This rule-splitting would also make the explicit use of the word *artha* in the following rule unnecessary. Incidentally, treatment of *arthena* of *tatkṛrārthena* as separate from *tatkṛta* in the wording of this rule via *yogavibhāga* leaves *tatkṛta* as used without a nominal ending. Commentators explain that *tatkṛta* is used here with a deleted instrumental ending (*luptatṛtīyākam*).

2.1.31 **पूर्वसदृशसमोनार्थकलहनिपुणमिश्रश्लक्ष्णैः**

pūrvasadṛśasamonārthakalahanipuṇamiśraślakṣṇaiḥ
/ *pūrvasadṛśa...ślakṣṇaiḥ* 3/1 (*itar. dv.*) /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *tṛtīyā* #30)
'*pūrva, sadṛśa, sama, ūnārtha, kalaha, nipuṇa, miśra, ślakṣṇa*' *etaiḥ saha tṛtīyāntaṃ samasyate, tatpuruṣaś ca samāso bhavati*
A *pada* which ends in *tṛtīyā* optionally combines with a syntactically related *pada* which ends in *sUP* to yield a *tatpuruṣa* compound

provided the latter contains *pūrva* 'earlier, prior', *sadṛśa* 'like', *sama* 'similar, same', *ūna* 'less' and its synonyms, *kalaha* 'quarrel', *nipuṇa* 'skillful, adept', *miśra* 'mixed', or *ślakṣṇa* 'gentle, smooth'.

EXAMPLES:

māsapūrvaḥ 'earlier by a month'
saṃvatsarapūrvaḥ 'earlier by a year'
mātṛsadṛśaḥ 'like his/her mother'
pitṛsadṛśaḥ 'like his/her father'
mātṛsamaḥ 'same as his/her mother'
pitṛsamaḥ 'same as his/her father'
māṣonam 'less by a measure of weight'
māṣavikalam 'id.'
kārṣāpaṇonam 'less by a gold or silver coin (*kārṣāpaṇa*)'
kārṣāpaṇavikalam 'id.'
asikalahaḥ 'quarrel by sword'
vākkalahaḥ 'quarrel by word'
vāgnipuṇaḥ 'skilled at words'
ācāranipuṇaḥ 'skilled at how to behave'
guḍamiśraḥ 'mixed with jaggery'
tilamiśraḥ 'mixed with sesame'
ācāraślakṣṇaḥ 'polite in behavior'

1. Note that the inclusion of the word *artha* in this rule has been rejected by Patañjali. Kaiyaṭa (Joshi 1969: 180) thinks that *artha* should be retained in this rule, not to form a compound independently, but to be read with *ūna* to specify a compound formation with *ūna* and its synonyms (*ūnārtha*). But Kaiyaṭa accepts that this purpose can be served, even without using the word *artha* explicitly. For, a word can denote itself as well as its synonyms, without the use of *artha*. This brings reference to rule 6.2.152 *ūnārthakalaham...*, which, according to Mīmāṃsaka (1974: 95), includes the word *artha* to indicate the desirability of compound formations with the synonyms of *ūna*. This, claims Mīmāṃsaka, is Pāṇini's intent. The use of the word *artha*, he argues, will become vacuous if this interpretation is not accepted.

The validity of the word *artha* as part of this rule can only serve one purpose: *artha* is to be jointly read with *ūna* to denote *ūnārtha*, '*ūna*, and items which denote the sense of *ūna*'. This will allow compounds such as *māṣonaḥ* and *māṣavikalaḥ*, where in the second example *vikala* is a synonym of *ūna*. If Patañjali's rejection of the word *artha* in this rule is accepted, these compounds can still be derived under the provisions of the preceding rule, with their corresponding analyzed forms *māṣeṇa kṛto ūnaḥ* and *māṣeṇa kṛto vikalaḥ*. In this case, *ūna* also becomes unnecessary in this rule.

Finally, the word *artha* can be associated here only with *ūna*. For Pāṇini explicitly states the synonym of *sama* as *sadṛśa* in this rule. Thus, *artha* cannot be associated with others.

Note that *sama* and *sadṛśa* form a compound with a *pada* ending in *tṛtīyā*, on the grounds that *tṛtīyā*, in connection with them, is already provided for by rule 2.3.72 *tulyārthair....* Such a *tṛtīyā* is, however, unavailable in connection with the other items. How could they be combined? *Kāśikā* states that such a *tṛtīyā* would be made available to them on the authority of this rule.

2.1.32 कर्तृकरणे कृता बहुलम्

kartṛkaraṇe kṛtā bahulam
/ *kartṛkaraṇe* 7/1 = *kartā ca karaṇaṃ ca* (*sam. dv.*), *tasmin*; *kṛtā* 3/1 *bahulam* 1/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *tatpuruṣaḥ* #22, *tṛtīyā* #30)
kartari karaṇe ca yā tṛtīyā tadantaṃ kṛdantena saha samasyate bahulam, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *tṛtīyā* and denotes either *kartṛ* 'agent' or *karaṇa* 'instrument' variously (*bahulam*) combines with a syntactically related *pada* which ends in *sUP* and contains a *kṛt* to form a *tatpuruṣa* compound.

EXAMPLES:

ahihataḥ 'killed by snakebite'
nakhanirbhinnaḥ 'split open by nails'
paraśucchinnaḥ 'cut by an axe'

1. Kātyāyana (*Mbh* II: 593) suggests that *kṛtā* 'with a word containing an item which ends in a *kṛt* affix' should be replaced with *ktena* 'with a word which contains an item ending in a *kṛt* affix, namely *Kta*'. If *kṛtā* is retained in this rule, *ktena* must also be used. In this way, *kṛtā* can modify *ktena* to denote 'with a word which contains an item ending in a *kṛt* affix, namely *Kta*'. This modifier function of *kṛt* will be nothing but 'decorative' (*uparañjaka*) anyway, since affix *Kta* is a *kṛt* (3.1.93 *kṛd atiṅ*). Patañjali concludes that *ktena* should not be used, because the very use of *bahulam* can account for the limitation of the compound formation with a *pada* which underlies an item ending in affix *Kta*. Incidentally, *bahulam* 'variously' refers to the characteristic application of a rule, such that it sometimes applies, sometimes applies only optionally, and sometimes does not apply at all. Thus, as *Kāśikā* points out, it becomes a way to explain violations of diverse kinds which cannot be accounted for by precise statements (*sarvopādhi-vyabhicārārtham*).

2.1.33 कृत्यैरधिकार्थवचने

kṛtyair adhikārthavacane
/ *kṛtyaiḥ* 3/3 *adhikārthavacane* 7/1 = *arthasya vacanam* (*sas. tat.*) = *arthavacanam, adhikam ca tad arthavacanaṃ ca* = *adhikārthavacanam* (*karm.* with int. *ṣaṣ. tat.*), *tasmin* /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *tṛtīyā* #30, *kartṛkaraṇe* #32)
kartṛkaraṇayor yā tṛtīyā tadantaṃ subantaṃ kṛtyaiḥ saha samasyate ' dhikārthavacane gamyamāne vibhāṣā
A *pada* which ends in *tṛtīyā*, and denotes either *kartṛ* or *karaṇa*, optionally combines in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* and contains a *kṛtya* derivate provided *adhikārthavacana* 'exaggerating' is understood.

EXAMPLES:

kākapeyā nadī 'a river so full that even a crow sitting on its bank can drink water' or 'a river so low that even a crow can drink it up'
śvalehyaḥ kūpaḥ 'a waterwell full to its brim so that even a dog can lap its water' or 'a waterwell with so little water that even a dog can lap it dry'

1. This rule provides for a word which ends in *tṛtīyā* to be optionally combined with a word which contains an item ending in a *kṛtya* (3.1.95 *kṛtyāḥ*) affix, provided the word which ends in *tṛtıyā* denotes *kartṛ* or *karaṇa*, and the compound derived denotes *adhikārtha* 'exaggeration'. The word *adhikārthavacana* means 'statement of praise (*stuti*) or censure (*nindā*) made by inventing qualities or faults'. Consequently, a compound such as *kākapeyā* as in *kākapeyā nadī*, can denote both praise or censure: in the examples given below, the first denotes praise, and the second, censure.

pūrṇatoyā nadī...kākair api śakyā pātum 'a river so full...even the crows can drink water' (praise)
alpatoyā nadi...kākair api śakyā pātum 'a river with so little water... even a crow could drink it up' (censure)

2.1.34 अन्नेन व्यञ्जनम्

annena vyañjanam
/ *annena* 3/1 *vyañjanam* 1/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *tṛtīyā* #30).
vyañjanavāci tṛtīyāntaṃ annavācinā subantena saha samasyate vibhāṣā, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *tṛtīyā* and denotes *vyañjana* 'condiments;

things which are added to make food taste good' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in a *sUP* and denotes *anna* 'an article of food'.

EXAMPLES:

dadhyodanaḥ 'rice mixed with yogurt'
kṣīraudanaḥ 'rice mixed with milk'

1. This rule allows for the formation of a *tatpuruṣa* compound, where one constituent ends in *tṛtīyā* and another underlies a word which denotes *anna* 'food, grain', provided the former denotes *vyañjana* 'flavoring ingredient'. *Kāśikā* explains that *anna* and *uyañjana,* in this context, refer to things that are *saṃskārya* 'to be flavored' and *saṃskāraka* 'that which flavors' respectively. Note that the action of flavoring *saṃskāra*) forms the basis for the *sāmarthya* relationship that obtains between *anna* and *vyañjana.* An example such as *dadhyodanaḥ* is consequently explained as *dadhnā upasiktaḥ odanaḥ* 'rice mixed with yogurt', where the action of *upaseka* 'flavoring, soaking' qualifies rice, though is not denoted by a constituent word of the compound. This is what *Kāśikā* implies by *vṛttau kriyāyā antarbhāvāt.....* 'on account of the inherence of action in integration'. For example, *upaseka* denotes the inhered action in the example discussed.

2.1.35 **भक्ष्येण मिश्रीकरणम्**

bhakṣyeṇa miśrīkaraṇam
/ bhakṣyeṇa 3/1 *miśrīkaraṇam* 1/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *tṛtīyā* #30)
miśrīkaraṇavāci tṛtīyāntaṃ bhakṣyavācinā subantena samasyate, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *tṛtīyā* and denotes *bhakṣya* 'something edible' optionally combines, in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* and denotes *miśrīkaraṇa* 'admixture'.

EXAMPLES:

guḍadhānāḥ 'rice crisps mixed with jaggery
guḍapṛthukāḥ parched rice mixed with jaggery.

1. This rule allows for the formation of a *tatpuruṣa* compound, where one constituent ends in *tṛtīyā* and another underlies a word which denotes something edible (*bhakṣya*) provided the former denotes *miśrīkaraṇa* 'admixture'. The word *bhakṣya* is explained by *Kāśikā* as anything solid (*khara*) or soft (*viśada*) which, in turn, could be eaten by chewing (*hanu calana: PM* ad *Kāśikā*). A detailed discussion ensues in the *Mahābhāṣya* (II: 595–97) concerning the *sāmarthya* relationship between the constituents of compounds covered by this rule. It is argued that such a

relationship does not obtain here, mainly because the constituents are *kāraka* denoted by *saṃskārya* and *saṃskāraka*. For *sāmarthya* obtains only between a *kāraka* and its related actionn (*kriyā*). It does not obtain between *kāraka* themselves. To further strengthen the argument, an analogy is used of a ladder (*niśrayaṇi*) and its rungs (*kāṣṭha*). It is said that the rungs, since they are joined (*yukta*) to the two vertical parts, are qualified as sharing a *sāmarthya* relationship with them. They cannot be said to be *samartha* with each other, since they are not joined to each other. This same argument could be applied to *kāraka*. Consequently, a compound formed with consituents without *sāmarthya* should be treated as *asamartha* 'semantically lacking integration'.

It is first suggested that this impaired *sāmarthya* could be restored on the authority of the formulation of the rules themselves. This solution, however, would rule out many other examples for which such an authority is not available. It is suggested, therefore, that a new rule should be formulated with the following interpretation:

> A word containing a compound base which ends in *Kta* where its first constituent ends in *tṛtīyā* is combined with another....

A rule formulated with its content as summarized above would require a two step compound formation to yield example *dadhyodanah*:

(1) *dadhnā upasiktaḥ* = *dadhyupasiktaḥ*
(2) *dadhyupasiktaḥ odanaḥ* = *dadhyodanaḥ*

Obviously, such a rule formation would also require the deletion of *upasikta* +*sU*, the middle constituent (*madhyamapadalopa*); and it would have to be included in the section of rules dealing with compounds formed of syntactically coordinated (*samānādhikaraṇa*) constituents. Examples such as *guḍadhānāḥ* of the present rule can also be derived, parallel to its analyzed form *guḍasaṃsṛṣṭāḥ dhānāḥ*, where *dhāna* denotes 'parched grains'. This view, however, has been abandoned, since the specification of deletion of internal constituents would prove an endless process.

2.1.36 **चतुर्थी तदर्थार्थबलिहितसुखरक्षितैः**

> *caturthi tadarthārthabalihitasukharakṣitaiḥ*
> / *caturthī* 1/1 *tadarthārtha....rakṣitaiḥ* 3/1 = *tasmai idam* = *tadartham* (*caṭtat*), *tadartham ca arthaś ca baliś ca hitaś ca sukhaṃ ca rakṣitaś ca* = *tadarthārthābalihitasukharakṣitāni* (*itar. dv* with in *caṭtat*), *taiḥ*/
> (*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22)
> *'tadartha, artha, bali, hita, sukha, rakṣita' ity etaiḥ saha caturthyantaṃ samasyate, tatpuruṣaś ca samāso bhavati*
> A *pada* which ends in *caturthī* 'fourth triplet of *s*UP' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada*

which ends in *sUP* and denotes *tadartha* 'a thing intended for what is denoted by the constituent in *caturthī*', or contains nominal stems *artha* 'purpose', *bali* 'sacrificial offering', *hita* 'beneficial', *sukha* 'pleasure', or *rakṣita* 'reserved, protected'.

EXAMPLES:

yūpadāruḥ 'wood intended for making a sacrificial post'
kuṇḍalahiraṇyam 'gold intended for making earrings'
brāhmaṇārthaṃ payaḥ 'milk intended for the *brāhmaṇa*'
brāhmaṇārthā yavāgūḥ 'barley gruel intended for the *brāhmaṇa*'
kuberabaliḥ 'sacrificial offering intended for Kubera, the guardian of wealth'
mahārājabaliḥ 'sacrificial offering intended for Indra'
gohitam 'beneficial for the cows'
aśvahitam 'beneficial for the horses'
gosukham 'for the pleasure of the cows'
aśvasukham 'for the pleasure of the horses'
gorakṣitam 'reserved for the cows'
aśvarakṣitam 'reserved for the horses'

1. *Kāśikā* explains that compounds entailing *tādarthya* 'meant for the sake of the denotatum of a word which ends in *caturthī*' are limited to constituents where the word ending in *caturthī* denotes modification (*vikāra*) of some material (*prakṛti*) denoted by the second constituent. Thus we get *kuṇḍalāya hiraṇyam*, where *kuṇḍala*, ending in *caturthī*, denotes *vikāra* of *hiraṇya* 'gold' (constituting the second constituent). Limiting *tādarthya* compounds of this rule to *prakṛti-vikāra* contexts is required so that a compound like **randhanasthālī*, parallel to *randhanāya sthālī* 'pot meant for the sake of cooking' can be blocked. Besides, if one accepts the general context of such compounds as *tādarthya*, then specific mention of *bali* 'ritual oblation' and *hita* 'beneficial to' becomes redundant, since *tādarthya* is already inhered there. This, in turn, becomes a mark (*liṅga*) for restricting *tādarthya* examples to *prakṛti-vikāra* contexts.

The use of the word *artha* is again made to inform that the compounds formed are obligatory (*nitya*). For this reason, the analyzed form (*vigrahavākya*) of a compound such as *brāhmaṇārtham* of *brāhmaṇārthaṃ payaḥ* must be furnished by means of a word outside the constituency of the compound (*asvapada*). The statement is necessary since *vibhāṣā* 'optionally' is carried here. Additionally, obligatory compounds with *artha* entail usage in all three genders (*sarvaliṅgatā*). That is, these compounds are allowed to be used in accordance with the gender of entities they qualify. It is necessary to make such a provision in view of rule 2.4.26 *paraval liṅgaṃ dvandvatatpuruṣayoḥ*, which assigns the gender of a *tatpuruṣa*

compound to be similar to the gender of its following constituent. Thus, *brāhmaṇārthaḥ sūpaḥ*(masculine), *brāhmaṇārthaṃ payaḥ* (neuter), and *brāhmaṇārthā yavāgūḥ* (feminine) all get covered.

2.1.37 **पञ्चमी भयेन**

> *pañcamī bhayena*
> / *pañcamī* 1/1 *bhayena* 3/1/
> (*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22)
> *pañcamyantaṃ subantaṃ bhayaśabdena subantena saha samasyate vibhāṣā, tatpuruṣaś ca samāso bhavati*
> A *pada* which ends in *pañcamī* 'fifth triplet of *sUP*' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP* and contains *bhaya* 'fear'.

EXAMPLES:

> *vṛkabhayam* 'fear of a wolf'
> *caurabhayam* 'fear of a thief'
> *dasyubhayam* 'fear of a bandit'

1. It has been suggested in the *Mahābhāṣya* (II: 605) that *bhīta* 'frightened', *bhīti* 'fear' and *bhīḥ* 'id.' must also be stated in the rule. In this way, compounds such as *vṛkabhītaḥ* 'frightened of a wolf', *vṛkabhītiḥ* 'fear of a wolf' and *vṛkabhīḥ* 'id.' could be accounted for. This modification is desired, especially when one interprets the word *bhaya* in this rule as denoting its form (*svarūpa*) only. But a modification of this rule to include the synonyms of *bhaya* may also entail some undesired compounds. One such example, parallel to *vṛkāt trāsaḥ*, is *vṛkatrāsaḥ*, where *trāsa* is a synonym of *bhaya*. Yet another proposal seeks compounds to be formed with *bhaya*, *nirgata* 'gone outside of', and *jugupsu* 'disgusted with'. Consequently, this proposal seeks to reformulate the rule as *pañcamī bhayanirgatajugupsubhiḥ*.

2.1.38 **अपेतापोढमुक्तपतितापत्रस्तैरल्पशः**

> *apetāpoḍhamuktapatitāpatrastair alpaśaḥ*
> / *apetāpoḍha...patrastaiḥ* 3/3 =(*itar. dv.*) *alpaśaḥ* 0/
> (*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *pañcamī* #37)
> '*apeta, apoḍha, mukta, patita, apatrasta*' *ity etaiḥ saha pañcamyantaṃ samasyate, tatpuruṣaś ca samāso bhavati*; '*alpaśaḥ*' *iti samāsasyālpaviṣayatām ācaṣṭe*
> A *pada* ending in *pañcamī* optionally combines, in a *tatpuruṣa* compound of limited frequency (*alpaśaḥ*), with a syntactically related *pada* which ends in *sUP* and contains *apeta* 'removed, gone away', *apoḍha* 'carried away, removed', *mukta* 'released, freed', *patita* 'fallen', or *apatrasta* 'scared of'.

EXAMPLES:

sukhāpetaḥ 'removed from happiness'
kalpanāpoḍhaḥ 'removed from (lacking) imagination'
cakramuktaḥ 'freed from the wheel'
svargapatitaḥ 'fallen from heaven'
taraṅgāpatrastaḥ 'frightened by waves'

1. The word *alpaśaḥ* is included in the wording of this rule to indicate that only a limited number of words with *pañcamī* should be combined. This allows compound formations parallel to *prāsādāt patitaḥ* 'fallen off the rooftop' and *bhojanād apatrastaḥ* 'thrown away from food' to be ruled out.

2.1.39 स्तोकान्तिकदूरार्थकृच्छ्राणि क्तेन

stokāntikadūrārthakṛcchrāṇi ktena
/ *stokāntika...kṛcchrāṇi* 1/3 =*stokaś ca antikaś ca dūraś ca* = *stokāntikadūrāḥ* (*itar. dv.*), *stokāntikadūrās te' rthāḥ yeṣāṃ te* = *stokāntikadūrārthāḥ* (*bv.*), *stokāntikadūrārthāś ca kṛcchraṃ ca, tāni* = *stokāntika... kṛcchrāṇi* (*itar. dv.* with int. *bv.*); *ktena* 3/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *pañcamī* #37)
'*stoka, antika, dūra*' *ity evam arthāḥ śabdāḥ kṛcchraśabdaś ca pañcamyantāḥ ktāntena saha samasyante, tatpuruṣaś ca samāso bhavati*
A *pada* which ends in *pañcamī* and contains *kṛcchra* 'trouble, difficulty' or stems which denote *stoka* 'a bit', *antika* 'near, proximate', or *dūra* 'far', optionally combines in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* and contains *Kta*.

EXAMPLES:

stokānmuktaḥ 'freed by a slight margin'
antikādāgataḥ 'arrived from a nearby place'
abhyāśādāgataḥ 'id.'
dūrādāgataḥ 'arrived from a faraway place'
viprakṛṣṭādāgataḥ 'id.'
kṛcchrānmuktaḥ 'released with difficulty'
kṛcchrāllabddhaḥ 'obtained with difficulty'

1. Note that rule 6.3.2 *pañcamyāḥ stokādibhyaḥ* will not permit the deletion of nominal endings of these compounds.

2.1.40 सप्तमी शौण्डैः

saptamī śauṇḍaiḥ
/ *saptamī* 1/1 *śauṇḍaiḥ* 3/3/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22)
saptamyantaṃ śauṇḍādibhiḥ saha samasyate, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *saptamī* 'seventh triplet of *sUP*' optionally

combines in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* and contains *śauṇḍa* 'cunning, skilled' etc.

EXAMPLES:

akṣaśauṇḍaḥ 'he who is skilled or cunning at the game of dice'
akṣakitavaḥ 'id.'
akṣadhūrttaḥ 'he who cheats at the game of dice'

1. The *Mahābhāṣya* (II: 604) discusses the question of whether the plural in *śauṇḍaiḥ* is to be interpreted as referring to items listed in the *gaṇa* 'group' headed by *śauṇḍa*, or solely to its own plural form. The lack of the word *ādi* 'beginning with, etc.', which makes a reference to the *gaṇa*, raises this question. The *Mahābhāṣya* concludes that a reference to the *gaṇa* is desired. This, in turn, will facilitate the formation of compounds with the synonyms of *śauṇḍa*. The plural in *śauṇḍaiḥ* itself can account for all this. Consider the example *akṣakitavah*, where *kitava* is a synonym of *śauṇḍa*.

2.1.41 **सिद्धशुष्कपक्वबन्धैश्च**

siddhaśuṣkapakvabandhaiś ca
/ *siddha...bandhaiḥ* 3/3 (*itar. dv.*); *ca* 0 /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *saptamī* #40)
'siddha, śuṣka, pakva, bandha' ity etaiḥ saha saptamyantaṃ samasyate, tatpuruṣaś ca samāso bhavati
A pada which ends in *saptamī* optionally combines in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* and contains *siddha* 'established, made', *śuṣka* 'dried', *pakva* 'cooked, ripe', or *bandha* 'tied, bound'.

EXAMPLES:

sāṃkāśyasiddhaḥ 'made or known in Sāṃkāśya'
kāmpilyasiddhaḥ 'made or known in Kāmpilya'
ātapaśuṣkaḥ 'dried in the sun'
chāyāśuṣkaḥ 'dried in the shade'
sthālīpakvaḥ 'cooked in a *sthālī* (vessel)'
kumbhīpakvaḥ 'cooked in a small earthen pitcher'
cakrabandhaḥ 'tied with a wheel'

2.1.42 **ध्वांक्षेण क्षेपे**

dhvāṅkṣeṇa kṣepe
/ *dhvāṅkṣeṇa* 3/1 *kṣepe* 7/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *saptamī* #40)

dhvāṅkṣavācinā saha saptamyantaṃ subantaṃ samasyate, tatpuruṣaś ca samāso bhavati kṣepe gamyamāne
A *pada* ending in *saptamī* optionally combines in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* and contains *dhvāṅkṣa* 'crow' or its synonyms, provided contempt (*kṣepa*) is denoted.

EXAMPLES:

tīrthadhvāṅkṣaḥ 'fickle as a crow in a holy place'
tīrthakākaḥ 'id.'

1. The word *dhvāṅkṣa* 'crow' is treated here as referring to its synonyms as well. Thus, compounds such as *tīrthakākaḥ* can also be derived. A student who lacks diligence in his studies, and thus does not stay long at the teacher's, is often given this name. Obviously, the teacher's place is a *tīrtha* 'holy place'.

2.1.43 कृत्यैर्ऋणे

kṛtyair ṛṇe
/ *kṛtyaiḥ* 3/3 *ṛṇe* 7/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *saptamī* #40)
kṛtyapratyayāntaiḥ saha saptamyantaṃ samasyate, tatpuruṣaś ca samāso bhavati, ṛṇe gamyamāne
A *pada* which ends in *saptamī* combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP* and contains a stem in *kṛtya* (3.1.97 *aco yat*) provided *ṛṇa* 'debt' is denoted.

EXAMPLES:

māsadeyam 'a debt which is to be repaid in a month'
saṃvatsaradeyam 'a debt which is to be repaid in a year'
tryahadeyam 'a debt which is to be repaid in three days'

1. Kātyāyana (*Mbh* II: 605) proposes a modification of this rule as follows: *kṛtyair niyoge yatā* 'a word ending in *saptamī* combines with a word which contains an item ending in the *kṛtya* affix (3.1.95 *kṛtyāḥ*) *yaT* (3.1.97 *aco yat*), provided the compound denotes obligation (*niyoga*)'. The condition of *niyoga* is required to cover examples like *pūrvāhṇegeyam* 'a chant one is obligated to make in the morning'. The condition of *yatā* will restrict the constituency of compounds to where the other member contains a derivate in *yaT*. Consequently, **pūrvāhṇedātavyā* (*bhikṣā*) 'alms given in the morning', etc., will be blocked. Patañjali rejects the condition of *niyoga* on the grounds that *ṛṇe*, when accepted as used in a much more generalized sense of something one must necessarily do (*āvaśyaka*), will account for it. He does, however, accept the condition of *yaT*, possibly to block compound formation parallel to *pūrvāhṇe dātavyā bhikṣā*. But the problem of

the validity of this condition still remains. *PM* and *Nyāsa* ad *Kāśikā* both state that the *anuvṛtti* of *alpaśaḥ* 'in a limited manner' from 2.1.38 could account for what *yatā* does. Incidentally, the non-deletion of *saptamī* in the above examples is accomplished by rule 6.3.13 *tatpuruṣe kṛti bahulam.* The compounds covered by this rule are also treated as obligatory (*nitya*).

2.1.44 संज्ञायाम्

saṃjñāyām
/ *saṃjñāyām* 7/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *tatpuruṣaḥ* #22, *saptamī* #40)
saṃjñāyāṃ viṣaye saptamyantaṃ supā saha samasyate, tatpuruṣaś ca samāso bhavati
A *pada* ending in *saptamī* combines in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* provided the compound denotes a *saṃjñā* 'name'.

EXAMPLES:

araṇyetilakāḥ 'wild sesame'
araṇyemāṣāḥ 'wild beans'
vanekiṃśukāḥ 'wild *Kiṃśuka* flowers'

1. The condition of *saṃjñā* requires that compounds so formed denote a name. Since an analyzed form cannot denote a name, the compounds should be accepted as obligatory (*nitya*). For example, *araṇyemāṣāḥ* means 'wild beans growing in the forest'. The analyzed form *araṇye māṣāḥ* may mean 'there are Mung beans growing in the forest'. The non-deletion of *saptamī* is accomplished by 6.3.9 *halantāt saptamyāḥ.*

2.1.45 क्तेनाहोरात्रावयवाः

ktenāhorātrāvayavāḥ
/ *ktena* 3/1 *ahorātrāvayavāḥ* 1/3 = *ahaś ca rātriś ca* = *ahorātrau* (*dv.*), *tayor avayavāḥ* (*ṣaṣ. tat.* with int. *dv.*) /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *saptamī* #40)
aharavayavāḥ rātryavayavāś ca saptamyantāḥ ktāntena saha samasyante, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *saptamī* and denotes a part of day or night optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* ending in *sUP* and containing a stem in *Kta*.

EXAMPLES:

pūrvāhṇakṛtam 'that which was done in the first part of the day'
pūrvarātrakṛtam 'that which was done in the first part of the night'
aparāhṇakṛtam 'that which was done in the second part of the day'
apararātrakṛtam 'that which was done in the second part of the night'

1. The word *avayava* 'part' is included in this rule to block the formation of compounds parallel to *rātrau kṛtam* 'that which was done in the night', where *rātri* 'night' denotes entirety (*kārtsnya*) and not *avayava*.

2.1.46 तत्र

tatra
| tatra Ø|
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *saptamī* #40, *ktena* #45)
'tatra' ity etat saptamyantaṃ ktāntena saha samasyate, tatpuruṣaś ca samāso bhavati
A *pada* constituted by *tatra* optionally combines in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* and contains a stem in *Kta*.

EXAMPLES:

tatrabhuktam 'eaten there'
tatrakṛtam 'made or done there'
tatrapītam 'drunk there'

1. This rule is required for covering examples such as *tatrakṛtam* 'done there', where *tatra* does not end in *saptamī*. Instead, it is a derivate of *tad* 'that' formed with the affix *traL* (5.3.10 *saptamyās tral*) to denote the sense of *saptamī*. This is why the word *saptamī* carried via *anuvṛtti* must be interpreted as denoting not its form (*tacchabda*), but its characteristic feature (*dharma*), namely, the denotation of locus (*adhikaraṇa*). The purpose of forming such compounds is *aikasvarya* and *aikapadya* (see note under 2.1.25).

2.1.47 क्षेपे

kṣepe
| kṣepe 7/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *saptamī* #40, *ktena* #45)
kṣepe gamyamāne saptamyantaṃ ktāntena saha samasyate, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *saptamī* combines, in a *tatpuruṣa* compound, with a syntactically related *pada* ending in *sUP* provided *kṣepa* 'contempt' is denoted.

EXAMPLES:

avataptenakulasthitaṃ tava etat 'this conduct of yours (i.e running around with no respect for duty) is like that of a mongoose running about on hot ground'

udakeviśīrṇaṃ tava etat 'this conduct of yours is as if going down the drain'
pravāhemūtritaṃ tava etat 'this conduct of yours is as if urinating in running water'

1. Note that the meaning of *kṣepa* derives here from *kāryeṣv anavasthitatā* 'lack of stability or concentration' leading to failure (*niṣphalatā*). The non-deletion of *saptamī* is accomplished by 6.3.14 *tatpuruṣe kṛti bahulam.* The last two examples attest to the belief that defecating or urinating in water is a contemptible act. Incidentally, these compounds are treated as obligatory (*nitya*) on account of the meaning condition of *kṣepa.*

2.1.48 **पात्रेसमितादयश्च**

pātresamitādayaś ca
/ *pātresamitādayaḥ* 1/3 = *pātresamita ādir yeṣām* (*bv.*); *ca* Ø /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *saptamī* #40, *kṣepe* #47)
pātresamitādayaḥ śabdās tatpuruṣasaṃjñā bhavanti, kṣepe gamyamāne
Items enumerated in the list headed by *pātresamita* also are termed *tatpuruṣa* when *kṣepa* is denoted.

EXAMPLES:

pātresamitāḥ 'those who gather around only when food is served'
pātrebahulāḥ 'those who are variously around at the time when food is served'
udarakrimiḥ 'worm in the belly, i.e., low person'
kūpakacchapaḥ 'a tortoise in a waterwell, i.e., narrow-minded'
kūpacūrṇakaḥ 'powder in a waterwell, i.e., insignificant'
avaṭakacchapaḥ 'a tortoise in a hole, i.e., narrow-minded'

1. The words *pātresamita*, etc., are listed as part of a larger *gaṇa* headed by *yuktārohin* (6.2.81 *yuktārohyādayaś ca*). This extracted short listing is consequently treated as *ākṛtigaṇa*, an enumeration with limited membership with the possibility of addition. The compounds covered by this rule derive as cited in the list. That is, their formation is ad hoc (*nipātana*). Heuristically, though, an example like *pātresamita* can be explained as formed of a word ending in *saptamī*, with another underlying item ending in *Kta*. Because they are included in the list headed by *yuktārohin*, these compounds will be assigned *udātta* on their first (*ādi*) vowel by rule 6.2.81 *yuktā...*).

The particle *ca* is used, here, in the sense of *eva* 'alone, only', so that larger compounds parallel to, for example, *paramāḥ pātresamitāḥ* 'those who are extremely parasitical', can be blocked. The denotatum of *ca* also indicates the meaning of compounds to be that of contempt.

2.1.49 पूर्वकालैकसर्वजरत्पुराणनवकेवलाः समानाधिकरणेन

pūrvakālaikasarvajaratpurāṇanavakevalāḥ samānādhikaraṇena
/ *pūrvakālaikasarvajaratpurāṇanavakevalāḥ* 1/3 (*itar. dv.*); *samānādhikaraṇena* 3/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22)
'*pūrvakāla, eka, sarva, jarat, purāṇa, nava, kevala*' *ity ete subantāḥ samānādhikaraṇena supā saha samasyante, tatpuruṣaś ca samāso bhavati*
A *pada* which ends in *sUP* and contains a stem that either denotes *pūrvakāla* 'something which naturally precedes another' or is constituted by *eka* 'one', *sarva* 'all', *jarat* 'aged', *purāṇa* 'ancient, old', *nava* 'new', or *kevala* 'only', optionally combines in a *tatpuruṣa* compound with a syntactically related coreferential *pada* which ends in *sUP*.

EXAMPLES:

snātānuliptaḥ 'he who first bathed then anointed'
kṛṣṭasamīkṛtam 'he who ploughed the field first then leveled it'
ekabhikṣā 'one and only alm'
ekaśāṭī 'one and only garment'
sarvadevāḥ 'all the gods'
sarvamanuṣyāḥ 'all men'
jaraddhastī 'an old elephant'
jaradgṛṣṭiḥ 'an old cow which delivered only once'
purāṇānnam 'old grain'
purāṇāvasatham 'an old dwelling'
navānnam 'newly harvested grain'
kevalānnam 'only grain'

1. The word *sāmānādhikaraṇya* 'coreferentiality, syntactic coordination' is explained by *Kāśikā* as 'the process whereby an item which has varying meanings (*bhinna- pravṛttinimitta*) is integrated (*vṛtti*) with another item to denote a single meaning (*bhinnapravṛttinimittasya śabdasya ekasminn arthe vṛttiḥ sāmānādhikaraṇyam*). This will obviously restrict the reference of items cited in this rule to their form only. That is, compounds with their synonyms will be blocked. *Kāśikā* adds, however, that in the case of *pūrvakāla*, the reference is made via meaning (*arthadvāraka*). Thus, a word which denotes *pūrvakāla* 'prior time' can be combined with a word which denotes other time (*aparakāla*). This will yield examples such as *snātānubhuktaḥ* 'one who has bathed, then eaten', where the action of bathing (*snāna*) is performed prior to the action of eating (*bhojana*). It is clear that *snāna* and *bhojana* have their own contextual usages, even though in *snātānubhuktaḥ* they both denote a single meaning, i.e., the same person. How does one understand that *pūrvakāla* should be interpreted as given

via meaning? One understands this on the basis that items such as *pūrva-kāla* can be fully comprehended only in relation to items such as *apara-kāla*: they refer to relative things.

2. Note that compounds covered by this rule can also be formed in view of provisions made by rule 2.1.59 *viśeṣaṇam...*, where a qualifier constituent (*viśeṣaṇa*) is required to be preplaced, as is specified by *viśeṣaṇam* in the nominative (1.2.43 *prathamā...*). This rule also provides for preplacement, though with a difference. This preplacement is ordered in view of the possibility of postplacement (*paranipāta*). That is, its provision of preplacement is restrictive in view of some possible postplacement. For example, *snātānuliptaḥ* is interpreted as *pūrvaṃ snātaḥ paścād anuliptaḥ*, where 'bathing' qualifies 'anointing'. But one may also wish to speak of this relationship as reversed which, in turn, would require postplacement of what is required to be preplaced. It is to prevent compound formations which involve such reversals, with resultant postplacement of qualifiers, that this rule is formulated.

2.1.50 **दिक्संख्ये संज्ञायाम्**

diksaṃkhye saṃjñāyām
/ *diksaṃkhye* 1/2 (*itar. dv.*); *saṃjñāyām* 7/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *tatpuruṣaḥ* #22, *samānādhi-karaṇena* #49)
digvācinaḥ śabdāḥ saṃkhyā ca samānādhikaraṇena subantena saha samasyante, tatpuruṣaś ca samāso bhavati, saṃjñāyāṃ viṣaye
A *pada* which ends in *sUP* and signifies *diś* 'direction' or *saṃkhyā* 'number' combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* provided the compound denotes a *saṃjñā* 'name'.

EXAMPLES:

pūrveṣukāmaśamī 'east Iṣukāmaśamī'
apareṣukāmaśamī 'west Iṣukāmaśamī'
pañcāmrāḥ 'name of a village'
saptarṣayaḥ 'name of a galaxy; Great Bear'

2.1.51 **तद्धितार्थोत्तरपदसमाहारे च**

taddhitārthottarapadasamāhāre ca
/ *taddhitārthottarapadasamāhāre* 7/1 = *taddhitārthaś ca uttarapadaṃ ca samāhāraś ca* (*itar. dv.*), *tasmin*; *ca* Ø /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49, *diksaṃkhye* #50)
taddhitārthe viṣaye uttarapade ca parataḥ samāhāre cābhidheye diksaṃkhye supā saha samasyete, tatpuruṣaś ca samāso bhavati

A *pada* which ends in *sUP* and contains a stem denoting *diś* or *saṃkhyā* optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* when either the meaning of a *taddhita* (4.1.76 *taddhitāḥ*) affix finds its scope, a third *pada* is to follow, or *samāhāra* 'collection, grouping' is to be denoted.

EXAMPLES:

paurvaśālaḥ 'that which is located in the eastern hall'
āparaśālaḥ 'that which is located in the western hall'
pūrvaśālāpriyaḥ 'he to whom the eastern hall is dear'
aparaśālāpriyaḥ 'he to whom the western hall is dear'
pāñcanāpitiḥ 'related to five barbers'
pañcakapālaḥ 'a ritual oblation prepared in five bowls'
pañcagavadhanaḥ 'he who possesses five cows as his wealth'
daśagavadhanaḥ 'he who possesses ten cows as his wealth'
pañcakumāri 'a group of five girls'
daśakumāri 'a group of ten girls'

1. The words *samānādhikaraṇena* and *diksaṃkhye* are carried to this rule. The word *taddhitārthottarapadasamāhāre* is interpreted as a *dvandva* of *samāhāra* 'grouping' type, with the constituents *taddhitārthe, uttarapade,* and *samāhāre,* all ending in *saptamī*. Obviously, this rule allows for compounds in three categories:

(*i*) *taddhitārthe,* where a word denoting direction or number is combined with another word in syntactic coordination, provided the sense of *taddhita* affix finds its scope;
(*ii*) *uttarapade,* where a word which denotes direction or number is combined with another word in syntactic coordination provided there follows still another word; and
(*iii*) *samāhāre,* where a word which denotes direction or number is combined with another in syntactic coordination provided that the meaning of *samāhāra* is to be denoted.

The *saptamī* in (i) is interpreted as that of domain (*viṣaya*). It cannot be interpreted as denoting 'when the sense of a *taddhita* is to be denoted'. For, examples like *pāñcanāpitiḥ* cannot qualify for the introduction of a *taddhita*. The sense of a *taddhita* would already be included in the compound. Under the *viṣayasaptamī* interpretation, the compound will be allowed in anticipation of the denotation, via introduction of a *taddhita* affix.

Consider the derivation of *paurvaśālaḥ* from *pūrvā* + *Ṅi śālā* + *Ṅi,* the two constituents which are in syntactic coordination. The compound is permitted on the understanding that a *taddhita* affix, such as *aÑ* (4.2.107

dikpūrvapadāt. .), will subsequently be introduced to denote the sense of 'located there': *pūrvā* + *Ṅi* + *śālā* + *Ṅi* –> *pūrvāśālā*; *pūrvāśālā* + *aÑ* –> *paurvaśāla*; *paurvaśāla* + *sŪ* – >*paurvaśālaḥ*. The denotation of the *taddhita* affix via *aÑ* is treated as *bhāvin* 'to take place subsequently'. In view of mutual dependency *(anyonyāśrayatva)*, this appears problematic. That is, the compound cannot be formed if the sense of a *taddhita* affix is not denoted; and the *taddhita* affix cannot denote its sense unless it is introduced after the compound. Both of these conditions are impossible to satisfy at the same time. It is to resolve this difficulty that the sense of the *taddhita* affix is considered as *bhāvin*. This interpretation is possible only when *saptamī* in *taddhitārthe* is interpreted as denoting the domain (*viṣaya*).

The *saptamī* in *uttarpade* is viewed as *parasaptamī*, whereby we get the following interpretation:

> A word which denotes *diś* or *saṃkhyā* is combined with a word in syntactic coordination provided there is another word which follows.

Clearly, the condition of *uttarapade* makes the compound with *diś* and *saṃkhyā* as part of a larger compound. Thus, *pūrvaśālāpriyaḥ* is a *bahuvrīhi* compound formed from *pūrvā* + *sŪ* + *śālā* + *sŪ* + *priya* + *sŪ*, where an internal *tatpuruṣa* with the first two constituents is formed under the condition of the third. The compound must be formed in this manner, so that *udātta* accent at the end (*antodātta*) (of *śālā*) can be accomplished before *priya* + *sŪ*. This kind of *tatpuruṣa*, internal to a *bahuvrīhi* compound, is obligatory (*nitya*). Thus, given the string *pañcan* + *Jas* + *go* + *Jas* + *dhana* + *sU*, a *bahuvrīhi* parallel to *pañca gāvo dhanam asya* 'he who possesses five cows as his wealth' is formed. Subsequently, *pañcan* + *Jas* + *go* + *Jas* forms a *tatpuruṣa*. This alone would allow the introduction of the affix *ṬaC* (5.4.92 *gor ataddhitaluki*) to yield *pañcan* + *Jas* + *go* + *Jas* + *ṬaC* – > *pañcago* + *a*. A wrong from **pañcagodhana* would result in the absence of *ṬaC*. It is evident that a *bahuvrīhi* that anticipates an internal obligatory *tatpuruṣa* is to be formed first. Of course, the internal *tatpuruṣa* will be formed subsequently. A *dvandva* internal to a *bahuvrīhi*, such as *vāgdṛṣadapriyaḥ* 'he who likes speech and stone' from *vāk* + *sŪ* + *dṛṣad* + *sŪ* + *priya* + *sŪ*, is similarly formed.

It is stated that a compound that entails *samāhāra* is not possible with a constituent which denotes *diś* 'direction'. For, a *samāhāra* is a group of items with varying denotata, as is possible in the case of numbers which distinguish them. The scope of the denotata of *diś* is fixed (*pratiniyata*).

Questions have also been raised about the word *samāhāra* itself. It can have two interpretations:

(*i*) *samāharaṇaṃ samāhāraḥ* 'the action of grouping together is called *samāhāra*'

(*ii*) *samāhriyata iti samāhāraḥ* 'that which is grouped...'

The choice of action (*i*) or object (*ii*) meaning when deriving *samāhāra* has its consequences. For example, the object interpretation would create problems in the derivation of *pañcakumāri* 'a group of five girls', where the meaning of *kumārī* 'girl' is principal. The rule which assigns compound formation (2.1.51) does not cite the constituent represented by *kumārī* in the nominative. This qualifies *kumārī* to be used with various endings. As a result, neither rule 1.2.43 *prathamā...* nor 1.2.44 *ekavibhakti cāpūrvanipāte* can term *kumārī* an *upasarjana*. Not being an *upasarjana*, *kumārī* in *pañcakumāri* cannot have its final long vowel replaced with a short vowel (1.2.48 *gostriyor upasarjanasya*).

Similarly, one cannot derive *pañcakhaṭvī* 'a group of five cots' parallel to *pañca khaṭvāḥ samāhṛtāḥ*. Note that *pañcakhaṭvī* is optional to neuter *pañcakhaṭvam*. A lack of assignment of the term *upasarjana* to *khaṭvā* would block its *ā*, to be replaced with *a*. This, in turn, would block the introduction of feminine affix *ṄīP* by 4.1.21 *dvigoḥ*. Commentators thus favor the first (*i*) interpretation over the second (*ii*).

2.1.52 संख्यापूर्वो द्विगुः

saṃkhyāpūrvo dviguḥ
/ *saṃkhyāpūrvaḥ* 1/1 = *saṃkhyā pūrvā yasmāt* (*bv.*); *dviguḥ* 1/1/
'*taddhitārthottarapadasamāhāre ca*' *ity atra yaḥ saṃkhyāpūrvaḥ samāsaḥ sa dvigusaṃjño bhavati*
A compound (formed by 2.1.51 *taddhitārth...*) when it begins with a constituent denoting *saṃkhyā* 'number' is termed *dvigu*.

EXAMPLES:

pañcakapālaḥ 'a ritual oblation of food prepared in five bowls'
daśakapālaḥ 'a ritual oblation prepared in ten bowls'
pañcanāvapriyaḥ 'he to whom five boats are dear'
pañcamūlī 'a bunch of five radishes'

1. A compound with constituents in syntactic coordination, formed under the provisions of the preceding rule, is termed *dvigu* if its first constituent denotes number. Our present rule thus becomes a residue (*śeṣa*) of rule 2.1.51. Note that *Paribhāṣā* 61 states that a provision made for an operation (*vidhi*) or its negation (*pratiṣedha*) applies to that which is most immediate (*anantarasya vidhir bhavati pratiṣedho vā*). Consequently, compounds with number constituents covered by the preceding rule alone are referenced here. However, a reference to compounds formed by rules 2.1.49, 2.1.50, and 2.1.51, which together form the context (*prakaraṇa*) of compounds with constituents in syntactic coordination (*sāmānādhikaraṇya*), cannot be ruled out. A reference to compounds allowed thus far in general can also be accepted here; but this would result in all kinds of problems.

For example, an *avyayībhāva* compound such as *dvimuni* 'two sages' would then be termed *dvigu*, necessitating original accent for its first

constituent by 6.2.29 *igantakāla....* The *Mahābhāṣya* (II: 617) discusses this and the other two interpretations, with examples and counter-examples. The final view favors only those compounds which are formed by rule 2.1.51. See the appendix for derivational details.

2.1.53 कुत्सितानि कुत्सनैः

kutsitāni kutsanaiḥ
/ *kutsitāni* 1/3 *kutsanaiḥ* 3/3/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
kutsitavācīni subantāni kutsanavacanaiḥ subantaiḥ saha samasyante, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and signifies *kutsita* 'object of contempt' optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and signifies *kutsā* 'contempt'.

EXAMPLES:

vaiyākaraṇakhasūciḥ 'a grammarian who, when asked a question, does not know the answer and stares at the sky'
yājñikakitavaḥ 'a priest who cheats, for money, by performing the ritual for someone not qualified'
mīmāṃsakadurdurūḍhaḥ 'a ritualist (*mīmāṃsaka*) who does not know what he argues about'

1. Note that the words *kutsita* and *kutsana*, which specify the constituency of compounds covered by this rule, are both given in plural. This indicates that reference is being made to their synonyms and not to their form. The use of plural thus blocks interpretations exclusive to word-forms (*svarūpavidhi*) *kutsita* and *kutsana*. Note that what is censured in these compounds is the reason for which they are used (*pravṛttinimitta*). Thus, *vaiyākaraṇakhasūciḥ* is 'a grammarian who, when asked a question, does not know the answer and stares at the sky'. That is, he is slow-witted (*niṣpratibha*). What is censured here is not grammar itself, but the grammarian's lack of intelligence, which constitutes the cause for the use of the expression. A compound such as *vaiyākaraṇaścauraḥ* 'grammarian crook' therefore cannot be permitted by the present rule. For it is the grammarian's property of being a crook and not his property of being a grammarian which is censured.

2.1.54 पापाणके कुत्सितैः

pāpāṇake kutsitaiḥ
/ *pāpāṇake* 1/2 = *pāpaṃ ca aṇakaṃ ca* (*itar. dv.*); *kutsitaiḥ* 3/3/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49, *kutsanaiḥ* #53)

'pāpa, aṇaka' ete subante kutsitavacanaiḥ saha samasyete, tatpuruṣaś ca samāso bhavati

A *pada* which ends in *sUP* and contains *pāpa* 'low, wicked' or *aṇaka* 'contemptible' optionally combines in a *tatpuruṣa* compound with a syntactically related coreferential *pada* which ends in *sUP* and signifies the object of disrespect.

EXAMPLES:

pāpanāpitaḥ 'a wicked barber'
pāpakulālaḥ 'a wicked potter'
aṇakanāpitaḥ 'a contemptible barber'
aṇakakulālaḥ 'a contemptible potter'

1. A question is raised as to why compounds with *pāpa* and *aṇaka* cannot be accounted for by the preceding rule. It is explained that *pāpa* and *aṇaka* denote *kutsana*, and hence will not be placed first in the compound if they happen to be covered by rule 2.1.53. A reference to *kutsana* in *tṛtīyā* (as opposed to *prathamā*) will block the *upasarjana* designation required for preplacement (*pūrvanipāta*). Our present rule makes *pūrvanipāta* possible. It can thus be also treated as an exception to the preceding rule. How did Pāṇini come to state *kutsitaiḥ* explicitly, when he could have done without by using *anuvṛtti*? Jinendrabuddhi thinks that the explicit mention of *kutsitaiḥ* was made for the sake of clarity (*vispaṣṭārtham*).

2.1.55 उपमानानि सामान्यवचनैः

upamānāni sāmānyavacanaiḥ
/ *upamānāni* 1/3 *sāmānyavacanaiḥ* 1/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
upamānavācīni subantāni sāmānyavacanaiḥ subantaiḥ saha samasyante, tatpuruṣaś ca samāso bhavati

A *pada* which ends in *sUP* and denotes *upamāna* 'standard of comparison' optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and denotes a common quality.

EXAMPLES:

śastrīśyāmā devadattā 'Devadatta's daughter is as black as a *śastrī* (a small, black knife)'
kumudaśyenī 'white as a water lily'
haṃsagadgadā 'a woman with a sweet, soft voice'

1. This rule allows the formation of a compound between a word which denotes *upamāna* 'standard of comparison' and another denoting a common property (*sāmānyavacana*). shared with the thing compared

(*upameya*). The word *sāmānyavacana* refers to items which denote properties common to the *upamāna* and the *upameya*. The word *śastrīśyāmā* 'black as a knife' of *śastrīśyāmā devadattā* 'Devadatta's daughter is as black as a *śastrī*' serves as a celebrated example. Here, *śastrī*, which denotes *upamāna*, is combined with *śyāmā* 'black', which denotes the property of blackness common to both the knife and the daughter of Devadatta, the *upameya*. The word *śyāmā* denotes a quality or a thing possessed of that quality (*guṇavacana*). How can it be considered as *sāmānyavacana*? Commentators inform us that a qualifier becomes *sāmānyavacana* when, after having denoted the quality, it finds its locus in the thing it qualified. The word *śastrī* is famous as having the quality of *śyāmatva* 'blackness'; having denoted blackness, *śyāmatva* now resides in the daughter of Devadatta it qualified.

Further questions have been raised about the validity of forming such compounds. For example, the word *śastrī* relates to *śastrī*, whereas *śyāmā* relates to *devadattā*. Consequently, because of the lack of *sāmānādhikaraṇya* 'coreferentiality', the compound cannot be allowed. It is said that this is no problem. Since *upamāna* and *upameya* are two different entities, words which denote them will entail *vaiyadhikaraṇya* 'reference to different loci'. A compound between items which denote varying loci can be permitted on the strength of this rule itself (*vacanasāmarthya*). Or, one can say that *śastrī* also refers to *devadattā* on the basis of *tādharmya* 'shared characteristics' constituted by the quality of blackness (*śyāmaguṇatva*).

2. This rule, along with the following, is formulated to facilitate the preplacement (*pūrvanipāta*) of constituents serving as those which are qualified (*viśeṣya*). A statement to this effect becomes necessary in view of situations where both constituents can be used as qualified elements the way one wishes (*kāmācāra*).

2.1.56 उपमितं व्याघ्रादिभिः सामान्याप्रयोगे

upamitaṃ vyāghrādibhiḥ sāmānyāprayoge
| upamitam 1/1 *vyāghrādibhiḥ* 3/3 *sāmānyāprayoge* 7/1 = *na prayogaḥ* = *aprayogaḥ (nañ. tat.), sāmānyasya aprayogaḥ* = *sāmānyāprayogaḥ* (*ṣaṣ. tat.*), *tasmin |*
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
upameyavāci subantaṃ vyāghrādibhiḥ sāmarthyād upamānavacanaiḥ saha samasyate, tatpuruṣaś ca samāso bhavati, na cet sāmānyavācī śabdaḥ prayujyate
A *pada* which ends in *sUP* and signifies *upameya* 'object to be compared' optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and contains items enumerated in the list headed by *vyāghra* 'tiger', provided a word which denotes common quality is not used.

EXAMPLES:

puruṣavyāghraḥ 'a man like a tiger'
puruṣasiṃhaḥ 'a man like a lion'

1. A word denoting a thing compared (*upameya*) can be combined with another word which contains an item listed in the set headed by *vyāghra* 'tiger', provided a word denoting their common property is not used. The common property referenced here in connection with *upamāna* and *upamita* is bravery, etc. (*śauryādi*). A compound is not permitted by this rule when a word denoting a common property is used. This rule facilitates the preplacement (*pūrvanipāta*) of *puruṣa* 'man' in *puruṣa-vyāghraḥ* 'man like a tiger', which would have been placed subsequent to *vyāghra* had the compound been formed by 2.1.57 *viśeṣaṇaṃ viśeṣyeṇa bahulam*. *Kāśikā* states that this rule is formulated to facilitate the preplacement of a *viśeṣya* 'qualified'. Note that the compound *puruṣavyāghraḥ*, parallel to *puruṣo vyāghra iva śūraḥ*, is not permitted, since *śūraḥ* denotes the property common to *puruṣa* and *vyāghra*. The compound is permitted parallel to *puruṣo vyāghra iva* instead.

2.1.57 **विशेषणं विशेष्येण बहुलम्**

viśeṣaṇaṃ viśeṣyeṇa bahulam
/ *viśeṣaṇaṃ* 1/1 *viśeṣyeṇa* 3/1 *bahulam* 1/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
viśeṣaṇavācī subantaṃ viśeṣyavācinā subantena saha bahulaṃ samasyate, tatpuruṣaś ca samaso bhavati
A *pada* which ends in *sUP* and denotes a qualifying property (*viśeṣaṇa-vācī*) variously combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and denotes the object so qualified.

EXAMPLES:

nīlotpalam 'blue lotus'
raktotpalam 'red lotus'
kṛṣṇasarpaḥ 'black snake (cobra)'
lohitaśāliḥ 'red rice'

1. This rule allows for the formation of *tatpuruṣa* compounds where both of the constituents are syntactic coordinates, but one denotes a qualifier (*viśeṣaṇa*) and the other a qualified (*viśeṣya*). Thus, we get examples like *kṛṣṇasarpaḥ* 'black snake', where *kṛṣṇa* is a qualifier to *sarpa*. The compound is formed parallel to *kṛṣṇaś cāsau sarpaś ca* 'that which is black as well as is a snake'.

Kāśikā explains *viśeṣaṇa* and *viśeṣya* as *bhedaka* 'distinguisher' and *bhedya* 'distinguished'. It is argued (*Mbh* (II: 627) that, given the word *kṛṣṇa*, one understands the quality 'blackness' in general. Similarly, given the word *sarpa*, one understands the thing named *sarpa* in general. However, given *kṛṣṇasarpaḥ*, the quality of blackness is particularized to the one available in the black snake; the denotatum of snake is particularized now to the context of blackness. In this way, both *kṛṣṇa* and *sarpa* can serve as qualifiers and qualifieds. This being the case, the term *upasarjana* cannot be assigned to one over the other. Which, then, should be placed first in the compound? That which does not denote a substance (*dravya*). Obviously, *upasarjana* is here interpreted in its etymological sense of 'subordinate' (*apradhāna*). Further questions have been raised as to why the meaning of *dravya* should be treated as principal. A *dravya* does not abandon its locus, unlike *guṇa*, which may or may not reside in its locus. Besides, a *guṇa* needs *dravya* to serve as its locus.

The word *bahulam* is included here to allow freedom from all specifications. For example, a compound is here allowed to be optional, whereas with *bahulam* in the rule it could also be obligatory. Thus, we get *nīlotpalam*, parallel to *nīlam utpalam* 'blue lotus'. But we get *kṛṣṇasarpaḥ* 'black snake' and *lohitaśāliḥ* 'red rice' as obligatory compounds, and we do not get a compound parallel to *rāmo jāmadagnyaḥ* 'Rāma, the son of Jamadagni'. The use of *bahulam*, thus, means that the compound may apply, it may not apply, or it may apply only obligatorily.

2.1.58 पूर्वापरप्रथमचरमजघन्यसमानमध्यमध्यमवीराश्च

pūrvāparaprathamacaramajaghanyasamānamadhyamadhyamavīrāś ca
/ *pūrva...vīrāḥ* 1/3 (*itar. dv.*); *ca* Ø /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49, *viśeṣaṇaṃ viśeṣyeṇa* #57)
'pūrva, apara, prathama, carama, jaghanya, samāna, madhya, madhyama, vīra' ity ete subantāḥ samānādhikaraṇena supā saha samasyante, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP*, denotes a distinguishing quality and contains *pūrva* 'former', *apara* 'later, next', *prathama* 'first, foremost', *carama*, 'last', *jaghanya*, 'low, last' *samāna* 'similar, same', *madhya* 'intermediate', *madhyama* 'moderate, middle', or *vīra* 'brave, heroic' optionally combines with a syntactically related coreferential *pada* which ends in *sUP* and denotes the object so qualified.

EXAMPLES:

pūrvapuruṣaḥ 'ancestor, former person'
aparapuruṣaḥ 'descendant, later person'
prathamapuruṣaḥ 'foremost person, third person'

caramapuruṣaḥ 'last person'
jaghanyapuruṣaḥ 'person of the lowest class'
samānapuruṣaḥ 'similar (same) person'
madhyapuruṣaḥ 'person in the middle'
madhyamapuruṣaḥ 'average person, second person'
vīrapuruṣaḥ 'brave person, hero'

1. The examples covered by this rule can be accounted for by the preceding rule. For the constituency of compounds here still relates to *viśeṣaṇa-viśeṣya* 'qualifier-qualified'. Why then is this rule formed? For expatiation (*prapañca*) of the scope of the preceding rule. Commentators explain that the word *bahulam* 'variously' does not specify 'how variously'. A rule such as this offers some particulars concerning the context of the preceding rule. It is in this sense that this rule is an expatiation (*prapañca*), relative to the preceding one.

2.1.59 **श्रेण्यादयः कृतादिभिः**

śreṇyādayaḥ kṛtādibhiḥ
/ *śreṇyādayaḥ* 1/3 = *śreṇi ādir yeṣām* (*bv.*); *kṛtādibhiḥ* 1/3 = *kṛta ādir yeṣām* (*bv.*) /
(*samāsaḥ* #3, *saha supā* #4, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
śreṇyādayaḥ subantāḥ kṛtādibhiḥ samānādhikaraṇaiḥ saha samasyante, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and contains *śreṇi* 'an order, or group of traders or artisans', etc., optionally combines in a *tatpuruṣa* compound with a syntactically related coreferential *pada* which ends in *sUP* and contains *kṛta* 'made, done'.

EXAMPLES:

śreṇikṛtāḥ 'a group formed from those who were not in a group'
ekakṛtāḥ 'arranged together as one'

1. This rule references the constituency of its compounds by enumeration. The first list, specified by *śreṇyādayaḥ* 'items listed in the group headed by *śreṇi*', is a *gaṇapāṭha* (*GP*) listing. The second is what is generally referred to as *ākṛtigaṇa*, a *gaṇa* listing which is open-ended and serves only illustrative purposes. Thus, *kṛtādibhiḥ* refers to items such as *kṛta* 'made' and the like, which one can find in the usage. It is stated by a *vārttika* on this rule that items such as *śreṇi* 'group' are to be treated as used in the sense of affix *CvI* (*cvyartha*). Commentators identify the sense of *CvI* as *abhūtatadbhāva* 'that which became something which it previously was not'. Hence, *śreṇi* refers to a group of people who earn their livelihood by pursuing a common profession or business (*PM* ad *Kāś* II: 80: *ekena śilpena paṇyena vā ye jīvanti teṣāṃ samūhaḥ*). With the addition of the

abhūtatadbhāva sense of *CvI*, the meaning of *śreṇi* would thus become: 'a grouping of people earning their livelihood by pursuing a common profession or business, who were not previously grouped'. Note that the word *ādi* in *śreṇyādayaḥ* accordingly means *vyavasthā* or *prakāra* 'specific type'; *śreṇyādayaḥ* would therefore mean *śreṇi*, and the like, available in usage.

2.1.60 **क्तेन नञ्विशिष्टेनानञ्**

ktena nañviśiṣṭena anañ
/ *ktena* 3/1 *nañviśiṣṭena* 3/1 = *nañ eva viśiṣṭo yasmin* (*bv.*), *tena*; *anañ* 1/1 = *na vidyate nañ yasmin* (*bv.*) /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
nañviśiṣṭena ktāntena samānādhikaraṇena saha anañ ktāntaṃ samasyate, tatpuruṣaś ca samāso bhavati

A *pada* which ends in *sUP*, contains a stem in *Kta* and does not contain *naÑ* 'not' optionally combines in a *tatpuruṣa* compound with a syntactically related coreferential *pada* which ends in *sUP* and is rendered distinct only by *naÑ*.

EXAMPLES:

kṛtākṛtam 'partly done, partly not done'
bhuktābhuktam 'partly eaten, partly not eaten'
pītāpītam 'partly drunk, partly not drunk'

1. The word *viśiṣṭa* is used here in the sense of *adhika*, which can sometimes give the sense of *avadhāraṇa* 'specific delimitation', as in *devadatto yajñadattāt svādhyāyena viśiṣṭaḥ* 'Devadatta excels Yajñadatta by study'. This sentence thus implies that Devadatta and Yajñadatta differ only in respect of studying. Their other qualities remain the same. Sometimes, however, *adhika* may mean the opposite of non-delimitation (*niravadhāraṇa*). This preceding sentence can also give one the impression that Devadatta and Yajñadatta are different as far as study goes; whether or not their other qualities are similar is left without any specificity. The meaning of *avadhāraṇa* or *niravadhāraṇa* has to be determined on the basis of context, since the form of the sentence happens to be the same. In the context of this rule, a word containing a non-*ncÑ* item which ends in affix *Kta* is combined with another word in syntactic coordination, provided this latter also contains an item which ends in *Kta*, and is distinguished (*viśiṣṭa*) from the former by means of *naÑ*.

Let us take the example of *kṛtākṛtam*, where the two constituents are *kṛtam* and *akṛtam*. They both contain forms ending in the suffix *Kta*, such that one (*kṛta*) is distinguished from the other (*akṛta*) only on the basis of the negative *naÑ*. It is this sense of *sāvadhāraṇa* 'with delimitation' which is implied here by the use of *nañviśiṣṭa* 'that which has been distinguished by *naÑ*'. Obviously, the difference between the two constituents has to be

minimally identifiable to the difference of *naÑ*. But what of examples like *uditānuditam* 'partly spoken, partly unspoken', where a word containing a *Kta* (*udita*) is combined with another syntactically coordinate word which contains *Kta* (*anudita*) and is distinguished by *naÑ*? The derivation of *anudita* entails the introduction of the augment *nUṬ*, in addition to *naÑ*. Thus, the difference between *udita* and *anudita* is not limited only to *naÑ*. Commentators say (see *PM* ad *Kāś*) that the introduction of *nUṬ* forms part of the qualification by *naÑ*. That is, a *naÑ* derivate such as *anudita* is obligatorily going to have the introduction of *nUṬ*. In this sense, *anudita* is still minimally different from *udita*. The *naÑ* alone, especially since it also conditions *nUṬ*, is responsible for the difference. The compound will thus be permitted.

What does a compound like *kṛtākṛtam* denote? How could one thing be called 'made' and at the same time 'not made'? One can understand the meaning of this compound by transferring the quality of the 'unmade' part to the whole. Thus, a part 'unmade' will render the whole, in a manner of speaking, 'unmade'. After all, a son can be called a 'non-son' (*aputra*) for failing to do something for which he may be called a 'son' (*putra*).

As an expatiation of *bahulam* of 2.1.57 two *vārttika* are offered in the *Mahābhāṣya* (II: 638): (i) that compounds like *kṛtāpakṛtam* 'done, though badly', etc., should be enumerated; (ii) that examples such as *gatapratyāgatam* 'went out to go to place X, though returned without reaching there', etc., should also be enumerated. Patañjali proposes to account for these examples by replacing the meaning condition of *nañviśiṣṭena* by *anañ ktāntena kriyāvisamāptau* 'with a non-*naÑ* word containing *Kta* when the sense is that of lack of properly completing the action'. See *Mbh* (ibid.).

2.1.61 सन्महत्परमोत्तमोत्कृष्टाः पूज्यमानैः

sanmahatparamottamotkṛṣṭāḥ pūjyamānaiḥ
/ *san...kṛṣṭāḥ* 1/3 (*itar. dv.*); *pūjyamānaiḥ* 3/3/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
'*sat, mahat, parama, uttama, utkṛṣṭa*' *ity ete pūjyamānaiḥ saha samasyante, tatpuruṣaś ca samāso bhavati*
A *pada* which ends in *sUP* and contains *sat* 'true, wise, good', *mahat* 'great', *parama* 'best', *uttama* 'excellent', or *utkṛṣṭa* 'excellent' optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and denotes one deserving of respect or praise.

EXAMPLES:

satpuruṣaḥ 'a wise man'

mahāpuruṣaḥ 'a great man'
paramapuruṣaḥ 'the best man'
uttamapuruṣaḥ 'an excellent man'
utkṛṣṭapuruṣaḥ 'an excellent man'

1. The word *pūjyamānaiḥ* conditions the use of *sat*, etc., in the sense of praise (*pūjā*). If this were not so, how else could praise be denoted in an example like *mahāpuruṣaḥ* 'a great man', where *puruṣa* simply means 'man'? The word *sat*, by 3.2.127 *tau sat*, cannot refer to an item ending in affixes *ŚatṚ* and *ŚānaC*. For, they do not denote praise. Further, how do compounds such as *mahodadhiḥ* 'a great ocean' and *mahādrumaḥ* 'a great tree' come to be formed? There is no praise involved in them. The compound simply states the fact of the great expanse of the ocean or the unusual height of the tree. Such compounds can be formed by 2.1.57 *viśeṣaṇaṃ viśeṣyeṇa bahulam*. Or, the word *bahulam* could be carried here from that rule.

2.1.62 वृन्दारकनागकुञ्जरैः पूज्यमानम्

vṛndārakanāgakuñjaraiḥ pūjyamānam
/ *vṛndārakanāgakuñjaraiḥ* 3/3 = (*itar. dv.*); *pūjyamānam* 1/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
'*vṛndāraka, nāga, kuñjara*' *ity etaiḥ pūjyamānavāci subantaṃ samasyate, tatpuruṣaś ca samāso bhavati*
A *pada* which ends in *sUP* and denotes someone deserving of respect or praise combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and contains *vṛndāraka* 'excellent; beautiful', *nāga* 'snake; the best of any kind', or *kuñjara* 'elephant; the most prominent kind'.

EXAMPLES:

govṛndārakaḥ 'an excellent ox; a beautiful cow'
aśvavṛndārakaḥ 'an excellent horse'
gonāgaḥ 'excellent cow'
aśvanāgaḥ 'excellent horse'
gokuñjaraḥ 'a cow of quality'
aśvakuñjaraḥ 'a horse of quality'

1. A word which denotes 'he who ought to be praised' is combined with a word constituted by *vṛndāraka*, *nāga*, and *kuñjara*. The very use of *pūjyamānam* 'ought to be praised' makes one expect that *vṛndāraka*, *nāga*, and *kuñjara* would denote praise (*pūjā*). Words such as *vṛndāraka* and *kuñjara*, as well as *nāga*, denote the class (*jāti*) of *deva* 'gods' and *gaja* 'elephants', respectively. The question of *pūjā* 'praise' would not arise if

they did not serve as *upamāna* 'standard of comparison'. Since *vyāghra*, etc., are given as part of *ākṛtigaṇa*, where *vṛndāraka*, etc., can also be included, rule 2.1.56 *upamitaṃ vyāghrādibhiḥ...*, itself, can account for the examples of this rule. Why, then, is this rule needed? So that the compound is permitted only when praise (*pūjā*), and not *nindā* 'reproach', is denoted.

2.1.63 **कतरकतमौ जातिपरिप्रश्ने**

katarakatamau jātiparipraśne
/ *katarakatamau* 1/2 (*itar. dv.*); *jātiparipraśne* 7/1 = *jāteḥ paripraśnaḥ* (*ṣaṣ. tat.*), *tasmin* /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
katarakatamau jātiparipraśne varttamānau samarthena supā saha samasyete, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP*, contains *katara* 'which one of two' or *katama* 'who one of many', and denotes *jāti* 'class' about which questions are asked, optionally combines in a *tatpuruṣa* compound with a syntactically related coreferential *pada*.

EXAMPLES:

katarakaṭhaḥ 'who is the Kaṭha of these two'
katamakaṭhaḥ 'who is the Kaṭha among these people'
katarakālāpaḥ 'who is the Kālāpa of these two'
katamakālāpaḥ 'who is the Kālāpa among these people'

1. This rule allows for the formation of a compound of words constituted by *katara* 'who of the two' and *katama* 'who of the many' with words in syntactic coordination with them when *katara* and *katama* are questioning about a class (*jātiparipraśna*). How is it that the words *katara* and *katama* must be qualified with *jātiparipraśna*? Is this meaning not already understood? Such a qualification is necessary because *katara* and *katama* may be used in questioning something other than a class. Consider, for example, the following sentences:

(*i*) *kataro bhavator devadattaḥ* 'which one of you is Devadatta?'
(*ii*) *katamo bhavatāṃ devadattaḥ* 'who among you is Devadatta?'

2.1.64 **किं क्षेपे**

kiṃ kṣepe
/ *kiṃ* 1/1 *kṣepe* 7/2/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
'*kim*' *ity etat kṣepe gamyamāne supā saha samasyate, tatpuruṣaś ca samāso bhavati*

A *pada* which ends in *sUP* and contains *kim* 'who, what, which' optionally combines with a syntactically related coreferential *pada* which ends in *sUP* provided *kṣepa* 'contempt' is denoted.

EXAMPLES:

kiṃrājā 'a worthless king'
kiṃsakhā 'a worthless friend'
kiṃgauḥ 'a worthless cow'

1. Rule 5.4.70 *kimaḥ kṣepe* blocks the introduction of any *samāsānta* (5.4.68 *samāsāntāḥ*) affix after compounds covered by this rule.

2.1.65 **पोटायुवतिस्तोककतिपयगृष्टिधेनुवशावेहद्बष्कयणीप्रवक्तृश्रोत्रियाध्यापकधूर्तैर्जातिः**

poṭāyuvatistokakatipayagṛṣṭidhenuvaśāvehadvaṣkayaṇīpravaktṛ-śrotriyādhyāpakadhūrtair jātiḥ
/ *poṭā...dhūrtaiḥ* 1/3 = *poṭā ca yuvatiś ca stokaś ca katipayaṃ ca gṛṣṭiś ca dhenuś ca vaśā ca vehad ca vaṣkayaṇī ca pravaktā ca śrotriyaś ca adhyāpakaś ca dhūrtaś ca* = *poṭā...dhūrtāḥ (itar. dv.), taiḥ; jātiḥ* 1/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
poṭādibhiḥ saha jātivāci subantaṃ samasyate, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and denotes *jāti* 'class' optionally combines in a *tatpuruṣa* compound with a syntactically related coreferential *pada* which ends in *sUP* and contains any of the following:
poṭā 'a hermaphrodite'
yuvati 'young female'
stoka 'a little'
katipaya 'several, some, so many'
gṛṣṭi 'a cow which has delivered only once'
dhenu 'a cow which has recently delivered'
vaśā 'a barren cow'
vehat 'a cow that miscarries'
vaṣkayaṇī 'a cow with a young calf'
pravaktṛ 'an expounder, announcer'
śrotriya 'learned in the Veda, conversant with sacred knowledge'
adhyāpaka 'teacher'
dhūrta 'cunning, crafty'

EXAMPLES:

ibhapoṭā 'young female elephant'
ibhayuvatiḥ 'a young female elephant'
agnistokaḥ 'a little fire'
udaśvitkatipayam 'some buttermilk'
gogṛṣṭiḥ 'a cow which has delivered only once'

godhenuḥ 'a cow which has recently delivered'
govaśā 'a barren cow'
govehat 'a cow that miscarries'
govaṣkayaṇī 'a cow with a young calf'
kaṭhapravaktā 'a Kaṭha who is an expounder'
kaṭhaśrotriya 'a Kaṭha who is learned in the Veda'
kaṭhādhyāpakaḥ 'a Kaṭha who is a teacher'
kaṭhadhūrtaḥ 'a Kaṭha who is crafty (skilled)'

1. This rule allows the optional formation of compounds between a word which denotes *jāti* 'class' and a word in syntactic coordination containing *poṭā*, etc. Words denoting *jāti* are referenced as qualifieds (*viśeṣya*) as against *poṭā*, etc., which are given as adjectives (*viśeṣaṇa*). The formation of these compounds can be accomplished by 2.1.57 *viśeṣaṇaṃ viśeṣyeṇa...*, though *poṭā*, etc., must in that case be preplaced. The compounds covered by this rule require the adjectives to be postposed.

2.1.66 प्रशंसावचनैश्च

praśaṃsāvacanaiś ca
/ *praśaṃsāvacanaiḥ* 3/3 *ca* 0 /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49, *jātiḥ* #65)
jātivāci subantaṃ praśaṃsāvacanaiḥ saha samasyate, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and denotes *jāti* optionally combines in a *tatpuruṣa* compound with a syntactically related coreferential *pada* which ends in *sUP* and denotes *praśaṃsā* 'praise'.

EXAMPLES:

goprakāṇḍam 'an excellent cow'
aśvaprakāṇḍam 'an excellent horse'
gomatallikā 'an excellent bull'
aśvamatallikā 'an excellent horse'
gomacarcikā 'an excellent cow'
aśvamacarcikā 'an excellent horse'

1. This rule allows the formation of compounds of words which denote *jāti* with words in syntactic coordination denoting *praśaṃsā* 'praise'. There are three ways to denote praise (*praśaṃsāvacana*);

(*i*) A word denoting *jāti* may denote praise when used for something else (*parārthe prayujyamānāḥ praśaṃsām ācakṣate*). Thus, *siṃho devadattaḥ* 'Devadatta is a lion'.
(*ii*) Sometimes a qualifier-qualified relation (*guṇaguṇī*) results in praise.

Thus, *ramaṇīyo grāmaḥ* 'a beautiful village'.

(*iii*) On occasion, certain words conventionally denote praise. Thus, *gomatallikā* 'an excellent cow'.

The word *vacana* in this rule is used so that compounds with conventional meaning (iii) alone should be formed with this rule. That is, examples from (i) will be ruled out. Furthermore, compounds which by convention (*rūḍhi*) denote praise are used in their own respective genders: they do not change for the gender of the others. Thus, *aśvamatallikā* 'an excellent horse', where *matallikā* does not change for the masculine 'horse' (*aśva*).

2.1.67 **युवा खलतिपलितवलिनजरतीभिः**

yuvākhalatipalitavalinajaratībhiḥ
/ *yuvā...jaratībhiḥ* 3/3 (*itar. dv.*) /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
khalatyādibhiḥ samānādhikaraṇaiḥ saha yuvaśabdaḥ samasyate, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and contains *yuvā* 'young' optionally combines, in a *tatpuruṣa* compound, with a syntactically related co-referential *pada* which ends in *sUP* and contains any of the following:

khalati 'bald'
palita 'greyhaired'
valina 'wrinkled'
jaratī 'aged, old (female)'

EXAMPLES:

yuvakhalatiḥ 'a young man who has gone bald'
yuvakhalatī 'a young woman who has gone bald'
yuvapalitaḥ 'a young man who has gone grey'
yuvapalitā 'a young woman who has gone grey'
yuvavalinaḥ 'a young man who has wrinkled'
yuvavalinā 'a young woman who has wrinkled'
yuvajaran 'a young man who looks old'
yuvajaratī 'a young woman who looks old'

1. Note that the word *yuvā* 'young' is used in the masculine whereas the word *jaratī* 'old' is used in the feminine. The formation of compounds obtains under the condition of syntactic coordination (*sāmānādhikaraṇya*). But *yuvā*, masculine, and *jaratī*, feminine, cannot share syntactic coordination. Their meanings are also diametrically opposed. Commentators inform us that, by using *jaratī* in feminine, Pāṇini wants to indicate the *paribhāṣā* (72): *prātipadikagrahaṇe liṅgaviśiṣṭasyāpi grahaṇam* 'reference to a particular nominal stem also includes reference to its particular genders . One can thus infer *yuvā jaran* as well as *yuvatir jaratī*

from *yuvā jaratī*. Incidentally, the opposition of meaning between *yuvā* and *jaratī* can be reconciled by the fact that someone may look old even in youth, due to malnutrition, etc. Thus, the referent of *yuvā* or *jaratī* is not limited to masculine or feminine only. Others find problems with the exact interpretation of the *paribhāṣā* just cited. For example, a reference to a particular gender may be available if the reference is made by the nominal stem. Can reference to the masculine be made by the reference of the stem *jarat* in the feminine? It probably cannot. Kaiyaṭa (see Mīmāṃsaka 1974: 155) therefore proposes *jaradbhiḥ* as another reading for *jaratībhiḥ*.

2. See note (2) under rule 2.1.55 *upāmānāni sāmānyavacanaiḥ* for an additional explanation of the formulation of this rule, especially since compounds covered by the current rule may also be formed under provisions of rule 2.1.57 *viśeṣaṇam...*

2.1.68 कृत्यतुल्याख्या अजात्या

kṛtyatulyākhyā ajātyā
/ *kṛtyatulyākhyā* 1/1 = *tulyasya ākhyā* = *tulyākhyā* (*ṣaṣ. tat.*), *kṛtyaś ca tulyākhyā ca* (*itar. dv.* with int. *tat.*); *ajātyā* 3/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
A *pada* which ends in *sUP*, and contains either a stem in *kṛtya* or a stem synonymous with *tulya* 'equal, similar', optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and does not denote *jāti* 'class'.

EXAMPLES:

bhojyoṣṇam 'warm food'
bhojyalavaṇam 'salty food'
pānīyaśītam 'cold drink'
tulyaśvetaḥ 'equally white'
tulyamahān 'equally great'
sadṛśaśvetaḥ 'equally white'
sadṛśamahān 'equally great'

1. This rule allows for a word which contains an item ending in a *kṛtya* (3.1.95 *kṛtyāḥ*) affix, or a word constituted by *tulya* 'equal' or its synonym, to combine in a *tatpuruṣa* compound with another word in syntactic co-ordination, provided this latter does not denote *jāti* 'class'. We thus get examples like *bhojyoṣṇam* 'warm food', *tulyaśvetaḥ* 'equally white', and *sadṛśaśvetaḥ* 'id.' A compound parallel to *bhojya odanaḥ* will not be permitted by this rule, simply because *odanaḥ* 'rice' denotes *jāti*.

The word *ākhyā* 'denotation' is included so that *tulya* is not treated as denoting its form (*svarūpa*) only. The word *kṛtya*, itself, does not denote

its form only. By its association (*sāhacarya*), *tulya* should also not be restricted in this way.

Words such as *uṣṇam* in *bhojyoṣṇam* are qualifiers (*guṇavācaka*). As such, and especially in the absence of the present rule, they will be placed first in the compound (2.1.57 *viśeṣaṇam...*). This rule thus facilitates their post-placement (*paranipāta*). Note that compounds such as *tulyamahān* can be formed by 2.1.61 *sanmahat*.... However, this rule will be preferred over 2.1.61 for the reason that it is subsequent (*paratvāt*). Rule 1.4.2 *vipratiṣedhe paraṃ kāryam* will facilitate this. Observe that *sāvakāśatva* 'valid scope of application elsewhere' of rules in conflict is one of the conditions of *tulyabalatā* 'equal strength of rules in conflict' which rule 1.4.2 implies. Our present rule is *sāvakāśa* in examples like *tulyaśvetaḥ* 'equally white', while rule 2.1.61 has its valid scope in examples like *mahāpuruṣaḥ* 'great man'. The other condition of *tulyabalatā*, i.e., simultaneous (*yugapad*) application of two rules in a single context, entails examples such as *tulyamahān*, where rules 2.1.61 *sanmahat*... and 2.1.68 *kṛtyatulyākhyā*... become applicable at the same time. Incidentally, *tulya* in *tulyaśvetaḥ* denotes the sense of equality (*tulyārtha*), whereas *mahat* in *mahāpuruṣaḥ* denotes inequality (*atulyārtha*).

2.1.69 वर्णो वर्णेन

varṇo varṇena
/ *varṇaḥ* 1/1 *varṇena* 3/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
varṇaviśeṣavāci subantaṃ varṇaviśeṣavācinā subantena samānādhikaraṇena saha samasyate, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and denotes *varṇa* 'color' optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and denotes *varṇa*.

EXAMPLES:

kṛṣṇasāraṅgaḥ 'black and (at the same time) variegated'
lohitasāraṅgaḥ 'red and (at the same time) variegated'
kṛṣṇaśabalaḥ 'black and (at the same time) brindled'
lohitaśabalaḥ 'red and (at the same time) brindled'

1. The word *varṇa* in both its occurrences is to be interpreted as denoting 'a particular word for color'. In addition, both compound constituents must be in syntactic coordination (*sāmānādhikaraṇya*). Thus, we get the example *kṛṣṇaśabalaḥ* 'black and (at the same time) brindled', or 'variegated black', where *kṛṣṇa* is in syntactic coordination with *śabalaḥ* 'variegated', by way of (*dvāreṇa*) being the part (*avayava*) present in the whole (*samudāya*) constituted by variegation.

2.1.70 कुमारः श्रमणादिभिः

kumāraḥ śramaṇādibhiḥ
/ *kumāraḥ* 1/1 *śramaṇādibhiḥ* 3/3/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
kumāraśabdaḥ śramaṇādibhiḥ saha samasyate, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and contains the stem *kumāra* 'boy' optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* which ends in *sUP* and contains a stem enumerated in the list headed by *śramaṇa* 'ascetic'.

EXAMPLES:

kumāraśramaṇā 'a female ascetic who is still young'
kumārādhyāpakaḥ 'a teacher who is still very young'

1. Note that *śramaṇā* 'female ascetic, hard-working', etc., are given in the feminine. Consequently, their compounds should be formed with the corresponding feminine constituent *kumārī*. This is necessitated because *kumāra* is given in the masculine. See (*Pbh* 72) *prātipadikagrahaṇe...* for details. Also refer to note 1 under rule 2.1.67 *yuvā khalati....*

2.1.71 चतुष्पादो गर्भिण्या

catuṣpādo garbhiṇyā
/ *catuṣpādaḥ* 1/1 = *catvāraḥ pādā yeṣām* (*bv.*), *te*; *garbhiṇyā* 3/1/
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
catuṣpād vācinaḥ subantā garbhiṇīśabdena samasyante, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and denotes a *catuṣpād* 'quadruped' optionally combines, in a *tatpuruṣa* compound, with a syntactically related coreferential *pada* constituted by *garbhiṇī* 'pregnant'.

EXAMPLES:

gogarbhiṇī 'a pregnant cow'
ajāgarbhiṇī 'a pregnant goat'

2.1.72 मयूरव्यंसकादयश्च

mayūravyaṃsakādayaś ca
/ *mayūravyaṃsakādayah* 1/3 = '*mayūravyaṃsaka*' *ādir yeṣām* (*bv.*), *te; ca* Ø /
(*samāsaḥ* #3, *saha supā* #4, *sup* #9, *vibhāṣā* #11, *tatpuruṣaḥ* #22, *samānādhikaraṇena* #49)
mayūravyaṃsakādayaḥ śabdās tatpuruṣasaṃjñā bhavanti

Items enumerated in the list headed by *mayūravyaṃsaka* 'as cunning as a peacock' are also termed *tatpuruṣa.*

EXAMPLES:

mayūravyaṃsakaḥ 'as cunning as a peacock'
chātravyaṃsakaḥ 'as cunning as a student'
kāmbojamuṇḍaḥ 'one whose shaven head is like the head of a resident of Kamboja'
yavanamuṇḍaḥ 'one whose shaven head is like the head of a Yavana (Ionian)'

1. This rule allows for the formation of compounds such as *mayūravyaṃsakaḥ* by *nipātana* 'ad hoc'. The word *ca* is used in the sense of *avadhāraṇa,* exact delimitation of the scope. That is, no further compounds such as **paramamayūravyaṃsakaḥ* would be permitted. Note that words such as *vyaṃsaka* qualify for post-placement (*paranipāta*) on the strength of this rule. This is true of all the other examples including *yavanamuṇḍaḥ* 'one whose shaven head is like the head of a Yavana (Ionian)'. Examples such as *hastegṛhya* will qualify for *LyaP* by 7.3.37 *samāso' nañpūrve ktvo lyap.* Elsewhere, *haste gṛhītvā* 'after having grabbed in the hand' and *punar datvā* 'after having given again' would entail *Ktvā* as usual.

2.2.1 **पूर्वापराधरोत्तरमेकदेशिनैकाधिकरणे**

pūrvāparādharottaram ekadeśinā ekādhikaraṇe
/ pūrvāparādharottaram 1/1 = *pūrvaṃ ca aparaṃ ca adharaṃ ca uttaraṃ ca* (*sam. dv.*); *ekadeśinā* 3/1 = *ekadeśo 'syāsti* (*karm.*), *tena*; *ekādhikaraṇe* 7/1 = *ekaṃ ca tad adhikaraṇaṃ ca* (*karm.*). *tasmin /*
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22)
avayavivācinā subantena saha pūrva, apara, adhara, uttaraśabdāḥ sāmarthyād ekadeśavacanāḥ samasyante, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and contains *pūrva* 'fore', *apara* 'back', *adhara* 'lower', or *uttara* 'upper' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP* and refers to a single substance (*ekādhikaraṇa*) with parts (*ekadeśin*).

EXAMPLES:

pūrvakāyaḥ 'the front of the body'
aparakāyaḥ 'the back of the body'
adharakāyaḥ 'the lower part of the body'
uttarakāyaḥ 'the upper part of the body'

1. *Kāśikā* explains the word *ekadeśin* as *avayavin* 'that which has parts;

a whole'. Because they are syntactically related (*samartha*) with items denoting an *ekadeśin*, *pūrva* 'front', etc., are treated as denoting parts (*ekadeśa-vacana*). Besides, if *pūrva*, etc., are not treated as denoting parts, the second constituent of the compound referred to here as denoting a whole makes no sense. For, a part (*ekadeśa*) necessarily implies a corresponding whole (*ekadeśin*). It is for this reason that a generalized reference with *pūrva*, etc., is interpreted as having been made in the particular sense of a part. The word *ekādhikaraṇa* has been used here as a qualifier (*viśeṣaṇa*) to *ekadeśin*, thereby giving the sense of 'that which is one, and is, at the same time, also the substratum, i.e., substance (*ekaṃ ced adhikaraṇam ekadravyam ekadeśi bhavati*). This is what *Nyāsa* calls *ekasaṃkhyāviśiṣṭaṃ dravyam* 'a thing qualified by the number one'.

Since an *ekadeśin* serves as the locus or substratum for its parts, the *saptamī* is acceptable in *ekādhikaraṇe*. But to accept the qualifier status of *ekādhikaraṇa* on the one hand, and the instrumental which denotes the qualified in the word on the other, is problematic. The syntactic coordination (*sāmānādhikaraṇya*) necessary for items termed qualifier-qualified (*viśeṣaṇa-viśeṣya*) thus becomes impaired. Jinendra (*Nyāsa* ad *Kāś* II: 96) suggests that *saptamī* in *ekādhikaraṇe* is used in the sense of *tṛtīyā* (*ekādhikaraṇa ity atra tṛtīyārtha evaiṣā saptamī*). It is not a *saptamī* introduced by 2.3.36 *saptamy adhikaraṇe ca* (*na saptamy adhikaraṇe ca ity anena*).

Note that the constituency of compounds covered by this rule entails *avayavāvayavisambandha* 'part-whole relationship'. This may occasion the use of *ṣaṣṭhī* 'genitive' after items denoting a whole (*ekadeśin*). Additionally, such a compound should then be covered by 2.2.8 *ṣaṣṭhī*. *Kāśikā* states that the formulation of this rule constitutes an exception (*apavāda*) to genitive compound (*ṣaṣṭhīsamāsāpavādo' yaṃ yogaḥ*).

The condition of *ekadeśinā* will not permit a compound parallel to *pūrvaṃ nābheḥ kāyasya* 'part of the body prior to the navel', where *nābhi* is used in the ablative (*pañcamī*) to denote *avadhi* 'limit' marked by association with *diś* 'direction'. The navel thus cannot be called *ekadeśin*. Similarly, *ekadeśitva* 'partness' must also be qualified by *ekatva* 'singularity'. A compound parallel to *pūrvaṃ chātrāṇāṃ* 'the front of the students' cannot therefore be permitted, since even though the group can serve as *ekadeśa*, the students are many.

2.2.2 अर्धं नपुंसकम्

ardhaṃ napuṃsakam
/ *ardham* 1/1 *napuṃsakam* 1/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22, *ekadeśinaikādhikaraṇe* #1)
'*ardham*' *ity etad napuṃsakam ekadeśinaikādhikaraṇena samasyate, tatpuruṣaś ca samāso bhavati*

A *pada* which contains *ardha* 'half' in neuter optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP* and refers to a single substance with parts.

EXAMPLES:

ardhapippalī 'half of a pepper'
ardhakośātakī 'half of a squash'

1. Note that the words *ekadeśinā* and *ekādhikaraṇe* are carried. This obviously limits the compound constituency in a way similar to that of the preceding rule, though with a qualification. *Kāśikā* informs us that *ardham* 'exact half' is to be interpreted here as *āviṣṭaliṅga* 'fixed gender; neuter'. The word *ardha* in neuter is invariably used in the sense of an exact half. The question of gender in this context becomes pertinent, since a word denoting part (*avayava*) will normally be expected to take the gender of the whole whose part it denotes (*abhidheya*). A word denoting part thus can be seen in all the three genders; but the part which consists of the exact half of the whole will, in the present case, have to be in neuter.

A compound with *ardham* is permitted when it is used in the neuter, consequent upon denoting an exact half. This again is an exception to the genitive compound, where we get an example such as *ardhapippalī*, parallel to *ardhaṃ pippalyāḥ*. Incidentally, *ardhapippalī* is a feminine in consonance with *pippalī*, the second constituent of the compound (2.4.26 *paraval liṅgaṃ dvandvatatpuruṣayoḥ*). It does not go through the shortening (*hrasva*) of its final *ī*, since *pippalī* is not an *upasarjana* (cf. 1.2.43 *prathamānirdiṣṭa samāsa upasarjanam*; 1.2.48 *gostriyor upasarjanasya*).

Note that the condition of *napuṃsakam* rules the compound *grāmārdhaḥ*, parallel to *grāmasya ardhaḥ*, out of the scope of this rule. For *ardha* 'half', here, denotes 'part, section' (*khaṇḍa*), as opposed to an 'exact half' (*samāṃśa*). The condition of *ekadeśinā* blocks the formation of a compound between *ardham* and *devadattaḥ* of *ardhaṃ paśor devadattasya* 'half of Devadatta's cattle'. For, *devadatta* is the owner (*svāmin*) and hence is *anekadeśin* 'residing in more than one locus' in relation to the cattle he owns. Contrarily, *paśuḥ* 'cattle', because it has a single locus, can be viewed as an *ekadeśin* in a compound, such as, *ardhapaśuḥ*. A compound parallel to *ardhaṃ pippalīnām* will not be permitted either, since *pippalī* is plural and violates the condition of *ekādhikaraṇe*.

2.2.3 **द्वितीयतृतीयचतुर्थतुर्याण्यन्यतरस्याम्**

dvitīyatṛtīyacaturthaturyāṇy anyatarasyām
| dvitīya...turyāṇi 1/3 (*itar. dv.*); *anyatarasyām* Ø |
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22, *ekadeśinaikādhikaraṇe* #1)

dvitīyādīni śabdarūpāṇi ekadeśinaikādhikaraṇena sahānyatarasyāṃ samasyante, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and contains *dvitīya* 'second', *tṛtīya* 'third', *caturtha* 'fourth', or *turya* 'fourth' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP* and refers to a single substance with parts.

EXAMPLES:

dvitīyabhikṣā 'second portion of alms'
bhikṣādvitīyam 'id.'
tṛtīyabhikṣā 'third portion of alms'
bhikṣātṛtīyam 'id.'
caturthabhikṣā 'fourth portion of alms'
bhikṣācaturtham 'id.'
turyabhikṣā 'fourth portion of alms'
bhikṣāturyam 'id.'

1. This rule also forms an exception to the genitive compounds. However, since Pāṇini uses *anyatarasyām* 'optionally', a genitive compound can also be allowed additionally. The restriction of *pūraṇaguṇa...* (2.2.11) does not apply here, because of the use of *anyatarasyām*. Thus, we get *dvitīyabhikṣā*, parallel to *dvitīyaṃ bhikṣāyāḥ*, 'second portion of alms'. A genitive compound under the provision of *anyatarasyām* will be *bhikṣādvitīyam*. See note 2 under 2.1.18 *pāre madhye ṣaṣṭhyā vā* on how rule 2.1.11 *vibhāṣā* interacts with *anyatarasyām* of this rule.

It is stated that a compound with *turīya*, in addition to *turya*, is desired. Thus, *turīyabhikṣā*, parallel to *turīyaṃ bhikṣāyāḥ*, or *bhikṣāturīyam*.

Note that, given *dvitīyaṃ bhikṣāyā bhikṣukasya*, *bhikṣuka* cannot be combined with *dvitīyam*, since it does not denote the *ekadeśin*. Similarly, the plural of *bhikṣāṇām* in *dvitīyaṃ bhikṣāṇām* will violate the condition of *ekādhikaraṇa*. Compounds parallel to these strings will, thus, not be permitted.

2.2.4 **प्राप्तापन्ने च द्वितीयया**

prāptāpanne ca dvitīyayā
/ *prāptāpanne* 1/2 (*itar. dv.*); *ca* Ø *dvitīyayā* 3/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22, *anyatarasyām* #3)
'*prāpta, āpanna' ity etau dvitīyāntena saha samasyete, tatpuruṣaś ca samāso bhavati*
A *pada* which ends in *sUP* and contains *prāpta* 'obtained' or *apānna* 'reached' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *dvitīyā* 'second triplet of *sUP*'.

EXAMPLES:

prāptajīvikaḥ 'he who has obtained his livelihood'
jīvikāprāptaḥ 'id.'
āpannajīvikaḥ 'he who has reached (attained) his livelihood'
jīvikāpannaḥ 'id.'

1. Note that *ekadeśinā* and *ekādhikaraṇe* are not carried here, because they are incompatible. The compound formation allowed by this rule is limited to the constituency of *prāpta* and *āpanna*, along with a word in *dvitīyā* 'accusative'. Obviously, the provision of this rule may be treated as an exception to 2.1.24 *dvitīyāśritātīta*.... But *anyatarasyām* will again permit the formation of compounds specific to rule 2.1.24. Thus, this rule allows *prāptajīvikaḥ*, parallel to *jīvikāprāptaḥ* of 2.1.24. The word *jīvikā* will be termed *upasarjana* by 1.2.44 *ekavibhakti*.... Consequently, its long *ā* will be replaced with short (1.2.48 *gostriyor*...). How is it that *prāptajīvikaḥ* is not assigned feminine gender according to *jīvikā* (cf. 2.4.26 *paraval liṅgaṃ dvandva*...)? An exception to gender in accordance with the following constituent is made by the *Mahābhāṣya* (see *vt.* I, under 2.4.26 *dvigu-prāptāpannālaṃ*...). Refer, also, to the *Mahābhāṣya* under this rule for a much finer interpretation of this rule, especially in view of the derivation of *prāptajīvikā*, a compound parallel to *jīvikāṃ prāptā strī* 'a woman who has obtained her livelihood'.

2.2.5 कालाः परिमाणिना

kālāḥ parimāṇinā
/ *kālāḥ* 1/3 *parimāṇinā* 3/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22)
parimāṇavācinā subantena saha sāmarthyāt parimāṇavacanāḥ kālaśabdāḥ samasyante, tatpuruṣaś ca samāso bhavati
A *pada* which ends in *sUP* and contains a stem denoting *kāla* 'time, duration' optionally combines in a *tatpuruṣa* compound with a *pada* ending in *sUP* and containing a stem denoting *parimāṇin* 'item to be measured'.

EXAMPLES:

māsajātaḥ 'born a month ago'
saṃvatsarajātaḥ 'born a year ago'
dvyahajātaḥ 'born two days ago'
tryahajātaḥ 'born three days ago'

1. This rule limits the constituency of its examples to *parimāṇaparimāṇi-sambandha* 'measure-measured relationship'. The word *parimāṇin* thus

refers to the thing which may be measured. Based on the necessary condition of *sāmarthya* between that which denotes a *parimāṇin* and that which denotes time (*kāla*), we conclude that the latter denotes the measure (*parimāṇa*). Accordingly, a word which denotes time becomes the measure of that which is measured (*parimāṇin*). The *parimāṇaparimāṇi-sambandha* would naturally require the use of genitive after the item which denotes *parimāṇin*. More particularly, a compound with *parimāṇin* in genitive may become the subject of genitive compound (*ṣaṣṭhīsamāsa*).

A genitive compound formed under 2.2.8 *ṣaṣṭhī* would yield the form **jātamāsaḥ*, where the constituent ending in genitive will have to be pre-placed. This rule favors the form *māsajātaḥ*, with the preplacement of the non-genitive constituent *māsaḥ*. It is in this sense that the present rule is treated as a exception to 2.2.8. Commentators also note that *māsa-jātaḥ* can also be derived as a *bahuvrīhi* compound, parallel to *māso jātaḥ asya* 'he of whom one month has passed', with practically no difference of meaning or accent.

It is argued that a person born (*jātaḥ*) does not necessarily become *parimāṇin* with reference to the month (*māsa*), a measure of time (*pari-māṇa*). If this were so, a compound such as *māsajātaḥ*, parallel to *māso jātasya*, would not be permitted. The discrepency, however, is reconciled by the fact that the function of an item such as *māsa*, as a measure of time, can only be understood in connection with items such as *jātaḥ*, the relative *parimāṇin*.

2.2.6 नञ्

nañ
/ nañ Ø */*
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22)
nañ samarthena subantena saha samasyate, tatpuruṣaś ca samāso bhavati
A *pada* constituted by *naÑ* 'not' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP*.

EXAMPLES:

abrāhmaṇaḥ 'a non-Brāhmaṇa'
avṛṣalaḥ 'a non-Vṛṣala'

1. The *Mahābhāṣya* (II: 666-76) discusses in detail the logico-semantic implications of negation in general, and of a negative (*na*) compound in particular. The example discussed is *abrāhmaṇa* of *abrāhmaṇam ānaya* 'bring him who is not a *brāhmaṇa*'. Questions have been raised about the person who will be brought in response to the command. Will he be a *brāhmaṇa*? Why not? After all, it is a *tatpuruṣa* compound, where the meaning

of the second constituent is principal (*pradhāna*). But, in compliance with the command, he who is brought is not a *brāhmaṇa*. This contradicts the view that the meaning of the second constituent is principal in a *tatpuruṣa* compound. Is it, then, possible for us to accept that it is the meaning of *naÑ*, the first constituent, which is principal in such a case? This possibility will also encounter problems. Firstly, *naÑ* is an indeclinable. Therefore, the compound must also be termed an indeclinable (*avyayībhāva*).

Secondly, the relation between the constituents is that of qualifier-qualified (*viśeṣaṇa-viśeṣya*) nature. The *na* denotes non-existence in general (*asatsāmānya*). Given the phrase, *abrāhmaṇaḥ kṣatriyaḥ*, difficulty of interpretation will arise. The sense intended is that the *kṣatriya* is similar, though not identical, to a *brāhmaṇa*. That is, he is *brāhmaṇa bhinna tad* (*brāhmaṇa*) *sadṛśa* 'not a *brāhmaṇa*, although he is similar to one'. The *asatsāmānya* interpretation will reduce the *sādṛśya* 'similarity' to non-existence.

A third proposal, to accept *abrāhmaṇaḥ* as a compound with the prominence of the meaning of something outside the constituency of the compound, is also made. This, too, runs into problems, owing mainly to the negative meaning of *naÑ* in relation to *brāhaṇa*. That is, the *sādṛśya* 'similarity' meaning cannot be established. Besides, the question of forming a *karmadhāraya* with two constituents in syntactic coordination, as opposed to a *bahuvrīhi*, would also arise.

The *Mahābhāṣya* accepts the prominence of the meaning of the second constituent *brāhmaṇa*, with the stipulation that *na* denotes *asatsāmānya* 'non-existence in general' and *brāhmaṇa* denotes 'non-existence of an aspect of Brāhmaṇaness (*brāhmaṇatva*) in particular'. The particular aspect of *brāhmaṇatva* recognized with *asatsāmānya* is *brāhmaṇatva* by birth. In this way, a qualifier-qualified relationship resulting in *sāmānādhikaraṇya* 'syntactic coordination' can be established. Thus, *na brāhmaṇaḥ* = *brāhmaṇaḥ* = *brāhmaṇaḥ bhinnaḥ kṣatriyaḥ brāhmaṇasadṛśaḥ* = *abrāhmaṇaḥ*. The similarity established between a *brāhmaṇa* and a *kṣatriya* may be a fair complexion (*gaura varṇa*); ritual conduct (*śucyācāra*); brown (*piṅgala*) eyes; and golden hair (*kapilakeśa*). The difference (*bheda*) thus constituted could be birth (*jāti*). The difficulty of *brāhmaṇa* denoting 'non-existence of an aspect of *brāhmaṇatva*' has been recognized as the secondary meaning of the word *brāhmaṇa*. A primary meaning would be '*brāhmaṇatva* by birth'. In a negative compound such as *abrāhmaṇaḥ*, *brāhmaṇa* denotes the non-existence of its primary meaning. That is, *brāhmaṇa* is used in the sense of *brāhmaṇasadṛśa*. This sense, however, could be brought about only when *brāhmaṇa* is used with *naÑ*. Consequently, *naÑ* becomes the revealer (*dyotaka*) of this meaning. For further details see Joshi (1973: 70–105). Also recall my notes under rule 1.2.45 *arthavadadhātuḥ*....

The denotata of *naÑ* are explained in six ways, as follows:

(*i*) *sādṛśya* 'similarity, resemblance' as in *abrāhmaṇaḥ*

(*ii*) *abhāva* 'lack, non-existence', as in *ajñāna* 'lack of knowledge'
(*iii*) *bheda* 'difference' as in *apaṭaḥ* 'something other than cloth'
(*iv*) *alpatā* 'smallness', as in *anudarā kanyā* 'a girl with no belly; with a very slender waist'
(*v*) *aprāśastya* 'unpraiseworthiness,' as in *akālaḥ* 'inopportune time'
(*vi*) *virodha* 'opposition', as in *anītiḥ* 'immorality'

Bālamanoramā and *Tattvabodhinī* ad *SK* explain *abrāhmaṇaḥ* as *āropita-brāhmaṇaḥ*, an impostor, where imposition (*āropitatva*) becomes the meaning of *naÑ*. This meaning, incidentally, is covered by (*i*) above.

2.2.7 ईषदकृता

īṣad akṛtā
/ *īṣat* ∅ *akṛtā* 3/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22)
'īṣat' ity ayaṃ śabdo' kṛdantena supā saha samasyate, tatpuruṣaś ca samāso bhavati

A *pada* which contains *īṣat* 'a little, slight' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP* but does not contain a stem in *kṛt*.

EXAMPLES:

īṣatkaḍāraḥ 'slight yellow'
īṣatpiṅgalaḥ 'id.'

1. A proposal has been made in the *Mahābhāṣya* (II: 677) to read *guṇavacanena* 'with that which denotes quality' in place of *akṛtā*. That is, *īṣat* should be combined with a word which ends in a *sUP*, and denotes a quality. Such a specification is needed to block a compound parallel to *īṣad gārgyaḥ* 'slightly Gārgya', where *gārgyaḥ* contains a base which ends in the *taddhita* affix *yaÑ*.

2.2.8 षष्ठी

ṣaṣṭhī
/ *ṣaṣṭhī* 1/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22)
ṣaṣṭhyantaṃ subantaṃ samarthena subantena saha samasyate, tatpuruṣaś ca samāso bhavati

A *pada* which ends in *ṣaṣṭhī* 'sixth triplet of *sUP*' optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP*.

EXAMPLES:

rājapuruṣaḥ 'king's man'
brāhmaṇakambalaḥ '*brāhmaṇa*'s blanket'

1. This rule allows the formation of compounds between a word ending in genitive (*ṣaṣṭhī*) and another which may be syntactically related to it. However, because its genitive constituent is not qualified, the rule obviously becomes much wider in application. An effort will subsequently be made to restrict this scope by rules such as 2.2.10 *na nirdhāraṇe*, 2.2.12 *ktena ca pūjāyām*, 2.2.13 *adhikaraṇavācinā ca*, and 2.2.14 *karmaṇi ca*, etc.

Rule 2.2.10 *na nirdhāraṇe* has an extra restriction in the form of a *vārttika*. It is stated that a genitive introduced by enumerating specific bases (*pratipadavidhāna*) should also not be permitted to combine in a *tatpuruṣa* compound. This *vārttika* has been accepted as the reason for stating another *vārttika*. This happens to be the first *vārttika* of the present rule. It requires a specification whereby a genititve, introduced in connection with a word containing a derivate in *kṛt*, is allowed to form a *tatpuruṣa* compound. Such a specification would appear to be useless, given the already wider scope of this rule; but it would seem perfectly logical in view of the restriction of 2.2.10. That is, *vārttika* one, under 2.2.10, denies formation of a compound where a genitive may have been introduced by any rule other than 2.3.50 *ṣaṣṭhī śeṣe*. If such a restriction is accepted, then compounds such as *idhmapravaścana* 'that by means of which one cuts the wood' could never be derived. For, the genitive in *idhmasya* has been introduced by rule 2.3.65 *kartṛkarmaṇoḥ kṛti*, in connection with its use with *pravaścanaḥ*, a derivate ending in *kṛt*. To facilitate the formation of *idhmapravaścana*, *vārttika* one under this rule must be stated. Moreover, it must also be stated to cancel the prohibition issued by *vārttika* of 2.2.10. It is in this sense that commentators accept the *vārttika* of this rule as the *purastādapakarṣa* 'retraction'.

2.2.9 याजकादिभिश्च

yājakādibhiś ca
/ *yājakādibhiḥ* 3/3 = *yājaka ādir yeṣāṃ* (*bv.*), *te*; *ca*: Ø /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *tatpuruṣaḥ* #2.1.22, *ṣaṣṭhī* #8)
yājakādibhiḥ saha ṣaṣṭhī samasyate tatpuruṣaś ca samāso bhavati
A *pada* which ends in *ṣaṣṭhī* optionally combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which contains a stem enumerated in the list headed by *yājaka* 'sacrificer'.

EXAMPLES:

brāhmaṇayājakaḥ 'the sacrificing priest of a *brāhmaṇa*'
kṣatriyayājakaḥ 'the sacrificing priest of a *kṣatriya*'

1. A compound allowed by this rule could have been easily covered by the preceding rule. As such, this rule should not be formulated. *Kāśikā* states that examples such as *brāhmaṇayājakaḥ*, etc., could not be derived in view of the restriction laid down by rule 2.2.16 *karttari ca*. For, suffix *aka*, i.e., *ṆvuL*, in *yājaka* is introduced to denote *kartṛ*. This rule, then, is given as a reinforcement (*pratiprasava*) of the provision of the preceding rule, obviously in view of an impending prohibition (*anyena nivartitasya punaḥ pravṛtyabhyanujñānam*).

It is stated that the use of *ca* in this rule is intended for gathering aspects of application not covered by specific rules (*anuktasamuccaya*). Consider, for example, the compound *candanagandhaḥ* 'fragrance of sandalwood' parallel to *candanasya gandhaḥ*, which could not be permitted because of the formulation of rule 2.2.11 *pūraṇaguṇasuhitārtha*.... A provision for compounds such as these, with a constituent denoting quality (*guṇa*) and the other ending in genitive, is made by yet another *vārttika* under this rule: *tatsthaiś ca guṇaiḥ*.... This *vārttika* restricts the quality words to those which may be perceived as *tatstha* 'within that'. The word *tat*, because of its proximity with *guṇa* in the *vārttika*, is interpreted as having *guṇa* itself as its antecedent. Thus, *tatstha* will be interpreted as 'that (quality) which is located within itself'.

It is noted in connection with this that a quality is always perceived as having a substance (*dravya*) as its locus (*ādhāra*). How, then, could *guṇa* be stated to be located within itself? Commentators explain that certain qualities are perceived with words, only as extracted from their substance (*śabdena dravyān niṣkṛtā eva pratyāyante*). Thus, *gandha* in *candanasya gandhaḥ* is perceived as a quality separate from its substance, the sandalwood. It is a quality which is always perceived in appositional (*vyadhikardṇa*) relationship with its substance; it is not perceived as subservient (*uparañjaka*) to the substance. There are certain other qualities, such as the whiteness (*śuklatva*) in *śuklaḥ paṭaḥ* 'the white cloth', which can be perceived as being one with the substance. That is why one gets the syntactic coordination (*sāmānādhikaraṇya*). Similar syntactic coordination is not available in the case of *candanasya gandhaḥ*: that is, *candanaṃ gandhaḥ* is out of the question. Note, however, that in the case of *śuklaḥ paṭaḥ*, *paṭasya śuklaḥ* is also available. In other words, 'whiteness' is a quality which can be perceived in both ways: either in the *sāmānādhikaraṇa* or the *vyadhikaraṇa* relationship with its substance. A compound which entails *vyadhikaraṇa* (perception of the quality alone) is permitted by the *vārttika* in question.

This also brings up the question of compound formation parallel to *balākāyāḥ śauklyam* 'the whiteness of the crane'. A compound parallel to this string is not permitted, since the quality of whiteness is not *tatstha*. Note that whether or not a quality can be treated as *tatstha* is based only on meaning (*arthasya ca tatsthatvam āśrīyata iti*: see *Pradīpa* of Kaiyaṭa ad

Mbh II: 679). It is the condition of *tatsthatva* that also rules out the formation of compounds with the qualifiers of these quality words. Thus, *tīvra* in *ghṛtasya tīvro gandhaḥ* 'the strong smell of ghee' cannot be combined.

2.2.10 न निर्धारणे

na nirdhāraṇe
| na Ø nirdhāraṇe 7/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *ṣaṣṭhī* #8)
nirdhāraṇe yā ṣaṣṭhī sā na samasyate
A *pada* which ends in *ṣaṣṭhī* and denotes *nirdhāraṇa* 'setting apart, singling out' does not combine in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP*.

EXAMPLES:

kṣatriyo manuṣyāṇāṃ śūratamaḥ 'a *kṣatriya* is bravest among men'
kṛṣṇā gavām sampannakṣīratamā 'the black one among cows is richest in milk'
ḍhāvann adhvagānāṃ śīghratamaḥ 'he who runs is the fastest among those who go by the road'

1. The word *nirdhāraṇa* has been explained by the *Kāśikāvṛtti* as singling out one part from among many, of a whole based upon class, quality, or action (*jātiguṇakriyābhiḥ samudāyād ekadeśasya pṛthak karaṇaṃ nirdhāraṇam*). For example, consider *manuṣyāṇāṃ kṣatriyaḥ śūratamaḥ* 'a *kṣatriya* is bravest among men', where, from among many groups (*samudāya*) of men, a single group of men is singled out as the bravest, owing to its quality (*guṇa*) of bravery. Note that it is the part of a whole which is here singled out on the basis of its quality, etc. *Kāśikā* uses the word *ekadeśa* 'part' to signify the entity thus singled out. See Joshi (1973: 141) for details on removing possible difficulties in this explanation. Note also that the genitive which specifies *nirdhāraṇa* is introduced by rule 2.3.41 *yataś ca nirdhāraṇam*. Also refer to my notes under 2.2.8, concerning the implications of the *vārttika* under this rule.

2.2.11 पूरणगुणसुहितार्थसदव्ययतव्यसमानाधिकरणेन

pūraṇaguṇasuhitārthasadavyayatavyasamānādhikaraṇena
| pūraṇa...karaṇena 3/1 = *pūraṇaṃ ca guṇaś ca suhitārthāś* (*suhito 'rtho yeṣāṃ* (*bv.*)) *ca sat ca avyayaṃ ca tavyaś ca samānādhikaraṇaṃ ca* (*sam. dv.*), *tena |*
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *ṣaṣṭhī* #8, *na* #10)
'pūraṇa, guṇa, suhitārtha, sad, avyaya, tavya, samānādhikaraṇa' ity etaiḥ saha ṣaṣṭhī na samasyate

A *pada* which ends in *ṣaṣṭhī* does not combine, in a *tatpuruṣa* compound, with a *pada* which ends in *sUP* and entails one of the following:
pūraṇa 'a stem which ends in a *pūraṇa* suffix (ordinal number; 5.2.48 *tasya pūraṇe*, etc.)'
guṇa 'a stem which denotes quality'
suhitārtha 'a stem which denotes satisfaction'
sat 'a stem which ends in affixes termed *sat*'
avyaya 'an indeclinable'
tavya 'a stem which ends in *tavyaT* suffix'
samānādhikarana 'item in syntactic coordination'

EXAMPLES:

chātrāṇāṃ pañcamaḥ 'fifth among the students'
chātrāṇāṃ daśamaḥ 'tenth among the students'
balākāyāḥ śauklyam 'the whiteness of the crane'
kākasya kārṣṇyam 'the blackness of the crow'
phalānāṃ tṛptaḥ 'satisfaction of fruits'
brāhmaṇasya kurvan 'while doing some work of a *brāhmaṇa*'
brāhmaṇasya kurvāṇaḥ 'id.'
brāhmaṇasya kṛtvā 'after having done the work of a *brāhmaṇa*'
brāhmaṇasya hṛtvā 'id.'
brāhmaṇasya kartavyam 'worth doing for a *brāhmaṇa*'
rājñaḥ pāṭaliputrakasya 'of the king of Pāṭaliputraka'
pāṇineḥ sūtrakārasya 'of Pāṇini, the composer of the *sūtra*'

1. The word *pūraṇaguṇasuhitārtha* is a *dvandva* compound where *artha*, occurring at its end, must be associated with each one of its constituents (cf. *dvandvānte śrūyamāṇaṃ padaṃ pratyekam abhisambadhyate*). Consequently, the word *guṇa* will be considered here as *guṇārthe* 'that which is used in the sense of quality'. In this way, the word *guṇa* will not denote only its form (1.1.68 *svaṃ rūpam*...), nor will it denote the vowels *a*, *e*, and *o*, based on the *paribhāṣā* (9) *kṛtrimākṛtrimayoḥ kṛtrimeṇa kāryasampratyayaḥ*.

There is a detailed discussion on the word *guṇa* itself in the *Mahābhāṣya*. It has been explained as referring to two types of qualifiers: *guṇavacana* 'words which denote quality'; and *guṇopasarjanadravyavācin* 'words which denote a substance qualified by quality'. The first type has been defined as a quality which inheres to a substance (*dravya*), but which can also be removed from it (*sattve niviśate' paiti*). This kind of *guṇa* is considered as essentially different from the substance. Qualities such as *rūpa* 'color' and *śabda* 'sound' are examples. The second type refers to qualities which can be expressed in all genders, like *śuklaḥ* in *śuklaḥ paṭaḥ* 'white cloth'; *śuklaṃ vastram* 'white garment'; and *śuklā śāṭī* 'white garment'. These are possible because of the use of the quality word in accordance with the word which denotes substance.

Rule 2.2.11 blocks the formation of compounds with both types of quality words. Thus, *kākasya kārṣṇyam* 'the blackness of the crow' cannot yield **kākakārṣṇyam*. Similarly, *brāhmaṇasya śuklāḥ* in *brāhmanasya śuklāḥ dantāḥ* 'the white teeth of the *brāhmaṇa*' cannot yield a compound, since the genitive in *brāhmaṇasya* is not introduced based upon *dantāḥ* 'teeth'. Instead, *śuklāḥ* modifies *dantāḥ*, and by context one understands that *śuklāḥ* refers to *dantāḥ*. That is, *śuklāḥ* by itself becomes the substratum (*ādhāra*) of the quality *śuklatva* 'whiteness'. The genitive in *brāhmaṇasya* is introduced in relation to *śuklāḥ*. Consequently, *brāhmaṇasya śuklāḥ* cannot yield a compound such as **brāhmaṇasuklāḥ*. Also see my note under rule 2.2.9. Joshi (1972: 144-47) presents a very detailed discussion on this aspect of the word *guṇa*. Commentators also note that the negation (*pratiṣedha*) of quality (*guṇa*) words in relation to compounds covered by this rule is not universal (*nitya*).

Note that *saṃkhyā* 'number' can also be treated as a *guṇa* word. This being the case, compounds such as *goviṃśatiḥ* 'score of cows' should not be permitted. It is argued that examples such as *niṣkaśatam* 'a hundred Niṣka' are indicators (*jñāpaka*) for the understanding that compounds with *saṃkhyā* are not blocked (cf. 5.2.119 *śatasahasrāntāc ca niṣkāt*). How else could one talk about *niṣka* terminating in *śata* or *sahasra*?

The genitive in examples such as *balākāyāḥ śauklyam* obtains in the sense of *guṇaguṇin* 'quality and that which inheres it'. Rule 2.3.50 *ṣaṣṭhī śeṣe* will introduce this genitive. The genitive in examples such as *brāhmaṇasya kṛtvā* will be introduced by 2.3.71 *kṛtyānāṃ karttari vā*.

Note that examples such as *phalānāṃ suhitaḥ* entail a genitive which is introduced to denote *karaṇa* 'means'. Similarly, the genitive in *brāhmaṇasya kurvan* is not introduced in relation to, for instance, the pot (*ghaṭa*), as in *brāhmaṇasya ghaṭaṃ kurvan* 'making the pot of the *brāhmaṇa*'. The word *kurvan* denotes the servant (*kiṅkara*).

A compound with an indeclinable (*avyaya*) is blocked only when the indeclinable ends in a *kṛt* affix. This becomes known from the use of the word *avyaya* between the affixes *sat* and *tavya*, which are both *kṛt*. This will thus not block the formation of a compound such as *vṛkṣopari*, parallel to *vṛkṣasyopari* of *vṛkṣasyopari kākas tiṣṭhati* 'there is a crow sitting on the tree'.

2.2.12 क्तेन च पूजायाम्

ktena ca pūjāyām
/ *ktena* 3/1 *ca* Ø *pūjāyām* 7/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *ṣaṣṭhī* #8, *na* #10)
kto yaḥ pūjāyāṃ vihitas tena ṣaṣṭhī na samasyate

A *pada* which ends in *ṣaṣṭhī* also does not combine, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP*, contains a stem in *Kta* and denotes *pūjā* 'honoring'.

EXAMPLES:

rājñāṃ mataḥ 'honored by kings'
rājñāṃ buddhaḥ 'known by kings'
rājñāṃ pūjitaḥ 'honored by kings'

1. Note that *pūjā* here refers to rule 3.2.188 *matibuddhipūjā*.... Similarly, the word *kta* is used in this instance to symbolize the provisions of the rule. Consequently, *kta* should be interpreted here as referring to all instances of *kta* introduced by rule 3.2.188, and not only to that which denotes the sense of *pūjā* 'praise'. The word *pūjā* thus becomes an *upalakṣaṇa* 'mark' for the operational provisions of rule 3.2.188.

2.2.13 अधिकरणवाचिना च

adhikaraṇavācinā ca
/ *adhikaraṇavācinā* 3/1 *ca* Ø /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* # 2.1.22, *ṣaṣṭhī* #8, *na* # 10, *ktena* # 12)
adhikaraṇavācinā ktena ṣaṣṭhī na samasyate
A pada which ends in *ṣaṣṭhī* does not combine, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP*, contains a *Kta* and denotes *adhikaraṇa* 'locus'.

EXAMPLES:

idam eṣāṃ yātam 'this is their path of going'
idam eṣāṃ bhuktam 'this is their place of eating'

1. The word *adhikaraṇa*, like the word *pūjā* in the preceding rule, refers to rule 3.4.76 *kto' dhikaraṇe*.... Here, *Kta* again becomes an *upalakṣaṇa* 'mark'. The blocking of compounds with a constituent in *Kta* is thus limited to the *Kta* introduced by rule 3.4.76.

2.2.14 कर्मणि च

karmaṇi ca
/ *karmaṇi* 7/1 *ca* Ø /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *ṣaṣṭhī* #8, *na* #10)
karmaṇi ca yā ṣaṣṭhī sā na samasyate
A *pada* which ends in *ṣaṣṭhī* and denotes *karman* 'object' also does not combine, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP*.

EXAMPLES:

gavāṃ dohaḥ 'milking of cows'
āścaryo gavāṃ doho 'gopālakena 'it is a surprise to see the non-cowherd milking the cow'

odanasya bhojanam 'eating of rice' as in
rocate odanasya bhojanaṃ devadattena 'eating of rice pleases Devadatta'

1. The word *ktena* is not carried here. The word *karman* therefore qualifies *ṣaṣṭhī*. But the *ṣaṣṭhī* intended here is one which is specific to 2.3.66 *ubhayaprāptau karmaṇi*. Thus, a compound between *odanasya bhojanam* in *rocate me devadattena odanasya bhojanam* 'I like Devadatta's eating of rice' will not be permitted, since the genitive in *odanasya* is introduced by rule 2.3.66 to denote *karman* 'object'. The prohibition of a genitive denoting *kartṛ*, which is to follow, also becomes an indicator that *karman* in this rule refers to rule 2.3.66. In this way, compounds such as *idhmapravaścanaḥ*, where *idhma* entails a genitive denoting *karman* (and *LyuṬ* denotes *karaṇa*) cannot be blocked.

2.2.15 तृजकाभ्यां कर्त्तरि

tṛjakābhyāṃ karttari
/ *tṛjakābhyām* 3/2 *karttari* 7/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *ṣaṣṭhī* #8, *na* #10, *karmaṇi* #2.2.14)
karttari tṛjakābhyām (*karttari yau tṛjakau tābhyām*) *karmaṇi* (*yā*) *ṣaṣṭhī* (*sā*) *na samasyate*
A *pada* which ends in *ṣaṣṭhī* and denotes *karman* does not combine, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP*, contains a stem in *tṛC* or *aka*, and denotes *kartṛ*.

EXAMPLES:

apāṃ sraṣṭā 'producer of water'
purāṃ bhettā 'destroyer of cities'
odanasya bhojakaḥ 'eater of rice'
saktūnāṃ pāyakaḥ 'drinker of *saktu* (powdered roasted grain mixed with water)'

1. Bhaṭṭoji Dīkṣita (*SK* II: 52-54) interprets rules 2.2.15 and 2.2.16 differently from the *Kāśikā*. According to him these *sūtra* have the following meanings:

2.2.15 A *pada* in *ṣaṣṭhī* does not combine in a *tatpuruṣa* compound with a *pada* which contains a stem in *tṛC* or *aka* and denotes agent (*kartṛ*).

2.2.16 A *pada* in *ṣaṣṭhī* which denotes agent does not combine in a *tatpuruṣa* compound with a *pada* which contains a stem in *aka*.

The above interpretations are based on two important considerations.

(*i*) Bhaṭṭoji does not treat *karttari* as an adjective of *ṣaṣṭhī* in rule 2.2.15.
(*ii*) Bhaṭṭoji treats *karttari* as an adjective of ṣaṣṭhī in 2.2.16 but drops *tṛC* as part of the rule. He does not treat *tṛC* as being carried from 2.2.15.

As is apparent from the *vṛtti* and the translation, *Kāśikā* treats *karttari* as an adjective of *ṣaṣṭhī* in 2.2.15. Further, it treats *karttari* as an adjective of *tṛjakau* in 2.2.16. Obviously, *Kāśikā* retains *tṛC* in the interpretation of 2.2.16 carried from 2.2.15.

Bhaṭṭoji argues that since *ṣaṣṭhī* is an *anuvṛtti* element, while *tṛjakau* is expressly mentioned in rule 2.2.15, *karttari* should qualify *tṛjakau*. Apparently, *Kāśikā* disagrees. But, as *Kāśikā* points out, there are problems in its own interpretation. Although *Kāśikā* interprets *karttari* as an adjective to *ṣaṣṭhī*, there are no examples given for such a *ṣaṣṭhī* denoting agent and being syntactically relatable to a *pada* containing *tṛC*. Such examples simply do not exist. But such examples may be available if *ṣaṣṭhī* is not constrained by the qualifier *karttari*. This is what Bhaṭṭoji is advocating. This leads him to accept *karttari* as an adjective of *tṛC* and *aka*. But since *tṛC* obligatorily denotes agent, to further qualify it with *karttari* only amounts to stating the most obvious. This is the drawback which *kāśikā* realizes in stating that *karttari* does not qualify *tṛC* and, because of its association (*sāhacarya*), *aka*. But *Kāśikā* should then drop *tṛC* from the rule, as there are no examples. *Kāśikā* states that *tṛC* should be retained here for *anuvṛtti* in later rules. If Bhaṭṭoji accepts the *anuvṛtti* of *tṛC* in 2.2.16, he will face the same problem of a lack of examples that *Kāśikā* faces in 2.2.15. It is for this reason that Bhaṭṭoji qualifies *ṣaṣṭhī* by *karttari* in 2.2.16. To avoid further problems, he does not accept the *anuvṛtti* of *tṛC* in 2.2.16.

Bhaṭṭoji's position seems to be stronger, since he can offer an example for *tṛC* in 2.2.15 by not allowing *karttari* to qualify *ṣaṣṭhī*. Because he does not accept the *anuvṛtti* of *tṛC* in 2.2.16, he can afford to qualify *ṣaṣṭhī* with *karttari* there. That way he need not even postulate, as *Kāśikā* does, that *tṛC* is intended in 2.2.15 for *anuvṛtti* in subsequent rules.

Dropping the *anuvṛtti* of *tṛC* also has consequences for rule 2.2.17 *nityaṃ krīḍājīvikayoḥ*, whereby an obligatory compound is ordered for a *pada* which ends in *ṣaṣṭhī* provided the resulting compound denotes *krīḍā* 'sport' or *jīvikā* 'livelihood'. If one does not accept the *anuvṛtti* of *tṛC* in 2.2.16, as Bhaṭṭoji does not, the *ṣaṣṭhī* will combine only with a *pada* which contains a stem in *aka*. Bhaṭṭoji does not have to accept the *anuvṛtti* of *tṛC* in 2.2.17 because there are no compounds with *tṛC* and *ṣaṣṭhī* that could denote *krīḍā* or *jīvikā*. Again, Bhaṭṭoji's is the stronger position, especially when *Kāśikā* carries the *anuvṛtti* of *tṛC*, but fails to give any examples because they simply do not exist.

The above discussion is based on the positions taken by *Kāśikā* and Bhaṭṭoji's *Śabdakaustubha*. Since I have already presented the views of *Kāśikā* in detail, I cite only the statements from the *Śabdakaustubha*:

> *prathamasūtre kartṛgrahaṇaṃ tṛjakayor eva viśeṣaṇaṃ yuktam, tayoḥ śrutatvāt, na tu ṣaṣṭhyāḥ. evaṃ ca tṛjuttarārtha ity api na kalpyam. akasyaiva cottaratrānuvṛttir na tu tṛcaḥ, asambhavāt. tathā ca sūtradvayasya*

> *vyatyāsenārtha ucita iti. vāmanastu—ake jīvikārthe iti sūtre 'ake iti kim' ramaṇīyakartteti jīvikāyāṃ tṛcaṃ pratyudājahāra....* 'the citation of *kartṛ* in the first rule is made to qualify *tṛC* and *aka*; this position is appropriate, since *tṛC* and *aka* are expressly mentioned in the rule, and the *ṣaṣṭhī* is not. This way, one does not have to postulate that *tṛC* is used in the rule for *anuvṛtti* in subsequent rules. For, that is impossible (in view of the lack of examples). Consequently, it is only appropriate to be interpreted conversely (*vyatyāsena*). Vāmana, indeed, offered an example under rule *ake jīvikārthe* by asking 'why *ake*?'....'

The fact that Vāmana, the co-author of *Kāśikā*, gave *ramaṇīyakarttā* 'he who beautifies' as an example denoting *jīvikā* 'livelihood' in rule 6.2.73 *ake jīvikārthe,* adds another dimension to the controversy surrounding the interpretation of 2.2.15–2.2.17. Note that *Kāśikā* admits that examples for 2.2.17 with *tṛC* do not exist. How, then, does *Kāśikā* give an example in 6.2.73? Traditionalists may excuse this contradiction on the basis that Jayāditya wrote the *Kāśikāvṛtti* on 2.2.15–2.2.17, while Vāmana wrote the one on 6.2.73. Such differences are not uncommon for two authors. But even if one does not accept this explanation and still treats *Kāśikā*'s position as weak, there is something else that casts serious doubt on Bhaṭṭoji's position. Bhaṭṭoji's position looks stronger until one reads his *Siddhāntakaumudī* on 6.2.73. Surprisingly, Bhaṭṭoji uses the same example, *ramaṇīyakarttā,* which Vāmana puts forward. This places Bhaṭṭoji in a very awkward situation. The question becomes this: how could he argue on the basis of the absence of examples of *tṛC* in 2.2.17 in his *Śabdakaustubha,* and yet give an example in his *Siddhāntakaumudī*? His troubles are compounded because, if he does not accept the *anuvṛtti* of *tṛC* in 2.2.17, then the example cited in *SK* (ad 6.2.73) cannot be derived. Thus, he is making contradictory statements in his two works. To top it all, it seems, he has copied Vāmana's example (*ramaṇīyakarttā*), as Vāmana happens to be the earlier of the two.

2. Note that *Kāśikā*'s interpretation of rules 2.2.15–2.2.16 is against the *Mahābhāṣya*. This, then, generally becomes the basis for rejecting *Kāśikā*'s interpretation. The *Mahābhāṣya* (II: 685) accepts that *karmaṇi,* from rule 2.2.14, is carried as a qualifier of *ṣaṣṭhī* in 2.2.15. The *karttari* of 2.2.15 then qualifies *tṛC* and *aka*. In this way, rule 2.2.15 is interpreted as: 'a *pada* which ends in *ṣaṣṭhī* and denotes *karman* does not combine in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP*, contains a stem in *tṛC* or *aka*, and denotes *kartṛ*'. This will block compounds such as *apāṃ sraṣṭā,* (cited by *Kāśikā* under 2.2.16), where the genitive in *apām* is introduced to denote *karman* by rule 2.3.65 *kartṛkarmaṇoḥ kṛti.*

A similarly different interpretation of rule 2.2.16 will make *karttari* a qualifier to its *ṣaṣṭhī*, thereby rendering the interpretation of the rule as: 'a *pada* which ends in *ṣaṣṭhī* and denotes *kartṛ* additionally does not combine in a *tatpuruṣa* compound with a syntactically related *pada* which ends in *sUP* and contains a stem in *aka*'. This will then cover examples such as *bhavataḥ śāyikā*, which the *Kāśikā* cites under rule 2.2.15. Pāṇinīyas generally prefer this converse (*vyatyasta*) interpretation of rules 2.2.15–2.2.16.

I have interpreted rules 2.2.15–2.2.16 in a way similar to that in the *SK* of Bhaṭṭoji Dīkṣita, while knowing full well that his position also has its flaws. His position, however, happens to be in consonance with the *Mahābhāṣya*. Moreover, *Kāśikā*'s position is very difficult to defend. I have switched about the examples of *Kāśikā* to suit this preferred interpretation of rules 2.2.15–2.2.16.

2.2.16 **कर्त्तरि च**

karttari ca
/ *karttari* 7/1 *ca* Ø /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *ṣaṣṭhī* #8, *na* #10, *aka* #15)
karttari (*yā*) *ṣaṣṭhī* (*sā*) *akena na samasyate*
A *pada* which ends in *ṣaṣṭhī* and denotes *kartṛ* additionally does not combine, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP* and contains a stem in *aka*.

EXAMPLES:

bhavataḥ śāyikā 'your turn for sleeping'
bhavataḥ āsikā 'your turn for sitting'

1. Note that, according to *Kāśikā*, *karttari* 'when denoting *kartṛ*' should be treated as qualifying *aka* only. For, *tṛC* is always introduced to denote *kartṛ*. That is, it never abandons (*vyabhicarati*) its *kartṛ* denotatum. However, *aka* can sometimes denote agent (*kartṛ*), while on other occasions it can denote *bhāva* 'root sense'. Since a qualifier-qualified (*viśeṣaṇa- viśeṣya*) relationship obtains only when a qualifier may be able to abandon the qualified, (which happens to be the case with *aka*), *aka* alone should be qualified with *karttari*.

2.2.17 **नित्यं क्रीडाजीविकयोः**

nityaṃ krīḍājīvikayoḥ
/ *nityaṃ* Ø *krīḍājīvikayoḥ* 1/2 (*itar. dv.*) /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *ṣaṣṭhī* #8, *aka* #15)
krīḍāyāṃ jīvikāyāṃ ca nityaṃ ṣaṣṭhī akena samasyate, tatpuruṣaś ca samāso bhavati

A *pada* which ends in *ṣaṣṭhī* obligatorily combines, in a *tatpuruṣa* compound, with a syntactically related *pada* which ends in *sUP* and contains *aka* provided *krīḍā* 'sport' or *jīvikā* 'livelihood' is denoted.

EXAMPLES:

uddālakapuṣpabhañjikā 'a sport in which the *uddālaka* flowers are crushed'
vāraṇapuṣpapracāyikā 'a sport in which the *vāraṇa* flowers are gathered'
dantalekhakaḥ 'a person who makes his living by painting teeth'
nakhalekhakaḥ 'a person who makes his living by painting nails'

1. The word *nitya* in this rule serves two purposes:
   (*i*) it makes the *anuvṛtti* of *vibhāṣā* unnecessary for itself, as well as for other subsequent rules, and;
   (*ii*) it also stops the *anuvṛtti* of *na* 'not' on grounds of incompatibility with its own provisions.

Compounds covered by this rule are obligatory, since their analyzed forms will not be able to denote their intended meanings. Note that the compounds could have been allowed by rule 2.2.8 *ṣaṣṭhī*. However, this rule is needed so that the compounds could be allowed as obligatory in the case of *krīḍā*. Observe also in this connection that *ṆvuL*, in examples such as *uddālakapuṣpabhañjikā*, is introduced by rule 3.3.109 *saṃjñāyām* with the *anuvṛtti* of 3.3.108 *rogākhyāyāṃ ṇvul bahulam*. Now, an analyzed form of such compounds cannot denote *krīḍā*. Consequently, *vibhāṣa* must be dropped. This is what *nityam* accomplishes in the case of *krīḍā*. A compound in the case of *jīvikā* would not be allowed by rule 2.2.15 *tṛjakābhyāṃ karttari*. Thus, this rule becomes necessary for making such a compound obligatorily available.

2.2.18 कुगतिप्रादयः

kugatiprādayaḥ
/ *kugatiprādayaḥ* 1/3 = *pra ādir yeṣāṃ te prādayah* (*bv.*), *kuś ca gatiś ca prādayaś ca* = *kugatiprādayaḥ* (*itar. dv.* with int. *bv.*) /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *nityam* #17)
kugatiprādayaḥ samarthena śabdāntareṇa saha nityaṃ samasyante, tatpuruṣaś ca samāso bhavati
Items such as *ku* 'bad', or those which are either termed *gati* (1.4.60 *gatiś ca*), or else are listed in the set headed by *pra* (1.4.58 *prādayaḥ*), obligatorily combine in a *tatpuruṣa* compound with another syntactically related word.

EXAMPLES:

kupuruṣaḥ 'an evil person'
urarīkṛtam 'that which has been accepted'

duṣpuruṣaḥ 'a wicked person'
supuruṣaḥ 'a gentleman'
atipuruṣaḥ 'id.'
āpiṅgalaḥ 'a little reddish-brown'

1. A question has been raised about the use of the word *prādi* with *gati*. Note that *pra*, etc., are the items to which the term *gati* applies (1.4.60 *gatiś ca*). Commentators explain that *pra*, etc., are termed *gati* in connection with their usage with verbs. This rule uses *pra*, etc. to indicate their non-usage with verbs. That is, this rule allows the formation of compounds with *pra*, etc., whether they are relatable to verbs or not. When they are relatable to verbs, they will be combined on the strength of being *gati*. When they are not relatable to verbs, they can still be combined on the strength of the explicit statement of *pra*, etc. It is with this specific meaning of *pra*, etc., that *vārttika* I is introduced to block their combination when they have been termed a *karmapravacanīya*.

2. The word *ku* is interpreted as an indeclinable because of its citation in association with (*sāhacarya*) items termed *gati*, etc. It can further be treated as an indeclinable because it does not decline for gender (*liṅga*) or number (*saṃkhyā*). An interpretation of *ku* as denoting *pṛthivī* 'earth' is, thus, ruled out. Note in connection with this that rule 1.1.37 *svarādinipātam avyayam* assigns the term *avyaya* to those items which (*i*) are listed in the group headed by *svar*; or (*ii*) have been termed *nipāta*. Our indeclinable word *ku* is not included in either assignment.

3. Note that a compound with *pra*, etc., even when they are not termed *gati* as denoted by *prādi*, is still a very generalized provision. This may lead to undesired compounds. It is to restrict the scope of these compounds that a series of *vārttika* (*Mbh* II: 688-90) have been introduced. For example:

(*a*) *pra*, etc., should combine with a syntactically related *pada* which ends in the nominative (*prathamā*) in the sense of *gata*, etc. Thus, we get *prācāryaḥ* 'he who has excelled an *ācārya*'.

(*b*) *ati*, etc., are combined with a syntactically related *pada* which ends in *dvitīyā* in the sense of *krānta*. Thus, we get *atimālā* 'that which has excelled the garland'.

(*c*) *ava*, etc., are combined with a syntactically related *pada* which ends in *tṛtīyā* in the sense of *kruṣṭa*. Thus, we get *avakokilaḥ* 'that which has been heralded by the cuckoo; spring'.

(*d*) *pari*, etc., are combined with a *pada* which ends in *caturthī* in the sense of *glāna* 'disgusted, weary'. Thus, we get *paryadhyayanaḥ* 'weary of studying'.

(*e*) *nir*, etc., are combined with a syntactically related *pada* which ends in *pañcamī* in the sense of *krānta*. Thus, we get *niṣkauśāmbiḥ* 'gone outside of *kauśāmbī*'.

2.2.19 उपपदमतिङ्

upapadam atiṅ
/ *upapadam* 1/1 *atiṅ* 1/1 (*nañ. tat.*) /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *nityam* #17)
upapadam atiṅantaṃ samarthena śabdāntareṇa saha samasyate nityam, tatpuruṣaś ca samāso bhavati
An *upapada* (3.1.92 *tatropapadaṃ saptamīstham*) which does not end in *tiṄ* (3.1.78 *tiptas...*) obligatorily combines, in a *tatpuruṣa* compound, with a syntactically related item.

EXAMPLES:

kumbhakāraḥ 'maker of pots'
nagarakāraḥ 'builder of cities'
aśvakrītī 'she who has been purchased with horses'
dhanakrītī 'she who has been purchased with wealth'

1. Note that the *vṛtti* does not include the word *pada* as a qualifier to the syntactically related item combining with items termed *upapada*, etc. This is in view of the *paribhāṣā* (76) *gatikārakopapadānāṃ kṛdbhiḥ saha samāsavacanaṃ prāk subutpatteḥ* 'a compound of items termed *gati*, *upapada*, or those which denote a *kāraka* with an item terminated in a *kṛt* affix, is formed prior to the introduction of a *sUP*'.

Take, for instance, a compound between *kumbha* + *Ṅas* and *kāra*. Here, *kāra* is derived by introducing the *kṛt* affix *aṆ* after the verbal root *ḌukṛÑ*, under the condition of the cooccurring *pada* (*upapada*; 3.1.92 *tatropapadaṃ saptamīstham*), namely *kumbha* + *Ṅas*, which denotes *karman* 'object'. That is, an obligatory compound *kumbhakāra* is formed from *kumbha* + *Ṅas* + *kāra*, where *kāra* is a nominal stem (1.2.46 *kṛttaddhitasamāsāś ca*) terminated in the *kṛt* affix *aṆ*. The *paribhāṣā* requires that *kumbha* + *Ṅas* be combined prior to any *sUP* which is introduced after *kāra*. Commentators explain that, without accepting this *paribhāṣā*, one would run into problems in deriving forms such as *vyāghrī* 'tigress', or *aśvakrītī* 'she who was purchased with horses', etc. Refer to this *paribhāṣā* in the *Paribhāṣenduśekhara* of Nāgeśa for details. Such a mode of combination also applies to *gati* compounds of 2.2.18.

Note, however, that combining a *kṛt* derivate prior to the introduction of a *sUP* is basically a strategy to arrive at the desired derivate. Considering this, Jinendra (*Nyāsa* ad *Kāśikā* II: 123) adds: *na hy anena sarvatra... prāk subutpatteḥ samāso bhavati. kiṃ tarhi? kvacid eveṣṭaviṣaye.* '*paribhāṣā* (76) does not dictate the formation of a compound prior to the introduction of *sUP* in all instances. It does so only in instances where desired'. How do we know this? By the optionally required

non-deletion of *saptamī* under the provision of rule 6.3.14 *tatpuruṣe kṛti bahulam*.

It is in view of this *paribhāṣā*, and the related strategy that *supā* '...with a *pada* ending in *sUP* (2.1.4)', is not treated as valid here.

2.2.20 अमैवाव्ययेन

amaivāvyayena
/ *amā* 3/1 *eva* Ø *avyayena*/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *upapadam* #19)
avyayenopapadasya yaḥ samāso so' maiva bhavati, nānyena
When an *upapada* is to be combined, in a *tatpuruṣa* compound, with an *avyaya* 'indeclinable', the *avyaya* must be one which ends in *am*.

EXAMPLES:

svāduṃkāraṃ bhuṅkte 'he eats food after making it savoury, tasty'
lavaṇaṃkāraṃ bhuṅkte 'he eats food after making it salty'

1. This rule provides for the formation of a compound with an *upapada* and an indeclinable, with the restriction that the latter ended in *am* alone. We thus get examples such as *svāduṃkāram*, as in *svāduṃkāraṃ bhuṅkte*, where the indeclinable in question is *kāram*. Such a compound was already available under the provisions of the preceding rule. Why, then, should we also have this rule? If one argues that it is formulated to restrict the compound (*niyama*) to instances of indeclinables ending in *am*, then what could possibly be the function of *eva* 'alone, only'? The word *eva* cannot be included simply for restriction, as provision for something which is already available serves a restrictive purpose. The *eva*, then, should be interpreted as serving the special restrictive function as follows:

> 'a conjoined word (*upapada*) under the provision of this rule should combine with an indeclinable ending in *am*, provided also that *am* is introduced by a rule exactly as its related conjoined *pada* (*tulya-vidhānam*)'

Nyāsa (ad *Kāś* II: 125) explains this *tulyavidhāna* as involving two necessary conditions:

(*i*) *am* has to be the one and only affix introduced by a rule, and
(*ii*) the conjoined *pada* (*upapada*) which forms a constituent under the provisions of this rule should also be the conjoined *pada* specified for the introduction of that *am*: (*yena vākyenāmeva pratyayo vidhīyate na tu pratyayāntaram, tena yad upapadaṃ nirdiśyate tad amaiva tulya-vidhānam, tasyaiva samāso yathā syāt...*).

Thus, the use of *eva* is to ensure (*avadhāraṇa*) the desired results (*iṣṭa*).

Consider the counter-example *agre bhuktvā* 'having eaten first', which is an optional form to *agre bhojam* approved by rule 3.4.24 *vibhāṣā' grepra-thamapūrveṣu*. A compound parallel to *agre bhojam* cannot be permitted by this rule, since *am* of *bhojam* is introduced by rule 3.4.24, which also introduces *tumUN*. The *am* of our examples is introduced by 3.4.26 *svādumi....* The word *avyaya* is used here just for clarity (*spaṣṭārtham*).

2.2.21 तृतीयाप्रभृतीन्यन्यतरस्याम्

tṛtīyāprabhṛtīny anyatarasyām
/ *tṛtīyāprabhṛtīni* 1/3 *tṛtīyāprabhṛti yeṣāṃ* (*bv.*); *anyatarasyām* 7/1/ (*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *upapadam* #19, *amaivāvyayena* #20)
'upadaṃśastṛtīyāyām' ity ataḥ prabhṛti yāny upapadāni tāny amaivāvyayena sahānyatarasyāṃ samasyante, tatpuruṣaś ca samāso bhavati
An *upapada* which is referenced by rules 3.4.47 *upadaṃśa...* through 3.4.64 *anvacyā...* optionally combines in a *tatpuruṣa* compound with an *avyaya* which terminates in *am*.

EXAMPLES:

mūlakopadaṃśaṃ bhuṅkte 'he eats while taking a bite of a radish'
mūlakena upadaṃśaṃ bhuṅkte 'id.'
uccaiḥkāram ācaṣṭe 'he speaks aloud'

1. The word *anyatarasyām* is used here to counter the *anuvṛtti* of *nityam* 'obligatorily' and *eva* 'alone', mostly because what they provide will run counter to the provision of this rule. That *anyatarasyām* 'optionally' is the opposite of *nityam* is obvious. The provision of *eva* relates to *tulyavidhāna*, as I have already explained in my notes under the previous rule. That provision is made optional in this rule. That is, *am*, for the purposes of this rule, does not have to be introduced exclusively by a rule. This rule would also permit the formation of a compound with *am*, which may have been introduced by a rule in addition to some other affix. The option offered by *anyatarasyām* is technically referred to as *prāptāprāpta*. It is *prāpta* 'available' with reference to *am* entailing *tulyavidhāna* (3.4.47 *upadaṃśas...*); it is *aprāpta* elsewhere.

Thus, 3.4.47 allows the compound *mūlakopadaṃśam*, where *am* refers to affix *ṆamUL* exclusively introduced by rule 3.4.47 *upadaṃśas....* As opposed to this, consider *nīcaiḥkṛtya* 'softly' and *nīcaiḥkāram* 'id.', where a compound is permitted with *Ktvā* and *ṆamUL*, both introduced by the single rule 3.4.59 *avyaye' yathābhipretākhyāne....* Obviously, *tulyavidhāna* would not have permitted these two compounds.

2. The word *tṛtīyāprabhṛtīni* specifies *upapada* referenced in rules 3.4.47 *upadaṃśas tṛtīyām* to 3.4.53 *dvitīyāyāṃ ca*.

2.2.22 क्त्वा च

ktvā ca
/ *ktvā* 3/1 *ca* ∅ /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *tatpuruṣaḥ* #2.1.22, *tṛtīyāprabhṛtīny anyatarasyām* #21)
tvā pratyayena saha tṛtīyāprabhṛtīny upapadāni anyatarasyām samasyante, tatpuruṣaś ca samāso bhavati
An *upapada* which is referred to by rules 3.4.47 *upadaṃśa...* through 3.4.64 *anvacyā...* also combines optionally, in a *tatpuruṣa* compound, with a form ending in *Ktvā*.

EXAMPLES:

uccaiḥkṛtya 'having raised (the voice)'
uccaiḥ kṛtvā 'id.'

1. Note that the preceding rule allowed the formation of a compound only with *am*. This rule additionally allows the formation of compounds with *ktvā*. The *ktvā* in this context has to be one introduced by rule 3.4.59 *avyaye....* The example *uccaiḥkāram* of rule 2.2.21 is parallel to *uccaiḥkṛtya* of this rule. Incidentally, *ktvā*, in view of the context, is treated as ending in *tṛtīyā* 'instrumental'.

2.2.23 शेषो बहुव्रीहिः

śeṣo bahuvrīhiḥ
/ *śeṣaḥ* 1/1 *bahuvrīhiḥ* 1/1/
śeṣaḥ samāso bahuvrīhisaṃjño bhavati
The remainder is termed *bahuvrīhi*.

EXAMPLES:

citraguḥ 'he who owns brindled cows'
śabalaguḥ 'id.'

1. Questions have been raised about the exact referent of the word *śeṣa*. The *Mahābhāṣya* (II: 698) discusses three possibilities as follows:
(*i*) *śeṣa* refers to the remainder of the words with reference to which no compound formation has yet been specified;
(*ii*) *śeṣa* refers to the remainder of word meanings with reference to which no compound formation has yet been specified; and
(*iii*) *śeṣa* refers to the remainder of the compound types already specified.

The *Mahābhāṣya* offers yet another interpretation of *śeṣa*. It is said that compound formation of constituents terminating in different nominal endings has been specified by earlier rules. The only nominal ending

that has not yet been specified for the formation of compounds is the nominative (*prathamā*). It is clear from the discussion, and from some related *vārttika*, that none of the above interpretations is free of problems. If, however, one focuses on the context itself, one finds that a generalized referent for *śeṣa* is not hard to comprehend. Thus, *śeṣa* refers to 'that which is other than that which has already been stated' (*upayuktād anyaḥ*). What has already been stated is: the formation of compounds *avyayī-bhāva* and *tatpuruṣa* with specific constituency and meanings. The word *śeṣa* then refers to a non-*avyayībhāva*/non-*tatpuruṣa* compound formed with constituents and meanings yet to be stated.

2.2.24 **अनेकमन्यपदार्थे**

anekam anyapadārthe
/ *anekam* 1/1 (*nañ. tat.*); *anyapadārthe* 7/1 = *anyac cāsau padam* (*karm.*), *anyapadasya arthaḥ* (*ṣaṣ. tat.* with int. *karm.*), *tasmin* /
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *bahuvrīhiḥ* #23)
anekaṃ subantaṃ anyapadārthe vartamānaṃ samasyate, bahuvrīhiś ca samāso bhavati
Many syntactically related *pada* which end in *sUP* optionally combine, in a *bahuvrīhi* compound, when the compound denotes the meaning of something other than its own constituents.

EXAMPLES:

prāptodako grāmaḥ 'a village to which water has reached'
prāptam udakaṃ yaṃ grāmam 'id.'
ūḍharatho 'naḍvān 'a bullock by whom a chariot has been pulled'
ūḍho ratho yena 'he by whom a chariot has been pulled'
upahṛtapaśū rudraḥ 'Rudra to whom an animal has been offered sacrificially'
upahṛtaḥ paśur yasmai 'id.'
uddhṛtaudanā sthālī 'a pot from which rice is lifted'
uddhṛta odano yasyāḥ 'id.'
citragur devadattaḥ 'Devadatta is one who owns brindled cows'
citrā gāvo yasya '(Devadatta is) one who owns brindled cows'
vīrapuruṣako grāmaḥ 'a village in which there are brave men'
vīraḥ puruṣā yasmin '(a village) in which there are brave men'

1. This rule provides for the formation of compounds with two or more constituents, provided the meaning expressed by the compound is that of something outside its constituency. The word *anekam* 'more than one' is in the nominative used as a qualifier to *sUP* (in the nominative carried from 2.1.2 *sub āmantrite...*). Because of its use in the nominative

(*prathamā*), *anekam* cannot be treated as a modifier to *supā* in the instrumental carried from rule 2.1.4 *saha supā*.

The purpose of using the word *anekam* is clearly to allow for the compound formation of more than two constituents. In the absence of *anekam*, a *bahuvrīhi* could not be allowed with multiple (*bahu*) constituency. Commentators cite the following verse as an example of *bahuvrīhi* with multiple constituency:

> *susūkṣmajaṭakeśena sugajājinavāsasā* /
> *putrī parvatarājasya kuto hetor vivāhitā* //
> 'how come the daughter of the king of the mountains was married to the one who wears a fine lock of matted hair, and has beautiful elephant-hide for clothing'

Note that *susūkṣmajaṭakeśena* is a *bahuvrīhi* compound with an internal *bahuvrīhi*, together totalling a constituency of four words. It can therefore be analyzed as *suṣṭhu sūkṣmā jaṭā yeṣu te susūkṣmajaṭāḥ*; *tādṛśāḥ keśā asya iti susūkṣmajaṭakeśaḥ*. The four can also be combined in a direct *bahuvrīhi* with the analyzed form such as *suṣṭhu sūkṣmā jaṭāḥ keśā asya iti*.

The word *anyapadārthe*, used as a qualifier of *bahuvrīhi* compounds, can also serve as a distinguisher for the domain of *tatpuruṣa* compounds. That is, the presence of the qualifier determines the meaning of a *bahuvrīhi* compound as that of something outside its constituency. A lack of this qualifier, such as one finds in the case of a *tatpuruṣa*, will distinguish the domain of a *tatpuruṣa* from that of a *bahuvrīhi*.

There are several *vārttika* to this rule in the *Mahābhāṣya* (II: 701-19). Consider, for example, the following:

(*a*) A statement should be made that *bahuvrīhi* should be formed out of constituents in syntactic coordination (*sāmānādhikaraṇya*), and not out of constituents with different loci (*vyadhikaraṇa*). A compound such as *pañcabhuktaḥ*, of *pañcabhir bhuktam asya*, would denote a different sense.

(*b*) A *bahuvrīhi* formed of indeclinable constituents should also be stated to cover *uccairmukhaḥ* 'he who has a raised forehead', etc.

(*c*) A *bahuvrīhi* should be stated to be formed of constituents where the first word is in the locative, or denotes a standard of comparison (*upamāna*), and where a subsequent word also gets deleted. Thus, we get *kaṇṭhekālaḥ* 'he in whose throat is blackness', parallel to *kaṇṭhe sthitaḥ kālo yasya*.

(*d*) A *bahuvrīhi* with deletion of a subsequent word should also be stated, for instances where the first constituent ends in the genitive and denotes collection or modification. Thus, *suvarṇālaṃkāraḥ*, parallel to *suvarṇasya vikāro' laṃkāro' sya* 'he whose ornament is the modification (made) of gold'.

(*e*) A compound with constituents which denote existence, used with *naÑ*, with optional deletion of a subsequent word, should also be stated. This gives examples such as: *avidyamānaputraḥ* 'he whose son is not', or *aputraḥ*, parallel to *avidyamānaḥ putro yasya*, where *vidyamāna* can undergo optional deletion.
(*f*) Compounds such as *astikṣīrā*, with *asti*, a particle, as in *astikṣīrā brāhmaṇī* 'a *brāhmaṇa* woman with milk', should be stated.

Kāśikā states that a *bahuvrīhi* compound is formed with its denotatum as the denotatum of any one of the nominal endings (*vibhakti*), except for the nominative (*Kāś* II: 128: *prathamārtham ekaṃ varjayitvā sarveṣu vibhaktyartheṣu bahuvrīhir bhavati*). This, in turn, becomes the interpretation of the word *anyapadārtha*, used in this rule in the locative. Obviously, the sense of the nominal ending is treated as principal in a *pada*, as compared with that of its base (*prakṛti*). As such, it is the denotatum of the nominal ending which is associated with the meaning condition of *anyapadārthe*. Thus, *prāptam udakaṃ yaṃ grāmam* has a parallel *bahuvrīhi* in *prāptodakaḥ* of *prāptodako grāmaḥ* 'a village to which water has reached'. Similar examples are available for other meanings: *ūḍharathaḥ*, *upahṛtapaśū*, *uddhṛtaudanā*, *citraguḥ*, and *vīrapuruṣakaḥ*, parallel to uncompounded forms such as *ūḍho ratho yena* 'he by whom a chariot has been pulled'; *uddhṛta odano yasyāḥ* 'a pot from which rice is lifted'; *upahṛta paśur yasmai* 'Rudra to whom an animal has been offered sacrificially'; *citrā gāvo yasya* '(Devadatta) is one who owns brindled cows'; and *vīrāḥ puruṣā yasmin* '(a village) in which there are brave men', respectively.

Note that the variable relative pronoun *yad* 'that', used as *yam*, *yena*, *yasmai*, *yasyāḥ*, *yasya*, and *yasmin*, denotes the sense of the nominal endings *dvitīyā*, *tṛtīyā*, *caturthī*, *pañcami*, *ṣaṣṭhī*, and *saptamī* respectively. The antecedent of these variables constitutes the denotatum of the compounds in questions. It is in this sense that commentators state that a *bahuvrīhi* denotes the sense of every nominal ending, except for the nominative. *Kāśikā* offers the counter-example *vṛṣṭe deve gataḥ* 'he went as it rained', where the sense of the nominative, i.e., *prātipadikārtha* 'nominal stem notion', does not become the sense of the compound mostly because of lack of usage (*anabhidhāna*). That is, a compound such as **vṛṣṭadeva* is not permitted, since it cannot denote the sense of *vṛṣṭe deve*.

2.2.25 **संख्ययाऽव्ययासन्नादूराधिकसंख्याः संख्येये**

saṃkhyayā 'vyayāsannādūrādhikasaṃkhyāḥ saṃkhyeye
/ *saṃkhyayā* 3/1 *avyayāsannādūrādhikasaṃkhyāḥ* 1/3 = *avyayaṃ ca āsannaś ca adūraś ca adhikaś ca saṃkhyā ca (itar. dv.)*; *saṃkhyeye* 7/1/ (*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *bahuvrīhiḥ* #23)

saṃkhyeye yā saṃkhyā varttate tayā sahāvyayāsannādūrādhikasaṃkhyāḥ samasyante, bahuvrīhiś ca samāso bhavati

A *pada* which ends in *sUP* and contains an *avyaya*, or *āsanna* 'proximate', *adūra* 'not far, near', *adhika* 'more', or *saṃkhyā* 'number', optionally combines in a *bahuvrīhi* compound with a *pada* which ends in *sUP* and contains a *saṃkhyā* denoting a thing counted (*saṃkhyeya*).

EXAMPLES:

upadaśāḥ 'those which are near to the ten already counted'
upaviṃśāḥ 'those which are near to the twenty already counted'
āsannadaśāḥ 'id.'
āsannaviṃśāḥ 'id.'
adhikadaśāḥ 'those which are more than the ten already counted'
adhikaviṃśāḥ 'those which are more than the twenty already counted'
dvitrāḥ 'two or three things'
tricaturāḥ 'three or four things'

1. This rule allows for the formation of a *bahuvrīhi* compound with a number word used in the sense of a thing counted. The other constituent could either be an indeclinable, or any one of the enumerated items. Thus, we get a compound such as *upadaśāḥ* 'that which is proximate to ten; either nine or eleven'. It is argued that such a compound could still be formed by rule 2.1.6 *avyayaṃ vibhaktisamīpa....* But the compound would be an *avyayībhāva*, and it, too, would have the meaning of its first constituent as prominent. The meanings, however, would be different. The *bahuvrīhi* would denote the *saṃkhyeya*, the sense in which its first member would be used. The *avyayībhāva* would denote proximity (*sāmīpya*). The *bahuvrīhi* thus denotes the thing which is proximate (*samīpin*), as opposed to the *avyayībhāva* which denotes proximity (*sāmīpya*). Thus, an *avyayībhāva* compound such as *upadaśa* can still be formed, though the meaning will be that of proximity.

2.2.26 दिङ्नामान्यन्तराले

diṅnāmāny antarāle
/ *diṅnāmāni* 1/3 = *diśāṃ nāmāni* (*ṣaṣ. tat.*); *antarāle* 7/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11. *bahuvrīhiḥ* #23)
diṅnāmāni subantāni antarāle vācye samasyante, bahuvrīhiś ca samāso bhavati
A *pada* which ends in *sUP* and denotes *diś* 'direction: east, west, etc.' optionally combines in a *bahuvrīhi* compound with a *pada* which ends in *sUP* and denotes *diś* provided the compound means *antarāla* 'intermediate direction'.

EXAMPLES:

dakṣiṇapūrvā 'south-eastern direction'
pūrvottarā 'north-eastern direction'
uttarapaścimā 'north-western direction'
paścimadakṣiṇā 'south-western direction'

1. This rule allows the compound formation of words denoting directional names, provided the resultant compound denotes an intermediate point (*antarāla*). Obviously, *antarāla* is a meaning which belongs to a word outside the constituency (*anyapadārtha*) of the derivate, therefore rule 2.2.24 *anekam anyapadārthe* could itself allow the compound formation Why, then, have this rule? The *Mahābhāṣya* (II: 725-27) discusses various details of this aspect of the problem (see Joshi 1974: 117-33). Haradatta (*PM* ad *Kāśikā* II: 136) states that this rule is required so that *bahuvrīhi* compounds, with words which denote directional names, can be formed even in the following three cases:

(*i*) when their denotatum is something other than that of *matUP*;
(*ii*) when their denotatum is similar to that of the nominative (*prathamā*); and
(*iii*) when their constituents entail lack of syntactic coordination (*vaiyadhikaraṇya*).

For example, a compound such as *citraguḥ* 'he who possesses brindled cows' entails 'possession' which, in turn, happens to be the denotatum of affix *matUP*. This rule may be necessary for forming *bahuvrīhi* where the sense of *matUP* is not involved. I have already indicated in my notes under 2.2.23 *śeṣo bahuvrīhiḥ* and 2.2.24 *anekam anyapadārthe* that those rules may permit the formation of *bahuvrīhi* only when the constituents are in syntactic coordination, or when the derivate denotes the sense of any nominal ending other than that of the nominative. This rule again may permit such compound formations. This is basically the point made by Haradatta.

2. The word *nāma* 'name' is used in this rule to emphasize that a constituent, fit to form a compound under the provisions of this rule, must not only denote 'direction' but must do it 'primarily'. That is, it should denote a directional name as a *rūḍhi* 'conventional practice', and not as *yaugika* 'derivationally arrived at'. Examples cited more often for directional names in this category are *aindrī* 'east' and *kauberī* 'north', which denote directions only derivationally, and by inference. The words really refer to that which pertains to Indra, or Kubera, respectively.

2.2.27 तत्र तेनेदमिति सरूपे

tatra tenedam iti sarūpe

| tatra ∅ tena 3/1 *idam* 1/1 *iti ∅ sarūpe* 1/2/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *bahuvrīhiḥ* #23)
tatreti saptamyante sarūpe pade teneti ca tṛtīyānte idam etasminn arthe samasyete, bahuvrīhiś ca samāso bhavati
A *pada* which ends either in *saptamī* or *tṛtīyā* optionally combines, in a *bahuvrīhi* compound, with an identical *pada* where the compound denotes *iti* 'thus'.

EXAMPLES:

keśākeśi 'a fight where one seized the other's hair'
daṇḍādaṇḍi 'a fight where one attacked the other with a stick'
musalāmusali 'a fight where one attacked the other with a club'

1. The word *tatra* is here treated as ending in locative (*saptamī*; 5.3.10 *saptamyās tral*). The word *tena* is obviously an instrumental (*tṛtīyā*). The word *sarūpe* is to be read with both. That is, a *pada* which ends in the locative, or one ending in the instrumental, combines to form a *bahuvrīhi* compound with another identical (*sarūpa*) *pada* which ends in the locative or instrumental. The word *idam*, used with *iti* 'thus', provides for the meaning of the derivate compound. First of all, the word *iti* would rule out any reference to the form (*svarūpa*). Secondly, it would be used with words in the locative or instrumental, to clearly figure out the meaning of the compounds in question. Thus, *tena idam iti*, where *iti* does not refer to the word-forms *tena idam*, can be interpreted as 'that by means of which this...'. These compounds, because of the force of *iti*, will therefore express the desired meanings (*vivakṣārtha*). Note that examples such as *keśākeśi* and *daṇḍādaṇḍi* are used in the context of fights and, as such, entail reciprocity (*paraspara*) in fights (*praharaṇa*). This sense of reciprocal attack is outside the constituency of the compound (*anyapadārtha*) anyway.

Note that the compound constituents end with the same endings, and have identical forms. This occasions the use of *ekaśeṣa* 'retention of only one' (cf. 1.2.64 *sarūpāṇām ekaśeṣa ekavibhaktau*). The *ekaśeṣa* is blocked on the strength of the formulation of this rule, itself.

2.2.28 तेन सहेति तुल्ययोगे

tena saheti tulyayoge
| tena 3/1 *saha ∅ iti ∅ tulyayoge* 7/1 = *tulyaś cāsau yogaś ca* (*karm. tat.*), *tasmin |*
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *bahuvrīhiḥ* #23)
'saha' ity etac chabdarūpaṃ tulyayoge vartamānaṃ 'tena' ity tṛtīyāntena saha samasyate, bahuvrīhiś ca samāso bhavati

A *pada* constituted by *saha* 'with' optionally combines, in a *bahuvrīhi* compound, with a *pada* which ends in *tṛtīyā* provided the referents of both have the same relation to the action.

EXAMPLES:

saputraḥ (*āgataḥ*) 'he came with his son'
sacchātraḥ (*āgataḥ*) 'he came with his student'
sakarmakaraḥ (*āgataḥ*) 'he came with his servant'

1. Note that *saha* is an indeclinable (*avyaya*), and that it can combine with a word which ends in *tṛtīyā* provided it is also used in the sense of *tulyayoga* 'identical connection'. A *saha* is treated as occurring in *tulyayoga* when there happen to be two or more entities related with a common action. Thus, *putreṇa sahāgataḥ pitā* 'the father came with the son', where both the father and the son are equally related with the action of coming (*āgamana*). They are so marked by the use of *saha*. A compound such as *saputraḥ* cannot be formed with relevant constituents from: *sahaiva daśabhir putrair bhāraṃ vahati gardabhī* 'the female donkey is carrying the load, even when she has ten sons'. The sense here is that of presence (*vidyamānatā*) and not of the connection of the sons with the action of carrying. It is stated, though, that the condition of *tulyayoga* is limited in effect (*prāyika*). That is, it cannot cover everything (*asarvaviṣaya*). Failure to demand this condition would facilitate the formation of compounds such as *sakarmaka* 'that which has an object', *salomakaḥ* 'he who has hair', etc., which do not share the condition of *tulyayoga*.

2.2.29 चार्थे द्वन्द्वः

cārthe dvandvaḥ
/ *cārthe* 7/1 = *cena* (*kṛtaḥ*) *arthaḥ* (*ṣaṣ. tat.*), *tasmin*; *dvandvaḥ* 1/1/
(*samāsaḥ* #2.1.3, *saha supā* #2.1.4, *sup* #2.1.9, *vibhāṣā* #2.1.11, *anekam* #24)
anekaṃ subantaṃ cārthe vartamānaṃ samasyate, dvandvasaṃjñaś ca samāso bhavati
Two or more *pada* which end in *sUP* optionally combine with each other, in a *dvandva* compound, in the sense of *ca* 'and'.

EXAMPLES:

plakṣanyagrodhau 'a *plakṣa* and a *nyagrodha* tree'
dhavakhadirapalāśāḥ '*dhava*, *khadira*, and *palāśa* trees'
vāktvacam 'speech and skin'

1. This rule allows the formation of *dvandva* compounds under the meaning condition of *cārtha* 'sense of *ca*'. The *ca* is a particle generally

meaning 'and'. Since not all meanings generalized as 'and' can form a *dvandva* compound, a close look at the meaning of *ca* is necessary. Commentators recognize four types of meaning of *ca*, as follows:

(*i*) *samuccaya* 'collection', where mutually independent items are brought together simply on the basis of their relation to some common factor. For example, consider:
aharahar nayamāno gāmaśvaṃ puruṣaṃ paśum /
vaivasvato na tṛpyati surāyā iva durmadī //
'Unsatisfied even when he is carrying off cows, horses, men, and animals, day in and day out, Yama (the god of death) is like an alcoholic who is never satiated by drinking liquor'. Here, cows, horses, etc., are mutually independent, though they are brought into close relation by the single action of *nayana* 'carrying off'. The *samuccaya* sense is so obvious that *ca* does not need to be explicitly used (*PM* ad *Kāśikā*: *yadā parasparanirapekṣāḥ padārthā ekasmin pratisambandhini samuccīyante tadā samuccayaḥ... atra nayatikriyāyām ekasyāṃ gavādīnāṃ samuccayaḥ*). This sense of *samuccaya* can also be found in *rājño gauś cāśvaś ca* 'the king's cow and horse', and *raktaḥ paṭaḥ kuṇḍalaṃ ca* 'the red cloth and the earring'.

(*ii*) *anvācaya* 'aggregation', where an independent item is made dependent in conformity with another principal item (*pradhāna*). Consider, for example, *bho baṭo, bhikṣāṃ aṭa gāṃ cānaya* 'O, child, go the rounds and collect alms; also the cow'. Here, bringing alms is principal, and bringing the cow is secondary. The person commanded will primarily perform the begging of alms; if, perchance, while doing so he sees the cow, he will also bring that. He will not, however, put any special effort into bringing the cow.

Note that a *dvandva* compound is not permitted for instances where the *ca* means *samuccaya* and *anvācaya*. This is because the condition of *sāmarthya* 'syntactico-semantic relation' lacks items which can be brought together. Items in *samuccaya* remain independent of each other (*nirapekṣa*), whereas in *anvācaya* there obtains the dependence of the secondary item upon the primary. This is what causes the impairment of the condition of *sāmarthya* (cf. 2.2.1 *samarthaḥ padavidhiḥ*).

(*iii*) *itaretarayoga* 'one joined with the other', where two items are brought close to each other via their mutual expectancy to a third. Thus, *itaretarayoga* becomes like a subtype of *samuccaya* and *anvācaya*. However, a difference does exist. The two items in *itaretarayoga* are both principal, though share a mutual expectancy relationship in regard to the third. Consider the example *devadattayajñadattābhyām idaṃ kāryam* 'this is to be done by Devadatta and Yajñadatta', where *devadatta* and *yajñadatta* are independent

of each other, but are brought close via the action of doing a particular thing; they are mutually related via this action.

(*iv*) *samāhāra* 'grouping', where one group of things is brought together with another group of things via something else. Such grouping causes individual differences to become subservient to the force which brings them together. Consider, for example, *chatropānaham* 'the umbrella and the shoes', where *chatra* 'umbrella' and *upānaha* 'shoes' are independent things, but are brought together via their location in each other's proximity (*saṃhati*).

A *dvandva* compound with the last two instances (iii-iv) is permitted, since the *sāmarthya* relationship between the constituents is not impaired.

2.2.30 उपसर्जनं पूर्वम्

upasarjanaṃ pūrvam
/ *upasarjanam* 1/1 *pūrvam* 1/1/
(*samāsaḥ* #2.1.3)
upasarjanasaṃjñakaṃ samāse pūrvaṃ prayoktavyam
A *pada* which is termed *upasarjana* (1.2.43 *prathamā...*) is placed first in a compound.

EXAMPLES:

kaṣṭaśritaḥ (see 2.1.24 *dvitīyā...*)
śaṃkulākhaṇḍaḥ, etc. (see 2.1.30 *tṛtīyā...*, etc.)

1. It is stated that the word *samāsaḥ*, carried from rule 2.1.3 *prāk kaḍārāt samāsaḥ*, is transformed into *samāse*, its locative counterpart, so that it can be interpreted as 'in a compound'. This contextually conditioned transposition of a nominal ending (*vibhaktivipariṇāma*) is not uncommon.

A constituent specified by the nominative (*prathamā*) in the rules which allow the formation of compounds is termed *upasarjana*. However, the word is used in its etymological sense (*anvartha*) of 'secondary' (1.2.43 *prathamānirdiṣṭaṃ samāsa...*). Rule 2.2.30 requires that a constituent termed *upasarjana* be placed first (*pūrvam*) in the compound. For example, given the strings *rājan* + *Ṅas* + *puruṣa* + *sU*, from whence derives the compound *rājapuruṣa* 'king's man', *rājan* + *Ṅas* is termed *upasarjana* because of rule 2.2.8 *ṣaṣṭhī*. That is, 2.2.8 allows the formation of a compound where one constituent ends in the genitive (*ṣaṣṭhī*) and another is a syntactically related word. The word *ṣaṣṭhī* in rule 2.2.8, which specifies constituents such as *rājan* + *Ṅas*, is given in the nominative (*prathamā*). Consequently, *rājan* + *Ṅas* is termed *upasarjana* and is placed first in the compound string *rājan* + *Ṅas* + *puruṣa* + *sU*.

An objection is made to the formation of this rule, on the grounds that

no usage to the contrary of *upasarjana* constituents is found. If everyone uses the compounds in the correct order of constituent combination, then the rule should not have been formed. It is stated, then, that a rule such as this is required to block any wrong order of constituents (*viparītaprayoga*). The word *pūrvam* is thus used to block any postplacement of a constituent termed *upasarjana* (*Kāś*: *pūrvavacanam paraprayoga-nivṛtyartham*).

2.2.31 **राजदन्तादिषु परम्**

rājadantādiṣu param
/ *rājadantādiṣu* 7/3 = *rājadanta ādir yeṣāṃ te* (*bv.*), *tasmin*; *param* 1/1/
(*upasarjanam* #30)
rājadantādiṣu param upasarjanaṃ prayoktavyam
A *pada* which is termed *upasarjana*, with reference to compounds enumerated in the list headed by *rājadanta*, is placed at the end.

EXAMPLES:

rājadantaḥ 'front tooth, king of teeth'
agrevaṇam 'edge of the forest'

1. This rule heads the series of adjustments in the general rule of the preplacement (*pūrvanipāta*) of a compound constituent termed *upasarjana*. The word *rājadantādiṣu* clearly refers to a list of compounds headed by the compound *rājadanta*. Note that this rule simply states that an *upasarjana* is to be postplaced in the compounds of this specific list. This postplacement can also be called *nipātana* 'ad hoc'.

Note that the list headed by *rājadanta* contains two types of compounds:

(*i*) compounds which postplace constituents termed *upasarjana*, and thus become an exception to rule 2.2.30 *upasarjanaṃ pūrvam*; and
(*ii*) compounds which postplace a constituent against a provision made elsewhere, and thus form an exception to some other rule.

The 'ad hoc' nature of the formation of compounds contained in this list is also emphasized by examples such as *agrevaṇam* 'edge of the forest', where the locative of *agra* + *Ṅi* does not undergo deletion.

2.2.32 **द्वन्द्वे घि**

dvandve ghi
/ *dvandve* 7/1 *ghi* 1/1/
(*pūrvam* #31)
dvandvasamāse ghyantaṃ pūrvaṃ prayoktavyam
A *pada* which terminates in *ghi* (1.4.7 *śeṣo...*) is placed first in a *dvandva* compound.

EXAMPLES:

paṭuguptau 'clever and secretive'
mṛduguptau 'soft and secretive'

1. Note that the word *pūrvam*, of rule 2.2.30 *upasarjanaṃ pūrvam*, now becomes valid. It was not retained in the preceding rule because of its incompatibility with *param*. This rule with *pūrvam* thus provides for the preplacement of a constituent of a *dvandva* compound which ends in *ghi* (1.4.7 *śeṣo ghy asakhi*). The constituents of a *dvandva* compound are treated as equal. In this way, the question of principal (*pradhāna*) or secondary (*upasarjana*) does not arise. It is to determine the order of these principal constituents that this rule is formulated. In other words, this rule is formulated so that, in cases of doubt or of provisions indicating otherwise, a particular ruling could be obtained.

What about a *dvandva* compound with more than one constituent termed *ghi*? The rule of preplacement applies to only one constituent. Thus, we get *hariguruharāḥ* or *hariharaguravaḥ*, where *hari* and *guru* are two constituents termed *ghi*. The restriction of preplacement will apply to only one (here *hari*) and not to *guru*, relative to *hara*. It is for this reason that *hari* is preplaced, though *guru* and *hara* could be switched.

2.2.33 अजाद्यदन्तम्

ajādyadantam
/ *ajādyadantam* 1/1 = *ac ādir yasya tat* = *ajādiḥ* (*bv.*), *ad ante yasya tat* (*bv.*), *ajādi cādaḥ adantaṃ ca* = *ajādyadantam* (*karm. tat.*) /
(*pūrvam* #30, *dvandve* #32)
ajādyadantaṃ śabdarūpaṃ dvandve samāse pūrvaṃ prayoktavyam
A *pada* which begins with *aC* (a vowel) and ends in *aT* (*a*; cf. 1.1.70 *taparas...*) is placed first in a *dvandva* compound.

EXAMPLES:

uṣṭrakharam 'a camel and a donkey'
uṣṭraśaśakam 'a camel and a rabbit'

1. Note that rules 2.2.30 and 2.2.32 determine the order of placement of a given constituent by means of the technical terms *upasarjana* and *ghi*. Rule 2.2.31 does the same by means of enumeration (*parigaṇana*). Our present rule determines the order by specifying the initial (*ādi*) and the final (*anta*) sound segments of the constituent. Thus, our rule requires that a constituent beginning with a vowel (*aC*) and terminating in *aT* (*a*; 1.1.70 *taparas tatkālasya*) is to be placed first in a *dvandva* compound.

The provision of this rule is not free of problems. Additionally, one may find a conflict of this rule with rule 2.2.32 *dvandve ghi*. Consider the

examples *indrāgnī* 'Indra and Agni' and *indravāyū* 'Indra and Vāyu', where *indra* begins with a vowel and ends with *a*. Similarly, *agni* and *vāyu* end in *i* and *u*, respectively. These last two qualify for preplacement under the provisions of rule 2.2.32. But *indra* qualifies for preplacement under the present rule. There is clearly a conflict here. The tradition invokes rule 1.4.2 *vipratiṣedhe paraṃ kāryam*, and rules in favor of the subsequent provision. This is how *indra* comes to be preplaced.

2.2.34 अल्पाच्तरम्

alpāc taram
/ *alpāc taram* 1/1 = *alpo 'c yasmin tat* (*bv.*), *anayor atiśāyane alpāc* = *alpāc taram* /
(*dvandve* #32, *pūrvam* #30)
alpāc taraṃ śabdarūpaṃ dvandve samāse pūrvaṃ prayoktavyam
A *pada* which contains fewer *aC* (vowels) is placed first in a *dvandva* compound.

EXAMPLES:

plakṣanyagrodhau 'a *plakṣa* and a *nyagrodha* tree'
dhavakhadirapalāśāḥ '*dhava*, *khadira*, and *palāśa* trees'
śaṅkhadundubhivīṇā 'conch-shell, bugle, and *vīṇā* (a string instrument)'
vīṇāśaṅkhadundubhayaḥ '*vīṇā*, conch-shell, and bugle'

1. This rule provides for preplacement on the basis of a fewer number of vowels in a given constituent. However, there are very many problems with this provision. Consider the series of *vārttika* given under this rule:

(*i*) *ṛtunakṣatrāṇām ānupūrvyeṇa samānākṣarāṇāṃ pūrvanipāto vaktavyaḥ*
'preplacement should be stated for constituents which denote a prior season (*ṛtu*) or constellation (*nakṣatra*), and consist of an equal number of syllables (*samānākṣara*)'
Thus: *citrāsvātī* 'the constellations *citrā* and *svātī*'

(*ii*) *laghvakṣaraṃ ca pūrvaṃ nipatatīti vaktavyam*
'it should be stated that a constituent consisting of a short syllable is also preplaced'
Thus: *śaraśādam* 'reed and weed'.

(*iii*) *abhyarhitaṃ ca pūrvaṃ nipatatīti vaktavyam*
'it should be stated that a constituent denoting someone worthy of respect (*abhyarhita*) is also preplaced'
Thus: *mātāpitarau* 'mother and father', where the question of which parent is worthier of respect is resolved, according to canonical tradition, in favor of the mother (*mātā*).

(*iv*) *varnānām ānupūrvyeṇa pūrvanipātaḥ*
'constituents which denote *varṇa* 'caste group' should be preplaced in accordance with their relative order'

Thus: *brāhmaṇakṣatriyabiṭśūdrāḥ*
'brāhmaṇa, kṣatriya, vaiśya, and *śūdra'*
Note that the consideration of an equal number of syllables is not applicable in this instance.

(*v*) *bhrātuś ca jyāyasaḥ pūrvanipāto vaktavyaḥ*
'preplacement should also be stated for the constituent which denotes an older brother'
Thus: *yudhiṣṭhirārjunau* 'Yudhiṣṭhira and Arjuna'

(*vi*) *saṃkhyāyā alpīyasyāḥ pūrvanipāto vaktavyaḥ*
'preplacement of a constituent which denotes a smaller number should be stated'
Thus: *dvitrāḥ* 'two and three'

2.2.35 सप्तमीविशेषणे बहुव्रीहौ

saptamīviśeṣaṇe bahuvrīhau
/ *saptamīviśeṣaṇe* 1/2 (*dv.*) *bahuvrīhau* 7/1/
(*pūrvam* #30)
saptamyantaṃ viśeṣaṇaṃ ca bahuvrīhisamāse pūrvaṃ prayoktavyam
A *pada* which ends in *saptamī* or denotes a qualifier (*viśeṣaṇa*) is placed first in a *bahuvrīhi* compound.

EXAMPLES:

kaṇṭhekālaḥ 'he in whose throat is blackness'
urasilomā 'he who has hair on his chest'
citraguḥ 'he who owns brindled cows'
śabalaguḥ 'id.'

1. If one understands the meaning of compounds in terms of principal and secondary constituents, with the further stipulation that the secondary constituent will be placed first, then the constituents of a *bahuvrīhi* compound will all qualify for the status of *upasarjana*. For, the meaning of something outside of the constituency is principal in a *bahuvrīhi* compound. A problematic situation arises, since all constituents obviously cannot be placed first. This rule resolves some of the problems. It provides that a *bahuvrīhi* constituent which either ends in locative, or is a qualifier, is placed first. Thus, *kaṇṭhe* and *citrā* in *kaṇṭhekālaḥ* and *citraguḥ* are placed first, on account of ending in locative, or of being a qualifier. Further adjustments are provided by *vārttika* relative to the preplacement of constituents in a *bahuvrīhi* compound. For example, preplacement is also required of pronouns (*sarvanāman*) and numeral (*saṃkhyā*). Thus, *sarvaśvetaḥ* 'all-white' and *dvyanyaḥ* 'he for whom there are two others', etc.

2.2.36 निष्ठा

niṣṭhā
/ *niṣṭhā* 1/1/
(*pūrvam* #30, *bahuvrīhau* #35)
niṣṭhāntaṃ ca bahuvrīhisamāse pūrvaṃ prayoktavyam
A *pada* which contains a stem in *niṣṭhā* (3.2.102 *niṣṭhā*) is placed first in a *bahuvrīhi* compound.

EXAMPLES:

kṛtakaṭaḥ 'he who has already finished making the mat'
bhikṣitabhikṣiḥ 'he who has already received alms'

1. A proposal for postplacement is made by a *vārttika* in connection with those *niṣṭhā* constituents which occur with items denoting *jāti* 'class', *kāla*, 'time' and *sukha* 'pleasure'. Thus, we get *śārṅgajagdhī* 'she who ate Mung beans', *māsajātaḥ* 'he since whose birth a month has elapsed', and *sukhajātaḥ* 'he who has achieved happiness'.

2.2.37 वाऽऽहिताग्न्यादिषु

vā "hitāgnyādiṣu
/ *vā0 āhitāgnyādiṣu* 7/3 = *āhitāgniḥ ādir yeṣāṃ* (*bv.*), *teṣu*/
(*pūrvam* #30, *bahuvrīhau* #35, *niṣṭhā* #36)
āhitāgnyādiṣu niṣṭhāntaṃ pūrvaṃ vā prayoktavyam
A *pada* which contains a stem in *niṣṭhā* and is enumerated under the list headed by *āhitāgni* is only optionally placed first in a *bahuvrīhi* compound.

EXAMPLES:

āgnyāhitaḥ 'he who has lighted the ritual fire'
āhitāgniḥ 'id.'
jātaputraḥ 'he who has a son born'
putrajātaḥ 'id.'

2.2.38 कडाराः कर्मधारये

kaḍārāḥ karmadhāraye
/ *kaḍārāḥ* 1/3 *karmadhāraye* 7/1/
(*pūrvam* #30, *vā* #37)
kaḍārādayaḥ śabdāḥ karmadhāraye samāse vā pūrvaṃ prayoktavyam
A *pada* which contains *kaḍāra* 'yellow, etc.' only optionally is placed first in a *karmadhāraya* compound.

EXAMPLES:

kaḍārajaiminiḥ 'a pale Jaimini'
jaiminikaḍāraḥ 'id.'

2.3.1 अनभिहिते

anabhihite
/ anabhihite 7/1/
'anabhihite' anukte anirdiṣṭe karmādau vibhaktir bhavati
(A nominal ending occurs only) when (what it expresses is) not expressed by some other means.

EXAMPLES:

kaṭaṃ karoti 'he is making a mat'
grāmaṃ gacchati 'he is going to the village'
kriyate kaṭaḥ 'a mat is being made'
śatyaḥ 'a thing bought for a hundred'
śatikaḥ 'id.'
prāptodako grāmaḥ 'a village to which water has reached'

1. The word *anabhihite* is used here in the sense of *anukta* 'not stated' or *anirdiṣṭa* 'not specified'. The *Kāśikā* calls it a governing rule (*adhikāra*) which, in turn, means that rules dealing with the introduction of nominal endings (*vibhakti*) must take this *sūtra* into consideration.

2. The purpose of this *sūtra* is to specify conditions under which a particular nominal ending can be introduced. Thus, rule 2.3.2 *karmaṇi dvitīyā*, read with rule 2.3.1 *anabhihite*, specifies that *dvitīyā* 'second triplet of nominal ending' can be introduced after a nominal stem (*prātipadika*) to express *karman* 'object' (1.4.49 *kartur īpsitatamaṃ karma*), when the same has not already been expressed by some other means. That is, if *karman* has already been expressed, it should not be expressed again by means of nominal endings. Rule 2.3.1, therefore, serves as a constraint for the introduction of nominal endings. It allows the introduction of nominal endings only when their denotatum has not already been expressed by some other means. Commentators specify by enumeration (*parigaṇana*) the following four ways in which the denotatum of a nominal ending can be expressed elsewhere:

(*i*) affixes denoted by the abbreviatory term *tiṄ* (3.4.78 *tiptasjhi*...);
(*ii*) affixes termed *kṛt* (3.1.93 *krd atiṅ*);
(*iii*) affixes termed *taddhita* (4.1.76 *taddhitāḥ*); and
(*iv*) items termed *samāsa* 'compound' (2.1.3 *prāk kaḍārāt*...).

These four ways of expression can be illustrated by the use of examples (*a*)-(*e*), below:

(*a*) *devadatta odanaṃ pacati* 'Devadatta is cooking rice'

This sentence expresses the agent (*kartṛ*) by means of the verbal ending *tiṄ*. As a result *devadatta*, the named agent, is put in the nominative, expressing nothing but the notion of the nominal stem (*prātipadikārtha*; 2.3.46 *prātipadikārtha...*). Since the *karman* of the action denoted by the verbal root *pac* 'to cook' remains unexpressed, *am*, the second triplet of nominal ending, has been introduced after *odana* to express it.

(*b*) *devadattena odanaḥ pacyate* 'rice is being cooked by Devadatta'

Sentence (*b*) expresses the object by means of the verbal ending *te*. This necessitates the introduction of the nominative after *odana* to express the nominal stem notion. But since the agent remains unexpressed, *tṛtīyā* 'third triplet of nominal ending', *Ṭā*, has been introduced after *devadatta* to express it.

The above two examples show how an agent or object expressed otherwise cannot again be expressed by means of nominal endings.

(*c*) *devadattena kaṭaḥ kṛtaḥ* 'a mat was made by Devadatta'

Sentence (*c*) expresses the object by means of the *kṛt* affix *Kta* in *kṛtaḥ*. Consequently, *kaṭa* 'mat' is used in the nominative, where nothing but the nominal stem notion is expressed. The third triplet, *Ṭā*, has been introduced after *devadatta* to express agent.

(*d*) *śatyo' śvaḥ* 'a horse bought for a hundred'

The object is expressed in sentence (*d*) by means of the *taddhita* affix *yaT* (5.1.21 *śatāc ca...*).

(*e*) *prāptodako grāmaḥ* 'a village to which water has reached'

In sentence (*e*), the object is expressed by means of a compound. The compound *prāptodakaḥ* 'that to which water has reached' is a *bahuvrīhi* (2.2.24 *anekam anyapadārthe*), where the object of reaching has already been expressed. This explains why *grāma* 'village' has been put in the nominative.

It should be clear from the preceding examples, and their explanations, that the denotata of nominal endings can be expressed by diverse means. A nominal ending is used to express its denotatum if, and only if, the same has not already been expressed by something else.

3. The function of rule 2.3.1 can also be viewed as establishing an interdependency among rules expressing *kāraka* or non-*kāraka* relations. Thus, the introduction of nominal endings is dependent upon the information whether or not their denotatum has already been expressed by some other means. Such information is necessary to avoid duplication in expressing a *kāraka* or non-*kāraka* relation. In addition, if a denotatum can be expressed by diverse means, strings employing those diverse means can be said to be relatable to each other.

A constraint, in the form of rule 2.3.1 *anabhihite*, underscores this aspect of relatability among structures expressing similar denotata.

Thus, sentence (*a*) is related to sentence (*b*) in the sense that (*b*) is the passive counterpart of (*a*). Their derivations start with a common string:

devadatta (*kartṛ*) + *odana* (*karman*) + *kṛ* + *LAṬ*.

The derivation then branches off in two directions, depending on what kind of verbal ending is selected to replace *LAṬ*.

Note in this connection that affixes referred to as *LA*, of which *LAṬ* is one, are introduced after a transitive root when either agent or object is to be expressed. They are introduced after an intransitive root when either agent or *bhāva* 'root-sense' is to be expressed (3.4.69 *laḥ karmaṇi ca...*). Furthermore, these abstract suffixes are eventually replaced, generally by the verbal endings referred to as *tiṄ*. It is at the level of the selection of *tiṄ* that a decision must be made, whether *tiṄ* should be expressing agent, object, or *bhāva*. Once this decision has been made, and a proper *tiṄ* has been selected, the further selection of nominal endings can be made. Similar relatability also exists between structures expressing *kāraka* or non-*kāraka* relations through diverse means.

4. The negative particle *naÑ* 'not', and therefore the present rule (*anabhihite*), has been interpreted in two ways:

(*i*) as *prasajya*, where the negative particle is construed with the verb; and

(*ii*) as *paryudāsa*, where the same has been construed with a noun.

Rule 2.3.2 *karmaṇi dvitīyā*, etc., when read with 2.3.1 *anabhihite*, can thus receive the following two interpretations:

(*i*) *anabhihite karmaṇi dvitīyā na bhavati* 'a *dvitīyā* 'second triplet of nominal ending' does not occur when *karman* 'object' is expressed otherwise'

(*ii*) *anabhihite karmaṇi dvitīyā bhavati* 'a *dvitīyā* occurs when *karman* is not expressed otherwise'

The first interpretation construes the negative particle *naÑ* with the verb *bhavati*, and thus renders the status of rule 2.3.2 restrictive (*pratiṣedha*). The second interpretation construes the negative particle *naÑ* with the noun *karman*, and consequently renders the status of 2.3.2 operational (*vidhi*). The *Mbh* (II: 764-65) has discussed these interpretations in connection with this example:

(*f*) *prāsāda āste* 'he is sitting on the roof of the palace'

Here, *prāsāda* 'palace' has been placed in *saptamī* 'seventh triplet of *sUP*'. Now, this *saptamī* has been introduced to denote *adhikaraṇa* 'locus', which is also the denotatum of affix *GHaÑ*, introduced after *pra* + *sad* to derive *prāsāda*. It can be argued that, if the locus has already been expressed by *GHaÑ* in *prāsāda*, the introduction of *saptamī* to denote locus again will make no sense. The *paryudāsa* interpretation allows the introduction of *Ṅi*, the locative singular ending, to denote the locus of *ās* 'to sit' which

still remains to be expressed. That is, *āste*, the verb form, has not already expressed it. Besides, *GHaÑ* expresses the locus of *sad*. It should also be noted that rules 2.3.2, etc., are basically operational in nature; hence, a *paryudāsa* interpretation is favored.

2.3.2 **कर्मणि द्वितीया**

karmaṇi dvitīyā
/ *karmaṇi* 7/1/ *dvitīyā* 1/1/
(*anabhihite* #1)
karmaṇi kārake yā saṃkhyā tatra dvitīyā vibhaktir bhavati
A *dvitīyā* occurs when *karman* is not expressed otherwise.

EXAMPLES:

kaṭaṃ karoti 'he is making a mat'
grāmaṃ gacchati 'he is going to the village'

1. This rule, read with 2.3.1 *anabhihite*, states that *dvitīyā* (*am*, *auṬ*, *Śas*) can occur after a nominal stem to express *karman* (1.4.49 *kartur īpsitatamaṃ karma*), provided the *karman* has not already been expressed by some other means. In the notes under the previous rule, I have already illustrated instances where *karman* has been expressed by means of something other than a nominal ending.

In the first of the above examples (*kaṭaṃ karoti*) *am*, the accusative singular ending, has been introduced after *kaṭa* to express the object of the action denoted by the verbal root *kṛ* 'to make'. This introduction of *am* was made possible by the fact that there was nothing in the sentence that expressed the object in question. The verbal ending *ti*, in *karoti*, is expressing the agent.

2. Note that *dvitīyā*, etc., are terms assigned to the triplet of nominal endings which Pāṇini accepts from the earlier grammarians. Additionally, the word *karman* has been used in the *Aṣṭādhyāyī*, in the sense of both an action (*kriyā*) and an object. Of course, in rule 2.3.2 *karman* is used in the sense of object, as defined by rules 1.4.49 *kartur īpsitatamaṃ karma*, etc.

3. The *Kāśikā* states that a *saṃkhyā* 'number' is also expressed with the nominal endings. That is, the *am* in *kaṭam*, in addition to expressing the object, also expresses the singular number. Further, *Kāśikā* takes *saṃkhyā* as the principal denotatum, and uses *karman* as its qualifier: *karmaṇi kārake yā saṃkhyā tatra dvitīyā* '*dvitīyā* occurs when a number, having its locus in the participant named object, is to be expressed, providing the same has not already been expressed otherwise'.

Bhaṭṭoji (*SK* I: 600) simply says: *anukte karmaṇi dvitīyā syāt* '*dvitīyā* occurs to express *karman* when it is not expressed otherwise'. Note that

Bhaṭṭoji does not mention *saṃkhyā* here. That is, according to him, the denotatum of *dvitīyā* is a *karman* which has not been expressed otherwise.

The *Mahābhāṣya* discusses the question of the denotatum of nominal endings. According to one view, number (*saṃkhyā*) is the denotatum of nominal endings, while the other regards nominal endings as generally denoting a *kāraka*. A discussion of these two views is necessitated by rules such as 1.4.21 *bahuṣu bahuvacanam*, which states that a plural ending is to be introduced to denote plurality (*bahutva*). This establishes that number could indeed be the denotatum of nominal endings. When a nominal ending is selected, rules such as 1.4.21 are brought close to the context of rules such as the present one (2.3.2). These two rules, read with 2.3.1 *anabhihite*, will then specify that:

> *anabhihite karmaṇi dvitīyā bahuṣu bahuvacanam* 'second plural triplet of nominal ending is introduced when the multiplicity of *karman* is not already expressed otherwise'

If one takes the view that number is principal (*pradhāna*), and *kāraka* is secondary (*gauṇa*), number becomes the denotatum of nominal endings. As we have seen, *Kāśikā* takes *saṃkhyā* as *pradhāna*, whereas *SK* treats *kāraka* as *pradhāna*. For a detailed explication of these views, consult the *Mbh* (II: 752–69) where, on the basis of the view that *kāraka* is the denotatum of nominal endings, rule 2.3.1 is also shown to be unnecessary.

4. The *Mbh* (II: 770) states in a *ślokavārttika* that *dvitīyā* is also introduced after a nominal stem, cooccurring with *ubhayataḥ* 'on both sides'; *sarvataḥ* 'on all sides'; *dhik* 'interjection denoting censure'; *uparyupari* 'high above'; and *adhyadhi* 'down below', etc. Thus, we get the following sentences:

(*a*) *ubhayato grāmam* 'on both sides of the village'
(*b*) *sarvato grāmam* 'on all sides of the village'
(*c*) *dhik devadatta* 'shame on you, Devadatta!'
(*d*) *uparyupari grāmam* 'high above the village'
(*e*) *adhyadhi grāmam* 'down below the village'
(*f*) *adho' dho grāmam* 'id.'

2.3.3 **तृतीया च होश्छन्दसि**

> *tṛtīyā ca hoś chandasi*
> / *tṛtīyā* 1/1 *ca* Ø *hoḥ* 6/1 *chandasi* 7/1/
> (*karmaṇi dvitīyā* #2, *anabhihite*#1)
> *chandasi viṣaye juhoteḥ karmaṇi kārake tṛtīya vibhaktir bhavanti, dvitīyā ca*
> A *tṛtīyā* 'third triplet of *sUP*' also occurs optionally to *dvitīyā* in the Vedic when *karman* of *hu* 'to call; to perform a ritual sacrifice' is not expressed otherwise.

EXAMPLES:

yavāgvāgnihotraṃ juhoti 'he is offering an oblation of *yavāgū* (barley gruel) to the *agnihotra* (a kind of ritual fire)'
yavāgūm agnihotraṃ juhoti 'id.'

1. This rule introduces *tṛtīyā*, in addition to *dvitīyā*, in those Vedic usages where the *karman* of the action denoted by the verbal root *hu* is to be expressed. Obviously, this rule will allow two forms, as shown in the examples above.

Note that, in the first sentence, *yavāgū* is put in *tṛtīyā*, and *agnihotra* in *dvitīyā*, whereas in the second they are both put in *dvitīyā*. The meaning, of course, is that someone is offering a ritual oblation of barley gruel, and anticipating that Agni will be the goal.

2.3.4 अन्तराऽन्तरेणयुक्ते

antarāntareṇa yukte
/ *antarāntareṇa* 3/1 = *antarā ca antareṇa ca* (*itar. dv.*);
antarāntareṇa yuktaḥ (*tr. tat.*), *tasmin*; *yukte* 7/1/ (*dvitīyā* #2)
antarā' ntareṇa śabdau nipātau gṛhyete ābhyāṃ yoge dvitīyā vibhaktir bhavati
A *dvitīyā* occurs when *antarā* 'in between' and *antareṇa* 'without' are in use.

EXAMPLES:

antarā tvāṃ ca māṃ ca kamaṇḍaluḥ 'in between you and me is the *kamaṇḍalu* (water pot)'
antareṇa puruṣakāraṃ na kiṃcil labhyate 'nothing is gained without diligent effort'

1. This rule allows the introduction of *dvitīyā*, after a nominal stem cooccurring with the particles *antarā* and *antareṇa*. Commentators explain that *antarā*, the particle, should not be confused with *antarā*, the feminine derivative ending in the affix *ṬāP*. Similarly, *antareṇa* is not to be mistaken for the instrumental singular of *antara*; it, too, is a particle. We know this by association (*sāhacarya*). Since *antareṇa* is cited in this rule in association with *antarā*, an indeclinable, it is evident that *antareṇa* should also be understood as an indeclinable. The idea of association also applies in the case of *antarā* used with *antareṇa*. Again, as *antareṇa* is not a form ending in the affix *ṬāP*, *antarā* should not be interpreted as ending in *ṬāP*. Reasoning based on association has its parallels as well. For instance, because association demands similarity of class, one understands *guru-bhārgavau* as meaning 'Jupiter and Sun', and not 'the teacher and Paraśurāma, the son of Jamadagni'. In the same manner, *antarā* and *antareṇa* must both be interpreted as *nipāta*, indeclinables.

2. This rule introduces *dvitīyā* as an exception to *ṣaṣṭhī* 'sixth triplet of nominal ending; genitive'. If this rule was not formulated, a sentence such as *antarā tvāṃ ca māṃ ca kamaṇḍaluḥ,* (above), where *yuṣmad* 'you' and *asmad* 'I' have been used in the accusative, would be rendered as *antarā tava ca mama ca kamaṇḍaluḥ.* That is, *yuṣmad* and *asmad* would qualify for residual (*śeṣa*) genitive (*ṣaṣṭhī*) by rule 2.3.50 *ṣaṣṭhī śeṣe.* This rule is, therefore, an exception to genitive.

2.3.5 कालाध्वनोरत्यन्तसंयोगे

kālādhvanor atyantasaṃyoge
/ *kālādhvanoḥ* 7/2 (*itar. dv.*) *atyantasaṃyoge* 7/1 = *atyantaṃ saṃyogaḥ* (*karm. tat.*), *tasmin* /
(*dvitīyā* #2)
kālaśabdebhyo' dhvaśabdebhyaś ca dvitīyā vibhaktir bhavati atyantasaṃyoge gamyamāne
A *dvitīyā* occurs after stems denoting *kāla* '(measure of) time' or *adhvan* '(measure of) path, road' when *atyantasaṃyoga* 'continuous connection' is signified.

EXAMPLES:

māsam adhīte 'he studies for one whole month'
saṃvatsaram adhīte 'he studies for one whole year'
māsaṃ kalyāṇī 'this whole month is beneficial'
saṃvatsaraṃ kalyāṇī 'this whole year is beneficial'
krośam adhīte 'he studies the entire distance of a *krośa* (two miles)'
yojanam adhīte 'he studies the entire distance of a *yojana* (nine miles)'
krośaṃ kuṭilā nadī 'the river is full of bends for the entire distance of a *krośa*'

1. This rule allows the introduction of *dvitīyā* after a nominal stem denoting *kāla* or *adhvan*, providing continuous connection (*atyantasaṃyoga*) with some action (*kriyā*), thing (*dravya*), or quality (*guṇa*) is denoted.

2. Note that this introduction of *dvitīyā* is made directly, and not via the assignment of the *kāraka* termed *karman*. If the latter were the case, this rule would not be required; for rule 2.3.2 *karmaṇi dvitīyā* would introduce the ending. This direct introduction of *dvitīyā* causes some problems, especially in connection with intransitive verbs like *ās*. Consider the following sentences:

(*a*) *devadattaḥ māsam āste* 'Devadatta stays for a month'
(*b*) *devadattena māsam āsyate* 'id.'

The word *māsam*, in both of these sentences, will be used with *dvitīyā*, because *māsa* denotes time, and its continued connection with the action

denoted by *ās* is being expressed. The verbal form in (*a*) is expressing the agent, while in (*b*) it is expressing the action (*bhāva*). This is in accordance with the specification of 3.4.69 *laḥ karmaṇi...*, whereby we learn that a *LA* suffix, (of which *te* in sentence (*b*) is a replacement), is introduced after an intransitive verb root when either action or agent is to be denoted. Since in sentence (*b*) the agent remains unexpressed by the verbal form, *devadatta* is used with *tṛtīyā* (2.3.18 *kartṛkaraṇayos tṛtīyā*).

Now consider the following sentence:

(*c*) *devadattena māsaḥ āsyate*

Sentence (*c*) is attested by the *Mahābhāṣya*. The *te* in this sentence is expressing the object (*karman*). That is why *māsaḥ* is in the nominative which, in turn, is expressing nothing but the nominal stem notion (*prātipadikārtha*). But *te*, which expresses the object in (*c*), is a replacement of *LA* introduced after *ās*, an intransitive (*akarmaka*) verb. As such, *LA* could only be introduced to denote either the agent or the action. How could a replacement of *LA*, introduced after an intransitive verb, express an object? Besides, rule 2.3.5 explicitly requires *māsa* to be put in *dvitīyā*. Given this, sentence (*c*) looks ungrammatical.

It is to account for sentences like (*c*) that Kātyāyana has written a *vārttika* (*Mbh* II: 774): *atyantasaṃyoge karmaval lādyartham* 'for purposes of denotation by means of *LA*, etc., words denoting *kāla* and *adhvan* should be treated as if they were *karman*'. If accepted, this *vārttika* would account for the introduction of *LA* where its replacement in *te* could denote *karman*. Thus, *māsa* would be used with *dvitīyā* in an active sentence, where the verb would express the agent. In a passive sentence such as (*c*), *māsa* would express the nominal stem notion, while *karman* would be expressed by the verbal form. Note that under this interpretation, *dvitīyā* would be introduced by 2.3.2 *karmaṇi dvitīyā*. Rule 2.3.5 would therefore not be required at all. But there are still problems in accepting the *vārttika*. For example, how is one to derive a sentence like

(*d*) *āsyate māsaḥ* 'a month is spent sitting'

Actually, this sentence can be derived by accepting the verb as intransitive, and subsequently introducing *LA* to denote *bhāva* 'action'. However, the status of *karman*, assigned by the *vārttika* to *māsa*, remains to be considered. It would not allow *māsa* be put in the nominative. Accordingly, if one wants to express action with the verb, the sentence should be

(*e*) **āsyate māsam*

which is ungrammatical. To allow the derivation of (*d*), as opposed to (*e*), the wording of the *vārttika* must be brought into focus. The *vārttika* uses affix *vatI* after *karman*, thereby implying that an item denoting *kāla* or *adhvan* is to be treated as though it were *karman*. The *vārttika* does not rule out the possibility of their not being termed non-*karman*; for *vatI*

marks *atideśa* 'transfer to some entity of something which it did not possess'. This does not mean that what the entity possessed prior to the transfer no longer exists. Consider the following sentence:

(*f*) *brāhmaṇavat kṣatriye varttitavyam* 'one should treat a *kṣatriya* like a *brāhmaṇa*'

This injunction does not imply that a *kṣatriya* ceases to be a *kṣatriya*, simply because he is to be treated like a *brāhmaṇa*. Similarly, words denoting time and space can be treated like *karman*, though they will not on that account cease to be non-*karman*. When one does not wish to treat a word denoting time or space as *karman*, *māsa* in (*d*) can be put in the nominative. The question of a wrong derivation, such as (*e*), would not arise, since the *vārttika* makes rule 2.3.5 unnecessary.

Patañjali, however, refuses to accept the *vārttika*. He also recommends that the present rule (2.3.5) should be retained. But if he chooses to retain the *sūtra* and reject the *vārttika*, he cannot account for sentence (*c*). That is, he cannot establish that the verb *ās* is transitive; nor can he establish it as intransitive. For sentences such as

(*c*) *devadattena māsaḥ āsyate*

ās must be established as transitive. But if one has taken Patañjali's position, rejecting the *vārttika* and accepting the *sūtra* as stated, *māsaḥ* must be used with *dvitīyā*; in which case the result would be:

(*b*) *devadattena māsam āsyate*

Furthermore, the question of treating *ās* as intransitive is not the only difficulty. It is also important that *dvitīyā* be introduced via the assignment of the term *karman*. Even with the intransitive view, one still cannot derive (*c*), where *māsaḥ* may be put in the nominative. That is, if one retains *sūtra* 2.3.5, whereby only *dvitīyā* could be introduced after *māsa*, the derivation would not be possible. Attempts have been made to accommodate sentence (*c*) by interpreting *akarmaka* 'intransitive' and *sakarmaka* 'transitive' in various ways. But there is no satisfactory solution to the problem unless the *vārttika* is accepted. See Joshi (1976: 70–79) for further details.

2. Recall the statement that this *sūtra* would no longer be required if the above-mentioned *vārttika* were accepted, and that the *karman* status of words denoting time and space were extended. But note also that the introduction of *dvitīyā* would thus be made by means of rule 2.3.2 *karmaṇi dvitīyā*. This, in turn, would cover only those instances where continuous connection with action was being expressed. Instances like

(*g*) *krośaṃ kuṭilā nadī* 'the river is crooked for the entire length of one mile'

cannot be covered, since what obtains here is a continuous connection between a word denoting time, and a word denoting quality (*guṇa*).

The same goes for continuous connection involving a word denoting *dravya* 'thing'. For this, rule 2.3.5 must be retained as formulated.

2.3.6 अपवर्गे तृतीया

apavarge tṛtīyā
/ *apavarge* 7/1 *tṛtīyā* 1/1/
(*kālādhvanor atyantasaṃyoge* #5)
apavarge gamyamāne kālādhvanor atyantasaṃyoge tṛtīyā vibhaktir bhavati
A *tṛtīyā* occurs after stems denoting *kāla* or *adhvan* when both *atyantasaṃyoga* and *apavarga* 'accomplishment' are signified.

EXAMPLES:

māsenānuvāko' dhītaḥ 'he studied and accomplished the understanding of the *anuvāka* (a group of particular Vedic hymns) in one month'
saṃvatsareṇānuvāko' dhītaḥ 'he studied and accomplished the understanding of the *anuvāka* in one year'
krośenānuvāko' dhītaḥ 'he studied and accomplished the understanding of the *anuvāka* in two miles'
yojanenānuvāko' dhītaḥ 'he studied and accomplished the understanding of the *anuvāka* in nine miles'

1. This rule introduces *tṛtīyā*, instead of *dvitīyā* made available by rule 2.3.5. It is constrained by an additional requirement of *apavarga* 'accomplishment'. Compare the following sentences:
(*a*) *māsam adhīto' nuvāhkaḥ* 'he read the *anuvāka* for a month'
(*b*) *māsenādhīto' nuvākaḥ* 'he read the *anuvāka* for a month and fully understood it'
Sentence (*a*) must retain *dvitīyā* after *māsa* if it is to denote that the person simply read the *anuvāka*, though he did not understand it. Sentence (*b*) uses *tṛtīyā* to make the accomplishment known.

2.3.7 सप्तमीपञ्चम्यौ कारकमध्ये

saptamīpañcamyau kārakamadhye
/ *saptamīpañcamyau* 1/2 (*itar. dv.*) *kārakamadhye* 7/1 = *kārakayor madhyaḥ* (*ṣaṣ. tat.*), *tasmin* /
(*kālādhvanoḥ* #5)
kārakayor madhye yau kālādhvanau tābhyāṃ saptamīpañcamyau vibhaktī bhavataḥ
A *saptami* seventh triplet of *sUP*' or *pañcamī* 'fifth triplet of *sUP*' occurs after stems denoting *kāla* or *adhvan* when a span of time or distance between two *kāraka* is signified.

EXAMPLES:

> *adya bhuktvā devadatto dvyahe bhoktā* 'having eaten today, Devadatta will eat after two days'
> *adya bhuktvā devadatto dvyahād bhoktā* 'id.'
> *ihastho' yam iṣvāsaḥ krośe lakṣyaṃ viddhyati* 'sitting here, this archer pierces his target up to a distance of two miles'
> *ihastho' yam iṣvāsaḥ krośāl lakṣyaṃ viddhyati* 'id.'

1. This rule introduces *saptamī* or *pañcamī* after an item which denotes time and space, providing they intervene between two *kāraka* 'participants in an action'. Consider the above examples, where the third and fourth illustrate the usages of *saptamī* and *pañcamī* respectively. In these sentences, the word *krośa* intervenes between two *kāraka*; it denotes the space between the archer (*iṣvāsaḥ*), who is the agent of *vyadh* 'to pierce', and his target (*lakṣya*), which is the object of *vyadh*.

The first two examples present some difficulty. They can possibly not meet the condition that the word denoting time should occur between two *kāraka*. These sentences have *bhuktvā*, which represents a prior action in relation to the subsequent action, again denoted by *bhuj* 'to consume'. This being the case, affix *Ktvā* has been introduced under the condition that the agent of the prior action, as well as that of the subsequent action, should be the same (3.4.21 *samānakartṛkayoḥ pūrvakāle*). Devadatta is that same agent, and, consequently, the condition of having two participants is not met. In both sentences, *dvyahan*, a word denoting time, intervenes between the same participant.

Commentators explain that the word *kāraka* in 2.3.7 should not be interpreted as meaning *kāraka* per se. Instead, it should be interpreted to mean the power (*śakti*) of a *kāraka*. Thus, *devadatta* is the locus of the power which, in turn, qualifies him to become the agent. Since the power that brings about the action of consuming today is different from that which enables the agent to accomplish the action two days later, *dvyahan* can be treated as occurring between two participants.

2. Another problem of interpretation has been raised in connection with *saptamīpañcamyau*.... Commentators warn us against interpreting the introduction of *saptamī* and *pañcamī* in accordance with the rule of *yathāsaṃkhya* (1.3.10 *yathāsaṃkhyam anudeśaḥ samānām*). In other words, one should not introduce *saptamī* after items denoting *kāla*, and should not introduce *pañcami* after items denoting *adhvan*. This is based on the understanding that *kāla* and *adhvan* have been enumerated in a set in a given order, to which another set constituted by *saptamī* and *pañcamī* corresponds. *Kāśikā* refers to rule 1.3.11 *svaritenādhikāraḥ*, and states that equivalencies based upon order of enumeration are assigned only where *svarita* 'circumflex accent' is intended. Rule 2.3.7 lacks this intended *svarita*.

2.3.8 कर्मप्रवचनीययुक्ते द्वितीया

karmapravacanīyayukte dvitīyā
/ *karmapravacanīyayukte* 7/1 = *karmapravacanīyair yuktaḥ* (*tr. tat.*), *tasmin*; *dvitīyā* 1/1/
karmapravacanīyair yukte dvitīyā vibhaktir bhavati
A *dvitīyā* occurs after a nominal stem used in conjunction with a *karmapravacanīya* (1.4.83 *karma...*).

EXAMPLES:

śākalyasya saṃhitām anu prāvarṣat 'it rained after the chanting of the *saṃhitā* of Śākalya'
āgastyam anv asiñcat prajāḥ 'it rained over the people after chanting of the *saṃhitā* of Agastya'

1. The word *anu* is termed *karmapravacanīya* by rule 1.4.84 *anur lakṣaṇe*, when it is used in the sense of *lakṣaṇa* 'mark, symbol'. In the first example, *śākalyasya saṃhitām anu prāvarṣat*, *anu* is used as a mark for the rain to follow the chanting.

2.3.9 यस्मादधिकं यस्य चेश्वरवचनं तत्र सप्तमी

yasmād adhikaṃ yasya ceśvaravacanaṃ tatra saptamī
/ *yasmād* 5/1 *adhikam* 5/1 *yasya* 6/1 *ca*Ø *īśvaravacanam* 1/1 *tatra* Ø *saptamī* 1/1/
(*karmapravacanīyayukte* #8)
yasmād adhikaṃ yasya ceśvaravacanaṃ karmapravacanīyair yukte tatra saptamī vibhaktir bhavati
A *saptamī* occurs after that which is conjoined with a *karmapravacanīya* and which refers, either to a thing (e.g., *khāri*) than which something else (e.g., *droṇa*) is greater, or to a people whose lordship is being expressed.

EXAMPLES:

upa khāryāṃ droṇaḥ 'a *droṇa* is more than a *khāri*'
upa niṣke kārṣāpaṇam 'a *kārṣāpaṇa* is more than a *niṣka*'
adhi pañcāleṣu brahmadattaḥ 'Brahmadatta rules over the Pañcālas'

1. This rule introduces *saptamī*, as opposed to *dvitīyā*, after a nominal stem which cooccurs with a *karmapravacanīya*, and which denotes either something more than its denotatum, or its lordly position or ownership (*īśvaravacanatā*). Note that the term *īśvaravacana* is interpreted here in two ways, based upon the fact that lordship or ownership are relative notions. That is, both the thing owned (*svam*) and the owner (*svāmin*) are mutually expectant. Thus, an item denoting something owned can also be used, with

saptamī, as an item denoting the owner. Such an item is most obviously provided for by this rule.

The following sentences exemplify this point:

(*a*) *adhi brahmadatte pañcālāḥ*

(*b*) *adhi pañcāleṣu brahmadattaḥ*

Here, the *saptamī* is to be used in turn (*paryāya*), and not simultaneously (*yugapad*) after both items. Both denote a thing owned, or the owner; and, of course, both cooccur with a *karmapravacanīya*. This rule, as indicated earlier, forms an exception to *dvitīyā* introduced by the preceding rule.

Items cooccurring with a *karmapravacanīya*, where *saptamī* is required, and where there is to be denoted something more than the denotatum of the items concerned, present no problem. Thus, in the example

upakhāryāṃ droṇaḥ

the measure of weight called *droṇa* is described as more than another measure of weight, called *khāri*. In this case, *khāri* is to be put in *saptamī*, as it occurs with *upa* (a *karmapravacanīya*; 1.4.87 *upo' dhike ca*) and it denotes a measure of weight compared with which *droṇa* is greater.

2.3.10 **पञ्चम्यपाङ्परिभिः**

pañcamy apāṅparibhiḥ

/ ***pañcamy*** **1/1** ***apāṅparibhiḥ*** **3/1** (*itar.dv.*)/

(***karmapravacanīyayukte*** **# 8**)

'apa, āṅ, pari' ity etaiḥ karmapravacanīyair yoge pañcamī vibhaktir bhvati

A *pancamī* occurs after an item in conjunction with the *karma-pravacanīya apa*, *āṄ*, or *pari*.

EXAMPLES:

apa trigarttebhyo *vṛṣṭo* ***devaḥ*** 'it rained up to, though excluding, Trigartta'

ā pāṭaliputrād *vṛṣṭo* ***devaḥ*** 'it rained up to Pāṭaliputra'

pari pari trigarttebhyo *vṛṣṭo* ***devaḥ*** 'it rained around Trigartta'

1. The *karmapravacanīya* designation of *apa* and *pari* is allowed by rule 1.4.88 ***apaparī varjane***. Rule 1.4.89 ***āṅ maryādāvacane*** assigns the term ***karma-pravacanīya*** to *āṄ*. Since these term-assignments are constrained by specific semantic conditions, one ought to consult these rules when interpreting the examples.

2.3.11 **प्रतिनिधिप्रतिदाने च यस्मात्**

pratinidhipratidāne ca yasmāt

/ *pratinidhipratidāne* 1/2 (*itar.dv.*) *ca* Ø *yasmāt* 5/1/

(*pañcamī* # 10, ***karmapravacanīyayukte*** # 8)

yasmāt pratinidhir yataś ca pratidānaṃ tatra karmapravacanīyayukte pañcamī vibhaktir bhavati

A *pañcamī* also occurs after that which is both conjoined with a *karmapravacanīya* and either serves as one for whom someone else is a substitute (*pratinidhi*), or denotes a thing for which something else is given in exchange (*pratidāna*).

EXAMPLES:

abhimanyur arjunataḥ prati 'Abhimanyu is the substitute for Arjuna'
pradyumno vāsudevataḥ prati 'Pradyumna is the substitute for Vāsudeva'
māṣān asmai tilebhyaḥ prati yacchati 'he is giving him the Mung beans in exchange for the sesame'

1. This rule introduces *pañcamī* after a nominal stem which cooccurs with a *karmapravacanīya*, under the condition that either *pratinidhi* 'substitute', or *pratidāna* 'thing for which something else is given in exchange', is being denoted. In the examples cited, Arjuna, for whom Abhimanyu serves as a substitute, cooccurs with *prati*, a *karmapravacanīya* demanding *pañcamī*. Similarly, *tila* is used with *pañcamī*, as *māṣa* are given in return for them.

2.3.12 **गत्यर्थकर्मणि द्वितीयाचतुर्थ्यौ चेष्टायामनध्वनि**

gatyarthakarmaṇi dvitīyācaturthyau ceṣṭāyām anadhvani
/ *gatyarthakarmaṇi* 7/1 = *gatir artho yeṣāṃ te* = *gatyarthāḥ* (*bv.*), *gatyarthānāṃ karma* = *gatyarthakarma* (*ṣaṣ. tat.*), *tasmin* (*ṣaṣ. tat.* with internal *bv.*) *dvitīyācaturthyau* 1/2 *ceṣṭāyām* 7/1 *anadhvani* 7/1/
(*anabhihite* #1)
gatyarthānāṃ dhātūnāṃ ceṣṭākriyāṇāṃ (*parispandanakriyāṇām*) *karmaṇi kārake' dhvavarjite dvitīyācaturthyau bhavataḥ*
Either *dvitīyā* or *caturthī* 'fourth triplet of *sUP*' occurs to express the object of a verb of movement (*gati*), provided that the object is not expressed otherwise, that it is not *adhvan*, and that the action involves actual movement (*ceṣṭā*).

EXAMPLES:

grāmaṃ gacchati 'he goes to the village'
grāmāya gacchati 'id.'
grāmaṃ vrajati 'id.'
grāmāya vrajati 'id.'

1. This rule introduces *dvitīyā* and *caturthī*, after a nominal stem, to express the *karman* of an action denoted by a root having the signification of *gati* 'going', providing
(*i*) the *karman* is not characterized by *adhvan* 'road', and
(*ii*) the action entails *ceṣṭā* 'physical effort'.

Note that this optional introduction of *dvitīyā* and *caturthī* is made in the context of an action and object which are both special. Thus, action must be denoted by a root having the signification of *gati*. This will allow the first two examples given above. It will not, however, allow of a sentence like:

(*a*) *odanaṃ pacati*

Here, the action denoted by *pac* 'to cook' does not signify *gati* 'going'. The act of going must also involve physical effort (*ceṣṭā*) so that a sentence such as

(*b*) *manasā pāṭaliputraṃ gacchati* 'he is mentally going to Pāṭaliputra'

can be excluded from the scope of this *sūtra*. Finally, the action does not necessarily have to be denoted by *gam* 'to go'. Any one of the synonyms of *gam* can denote the action. As a result, the action denoted by the verbal root *gam* in the preceding sentences can also be denoted by *vraj* 'to wander'. Thus we get the following sentences:

(*c*) *grāmaṃ vrajati*

(*d*) *grāmāya vrajati*

(*e*) *manasā pāṭaliputraṃ vrajati*

Note that the object, like the action, is also constrained. For example, it cannot be identified as *adhvan* 'road', or a word synonymous with it. This would exclude such sentences as

(*f*) *panthānaṃ gacchati*

(*g*) *pathe gacchati*

Two questions arise in this connection: how do we know that the excluded object is not only *adhvan* but also its synonym? And what forms the basis for excluding sentence (*g*) from the scope of this rule?

The first question is raised because 1.1.68 *svaṃ rūpaṃ śabdasya...* demands that a word cited in this grammar must denote its form only. Haradatta (*PM* ad *Kāś* II: 165) explains that, since *anadhvan* 'non-*adhvan*' is used with *saptamī*, and is construed as a modifier to *karman* (also in *saptamī*), Pāṇini's specification by means of *anadhvani* is basically semantic. Besides, the form of the word *adhvan* cannot serve as an object here. Only what is denoted by the form can participate as an object (*saptamīnirdeśe hy anadhvani karmaṇīty anvayaḥ. nānadhvanaḥ prakṛter ity artha eva karma nādhvaśabdaḥ; tenādhvaparyāye' pi caturthī vaktavyā*). Furthermore, if Pāṇini intended *adhvan* to denote its form only, he would have put it in the nominative.

Commentators explain that sentence (*g*) is excluded from the scope of this rule because of semantic restriction. That is, when someone is already on the road and is traversing (*āsthita*) it, an object signified by *adhvan* or its synonym will not be allowed by this rule to be used with *caturthī*. When, for example, someone is lost and wishes to approach the right road from the wrong, the use of *caturthī* is correct. Thus, sentence

(*g*) entails an object which is denoted as the road to be approached, and not that already being traversed. (*Kāś* II: 165: *āsthitapratiṣedhaś ceyaṃ vijñyeyaḥ. āsthitaḥ = saṃprāptaḥ, ākrānta ucyate. yatra tu utpathena panthānaṃ gacchati, tatra bhavitavyam eva caturthyā: pathe gacchati*). Note that to disallow *caturthī*, in accordance with the semantic constraint just explained, does not mean the disallowing of *dvitīyā*, which will in any event be ruled by 2.3.2 *karmaṇi dvitīyā*.

2. A question is raised as to why *dvitīyā* is to be expressly mentioned in this rule, when it could easily have been carried from 2.3.2. If the intent was to introduce *caturthī* as an optional form to *dvitīyā*, the rule should simply have been formulated as *gatyarthakarmaṇi caturthī vā* 'optionally *caturthī* when the object of an action signifying '*gati*' is to be denoted'. Actually, *dvitīyā* is expressly mentioned to allow the blocking of a rule which could prevent the use of *dvitīyā* as an exception. To block the rule which blocks *dvitīyā* (*bādhakabādhana*) is, therefore, the purpose of explicitly mentioning *dvitīyā*.

Kāśikā cites two examples:

(*h*) *grāmaṃ gantā* 'goer of the village'

(*i*) *grāmāya gantā* 'id.'

In example (*h*), *dvitīyā* is introduced by this rule to denote object. Rule 2.3.2 cannot introduce *dvitīyā* after *grāma* in (*h*), because *grāma* is co-occurring with *gantā*, a *kṛt*-derivate (3.4.67 *karttari kṛt*) ending in *tṛC* (3.1.133 *ṇvultṛcau*). Rule 2.3.65 *kartṛkarmaṇoḥ kṛti* allows the introduction of *ṣaṣṭhī* 'genitive' to denote the object in such instances. Thus, sentence (*h*) should be read as

(*j*) *grāmasya gantā*

Here, rule 2.3.12 disallows the application of 2.3.65 which, in turn, blocks 2.3.2. This *bādhyabādhakabhāva* can also be explained as the optional blocking of *dvitīyā* by *caturthī* in this rule, versus the blocking of 2.3.2 by 2.3.65.

3. A question is further raised in connection with the use of *gatyarthakarmaṇi*. Why did not Pāṇini simply use *gatikarmaṇi* 'when the object of an action denoted by a root signifying *gati* is to be expressed'? By using *gatyarthakarmaṇi*, Pāṇini wishes to indicate that rule 2.3.12 does not apply where *gati* may be the meaning of an action entailing physical effort only through the association of something else. Thus, in a sentence such as

(*k*) *striyaṃ gacchati* 'he is fornicating with the woman'

gati, entailing physical effort, is not the direct meaning of the verbal root *gam*. One gets this meaning only through the association of the word *strī* 'woman'.

2.3.13 चतुर्थी सम्प्रदाने

caturthī sampradāne

/ *caturthī* 1/1 *sampradāne* 7/1/

(*anabhihite* #1)
sampradāne kārake caturthī vibhaktir bhavati
A *caturthī* occurs to express *sampradāna* when it is not expressed otherwise.

EXAMPLES:

upādhyāyāya gāṃ dadāti 'he gives a cow to the teacher'
māṇavakāya bhikṣāṃ dadāti 'he gives alms to the boy'
devadattāya rocate 'it is pleasing to Devadatta'
puṣpebhyaḥ spṛhayati 'he longs for the flowers'

1. This rule introduces *caturthī* to denote *sampradāna* 'dative'. The assignment of the term *sampradāna* in the first two examples, *upādhyāyāya gāṃ dadāti* and *māṇavakāya bhikṣāṃ dadāti*, has been made by 1.4.32 *karmaṇā yam abhipraiti sa sampradānam*. Rules 1.4.33 *rucyarthānāṃ prīyamāṇaḥ* and 1.4.37 *spṛher īpsitaḥ* assign the term *sampradāna* in the last two examples, *devadattāya rocate* and *puṣpebhyaḥ spṛhayati*, respectively.

2.3.14 **क्रियार्थोपपदस्य च कर्मणि स्थानिनः**

kriyārthopapadasya ca karmaṇi sthāninaḥ
/ *kriyārthopapadasya* 6/1 = *kriyārthā kriyā upapadaṃ yasya* (*dhātuḥ*) (*bv.* with final *pada* deleted), *tasya*; *ca* Ø *karmaṇi* 7/1 *sthāninaḥ* 6/1/
(*caturthī* #13, *anabhihite* #1)
kriyārthopapadasya ca sthānino' prayujyamānasya dhātoḥ karmaṇi kārake caturthī vibhaktir bhavati
A *caturthī* occurs to express the object of a verb which, though not actually used in a sentence, denotes an action for which another (expressed) action is intended, provided also that such an object is not otherwise expressed.

EXAMPLES:

edhebhyo vrajati 'he is going in order to bring some firewood'
puṣpebhyo vrajati 'he is going in order to bring some flowers'

1. This rule introduces *caturthī* to denote the object of an action, denoted by a root, conjoined with another root which denotes an action intended for the former, providing this intended action is not explicitly stated. Consider the following sentence:

(*a*) *puṣpāṇy āhartuṃ vrajati* 'he is going to fetch flowers'

The action here is denoted by *vraj* 'to go', and is intended for the implied action of fetching (*āhartum*) flowers. Rule 2.3.13 cannot introduce *caturthī* to denote the object of *āhṛ* 'to fetch', because the sense of the action denoted by it is explicitly stated in the sentence by *āhartum*, a form ending in *tumUN* (3.4.21 *samānakartṛkayoḥ*...). Here, 2.3.2 introduces *dvitīyā* after *puṣpa* 'flower' to denote the object. But consider

(*b*) *puṣpebhyo vrajati* 'id.'
where the object is being expressed by *caturthī*, as the action denoted by *āhṛ* is not explicitly stated in the sentence, and where *vraj* denotes an action intended for it.

2. The term *upapada* 'conjoined, cooccurring *pada*' has been defined by 3.1.92 *tatropapadaṃ saptamīstham* 'that which has been referred to by *saptamī* in the domain of 3.1.91 *dhātoḥ* is an *upapada*'. The expression *kriyārthopapadasya* of this rule thus refers to rule 3.3.10 *tumunṇvulau kriyāyāṃ kriyārthāyām*, where the words *kriyāyāṃ kriyārthāyām* end in locative and specify an *upapada*.

A question may be raised here about Pāṇini's use of *kriyārthopapadasya*. Why did he use it to introduce *caturthī*, when he could easily have introduced *caturthī* by 2.3.36 *caturthī tadarthārtha...*? The reason is obvious. The *caturthī* introduced by this rule must denote the object of an action denoted by a form ending in *tumUN*, though not explicitly stated in the sentence. Consider the example

(*c*) *praviśa (gṛhaṃ) piṇḍīṃ (bhakṣaya)* 'enter the house and eat rice-balls'

where the action of entering the house is intended for the purpose of eating rice-balls. But since *bhakṣaya* is a form ending in *LOṬ*, and not in *tumUN*, we cannot get the form of

(*d*) *praviśa piṇḍyai*

That is, we cannot use *caturthī* after *piṇḍī* by this rule, even if we delete *bhakṣaya* from the sentence. Moreover, a form ending in *LOṬ* cannot denote *kriyārthopapada*, as *LOṬ* is not introduced in that sense.

3. The word *sthānin* is also used, traditionally, to denote that which is not explicitly stated but implicitly assumed (*PM* ad *Kāś* II: 168: *yatra gamyate cārtho na ca prayujyate śabdaḥ sa sthānī* 'a *sthānin* is also that whose meaning is comprehended though the word is not used'). This is, of course, a practice in the Pāṇinian parlance.

2.3.15 **तुमर्थाच्च भाववचनात्**

tumarthāc ca bhāvavacanāt

/ *tumarthāt* 5/1 = *tumunaḥ artha ivārtha yasya sa tumarthaḥ* (*bv.*), *tasmāt ca* Ø *bhāvavacanāt* 5/1 =*bhāvasya vacanam* (*ṣaṣ. tat.*), *tasmāt* /

(*kriyārthopapadasya ca karmaṇi sthāninaḥ* #14, *caturthī* #13, *anabhihite* #1)

tumarthabhāvavacanapratyayāntāt prātipadikāc caturthī vibhaktir bhavati

A *caturthī* occurs after a nominal stem which terminates in an affix that denotes action and is synonymous with *tumuN*.

EXAMPLES:

pākāya vrajati 'he is going to do the cooking'

tyāgāya vrajati 'he is going to abandon'
bhūtaye vrajati 'he is going for prosperity'
sampattaye vrajati 'he is going for wealth'

1. This rule introduces *caturthī* after a nominal stem which ends in an affix denoting action (*bhāva*), similar to the denotatum of *tumUN*.

By the expression *bhāvavacanāt*, Pāṇini refers to rules of the domain of 3.3.18 *bhāve*. His use of the word *tumarthaḥ* 'similar to the meaning of *tumUN*' refers to rule 3.3.11 *bhāvavacanāś ca*, whereby suffixes such as *GHaÑ* are introduced under the condition of a future action intended by another action. According to rule 2.3.15, *caturthī* should be introduced after a stem ending in the suffix introduced by 3.3.11.

Once again, one may ask why *caturthī* cannot be introduced by 2.3.36 *caturthī tadarthārtha*.... The answer is that, in an example like the first, (*pākāya vrajati*), the sense of 'for the purpose of that...' would already be expressed by the suffix *GHaÑ* of *pāka* 'cooking'. This being the case, *caturthī* cannot be introduced by 2.3.36. Furthermore, only *prathamā* 'nominative' can be introduced after *pāka* to denote its nominal stem notion (*prātipadikārtha*). To remove this difficulty, we must have rule 2.3.15 to introduce *caturthī*.

Note also that *bhāvavacanāt* requires that the stem after which *caturthī* is to be introduced should denote *bhāva*. Consequently, *caturthī* cannot be introduced, for example, after *kāraka* of *kārako vrajati* 'the one who will do is going'. Here, affix *ṆvuL* in *kāraka* is denoting *kartṛ* 'agent'. Besides, according to this rule, *tādarthya* is related to the meaning of the root and not to that of the agent.

Another question has also been the subject of discussion. Why cannot *kriyārthopapadasya* be carried from the earlier rule, and be used as a qualifier to *bhāvavacanāt*? If this were done, *tumartha* would not be required to be stated. The fact that *kriyārthopapadasya* ends in the genitive, and *bhāvavacanāt* in the ablative, should pose no problem, since the genitive of *kriyārthopapadasya* can be changed to ablative so that it can serve as a qualifier to *bhāvavacanāt*. However, *kriyārthopapada* could only serve as a qualifier to the root, and not to a form ending in an affix denoting *bhāva*, similar to *tumUN*; therefore *tumartha* must be stated in this rule. Note that *kriyārthopapada* refers to a root denoting future action intended by another action.

2.3.16 **नमःस्वस्तिस्वाहास्वधालंवषड्योगाच्च**

namaḥsvastisvāhāsvadhālaṃvaṣaḍyogāc ca
/ *namaḥ...yogāt* 5/1 = *namaś ca svasti ca svāhā ca svadhā ca alaṃ ca vaṣaṭ ca* = *namaḥ...vaṣaṭ* (*dv.*), *tair yogaḥ* = *namaḥ...yogaḥ* (*ṣaṣ. tat.* with internal *dv.*), *tasmāt ca* Ø/
(*caturthī* #13)

'namaḥ, svasti, svāhā, svadhā, alaṃ, vaṣaṭ' ity etair yoge caturthī vibhaktir bhavati

A *caturthī* occurs after items in conjunction with *namas* 'obeisance'; *svasti* 'well-being'; *svāhā*, *svadhā*, and *vaṣaṭ* 'calls symbolizing obeisance accompanied by ritual oblation'; or *alam* 'enough, equal to'.

EXAMPLES:

namo devebhyaḥ 'our obeisance to the gods'
svasti prajābhyaḥ 'our blessings for the children'
svāhā' gnaye 'our obeisance to Agni'
svadhā pitṛbhyaḥ 'ritual oblations for our forefathers'
alaṃ mallo mallāya 'this wrestler is equal to the other one'
vaṣaḍ indrāya 'ritual oblations for Indra'

1. This *sūtra* introduces *caturthī* after a nominal stem which is used in conjunction with *namas*, etc. The word *yoga* (as in *yoge* of this rule) is derived from *yuj* 'to join, yoke' used with the suffix *GHaÑ* to denote *karman* 'object'. This being the case, *caturthī* is to be introduced after a stem which is used in conjunction with *namas*, etc. All the stems enumerated in this *sūtra* are indeclinables (*avyaya*).

2. The use of the word *ca* in this rule is also significant. Normally, *ca* is used to gather something which is not already stated (*anuktasamuccaya*). But there is nothing additional here that needs to be gathered. Hence, the *ca*, according to the commentators, is for the reassignment (*punarvidhāna*) of *caturthī*. The sense of *ca* here is thus *eva* 'only'. That is, *caturthī* alone should be used in accordance with the specifications of this rule. For example, rule 2.3.73 *caturthī cāśiṣi...* introduces *ṣaṣṭhī* when benediction (*āśīḥ*) is being denoted. That is, in a sentence, such as:

(*a*) *svasti gobhyo bhūyāt* 'may the cows be happy'

one would expect *ṣaṣṭhī* after *go* 'cow'. But, because of the use of *ca* in the present rule, *caturthī* alone can be used.

3. It is claimed by *upapadavibhakteḥ kārakavibhaktir balīyasī* (cf. *paribhāṣā* 103 of Nāgeśa's *Paribhāṣenduśekhara*) that a rule which introduces a *vibhakti*, with reference to a *kāraka*, is more powerful than a rule which introduces it with reference to a conjoined (*upa*) *pada*. The *caturthī* here is introduced under the condition of conjoined *pada* such as *namaḥ*, etc. Whenever there is a conflict between a rule introducing a *vibhakti* with reference to a *kāraka* and another rule introducing a *vibhakti* with reference to a conjoined *pada*, the rule which introduces the *vibhakti* with reference to a *kāraka* prevails. Consider the following sentence:

(*b*) *namasyati devān* 'he is bowing down to the gods'

The word *deva* 'god' is used here with *dvitīyā*, by rule 2.3.2, with reference

to *karman*. Thus, *dvitīyā* is a *kāraka-vibhakti*. A *caturthī* introduced by this rule will be blocked because it is conditioned by the conjoined *pada*: *namas*. Thus,

(*c*) **namasyati devāya* 'id.'

will not be permitted.

2.3.17 मन्यकर्मण्यनादरे विभाषाऽप्राणिषु

manyakarmaṇy anādare vibhāṣā' prāṇiṣu
| manyakarmaṇi 7/1 = *manyateḥ karma* (*ṣaṣ. tat.*), *tasmin; anādare* 7/1 *vibhāṣā* 1/1 *aprāṇiṣu* 7/1/
(*caturthī* #13, *anabhihite* #1)
manyakarmaṇi prāṇivarjite vibhāṣā caturthī vibhaktir bhavati anādare gamyamāne

A *caturthī* optionally occurs to express the object of *manĀ* 'to consider, treat' provided that such an object is not expressed otherwise, that it does not denote *prāṇin* 'living being', and that disrespect is expressed.

EXAMPLES:

na tvā tṛṇaṃ manye 'I do not consider you so much as even a blade of grass'
na tvā tṛṇāya manye 'id.'
na tvā busaṃ manye 'I do not consider you as even chaff'
na tvā busāya manye 'id.'

1. This rule optionally introduces *caturthī* to denote a non-living (*aprāṇin*) object of *manĀ*, when *anādara* 'disrespect' is being denoted. Obviously, when the option of denoting such an object by *caturthī* is not taken, *dvitīyā* will be introduced by 2.3.2.

Consider the second of the above examples (*na tvā tṛṇāya manye*). Why is not *yuṣmad* 'you', as the object of *man* 'to treat', put in *caturthī*? First of all, *yuṣmad* denotes a living being. Secondly, the *karman* should also denote disrespect; and in the example, it is not the person, but the straw, which is associated with disrespect.

2. How are we to know which *manĀ* is intended by the rule? The *manĀ* of the root-class *tanādi* '*tanŪ*, etc.', or that of the class of *divādi* '*div*, etc.'? The *manĀ* in this rule must refer to the root of the *tanādi* class, as Pāṇini makes the reference by using *manya* (*man* used with the augment *ŚyaN* of the *tanādi* class).

2.3.18 कर्तृकरणयोस्तृतीया

kartṛkaraṇayos tṛtīyā
| kartṛkaraṇayoḥ 7/2 *tṛtīyā* 1/1/
(*anabhihite* #1)

karttari karaṇe ca kārake tṛtīyā vibhaktir bhavati
A *tṛtīyā* occurs to express *kartṛ* and *karaṇa* when they are not expressed otherwise.

EXAMPLES:

devadattena kṛtam 'made by Devadatta'
yajñadattena bhuktam 'eaten by Yajñadatta'
dātreṇa lunāti 'he is cutting with a sickle'
paraśunā chinatti 'he is cutting with an ax'

1. This rule introduces *tṛtīyā* to denote *kartṛ* and *karaṇa* 'instrument'. For details of the assignment of these terms, refer to 1.4.54 *svatantraḥ karttā* and 1.4.42 *sādhakatamaṃ karaṇam*, respectively.

2.3.19 सहयुक्तेऽप्रधाने

sahayukte' pradhāne
/ *sahayukte* 7/1 *apradhāne* 7/1/
(*tṛtīyā* #18)
sahārthena yukte' pradhāne tṛtīyā vibhaktir bhavati
A *tṛtīyā* occurs after stems which denote *apradhāna* 'secondary' and are used in conjunction with *saha* 'with' or its synonyms.

EXAMPLES:

putreṇa sahāgataḥ pitā 'the father came with the son'
putreṇa saha gomān pitā 'the father is going with the son'

1. This rule introduces *tṛtīyā* after a nominal stem which denotes non-principal (*apradhāna*), and is used in conjunction with an item having the signification of *saha*.

Paṇini could have formulated the rule as *sahena apradhāne*. That is, *yukte* could have been left out, being accounted for by *sahena* 'with *saha*' That way, this rule-formulation would have been similar to 2.3.32 *pṛthag-vinā-nānābhis*.... Pāṇini, however, did not formulate the rule following the pattern of 2.3.32. He did not do so because, by using *yukte*, he wanted to indicate that *saha* represented not only itself, but also its synonyms, such as *sākam*, *sārdham*, and so on.

2. The status *pradhāna* 'principal' or *apradhāna* 'non- principal' should be decided on the basis of direct or indirect relatability with action. Consider the first example, *putreṇa sahāgataḥ pitā*, where both father and son, since they come together, are relatable to the action of coming. Of the two, the father is principal because he can be directly related to the action. The son can be related to the action only indirectly, through accompaniment (*sāhitya*). Or, to put it differently, the idea of the son's relatability to the action comes through interpretation (*artha*). As opposed

to this, the father's relatability to the action is direct: it comes directly from the form (*śabda*). Needless to say, relatability based only upon interpretation is non-principal.

3. Commentators indicate that when the sense of accompaniment is understood, as opposed to being explicitly stated by means of *saha* or one of its synonyms, *tṛtīyā* could still be used. Pāṇini himself has used it in rule 1.2.65 *vṛddho yūnā tallakṣaṇaś ced eva viśeṣaḥ*, where *yuvan* is used in *tṛtīyā* without the use of *saha*.

2.3.20 **येनाङ्गविकारः**

> *yenāṅgavikāraḥ*
> / *yena* 3/1 *aṅgavikāraḥ* 1/1 (*ṣaṣ. tat.*) /
> (*tṛtīyā* #18)
> *yenāṅgena vikṛtenāṅgino vikāro lakṣyate tatas tṛtīyā vibhaktir bhavati*
> A *tṛtīyā* occurs after a stem which denotes an *aṅga* 'limb' which is marked by deformity.

EXAMPLES:

> *akṣṇā kāṇaḥ* 'deformed by (the loss of) an eye'
> *pādena khañjaḥ* 'deformed by (the loss of) a foot'

1. This rule introduces *tṛtīyā* after a nominal stem which denotes *aṅga* 'part, limb' and marks a deformity (*vikāra*) of the *aṅgin* 'whole, body'. The *aṅgin* is here denoted by an *aṅga*, a *taddhita* (4.1.76 *taddhitāḥ*) derivative, where affix *aC* is introduced after *aṅga* 'part' by 5.2.126 *arśādibhyo...* to denote the sense of *matUP* (4.2.67 *tad asminn astīti...*). The derived form is still an *aṅga*. The part itself is referred to by the variable *yena* 'that by which...'.

Why should we have the condition that a deformed part should denote the deformity of its whole? Where the deformity of the part itself is to be denoted, *tṛtīyā* cannot be used. Compare the two sentences below, for example:

(*a*) *akṣi kāṇam asya* 'he has but one eye'
(*b*) *akṣṇā kāṇaḥ* 'he is but one-eyed'

2.3.21 **इत्थम्भूतलक्षणे**

> *itthaṃbhūtalakṣaṇe*
> / *itthaṃbhūtalakṣaṇe* 7/1 (*ṣaṣ. tat.*), *tasmin* /
> (*tṛtīyā* #18)
> *kaṃcit prakāraḥ prāptaḥ itthaṃbhūtaḥ, tasya lakṣaṇam itthaṃbhūta-lakṣaṇam, tatas tṛtīyā vibhaktir bhavati*
> A *tṛtīyā* occurs after a stem when 'the state just reached' is marked.

EXAMPLES:

api bhavān kamaṇḍalunā chātram adrākṣīt 'did you see a student with a *kamaṇḍalu*'
api bhavān śikhayā parivrājakam adrākṣīt 'did you see a wandering ascetic with a top (*śikhā*)'

1. This rule introduces *tṛtīyā* after a nominal stem which stands for a characteristic mark (*lakṣaṇa*) distinguishing the particular (*prakāra*) from the general. The word *itthaṃbhūta* is derived by introducing affix *thamU* (5.3.24 *idamas thamuḥ*) after *idam* 'this' to denote *prakāra* 'particular' (as distinguished from 'general'). The word *bhūta* of *itthaṃbhūta* is explained as *prāpta* 'reached, obtained'. Thus, if a word serves as a characteristic mark distinguishing the particular from the general, *tṛtīyā* should be used.

For example, consider

(*a*) *jaṭābhis tāpasaḥ* 'he is an ascetic, as marked by his matted hair'

Here, *jaṭā* 'matted hair' serves as a mark distinguishing him as an ascetic, a particular kind of man, from other men in general. Refer to my notes under 1.4.90 *lakṣaṇetthaṃbhūtākhyāna...* for additional details.

2.3.22 **संज्ञोऽन्यतरस्यां कर्मणि**

saṃjño' nyatarasyāṃ karmaṇi
/ *saṃjñaḥ* 6/1 *anyatarasyām* 7/1 *karmaṇi* 7/1/
(*tṛtīyā* #18, *anabhihite* #1)
saṃpūrvasya jānāteḥ karmaṇi kārake anyatarasyāṃ tṛtīyā vibhaktir bhavati
A *tṛtīyā* optionally occurs to express the object of *jñā* 'to know', used with the preverb *sam*, when the same is not expressed otherwise.

EXAMPLES:

pitrā saṃjānīte 'he recognizes his father'
pitaraṃ saṃjānīte 'id.'
mātrā saṃjānīte 'he recognizes his mother'
mātaraṃ saṃjānīte 'id.'

1. This rule introduces *tṛtīyā*, as an option to *dvitīyā* of 2.3.2 *karmaṇi dvitīyā*, to denote the object of *jñā* 'to know, understand, recognize', used with the preverb *sam*.

Note that 1.4.43 *saṃpratibhyām anādhyāne* introduces *ātmanepada* 'middle' after *saṃjñā*, a replacement for *LA*, under the condition that *ādhyāna* 'wistful remembrance; to miss' is not denoted. Consider the first two examples above. These sentences do not denote *ādhyāna*. If that were

the case, *parasmaipada* 'active' endings would have been introduced after the verb, to yield:

(*a*) *pitrā saṃjānāti* 'he misses his father'

(*b*) *pitaraṃ saṃjānāti* 'id.'

But there is a further complication in connection with this. Rule 2.3.52 *adhīgarthadayeṣāṃ karmaṇi* introduces *ṣaṣṭhī* 'genitive' to express the *karman* of, among other things, an action denoted by a verbal root which has the signification of *adhi-iK* 'to remember'. Thus, in (*a*) and (*b*), we would be required to use *ṣaṣṭhī* in place of *dvitīyā* or *tṛtīyā*. The sentence would thus read:

(*c*) *pituḥ saṃjānāti*

Obviously, a situation of conflict obtains between 2.3.22 and 2.3.52. Rule 1.4.2 *vipratiṣedhe paraṃ kāryam* will thus be invoked to resolve the conflict in favor of the introduction of *ṣaṣṭhī* by 2.3.52.

Note further that, irrespective of whether or not *ādhyāna* is expressed, a *karman* in connection with a form which ends in a *kṛt* affix will be denoted by *ṣaṣṭhī* as required by rule 2.3.65 *kartṛkarmaṇoḥ kṛti*. Again, 1.4.2 will resolve the conflict in favor of 2.3.65, the subsequent rule. A sentence such as

(*d*) *mātuḥ saṃjātā* 'the mother was remembered'

would come under the scope of 2.3.65.

2.3.23 हेतौ

hetau
/ *hetau* 7/1/
(*tṛtīyā* #18)
hetuvācinas tṛtīyā vibhaktir bhavati
A *tṛtīyā* occurs after a stem which denotes *hetu* 'cause'.

EXAMPLES:

dhanena kulam 'a clan prospers by wealth'
kanyayā śokaḥ 'grief comes by having a daughter'
vidyayā yaśaḥ 'fame comes by knowledge'

1. This rule introduces *tṛtīyā* to express *hetu* 'cause'. The word *hetu* in this rule is not to be confused with the technical term *hetu* defined by rule 1.4.55 *tatprayojako hetuś ca* 'the causal agent of *kartṛ* is additionally termed *hetu*'. The *hetu* of this rule is the non-technical word of popular (*laukika*) usage which denotes 'cause'. This rule would become useless if *hetu* were to be interpreted here as technical, for 2.3.18 *kartṛkaraṇayos tṛtīyā* could then easily account for *tṛtīyā*. *Kāśikā* explains the non-technical *hetu* as 'that which is capable of bringing about results' (*phalasādhanayogyaḥ*

padārtho loke hetur ucyate). However, this can also be said of *karaṇa* 'instrument', as defined by rule 1.4.42 *sādhakatamaṃ karaṇam*: '*karaṇa* is that which participates in an action as the most effective means'.

Compare Bhartṛhari (*VP* III: 25–26, 138–141):

> *dravyādiviṣayo hetuḥ karaṇaṃ niyatakriyam /*
> *karttā kartrantarāpekṣaḥ kriyāyāṃ hetur iṣyate//*
> 'substance (*dravya*) forms the scope of *hetu* 'cause', as opposed to a *kāraka* 'participant', which is restricted to action (*kriyā*). An agent depending upon another agent to accomplish an action is also called *hetu*'
> *kriyāyai karaṇaṃ tasya dṛṣṭaḥ pratinidhis tathā /*
> *hetvarthā tu kriyā tasmān na sa pratinidhīyate //*
> '*karaṇa* is for the sake of action and it is seen substituted. Since action is dependent upon *hetu*, *hetu* cannot be substituted'

The above two *kārikā* of Bhartṛhari view *hetu* as the cause or purpose of an action, as opposed to *karaṇa* which is a participant in an action. Instrument is thus dependent upon action which, in turn, is dependent upon *hetu*. A *karaṇa* is to be designated by an action, and is to be brought to participate by an agent. When the designated means is not available for use in accomplishing the action, another means can serve as a substitute. A *karaṇa* can, therefore, be substituted. However, this is not true of *hetu*.

Bhartṛhari also recognizes another distinction between *karaṇa* and *hetu*. He regards *karaṇa* as dependent upon *vyāpāra*, intermediate action. Thus, if *paraśu* 'axe' is to serve as *karaṇa* for splitting wood, (denoted by *bhid* 'to split'), there must be some intermediate actions; such as raising the axe (*udyamana*), and bringing it down (*nipātana*). Such intermediate actions are not required for *hetu*.

2.3.24 अकर्त्तर्यृणे पञ्चमी

> *akarttary ṛṇe pañcamī*
> */ akarttari 7/1 ṛṇe 7/1 pañcamī 1/1/*
> (*hetau* #23)
> *kartṛvarjitaṃ yad ṛṇaṃ hetus tataḥ pañcamī vibhaktir bhavati*
> *A pañcamī* occurs after a stem which signifies *ṛṇa* 'debt' provided *ṛṇa* serves as a *hetu* other than *kartṛ* 'agent'.

EXAMPLES:

> *śatād baddhaḥ* 'he was bound because of the debt of a hundred'
> *sahasrād baddhaḥ* 'he was bound because of the debt of a thousand'

1. This rule introduces *pañcamī* after a nominal stem standing for a debt (*ṛṇa*) and serving as *hetu*, though not as *kartṛ*. Note that a *ṛṇa* serving

as *hetu* can be termed *kartṛ* by rule 1.4.55 *tatprayojako hetuś ca*. Given the nature of rule 1.4.55, one can safely assume that an example for *hetu* termed *kartṛ* will be available only when a causal action is being denoted. For, *hetu* termed agent becomes the prompter agent of a causative sentence:

(*a*) *śatena adhamarṇaḥ uttamarṇena bandhitaḥ* 'the debtor was imprisoned by the creditor because of the debt of a hundred'

Here *śata*, the amount of debt, is a cause which is termed *hetu* because it serves as an instigator (*prayojaka*) for the *kartṛ*, (the creditor), to have the debtor imprisoned. It is clear that *śata*, a *hetu* termed *kartṛ*, cannot be used with *pañcamī* according to the present rule. In a non-causal sentence, however, *śata* (denoting a debt) can be put in *pañcamī*:

(*b*) *śatād baddhaḥ* 'he was imprisoned because of (the unpaid debt of) a hundred'.

2.3.25 **विभाषा गुणेऽस्त्रियाम्**

vibhāṣā guṇe' striyām
/ *vibhāṣā* 1/1 *guṇe* 7/1 *astriyām* 7/1/
(*pañcamī* #24, *hetau* #23)
guṇe hetāv astrīliṅge vibhāṣā pañcamī vibhaktir bhavati
A pañcamī optionally occurs after a non-feminine stem which denotes *hetu* as well as *guṇa* 'quality'.

EXAMPLES:

jāḍyād baddhaḥ 'he was caught on account of his foolishness'
jāḍyena baddhaḥ 'id.'
pāṇḍityān muktaḥ 'he was freed on account of his wisdom'
pāṇḍityena muktaḥ 'id.'

1. This rule makes the *pañcamī* introduced by the preceding rule optional, on the condition that *hetu* denotes a quality (*guṇa*) and is not feminine. For instance, *jāḍya* 'foolishness', in the first of the above examples, is non-feminine and a quality, thus fulfilling the condition.

If the option of *pañcamī* is not taken, *tṛtīyā* can be used, as in the second example.

Note that if the word standing for *hetu* is feminine, or denotes anything other than a quality, *pañcamī* cannot be ruled. Thus:

(*a*) *buddhyā muktaḥ* 'he was saved because of his intelligence'
(*d*) *dhanena kulam* 'a family respected because of wealth'

2.3.26 **षष्ठी हेतुप्रयोगे**

ṣaṣṭhī hetuprayoge
/ *ṣaṣṭhī* 1/1 *hetuprayoge* 7/1 (*ṣaṣ. tat.*), *tasmin* /
(*hetau* #23)

hetuśabdasya prayoge hetau dyotye ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs after a stem which denotes 'cause' when *hetu* itself is used in conjunction.

EXAMPLE:

annasya hetor vasati 'he lives here because of food'

1. Note that this rule requires a nominal stem to constitute the cause and also to cooccur with *hetu*. Thus, in a sentence such as the above example, *anna* represents the cause for which someone lives in a certain place. This stem is also used with *hetu*, thereby ensuring the use of *ṣaṣṭhī* after *anna*. The *ṣaṣṭhī* after the nominal stem *hetu* is introduced under the condition of coreferentiality (*sāmānādhikaraṇya*) with *anna*.

2.3.27 **सर्वनाम्नस्तृतीया च**

sarvanāmnas tṛtīyā ca
/ *sarvanāmnaḥ* 6/1 *tṛtīyā* 1/1 *ca* Ø /
(*ṣaṣṭhī hetuprayoge* #26, *hetu* #23)
sarvanāmno hetuśabdasya prayoge hetau dyotye tṛtīyā vibhaktir bhavati
A *tṛtīyā*, as well as *ṣaṣthī*, occurs after a pronominal stem which denotes 'cause' when *hetu* itself is used in conjunction.

EXAMPLES:

kasya hetor vasati 'what is the reason for his living here'
kena hetunā vasati 'id.'
yasya hetor vasati 'the reason he lives here...'
yena hetunā vasati 'id.'

1. This rule introduces *tṛtīyā*, in addition to the *ṣaṣṭhī*, after a pronominal stem which is used with *hetu* itself, and of course when *hetu* is to be denoted. Consider the second of the examples, *kena hetunā vasati*, parallel to

(*a*) *kasya hetunā vasati* 'id.'

Here, the pronominal stem *kim* 'who, what' is used with *hetu*, in *tṛtīyā* and *ṣaṣṭhī* respectively. The *tṛtīyā* and *ṣaṣṭhī* after *hetu* are introduced under the condition of its coreferentiality with *kim*. The *Mahābhāṣya* (II: 797) observes that practically any nominal ending can be seen as denoting *hetu* when a pronominal is used coreferentially with *hetu*, itself. Furthermore, the synonyms of *hetu*, such as *kāraṇa*, *nimitta*, *prayojana*, etc., can also be used in place of *hetu* in these sentences.

Consider the following sentences, where *nimitta* is used in the nominal endings *dvitīyā* through *saptamī*:

(*b*) *kiṃ nimittaṃ vasati*
(*c*) *kena nimittena vasati*

(*d*) *kasmai nimittāya vasati*
(*e*) *kasmān nimittād vasati*
(*f*) *kasya nimittasya vasati*
(*g*) *kasmin nimitte vasati*

2.3.28 **अपादाने पञ्चमी**

apādāne pañcamī
/ *apādāne* 7/1 *pañcamī* 1/1/
(*anabhihite* #1)
apādāne kārake pañcamī vibhaktir bhavati
A *pañcamī* occurs after a nominal stem when *apādāna* (1.4.24 *dhruvam...*) is not expressed otherwise.

EXAMPLES:

gramād āgacchati 'he is coming from the village'
parvatād avarohati 'he is climbing down the mountain'
vṛkebhyo bibheti 'he is afraid of wolves'
adhyayanāt parājayate 'he is weary of studying'

1. This rule introduces *pañcamī* after a nominal stem to denote *apādāna* 'ablative' as defined by rules 1.4.24 through 1.4.31.

2.3.29 **अन्यारादितरर्त्तेदिक्शब्दाञ्चूत्तरपदाजाहियुक्ते**

anyārāditararttedikśabdāñcūttarapadājāhiyukte
/ *anyā...yukte* 7/1 = *anyaś ca ārāc ca itaraś ca ṛte ca dikśabdaś ca añcūttara-padaś ca āc ca āhi ca* = *anyārāditararttedikśabdāñcūttarapadājāhayaḥ* (*itar. dv.*), *taiḥ yuktaḥ* (*tṛt. tat.*), *tasmin* /
(*pañcamī* #28)
'anya, ārāt, itara, ṛte, dikśabda, añcūttarapada, āc, āhi' ity etair yoge pañcamī vibhaktir bhavati
A *pañcamī* occurs after stems in construction with the following:
anya 'other, different'
ārāt 'far, near'
itara 'the one other than'
ṛte 'without'
dikśabda 'a directional name'
añcūttarapada 'a directional name which has *añcU* 'bend' as its final member'
āC 'a stem terminating in affix *āC* (5.3.36 *dakṣiṇād...*)'
āhi 'a stem terminating in affix *āhi* (5.3.37 *āhi ca dūre*)'

EXAMPLES:

anyo devadattāt 'someone different from Devadatta'

bhinno devadattāt 'id.'
ārād devadattāt 'far from Devadatta'
ārād yajñadattāt 'near Yajñadatta'
itaro devadattāt 'someone other than Devadatta'
ṛte devadattāt 'without Devadatta'
pūrvo grāmāt parvataḥ 'the mountain is east of the village'
uttaro grīṣmo vasantāt 'summer comes after spring'
prāg grāmāt 'to the east of the village'
pratyag grāmāt 'to the west of the village'
dakṣiṇā grāmāt 'to the south of the village'
uttarā grāmāt 'to the north of the village'
dakṣiṇāhi grāmāt 'in the far south of the village'
uttarāhi grāmāt 'in the far north of the village'

1. This rule introduces *pañcamī* after a nominal stem used with *anya*, etc. The word *anya* 'other' is used to represent itself as well as its synonyms, such as *bhinna*, *itara*, etc. If this were accepted, why does Pāṇini use *itara* again in this rule? Bhaṭṭoji (*SK* I: 665) explains that the mention of *itara* in this rule is just for expatiation (*prapañca*). However, *Kāśikā* seems to make a finer distinction between the meanings of *anya* and *itara:* it explains *itara* as referring to someone in oppositional relation to someone else specified (*nirdiśyamānasya pratiyogī*). *Nyāsa* seems to agree with the *Kāśikā* when it gives the example:

(*a*) *devadattaḥ śūraḥ, itaraḥ kātaraḥ* 'Devadatta is brave, the other one is a coward'

which is meant to show that the referent of *itara* is a person in oppositional relation to Devadatta. But Haradatta observes that the interpretation of *Kāśikā* is questionable (*cintya*).

2. The word *ārāt* denotes *dūra* 'far' or *antika* 'near', and thus qualifies a stem used in connection with it to optionally choose *ṣaṣṭhī* instead of *pañcamī*.

3. The word *ṛte* is an indeclinable meaning 'without'.

4. The word *diś* is used in this rule with the word *śabda*, perhaps to indicate, thereby, that usages where *diś* 'direction' is used to denote location (*deśa*) or time (*kāla*) are also covered by this rule. Consider the following sentences:

(*b*) *pūrvo grāmāt parvataḥ* 'the mountain is before the village' and
(*c*) *pūrvo grīṣmād vasantaḥ* 'spring is prior to summer'

Here, *grāma* and *grīṣma*, used with *pūrva*, can qualify for *pañcamī* even though *pūrva*, a word denoting direction, is used to denote location and time.

2.3.30 षष्ठ्यतसर्थप्रत्ययेन

ṣaṣṭhy atasarthapratyayena

/ *ṣaṣṭhī* 1/1 *atasarthapratyayena* 3/1 = *ataso' rthaḥ atasarthaḥ* (*ṣaṣ. tat.*), *atasarthe pratyayaḥ* = *atasartha- pratyayaḥ* (*sap. tat.*), *tena* / *atasarthena pratyayena yukte ṣaṣṭhī vibhaktir bhavati*

A *ṣaṣṭhī* occurs after a stem used in conjunction with a nominal stem terminated in an affix which has the sense of *atasUC* (5.3.28 *dakṣiṇottarābhyām...*).

EXAMPLES:

dakṣiṇato grāmasya 'in the south of the village'
uttarato grāmasya 'in the north of the village'
purastād grāmasya 'toward the east of the village'
upari grāmasya 'above the village'
upariṣṭād grāmasya 'id.'

2.3.31 एनपा द्वितीया

enapā dvitīyā
/ *enapā* 3/1 *dvitīyā* 1/1/
enapā yukte dvitīyā vibhaktir bhavati

A *dvitīyā* occurs after a stem used in conjunction with another stem which ends in affix *enaP* (5.3.35 *enab...*).

EXAMPLES:

dakṣiṇena grāmam 'not far in the south of the village'
uttareṇa grāmam 'not far in the north of the village'

1. The word *enapā* refers to rule 5.3.35 *enab anyatarasyām adūre...*, whereby affix *enaP* is optionally introduced after *uttara* 'north, upper'; *adhara* 'lower, below'; and *dakṣiṇa* 'south, right', when what is denoted is not far (*dūra*). The sense of *enaP* is given as the same as that of *astāti* (cf. 5.3.26 *dikśabdebhya...*).

2. Note that *Kāśikā* cites these two examples:

(*a*) *dakṣiṇena grāmasya* 'by the south of the village'
(*b*) *uttareṇa grāmasya* 'by the north of the village'

whereby *ṣaṣṭhī* is also shown as a desired option for the *dvitīyā* (*ṣaṣṭhy api iṣyate* 'genitive is also desired'). But *Kāśikā* also states that rule 2.3.31 is formulated in view of the genitive (*ṣaṣṭhī*) which would have been available from the preceding rule. Does rule 2.3.31 in fact introduce *dvitīyā* to block the *ṣaṣṭhī* made available by the preceding rule? It does, according to *Kāśikā's* statement: *pūrveṇa ṣaṣṭhyāṃ prāptāyāṃ vacanam* 'this statement is made in view of the genitive made available by the preceding rule'. However, one quickly becomes doubtful when *Kāśikā* adds that *ṣaṣṭhī* is also desired (*iṣṭa*); for how could the desired results be obtained? *Kāśikā* suggests splitting (*yogavibhāga*) this rule into two parts, in addition to

carrying *ṣaṣṭhī* from the previous rule, as a solution. If we follow this suggestion we will get two rules:

(*i*) *enapā ṣaṣṭhī* '*ṣaṣṭhī* occurs...'; and

(*ii*) *enapā dvitīyā* '*dvitīyā* occurs...'.

3. The *Mahābhāṣya* does not discuss this rule. However, Nāgeśa (*Udyota* ad *Mbh* II: 802), in connection with a *vārttika*, observes that rule 2.3.31 precedes rule 2.3.30 in the order of rules in the *Aṣṭādhyāyī* available to Patañjali. If this is accepted, then the question of carrying *ṣaṣṭhī* does not arise. Nāgeśa also criticizes *Kāśikā*'s attempt at *yogavibhāga* as questionable (*cintya*). Yudiṣṭhira Mīmāṃsaka (*Mbh* III: 340) states that Nāgeśa's claim, concerning the changed order of the *sūtra* and according to the *Mahābhāṣya*, is perhaps based on the *vārttika*'s words *dvitīyāṣaṣṭhyoḥ*. Nāgeśa thinks that, in accordance with the specification for fewer vowels (cf. 2.2.34 *alpāc taram*), *ṣaṣṭhī* should have been used first in *dvitīyā-ṣaṣṭhyoḥ*. Since it is not, claims Mīmāṃsaka, Nāgeśa assumes that it suggests the reversal in order of 2.3.31 *enapā dvitīyā* and 2.3.30 *ṣaṣṭhyartha...* in the *Mahābhāṣya*. Mīmāṃsaka considers Nāgeśa's claim to be questionable, and states that the order of constituency in *dvitīyāṣaṣṭhyoḥ* is, after all, numerical.

2.3.32 **पृथग्विनानानाभिस्तृतीयाऽन्यतरस्याम्**

pṛthagvinānānābhis tṛtīyā' nyatarasyām
I pṛthagvinānānābhiḥ 3/3 (*itar. dv.*) *tṛtīyā* 1/1 *anyatarasyām* 7/1/
(*pañcamī* #28)
'pṛthak, vinā, nānā' ity etair yoge tṛtīyā vibhaktir bhavati, anyatarasyāṃ pañcamī ca
A *tṛtīyā* optionally occurs to *pañcamī* after a stem in conjunction with *pṛthak* 'separate'; *vinā* 'without, separate'; or *nānā* 'separate'.

EXAMPLES:

pṛthag devadattena 'separate from, or except for Devadatta'
pṛthag devadattāt 'id.'
vinā devadattena 'id.'
vinā devadattāt 'id.'
nānā devadattena 'id.'
nānā devadattāt 'id.'

1. Note that, to account for usages of *dvitīyā* such as those in the following verse, or *pṛthag devadattam* parallel to its own example, the *Kāśikā* suggests *yogavibhāga* 'rule-splitting' in addition to carrying *dvitīyā* from the previous rule:

vinā vātaṃ vinā varṣaṃ vidyutprapatanaṃ vinā I
vinā hastikṛtān doṣān kenemau pātitau drumau II

'what, other than a storm, rainstorm, lightning, or an elephant's mischief, caused these two trees to fall?'
The *Mahābhāṣya* does not approve of the *anuvṛtti* of *dvitīyā*; and even less does it approve of the *yogavibhāga*.

2.3.33 करणे च स्तोकाल्पकृच्छ्रकतिपयस्यासत्त्ववचनस्य

karaṇe ca stokālpakṛcchrakatipayasyāsattvavacanasya
/ *karaṇe* 7/1 *ca* Ø *stokālpakṛcchrakatipayasya* 6/1 (*sam. dv.*), *asattvavacanasya* 6/1 (*nañ. tat.*) /
(*pañcamī* #28, *tṛtīyā* #27, *anabhihite* #1)
'*stoka, alpa, kṛcchra, katipaya' ity etebhyo' sattvavacanebhyaḥ karaṇe kārake' nyatarasyāṃ tṛtīyā bhavati*
A *tṛtīyā* optionally occurs to *pañcamī* to express *karaṇa* 'instrument' after *stoka* 'a little'; *alpa* 'a little'; *kṛcchra* 'difficult'; or *katipaya* 'a few' provided they do not denote *sattva* 'substance', and *karaṇa* is not expressed otherwise.

EXAMPLES:

stokān muktaḥ 'just about freed'
stokena muktaḥ 'id.',
alpān muktaḥ 'id.'
alpena muktaḥ 'id.'
kṛcchrān muktaḥ 'freed with difficulty'
kṛcchreṇa muktaḥ 'id.'
katipayān muktaḥ 'freed by a few'
katipayena muktaḥ 'id.'

1. This rule introduces *tṛtīyā* to denote *karaṇa* after *stoka, alpa, kṛcchra,* and *katipaya* when they do not denote *sattva* 'substance'. The option of introducing *tṛtīyā* to denote *karaṇa* is, in fact, already available by rule 2.3.18 *kartṛkaraṇayos....* This rule, however, introduces *tṛtīyā* as an option to *pañcamī*, as it is understood by the *anuvṛtti* of *pañcamī* (2.3.28 *apādāne pañcamī*) and *tṛtīyā anyatarasyām* (2.3.32 *pṛthagvinā...*). Thus, *pañcamī* is ruled as an option to *tṛtīyā* of 2.3.18 which, in turn, is made optional to *tṛtīyā* of this rule. Of course, a condition that *sattva* 'substance' is not the denotatum of *stoka*, etc., is imposed. The result is examples like those above.

2. The word *asattvavacana* 'not signifying substance' is important here. A thing can denote 'substance' and can serve as *karaṇa* in an action because it participates as the means. A substance may be viewed as possessing certain qualities (*guṇa*) or properties (*dharma*). Thus we get examples such as the following:

(*a*) *stokena viṣeṇa hataḥ* 'he was killed by a bit of poison'

In the example above, *viṣa* is *sattva*, possessing the property of being only a little bit in quantity; it serves as the *karaṇa* of killing, though qualified by *stoka*. That is, *viṣa* serves as *karaṇa*, denoting a substance

serving as locus (*āśraya*) of the quality *stoka*. Both the *sattva* and its *dharma* are thus inseparable (*abhinna*). It is in this sense that we claim that the denotatum of *stoka* is *viṣa*. When both the *dharma* and *dharmin* are said to be *abhinna*, the *dharma* denotes *dharmin* (*sattva*). In such instances, this rule will not apply. The *tṛtīyā* after both *stoka* and *viṣa* in sentence (*a*) has been introduced by 2.3.18.

Now recall two of the examples given at the beginning of this note:

(*b*) *stokān muktaḥ* 'just about freed'
(*c*) *stokena muktaḥ* 'id.'

Here, *pañcamī* and *tṛtīyā* are introduced after *stoka* by this rule. Though *stoka* denotes quality in (*b*) and (*c*), it does not denote *sattva* as it does in (*a*).

It follows from the preceding discussion that *stoka* denotes quality, though it can also be used without denoting *sattva* as its locus. In sentences (*b*) and (*c*) it refers to effort (*āyāsa*) which is not *sattva*, but serves as *karaṇa* in accomplishing the action denoted by *muc* 'to release, set free'. Jinendrabuddhi (*Nyāsa* ad *Kāśikā* II: 190) sums it up as follows:

> 'when a word which denotes *dharma* 'property' is spoken of as participating in an action as *karaṇa* without denoting its *dharmin*, the thing which serves as its locus, it is then treated as not denoting *sattva*. A word like *stoka* qualifies for this status when it does not represent the thing whose property of smallness it denotes'

Note that *stoka*, etc., do not denote *sattva* when used as a qualifier to an action (*kriyāviśeṣaṇa*), as action (*kriyā*) does not denote *sattva*. Remember in this context that an action is brought to accomplishment (*sādhyatva*), and a root therefore denotes an action which is in the state of being accomplished (*sādhyamānāvasthā*). Thus, consider these examples:

(*d*) *calati* 'he is moving'
(*e*) *calanaṃ karoti* 'he is (in the state of) doing (accomplishing) the act of walking'
(*f*) *stokaṃ calanaṃ karoti* 'he is doing a little bit of walking'

The first example, (*d*), can be rephrased as the second, (*e*). A qualifier like *stoka*, to the action denoted by *catana*, will be termed *karman* 'object' in a sentence such as (*f*); so it is important for the purposes of this rule that a qualifier (such as *stoka*) should denote not only *asattva* 'non-substance', but also *karaṇa* (*PM* ad *Kāśikā* II: 90). This is also the significance of using *karaṇa* in this rule.

3. The words *stoka*, etc., are synonymous, yet they have been mentioned separately to block other synonyms from coming under the scope of this rule. Consequently, this rule will not permit sentences like:

(*g*) *mātrayā muktaḥ* 'he became free with little effort' to avail themselves of optional *pañcamī*.

2.3.34 दूरान्तिकार्थैः षष्ठ्यन्यतरस्याम्

dūrāntikārthaiḥ ṣaṣṭhy anyatarasyām
/ *dūrāntikārthaiḥ* 3/1 = *dūraś ca antikaś ca* = *dūrantikau* (*itar. dv.*), *tau arthau yeṣām* (*bv.* with internal *dv.*), *taiḥ*; *ṣaṣṭhī* 1/1 *anyatarasyām* 7/1/
(*pañcamī* #28)
dūrāntikārthaiḥ śabdair yoge ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* optionally occurs to *pañcamī* after a stem used in conjunction with *dūra* 'far', *antika* 'near', or their synonyms.

EXAMPLES:

dūraṃ grāmāt 'away from the village'
dūraṃ grāmasya 'id.'
viprakṛṣṭaṃ grāmāt 'id.'
viprakṛṣṭaṃ grāmasya 'id.'
antikaṃ grāmāt 'near the village'
antikaṃ grāmasya 'id.'
abhyāśaṃ grāmāt 'id.'
abhyāśaṃ grāmasya 'id.'

1. This rule introduces *ṣaṣṭhī* as an optional form to *pañcamī* after nominal stems used in conjunction with forms which have the signification of *dūra* 'far' and *antika* 'near'. Note that the word *anyatarasyām* is understood from the preceding rule; Pāṇini perhaps should not have explicitly stated it again in this rule. However, remember that not only *anyatarasyām*, but also *pañcamī* and *tṛtīyā* were understood in the preceding rule. This being the case, the *ṣaṣṭhī* introduced by this rule would have become optional to both *tṛtīyā* and *pañcamī*. It is to block *tṛtīyā* that Pāṇini explicitly uses *anyatarasyām* in this rule. Furthermore, if *tṛtīyā* were to be an optional form, this would have been accomplished by the *anyatarasyām* of the earlier rule, since both are carried to that rule from 2.3.32 *pṛthag....* The *anyatarasyām* of this rule would therefore be useless if *pañcamī*, alone, were not intended as an option to *ṣaṣṭhī* (*Nyāsa* II: 191).

2.3.35 दूरान्तिकार्थेभ्यो द्वितीया च

dūrāntikārthebhyo dvitīyā ca
/ *dūrāntikārthebhyaḥ* 5/3 *dvitīyā* 1/1 *ca* Ø/
(*tṛtīyā* #33, *pañcamī* #28)
dūrāntikārthebhyaḥ śabdebhyo dvitīyā vibhaktir bhavati, cakārāt pañcamī tṛtīyāpi samuccīyate
A *dvitīyā*, as well as *pañcamī* or *tṛtīyā*, optionally occurs after *dūra*, *antika*, or their synonyms.

EXAMPLES:

dūraṃ grāmasya 'far from the village'
dūrād grāmasya 'id.'
dūreṇa grāmasya 'id.'
antikaṃ grāmasya 'near the village'
antikād grāmasya 'id.'
antikena grāmasya 'id.'

1. This rule introduces *dvitīyā*, in addition to *pañcamī* and *tṛtīyā*, after stems which denote the sense of *dūra* and *antika*. The use of the word *ca* makes it possible for both *pañcamī* and *tṛtīyā* to be carried via *anuvṛtti*. Note that *tṛtīyā* was specifically blocked in the preceding rule by the inclusion of the word *anyatarasyām*. No such inclusion blocks it here. So, *tṛtīyā* is also carried on the strength of the recurrence of *pañcamī* (*Nyāsa* II: 192: *tad anuvṛttisāmarthyāt tṛtīyāpi samuccīyate iti cakāreṇa*). Besides, if *pañcamī*, alone, were intended to be carried here, *anyatarasyām* should have been carried from the preceding rule for the purpose. For this reason, there was actually no need to have *ca* in this rule.

2. Note that *dūra, antika*, and their synonyms can take *dvitīyā, tṛtīyā* and *pañcamī* only when they are not used as qualifiers. If they are used as qualifiers, they must take the endings of their qualifieds.

2.3.36 सप्तम्यधिकरणे च

saptamy adhikaraṇe ca
| saptamī 1/1 *adhikaraṇe* 7/1 *ca* Ø*|*
(*dūrāntikārthebhyaḥ* #35, *anabhihite* #1)
saptamī vibhaktir bhavaty adhikaraṇe kārake, cakārād dūrāntikārthebhyaś ca
A *saptamī* occurs after a nominal stem when *adhikaraṇa* 'locus' is not expressed otherwise; additionally, it occurs after *dūra, antika*, or their synonyms.

EXAMPLES:

kaṭe āste 'he is sitting on the mat'
śakaṭe āste 'he is sitting in the cart'
sthālyāṃ pacati 'he is cooking in the pot'
dūre grāmasya 'far from the village'
antike grāmasya 'near the village'

1. This rule allows for the occurrence of *saptamī* after nominal stems to denote *adhikaraṇa* when the same is not expressed otherwise. This *saptamī* also occurs after stems which denotes *dūra* and *antika*, as is specified by the use of *ca* in the formulation of the rule. Note also that the preceding rule allows for the introduction of *dvitīyā* after *dūra* and *antika*,

in addition to *tṛtīyā* and *pañcamī*. That is, either one of these four endings (*dvitīyā*, *tṛtīyā*, *pañcamī*, and *saptamī*) can alternately be used after stems which have the denotata of *dūra* and *antika*.

The following *vārttika* (*Mbh* II: 805–6) have been discussed with a view to expanding the scope of this rule:

(*i*) *sādhv-asādhuprayoge ca saptamī vaktavyā*
'*saptamī* should also be stated to occur after a stem used with *sādhu* 'nice' and *asādhu* 'not nice''
Example: *sādhur devadatto mātari, asādhur pitari* 'Devadatta is nice with his mother, and not so nice with his father'

(*ii*) *kārakārhāṇāṃ ca kārakatve*
'*saptamī* should also be stated to occur after a stem used with that which qualifies to be a *kāraka* and becomes a *kāraka*'
Example: *ṛddheṣu bhuñjāneṣu daridrā āsate* 'the poor watch while the rich eat'

Note in this example that the rich, on account of their wealth, are capable of becoming an agent. The word *daridra* 'poor' is to be used with *saptamī* when the agency of the rich is actually denoted.

(*iii*) *akārakārhāṇāṃ cākārakatve*
'*saptamī* also occurs after that which is neither capable of becoming a *kāraka*, nor is used as one'
Example: *daridreṣu āsīneṣu ṛddhā bhuñjate* 'the rich eat while the poor sit'

(*iv*) *tad viparyāse ca*
'*saptamī* is to be also stated when contraposition (*viparāsya*) of the same is denoted'
Example: *ṛddheṣv āsīneṣu daridrā bhuñjate* 'the poor eat while the rich sit'

Note here that the contraposition is intended in relation to that which is capable of becoming a *kāraka*, but does not become one, and vice-versa.

(*v*) *nimittāt karmasaṃyoge saptamī vaktavyā*
'*saptamī* should also be stated to occur after a stem which denotes *nimitta* 'cause, purpose' used with an object (*karman*)'
Example: *carmaṇi dvīpinaṃ hanti dantayor hanti kuñjaram* //
keśeṣu camarīṃ hanti sīmni puṣkalako hataḥ //
'they kill a tiger for the hide; an elephant for the tusk; a wild cow for the hair of its tail; and a deer (*puṣkalaka*) for its musk'

2.3.37 यस्य च भावेन भावलक्षणम्

yasya ca bhāvena bhāvalakṣaṇam
/ *yasya* 6/1 *ca* Ø *bhāvena* 3/1 *bhāvalakṣaṇam* 1/1 (*ṣaṣ. tat.*) /
(*saptamī* #36)

yasya ca kriyayā kriyāntaraṃ lakṣyate tato bhāvavataḥ saptamī vibhaktir bhavatī
A *saptamī* occurs after a stem whose implied action characterizes another action.

EXAMPLES:

goṣu duhyamānāsu gataḥ 'he left when the cows were being milked'
dugdhāsv āgataḥ 'he returned when the cows were (already) milked'
agniṣu hūyamāneṣu gataḥ 'he left when oblations were being offered to the ritual fire'
huteṣv āgataḥ 'he returned when oblations were (already) offered to the ritual fire'

1. This rule introduces *saptamī* after the nominal stem which implies the *bhāva* 'action', and characterizes another *bhāva*. The word *bhāva* 'action' here should be interpreted differently from *kriyā* 'action'. This is because an action is a composite of several actions. For, an 'action', when not specified otherwise, denotes a process. This is the case with *kriyā*, which does indeed denote an action with process; that is, an action in the process of being brought to completion (*sādhya*). Once this action is brought to completion, it becomes *siddha* 'accomplished'. In the present rule, the word *bhāva* denotes an action which is *siddha*, and not an action which is *sādhya*, denoted by a verb root (*dhātu*).

Kāśikā glosses *bhāva* as *kriyā*, and further paraphrases the rule as follows:

yasya ca bhāvena = yasya ca kriyayā kriyāntaraṃ lakṣyate tato bhāvavataḥ saptamī vibhaktir bhavati
'that by whose implied action another action is characterized (marked); *saptamī* is introduced after that which implies the *bhāva* 'action''

If *bhāva* and *kriyā* are not intended here to denote the same thing, why did *Kāśikā* gloss *bhāva* as *kriyā* in this rule? Did the authors of *Kāśikā* miss the distinction? One must conclude that they did not. Their paraphrase of the rule itself is sufficient to bring out the distinction. They say: *tato bhāvavataḥ saptamī* 'seventh triplet of nominal ending is to be introduced after that nominal stem which implies an action'. Now, both *bhāva* and *kriyā* have 'action' as their central meaning. The difference between an action denoted by a root, and an action denoted by a nominal stem, is one of *sādhya* and *siddha*. Since this rule introduces the ending after a nominal stem which implies an action, the action of the nominal stem can be recognized as *bhāva*. Moreover, the action denoted by a nominal stem is always an action which is *siddha*. This is why the authors of the *Kāśikā* deemed it unnecessary to make an explicit statement about the difference between *bhāva* and *kriyā*. The problem, however, is not yet resolved.

2. The action which the nominal stem implies, and the further action which this inhered action characterizes, do not have to be already accomplished (*sīddha*). The important point is that one action must characterize another. Moreover, the action that a nominal stem implies has to be known (*jñāta*), or famous (*prasiddhā*). If it is not famous, then it may not qualify to characterize another action.

For instance, the first example under this rule is:

(*a*) *goṣu duhyamānāsu gataḥ* 'he left when the cows were being milked'

where the action of milking (denoted by *duh*) is known. The action of leaving (denoted by the root *gam*) is characterized by that of milking. However, the question of process, as noted earlier, is not actually crucial. Obviously, in (*a*) the action of milking was still in process when the person left. But this was not necessary; the milking could even have been accomplished. Thus, we get the alternative sentence:

(*b*) *goṣu dugdhāsu gataḥ* 'he left when the cows had already been milked'

The same can be said of the characterized action. What is important to remember in this context is that one action serves as the characteristic mark for the timing of the other action. The action that serves as a mark is known or famous, while the further action, the timing of which is characterized, is unknown (*anirjñāta*).

Speaking technically, Pāṇini uses the variable *yad* 'that' in the genitive. As such, it signifies the locus of action. The nominal stem which implies an action which characterizes another action must be either an agent or object, the locus of the action concerned. Sentence (*a*) is an example where the object of milking, the cow, serves as the locus of action which characterizes another action. An example where the locus of action is agent is :

(*c*) *brāhmaṇeṣu adhīyāneṣu gataḥ* 'he went when the *brāhmaṇa* were chanting'.

2.3.38 **षष्ठी चानादरे**

ṣaṣṭhī cānādare

/ *ṣaṣṭhī* 1/1 *ca* Ø *anādare* 7/1 (*nañ. tat.*) /

(*yasya ca bhāvena bhāvalakṣaṇam* #37, *saptamī* #36)

anādarādhike bhāvalakṣaṇe bhāvavataḥ ṣaṣṭhīsaptamyau vibhaktī bhavataḥ

A *ṣaṣṭhī* also occurs after a stem whose implied action characterizes another action provided *anādara* 'disrespect' is denoted.

EXAMPLES:

rudataḥ prāvrājīt 'not paying any attention to the crying relatives, he became a wandering ascetic'

rudati prāvrājīt 'id.'

krośataḥ prāvrājīt 'not paying any attention to the angry relatives, he became a wandering ascetic'
krośati prāvrājīt 'id.'

1. This rule introduces *ṣaṣṭhī* as an option to *saptamī* provided *anādara* 'disrespect' is denoted. Note that *anādara* is used with reference to the locus of the action characterized, as can be seen in the examples given above.

2.3.39 स्वामीश्वराधिपतिदायादसाक्षिप्रतिभूप्रसूतैश्च

svāmīśvarādhipatidāyādasākṣipratibhūprasūtaiś ca
/ *svāmī...prasūtaiḥ* 3/3 = *svāmī ca īśvaraś ca adhipatiś ca dāyādaś ca sākṣī ca pratibhūś ca prasūtaś ca* = *svāmī...prasūtāḥ* (*itar. dv.*), *taiḥ*; *ca* Ø /
(*ṣaṣṭhī* #38, *saptamī* #36)
'*svāmin, īśvara, adhipati, dāyāda, sākṣin, pratibhū, prasūta' ity etair yoge ṣaṣṭhīsaptamyau vibhaktī bhavataḥ*
A *ṣaṣṭhī*, as well as a *saptamī*, occurs after a stem used in conjunction with *svāmin* 'master, owner'; *īśvara* 'lord, master'; *adhipati* 'ruler, master'; *dāyāda* 'heir'; *sākṣin* 'witness'; *pratibhū* 'guarantor'; or *prasūta* 'offspring'.

EXAMPLES:

gavāṃ svāmī 'owner of cows'
goṣu svāmī 'id.'
gavām īśvaraḥ 'id.'
goṣv īśvaraḥ 'id.'
gavām adhipatiḥ 'id.'
goṣv adhipatiḥ 'id.'
gavāṃ dāyādaḥ 'he who inherits cows'
goṣu dāyādaḥ 'id.'
gavāṃ sākṣī 'witness of cows'
goṣu sākṣī 'id.'
gavāṃ pratibhūḥ 'guarantor of cows'
goṣu pratibhūḥ 'id.'
gavāṃ prasūtaḥ 'offspring of cows'
goṣu prasūtaḥ 'id.'

1. This rule introduces both *ṣaṣṭhī* and *saptamī* after a nominal stem used in conjunction with *svāmin*, etc. The force of *ca* makes it possible for both endings to be carried. This rule is required so that *saptamī* can be made an option to *ṣaṣṭhī*, (which, however, would have been available in any case from rule 2.3.50 *ṣaṣṭhī śeṣe*).

Note also that *svāmin*, etc., are all synonymous. Why did not Pāṇini use one of these with *artha* 'meaning' to account for the others, as he does in

so many other cases? He avoided doing this in order to ensure that only the cited synonyms came under the scope of this rule. In other words, he did not want the totality of possible synonyms to be included. Thus, since *rājā* has not been cited even though it is a synonym, a sentence like the following,

(*a*) *grāmasya rājā* 'the king of the village',

will not be allowed to have an optional form, such as

(*b*) *grāme rājā*

where *grāma* could be used in *saptamī*. It, therefore, becomes clear that this rule is required, more to allow an optional *saptamī* than to allow *ṣaṣṭhī*.

2.3.40 **आयुक्तकुशलाभ्यां चासेवायाम्**

āyuktakuśalābhyāṃ cāsevāyām

/ *āyuktakuśalābhyām* 3/2 (*itar. dv.*) *ca* ∅ *āsevāyām* 7/2/

(*ṣaṣṭhī* #38, *saptamī* #36)

āyuktaḥ vyāpāritaḥ, kuśalaḥ nipuṇaḥ tābhyāṃ yoge āsevāyāṃ gamyamānāyāṃ ṣaṣṭhīsaptamyau vibhaktī bhavataḥ

A *ṣaṣṭhī*, as well as a *saptamī*, occurs after a stem used in conjunction with *āyukta* 'delegated, appointed' or *kuśala* 'skilled' provided *āsevā* 'diligence' is denoted.

EXAMPLES:

āyuktaḥ kaṭakaraṇasya 'one who is entrusted with (and diligently involved in) making a mat'

āyuktaḥ kaṭakaraṇe 'id.'

kuśalaḥ kaṭakaraṇasya 'one who is skilled at (and diligently involved in) making a mat'

kuśalaḥ kaṭakaraṇe 'id.'

1. This rule introduces *ṣaṣṭhī* and *saptamī* after nominal stems used with *āyukta* 'delegated, appointed' and *kuśala* 'skilled' when *āsevā* 'diligence' is denoted. Thus we get examples such as the pairs above.

Note that the locative after *kaṭakaraṇa* 'mat-making' would, in any case, be available on account of its serving as the domain of *āyuktatā* 'delegation' and *nipuṇatā* 'skill'. The rule is required more for the optional *ṣaṣṭhī* (*Nyāsa* ad *Kāśikā* II: 197: *āyuktatā nipuṇatā ca kaṭādikaraṇaviṣayaiveti saptamyām eva prāptāyāṃ pakṣe ṣaṣṭhīvidhānārthaṃ vacanam*).

2.3.41 **यतश्च निर्धारणम्**

yataś ca nirdhāraṇam

/ *yataś* ∅ *ca* ∅ *nirdhāraṇam* 1/1/

(*ṣaṣṭhī* #38, *saptamī* #36)

yato nirdhāraṇaṃ tataḥ ṣaṣṭhīsaptamyau vibhaktī bhavataḥ
A *ṣaṣṭhī* or *saptamī* also occurs after a stem which denotes many, from amongst which one is singled out.

EXAMPLES:

manuṣyāṇāṃ kṣatriyaḥ śūratamaḥ 'the *kṣatriya* is bravest among men'
manuṣyeṣu kṣatriyaḥ śūratamaḥ 'id.'
gavāṃ kṛṣṇā saṃpannakṣīratamā 'the black among cows is richest in milk'
goṣu kṛṣṇā saṃpannakṣīratamā 'id.'
adhvagānāṃ dhāvantaḥ śīghratamāḥ 'those who run are the fastest among those who go by the road'

1. This rule introduces *ṣaṣṭhī* and *saptamī* after that stem which denotes a group, or whole, from which a part is singled out on the basis of *jāti* 'class'; *guṇa* 'quality'; and *kriyā* 'action'. The above examples illustrate this point.

2. *Nyāsa* (*Kāśikā* II: 197) observes that this rule is simply an expatiation (*prapañca*). If the part is contained within the whole, the whole would serve as the locus, and hence *saptamī* could easily be ruled by 2.3.35 *saptamy adhikaraṇe ca*. The *ṣaṣṭhī*, too, can be accounted for by 2.3.50 *ṣaṣṭhī śeṣe*, on the grounds that there obtains a part and whole relationship (*avayavāvayavibhāva*):

kimarthaṃ punar idam. yāvatā nirdhāryamāṇo' vayavaḥ samudāyāntarbhūtaḥ; tatra yadā samudāyādhikaraṇatvaṃ vivakṣyate tadā saptamī siddhaiveti... yadā tv avayavāvayavisambandhas tadā ṣaṣṭhī... satyam etat; prapañcārthaṃ vacanam.

2.3.42 पञ्चमी विभक्ते

pañcamī vibhakte
/ *pañcamī* 1/1 *vibhakte* 7/1/
(*yataś ca nirdhāraṇam* #41)
yasmin nirdhāraṇāśraye vibhaktam asyāsti tataḥ pañcamī vibhaktir bhavati
A pañcamī occurs after a stem which denotes something from which something different is distinguished.

EXAMPLES:

māthurāḥ pāṭaliputrakebhyaḥ sukumāratarāḥ 'the people of Mathurā are more youthful than the people of Pāṭaliputra'
māthurāḥ pāṭaliputrakebhyaḥ āḍhyatarāḥ 'the people of Mathurā are more prosperous than the people of Pāṭaliputra'

1. This rule introduces *pañcamī* after a nominal stem which denotes something from which something different is distinguished. For instance,

in the first example, the people of Mathurā are set apart from those of Pāṭaliputra; the two groups of people are shown to be different, lacking in similarity.

Note the following sentence:

(*a*) *goṣu kṛṣṇā saṃpannakṣīratamā* 'the black among cows is richest in milk'

Here, *go* will not qualify for *pañcamī* because the cows, both black and non-black, are not completely separable. A black cow is still part of the same larger herd, comprising black and non-black cows. Thus, the previous rule (2.3.41) covers instances where a part is singled out from the whole, but is not considered to be separate from it. The present rule covers other instances, where two entities are regarded as distinct.

Nyāsa observes that, once again, this rule is an effort to expatiate. Clearly, a thing set apart denotes movement away, and therefore *pañcamī* can be ruled by 2.3.28 *apādāne pañcamī*, read with 1.4.24 *dhruvam....*

2.3.43 साधुनिपुणाभ्यामर्चायां सप्तम्यप्रतेः

> *sādhunipuṇābhyām arcāyāṃ saptamy aprateḥ*
> / *sādhunipuṇābhyām* 3/1 (*itar. dv.*) *arcāyām* 7/1 *saptamī* 1/1 *aprateḥ* 6/1/
> '*sādhu, nipuṇa*' *ity etābhyāṃ yoge' rcāyāṃ gamyamānāyāṃ saptamī vibhaktir bhavati*
> A *saptamī* occurs after a stem used in conjunction with *sādhu* 'good, well-behaved' or *nipuṇa* 'kind, skilled' provided *prati* is not in use and *arcā* 'respect' is denoted.

EXAMPLES:

> *mātari sādhuḥ* 'he is good to his mother'
> *pitari sādhuḥ* 'he is good to his father'
> *mātari nipuṇaḥ* 'he is kind to his mother
> *pitari nipuṇaḥ* 'he is kind to his father'

1. This rule introduces *saptamī* after a nominal stem used with *sādhu* or *nipuṇa* provided *arcā* is denoted and *prati* is not used. The semantic condition with reference to *arcā* disallows *saptamī* where, for example, a statement of fact (*tatvakathana*) is made. Thus:

(*a*) *sādhur bhṛtyo rājñaḥ* 'the good servant of the king'.

2. The formal condition of *aprateḥ* 'when *prati* is not used' disallows the use of *saptamī* in *mātaram* of a sentence such as:

(*b*) *sādhur devadatto mātaraṃ prati* 'Devadatta is good to his mother'.

2.3.44 प्रसितोत्सुकाभ्यां तृतीया च

> *prasitotsukābhyāṃ tṛtīyā ca*

/ *prasitotsukābhyām* 3/2 = *prasitaś ca utsukaś ca* = *prasitotsukau* (*itar. dv.*), *tābhyām*; *tṛtīyā* 1/1 *ca* Ø/
(*saptamī* #36)
'prasita, utsuka' ity etābhyāṃ yoge tṛtīyā vibhaktir bhavati cakārāt saptamī ca
A *tṛtīyā*, as well as *saptamī*, also occurs after a stem used in conjunction with *prasita* 'preoccupied' or *utsuka* 'concerned, eager'.

EXAMPLES:

keśaiḥ prasitaḥ 'he who is preoccupied with his hair'
keśeṣu prasitaḥ 'id.'
keśair utsukaḥ 'he who is concerned about his hair'
keśeṣu utsukaḥ 'id.'

1. This rule additionally introduces *tṛtīyā* after a nominal stem used with *prasita* and *utsuka*. The *Kāśikā* explains *prasita* as *yas tatra nityam evāvabaddhaḥ* 'he who is always preoccupied with something'. Note that *prasita* can also mean 'dazzling white'; although, because of the association (*sāhacarya*) of *utsuka*, it too is interpreted as denoting an action.

2.3.45 नक्षत्रे च लुपि

nakṣatre ca lupi
/ *nakṣatre* 7/1 *ca* Ø/ *lupi* 7/1/
(*tṛtīyā* #44, *saptamī* #36)
lubantān nakṣatraśabdāt tṛtīyāsaptamyau vibhaktī bhavataḥ
A *tṛtīyā*, as well as *saptamī*, also occurs after a stem which terminates in *LUP* (1.1.61 *pratyayasya*; 4.2.4 *lub aviśeṣe*) and denotes *nakṣatra* 'constellation'.

EXAMPLES:

puṣyeṇa pāyasam aśnīyāt 'one should eat *pāyasa* (rice pudding) during the constellation *puṣya*'
puṣye pāyasam aśnīyāt 'id.'
maghābhiḥ palalaudanam aśnīyāt 'one should eat *palalaudana* (sweet rice) during the constellation *maghā*'
maghāsu palalaudanam aśnīyāt 'id.'

1. This rule introduces *tṛtīyā* and *saptamī* after a nominal stem which denotes *nakṣatra* and ends in *LUP*. The use of the word *LUP* in *saptamī* refers to rules 4.2.3 *nakṣatreṇa yuktaḥ kālaḥ* and 4.2.4 *lub aviśeṣe*, where the first rule introduces affix *aṆ* after a word denoting *nakṣatra* 'constellation' provided its time of conjunction with the moon is to be denoted. The second rule (4.2.4) deletes the affix when no additional specification

is being made. Thus, one expects to derive *pauṣyaḥ* by introducing affix *aṆ* after *puṣya*, a constellation, to denote the time of its conjunction with the moon. Rule 4.2.4 deletes the affix on the grounds that no further specification relative to the conjunction, or any additional information, is furnished.

To return to our present rule, we find that the condition of 'no additional specification' is also valid here. That is, the stem after which *tṛtīyā* and *saptamī* are to be introduced should not only stand for a constellation, but also for a general time-frame in which the moon enters the constellation, when no specific information is given in addition. It would thus be possible to derive *puṣyaḥ*, and not the expected *pauṣyaḥ*, by introducing affix *aṆ* to denote a general time-frame for the lunar conjunction with the constellation Puṣya. Note that, given the string *puṣya* + *aṆ*, the affix will subsequently be deleted by 4.2.4 *lub aviśeṣe*. This, in turn, will block the *vṛddhi* replacement in *au* for the *u* of *puṣya*. It is in this sense that we say that one expects to derive *pauṣya*, but one ends up with *puṣya*.

2. This rule is required more for *tṛtīyā* than for *saptamī*, since *saptamī* could have been introduced by 2.3.35 *saptamy....*

2.3.46 प्रातिपदिकार्थलिङ्गपरिमाणवचनमात्रे प्रथमा

prātipadikārthaliṅgaparimāṇavacanamātre prathamā
/ *prātipadikārtha...mātre* 7/1 = *prātipadikasya arthaḥ* = *prātipadikārthaḥ* (*ṣaṣ. tat.*), *prātipadikārthaś ca liṅgaṃ ca parimāṇaṃ ca vacanaṃ ca* = *prātipadikārtha...mātram* (*karm. tat.*), *tasmin; prathamā* 1/1/
prātipadikārthamātre liṅgamātre parimāṇamātre vacanamātre prathamā vibhaktir bhavati
A *prathamā* 'first triplet of *sUP*' occurs when only *prātipadikārtha* 'meaning of the stem, stem notion'; *liṅga* 'gender'; *parimāṇa* 'measure'; or *vacana* 'number' is to be expressed.

EXAMPLES:

uccaiḥ 'high up'
nīcaiḥ 'low down'
kumārī 'girl'
vṛkṣaḥ 'tree'
droṇaḥ 'a measure of weight'
khārī 'id.'
ekaḥ 'one'
dvau 'two'
bahavaḥ 'many'

1. This rule introduces *prathamā* to denote only the nominal stem notion (*prātipadikārtha*), gender (*liṅga*), measure (*parimāṇa*) and number (*saṃkhyā*). The formulation of the rule needs some explanation. The expression *prātipadikārthaliṅgaparimāṇavacanamātre* specifies the meaning condition under which *prathamā* can be introduced. The word *mātra* denotes *avadhāraṇa* 'exclusion' and is used at the end of a *dvandva* compound (namely, *prātipadikārthaliṅgaparimāṇavacanam*). Since an item used at the end of a *dvandva* compound is associated with each of its constituents (*dvandānte śrūyamāṇaḥ pratyekam abhisambadhyate*), *mātra* is read with each of the constituents. As a result, we get the meaning: nominal stem notion only; gender only; measure only; and number only.

This interpretation, however, runs into problems. The *prathamā* can only express the nominal stem notion in the case of an indeclinable base, such as *uccaiḥ* 'high up'; *nīcaiḥ* 'low down', etc. Elsewhere, number and gender are expressed concurrently with the nominal stem notion. Thus, the nominative singular ending *sU* in the word *kṛṣṇaḥ* expresses both masculine gender and singular number; but it also expresses the meaning of the nominal stem. Clearly, this is why *prathamā* in *kṛṣṇaḥ* cannot be said to denote only the sense of the nominal stem, gender, or number. Yet the wording of the rule seems to demand the expression of just one sense: either that of the nominal stem, that of the gender, or that of the number.

To end the confusion, commentators explain that, since the meaning of the nominal stem is to be expressed in any event, this is done by *prathamā*. The expression of gender, measure, or number is additional. That is, *prathamā* is introduced when nothing but nominal stem notion, or nominal stem notion plus gender, measure, or number is to be denoted. Accordingly, we get examples of indeclinables (*avyaya*) where nothing but the nominal stem notion is to be expressed. Words such as *kumārī* 'girl', *vṛkṣaḥ* 'tree', and *kuṇḍam* 'fire-pit, bowl' denote, in addition to their stem notion, the gender: feminine, masculine, or neuter. They are all cited here in the singular, and thus their *prathamā* also denotes number (*vacana*). If, however, separate mention of *vacana* as the denotatum of *prathamā* is not made on this account, nominal stems *eka* 'one', *dvi* 'two' and *bahu* 'many' would not qualify for the introduction of *prathamā*.

An example of *prathamā* denoting *parimāṇa* 'measure' is given as *droṇa*. By using *prathamā* after *droṇa*, one also expresses the sense of measure in addition to the nominal stem notion. That is, the relationship obtaining between that which measures (*paricchedaka*) and that which is measured (*paricchedya*) is expressed in addition to the stem-notion.

This rule has been extensively discussed, with the main focus of contention on what could be the meaning of a nominal stem. Patañjali

(II: 809–18) indicates that *svārtha* 'stem-notion'; *dravya* 'concrete thing'; *liṅga* 'gender'; *saṃkhyā* 'number'; and *kāraka* are five meanings of the nominal stem. This is what has been referred to as 'nominal stem'. If Patañjali's view is accepted, then the separate mention of gender and number in this rule becomes useless. Kaiyaṭa argues that *kāraka* is the denotatum of *vibhakti* 'nominal ending' and should therefore be excluded from the stem notion. Others could argue against the inclusion of gender and number as well.

This leaves *svārtha* and *dravya* as the two denotata of a nominal stem. It is for this reason that Bhaṭṭoji characterizes *prātipadikārtha* as *niyatopasthitikaḥ* 'that which is invariably denoted when the nominal stem is cited'. *Kāśikā* glosses *prātipadikārtha* as *sattā* 'being'. *Nyāsa*, however, finds certain problems with this approach. It points out that, if *sattā* refers to *jāti*, the consequence would be the exclusion of *vyakti* 'individual, particular'. In this case, *devadatta*, et al., will not qualify, since they are particular individuals. The condition of 'being' would also exclude items such as *ākāśakusuma* 'sky-flower', simply because they cannot be said to exist. *Nyāsa* concludes that the meaning of a nominal stem should be 'comprehended without reference to any other thing'. *Kāśikā*, incidentally, uses the word *sattā* just as an *upalakṣaṇa*, a distinguisher which distinguishes even when absent (*avidyamāna*).

2.3.47 सम्बोधने च

sambodhane ca
/ *sambodhane* 7/1 *ca* Ø /
(*prathamā* #46)
sambodhane ca prathamā vibhaktir bhavati
A *prathamā* also occurs after a stem when *sambodhana* 'address' is to be expressed.

EXAMPLES:

he devadatta 'O Devadatta!'
he devadattau 'O, two Devadattas'
he devadattāḥ 'O, many Devadattas'

1. This rule allows the use of *prathamā* to also denote *sambodhana*, glossed as *abhimukhīkaraṇa* 'to attract someone's attention, to address'. Further, note that the meaning of *sambodhana* will be denoted by *prathamā* in addition to the meaning of the nominal stem.

2.3.48 साऽऽमन्त्रितम्

sā' mantritam
/ *sā* 1/1 *āmantritam* 1/1/

(*sambodhane* #47, *prathamā* #46)
sambodhane yā prathamā tadantaṃ śabdarūpam āmantritasaṃjñaṃ bhavati
A form which ends in *prathamā* and denotes *sambodhana* is termed *āmantrita*
Examples are as outlined under the preceding rule.

1. This rule assigns the term *āmantrita* to a form which ends in *prathamā* and denotes *sambodhana.*

2. It is generally accepted that an affix cited in the grammar denotes a form that ends in that affix (1.1.72 *yena vidhis...*). Patañjali (*Mbh* II: 361) indicates that an affix denotes its form only when the affix is cited in a rule which assigns a term. If this were not the case, Pāṇini would not have had to use *antam* explicitly in 1.4.14 *suptiṅantaṃ padam.*

Rule 2.3.48 uses *sā,* referring to *prathamā,* and it assigns the term *āmantrita.* What should be considered as the meaning of this rule? Should *prathamā, sU, au, Jas,* or a form ending in it, be termed *āmantrita*? Jinendrabuddhi says that, if Pāṇini intended the term to be assigned to the form of *prathamā* alone, he should have used *sambodhana.* He would not then have needed the term *āmantrita.* But since he uses *āmantrita,* the term must have some special purpose. The purpose is perhaps for *sā* to refer to a form which ends in *prathamā* and denotes *sambodhana.*

3. The purpose of including the term *āmantrita* is also to assign the *udātta* accent, by rule 6.1.198 *āmantritasya ca* to the initial vowel of a form which ends in *prathamā* and denotes *sambodhana.* Under certain other conditions, it is manipulated to assign blanket *anudātta* (8.1.19 *āmantritasya ca*). Similarly, this term assignment also makes it possible for a vocative turned *āmantrita* to be treated as non-existent in matters of the assignment of accent to a following word.

Scope: 8.1.72 *āmantritaṃ pūrvam avidyamānavat*

2.3.49 एकवचनं सम्बुद्धिः

ekavacanaṃ sambuddhiḥ
/ *ekavacanam* 1/1 *sambuddhiḥ* 1/1/
(*āmantritam* # 48, *prathamā* # 46)
āmantrita prathamāyā yad ekavacanaṃ tat sambuddhisaṃjñaṃ bhavati
A singular *āmantrita* is termed *sambuddhi.*

EXAMPLES:

he paṭo 'O, clever one!'
he devadatta 'O, Devadatta!'

1. This rule assigns the term *sambuddhi* to the singular ending *sU* of *prathamā* termed *āmantrita.* Two interrelated questions arise in connection

with this. Firstly, why is the term *sambuddhi* not assigned here to a form which ends in *sU*? And secondly, why did Pāṇini not use *sU* instead of *ekavacana*?

Pāṇini uses *ekavacana* to indicate that, in this rule, *sambuddhi* should be assigned to the affix itself, and not to a form which ends in it. Otherwise, as in the previous rule, a form ending in nominative singular termed *āmantrita* would qualify for the assignment of the term. This point is also applicable to the second of the above questions; for if Pāṇini had used *sU* instead of *ekavacana*, no special directions would have been given concerning the assignment of the term *sambuddhi*, except for the wrong assignment of the term to a nominative singular.

Consider the string *paṭu* + *sU* of *he paṭo*, where *sU* is termed *sambuddhi*: rule 7.3.108 *hrasvasya guṇaḥ*, read with 7.3.106 *sambuddhau ca*, will order *guṇa* for the final *u* of *paṭu* (The same would be the case with the final *i* of *agni* + *sU* of *he agne* 'O, Agni!'). The *sU* could then be deleted by rule 6.1.69 *eṅ hrasvāt sambuddeḥ*.

Scope: 6.1.69 *eṅ hrasvāt sambuddheḥ*

2.3.50 **षष्ठी शेषे**

ṣaṣṭhī śeṣe
/ *ṣaṣṭhī* 1/1 *śeṣe* 7/1/
A *ṣaṣṭhī* occurs after a nominal stem when the remainder (*śeṣa*) is to be expressed.

EXAMPLES:

rājñaḥ puruṣasya gṛham 'the house of the servant of the king'
paśoḥ pādaḥ 'foot of an animal'
pituḥ putraḥ 'son of a father'

1. This rule introduces *ṣaṣṭhī* after a nominal stem to denote that which remains (*śeṣa*) to be stated. The word *śeṣa* has been explained as referring to those meanings not already specified by rules such as 2.3.2 *karmaṇi dvitīyā*, etc., and 2.3.46 *prātipadikārtha*.... Thus, any meaning which does not come within the scope of those rules, beginning with 2.3.2 and up to and including 2.3.46, should be treated as the denotatum of *ṣaṣṭhī* (referred to here by *śeṣa*). These meanings are identified as *svasvāmisambandha* 'owner-owned relation', etc. Note that *sambandha* entails dual locus (*dviṣṭha*), yet it is denoted by *ṣaṣṭhī*, introduced after a stem which denotes the qualifier (*viśeṣana*) and not the qualified (*viśeṣya*). The latter is principal (*pradhāna*), as opposed to the qualifier which is subsidiary (*gauṇa*). For details, see Jinendrabuddhi's *Nyāsa* ad *Kāśikā*, under rule 2.3.50).

2.3.51 **ज्ञो ऽविदर्थस्य करणे**

jño' vidarthasya karaṇe
/ *jñaḥ* 6/1 *avidarthasya* 6/1 = *vido' rthaḥ* = *vidarthaḥ* (*ṣaṣ. tat.*), *na vidarthaḥ* (*nañ. tat.*), *tasya*; *karaṇe* 7/1/
(*ṣaṣṭhī* #50)
jānāter avidarthasya ajñānārthasya karaṇe kārake ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs after a stem to express, as a remainder, the *karaṇa* of *jñā* when not used in the sense 'to know'.

EXAMPLES:

sarpiṣo jānīte 'he offers the ritual oblation thinking it is ghee'
madhuno jānīte 'he offers the ritual oblation thinking it is honey'

1. The expression 'not used in the sense 'to know' ', qualifying *jñā*, needs some explanation. The normal sense of the root *jñā* is that of knowing. However, in sentences such as the first example, above, the root is used not in the sense 'to know', but in that of proceeding with an action with (or without) a certain supposition. For instance, one proceeds with the ritual oblation treating some other substance as if it were ghee. Here, *jñā* means 'to proceed, engage in', but to do so on the basis of false knowledge or of a misapprehension. Conversely, if one were to proceed with the ritual actually using ghee, *jñā* would still refer to that proceeding, but without any such misapprehension being implied.

2.3.52 **अधीगर्थदयेशां कर्मणि**

adhīgarthadayeśāṃ karmaṇi
/ *adhīgarthadayeśām* 6/3 = *adhīgartho yeṣāṃ dhātūnāṃ te adhīgarthāḥ* (*bv.*), *adhīgarthāś ca dayaś ca īś ca* = *adhīgarthadayeśaḥ* (*itar. dv.*), *teṣāṃ*; *karmaṇi* 7/1/
(*ṣaṣṭhī śeṣe* #50)
adhīgarthāḥ = *smaraṇārthāḥ*, '*dayadānagatirakṣaṇeṣu*', *īś aiśvarye eteṣāṃ karmaṇi kārake śeṣatvena vivakṣite ṣaṣṭhī vibhaktir bhavati*
A *ṣaṣṭhī* occurs after a stem to express, as a remainder, the *karman* of verbs which denote the sense of *adhīk* (*adhi* + *iK*) 'to remember'; *dayĀ* 'to give, feel pity, protect, move'; and *īś* 'to rule'.

EXAMPLES:

mātur adhyeti 'he remembers his mother'
mātuḥ smarati 'id.'
sarpiṣo dayate 'he gives the ghee'
sarpiṣa īśṭe 'he controls the ghee'
madhuna īśṭe 'he controls the honey'

1. This rule allows for the introduction of *ṣaṣṭhī* to denote the object of verbal roots which have the signification of *adhi* + *iK* 'to remember' when the same is to be expressed as the remainder. Note that *dvitīyā* can express the *karman* when it is not expressed otherwise (2.3.2 *karmaṇi dvitīyā*). When the same object is to be expressed as a remainder of 2.3.2 *karmaṇi dvitīya*, 2.3.52 *adhīgartha*...can be applied to introduce *ṣaṣṭhī*. Thus, we get the first two examples shown above, which we shall call (*a*) and (*b*). A sentence such as:

(*c*) *smṛtā mātā tena* 'the mother was remembered by him' expresses the object of *smṛ* by the verb. Consequently, *mātā* cannot be used with *dvitīyā*. Rule 2.3.52 *adhīgartha*...thus illustrates two levels of constraints. Level one constrains the introduction of *dvitīyā*, with reference to 2.3.2 *karmaṇi dvitīyā*, and to any other means outside the domain of 2.3.1 *anabhihite* whereby *karman* could be expressed. Sentences (*a*) and (*c*) will be covered by this dependency in selection of the means of expressing an object. Conversely, level two constraint will operate within the domain of 2.3.1 *anabhihite*. That is, if the option of expressing the object is available to rule 2.3.2 *karmaṇi dvitīyā*, under the condition of 2.3.1 *anabhihite*, then that option could be taken by 2.3.2. If 2.3.2 takes the option, the *karman* will be expressed by *dvitīyā*, as in *mātaram*. If, however, the option is not taken, the object can then be expressed as the remainder (*śeṣa*) by rule 2.3.52 *adhīgartha*..., thereby yielding sentence (*b*) as an alternative.

2. Note that rules 2.3.51 *jño' vidarthasya karaṇe* through 2.3.64 *kṛtvo' rthaprayoge*...form a set, where *ṣaṣṭhī* is introduced with reference to the enumeration of specific stems. It is for this reason that the *ṣaṣṭhī* is called *pratipadavidhānāṣaṣṭhī* 'a genitive introduced with reference to specific words'. It is to be remembered that the *Mahābhāṣya* (II: 681) does not allow the formation of a compound with a constituent in *ṣaṣṭhī* introduced by a rule of this set. Instead, the compounds with a genitive constituent are permitted when the genitive happens to be marked with 'remainder' (*śeṣalakṣaṇā*; cf. 2.3.50 *ṣaṣṭhī śeṣe*). Thus, *śeṣalakṣaṇā*, as opposed to the *pratipadavidhānā*, forms the second type of genitive. A third type is called *kṛdyogā*, 'that which is introduced in conjunction with an item which ends in a *kṛt* affix'. Rule 2.3.65 *kartṛ karmaṇoḥ kṛti* forms a set by itself, whereby *kṛdyogā ṣaṣṭhī* is introduced. A fourth type of *ṣaṣṭhī*, in contradistinction to the preceding three, which are taken together as forming a single group, is called *sthāneyogā* (see my note under rule 1.1.49 *ṣaṣṭhī sthāneyogā*).

2.3.53 कृञः प्रतियत्ने

kṛñaḥ pratiyatne
/ *kṛñaḥ* 6/1 *pratiyatne* 7/1/
(*karmaṇi* #52, *ṣaṣṭhī śeṣe* #50)

karoteḥ karmaṇi kārake śeṣatvena vivakṣite pratiyatne gamyamāne ṣaṣṭhī vibhaktir bhavati

A *ṣaṣṭhī* occurs after a stem to express the *karman* of *ḌUkṛÑ* 'to do, make' when it is expressed as a remainder and *pratiyatna* 'introducing a new quality to something' is denoted.

EXAMPLE:

edho dakasyopaskurute 'the burning wood introduces new quality to water'

1. The word *pratiyatna* has been glossed by *Kāśikā* as *guṇāntarādhānam* 'bringing about another quality'. Thus, in the above example, *edha* (masculine) or *edhas* (neuter), meaning firewood, is credited with bringing a new quality to water (*daka* or *udaka*). For the purpose of this example, *edha* and *daka* are treated as the bases after which nominative and genitive are introduced to yield *edhaḥ* and *dakasya.*

This rule also requires that the condition of *śeṣa* be fulfilled, in case one wishes to introduce the genitive to denote *karman.* That is, 2.3.2 could also denote the *karman*, thereby yielding the sentence *edho dakam upaskurute.* If 2.3 53 is preferred, with the desire to express *karman* via *śeṣatva*, the form would then be *edho dakasyopaskurute.*

Note also in connection with this that, given the meaning condition of *pratiyatna*, rule 1.3.32 *gandhanāvakṣepaṇasevanasāhasikyapratiyatna...* introduces *ātmanepada* as a replacement of *LAṬ* and occurs after the verbal root *kṛ*, used with the preverb *upa.* This same meaning condition also causes rule 6.1.138 *upāt pratiyatna...*to introduce the augment *sUṬ* before the *k* of verbal root *kṛ*, used with *upa*, to yield *upaskṛ.*

2.3.54 रुजार्थानां भाववचनानामज्वरेः

rujārthānāṃ bhāvavacanānām ajvareḥ

/ *rujārthānām* 6/3 = *rujā artho yeṣām* (*bv.*) *bhāvavacanānām* 6/3 = *bhāvo vacanaḥ yeṣām* (*bv.*), *teṣām ajvareḥ* 6/1 = *na jvariḥ* = *ajvariḥ* (*nañ. tat.*), *tasya* /

(*karmaṇi* #52, *ṣaṣṭhī śeṣe* #50)

rujārthānāṃ dhātūnāṃ bhāvavacanānāṃ bhāvakartṛkānāṃ jvarivarjitānāṃ karmaṇi kārake śeṣatvena vivakṣite ṣaṣṭhī vibhaktir bhavati

A *ṣaṣṭhī* occurs to express the *karman* of roots which denote the meaning of *ruj* 'to break, to afflict' provided that *jvari* 'to have fever' is not one of the roots; that action denoted by these roots has an agent which denotes *bhāva* 'action'; and that *karman*, itself, is expressed as a remainder.

EXAMPLES:

caurasya rujati rogaḥ 'the disease afflicts the thief'
caurasyāmayaty āmayaḥ 'id.'

1. Here, *ṣaṣṭhī* is introduced to denote the object of roots, excluding *jvari*, which have the meaning of *ruj* and have an agent which denotes their own action. The rule requires two conditions:

(*i*) that the action denoted by the root must be synonymous with the action denoted by *ruj*, with the exception of *jvari*; and

(*ii*) that this action, though in the state of being accomplished (*sādhyamānāvasthā*), must be denoted by a nominal which serves as the agent and in an already accomplished state (*siddhāvasthā*).

The object must, of course, be expressed as a remainder.

Consider the first example:

(*a*) *caurasya rujati rogaḥ* 'the disease is afflicting the thief'

The agent of *ruj* in this sentence is *roga* 'disease', derived by introducing affix *GHaÑ* after the verbal root *ruj*. The word *roga* constitutes the agent of the action; thus, it denotes *bhāva* in an already accomplished state. The thief (*caura*) is the object of the sentence, which for the purposes of this rule is opted to be expressed as a remainder. If this option of expressing the object was not accepted, rule 2.3.2 *karmaṇi dvitīyā* would have applied to yield:

(*b*) *cauraṃ rujati rogaḥ* 'id.'

For a detailed discussion of the difference between an action in the state of being accomplished, as opposed to one already accomplished, see my note under rule 2.3.37 *yasya ca bhāvena bhāvalakṣaṇam*.

2.3.55 **आशिषि नाथः**

āśiṣi nāthaḥ
/ *āśiṣi* 7/1 *nāthaḥ* 6/1
(*karmaṇi* #52, *ṣaṣṭhī śeṣe* #50)
'nādhṛ, nāthṛ, yācñāpatāpaiśvaryāśīḥṣu' paṭhyate, tasyāśīḥ kriyasya karmaṇi kārake śeṣatvena vivakṣite ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs to express the *karman* of *nāthṚ* when it denotes *āśīḥ* 'benediction', and *karman* itself is expressed as a remainder.

EXAMPLES:

sarpiṣo nāthate 'he wishes for the blessing of ghee'
madhuno nāthate 'he wishes for the blessing of honey'

1. This rule introduces *ṣaṣṭhī* to denote the object of *nāthṚ* when the root is used in the sense of *āśīḥ*, as shown in the above examples. Note that *āśīḥ* is glossed as *yācñā* 'to pray for, beg'. Furthermore, *ṣaṣṭhī* is available when one wishes to express the *karman* as *śeṣa*. Otherwise, *dvitīyā* can be used.

Jinendrabuddhi (*Nyāsa* ad *Kāś*: 2.3.55) explains that *āśīḥ* is denoted in

the examples, by the wish for ghee which one does not have, and is expressed as the prayer 'May there be ghee (or honey) for me!' (*sarpir yasya nāsty ato' rthitvād āśāste saḥ, sarpir me bhūyād iti*).

2.3.56 जासिनिप्रहणनाटक्राथपिषां हिंसायाम्

jāsiniprahaṇanāṭakrāthapiṣāṃ hiṃsāyām
/ *jāsini...piṣāṃ* 6/3 = *jāsiś ca niprahaṇaṃ ca nāṭaś ca krāthaś ca piṣ ca= jāsini...piṣaḥ* (*itar. div.*), *tesāṃ hiṃsāyām* 7/1/
(*karmaṇi* #52, *ṣaṣṭhī śeṣe* #50)
'jāsi, niprahaṇa, nāṭa, krātha, piṣ' ity etesāṃ dhātūnāṃ hiṃsākriyāṇāṃ karmaṇi kārake ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs after a nominal stem to express, as a remainder, the object of an action denoted by the verbal roots *jasU* 'to wish harm to, to torment' and *han* 'to smite', used with the preverbs *ni* and *pra*, *naṭ* 'to injure' and *krāth* and *pis*, they mean 'to wish harm to'.

EXAMPLES:

caurasyojjāsayati 'he is beating the thief'
caurasya niprahanti 'they are beating the thief'
caurasya nihanti 'id.'
caurasya prahanti 'id.'
caurasya praṇihanti 'id.'
caurasyonnāṭayati 'he is torturing the thief'
caurasyotkrāthayati 'id.'
caurasya pinaṣṭi 'id.'

1. This rule allows the denotation of the object of the selected verbs under the meaning condition of *hiṃsā* provided the same is to be denoted as a remainder. In the absence of taking the option of expressing the object as a remainder, *dvitīyā*, by 2.3.2 *karmaṇi dvitīyā*, will obtain.

Note that *jāsi* does not refer here to the causal form of *jasU*. Instead, it refers to the *jasU* 'to wish harm to, to torment' of the *cur-ādi* class, which, when used with the preverb *ud*, gives the sense of *hiṃsā*. Similarly, *han* is referenced here as used with the preverbs *ni* and *pra*. *Kāśikā* informs us that *han* can be used with these preverbs in three different ways:

(*i*) in the form of *saṃghāta*, jointly in the order of enumeration as *nipra-han*;
(*ii*) in the *vigrahīta* form, separately as *ni-han*, *prahan*; or
(*iii*) in the *viparyasta* form, conversely in the order of enumeration as *pra-ni- han*.

The words *saṃghāta*, *vigrahīta*, and *viparyasta* thus technically explain the manner in which these preverbs are used with *han*. The verbal root

naṭ is also required to denote the meaning of *hiṃsā*, which it does when used with the preverb *ud*. The verbal root *krath* belongs to the *bhvādi* class, enumerated in its subset headed by *ghaṭ* 'to strive'. Roots belonging to the *ghaṭādi* group, which total fifty-five, are treated as marked with *M*. This, in turn, causes the shortening of their *vṛddhi* vowels before the causal suffix *ṆiC*.

Pāṇini refers to *krath* by its *vṛddhi* form *krāth*, because, under the *Mit* treatment just mentioned, it will lack the *vṛddhi*. That is, he does not want *krath* to undergo shortening of its *vṛddhi* vowel before the causative *ṆiC*. Note that he also cites *jasU* and *naṭA* as *jāsi* and *nāṭA*; again, this is intended to ensure that the option of denoting the *karman* of these roots as a remainder is available only when they are used in these modified forms. Consider the following examples:

(*a*) *caurasya ujjāsanam* 'the torturing of the thief'
(*b*) *caurasya unnāṭanam* 'id.'
(*c*) *caurasya krāthanam* 'id.'

Here, we find the modified usage of the roots. But compare

(*d*) *cauram ajījasat* 'he tortured the thief'

where *ṣaṣṭhī* could not be introduced to denote the object because the root is not available in the form of *jās*. Needless to say, the object in this instance must be expressed with *dvitīyā*. *Nyāsa* clarifies the issue as follows:

> *atra hīkāro dhātunirdeśārthaḥ kṛtaḥ, 'ikśtipau dhātunirdeśe' iti. yady evam, jāsīty ākāraḥ katham śrūyate. ucyate-ākāram uccārya vikṛtanirdeśaḥ kṛtaḥ; vikṛtanirdeśas tu yatrasyaitad rūpaṃ bhavati tatraiva yathā syād anyatra mā bhūd: dasyum ajījasad iti*
>
> 'Here *i* (in *jasi*) has been used to refer to the root in accordance with the convention '*ikśtipau dhātunirdeśe*'. If it is so, how do we come to have the *ā* in *jāsi*? It is stated that Pāṇini, by reading the *ā* instead of *a*, made a reference to the modified form *jās* of the root. By this he indicated that what is stated by this rule obtains only where the root is available in the modified form. Thus, the rule will not apply in the case of: *dasyum ajījasat* 'he tortured the bandit'.'

2. Note also that *ṣaṣṭhī* can be introduced only in the context of the roots enumerated by this rule. A root such as *hiṃs*, though it signifies 'to harm', does not come under the stipulation of this rule. A sentence like:

(*e*) *cauram hinsati* 'he kills the thief'

therefore cannot have the genitive to express the object.

2.3.57 व्यवहृपणोः समर्थयोः

vyavahṛpaṇoḥ samarthayoḥ
/ *vyavahṛpaṇoḥ* 6/2 *samarthayoḥ* 6/2/
(*karmaṇi* #52, *ṣaṣṭhī śeṣe* #50)

'vyavahṛ, paṇa' ity etayoḥ smarthayoḥ samānārthayoḥ karmaṇi kārake ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs to express the *karman* of *vyavahṛ* 'to conduct' and *paṇ* 'to bargain' when they are used synonymously.

EXAMPLES:

śatasya vyavaharati 'he is bartering or trading with a hundred'
sahasrasya vyavaharati 'he is bartering or trading with a thousand'
śatasya paṇate 'he is bargaining with a hundred'
sahasrasya paṇate 'he is bargaining with a thousand'

1. This rule introduces *ṣaṣṭhī* to express the object of the action denoted by verbal root *hṛ* used with the preverbs *vi* and *ava,* and also by the verbal root *paṇ* when used with a signification similar to that of *hṛ*. The above two roots become synonymous when they denote 'gambling' and 'barter'. They then become the concern of this rule. The *samartha* 'same meaning' condition is necessary, since these roots can also signify other meanings. Thus, in the following sentences

(*a*) *brāhṃ paṇāyate* 'he praises the *brāhmaṇa*'
(*b*) *śalākaṃ vyavaharati* 'he is counting the dice'

the same roots have been used in the sense of praise *(stuti)* and counting *(gaṇana)* respectively. Thus, no genitive obtains.

A question may be raised about the word *samartha.* After the compound-formation, why was not the long vowel *(dīrgha) sandhi* applied to yield *samārtha*? Commentators indicate that the sequence *a* + *a* was subjected to a single replacement *(ekādeśa),* similar to the subsequent *(pararūpa) a,* by the *vārttika: sakandhvādiṣu pararūpaṃ vācyam.*

2.3.58 **दिवस्तदर्थस्य**

divas tadarthasya
/ *divaḥ* 6/1 *tadarthasya* 6/1 = *saḥ artho yasya* = *tadarthaḥ (ṣaṣ.taṭ), tasya* /
(karmaṇi #52, *ṣaṣṭhī śeṣe* #50, *anabhihite* #1)
vyavahṛpaṇisamānārthasya dīvyateḥ karmaṇi ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs to express the *karman* of *div* 'to play' when it denotes a meaning similar to that of *vyavahṛ* 'to gamble' and *paṇ* 'to barter'.

EXAMPLES:

śatasya dīvyati 'he is gambling with a hundred'
sahasrasya divyati 'he is gambling with a thousand'

1. This rule introduces *ṣaṣṭhī* to denote the object of the action denoted by *div* 'to play' used in the sense of 'gamble' and 'barter'.

A question is raised as to why this rule should be stated separately from the preceding one. That is, verbal root *div*, synonymously used with *uyavahṛ* and *paṇ*, could very easily have been accommodated by the wording of the preceding rule. *Kāśikā* states that a split rule is required so that only *div* could be associated with the provision of 2.3.59 *vibhāṣopasarge*. If *div* were given as part of the preceding rule, all the roots would have become applicable in the context of rule 2.3.59. A separate formulation of this rule with *div* is thus *uttarārtha* 'for the sake of that which follows'.

The word *tad* 'that' is a varible which refers to the verbal roots *vyavahṛ* and *paṇ* and, when read with *arthasya* and *divaḥ*, gives the required interpretation: 'the object of the action denoted by *div* when used in the sense of *vyavahṛ* and *paṇ*' This condition of *tadarthasya* rules out genitive after *brāhmaṇa* in the example.

(*a*) *brāhmaṇaṃ dīvyati* 'he praises the *brāhmaṇa*'
where *div* is used in the sense of *stuti* 'praise'.

2.3.59 **विभाषोपसर्गे**

vibhāṣopasarge
/ *vibhāṣā* 1/1 *upasarge* 7/1
(*divas tadarthasya* #58, *karmaṇi* #52, *ṣaṣṭ hī śeṣe* #50, *anabhihite* #1)
upasarge sati divas tadarthasya karmaṇi kārake vibhāṣā ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* optionally occurs to express the *karman* of *div* when it is used with a preverb and it denotes a meaning similar to that of *vyavahṛ* and *paṇ*.

EXAMPLES:

śatasya pratidīvyati 'he is gambling with a hundred'
śataṃ pratidīvyati 'id.'
sahasrasya pratidīvyati 'he is gambling with a thousand'
sahasreṇa pratidīvyati 'id.'

1. This rule makes optional the obligatory provision of *ṣaṣṭhī* of rule 2.3.58, when *div* is used with a preverb. If the option is not taken, *dvitīyā* will obtain.

2.3.60 **द्वितीया ब्राह्मणे**

dvitīyā brāhmaṇe
/ *dvitīyā* 1/1 *brāhmaṇe* 7/1/
(*divas tadarthasya* #58, *karmaṇi* #52, *ṣaṣ thī śeṣe* #50, *anabhihite* #1)
brāhmaṇaviṣaye prayoge divas tadarthasya karmaṇi kārake dvitīyā vibhaktir bhavati

A *dvitīyā* occurs in the *Brāhmaṇa* to express the *karman* of *div* when this root is used with a meaning similar to that of *vyavahṛ* and *paṇ* provided the *karman* is not expressed otherwise.

EXAMPLE:

gāmasya tadahaḥ sabhāyaṃ dīvyeyuḥ 'they should stake a cow for him in the gambling hall that day' (*Mait Saṃ* 1.6.11.56)

1. This rule is required to block the *ṣaṣṭhī* which would otherwise obtain to denote the object of *div*, used without a preverb. Of course, the *dvitīyā* is relatable only to usage in the *Brāhmaṇa*. Haradatta (*PM* ad *Kāśikā* II: 220) explains that what is referred to here by the term *Brāhmaṇa* is really the *Śatapathabrāhmaṇa*.

2.3.61 **प्रेष्यब्रुवोर्हविषो देवतासम्प्रदाने**

preṣyabruvor haviṣo devatāsampradāne
/ *preṣyabruvoḥ* 6/2 (*itar. dv.*) *haviṣaḥ* 6/1 *devatāsampradāne* 7/1 = *devatā sampradānam yasya* (*bv.*), *tasmin* /
(*brāhmaṇe* #60, *karmaṇi* #52, *ṣaṣṭhī śeṣe* #50, *anabhihite* #1)
preṣyabruvor haviṣaḥ karmaṇaḥ ṣaṣṭhī vibhaktir bhavati devatā sampradāne sati
A *ṣaṣṭhī* occurs in the *Brāhmaṇa* to express the *karman* of *praiṣ* 'to send forth, utter' and *brū* 'to utter', when the *karman* stands for a ritual oblation offered to a deity and is not expressed otherwise.

EXAMPLES:

agnaye chāgasya haviṣo vapāyā medasaḥ preṣya 'offer the ritual oblation of goat, fat and marrow to Agni' (*KŚ* 6.6.26)
agnaye chāgasya haviṣo vapāyā medaso' nubrūhi 'make a pledge of the ritual oblation of goat, fat and marrow to Agni' (*KŚ* 6.6.26)

1. *Kāśikā* indicates that *iṣya* refers to the *divādi* root *iṣĀ* 'to go'. Furthermore, only its use in *LOṬ*, and that only in the second person singular, is intended by this rule. That the *iṣĀ* of *divādi* is intended is made clear by the use of *ŚyaN* in (*preṣya*). Because of *sāhacarya* 'association', *brū* is understood to be similarly constrained.

2.3.62 **चतुर्थ्यर्थे बहुलं छन्दसि**

caturthyarthe bahulaṃ chandasi
/ *caturthyarthe* 7/1 *bahulaṃ* 1/1 *chandasi* 7/1/
(*ṣaṣṭhī śeṣe* #50)
chandasi viṣaye caturthyarthe ṣaṣṭhī vibhaktir bhavati bahulam
A *ṣaṣṭhī* variously occurs in the sense of *caturthī* 'fourth triplet of *sUP*' in the Veda.

EXAMPLES:

puruṣamṛgaś candramasaḥ '...to the moon, a male deer' (*Vāj* 24.35)
puruṣamṛgaṃ candramase 'id.'
godhā kālakā dārvāghāṭaste vanaspatīnāṃ 'to the god of vegetation, a lizard, kālaka bird, and dārvāghāṭa' (*Vāj* 24.35)
godhā kālakā dārvāghāṭaste vanaspatibhyaḥ 'id.'

2.3.63 **यजेश्च करणे**

yajeś ca karaṇe
/ *yajeḥ* 1/1 *ca* Ø *karaṇe* 7/1/
(*bahulaṃ chandasi* #62, *ṣaṣṭhī śeṣe* #50, *anabhihite* #1)
yajer dhātoḥ karane kārake chandasi bahulaṃ ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* also variously occurs in the Veda to express the *karaṇa* of *yajA* when it is not expressed otherwise.

EXAMPLES:

ghṛtasya yajate 'he performs the ritual sacrifice with ghee' (*Śat* 4.4.2.4)
ghṛtena yajate 'id.'
somasya yajate 'he performs the ritual sacrifice with soma' (*Śat* 4.4.2.5)
somena yajate 'id.'

2.3.64 **कृत्वोऽर्थप्रयोगे कालेऽधिकरणे**

kṛtvo' rthaprayoge kāle' dhikaraṇe
/ *kṛtvo' rthaprayoge* 7/1 *kṛtvaso' rthaḥ* = *kṛtvo' rthaḥ* (*ṣaṣ. tat.*), *kṛtvo' rtha eva artho yeṣāṃ te* = *kṛtvo' rthāḥ* (*bv.*), *kṛtvo' rthasya prayogaḥ* = *kṛtvo' rthaprayogaḥ* (*ṣaṣ. tat.* with int. *bv.*), *tasmin; kāle* 7/1 *adhikaraṇe* 7/1/
(*ṣaṣṭhī śeṣe* #50, *anabhihite*#1)
kṛtvo' rthānāṃ pratyāyānāṃ prayoge kāle' dhikaraṇe ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs to express *adhikaraṇa* 'locus' after a stem which denotes time (*kāla*) and is used in conjunction with a word which ends in an affix having the sense of *kṛtvas* *UC* (5.4.17 *saṃkhyāyāḥ...*), provided *adhikaraṇa* is not expressed otherwise.

EXAMPLES:

pañcakṛtvo' hno bhuṅkte 'he eats five times a day'
dvirahno' dhīte 'he studies twice a day'

2.3.65 कर्तृकर्मणोः कृति

kartṛkarmaṇoḥ kṛti
/ *kartṛkarmaṇoḥ* 7/2 *kṛti* 7/1
(*ṣaṣṭhī śeṣe* #50, *anabhihite*#1)
kṛtprayoge karttari karmaṇi ca ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs after a stem to express *kartṛ* and *karman*, when the stem is used in conjunction with an item which ends in *kṛt* (2.1.93 *kṛd atiṅ*), and when *kartṛ* and *karman* are not expressed otherwise.

EXAMPLES:

bhavataḥ śāyikā 'your turn to sleep'
bhavata āsikā 'your turn to sit'
apāṃ sraṣṭā 'producer of water'
purāṃ bhettā 'destroyer of cities'

1. Note that the condition of *kṛti* 'when used in conjunction with an item which ends in a *kṛt*' is required so that a *kartṛ* or *karman* is not expressed with a genitive occurring after a stem used in conjunction with an item which ends in a *taddhita* (4.1.76 *taddhitaḥ*). The *kartṛ* or *karman*, if expressed with the genitive, must be related with the action denoted by the root underlying the item which ends in *kṛt*. In the absence of this blocking function of *kṛti*, in connection with the denotation of *kartṛ* and *karman* of the action which underlies a *taddhita* derivate, the use of *kṛti* would become useless. For, only two types of affixes (*tiṄ* and *kṛt*) are introduced after a verbal root in relation to whose action one talks about the expression of *kartṛ* and *karman*. Rule 2.3.69 *na lokāvyayaniṣṭhā...* does not allow the genitive to express the *kartṛ* or *karman* in conjunction with an item which ends in a *tiṄ*. This leaves only those items which may end in a *kṛt*. To retain *kṛti* in the rule to perform any function other than blocking the genitive in relation to an item which ends in a *taddhita* would be to state the most obvious. Thus, given the sentence

(*a*) *kṛtapurvī kaṭaḥ* 'he who has already made the mat; he who is experienced in mat-making'

the word *kṛtapūrvī* is derived by introducing affix *inI* after *kṛtapūrva*, by rule 5.2.87 *sa pūrvāc ca*, a compound. Note that the affix *Kta* in *kṛta* of *kṛtapūrvī* denotes *bhāva*, thereby leaving the object yet to be expressed. But since it is part of a *taddhita* derivate its expression by the genitive under the provisions of this rule must be negated.

2.3.66 उभयप्राप्तौ कर्मणि

ubhayaprāptau karmaṇi
/ *ubhayaprāptau* 7/1 = *ubhayoḥ prāptiḥ yasmin saḥ* (*bv.*), *tasmin karmaṇi* 7/1/

(*kṛti* #65, *ṣaṣṭhī śeṣe* #50, *anabhihite* #1)
ubhayoḥ prāptir yasmin kṛti so' yam ubhayaprāptiḥ; tatra karmaṇy eva ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs to express only the *karman*, when both *kartṛ* and *karman*, if not expressed otherwise, are to be expressed by introducing *ṣaṣṭhī* after stems used in conjunction with an item ending in *kṛt*.

EXAMPLES:

āścaryo gavāṃ doho' gopālakena 'it is a surprise to see the non-cowherd milking the cow'
rocate me odanasya bhojanaṃ devadattena 'Devadatta's eating of rice pleases me'

1. This rule is necessitated in view of the diversity of the denotata of a *kṛt* affix. For example, a *kṛt* can be introduced to denote agent, object, or *bhāva*. In the case of instances where a *kṛt* expresses an agent, genitive by this rule could express the object, and vice versa. But what if a *kṛt* denotes *bhāva*, rather than either the agent or the object? This rule provides for the genitive under those circumstances to express only the *karman*.

Consider the first example, above. Here, *dohaḥ*, a derivative of *duh* 'to milk', expresses action by means of the *kṛt* affix *GHaÑ*. This clearly leaves the object, as well as the agent, of *duh* unexpressed. The present rule introduces genitive to express the *karman* after *go* 'cow', instead of after *agopālaka* 'one who is not a cowherd'. The *kartṛ* is then expressed by *tṛtīyā* introduced after *agopālaka*.

The *Mahābhāṣya* (II: 836) discusses a *vārttika* whereby a genitive under these circumstances may be allowed to denote *kartṛ*. This exception is made in view of a *kṛt* derivate which ends in affixes *aka* or *a* used in the feminine. Thus, consider the sentence

(*a*) *cikīrṣā devadattasya kaṭasya* 'Devadatta's desire of making a mat' where *cikīrṣā* contains a feminine base which ends in *ṬāP*. This feminine base underlies *cikīrṣa*, a *kṛt* base derived by introducing affix *a* by rule 3.3.102 *a pratyayāt*. Incidentally, *cikīrṣa*, after which affix *a* is introduced, is a derivate ending in *saN* (3.1.7 *dhātoḥ karmaṇaḥ*...). Under the provision of the *vārttika*, the genitive can then express both the agent and the object, as is obvious from the genitive in *devadattasya* (the agent) and *kaṭasya* (the object).

An additional *vārttika* under this same rule further modifies the scope of these feminine derivates and the denotation of the agent by genitive. Consequently, a genitive can be used to express the agent only optionally where the feminine contains a base ending in an affix other than *aka* or *a*. Thus, we get two versions of the sentence below:

(*b*) *vicitrā hi sūtrasya kṛtiḥ pāṇineḥ* 'ingenious indeed is the making of the *sūtra* by Pāṇini'
(*c*) *vicitrā hi sūtrasya kṛtiḥ pāṇininā* 'id.'

Here, *pāṇineḥ*, ending in the genitive, optionally expresses the object; while *pāṇininā*, the instrumental, expresses the agent. The feminine form *kṛti* is derived by introducing the *kṛt* affix *KtiN* after the verbal root *kṛ*.

2.3.67 **क्तस्य च वर्तमाने**

ktasya ca vartamāne
/ *ktasya* 6/1 *ca* Ø *vartamāne* 7/1/
(*ṣaṣṭhī śeṣe* #50)
ktasya vartamānakālavihitasya prayoge ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs, to express *kartṛ* and *karman*, after a stem used in conjunction with an item which ends in *Kta* and denotes *vartamāna* 'current time'.

EXAMPLES:

rājñāṃ mataḥ 'honored by kings'
rājñāṃ pūjitaḥ 'id.'

1. Note that *mata* and *pūjita* in the above examples are items which end in affix *Kta*. This affix is introduced in the sense of *vartamāna* by rule 3.2.188 *matibuddhi*.... The word *rājñām* is thus put in the genitive plural, made available by this rule under the condition of cooccurrence with an item which ends in *Kta*.

A question is raised as to why one should have this rule, when its provision can be made available by rule 2.3.65 *kartṛkarmaṇoḥ kṛti*. After all, *Kta* is a *kṛt* affix. It is said that this rule is necessary to provide for the genitive, which otherwise would be blocked by rule 2.3.69 *na lokāvyayaniṣṭhā*.... Affix *Kta* is also assigned the term *niṣṭhā* by rule 1.1.26 *ktaktavatū niṣṭhā*.

2.3.68 **अधिकरणवाचिनश्च**

adhikaraṇavācinaś ca
/ *adhikaraṇavācinaḥ* 6/1 *ca* Ø /
(*ktasya* #67, *ṣaṣṭhī śeṣe* #50)
'kto' dhikaraṇe ca' vakṣyati, tasya prayoge ṣaṣṭhī vibhaktir bhavati
A *ṣaṣṭhī* occurs after a stem in conjunction with an item which ends in *Kta* (3.4.76 *kto' dhikaraṇe*) and denotes *adhikaraṇa*.

EXAMPLES:

idam eṣām āsitam 'this is where they sit'
idam eṣām śayitam 'this is where they recline'

1. This is again an effort to make available the provision of genitive, which could otherwise be denied by the following rule.

2.3.69 न लोकाव्ययनिष्ठाखलर्थतृनाम्

na lokāvyayaniṣṭhākhalarthatṛnām

/ *na* ∅ *lokāvyayaniṣṭhākhalarthatṛnām* 6/3 = *khalo' rthaḥ* = *khalarthaḥ*, *khalartha eva artho yeṣāṃ te* = *khalarthāḥ* (*bv.*), *laś ca uś ca ukaś ca avyayaṃ ca niṣṭhā ca khalarthaś ca tṛn ca* = *lokāvyayaniṣṭhākhalarthatṛn* (*itar. dv.*), *teṣām* /

(*ṣaṣṭhī śeṣe*#50)

'*la, u, uka, avyaya, niṣṭhā, khalartha, tṛn*' *ity eteṣāṃ prayoge ṣaṣṭhī vibhaktir na bhavati*

A *ṣaṣṭhī* does not occur to denote *kartṛ* and *karman* after a stem used in conjunction with any of the following:

(*i*) *la*: 'the replacements of *LA*, in *ŚatṚ*, *ŚānaC*, (3.2.124 *laṭaḥ...*), *KānaC* (3.2.106 *liṭaḥ kānaj vā*), *KvasU* (3.2.107 *kvasuś ca*), *Ki* and *Kin* (3.2.171 *ādṛg...*)';

(*ii*) *u*: 'an item which ends in affix *u* (3.2.168 *sanāśaṃsabhikṣa uḥ*)';

(*iii*) *uka*: 'an item which ends in affix *ukaÑ* (3.2.154 *lasapata...*)';

(*iv*) *avyaya* 'an indeclinable';

(*v*) *niṣṭhā*: 'an item which ends in affixes *Kta* or *KtavatU* (3.2.102 *niṣṭhā*)';

(*vi*) *khalartha*: 'an item ending in an affix which denotes the sense of *KHaL* (3.3.126 *īṣad...*)'; and

(*vii*) *tṛn*: 'an item which ends in affixes introduced by rules 3.2.124 *laṭaḥ...* through 3.3.69 *tṛn*'.

EXAMPLES:

odanaṃ pacan 'cooking the rice'
odanaṃ pacamānaḥ 'id.'
odanaṃ pecānaḥ 'he cooked the rice'
odanaṃ pecivān 'id.'
papiḥ somaṃ '...drank the Soma'
dadirgāḥ '...gave away cattle'
kaṭaṃ cikīrṣuḥ 'he who is wishing to make a mat'
odanaṃ bubhukṣuḥ 'he who desires to eat rice'
āgāmukaṃ vārāṇasīṃ rakṣa āhuḥ 'people say that even the demons wish to come to Vārāṇasī for release'
kaṭaṃ kṛtvā 'having made the mat'
odanaṃ bhuktvā 'having eaten the rice'
odanaṃ bhuktavān 'he ate the rice'
devadattena kṛtam 'made by Devadatta'
īṣatkaro kaṭaḥ bhavatā 'it is easy for you to make the mat'
īṣatpānaḥ somo bhavatā 'it is easy for you to drink Soma'

somaṃ pavamānaḥ 'ritually purifying the Soma'
naḍam āghnānaḥ 'beating the dancer'
kartā kaṭān 'he who will make the mat'
vaditā janāpavādān 'he who will be saying bad things about people'

1. This rule disallows the introduction of *ṣaṣṭhī*, to denote *kartṛ* and *karman*, after a nominal stem used in conjunction with the following:
(*i*) a replacement of *LA*;
(*ii*) a form which ends in the affix *u*;
(*iii*) a form which ends in *ukaÑ*;
(*iv*) an indeclinable;
(*v*) a form which ends in an affix termed *niṣṭhā*;
(*vi*) a form ending in the affixes which have the signification of *KHaL*; and
(*vii*) a form which ends in affix *tṛN*.

The compound base *lokāvyayaniṣṭhākhalarthatṛn* may be broken down as follows: *loka* + *avyaya* + *niṣṭhā* + *khalartha* + *tṛn*. The first item, *loka*, is still a complex form underlying (*u* + *uka*) + *la*. That is, *u* and *uka* are joined to form a *dvandva* compound (*ūkau*) and its base (*ūka*) is then combined with *la*. Thus, *u* + *uka* = *ūka*; *la* + *ūka* = *loka*. If one combines *u* + *la* first, *u* will then have to be placed first in the resultant compound, because *u* has the minimum number of vowels as compared with *la*. The result will then be: *ula*. If one now combines *uka*, the result will be *ukala*.

Commentators indicate that *LA*-replacements refer here to affixes *ŚatṚ*, *ŚānaC* (3.2.124 *laṭaḥ śatṛśānacāv aprathamāsamānādhikaraṇe*), *KānaC* (3.2.106 *liṭaḥ kānaj vā*), *KvasU* (3.2.107 *kvasuś ca*), *Ki*, and *Kin* (3.2.171 *adṛgamahana...*). Affixes *u* and *uka* refer to rules 3.2.168 *sanāśaṃsabhikṣa uḥ* and 3.2.154 *lasapatapada...ukañ*, whereby affixes *u* and *ukaÑ* are introduced.

2. The *Mahābhāṣya* (II: 839-40) discusses certain *vārttika* in connection with the negations of this rule. For example, a negation of genitive, relative to *uka*, is not applicable in the context of verbal root *kam* in the Classical (*bhāṣā*) language (*ukapratiṣedhe bhāṣāyām apratiṣedhaḥ*). We thus get examples such as this:

(*a*) *dāsyāḥ kāmukaḥ* 'lustful towards the maidservant'

Furthermore, in the context of the negation of genitive relative to an indeclinable, items which end in affixes *tosUN* (3.4.16 *bhāvalakṣaṇe...*) and *kasUN* (3.4.13 *īśvare...*) should be stated as exceptions. This will provide an example like:

(*b*) *purā sūryasyodetoḥ* 'before the rising of the sun' (*KS* 8.3)

The word *tṛn* here is interpreted as an abbreviatory term (*pratyāhāra*: *tṛN*) formed by the *tṛ* of the *Śatṛ* of 3.2.124 *laṭaḥ śatṛśānacāv...* and the *N* of 3.3.69 *tṛn*. This interpretation, however, would require that *ṣaṣṭhī* be

negated in the context of *Śatṛ* only optionally. This will give the parallel examples:

(*c*) *cauraṃ dviṣan* 'hitting the thief'

(*d*) *caurasya dviṣan* 'id.'

2.3.70 अकेनोर्भविष्यदाधमर्ण्ययोः

akenor bhaviṣyadādhamarṇyayoḥ

/ *akenoḥ* 6/2 *akaś ca in ca* = *akenau* (*itar. dv.*), *tayoḥ; bhaviṣyadādhamarṇyayoḥ* 7/2 = *bhaviṣyac ca ādhamarṇyaṃ ca* = *bhaviṣyadādhamarṇye* (*itar. dv.*), *tayoḥ* /

(*na* #69, *ṣaṣṭhī śeṣe* #50, *anabhihite* #1)

akasya bhaviṣyati kāle vihitasya, inas tu bhaviṣyati cādhamarṇye ca vihitasya prayoge ṣaṣṭhī vibhaktir na bhavati

A *ṣaṣṭhī* does not occur to express the *karman* of those verbs which contain items terminated in affixes *aka*, or *in*, to denote future, or future in addition to *ādhamarṇya* 'debt', respectively.

EXAMPLES:

kaṭaṃ kārako vrajati 'he who will make the mat is going'
odanaṃ bhojako vrajati 'he who will eat the rice is going'
grāmaṃ gamī 'he is the one who will go to the village'
grāmaṃ gāmī 'id.'
śataṃ dāyī 'he is the one who will pay back the debt of a hundred'
sahasraṃ dāyī 'he is the one who will pay back the debt of a thousand'

1. This rule disallows *ṣaṣṭhī* after a nominal stem used in conjunction with a form which ends in *aka* or *inI*, and denotes either future, or future and *ādhamarṇya*, respectively. Note that this rule enumerates a set of two affixes denoting a corresponding set of two meanings. The question is: can one treat the denotatum of *aka* as future, and the denotatum of *inI* as *ādhamarṇya*? Or, should one treat both the meanings as the denotata of both the suffixes?

First of all, the assignment of meanings should not be made in terms of the order of enumeration (*saṃkhyāta*). Secondly, *aka* is found only denoting 'future', while *inI* is found denoting both 'future' and *ādhamarṇya*. We may therefore conclude that 'future' alone is the denotatum of *aka* in this rule. In the case of *inI*, as attested by usage, both the meanings obtain (*Mbh* II: 840-41). In order to arrive at this interpretation, Patañjali suggests that we resort to *yogavibhāga*. Consequently, the rule will be split into two as follows:

(*i*) *akasya bhaviṣyati*: '...in conjunction with a form ending in *aka* when 'future' is being denoted'

(*ii*) *ina ādhamarṇye*: '...in conjunction with *inI* when 'future' and *ādhamarṇya* are being denoted'

2. Note that because of the meaning condition of 'future', only those instances of *aka* will be considered valid where *aka* denotes 'future'. Thus, a reference to rules 3.3.10 *tumun-ṇvulau...* and 7.1.1 *yuvor anākau* is obvious in the case of forms which end in *aka*. Affix *inI* refers here to both *inI* and *ṆinI*: one is an *Uṇādi* affix introduced by 3.2.3 *bhaviṣyati gamyādayaḥ*, and the other is introduced by 3.3.170 *āvaśyakādhamarṇyayor....* Two examples of this are respectively:

(*a*) *grāmaṃ gāmī* 'he is the one who will go to the village'

(*b*) *śataṃ dāyī* 'he is the one who will pay back the debt of a hundred'

2.3.71 कृत्यानां कर्त्तरि वा

kṛtyānāṃ karttari vā

/ *kṛtyānām* 6/3 *karttari* 7/1 *vā* Ø /

(*ṣaṣṭhī śeṣe* #50, *anabhihite*#1)

kṛtyānāṃ prayoge karttari vā ṣaṣṭhī vibhaktir bhavati, na karmaṇi

A *ṣaṣṭhī* optionally occurs to express *kartṛ*, and not *karman*, when an item which ends in a *kṛtya* affix is used in conjunction.

EXAMPLES:

bhavatā kaṭaḥ kartavyaḥ 'the mat should be made by you'

bhavataḥ kaṭaḥ kartavyaḥ 'id.'

1. This rule introduces *ṣaṣṭhī* optionally to denote *kartṛ*, and not *karman*, after a nominal stem which is used in construction with an item ending in an affix termed *kṛtya* (3.1.95 *kṛtyāḥ*). In other words, this rule makes the obligatory provision of 2.3.65 *kartṛkarmaṇoḥ kṛti* optional. Consider, for example, the following sentence:

(*a*) *geyo māṇavakaḥ sāmnām* 'the boy is the chanter of the Sāman hymn' where *geyaḥ* contains *geya* which, in turn, is derived by introducing affix *yaT* (3.4.68 *bhavyageya...*) to optionally denote *kartṛ*. In sentence (a) then, *geyaḥ* denotes the agent. That being the case, the object remains unexpressed. Rule 2.3.65 *kartṛkarmaṇoḥ kṛti* can now introduce *ṣaṣṭhī* to denote the object after *sāman*. Note that this rule makes an optional provision; hence, it might be assumed that its prohibition of *karman* coming under the purview of this rule is also optional. But this assumption would have been correct only if *karttari* had not been used in this rule. That is, the obligatory provision of 2.3.65 becomes optional only when the denotatum is *kartṛ* and not when it is *karman*.

The *Mahābhāṣya* (II: 841) suggests *yogavibhāga* 'rule-splitting' for the present rule, whereby two rules can be obtained:

(*i*) *kṛtyānām* and

(*ii*) *karttari vā*.

Furthermore, *kṛtyānām* will have the *anuvṛtti* of *ubhayaprāptau karmaṇi*

from rule 2.3.66 *ubhayaprāptau karmaṇi*, and that of *na* from 2.3.69 *na lokāvyaya....* The two rules will then read:

(*i*) *kṛtyānām ubhayaprāptau karmaṇi na* 'a *ṣaṣṭhī* does not occur to denote *kartṛ* or *karman* after a nominal stem used in conjunction with a form which ends in an affix termed *kṛtya*'

(*ii*) *karttari vā* 'a *ṣaṣṭhī* optionally occurs to denote *kartṛ* after a nominal stem used in conjunction with an item which ends in an affix termed *kṛtya*'

Patañjali considers *yogavibhāga* necessary to account for the optional *ṣaṣṭhī* which denotes agent in sentences such as:

(*b*) *netavyāḥ vrajaṃ gāvaḥ kṛṣṇasya* 'Kṛṣṇa will take the cows to the grazing pasture'

Note that *netavya* is a form which ends in *tavyaT*, a *kṛtya* suffix. While *kṛṣṇa* can qualify for *ṣaṣṭhī* to denote agent by blocking the provision of 2.3.66 *ubhayaprāptau karmaṇi*, the word *vraja* will also qualify for genitive under the provision of rule 2.3.65 *kartṛkarmaṇoḥ kṛti*. However, this would give the wrong result: **netavyāḥ vrajasya gāvaḥ kṛṣṇasya*

If *yogavibhāga* is accepted, the first rule will block the denotation of both *kartṛ* and *karman* by means of optional *ṣaṣṭhī*. The second rule allows the optional *ṣaṣṭhī* to denote *kartṛ*. Thus, we have sentence (*c*) parallel to (*b*):

(*c*) *netavyāḥ vrajaṃ gāvaḥ kṛṣṇena.*

2.3.72 तुल्यार्थैरतुलोपमाभ्यां तृतीयाऽन्यतरस्याम्

tulyārthair atulopamābhyāṃ tṛtīyā' nyatarasyām
/ tulyārthaiḥ 3/3 tulyaḥ artho yeṣāṃ te tulyārthāḥ (bv.),
taiḥ, atulopamābhyām 3/2 tulā ca upamā ca = tulopame (itar. dv.), na tulopame = atulopame (nañ. tat.), tābhyāṃ; tṛtīyā 1/1 anyatarasyām 7/1/ (ṣaṣṭhī śeṣe #50)
tulyārthaiḥ śabdair yoge tṛtīyā vibhaktir bhavaty anyatarasyām; pakṣe ṣaṣṭhī ca, tulopamāśabdau varjayitvā

A *tṛtīyā* optionally occurs when a synonym of *tulya* 'equal, identical' other than *tulā* or *upamā* is used in conjunction, and the relation to be expressed is that of 'remainder'.

EXAMPLES:

tulyo devadattena 'equal to Devadatta'
tulyo devadattasya 'id.'
śadṛśo devadattena 'id.'
śadṛśo devadattasya 'id.'

1. This rule introduces *tṛtīyā* as an option to *ṣaṣṭhī*, after a nominal stem used in conjunction with a word which has the signification of *tulya* 'equal', and is other than *tulā* and *upamā*.

Note that Pāṇini did not have to use the word *artha* with *tulya* to indicate items having the sense of *tulya,* since he uses *tulyārtha* in the plural. If he meant just the form, he should have used the singular, as is his normal practice. Since he uses the plural, there must be some special purpose. What could that be? The purpose is to accept only those synonyms of *tulya* which could qualify as synonymous without any cooccurrence condition. Because of this cooccurrence exclusion, forms such as *iva* will not be treated as valid. Thus, in the example

(*a*) *gaur iva gavayaḥ* 'a cow is like any other cow'

iva denotes synonymity with *tulya*; but the same is conditioned by the occurrence of *gavayaḥ*. That is, consider a sequence such as this:

yathā X, *tathā* Y 'the way X, the same way Y'

Here, *tathā* Y governs the use of *iva.*

A sentence such as

(*b*) *pitṛtulyaḥ prājñyaḥ* 'equal to his father in intelligence'

will also be blocked from having *ṣaṣṭhī* after *prājña* 'intelligent', as the speaker wishes to indicate *prājña* either as *hetu* 'cause' or as *karaṇa* 'means'. This being the case, only *tṛtīyā* can be introduced.

2. Pāṇini's inclusion of the word *anyatarasyām* in this rule may seem a useless excercise, since the earlier rule already has *vā*. Why was *vā* not carried to denote optionality instead? This question is pertinent, because both *vā* and *anyatarasyām* denote optionality. Commentators add here that *anyatarasyām* has been used so that it can be carried to the next rule. If *vā* had been carried instead, *tṛtīyā* would also have been carried, due to its association with *vā*. Thus, Pāṇini used *anyatarasyām* to block the *anuvṛtti* of *tṛtīyā* from the following rules.

2.3.73 **चतुर्थी चाशिष्यायुष्यमद्रभद्रकुशलसुखार्थहितैः**

caturthī cāśiṣyāyuṣyamadrabhadrakuśalasukhārthahitaiḥ
/ *caturthī* 1/1 *ca* ∅ *āśiṣi* 7/1 *āyuṣya...hitaiḥ* 3/3 = *āyuṣyaṃ ca madraś ca bhadraś ca kuśalaṃ ca sukhārthaś ca hitaś ca* = *āyuṣya...hitaḥ* (*itar. dv.*), *taiḥ* /
(*ṣaṣṭhī śeṣe* #50)
āśiṣi gamyamānāyām 'āyuṣya, madra, bhadra, kuśala, sukha, artha, hita' ity etair yoge caturthī vibhaktir bhavati; *cakāro vikalpānukarṣaṇārthaḥ*

A *caturthī* optionally occurs after a stem when items having the signification of *āyuṣya* 'longevity'; *madra* 'joy'; *bhadra* 'good fortune'; *kuśala* 'well-being'; *sukha* 'comfort, happiness'; *artha* 'prosperity'; or *hita* 'benefit' are used in conjunction and benediction is expressed as a remainder.

EXAMPLES:

> *āyuṣyaṃ devadattāya bhūyāt* 'may Devadatta live long'
> *āyuṣyaṃ devadattasya bhūyāt* 'id.'
> *madraṃ devadattāya bhūyāt* 'may Devadatta be happy'
> *madraṃ devadattasya bhūyāt* 'id.'
> *bhadraṃ devadattāya bhūyāt* 'may Devadatta enjoy good fortune'
> *bhadraṃ devadattasya bhūyāt* 'id.'
> *kuśalaṃ devadattāya bhūyāt* 'may Devadatta remain well'
> *kuśalaṃ devadattasya bhūyāt* 'id.'
> *sukhaṃ devadattāya bhūyāt* 'may Devadatta be happy'
> *sukhaṃ devadattasya bhūyāt* 'id.'
> *artho devadattāya bhūyāt* 'may Devadatta be prosperous'
> *artho devadattasya bhūyāt* 'id.'
> *hitaṃ devadattāya bhūyāt* 'may things be beneficial for Devadatta'
> *hitaṃ devadattasya bhūyāt* 'id.'

1. This rule introduces *caturthī* as an option to *ṣaṣṭhī* after a nominal stem used in conjunction with *āyuṣya* 'longevity', etc., when *āśīḥ* 'benediction' is to be denoted. The *ca* in this rule is used to carry *anyatarasyām* 'optionally'. Since *caturthī* is being introduced optionally, in the event that this option is not taken, *ṣaṣṭhī* will be the choice.

2.4.1 द्विगुरेकवचनम्

> *dvigur ekavacanam*
> / *dviguḥ* 1/1 *ekavacanam* 1/1/
> *dviguḥ samāsaḥ ekavacanaṃ bhavati*
> A *dvigu* compound has the denotatum of one.

EXAMPLES:

> *pañcapūlī* 'a bundle of five bunches'
> *daśapūlī* 'a bundle of ten bunches'

1. A question is raised (*Mbh* II: 846) concerning the need for this rule. It is argued that since *dvigu* is here intended as one formed with the sense of *samāhāra* 'grouping', and since a grouping of more than one thing is by nature singular (*ekavacana*), this rule is not necessary.

It is proposed that this rule should be formulated so that a *samāhāra* can denote singular. This is necessary, because number is denoted with reference to each and every substance (*dravya*), and also because a *dvigu* entails syntactic coordination with *saṃkhyā* 'number'. If number is to be introduced with reference to each and every substance, then a compound, such as *pañcapūlī* of *pañcapūlīyaṃ śobhanā* 'this beautiful bundle of five bunches', should have plural ending. A singular could

be gotten only with some special effort (*yatna*). Our present rule does just that.

However, there is yet another problem. The singular in *iyam* 'this', an iterant (*anuprayoga*), or subsequent referent for *pañcapūlī*, could not qualify for singular; the affix which has been introduced to denote singular in *pañcapūlī* is conditioned by the fact that *pañcapūlī* is a *dvigu* compound. The singular in *iyam* becomes questionable, since it is not even a compound.

Commentators propose that the word *ekavacanam* in this rule should be interpreted, not in its technical (*pāribhāṣika*), but in its non-technical sense. Rule 2.4.1 would give the following meaning if *ekavacanam* is interpreted in its technical sense:

> 'an affix termed *ekavacana* occurs after a nominal stem when the sense of one is denoted'

The non-technical sense of *ekavacanam* would give this meaning:

> 'a *dvigu* is treated as denoting the sense of one'

This interpretation first analyzes the compound *ekavacanam* as a genitive *tatpuruṣa*: *ekasya vacanam* 'denotation of one'. Secondly, it relies on the etymological (*anvartha*) interpretation of the word. Thirdly, as is obvious from the translation of this rule, the meaning is *ātideśika* 'extensional' in nature. This being the case, the singular comes by way of extension, and not by way of each and every substance. The problem of the syntactic coordination of *dvigu* with *saṃkhyā* is also removed. That is, if *pañcapūlī*, a *samāhāra-dvigu*, is treated as having the denotation of one, then its *anuprayoga* 'iterant' (such as *iyam*) also gets the singular. Incidentally, the *ṣaṣṭhī* in *ekasya vacanam* denotes *vācyavācakabhāva* 'signified-signifier relationship'.

The *dvigu* in this rule must be interpreted as *samāhāra-dvigu*. The *taddhitārtha-dvigu*, also covered by rule 2.1.51 *taddhitārthottarapadasamāhāre ca*, must be excluded from the reference of *dvigu* here. If it is not, examples such as *pañcasu kapāleṣu saṃskṛtaḥ* /... *saṃskṛtau* /... *saṃskṛtāḥ* =*pañcakapālaḥ* / *pañcakapālau* / *pañcakapālāḥ* will result. *Nyāsa* (ad *Kāśikā* II: 238) observes that the *ca* of the following rule, when brought close to the *dvigu* of this rule, will give the sense of *avadhāraṇa* 'exact delimitation'. That is, a *dvigu* denotes the sense of one only in *samāhāra*. Consequently, a *dvigu* is here treated as meaning *samāhāradvigu*.

The word *samāhāra* itself has been interpreted in two ways (for an explanation of which see my notes under rule 2.1.51 *taddhitārthottarapada*...). If the object interpretation of *samāhāra* is favored, then *khaṭvā* 'cot' in *pañcakhaṭvaḥ* cannot be referenced with *prathamā* 'nominative', nor can it be referred to with a fixed nominal ending (*ekavibhakti*). Consequently, *khaṭvā* cannot be termed an *upasarjana* which, in turn, will not facilitate

the shortening of its final *ā* to yield *khaṭvaḥ*. An object interpretation would require the introduction of nominal endings in accordance with the term 'object' (*karman*). Thus, *pañcapūlī*, in an object interpretation of *samāhāra*, would denote the five bunches to be grouped. The endings will accordingly be introduced in syntactic coordination with the object. The action interpretation of *samāhāra* would denote the meaning of a group (*samūha*) in which the individual entities thus grouped would have lost their individual identities. (cf. *PM* ad *Kāś* II: 239: *tirohitāvayavabhedaḥ samūharūpaḥ samāhāraḥ...*).

Commentators (*BM* ad *SK* II: 70-71) state that a *karman* interpretation of affix *GHaÑ* in *samāhāra* is preferred to justify the formulation of rule 2.4.1 *dvigur ekavacanam*. Thus, a *karman* interpretation would give prominence to the items grouped in a *samāhāradvigu* compound. The compound then requires a dual or plural ending in accord with the number of items involved. Rule 2.4.1. *dvigur...* will intervene at this time to extend the singular denotatum instead. A compound such a *pañcapūlī* will be extended the denotatum of singular in the wake of the possibility of plural.

An action interpretation of *samāhāra* would render rule 2.4.1 *dvigur...* unnecessary. For, in that case, a compound such as *pañcapūlī*, would automatically get singular based on the fact that action is obligatorily singular.

2.4.2 द्वन्द्वश्च प्राणितूर्यसेनाङ्गानाम्

dvandvaś ca prāṇitūryasenāṅgānām
/ *dvandvaḥ* 1/1 *ca* Ø *prāṇitūryasenāṅgānām* 6/3 = *prāṇī ca tūryaś ca senā ca* = *prāṇitūryasenāḥ* (*dv.*), *teṣām aṅgāni* = *prāṇitūryasenāṅgāni* (*bv.* with int. *dv.*); *teṣām* /
(*ekavacanam* # 1)
prāṇyaṅgānāṃ dvandva ekavad bhavati, tathā tūryāṅgānāṃ senāṅgānāṃ ca
A *dvandva* compound with constituents which denote body parts of a living being; players of a musical instrument; or a division of the army, has the denotatum of one.

EXAMPLES:

pāṇipādam 'hands and feet'
śirogrīvam 'head and neck'
mārdaṅgikapāṇavikam 'the Mṛdaṅga and Paṇava drummers'
vīṇāvādakaparivādakam 'the Vīṇā and Parivādinī players'
rathikāśvāroham 'the charioteers and the cavalry'
rathikapādātam 'the charioteers and the infantry'

1. The word *aṅga* in this rule is read at the end of the *dvandva* compound *prāṇitūryasenā*. Consequently, *aṅga* will be read with each of the constituents of this compound (cf. *dvandvānte śrūyamāṇaṃ pratyekam abhisambadhyate*: 'An item cited at the end of a *dvandva* compound is to be read with each one of its constituents.'). The word *aṅga* is read in the plural, thus giving the interpretation of individual constituents as *prāṇyaṅgānāṃ dvandvaḥ*, etc. A singular reading will yield the constituents as *prāṇyaṅgasya dvandvaḥ*, etc. This will occasion the use of singular, as opposed to the plural. A split reading of this rule, with individual constituents read with *aṅga* in plural, will yield three sentences:

(*a*) *prāṇyaṅgānāṃ dvandvaḥ* (*ekavad bhavati*) 'a *dvandva* with constituents which denote 'the body parts of living beings' is treated as denoting the sense of one'

(*b*) *tūryāṅgānāṃ dvandvaḥ*... 'a *dvandva* compound with constituents which denote 'the players of musical instruments'...'

(*c*) *senāṅgānāṃ dvandvaḥ*... 'a *dvandva* compound with constituents which denote 'divisions of the army'...'

Note that a *dvandva* compound is permitted in the two senses of *samāhāra* and *itaretarayoga* (see my notes under 2.2.29 *cārthe dvandvaḥ*). An *itaretarayoga* of *prāṇyaṅga*, etc., is ruled out because the negation of *dadhipayas*, etc., stated in 2.4.14, would then become vacuous (*vyartha*). For, a negation made in the absence of a positive provision is useless.

2.4.3 अनुवादे चरणानाम्

anuvāde caraṇānām
/ *anuvāde* 7/1 *caraṇānām* 6/3/
(*ekavacanam* #1, *dvandvaḥ* #2)
caraṇānāṃ dvandva ekavad bhavati anuvāde gamyamāne
A *dvandva* compound with constituents which denote different branches of the Vedas has the denotatum of one provided *anuvāda* 'recitation' alone is denoted.

EXAMPLES:

udagāt kaṭhakālāpam 'the Kaṭha and the Kālāpa prospered with their recitation'
pratyaṣṭhāt kaṭhakauthumam 'the Kaṭha and Kauthuma attained fame with their recitation'

1. The word *caraṇa* is explained as denoting various branches (*śākhā*) of the Vedas. It may also indirectly refer to people subscribing to those branches (*PM* ad *Kāś* II: 242: *caraṇaśabdaḥ kaṭhakālāpādiṣu śākhābhedeṣu mukhyaḥ, tad adhyāyiṣu puruṣeṣu gauṇaḥ*). This rule allows for *ekavadbhāva*

'treating something as denoting the sense of one', in the context of *anuvāda* 'recitation or interpretation based on information from elsewhere'. For example, *udagāt kaṭhakālāpam*, the first of the above examples, means that the Kaṭha and the Kālāpa prospered. The fact that this information is based on some indirect source is important for *ekavadbhāva* of this rule. A counter-example, *udguḥ kaṭhakālāpāḥ* 'id.', is thus offered to show that the information is not based on an indirect source, but on the observance of first recitation.

2.4.4 अध्वर्युक्रतुरनपुंसकम्

adhvaryukratur anapuṃsakam
/ *adhvaryukratuḥ* 1/1 = *adhvaryoḥ* (*sambandhī*) *kratuḥ* (*ṣaṣ. tat.*); *anapuṃsakam* 1/1 (*nañ. tat.*) /
(*ekavacanam* #1, *dvandvaḥ* #2)
adhvaryukratuvācināṃ śabdānām anapuṃsakaliṅgānāṃ dvandva ekavad bhavati
A *dvandva* compound with non-neuter constituents which denote the ritual sacrifices of *Yajurveda* has the denotatum of one.

EXAMPLES:

arkāśvamedham 'the ritual sacrifices of Arka and Aśvamedha'
sāyāhnātirātram 'the ritual sacrifices of Sāyāhna and Ātirātra'

1. The word *adhvaryu* primarily means a *ṛtvij* 'priest at a sacrifice'. It is here interpreted as meaning the *Yajurveda*, a secondary meaning, because its primary meaning will only fit in a context when the *adhvaryu* becomes a qualifier (*viśeṣaṇa*) to *kratu* 'ritual sacrifice'. This is not possible here. The word *adhvaryukratuḥ* thus specifies the constituency of the compound via its constituent meanings. The translation is therefore: 'a *dvandva* compound...which denotes the ritual sacrifices of *Yajurveda*...'. Incidentally, *kratu* has been used in the technical sense of a Soma sacrifice of the *Yajurveda*. It thus cannot refer to the sacrifices of *Yajurveda* in general. *Kāśikā* offers *darśapaurṇamāsau* 'the Darśa and Paurṇamāsa sacrifices of the *Yajurveda*' as a counter-example.

2.4.5 अध्ययनतोऽविप्रकृष्टाख्यानाम्

adhyayanato viprakṛṣṭākhyānām
/ *adhyayanataḥ* Ø *viprakṛṣṭākhyānām* 6/3 = *aviprakṛṣṭā ākhyā yeṣām* (*nañ. tat.*), *teṣām*/
(*ekavacanam* #1, *dvandvaḥ* #2)

adhyayanena nimittena yeṣāṃ aviprakṛṣṭā pratyāsannā ākhyā teṣāṃ dvandva ekavad bhavati
A *dvandva* compound with constituents which denote close proximity for the reason of study has the denotatum of one.

EXAMPLE:

padakramakam 'the person who has studied both the *pada* and the *krama* arrangements of Vedic recitation'
kramakavārttikam 'the person who has studied both the *krama* arrangement and the *vārttika*'

1. This rule allows *ekavadbhāva* for *dvandva* compounds with constituents which denote proximity to each other. The proximity, however, is to be established by their relative importance or the order in which they are to be studied. Thus, the first example, *padakramakam*, establishes close proximity between the *pada* and the *krama* arrangements of recitation. A *padapāṭha* recitation may also be easier than its corresponding *kramapāṭha* recitation. Such a proximity is not available between the grammarian and the ritualist of, for example, *yājñikavaiyākaraṇau*, where *ekavadbhāva* is not permitted.

2.4.6 जातिरप्राणिनाम्

jātir aprāṇinām
/ *jātiḥ* 1/1 *aprāṇinām* 6/3/
(*ekavacanam* # 1, *dvandvaḥ* #2)
jātivācināṃ śabdānāṃ dvandva ekavad bhavati prāṇino varjayatvā
A *dvandva* compound with constituents which denote class names (*jāti*) other than those of living beings has the denotatum of one.

EXAMPLES:

ārāśastrī 'an awl and a black knife'
dhānāśaṣkuliḥ 'parched rice and deep fried bread'

1. This rule extends *ekavadbhāva* to a *dvandva* compound which may have the constituency of words which denote *jāti*. An exception in the form of *aprāṇinām* is also furnished with the intended interpretation of the negative as *paryudāsa* (see my note under rule 2.3.1 for details). This negation blocks the *ekavadbhāva* to a *dvandva* compound such as

(*a*) *rūparasagandhasparśāḥ* 'form, taste, smell, and touch'

where it is the *jāti* of quality (*guṇa*), and not that of a *dravya* 'thing', that is denoted. This negation will also block *ekavadbhāva* in compounds such as

(*b*) *gamanākuñcanaprasāraṇāni* 'moving, contracting, and expanding'

where what is denoted is a class of actions. Note that

(*c*) *brāhmaṇakṣatriyabiṭśūdrāḥ*
would be denied *ekavadbhāva*, for the obvious reason that it denotes classes of living beings. An example such as
(*d*) *nandanapāñcajanyau* 'Kṛṣṇa's sword and conch'
would be disqualified for *ekavadbhāva* because it denotes the names of things, not of classes of things.

2.4.7 **विशिष्टलिङ्गो नदी देशोऽग्रामाः**

viśiṣṭaliṅgo nadī deśo' grāmāḥ
/ *viśiṣṭaliṅgaḥ* 1/1 = *viśiṣṭo bhinno liṅgo yasya* (*bv.*); *nadī* 1/1 *deśaḥ* 1/1 *agrāmāḥ* 1/3/
(*ekavacanam* #1, *dvandvaḥ* #2)
viśiṣṭaliṅgānām = *bhinnaliṅgānāṃ nadīvācināṃ śabdānāṃ deśavācināṃ ca grāmavarjitānāṃ dvandva ekavad bhavati*
A *dvandva* compound with constituents of different genders which denote names of rivers and places, but not of villages, has the denotatum of one.

EXAMPLES:

gaṅgāśoṇam 'the rivers Gaṅgā and Śoṇa'
kurukurukṣetram 'the country of the Kurus, and Kurukṣetra'

1. The word *viśiṣṭa* is used here in the sense of *bheda* 'difference'. Consequently, the word *bhinnaliṅgānām* means 'of those with different genders'. Note that, because of the negation of *agrāmāḥ*, the words *nadī* and *deśa* are not treated as denoting their forms.

The words *nadī* and *deśa* are not specified by means of a compound. This is done to block the *ekavadbhāva* in those *dvandva* compounds which may have mixed (*vyatikīrṇa*) constituents; that is, compounds which may have one constituent denoting *nadī* and another which denotes *deśa*, (as opposed to all constituents which denote either *nadī* or *deśa*). If one wished to put *nadī* and *deśa* in the form of a compound, what kind of a compound would that be? Would it be a *samāhāra*, or an *itaretarayoga*? If a *samāhāra*, then it should be neuter, by rule 2.4.17 *sa napuṃsakam*; if an *itaretarayoga*, then there will be an occasion for dual (*dvivacana*). The specification is therefore made without putting them in a compound. This means that a *dvandva* compound allowed for *ekavadbhāva* must have its constituents denoting either *nadī* or *deśa*, but not both.

2.4.8 **क्षुद्रजन्तवः**

kṣudrajantavaḥ
/ *kṣudrajantavaḥ* 1/2 /
(*ekavacanam* #1, *dvandvaḥ* #2)

kṣudrajantuvācināṃ dvandva ekavad bhavati
A *dvandva* compound with constituents which denote small creatures has the denotatum of one.

EXAMPLES:

daṃśamaśakam 'a bedbug and a mosquito'
yūkālikṣam 'a louse and a nit'

1. Note that the word *kṣudra* is used in varying senses. It can, for example, refer to a miserly person (*kṛpaṇa*); to a person who may be of low birth (*jāti*; *śūdra*) or of low character (*śīlahīna*); or to a person who may have a deformed limb (*aṅgahīna*; cf. *Nyāsa* ad *Kāś* II: 250; also refer to 4.1.131 *kṣudrābhyo vā*). The word is also used to denote small size or amount (*apacitaparimāṇa*). In the context of *jantu*, it is interpreted as follows:

kṣudrajantur anasthiḥ syād atha vā kṣudra eva yaḥ /
śataṃ vā prasṛtau yeṣāṃ kecid ā nakulād api //
'a *kṣudrajantu* is either without bones, or simply little; it is also those creatures of whom a hundred can fill one hand; some even characterize it as creatures up to the size of the mongoose'

Obviously, *kṣudra* read in association with *jantu* refers, in general, to creatures of insignificant size.

2.4.9 **येषां च विरोधः शाश्वतिकः**

yeṣāṃ ca virodhaḥ śāśvatikaḥ
/ *yeṣām* 6/3 *ca* ∅ *virodhaḥ* 1/1 *śāśvatikaḥ* 1/1/
(*ekavacanam* #1, *dvandvaḥ* #2)
yeṣāṃ śāśvatiko virodhas tadvācināṃ śabdānāṃ dvandva ekavad bhavati
A *dvandva* compound with constituents which denote natural antipathy has the denotatum of one.

EXAMPLES:

ahinakulam 'snake and mongoose'
mārjāramūṣakam 'cat and mouse'

1. The force of the particle *ca* in the formulation of this rule is to demarcate exact meaning (*avadhāraṇa*). That is, *ekavadbhāva* becomes applicable only to those compounds whose constituents denote animals with a permanent antipathy towards each other. By inference, then, this rule provides for obligatory *ekavadbhāva* when the particular meaning condition (of antipathy) is met.

2.4.10 **शूद्राणामनिरवसितानाम्**

śūdrāṇām aniravasitānām

/ śūdrāṇām 6/3 *aniravasitānām* 6/3 = *na niravasitāḥ* = *aniravasitāḥ* (*nañ. tat.*), *teṣām /*
(*ekavacanam* #1, *dvandvaḥ* #2)
A *dvandva* compound with constituents which denote non-outcast (*aniravasita*) *śūdra* has the denotatum of one.

EXAMPLES:

takṣāyaskāram 'a carpenter and a blacksmith'
rajakatantuvāyam 'a washerman and a weaver'

1. The word *niravasita* has been explained as:

yair bhukte pātraṃ saṃskāreṇāpi na śudhyati 'those whose eating from a pot makes its purification impossible even by means of rituals'

Note that ritual purity here refers to cleaning a pot with ash, or heating it in fire. This rule, as translated, entails constituents which denote those *śūdra* who are non-outcast, in that they are not of the *niravasita* category.

2.4.11 **गवाश्वप्रभृतीनि च**

gavāśvaprabhṛtīni ca
/ gavāśvaprabhṛtīni 1/3 = *gavāśvaṃ prabhṛti yeṣāṃ tāni* (*bv.*); *ca* Ø /
(*ekavacanam* #1, *dvandvaḥ* #2)
gavāśvaprabhṛtīni kṛtaikavadbhāvāni dvandvarūpāṇi sādhūni bhavanti
A *dvandva* compound enumerated in the list headed by *gavāśvam* 'cows and horses' also has the denotatum of one.

EXAMPLES:

gavāśvam 'cows and horses'
gavāvikam 'cows and sheep'

1. This rule is by nature 'ad hoc' (*nipātana*). It thus does not extend the denotatum of one to the compounds, but simply states them as given by enumeration. Many of the items contained in the list headed by *gavāśvam* form an exception to rule 2.4.12 *vibhāṣā...*, which makes the provision of *ekavadbhāva* optional.

2.4.12 **विभाषा वृक्षमृगतृणधान्यव्यञ्जनपशुशकुन्यश्ववडवपूर्वापराधरोत्तराणाम्**

vibhāṣā vṛkṣamṛgatṛṇadhānyavyañjanapaśuśakunyaśvavaḍavapūrvā-parādharottarāṇām
/ vibhāṣā 1/1 *vṛkṣa...ottarāṇām* 6/3 (*itar. dv.*) /
(*ekavacanam* #1, *dvandvaḥ* #2)
'*vṛkṣa, mṛga, tṛṇa, dhānya, vyañjana, paśu, śakuni, aśvavaḍava, pūrvāpara, adharottara*' *ity eteṣāṃ dvandvo vibhāṣaikavad bhavati*

A *dvandva* compound optionally has the denotatum of one when its constituents denote *vṛkṣa* 'tree'; *mṛga* 'deer'; *tṛṇa* 'straw'; *dhānya* 'grain'; *vyañjana* 'condiments'; *paśu* 'domestic animal'; *śakuni* 'bird'; *aśvavaḍava* 'horses and mares'; *pūrvāpara* 'first and last; preceding and following'; and *adharottara* 'lower and upper'.

EXAMPLES:

plakṣanyagrodham 'Plakṣa and Nyagrodha trees'
plakṣanyagrodhau 'id.'
rurupṛṣatam 'Ruru and spotted deer'
rurupṛṣatāḥ 'id.'
kuśakāśam 'reeds and weeds'
kuśakāśāḥ 'id.'
vrīhiyavam 'rice and barley'
vrīhiyavāḥ 'id.'
dadhighṛtam 'yogurt and ghee'
dadhighṛtāḥ 'id.'
gomahiṣam 'cows and water-buffaloes'
gomahiṣāḥ 'id.'
tittirakapiñjalam 'partridges and heathcocks'
tittirakapiñjalāḥ 'id.'
aśvavaḍavam 'horses and mares'
aśvavaḍavau 'id.'
pūrvāparam 'first and last'
pūrvāpare 'id.'
adharottaram 'lower and upper'
adharottare 'id.'

1. The words *vṛkṣa*, etc., all qualify the word *dvandva* individually, thereby yielding the meaning:

'*a* dvandva compound with constituents which denote *vṛkṣa* 'tree' etc.'

Commentators inform us that *vṛkṣa*, etc., do not refer to their general categories, but to a specific tree, and so on. Thus, what is intended here is a *dvandva* compound with its constituents denoting something specific. Note that the required constituency would also rule out the synonyms of the specific words enumerated; for a *dvandva* compound entails *cārtha* 'the sense of 'and' (*ca*)' which, in turn, entails *bhinnārthatā* 'meaning distinction'. Such a meaning distinction is not possible in the case of *paryāya* 'synonyms'.

A further question is also raised in connection with this. Why could the constituency not be defined in terms of the general and the particular, as is the case with the example

(*a*) *govalīvardam* 'cows and bullocks'
where *go* is a general term and *valīvarda* 'bullock' is a corresponding particular? It is said that such usages are not available (*anabhidhānāt*). That is, one does not get examples such as
(*b*) *vṛkṣadhavam* 'trees and Dhava trees'
How, then, is example (*a*) to be explained? It is true that *go* refers to the general category of 'cattle'. When used in association with 'bullock' (*valīvarda*), however, *go* must mean *gavī* 'cow'. The compound *govalīvardam* can thus be explained without difficulty.

A compound with constituents which denote *vṛkṣamṛgatṛṇadhānya* qualifies for *ekavadbhāva* obligatorily by rule 2.4.6 *jātir aprāṇinām*. The present rule makes that provision optional. In the case of the other compounds listed by this rule, no other rule provides for *ekavadbhāva*. The provision is further made optional. In this way, the option becomes *prāptāprāpta* 'made available which it was not'.

Why is the word *mṛga* 'deer' used in this rule, when it could easily have been covered by *paśu* 'animal'? The word *mṛga* is used to indicate that the *dvandva* compound, to which is extended *ekavadbhāva* under the provisions of this rule, must have its constituents belonging to the same class (*tulyajātīya*). Thus, *ekavadbhāva* would be blocked in the case of compounds where the constituency involves animals of different classes. A separate reference to *aśvavaḍava* is made to block *ekavadbhāva*, where synonyms may have been used. A compound such as *aśvavaḍave* would not, therefore, qualify. It is also stated (*PM* ad *Kāś.* II: 256) that *aśvavaḍava* is cited for application by specific citation (*pratipadavidhāna*). Consequently, in view of *ekavadbhāva* of this rule, *aśvavaḍavau*, a masculine dual, will be blocked in favor of *aśvavaḍavam*, a singular neuter.

2.4.13 **विप्रतिषिद्धं चानधिकरणवाचि**

vipratiṣiddhaṃ cānadhikaraṇavāci
/ *vipratiṣiddham* 1/1 *ca* Ø *anadhikaraṇavāci* 1/1 = *adhikaraṇaṃ vakti* = *adhikaraṇavāci, na adhikaraṇavāci* = *anadhikaraṇavāci* (*nañ. tat.*) /
(*ekavacanam* #1, *dvandvaḥ* #2, *vibhāṣā* #12)
vipratiṣiddhārthānāṃ śabdānāṃ anadhikaraṇavācinām adravyavācināṃ dvandva ekavad bhavati
A *dvandva* compound with constituents which denote opposite meanings, excluding *adhikaraṇa* 'thing, material object', optionally has the denotatum of one.

EXAMPLES:

śītoṣṇam 'cold and hot'
śītoṣṇe 'id.'

sukhaduḥkham 'happiness and grief'
sukhaduḥkhe 'id.'
jīvitamaraṇam 'life and death'
jīvitamaraṇe 'id.'

1. The word *vipratiṣiddha* is explained as *parasparaviruddha* 'one opposed to the other', further qualified by *anadhikaraṇavāci* 'not having the denotatum of *adhikaraṇa*'. Commentators state that *adhikaraṇa* here does not denote its technical meaning of 'locus' (*ādhāra*). Instead, it denotes 'a thing' (*dravya*). Our rule thus refers to a compound where the constituents do not denote a thing or a material object. The *ca* of this rule is used to bring *vibhāṣā* from the previous rule. Consequently, we get alternate forms, such as the last pair of examples, above: *jīvitamaraṇam* and *jīvitamaraṇe*, where both mean 'life and death' but the second is a dual.

2.4.14 न दधिपयआदीनि

na dadhipayaādīni
/ *na* Ø *dadhipayaādīni* 1/3 /
(*ekavacanam* #1, *dvandvaḥ* #2)
dadhipayaādīni śabdarūpāṇi naikavad bhavanti
A *dvandva* compound enumerated in the list headed by *dadhipayasī* 'yogurt and milk' does not have the denotatum of one.

EXAMPLES:

dadhipayasī 'yogurt and milk'
sarpirmadhunī 'ghee and honey'
madhusarpiṣī 'honey and ghee'

1. This rule starts the negation of *ekavadbhāva*, as related to the provisions made thus far. Consider, for example, *dadhipayasī*, a compound which is denied the extension of *ekavadbhāva* made available by rule 2.4.12 *vibhāṣā....* The option of *ekavadbhāva* was available on account of the constituents denoting *vyañjana* 'condiments'. *Kāśikā* cites the two additional examples (above), where *ekavadbhāva* is blocked on account of the denotation of *vyañjana*.

2.4.15 अधिकरणैतावत्त्वे च

adhikaraṇaitāvattve ca
/ *adhikaraṇaitāvattve* 7/1 = *etāvato bhāvaḥ* = *etāvattvam, adhikaraṇasya etāvattvam* (*ṣaṣ. tat.*), *tasmin* /
(*ekavacanam* #1, *dvandvaḥ* #2, *na* #14)
adhikaraṇasyaitāvattve parimāṇe gamyamāne dvandvo naikavad bhavati
A *dvandva* compound with constituents which denote a measure, or quantity of a thing, does not have the denotatum of one.

EXAMPLES:

daśa dantoṣṭhāḥ 'ten sets of teeth and lips'
daśa mārdaṅgikapāṇavikāḥ 'groups of ten Mṛdaṅga and Paṇava drummers'

1. This rule disallows *ekavadbhāva* to a compound which denotes the extent (*etāvattva*) of things. As a consequence, *ekavadbhāva* is not available to examples, such as *daśa dantoṣṭhāḥ*, where *daśa* denotes the extent.

2.4.16 विभाषा समीपे

vibhāṣā samīpe
/ *vibhāṣā* 1/1 *samīpe* 7/1 /
(*ekavacanam* #1, *dvandvaḥ* #2, *adhikaraṇaitāvattve* #15)
adhikaraṇaitāvattvasya samīpe vibhāṣā dvandva ekavad bhavati
A *dvandva* compound with constituents which denote an approximate measure, or extent of a thing, optionally has the denotatum of one.

EXAMPLES:

upadaśaṃ dantoṣṭham 'approximately ten (nine or eleven) sets of teeth and lips'
upadaśā dantoṣṭhāḥ 'id.'
upadaśaṃ mārdaṅgikapāṇavikam 'groups of approximately ten (nine or eleven) Mṛdaṅga and Paṇava drummers'
upadaśā mārdaṅgikapāṇavikāḥ 'id.'

1. This rule extends *ekavadbhāva* optionally to a compound which denotes an approximate measure. While the preceding rule denied *ekavadbhāva*, with reference to the denotation of extent in general, this rule gives us optional forms such as those listed in pairs above. An extent in the proximity of ten could be either nine (*nava*) or eleven (*ekādaśa*). Note that an indeclinable may form either an *avyayībhāva* (2.1.6 *avyayaṃ vibhakti...*), or a *bahuvrīhi* compound (2.2.25 *saṃkhyayāvyayāsanna...*) with another constituent denoting *saṃkhyā* 'number'. A compound with *ekavadbhāva* is interpreted as an *avyayībhāva*, since a corresponding *bahuvrīhi* would denote the sense of 'many'.

2.4.17 स नपुंसकम्

sa napuṃsakam
/ *saḥ* 1/1 *napuṃsakam* 1/1 /
yasyāyam ekavadbhāvo vihitaḥ sa napuṃsakaliṅgo bhavati dvigur dvandvaś ca
A *dvigu* or a *dvandva* compound which has the denotatum of one is neuter.

EXAMPLES:

pañcagavam 'a group of five cows'
daśagavam 'a group of ten cows'
pāṇipādam 'hands and feet'
śirogrīvam 'head and neck'

1. A compound which has thus received *ekavadbhāva* is neuter (*napuṃsaka*). What is the referent of *saḥ* 'that'? It is that which has received *ekavadbhāva*. What has received *ekavadbhāva*? A compound termed *dvigu* or *dvandva*.

Note that this rule is introduced as an exception to the stipulation of *paravalliṅgatā* 'assignment of gender to a compound in consonance with its following constituent' (cf. 2.4.26 *paraval liṅgaṃ dvandvatatpuruṣayoḥ*). Furthermore, in the context of a *dvandva* with *ekavadbhāva*, neuter becomes obligatory (*nitya*). In the case of a *dvigu*, it is not obligatory. This is shown by, for example, the *ṄīP* of

(*a*) *pañcakhaṭvī* 'a group of five cots'

which is parallel to *pañcakhaṭvam*.

Consider, also, the *vārttika* relative to gender under the present rule. For instance:

akārāntottarapado dviguḥ striyāṃ bhāṣyate 'a *dvigu* with its subsequent member ending in *a* is stated in feminine'

Accordingly, we get examples such as

(*b*) *pañcapūlī* 'a bundle of five bunches'

2.4.18 अव्ययीभावश्च

avyayībhāvaś ca
/ *avyayībhāvaḥ* 1/1 *ca* Ø /
(*napuṃsakam* #17)
avyayībhāvaś ca samāso napuṃsakaliṅgo bhavati
An *avyayībhāva* compound is also neuter in gender.

EXAMPLES:

adhistri 'pertaining to women'
unmattagaṅgam 'a place where the Gaṅgā flows tempestuously'

1. This rule becomes necessary in view of rule 2.4.26 *paraval liṅgaṃ dvandvatatpuruṣayoḥ*. whereby a *dvandva* and a *tatpuruṣa* is assigned gender in accordance with that of its following constituent. The meaning of the initial constituent is prominent in an *avyayībhāva*, for which no rule is formulated. The gender of a *bahuvrīhi*, because its denotatum falls outside its constituency, is assigned in accordance with something else. This

rule, therefore, is required to assign gender to the *avyayībhāva* compounds. The *ca* is generally used to bring something which has not been stated (*anuktasamuccaya*) into a rule: in this instance, the purpose of *ca* is to include the assignment of gender to an *avyayībhāva*.

This rule must be stated so that an *avyayībhāva* compound, such as *adhistri*, may not be assigned feminine. This possible assignment of feminine, in accordance with its subsequent constituent, will also be in consonance with the denotatum of the compound. The compound may end up with assignment of no gender whatsoever if one relies on the prominence of the indeclinable *adhi*. Similarly, in the absence of this rule, masculine gender may become available to the second example, *unmattagaṅgam*, on the basis of the fact that it denotes a place.

Note that the assignment of neuter by this rule to an *avyayībhāva* facilitates the short replacement of its long final vowel by rule 1.2.47 *hrasvo napuṃsake prātipadikasya*. Thus, we get a shortening of *ī* and *ā* in *adhistri* and *unmattagaṅgam*.

2.4.19 तत्पुरुषोऽनञ्कर्मधारयः

tatpuruṣo' nañkarmadhārayaḥ
/ *tatpuruṣaḥ* 1/1 *anañkarmadhārayaḥ* 1/1 = *nañ ca karmadhārayaś ca* = *nañkarmadhārayaḥ* (*sam. dv.*), *na nañkarmadhārayaḥ* = *anañkarmadhārayaḥ* (*nañ. tat.*) /
(*napuṃsakam* #17)
nañsamāsaṃ karmadhārayaṃ ca varjayitvā anyaś tatpuruṣo napuṃsakaliṅgo bhavatīty etad adhikṛtaṃ veditavyam, yad ita ūrdhvam anukramiṣyāmas tatra
A *tatpuruṣa* compound which is neither a *naÑ* nor a *karmadhāraya* is neuter in gender.

EXAMPLES:

brāhmaṇasenam 'the army of *brāhmaṇa* soldiers'
brāhmaṇasenā 'id.'

1. The word *anañkarmadhārayaḥ* is interpreted as 'that *tatpuruṣa* in which there is no *naÑ* or *karmadhāraya*' (*nañkarmadhārayau na vidyete yasmiṃs tatpuruṣe*). Obviously, the compound is a *bahuvrīhi* with an internal *dvandva* constituted by *anañkarmadhārayau*.

Questions have been raised concerning the type of the *dvandva* compound underlying *anañkarmadhārayaḥ*. If it is *samāhāra*, then the compound should be assigned the neuter gender (*napuṃsaka*); if it is *itaretara*, then the number should be dual (*dvivacana*). Commentators say that both types, on the strength of the usage found in the *sūtra* (*sautratvāt*), will be

correct. After all, the *sūtra* are like the Vedas, where contraposition of number and gender is not hard to find:

> *Nyāsa* ad *Kāśikā* (II: 264): '*...nirdeśasya sautratvād ubhayathāpy adoṣaḥ; tathā hi chandovat sūtrāṇi bhavantīti...*'.

2. This rule is given as an *adhikāra*, and hence is carried through rules 2.4.25 *vibhāṣā*.... Consider the two examples, above, which are versions of a *tatpuruṣa* compound which is neither *naÑ* nor *karmadhāraya*. The present rule assigns neuter, later to be made optional by rule 2.4.25 *vibhāṣā*....

Note that a general qualifier, such as *tatpuruṣaḥ*, is required so that neuter cannot be assigned to a *bahuvrīhi* compound like the following:

(*a*) *dṛḍhasenaḥ* 'the king whose army is strong'

A similar qualification of *tatpuruṣaḥ* by *anaN* and *karmadhārayaḥ* is also needed to block neuter to, for example,

(*b*) *asenā* 'a no good army'

which is a *naÑ*, and

(*c*) *paramasenā* 'an excellent army'

which is a *karmadhāraya*.

2.4.20 **संज्ञायां कन्थोशीनरेषु**

> *saṃjñāyāṃ kanthośīnareṣu*
> / *saṃjñāyām* 7/1 *kanthā* 1/1 *uśīnareṣu* 7/3 /
> (*napuṃsakam* #17, *tatpuruṣo' nañkarmadhārayaḥ* #19)
> *saṃjñāyāṃ viṣaye kanthāntas tatpuruṣo napuṃsakaliṅgo bhavati, sā cet kanthā uśīnareṣu bhavati*
> A *tatpuruṣa* compound which is neither a *naÑ* nor a *karmadhāraya*, and which ends in *kanthā* 'a locality', is neuter in gender provided the compound denotes the name of a place in the region called Uśīnara.

EXAMPLE:

> *sauśamikantham* 'the city of the descendants of Suśama'
> *āhvarakantham* 'the city of the descendants of Ahvara'

1. The word *kanthā* is used here as a qualifier (*viśeṣaṇa*) to *tatpuruṣa*. Accordingly, and also in view of *tadantavidhi* 'the process of interpreting a word as denoting something which ends in it', *kanthā* will be interpreted as a *tatpuruṣa* compound which has *kanthā* as its final constituent.

2.4.21 **उपज्ञोपक्रमं तदाद्याचिख्यासायाम्**

> *upajñopakramaṃ tadādyācikhyāsāyām*
> / *upajñopakramam* 1/1 = *upajñāyate 'sau upajñā, upakramyate 'sau*

upakramaḥ, upajñā ca upakramaś ca = upajñopakramam (sam. dv.); tadādyācikhyāsāyām 7/1 = *ākhyātum icchā = ācikhyāsā, tayoḥ(upajñopakramayoḥ) ādiḥ = tadādiḥ (ṣaṣ. tat.), tadādeḥ ācikhyāsā = tadādyācikhyāsā (ṣaṣ. tat.), tasyām* /
(*napuṃsakam* #17, *tatpuruṣo' nañkarmadhārayaḥ* #19)
upajñā ca upakramaś ca upajñopakramam, tadantas tatpuruṣo napuṃsakaliṅgo bhavati tadādyācikhyāsāyām
A *tatpuruṣa* compound which is neither a *naÑ* nor a *karmadhāraya*, and which ends in *upajñā* 'ingenuity' or *upakrama* 'initiative', is neuter in gender when the compound denotes the first person who used his ingenuity or who initiated something.

EXAMPLES:

pāṇiny upajñam akālakaṃ vyākdraṇam 'a grammar with no (definition of) *kāla* 'time, tense' is the creation of Pāṇini's ingenuity'
nandopakramāṇi mānāni 'the standard measure of weight was first started by Nanda'

1. The words *upajñā* and *upakrama* are interpreted as 'ingenuity' and 'initiation', respectively. A *tatpuruṣa* compound ending in *upajñā* or *upakrama* is assigned neuter gender when the beginning of either is desired as the denotatum. Thus, in the first example, the ingenuity of Pāṇini has innovated a grammar without a section on *kāla* 'tense'. A similar innovation (of standard weights) is credited to Nanda in the second example.

2.4.22 छाया बाहुल्ये

chāyā bāhulye
/ *chāyā* 1/1 *bāhulye* 7/1 /
(*napuṃsakam* #17, *tatpuruṣo' nañkarmadhārayaḥ* #19)
chāyāntas tatpuruṣo napuṃsakaliṅgo bhavati bāhulye gamyamāne
A *tatpuruṣa* compound which is neither a *naÑ* nor a *karmadhāraya*, and which ends in *chāyā* 'shadow', is neuter in gender provided the compound denotes *bāhulya* 'abundance'.

EXAMPLES:

śalabhacchāyam 'a thick cloud of locusts'
ikṣucchāyam 'an abundance of sugar cane'

1. Note that a *tatpuruṣa* compound which ends in *chāyā* is optionally assigned neuter by rule 2.4.25 *vibhāṣā*.... This rule makes that optional provision obligatory when, of course, *bāhulya* 'abundance' is also denoted. This *bāhulya*, however, is relative to the meaning of the first constituent, as in the examples, where the abundance of locusts and sugar cane is expressed.

2.4.23 सभा राजाऽमनुष्यपूर्वा

sabhā rājā' manuṣyapūrvā
/ *sabhā* 1/1 *rājā' manuṣyapūrvā* 1/1 = *na manuṣyaḥ* = *amanuṣyaḥ* (*nañ. tat.*), *rājā ca amanuṣyaś ca rājāmanuṣyau* (*itar. dv.*), *rājā' manuṣyau pūrvau yasyāḥ sā* = *rājā' manuṣyapūrvā sabhā* (*bv.*) /
(*napuṃsakam* #17, *tatpuruṣo' nañkarmadhārayaḥ* #19)
sabhāntas tatpuruṣo napuṃsakaliṅgo bhavati sā cet sabhā rājapūrvā, amanuṣyapūrvā ca bhavati
A *tatpuruṣa* compound which is neither a *naÑ* nor a *karmadhāraya*, and which ends in *sabhā* 'assembly hall', is neuter in gender provided *sabhā* is preceded either by a synonym of *rājā* 'king' or by a constituent which denotes *amanuṣya* 'non-human'.

EXAMPLES:

inasabham 'the king's council'
rakṣasabham 'the assembly of demons'

1. Note that the word *rājan* 'king', qualifying *sabhā* 'assembly hall', is interpreted as denoting only its synonyms (*Kāś*: *paryāyavacanasyaiveṣyate*). Refer to my note 2(*c*) under rule 1.1.68 *svaṃ rūpaṃ śabdasya*... for an account of the implications of a *vārttika* in connection with the application of this rule.

Note here that a word which denotes a particular king would also disqualify a compound from being assigned neuter. For example, one would not get:

**candraguptasabham* 'the assembly hall of King Candragupta'

The restriction of *amanuṣya* would favor examples such as the second, above; but it would rule out something like:

**devadattasabham* 'the assembly hall of Devadatta'

The word *sabhā*, as is already shown in the translation, is to be read here in the sense of *śālā* 'hall'.

2.4.24 अशाला च

aśālā ca
/ *aśālā* 1/1 *ca* 0 /
(*napuṃsakam* # 17, *tatpuruṣo' nañkarmadhārayaḥ* #19, *sabhā* #23)
aśālā ca yā sabhā tadantas tatpuruṣo napuṃsakaliṅgo bhavati
A *tatpuruṣa* compound which is neither a *naÑ* nor a *karmadhāraya*, and which ends in *sabhā* 'assembly hall', is neuter in gender provided *sabhā* does not denote *śālā* 'house'.

EXAMPLES:

strīsabham 'gathering of women'
dāsīsabham 'gathering of maids'

1. This rule requires that the word *sabhā* should be interpreted in a sense other than that of *śālā* 'hall'. *Kāśikā* clearly states that *sabhā*, for purposes of the present rule, is to be treated as denoting *saṃghāta* 'assembly, gathering'. Thus, a *tatpuruṣa* compound such as

(*a*) *anāthasabhā* 'hall of orphans, orphanage'

could not be assigned neuter, as opposed to feminine, since *sabhā* is not used in the sense of 'gathering'. Nor could it qualify for neuter under the previous rule, on account of the negation of *amanuṣyapūrvā*.

2.4 25 विभाषा सेनासुराच्छायाशालानिशानाम्

vibhāṣā senāsurācchāyāśālāniśānām
/ *vibhāṣā* 1/1 *senā...niśānām* 6/3 = *senā ca surā ca chāyā ca śālā ca niśā ca* = *senāsurācchāyāśālāniśāḥ* (*itar. dv.*), *tāsām* /
(*napuṃsakam* #17, *tatpuruṣo' nañkarmadhārayaḥ* #19)
'*senā, surā, chāyā, śālā, niśā' ity evam antas tatpuruṣo napuṃsakaliṅgo bhavati vibhāṣā*
A *tatpuruṣa* compound which is neither a *naÑ* nor a *karmadhāraya*, and which ends in *senā* 'army'; *surā* 'liquor'; *chāyā* 'shadow'; *śālā* 'house, hall'; or *niśā* 'night', is optionally neuter in gender.

EXAMPLES:

brāhmaṇasenam 'an army of *brāhmaṇa*'
brāhmaṇasenā 'id.'
yavasuram 'liquor made from barley'
yavasurā 'id.'
kuḍyacchāyam 'shadow of the wall'
kuḍyacchāyā 'id.'
gośālam 'cowhouse'
gośālā 'id.'
śvaniśam 'night of the dogs'
śvaniśā 'id.'

1. Note that *tatpuruṣaḥ*, in the nominative, and carried from 2.2.19, is here transformed into *ṣaṣṭhī* 'genitive'. Read with *napuṃsakam* it yields the meaning:
senādyantānāṃ tatpuruṣānāṃ napuṃsakatvam 'neuterness of the *tatpuruṣa* compounds ending in the constituents *senā*, etc.'

Kāśikā offers only a straightforward interpretation in the *vṛtti*.
The *vibhāṣa* 'optional provision' of this rule is treated as *aprāpta* 'that

which was not available', because neuter (*napuṃsaka*) was not available to the compounds under discussion from any earlier rule.

2. The word *chāyā* is included here with the understanding that *bāhulya* 'abundance' will not be the intended meaning. If this were so, the obligatory provision, made via the semantic restriction of 2.4.22 *chāyā bāhulye*, would then become vacuous.

3. *Nyāsa* explains the compound (and ninth example, above) *śvaniśam* as 'the night in which the dogs howl around wildly'. Haradatta, perhaps on the basis of the *Śābarabhāṣya* (to which Bhaṭṭoji also subscribes), says that *śvaniśam* refers to the fourteenth night (*caturdaśī*) of the dark fortnight (*kṛṣṇapakṣa*) when, according to tradition, the dogs fast (*PM* ad *Kāś* II: 269: *yasyāṃ niśāyāṃ śvāna upavasanti sā śvaniśam ity ucyate. sā punaḥ kṛṣṇa-caturdaśī tasyāṃ hi śvāna upavasantīti prasiddhiḥ*).

2.4.26 परवल्लिङ्गं द्वन्द्वतत्पुरुषयोः

paraval liṅgaṃ dvandvatatpuruṣayoḥ
/ *paravat* Ø *liṅgam* 1/1 *dvandvatatpuruṣayoḥ* 6/2 /
parasya yal liṅgaṃ tad bhavati dvandvasya tatpuruṣasya ca
A *dvandva* or a *tatpuruṣa* compound is similar to its final constituent in gender.

EXAMPLES:

kukkuṭamayūryau 'a rooster and a peahen'
mayūrīkukkuṭau 'a peahen and a rooster'
arddhapippalī 'half of a pepper'
arddhakośātakī 'half of a *kośātakī* fruit'
arddhanakharañjanī 'half of the nail polish'

1. *Nyāsa* (ad *Kāś* II: 269) gives a very straightforward explanation of the aspects of this rule's formulation. I summarize this in the following paragraphs:

A *dvandva* compound is said to have the meaning of each of its constituents as principal (*pradhāna*). This rule makes a restrictive provision (*niyama*) of gender, in accordance with the following constituent of the compound, where the constituency entails differing genders. The compound cannot be assigned differing genders either simultaneously (*yugapad*), or in turn (*paryāya*). Also note that neuter (*napuṃsaka*) has already been extended to instances of *samāhāra-dvandva*. The present rule thus extends gender in accordance with the gender of the following constituent, relative to the *dvandva* compound of *itaretarayoga* type.

A *tatpuruṣa* compound may have the meaning of either its initial or its final constituent as principal. Thus, we get examples such as the third, above, which is *arddhapippalī* 'half of a pepper'. Here, the meaning of the first constituent is principal. However, in a word like:

(*a*) *rājakumārī* 'the daughter of the king'
the principal meaning resides in the following constituent. *Nyāsa* observes that, in view of this, the assignment of gender in accordance with that of the following constituent, in compounds where the meaning of the following constituent is principal, becomes useless; such a compound will in any case have the required gender. This rule, therefore, provides for the extension of gender, in consonance with that of the following constituent, in instances where a *tatpuruṣa* compound may have the meaning of its initial constituent as principal.

The *ekadeśisamāsa* (2.2.1 *pūrvāparādharottaram*...) is basically the focus of this rule in the case of *tatpuruṣa*. The word *dvandvatatpuruṣayoḥ* is interpreted as genitive (*ṣaṣṭhī*) dual, as opposed to locative (*saptamī*). A locative interpretation would make the *pada* preceding an item specified by locative the focus of operation (cf. 1.1.66 *tasminn iti nirdiṣṭe*...). The *pada* specified by locative for the purposes of the application of this rule would be the following constituent of a *dvandva* or a *tatpuruṣa* compound. The focus of the extension of gender operation would therefore become the preceding constituent. Applied to an example such as the second above, (*mayūrīkukkuṭau*), this would cause the deletion of the feminine suffix of *mayūrī* 'peahen'. A *tatpuruṣa* compound, as in *arddhapippalī*, would also then demand transfer of feminine to *arddha*, which is neuter.

Thus, *dvandvatatpuruṣayoḥ* is interpreted as genitive, with the result that the compound itself becomes the focus of the operation of gender extension. The extension of an operation, or the lack of it, relative to the preceding constituent, is avoided in this way. Since the extension of gender relates to the compound, an iterant (*anuprayoga*), such as *idam*, would also qualify for the same gender. Consider

(*b*) *kukkuṭamayūryāv ime*

(*c*) *mayūrīkukkuṭāv imau*

where *ime* and *imau*, in feminine and masculine respectively, are iterants of their corresponding compounds.

Further questions have arisen concerning the true meaning of *paraval liṅgam*. It has been asked whether the reference of *liṅga* is made to the form (*śabda*) which denotes the gender one understands, or to the meaning. Commentators agree upon the latter answer, that it is the meaning which is made the focus of extension in *paraval liṅgam*. Reference to the form would entail the notion of an affix denoting the gender. This would cause the introduction of the affix denoting gender in accordance with the following constituent. That affix would then have to be introduced after (3.1.2 *paraś ca*); and this would create confusion.

2.4.27 **पूर्ववदश्ववडवौ**

pūrvavad aśvavaḍavau

/ *pūrvavat* Ø *aśvavaḍavau* 1/2 /
aśvavaḍavayoḥ pūrvaval liṅgaṃ bhavati
A *dvandva* compound of *aśva* 'stallion' and *vaḍava* 'mare' is similar to its first constituent in gender.

EXAMPLE:

aśvavaḍavau 'a stallion and a mare'

1. This rule extends gender to a compound, particularly *aśvavaḍava*, in accordance with the gender of its initial constituent. Note that *aśva* 'stallion' will dictate the gender of the compound. Consequently, we get the masculine dual in the example *aśvavaḍavau* above. Recall that the denotatum of singular was optionally extended to *dvandva* compounds with constituents which denote animals (*paśudvandva*) by rule 2.4.12 *vibhāṣā vṛkṣamṛgatṛṇadhānya*. Obviously, the provisions of the present rule will be accepted where the former option is not. For, the *paśudvandva* to which the option of singular applies would be neuter by rule 2.4.17 *sa napuṃsakam*.

This rule thus forms an exception to the preceding one. It also forms the residue, via this extension of gender, of rules 2.4.12 *vibhāṣā vṛkṣamṛgatṛṇa-dhānya...* and 2.4.17 *sa napuṃsakam*.

2.4.28 **हेमन्तशिशिरावहोरात्रे च छन्दसि**

hemantaśiśirāv ahorātre ca chandasi
/ *hemantaśiśirau* 1/2 *ahorātre* 1/2 *ca* Ø *chandasi* 7/1 /
(*pūrvavad* #27)
'hemantaśiśirau, ahorātre' ity etayoś chandasi viṣaye pūrvaval liṅgaṃ bhavati
A *dvandva* compound of *hemanta* 'autumn' and *śiśira* 'winter', or of *ahan* 'day' and *rātri* 'night', is similar to its first constituent in gender, in the Vedic.

EXAMPLES:

hemantaśiśirau 'autumn and winter'
ahorātre 'day and night'

1. This rule forms an exception to *paravaliṅgatā*, or gender in accordance with the gender of the following constituent (2.4.26 *paraval liṅgam...*), especially in the context of the Vedic. Thus, we get the first example, where *hemanta* is masculine and *śiśira* is neuter. In the absence of the provision of this rule, the compound would have been neuter. A similar explanation can be given for the second example, *ahorātre*, where the compound is extended neuter in accordance with its initial constituent *ahan*, which is neuter, as opposed to the feminine *rātri*.

2.4.29 रात्राह्नाहाः पुंसि

rātrāhnāhāḥ puṃsi
/ *rātrāhnāhāḥ* 1/3 = *rātraś ca ahnaś ca ahaś ca* (*itar. dv.*); *puṃsi* 7/1 /
(*kṛtasamāsāntānāṃ nirdeśaḥ*) '*rātra, ahna, aha' ity puṃsi bhāṣyante*
A compound with *rātra*, *ahna*, or *aha* as its final constituent is masculine in gender.

EXAMPLES:

dvirātraḥ 'a time span consisting of two nights'
trirātraḥ 'a time span consisting of three nights'
catūrātraḥ 'a time span consisting of four nights'
pūrvāhṇaḥ 'forenoon'
aparāhṇaḥ 'afternoon'
madhyāhnaḥ 'midday'
dvyahaḥ 'a time span of two days'
tryahaḥ 'a time span of three days'

1. Again, this rule is an exception to *paravalliṅgatā* of 2.4.26. For example, given the compounds (listed above) *dvirātraḥ* and *madhyāhnaḥ*, rule 2.4.26 *paraval liṅgam...* would require the former to be feminine and the latter, neuter, in accordance with the respective genders of *rātri* and *ahan*.

Note that this rule specifies *rātra*, *ahna*, and *aha* not by their base forms, but by their forms derived after the introduction of the *samāsānta* affixes (*Kāś*: *kṛtasamāsāntānāṃ nirdeśaḥ*). For example, *dvirātra* is a *samāhāra-dvigu* derived from the string

dvi + au + rātri + au

by 2.1.51 *taddhitārtha...*, and parallel to the sentence

dve rātrī samāhṛte 'the two nights grouped'

Given the form *dvirātri*, the *samāsānta* affix *aC* will be introduced by rule 5.4.87 *ahaḥ sarvaikadeśa....* The *i* of *dvirātri* will subsequently be deleted by 6.4.148 *yasyeti ca*. Our present rule will then extend the masculine, whereby

dvirātr(*i* → Ø) + *a*(*C* → Ø) = *dvirātr* + *a* = *dvirātra*

will yield the form *dvirātraḥ*.

2.4.30 अपथं नपुंसकम्

apathaṃ napuṃsakam
/ *apatham* 1/1 *napuṃsakam* 1/1 /
apathaśabdo napuṃsakaliṅgo bhavati
The *nañ-tatpuruṣa apatha* 'a path not fit to be followed' is neuter in gender.

EXAMPLES:

apatham idam 'this is a path not fit to be followed'
apathāni gāhate mūḍhaḥ 'only an idiot follows a wrong path'

1. The word *apatha* is specified here as ending in the *samāsānta* affix *aC*. That is, this extension of neuter constitutes an exception to the masculine only with reference to the negative of *pathin* 'path, road', used with a *samāsānta* suffix. Note in connection with this that a *samāsānta* affix after a compound constituent, such as *pathin* used with *naÑ*, is optionally blocked by rule 5.4.72 *patho vibhāṣā*. Thus, if the option of the *samāsānta* affix were availed, then rule 6.4.74 *ṛkpūrabdhūḥ*... would introduce affix *aC*. This, in turn, would yield *apatha*, which, in accordance with the provision of the present rule, will be extended neuter. If the option of the *samāsānta* affix is not taken, the derivate would be masculine (*apanthāḥ*), as opposed to the neuter *apatham*.

2.4.31 अर्द्धर्चाः पुंसि च

arddharcāḥ puṃsi ca
/ *arddharcāḥ* 1/3 *puṃsi* 7/1 *ca* Ø /
(*napuṃsakam* #30)
arddharcādayaḥ śabdāḥ puṃsi napuṃsake ca bhāṣyante
Items enumerated in the list headed by *arddharca* 'half a hymn' are both neuter and masculine in gender.

EXAMPLES:

arddharcaḥ 'half a hymn'
arddharcam 'id.'
gomayaḥ 'cow-dung'
gomayam 'id.'

1. This rule optionally extends masculine to the neuter in case of items contained in the list headed by *arddharca* 'half a hymn'. *Kaśikā* remarks that this extension of gender is made with reference to the forms of the enumerated compounds, although there may be some where the gender is established on the basis of the meaning. For example, *padma* and *śaṅkha*, which denote *nidhi* 'treasure', are masculine. They are, however, both masculine and neuter when used in the sense of 'lotus':

śabdarūpāśrayā ceyaṃ dviliṅgatā kvacid arthabhedenāpi vyavatiṣṭhate, yathā padmaśaṅkhaśabdau nidhivācakau puṃliṅgau jalaje ubhayaliṅgau

2.4.32 इदमोऽन्वादेशेऽशनुदात्तस्तृतीयादौ

idamo 'nvādeśe 'śanudāttas tṛtīyādau
/ *idamaḥ* 6/1 *anvādeśe* 7/1 *aś* 1/1 *anudāttaḥ* 1/1 *tṛtīyādau* 7/1 /
ādeśaḥ = *kathanam*, *anvādeśaḥ* = *anukathanam*; *idamo 'nvādeśaviṣayasyāśādeśo bhavaty anudāttas tṛtīyādau vibhaktau parataḥ*
The word *idam* 'this' is replaced by *anudātta* 'high-pitched' *aŚ* when

it is followed by nominal endings beginning with *tṛtīyā*, and when it occurs as part of an *anvādeśa* 'a tagged statement; a statement which follows'.

EXAMPLES:

ābhyāṃ chāttrābhyāṃ rātrir adhītā, atho ābhyām aharapy adhītam 'these two students studied the whole night and then they studied the whole day'
asmai chāttrāya kambalaṃ dehi, atho asmai śāṭakam api dehi 'give a blanket to this student and also give him a loincloth'

1. The word *ādeśa* has been glossed by *Kāśikā* as *kathanam* 'a statement'; *anvādeśa* thus becomes *anukathanam* 'a tagged statement'. This rule orders *idam* to be replaced with *aŚ*, with the further stipulation that *aŚ* be *anudātta*. In the first of the above examples, the words *ābhyām aharapy adhītam* will be treated as *anvādeśa*. The word *ābhyām* entails the replacement of *idam* by *aŚ*:

idam + *bhyām* = (*idam* → *aŚ*) + *bhyām* = *a* + *bhyām*= *ābhyām*

Note that the replacement of *idam* by *aŚ* is total, because *aŚ* is marked with *Ś* (1.1.55 *anekālśit sarvasya*). Furthermore, whether *aŚ* replaces *idam* or not, the derivate will be unaffected, except in case of its accent and when 5.3.7 *avyayasarvanāmnā*... has applied. Given the form *ābhyām*, where *idam* has been replaced by *aŚ*, *ā* will be *anudātta*. In the absence of *anvādeśa*, the nominal ending will not be *anudātta*. It will have to be marked *udātta* by 6.1.171 *ūḍidampadādya*..., since it occurs after a base which is marked *anudātta* at the end (*antodātta*).

2.4.33 एतदस्त्रतसोस्त्रतसौ चानुदात्तौ

etadas tratasos tratasau cānudāttau
/ *etadaḥ* 6/1 *tratasoḥ* 7/2 = *traś ca taś ca* = *tratasau* (*itar. dv.*), *tayoḥ*; *tratasau* 1/2 *ca* ∅ *anudāttau* 1/2 /
(*anvādeśe, anudāttaḥ* #32)
etado 'nvādeśaviṣayasyāśādeśo bhavaty anudāttas tratasoḥ parataḥ; *tau cāpi tratasāv anudāttau bhavataḥ*
The word *etad* 'this' is replaced by *anudātta aŚ* when it occurs as part of *anvādeśa* and is followed by affixes *traL* (5.3.10 *saptamyā*...) or *tasIL* (5.3.7 *pañcamyā*...), which, in turn, also become *anudātta*.

EXAMPLES:

etasmin grāme sukhaṃ vasāmaḥ, atho atra yuktā adhīmahe 'we live happily in this village and thus let us study diligently here'
etasmāc chātrāc chando 'dhīṣva, atho ato vyākaraṇam apy adhīṣva 'study Veda from this student and also study grammar from him'.

1. Note that *idam* is not carried in this rule, for reasons of incompatibility with *etad*. It will, however, be valid in the next rule, as will *etad*. Furthermore, *atra* and *ato* (*atas*) are replacements for *etasmin* and *etasmāt* respectively.

The present rule orders three operations simultaneously (*yugapad*): the replacement of *aŚ* for *etad*; the *anudātta* accent for *aŚ*; and further *anudātta* accent for affixes *traL* (5.3.10 *saptamyās tral*) and *tasIL*(5.3.7 *pañcamyās tasil*).

2.4.34 द्वितीयाटौस्स्वेनः

dvitīyāṭaussv enaḥ
/ *dvitīyāṭaussu* 7/3 = *dvitīyā ca ṭā ca oś ca* = *dvitīyāṭausaḥ* (*itar. dv.*), *teṣu*; *enaḥ* 1/1 /
(*idamo 'nvādeśe anudāttaḥ* #32, *etadaḥ* #33)
dvitīyā, ṭā, os ity eteṣu parata idametador anvādeśaviṣayayor enaśabda ādeśo bhavati anudāttaḥ
The words *idam* and *etad* are replaced by *anudātta ena* when they occur as part of *anvādeśa* and are followed by *dvitīyā* 'second triplet of *sUP*'; *Ṭā* 'singular third triplet of *sUP*'; or *os* 'dual sixth or seventh triplet of *sUP*'.

EXAMPLES:

imaṃ chāttraṃ chandam adhyāpaya, atho enaṃ vyākaraṇam adhyāpaya 'teach Veda to this student and also teach him grammar'
anena chāttreṇa rātrir adhītā, atho enenāhar apy adhītam 'this student studied the whole night and he also studied the whole day'
anayoś chāttrayoḥ śobhanaṃ śīlam, atho enayoḥ prabhūtaṃ svam 'these two students have very nice conduct and thus also have a lot of wealth'

1. Note that *idamaḥ* is carried via *anuvṛtti*, frequently called *maṇḍūkapluti* 'frog's leap'.

2.4.35 आर्धधातुके

ārdhadhātuke
/ *ārdhadhātuke* 7/1 /
'ārdhadhātuke' ity adhikāro' yam, 'ṇyakṣattriyārṣañitaḥ' iti yāvat; yad ita ūrdhvam anukramiṣyāmas tad ārdhadhātuke veditavyam
When an *ārdhadhātuka* (3.4.114 *ārdhadhātukam śeṣaḥ*) ..

EXAMPLES:

bhavyam 'ought to be brought about'
praveyam 'ought to be woven'
ākhyeyam 'ought to be told'

1. This rule is given as an *adhikāra,* governing rule enumerated prior to 2.4.58 *ṇyakṣatriyā....* Commentators indicate that the locative here is to be interpreted as *viṣayasaptamī* 'locative of domain', whereby operational provisions made by rules contained within this domain will become applicable, in anticipation of the domain of *ārdhadhātuka* being presented at some later stage. That is, when an *ārdhadhātuka* finds its scope. *Kāśikā* makes the distinction between 'replacement in anticipation of an affix' as opposed to 'when an *ārdhadhātuka* affix follows'. This is done by using the words *viṣaye* and *parataḥ* respectively. The distinction, for reasons of readability, consistency, and style, may not always be maintained in the English translation of the rules. Explanatory notes and relevant derivational details will, however, be provided to clear up any confusion.

Now consider, for example,

(*a*) *vadhyāt* 'may he kill...'

which is third person singular of *LIN* denoting benediction. Here, verbal root *han* is replaced with *vadha* under the provisions of rule 2.4.42 *hano vadha liṅi.* A minimum paraphrase of the aforementioned rule, read with the *anuvṛtti* of *ārdhadhātuke* of the present rule, will be as follows:

> *hanter vadha liṅi ārdhadhātuke* '*vadha* (comes as a replacement) in place of *han* when an *ārdhadhātuka* (replacement of) *LIṄ* finds its scope'

A *parasaptamī,* as opposed to a *viṣayasaptamī,* interpretation would require the paraphrase to be:

> '*vadha* (comes as a replacement) in place of *han* when an *ārdhadhātuka* (replacement of) *LIṄ* follows'

This being the case, a *vadha* replacement of *han* will not be realized unless *LIṄ* is introduced after *han* (3.4.116 *liṅāśiṣi*), and is subsequently replaced with the third personal singular *parasmaipada* ending *tiP* (3.4.76 *lasya;* 3.4.77 *tiptasjhi...*). That is, *han* cannot be replaced with *vadha* unless *tiP*, an *ārdhadhātuka* affix by 3.4.116 *liṅāśiṣi,* follows.

According to the commentators, this replacement operation is desired to be applied in anticipation of the *ārdhadhātuka* affix to be introduced later. For this, take as an example the derivation of the first example listed under the present rule:

(*as* → *bhū*) + *yaT*)) + *sU*

where rule 2.4.52 *aster bhūḥ* orders *bhū* as a replacement for *as* 'to be'. Rule 3.1.97 *aco yat* introduces suffix *yaT* after a verbal root ending in a vowel (*aC*). Obviously, *yaT* cannot be introduced after *as*, since it ends in a consonant. However, if *bhū* comes as a replacement, in anticipation of the subsequent introduction of *yaT*, everything will be in order. Rule 1.1.56 *sthānivad ādeśo 'nalvidhau* will enable *bhū* to be treated as *as*, the verb root it replaced.

If one waits for the replacement to take place after the introduction of the suffix, wrong forms will result. Let us now introduce affix *ṆyaT* after *as*, for which it can qualify on account of its ending in a consonant. Given the string

as + *ṆyaT*

where *bhū* replaces *as*, we get:

bhū + *ṆyaT*

The *ū* of *bhū* will then undergo *vṛddhi*, and we will eventually get the wrong form **bhāvyam*. Similarly,

bru + *yaT*

will yield -

(*brū* → *vac*) + *yaT*

where *vac* will be ordered as a replacement for *brū*. A wrong form (**vacyam*) will thus result:

(*vac* + *ya*) + *sU* → *vac* + *ya* + (*sU* → *am*) = *vac* + *y* (*a* + *a* → *a*)*m* = **vacyam*

2.4.36 अदो जग्धिर्ल्यप्ति किति

ado jagdhir lyap ti kiti

/ *adaḥ* 6/1 *jagdhiḥ* 1/1 *lyap* (deleted 7/1) *ti* 7/1 / *kiti* 7/1 / (*ārdhadhātuke* #35)

ado jagdhir ādeśo bhavati lyapti parataḥ, takārādau ca kiti pratyaye

The word *ad* is replaced by *jagdhI* when *LyaP* (7.1.3 *samāse...*), or an *ārdhadhātuka* affix beginning with *t* and marked with *K*, follows.

EXAMPLES:

prajagdhyaḥ 'having eaten properly'
vijagdhyaḥ 'having eaten specially'
jagdhaḥ 'eaten'
jagdhavān 'he ate'

1. The *i* at the end of the substitute *jagdhi* is for the sake of pronunciation (*uccāraṇārtha*). (Note in connection with this that, in the English translation of this and subsequent rules, 'word' means 'the form of the word cited'.) The substitute is thus *jagdh*. A question is raised as to why the rule must state *LyaP*, when its purpose can be served by *ti kiti* 'when an *ārdhadhātuka* affix beginning with *t* and marked with *K* follows'.

Let us consider the derivation of *prajagdhya*, which contains the verbal root *ad*, after which the absolutive suffix *Ktvā* has been introduced by 3.4.21 *samānakartṛkayoḥ....* Rule 2.2.18 *kugatiprādayaḥ* orders an obligatory compound in the case of *prajagdhya*, where *pra*, an item in the list headed by *pra*, combines with the resultant form of *ad* + *Ktvā*. Rule

7.1.37 *sāmse' nañpūrve kto lyap* requires that *Ktvā* be replaced with *LyaP*. Note that the replacement of *Ktvā* by *LyaP*, by rule 7.1.37, could still be available on the grounds that *Ktvā* is an affix marked with *K* and beginning with *t*. Thus, *LyaP* should not have been stated in the rule on hand. But Pāṇini states it; therefore, it must have some special purpose to serve.

Commentators (*Mbh* II: 873) think that *LyaP* is used to indicate (*jñāpanārtha*) that an externally conditioned (*bahiraṅga*) *LyaP* blocks the application of an internally conditioned (*antaraṅga*) operation. Note that the replacement of *ad* by *jagdh* is an internally conditioned operation, and hence should apply first, as compared with the application of the replacement of *Ktvā* by *LyaP*. The following verse from the *Mahābhāṣya* sums up the function of the retention of *LyaP*:

> *jagdhau siddhe' ntaraṅgatvāt tikitīti lyab ucyate/*
> *jñāpayaty antaraṅgāṇāṃ lyapā bhavati bādhanam//*
> 'an explicit mention of *LyaP*, even when its purpose can be accomplished by the internally conditioned (*antaraṅga*) replacement of *ad* by *jagdh* before a *t*-initial affix marked with *K*, is to indicate that *LyaP* can block internally conditioned operations.'

2.4.37 लुङ्सनोर्घस्लृ

> *luṅsanor ghasḷ*
> / *luṅsanoḥ* 7/2 *ghasḷ* 1/1 /
> (*ārdhadhātuke* #35, *adaḥ* #36)
> *luṅi sani ca parato 'do ghasḷ ādeśo bhavati*
> The word *ad* is replaced by *ghasḶ* when an *ārdhadhātuka* replacement of *LUṄ* 'aorist', or affix *saN*, is to follow.

EXAMPLES:

> *aghasat* 'he ate'
> *aghasatām* 'they (two) ate'
> *aghasan* 'they ate'
> *jighatsati* 'he wishes to eat'
> *jighatsataḥ* 'they (two) wish to eat'
> *jighatsanti* 'they wish to eat'

1. The purpose of marking the replacement of *ad* by *Ḷ* is to facilitate the introduction of *aṄ* as a replacement for *CLI* before *LUṄ* (cf. 3.1.55 *puṣādidyutādlṛditaḥ...*). For details, refer to the derivation of the example *aghasat* in the appendix under this rule.

2.4.38 घञपोश्च

> *ghañapoś ca*
> / *ghañapoḥ* 7/2 = *ghañ ca ap ca* (*itar. dv.*), *tayoḥ*; *ca* 0 /

(*ārdhadhātuke* # 35, *adaḥ* # 36, *ghasḷ* # 37)
ghañ api ca parato 'do ghasḷ ādeśo bhavati
The word *ad* is replaced by *ghasḶ* when *ārdhadhātuka* affixes *GHaÑ* (3.3.18 *bhāve*) and *ap* (3.3.59 *upasarge...*) follow.

EXAMPLES:

ghāsaḥ 'food'
praghasaḥ 'voracious'

2.4.39 बहुलं छन्दसि

bahulaṃ chandasi
/ *bahulam* 1/1 *chandasi* 7/1 /
(*ārdhadhātuke* # 35, *adaḥ* # 36, *ghasḷ* # 37, *ghañapoḥ* # 38)
chandasi viṣaye bahulam ado ghasḷ ādeśo bhavati
The word *ad* is replaced by *ghasḶ* in the Vedic variously, when *ārdhadhātuka* affixes *GHaÑ* and *aP* follow.

EXAMPLES:

ghastān nūnam 'they two just ate
sagdhiḥ 'common meal'

1. The word *bahulam* has been explained as follows:

kvacit pravṛttiḥ kvacid apravṛttiḥ
kvacid vibhāṣā kvacid anyad eva /
vidher vidhānaṃ bahudhā samīkṣya
catur-vidhaṃ bāhulakaṃ vadanti //
'after having carefully scrutinized the operational provisions' *bāhulaka* 'variously' is stated as: sometimes application; sometimes lack of application; sometimes application only optionally; and on occasion yet something else'

In view of this explanation, the propriety of using *bahulam* is questioned, especially as *anyatarasyām* 'optionally' is used in the subsequent rule. If *bahulam* can also be construed as an operation entailing optionality, then *bahulam* itself should have been carried to the subsequent rule. This would have made the use of *anyatarasyām* unnecessary there. Alternatively, Pāṇini should have used *anyatarasyām* here, and have carried the same term to the following rule.

Commentators state that the *bāhulaka* entails the necessity of applying, not applying, applying only optionally, or otherwise, a rule without which the desired form cannot be obtained. The notion of optionality expressed by *anyatarasyām* is also considered necessary, but it is systematic as opposed to the ad hoc (*nipātana*) nature of the notion of *bāhulaka*.

Besides, Pāṇini does not accept *bahulam* and *anyatarasyām* as synonymous, as is demonstrated by his use of *anyatarasyām* in the next rule.

2.4.40 **लिट्यन्यतरस्याम्**

liṭy anyatarasyām
/ *liṭi* 7/1 *anyatarasyām* 7/1 /
(*ārdhadhātuke* # 35, *adaḥ* # 36, *ghasḷ* # 37)
liṭi parato ado 'nyatarasyāṃ ghasḷ ādeśo bhavati
The word *ad* optionally is replaced by *ghasḶ* when an *ardhadhātuka* replacement of *LIṬ* 'perfect' follows.

EXAMPLES:

āda 'he ate'
jaghāsa 'id.'
ādatu 'they two ate'
jakṣatuḥ 'id.'
āduḥ 'they ate'
jakṣuḥ 'id.'

2.4.41 **वेञो वयिः**

veño vayiḥ
/ *veñaḥ* 6/1 *vayiḥ* 1/1 /
(*ārdhadhātuke* # 35, *liṭy anyatarasyām* # 40)
veño vayir ādeśo bhavati anyatarasyāṃ liṭi parataḥ
The word *veÑ* 'to weave' optionally is replaced by *vayI* when an *ārdhadhātuka* replacement of *LIṬ* follows.

EXAMPLES:

uvāya 'he wove'
ūyatuḥ 'they two wove'
ūvatuḥ 'id.'
ūyuḥ 'they wove'
ūvuḥ 'id.'

2.4.42 **हनो वध लिङि**

hano vadha liṅi
/ *hanaḥ* 6/1 *vadha* 1/1 (deleted) *liṅi* 7/1 /
(*ārdhadhātuke* # 35)
hanter dhātor vadha ity ayam ādeśo bhavati liṅi parata ārdhadhātuke
The word *han* 'to kill' is replaced by *vadha* when an *ārdhadhātuka* replacement of *LIṄ* 'precative' follows.

EXAMPLES:

> *vadhyāt* 'may he kill'
> *vadhyāstām* 'may they two kill'
> *vadhyāsuḥ* 'may they kill'

1. Note that the replacement of *han* is given as *vadha*, an *adanta* 'that which ends in *a*'. Jinendrabuddhi (*Nyāsa* ad *Kāś* II: 289) observes that 'it is the style of Pāṇini to cite replacements which end in a consonant with (final) *i* for ease of pronunciation, as *jagdh* in *jagdhiḥ* (2.4.36 *ado jagdhir...*); a lack of marking *vadh* with *i*, as opposed to *a*, is to indicate that the replacement is *akārānta* 'that which ends in *a*'. There are two consequences of having the replacement ending in *a*:

(*i*) no blocking of *iṬ*, and
(*ii*) the blocking of *vṛddhi*, which would otherwise be available by rule 7.2.3 *vadavraja....*

Consider, for example, the derivation of *avadhīt* 'he killed', at the stage of *avadh* + *s* + *t*. Here rule 7.2.10 *ekāc upadeśe...* is unable to block the introduction of the augment *iṬ*, mainly because *vadha*, the replacement given as ending in *a*, is not constituted by a single vowel. This *a* is deleted later by 6.4.48 *ato lopaḥ*.

2.4.43 लुङि च

> *luṅi ca*
> / *luṅi* 7/1 *ca* ∅ /
> (*ārdhadhātuke* #35, *hano vadha* #42)
> *luṅi ca parato hano vadha ity ayam ādeśo bhavati*
> The word *han* is also replaced by *vadha* when an *ārdhadhātuka* replacement of *LUṄ* follows.

EXAMPLES:

> *avadhīt* 'he killed'
> *avadhiṣṭām* 'they two killed'
> *avadhiṣuḥ* 'they killed'

1. Why did Pāṇini not make the replacement provision of this rule along with that of the previous one? This would have saved him one rule. He did not formulate a joint rule because, in that case, *LIṄ* and *LUṄ* would both be part of the rule. This would create problems with the provision of rule 2.4.44 *ātmanepadeṣv...*, where the *anuvṛtti* of *LUṄ* alone is valid. A joint formulation with *LIṄ* and *LUṄ* both as part of a single rule would demand the *anuvṛtti* of both in rule 2.4.44 *ātmane-adeṣv.....* For, items introduced simultaneously must be dropped, or carried together via *anuvṛtti*.

Besides, if *LIṄ* were carried to 2.4.44 consequent upon a joint formulation, the obligatory provision of 2.4.42 *hano vadha lini* would become optional in the context of *LIṄ*. It is to block this undesired result that Pāṇini chose to formulate rules 2.4.42 *hano vadha lini* and 2.4.43 *luṅi ca* separately.

2.4.44 आत्मनेपदेष्वन्यतरस्याम्

ātmanepadeṣv anyatarasyām
/ *ātmanepadeṣu* 7/3 *anyatarasyām* 7/1 /
(*ārdhadhātuke* # 35, *hano vadha* # 42)
ātmanepadeṣu parato hano luṅy anyatarasyāṃ vadha ity ayam ādeśo bhavati
The word *han* optionally is replaced by *vadha* when an *ārdhadhātuka* replacement of *LUṄ* termed *ātmanepada* follows.

EXAMPLES:

āvadhiṣṭa 'he killed'
āhata 'id.'
āvadhiṣātām 'they two killed'
āhasātām 'id.'
āvadhiṣata 'they killed'
āhasata 'id.'

1. This rule provides for optional replacement, as opposed to the obligatory replacement made available by the preceding rule. Of course, the context of this optional provision is marked by *ātmanepada*.

2.4.45 इणो गा लुङि

iṇo gā luṅi
/ *iṇaḥ* 6/1 *gā* 1/1 *luṅi* 7/1 /
(*ārdhadhātuke* # 35)
'*iṇaḥ gā*' *ity ayam ādeśo bhavati luṅi parataḥ*
The word *iṆ* 'to go' is replaced by *gā* when an *ārdhadhātuka* replacement of *LUṄ* follows.

EXAMPLES:

agāt 'he went'
agāyi bhavatā 'you went'

1. What is the purpose of again stating *LUṄ*, when it has already been given in the preceding rule? This *LUṄ* must be unqualified (*aviśeṣa*). It should therefore be construed as obligatory, as opposed to the optional *LUṄ* of the preceding rule. Additionally, its context is not constrained by

ātmanepada. The purpose of *LUṄ* here is thus to drop the *anuvṛtti* of *ātmanepadeṣv anyatarasyām*.

2.4.46 **णौ गमिरबोधने**

ṇau gamir abodhane
/ *ṇau* 7/1 *gamiḥ* 1/1 *abodhane* 7/1 /
(*ārdhadhātuke* # 35, *iṇaḥ* # 45)
ṇau parata iṇo' bodhanārthasya gamir ādeśo bhavati
The word *iṆ* is replaced by *gamI* when it is followed by the *ārdhadhātuka* affix *ṆiC* and does not denote *bodhana* 'understanding'.

EXAMPLES:

gamayati 'he has him go'
gamayataḥ 'they two have him go'
gamayanti 'they have him go'

1. It is obvious, from the use of *ṇau*, that *gami* is stated here as a non-causal replacement for *iṆ*. The *i* of *gami* is then used to facilitate the pronunciation.

Note that the explicit use of *LUṄ* in the previous rule, as opposed to bringing it via *anuvṛtti*, has consequences for this rule. I have already stated in my note under 2.4.45 that Pāṇini uses *LUṄ* explicitly to get rid of *ātmanepada* and *anyatarasyām*. This being the case, *gamI* will here replace *iṆ* before *ṆiC* in both *ātmanepada* and *parasmaipada*. Additionally, this replacement will be obligatory, since *anyatarasyām* is also dropped.

The condition of *abodhane* 'when not used in the sense of understanding' is imposed so that *gamI* cannot replace *iṆ* in derivates like *pratyāyayati* '...makes one understand'.

2.4.47 **सनि च**

sani ca
/ *sani* 7/1 *ca* Ø /
(*ārdhadhātuke* # 35, *iṇaḥ* # 45, *gamir abodhane* # 46)
sani parata iṇo' bodhanārthasya gamir ādeśo bhavati
The word *iṆ* is replaced by *gamI* when an *ārdhadhātuka saN* follows and *iṆ* does not denote *bodhana*.

EXAMPLES:

jigamiṣati 'he wishes to go'
jigamiṣataḥ 'they two wish to go'
jigamiṣanti 'they wish to go'

1. A split rule is stated separately from the preceding rule to facilitate the subsequent (*uttarārtha*). That is, if this rule were not stated separately,

then the subsequent rule would have been forced to have the *anuvṛtti* of both *ṇau* and *sani*. The *anuvṛtti* of *ṇau* is undesired for the subsequent rule.

Note that *saN* is qualified for the assignment of the term *ārdhadhātuka* only when it is introduced by rules beginning with 3.1.7 *dhātoḥ*.... That is, a *saN* introduced by rules 3.1.5 and 3.1.6 is excluded.

2.4.48 इङश्च

iṅaś ca
/ *iṅaḥ* 6/1 *ca* Ø /
(*ārdhadhātuke* # 35, *gamiḥ* # 46, *sani* # 47)
iṅaś ca sani parato gamir ādeśo bhavati
The word *iṄ* 'to study' is also replaced by *gamI* when an *ārdhadhātuka* *saN* follows.

EXAMPLES:

adhijigāṃsate 'he wishes to study'
adhijigāṃsete 'they two wish to study'
adhijigāṃsante 'they wish to study'

2.4.49 गाङ् लिटि

gāṅ liṭi
/ *gāṅ* 1/1 *liṭi* 7/1 /
(*ārdhadhātuke* # 35, *iṅaḥ* # 48)
gāṅādeśo bhavatīṅo liṭi parataḥ
The word *iṄ* is replaced by *gāṄ* when an *ārdhadhātuka* replacement of *LIṬ* is to follow.

EXAMPLES:

adhijage 'he studied'
adhijagāte 'they two studied'
adhijagire 'they studied'

1. Note that this replacement would be applicable in anticipation of the *LIṬ* affix, in a way similar to that of some rules already stated in the beginning of the *ārdhadhātuka* section, headed by 2.4.35 *ārdhadhātuke*. The replacement is marked with *Ṅ* to facilitate the introduction of *ātmanepada* endings in place of *LIṬ*.

An objection is made to the marking of *gā* with *Ṅ*, especially when the *ātmanepada* affixes may be easily obtained by treating *gā* as *iṄ*, the root it replaced. Now, *iṄ* is marked with *Ṅ*; hence, *gā* when treated as *iṄ* will automatically be marked with *Ṅ*. Commentators say that *gā* is still marked with *Ṅ*, to indicate that, in rule 1.2.1 *gāṅkuṭādi*..., *gāṄ* is to be interpreted as this very replacement. For details of consequences relative to *gā*, as

marked with *N*, refer to my notes and derivations under rule 1.2.1. Also see derivations of examples cited here in the appendix.

2.4.50 विभाषा लुङ्लृङोः

vibhāṣā luṅlṛṅoḥ
/ *vibhāṣā* 1/1 *luṅlṛṅoḥ* 7/2 /
(*ārdhadhātuke* # 35, *iṅaḥ* # 48, *gāṅ* # 49)
luṅi lṛṅi ca parata iṅo vibhāṣā gāṅ ādeśo bhavati
The word *iṄ* is replaced by *gāṆ* when an *ārdhadhātuka* replacement of *LUṄ* or *LṚṄ* is to follow.

EXAMPLES:

adhyagīṣṭa 'he studied'
adhyaiṣṭa 'id.'
adhyagīṣātām 'they two studied'
adhaiṣātām 'id.'
adhyagīṣata 'they studied'
adhyaiṣata 'id.'
adhyagīṣyata 'he will study'
adhyaiṣyata 'id.'
adhyagīṣyetām 'they two will study'
adhyaiṣyetām 'id.'
adhyagīṣyanta 'they will study'
adhyaiṣyanta 'id.'

1. Note that the use of *vibhāṣā* ensures a set of two optional forms. When the option of replacing *iṄ* with *gāṄ* is accepted, rule 1.2.1 *gāṅkuṭādi...* becomes applicable. That is, *gāṄ* is extended the status of being marked with *Ṅ*. This means that the root will have its final vowel replaced by *īT* (6.4.66 *ghumāsthāgāpā...*). Furthermore, rules relative to *guṇa* (8.2.27 *hrasvād aṅgāt*); the augment *āṬ* (6.4.72 *āḍ ajādīnām*); and a single *vṛddhi* replacement (6.1.88 *āṭaś ca*) will be blocked. Conversely, in the event that the option of replacing *iṄ* with *gāṄ* is chosen, *īT* will be blocked through *guṇa*, and *āṬ* and a single *vṛddhi* replacement will become available. See the appendix for derivational details.

2.4.51 णौ च संश्चङोः

ṇau ca saṃścaṅoḥ
/ *ṇau* 7/1 *ca* Ø *saṃścaṅoḥ* 7/2 = *san ca caṅ ca* = *saṃścaṅau* (*itar. dv.*), *tayoḥ* /

(*ārdhadhātuke* # 35, *iṅaḥ* # 48, *gāṅ* # 49, *vibhāṣā* # 50)
ṇau sanpare caṅpare ca parata iṅa vibhāṣā gāṅ ādeśo bhavati
The word *iṄ* optionally is replaced by *gāṄ* when it is followed by a *ṆiC* which is followed by *saN* and *caṄ* (3.1.48 *ṇiśridrusru-bhyaḥ...*).

EXAMPLES:

adhijigāpayiṣati 'he wishes to teach'
adhyāpipayiṣati 'id.'
adhyajīgapat 'he taught'
adhyāpipat 'id.'

1. Note that the *parasaptamī* 'that which marks the right condition of an operation' in *Ṇi* (of *ṇau*) is to be interpreted relative to the verbal root *iṄ*. This will yield the interpretation 'when *ṆiC* follows *iṄ*'. By contrast, the *parasaptamī* given in *saṃścaṅoḥ* is to be interpreted relative to *ṆiC*. This will result in the following interpretation: 'when *saN* and *caṄ* follow *ṆiC*'.

2.4.52 **अस्तेर्भूः**

aster bhūḥ
/ *asteḥ* 5/1 *bhūḥ* 1/1 /
(*ārdhadhātuke* # 35)
aster dhātor bhū ity ayam ādeśo bhavati ārdhadhātuke
The word *as* is replaced by *bhū* when an *ārdhadhātuka* affix is to follow.

EXAMPLES:

bhavitā 'he will become'
bhavitum 'in order to become'
bhavitavyam 'ought to become'

1. This rule allows for the replacement with *bhū* of *as* when *LIṬ* is to find its scope. The replacement is, however, blocked when *as* is used subsequently (*anuprayukta*) in examples such as *īhāmāsa* 'he strove'. How is this to be ascertained? From the use of the abbreviatory term *kṛÑ* in rule 3.1.40 *kṛñcānuprayujyate liṭi*, which refers to roots *kṛ*, *bhū*, and *as*. The abbreviatory term itself is formed by taking the *kṛ* of 5.4.40 *kṛbhvastiyoge...* and joining it with the *Ñ* of rule 5.4.58 *kṛño dvitīyatṛtīya....* If *as* is to be replaced with *bhū* when *as* is used subsequently, the use of the abbreviatory symbol *kṛÑ* would become vacuous (*vyartha*).

2.4.53 ब्रुवो वचिः

bruvo vaciḥ
/ *bruvaḥ* 6/1 *vaciḥ* 1/1 /
(*ārdhadhātuke* # 35)
bruvo vacir ādeśo bhavati ārdhadhātuke viṣaye
The word *brūÑ* 'to speak' is replaced by *vacI* when an *ārdhadhātuka* affix is to follow.

EXAMPLES:

vaktā 'speaker'
vaktum 'in order to speak'
vaktavyam 'ought to be spoken'

1. The final *i* of *vacI* is used, once again, for ease of articulation (*uccāraṇārtha*). Note also that *brūÑ* is marked with *Ñ*, and *ātmanepada* will therefore be available to it when, of course, the fruit of the action is to accrue to the agent (1.3.72 *svaritañitaḥ kartrabhiprāye...*). This *ātmanepada* will be available via *sthānivadbhāva* of 1 1.56 *sthānivad ādeśo'...* when *brūÑ* is replaced with *vacI*.

2.4.54 चक्षिङः ख्याञ्

cakṣiṅaḥ khyāñ
/ *cakṣiṅaḥ* 6/1 *khyāñ* 1/1/
(*ārdhadhātuke* # 35)
cakṣiṅaḥ khyāñ ādeśo bhavaty ārdhadhātuke viṣaye
The word *cakṣIṄ* 'to speak, relate' is replaced with *khyāÑ* when an *ardhadhātuka* affix is to follow.

EXAMPLES:

ākhyātā 'he who will relate'
ākhyātum 'in order to relate'
ākhyātavyam 'ought to be related'

1. My remarks under the notes of previous rule concerning *ātmanepada* via *sthānivadbhāva* (1.1.56 *sthānivad ādeśo' nalvidhau*) remain pertinent to the replacement *khyāÑ* of the present rule. *Kāśikā* makes the following statement:

sthānivadbhāvena nityam ātmanepadaṃ na bhavati ñakārānubandha-karaṇasāmarthyāt
'on account of the *Ñ* as an *it* (in *khyāÑ*), the obligatory *ātmanepada* (on the strength of *Ṅ* as an *it* in *cakṣIṄ*) via *sthānivadbhāva* does not apply'

That is, Pāṇini marks the replacement *khyā* with *Ñ* as an *it* so that, via *sthānivadbhāva*, *khyāÑ* may still be considered a verbal root similar to *cakṣIṄ*. Thus, *khyāÑ* will be qualified to receive *ātmanepada* under the provision of rule 1.3.72 *svaritañitaḥ*.... But the same *sthānivadbhāva* must also require that *khyā* be treated as marked with *Ṅ*, in consonance with the root *cakṣIṄ* which it replaces. Consequent upon this, rule 1.3.12 *anudāttaṅita ātmanepadam* would require *ātmanepada*. Pāṇini first blocks the obligatory *ātmanepada* of 1.3.12, and then makes it available under the condition of rule 1.3.27 *svaritañitaḥ*....

2.4.55 वा लिटि

vā liṭi
/ *vā* Ø *liṭi* 7/1 /
(*ārdhadhātuke* #35, *cakṣiṅaḥ khyāñ* #54)
liṭi parataś cakṣiṅaḥ khyāñ ādeśo va bhavati
The word *cakṣIṄ* optionally is replaced by *khyāÑ* when an *ārdhadhātuka* replacement of *LIṬ* follows.

EXAMPLES:

ācakhyau 'he related'
ācacakṣe 'id.'
ācakhyatuḥ 'they two related'
ācacakṣāte 'id.'
ācakhyuḥ 'they related'
ācacakṣire 'id.'

1. This rule simply makes the obligatory replacement of *cakṣIṄ* by *khyāÑ* optional in the context of *LIṬ*.

2.4.56 अजेर्व्यघञपोः

ajer vy aghañapoḥ
/ *ajeḥ* 6/1 *vī* 1/1 *aghañapoḥ* 7/2 = *ghañ ca ap ca* = *ghañapau* (*itar. dv.*), *na ghañapau* = *aghañapau* (*nañ. tat*), *tayoḥ* /
(*ārdhadhātuke* #35, *vā* #55)
ajer dhātoḥ 'vī' ity ayam ādeśo bhavaty ārdhadhātuke parato ghañapau varjayitvā
The word *ajA* 'to move, lead' is replaced by *vī* when an *ārdhadhātuka* affix other than *GHaÑ* (3.3.18 *bhāve*) or *ap* (3.3.69 *samudor ajaḥ*...) follows.

EXAMPLES:

pravayaṇīyaḥ 'fit for leading'

pravāyakaḥ 'he who leads or conducts'

1. Note that the replacement provided by this rule does not become effective before the affixes *GHaÑ* (3.3.18 *bhāve*) and *ap* (3.3.69 *samudor ajaḥ...*). This is necessary so that forms such as *samāja* 'society' and *samaja* 'herd' can be derived. In this connection, however, a *vārttika* (*Mbh* II: 880) demands that a similar restriction should also apply when affix *KyaP* follows. This would make possible the derivation of *samajyā* 'meeting, fame'. It is also proposed that the provision should be made optional before an *ārdhadhātuka* affix which begins with a consonant and is denoted by the abbreviatory term *vaL* ('all consonants except *y*'; *Śs* 5-14). This would allow the derivation of examples such as follows, parallel to *pravetā*.
(*a*) *prājitā* 'one who carries, sets in motion'

2.4.57 **वा यौ**

vā yau
/ *vāḥ* 1/1 *yau* 7/1 /
(*ārdhadhātuke* #35, *ajer vī* #56)
yau parabhūte ajer vā 'vī ity ayam ādeśo bhavati
The word *ajA* optionally is replaced by *vī* when an *ārdhadhātuka* replacement of *LyuṬ* (3.3.117 *karaṇā...*) follows.

EXAMPLES:

pravayaṇo daṇḍaḥ 'a stick or goad (for leading)'
prājano daṇḍaḥ 'id.'
pravayaṇam ānaya 'bring the stick or goad (for leading)'
prājanam ānaya 'id.'

1. Note that *yu* is used as a cover term for affixes *KHyuN* (3.2.56 *āḍhya...*), *ṬyuL* (4.3.23 *sāyaṃ...*), *yuC* (3.2.148 *calana...*), *Lyu* (3.1.134 *nandigrahi...*), and *LyuṬ* (3.3.113 *kṛtya...*). The context of our present rule requires *yu* to refer here only to *LyuṬ*.

2.4.58 **ण्यक्षत्रियार्षञितो यूनि लुगणिञोः**

ṇyakṣatriyārṣañito yūni lug aṇiñoḥ
/ *ṇyakṣatriyārṣañitaḥ* 5/1 = *ñ it yasya sa ñit* (*bv.*), *ṇyaś ca kṣatriyaś ca ārṣaś ca ñic ca* = *ṇyakṣatriyārṣañit* (*sam. dv.* with int. *bv.*); *yūni* 7/1 *luk* 1/1 *aṇiñoḥ* 6/2 = *aṇ ca iñ ca* (*itar. dv.*), *tayoḥ* /
ṇyantāt kṣatriyagotrād ārṣād ñitaś ca parayor aṇiñor yūni lug bhavati

Affixes *aṆ* and *iÑ* are deleted by *LUK* when they denote *yuvan* 'young descendant' and occur after:

(*i*) *ṇya* 'a form which ends in affix *Ṇya*' (4.1.151 *kurvādibhyo ṇyaḥ*),
(*ii*) *kṣatriya* 'a form which denotes a *gotra* (grandson on) descendant of a *kṣatriya*',
(*iii*) *ārṣa* 'a form which denotes a *gotra* descendant of a *ṛṣi* (sage)', or
(*iv*) *ñit* 'a form which ends in a *gotra* affix marked with *Ñ*'.

EXAMPLES:

kauravyaḥ pitā 'descendant of Kuru'
kauravyaḥ putraḥ 'grandson of Kuru'
śvāphalkaḥ pitā 'descendant of Śvaphalka'
śvāphalkaḥ putraḥ 'grandson of Śvaphalka'
vāsiṣṭhaḥ pitā 'descendant of Vasiṣṭha'
vāsiṣṭhaḥ putraḥ 'grandson of Vasiṣṭha'
baidaḥ pitā 'descendant of Bida'
baidaḥ putraḥ 'grandson of Bida'
taikāyaniḥ pitā 'descendant of Tika'
taikāyaniḥ putraḥ 'grandson of Tika'.

1. This rule heads the section of deletion by means of *LUK* (1.1.61 *pratyayasya lukślulupaḥ*). This term deletes affixes, with the further stipulation that operations characteristic of an affix do not apply in relation to an *aṅga*, when the deletion has been accomplished by means of an item which contains a *LU* (1.1.63 *na lumatāṅgasya*). Additionally, we learn from rules 1.2.49 *luk taddhitaluki* and 1.2.51 *lupi yuktavad vyaktivacane* that when a *taddhita* is deleted by means of *LUK*, the feminine of an *upasarjana* 'secondary' element is also dropped. However, the original number and gender is still applicable to a *taddhita* derivate when the affix has been deleted by means of *LUK*.

Our present rule identifies the conditions under which affixes *aṆ* (4.1.92 *tasyāpatyam*) and *iÑ* (4.1.95 *ata iñ*) may be deleted by *LUK*. The semantic condition common to all the contexts of this deletion is the denotation of *yuvan* 'a descendant with his elders still alive' (4.1.163 *jīvati tu vaṃśye yuvā*).

See the appendix for derivational details.

2.4.59 पैलादिभ्यश्च

pailādibhyaś ca
/ *pailādibhyaḥ* 5/3 = *paila ādir yeṣāṃ te* (*bv.*); *ca* Ø /
(*yūni luk* # 58)
'paila' ity evam ādibhyaś ca yuvapratyayasya lug bhavati
A *yuvan* affix also is deleted by *LUK* when it occurs after items enumerated in the list headed by *paila*.

EXAMPLES:

pailaḥ pitā 'descendant of Pīlā'
pailaḥ putraḥ 'grandson of Pīlā'

1. Affix *aṆ* is introduced after *pīlā* (4.1.118 *pīlāyā vā*) to denote a *gotra* (4.1.162 *apatyaṃ pautraprabhṛti gotram*) descendant. The resultant form receives affix *phiÑ* by rule 4.1.156 *aṇo dvyacaḥ*, to denote a young *gotra* descendant. Our present rule deletes this affix *phiÑ* by means of *LUK*. See the appendix for derivational details.

The other derivates of the *paila* group entail items ending in affix *iÑ*. The deletion of *phaK*, introduced after them to denote 'young *gotra* descendant' (4.1.101. *yañiñoś ca*), is accompalished by the following rule. The derivational details of relevant examples can be found in the appendix, under the preceding and subsequent rules.

2.4.60 इञः प्राचाम्

iñaḥ prācām
/ *iñaḥ* 6/1 *prācām* 6/3/
(*yūni luk* #58)
gotre ya iñ tadantād yuvapratyayasya lug bhavati
A *yuvan* affix is deleted by *LUK* when it occurs after an item which terminates in *iÑ* and denotes the *gotra* descendants of Easterners.

EXAMPLES:

pānnāgāriḥ pitā 'a *gotra* descendant of Pannāgāra'
pānnāgāriḥ putraḥ 'a young *gotra* descendant of Pannāgāra'

2.4.61 न तौल्वलिभ्यः

na taulvalibhyaḥ
/ *na* Ø *taulvalibhyaḥ* 5/3 /
(*yūni luk* # 58)
taulvalyādibhyaḥ parasya yuvapratyayasya lug na bhavati
A *yuvan* affix is not deleted by *LUK* when it occurs after items which denote *gotra* and are enumerated in the list headed by *taulvali*.

EXAMPLES:

taulvaliḥ pitā 'a *gotra* descendant of Tulvala'
taulvalāyanaḥ putraḥ 'a young *gotra* descendant of Tulvala'

1. The word *taulvalāyanaḥ* denotes the young descendant of Tulvala, and is derived by introducing affix *phaK* (4.1.101 *yañiñoś ca*) after

taulvali. As is true of many previous examples, the references to derivates are furnished by citation of the *gaṇa* listings. Obviously, *taulvali* heads the list of items enumerated in the *GP*. All such items will normally receive *gotra* affix *iÑ*, after which rule 4.1.101 *yañiñoś ca* will introduce *phaK*.

2.4.62 तद्राजस्य बहुषु तेनैवास्त्रियाम्

tadrājasya bahuṣu tenaivāstriyām
/ *tadrājasya* 6/1 *bahuṣu* 7/3 *tena* 3/1 *eva* Ø *astriyām* 7/1 /
(*luk* #58)
'te tadrājāḥ', 'ñyādayas tadrājā' ity vakṣyati, tasya tadrājasaṃjñasya pratyayasya bahuṣu vartamānasyāstrīliṅgasya lug bhavati, tenaiva cet tadrājena kṛtaṃ bahutvaṃ bhavati
The *tadrāja* (4.1.174 *te tadrājāḥ*, 5.3.119 *ñyādayas...*) affix of a base which denotes 'plurality' (*bahu*) is deleted by *LUK* provided that 'plurality' relates to the meaning of the affix, and the base is not used in the feminine.

EXAMPLES:

aṅgāḥ 'the princes of Aṅga'
vaṅgāḥ 'the princes of Vaṅga'

1. This rule provides for the deletion of an affix termed *tadrāja* (4.1.117 *te tadrājāḥ*) when it occurs after a non-feminine base which denotes the sense of 'plurality' in relation to the meaning of the affix. Thus, affix *aṆ* is introduced after the syntactically related nominal base *āṅga* 'a prince of Aṅga', a base which ends in *aṆ*. If one wishes to derive the 'many princes of Aṅga' from *āṅga* + *Jas*, where *āṅga*, a base not used in the feminine, has the denotatum of 'plurality' relative to the meaning of *aṆ*, *āṅga* must lose affix *aṆ* via *LUK*-deletion. Consequently, we wil get: (*āṅga* + *aṆ* → *aṅga*) + *Jas* = *aṅgāḥ*. Note that *āṅga* not only loses its *aṆ*, but also its initial *vṛddhi*. This is in consonance with *paribhāṣa*: *nimittasyāpāye naimittikasyāpy apāyaḥ*, whereby 'the effect of a cause (*naimittika*) must also be removed at the time when the cause is removed'. Needless to say, the *vṛddhi* of *a* was conditioned by affix *aṆ* introduced after the nominal stem *aṅga* terminated in *Ṅas* (4.1.82 *samarthānāṃ prathamād vā*).

2. Questions have been raised about the correct interpretation of this rule, which I discuss here, in view of the following paraphrase of *Kāśikā*:

tadrājasaṃjñasya pratyayasya bahuṣu vartamānasyāstrīliṅgasya lug

bhavati tenaiva cet tadrājena kṛtam bahutvaṃ bhavati 'a non-feminine affix termed *tadrāja* is deleted by *LUK* when it denotes 'plurality' provided 'plurality' is conditioned by the affix itself'

The preceding reference is a very literal translation of the paraphrase of *Kāśikā*. It does not make use of the process of *tadantavidhi*, whereby a form is interpreted as denoting something which may end in it. That is, it does not interpret *tadrājasaṃjñasya pratyayasya* as 'a form which ends in an affix termed *tadrāja*'. This leads to acceptance of *bahuṣu* and *asrīliṅgasya* as modifiers to the affix. Commentators prefer an interpretation based on *tadantavidhi*, whereby *bahuṣu* and *astrīliṅgasya* become modifiers to the form (nominal base) which ends in an affix termed *tadrāja*. Some might object to this interpretation by noting that if *tadrājasya* is interpreted as *tadrājāntasya* 'that which ends in a *tadrāja* affix', deletion by *LUK* may also become applicable to that which ended in the affix. This, however, is not accurate. For, rule 1.1.61 *pratyayasya lukślulupaḥ* specifically restricts *LUK* to the context of affixal deletion. Thus, *bahuṣu* is treated as a qualifier to the base, and not the affix.

Note that the use of the word *eva* in *tenaiva* requires that the scope of 'plurality' be limited to the denotatum of the affix, itself. It is because of this restriction that *aṅgāḥ* still denotes 'many princes of Aṅga'. That is, it does not denote something as 'many Aṅgas'. It is in this sense that *Kāśikā* states *tenaiva cet tadrājena kṛtaṃ bahutvam bhavati* '...provided the 'multiplicity' is caused by the affix termed *tadrāja*, itself'. Incidentally, the term *tadrāja* applies to affixes introduced by rules 4.1.168 *janapada*... through 4.1.173 *sālvāyava*....

2.4.63 यस्कादिभ्यो गोत्रे

yaskādibhyo gotre
/ *yaskādibhyaḥ* 5/3 *gotre* 7/1 /
(*luk* # 58, *bahuṣu tenaivāstriyām* # 62)
'yaska' ity evamādibhyaḥ parasya gotrapratyayasya bahuṣu vartamānasyāstrīliṅgasya lug bhavati, tenaiva ced gotrapratyayena kṛtaṃ bahutvaṃ bhavati

The *gotra* affix of a base that is derived from items enumerated in the list headed by *yaska* and which denotes 'plurality' is deleted by *LUK* provided that 'plurality' relates to the meaning of the affix, and the base is not used in the feminine.

EXAMPLES:

yaskāḥ '*gotra* descendants of Yaska'
labhyāḥ '*gotra* descendants of Labhya'

1. This rule requires the deletion of affix *aṆ*, introduced under the condition of plurality (*bahutva*) by rule 4.1.112 *śivādibhyo' ṇ*. Thus, *aṆ* itself causes the plurality.

2.4.64 यञञोश्च

yañañoś ca
/ *yañañoḥ* 6/2 = *yañ ca añ ca* (*itar. dv.*), *tayoḥ*; *ca* Ø /
(*luk* # 58, *bahuṣu tenaivāstriyām* # 62, *gotre* # 63)
yaño 'ñaś ca gotrapratyayasya bahuṣu vartamānasyāstrīliṅgasya lug bhavati
The *gotra* affixes *YaÑ* and *aÑ* which denote 'plurality' are deleted by *LUK*, provided that 'plurality' relates to the meaning of the affix, and the base is not used in the feminine.

EXAMPLES:

gargāḥ 'male *gotra* descendants of Garga'
bidāḥ 'male *gotra* descendants of Bida'

1. Note that rule 4.1.104 *anṛṣyānantarye...* introduces affix *aÑ* after *bida*, etc. Once this affix is deleted, the *vṛddhi* conditioned by this affix (*tannimittaka*) is also removed. Thus, we will get forms such as *bidāḥ*.

2.4.65 अत्रिभृगुकुत्सवसिष्ठगोतमाङ्गिरोभ्यश्च

atribhṛgukutsavasiṣṭhagotamāṅgirobhyaś ca
/ *atri...āṅgirobhyaḥ* 5/3 = *atri ca bhṛguś ca kutsaś ca vasiṣṭhaś ca gotamaś ca aṅgirāś ca* = *atri...aṅgirasaḥ* (*itar. dv.*), *tebhyaḥ*; *ca* Ø /
(*luk* # 58, *bahuṣu tenaivāstriyām* # 62, *gotre* # 63)
atryādibhyaḥ parasya gotrapratyayasya bahuṣu lug bhavati
A *gotra* affix which occurs as part of a base derived from *atri*, *bhṛgu*, *kutsa*, *vasiṣṭha*, *gotama* or *aṅgiras*, and denotes 'plurality' is also deleted by *LUK* provided that 'plurality' relates to the meaning of the affix, and the base is not used in the feminine.

EXAMPLES:

atrayaḥ '*gotra* descendants of Atri'
bhṛgavaḥ '*gotra* descendants of Bhṛgu'
kutsāḥ '*gotra* descendants of Kutsa'
vasiṣṭhāḥ '*gotra* descendants of Vasiṣṭha'
gotamāḥ '*gotra* descendants of Gotama'
aṅgirasaḥ '*gotra* descendants of Aṅgiras'

1. Note that affix *ḍhaK* is introduced to denote 'young *gotra* descendant' after *atri* by rule 4.1.122 *itaś cāniñaḥ*, where plurality is also caused

by the affix. Our present rule deletes this affix to facilitate the derivation of *atrayaḥ*. The remaining bases (*bhṛgu*, etc.) get affix *aṆ* by rule 4.1.114 *ṛṣyandhaka...* and, after the deletion of the affix, yield forms such as *bhṛgavaḥ*, etc. Incidentally, rule 7.3.109 *jasi ca* orders *guṇa* in *bhṛgavaḥ*. Forms unaffected by this deletion, like the singular and dual of *atri* + *ḍhaK*, will yield *ātreyaḥ*, *ātreyau*, and so on, where *vṛddhi* will be retained.

2.4.66 **बह्वच इञः प्राच्यभरतेषु**

bahvaca iñaḥ prācyabharateṣu
/ *bahvacaḥ* 5/1 *iñaḥ* 6/1 *prācyabharateṣu* 7/3 /
(*luk* # 58, *bahuṣu tenaiva* # 62, *gotre* # 63)
bahvacaḥ prātipadikād ya iñ vihitaḥ prācyagotre bharata gotre ca vartate, tasya bahuṣu lug bhavati
The *gotra* affix *iÑ*, which occurs as part of a polysyllabic base used to denote 'plurality' of the *gotra* descendants of the *prācya* 'eastern' and *bharata* people, is deleted by *LUK*, provided 'plurality' relates to the meaning of the affix.

EXAMPLES:

pannāgārāḥ '*gotra* descendants of Pannāgāra'
mantharaiṣaṇāḥ '*gotra* descendants of Manthareṣaṇa'
yudhiṣṭhirāḥ '*gotra* descendants of Yudhiṣṭhira'
arjunāḥ '*gotra* descendants of Arjuna'

1. This rule deletes affix *iÑ* (4.1.95 *ata iñ*) which denotes the many *gotra* descendants of the *prācya* and *bharata* people. It does so, however, only when the base after which the affix is introduced is polysyllabic (*bahvac*). Obviously, *pannāgāra* and *yudhiṣṭhira* are polysyllabic bases, and yield the forms *pannāgārāḥ* and *yudhiṣṭhirāḥ* under the provisions of this rule. In the absence of the affixal deletion in singular and dual, as well as in situations where the bases are not polysyllabic, forms such as *pānnāgāriḥ* and *vaikayaḥ* result.

Haradatta (*PM* ad *Kāś* II: 311) remarks that *prācyabharata* of *prācyabharateṣu* is a *dvandva* compound formed with *prācya* and *bharata*. Here, *prācya* denotes 'general' (*sāmānya*) and *bharata* denotes 'particular' (*viśiṣṭa*). This compound could be justified by the maxim *gobalīvarda*: 'cows and the bullock, a particular within that general class' ('*prācyabharateṣu*' *iti dvandvas tu sāmānyaviśeṣavācinor gobalīvardanyāyeneti bhāvaḥ*).

A question is raised as to why *bharata* should be made a part of the rule, when its denotatum is already included in *prācya*. *Kāśikā* (II: 311) states that *bharata* is mentioned separately here to indicate that *prācya*, used elsewhere, will exclude the denotation of *bharata* (cf. *bharatāḥ prācyā eva*; *teṣāṃ punar grahaṇaṃ jñāpanārtham—anyatra prāg grahaṇe bharata-*

grahaṇaṃ na bhavatīti; tena 'iñaḥ prācām' iti bharatānāṃ yuvapratyayasya lug na bhavati). Consequently, there is no *LUK*-deletion applicable to *bharata* derivates under the provisions of rule 2.4.60 *iñaḥ prācām*. We thus get *ārjuniḥ* and *ārjunāyanaḥ* for, respectively, the father and son *gotra* descendants of Arjuna.

2.4.67 न गोपवनादिभ्यः

na gopavanādibhyaḥ
/ *na* ∅ *gopavanādibhyaḥ* 5/3 =*gopavana ādir yeṣāṃ te gopavanādayaḥ* (*bv.*), *tebhyaḥ* /
(*luk* # 58, *bahuṣu tenaiva* # 62, *gotre* # 63)
gopavanādibhyaḥ parasya pratyayasya lug na bhavati
A *gotra* affix occurring after *gopavana*, etc., used in the plural, is not deleted by *LUK* when 'plurality' is denoted relative to the meaning of the affix.

EXAMPLES:

gaupavanāḥ '*gotra* descendants of Gopavana'
śaigravāḥ '*gotra* descendants of Śigru'

1. This rule forms an exception to the *LUK* applicable to affix *aÑ* introduced by rule 4.1.104 *anṛṣyānantarye....* The deletion by *LUK* is ordered by rule 2.4.64 *yañañoś ca*, where the sense of 'plurality' relative to the meaning of the affix is still the attendant situation. Note also that the *gopavanādi gaṇa* is a sublisting contained within the larger listing of the *bidādi* group. The resultant form, under the provisions of this rule, will be the first example

gaupavanāḥ '*gotra* descendants of Gopavana'

where the affix, as well as the *vṛddhi*, is retained.

2.4.68 तिककितवादिभ्यो द्वन्द्वे

tikakitavādibhyo dvandve
/ *tikakitavādibhyaḥ* 5/3 = *tikaś ca kitavaś ca* = *tikakitavau* (*itar. dv.*), *ādiś ca ādiś ca* = *ādī*, *tau ādī yeṣāṃ te* = *tikakitavādayaḥ* (*bv.* with int. *dv.*), *tebhyaḥ*; *dvandve* 7/1 /
(*luk* # 58, *bahuṣu tenaivāstriyām* # 62, *gotre* # 63)
tikādibhyaḥ kitavādibhyaś ca dvandve gotrapratyayasya bahuṣu lug bhavati
A *gotra* affix which occurs as part of a *dvandva* compound that is used to denote 'plurality', and which is composed of constituents enumerated in the lists headed by *tika* and *kitava*, is deleted by *LUK* when 'plurality' relates to the meaning of the affix.

EXAMPLES:

tikakitavāḥ '*gotra* descendants of Tika and Kitava'
vaṅkharabhaṇḍīrathāḥ '*gotra* descendants of Vaṅkhara and Bhaṇḍīratha'

1. This rule allows for the deletion of affixes *iÑ* (4.1.95 *ata iñ*) and *phiÑ* (4.1.154 *tikādibhyaḥ...*). Note that *dvandva* (2.2.29 *cārthe dvandvaḥ*), and the denotation of plurality relative to the meaning of the affix, are the two conditions for deletion to occur.

2.4.69 उपकादिभ्योऽन्यतरस्यामद्वन्द्वे

upakādibhyo 'nyatarasyām advandve
/ *upakādibhyaḥ* 5/3 (*bv.*); *anyatarasyām* 7/1 *advandve* 7/1 (*nañ. tat.*) /
(*luk* # 58, *bahuṣu tenaivāstriyām* # 62, *gotre* # 63)
'*upaka*' *ity evam ādibhyaḥ parasya gotrapratyayasya bahuṣu lug bhavati anyatarasyāṃ dvandve cādvandve ca*
A *gotra* affix which occurs after *upaka*, etc., and which denotes 'plurality', whether individually or as part of a *dvandva* compound, is optionally deleted by *LUK* when 'plurality' relates to the meaning of the affix.

EXAMPLES:

upakāḥ '*gotra* descendants of Upaka'
aupakāyanāḥ 'id.'
lamakāḥ '*gotra* descendants of Lamaka'
lāmakāyanāḥ 'id.'

1. The word *advandve* is used here to facilitate the discontinuation of the domain of *dvandve*. That is, it is not used to disallow the optional *LUK* under the condition of the lack of a *dvandva* compound It is simply used to state that in situations of non-*dvandva*, the deletion is optional in the context of the bases denoted by *upakādi*. Obviously, two sets of forms, one with *dvandva* (such as *upakalamakāḥ*), and one without (such as *upakāḥ*), will result where the option of *dvandva* is available.

2.4.70 आगस्त्यकौण्डिन्ययोरगस्तिकुण्डिनच्

āgastyakauṇḍinyayor agastikuṇḍinac
/ *āgastyakauṇḍinyayoḥ* 6/2 (*itar. dv.*) *agastikuṇḍinac* 1/1 = *āgastiś ca kuṇḍinac ca* (*sam. dv.*) /
(*luk* # 58, *bahuṣu tenaivāstriyām* # 62, *gotre* # 63)
āgastyakauṇḍinyayor aṇo yañaś ca bahuṣu lug bhavati, pariśiṣṭasya ca prakṛtibhāgasya yathāsaṃkhyam 'agastikuṇḍinac' ity etāv ādeśau bhavataḥ

A *gotra* affix (*aṆ* or *yaÑ*) which occurs as part of *āgastya* or *kauṇḍinya* and which denotes 'plurality' is deleted by *LUK* when 'plurality' relates to the meaning of the affix; the resultant bases are replaced by *agasti* and *kuṇḍinaC* respectively.

EXAMPLES:

agastayaḥ '*gotra* descendants of Agasta'
kuṇḍināḥ '*gotra* descendants of Kuṇḍin'

1. This rule does not only provide for the *LUK*- deletion of affixes *aṆ* (4.1.114 *ṛṣyandhaka...*) and *yaÑ* (4.1.105 *gargādi...*). It also states that the bases *āgastya* and *kuṇḍinī*, which result from the affixal deletion, should be replaced by *agasti* and *kuṇḍinaC* respectively. This will yield examples such as the two given above. The *C* of the replacement *kuṇḍinaC* is intended for accent. The word *kuṇḍinī* is marked *udātta* in the middle (*madhyodātta*). Its replacement (*kuṇḍinaC*) will therefore also receive *udātta* on its middle *i*.

2.4.71 **सुपो धातुप्रातिपदिकयोः**

supo dhātuprātipadikayoḥ
/ *supaḥ* 6/1 *dhātuprātipadikayoḥ* 6/2 = *dhātuś ca prātipadikaś ca* = *dhātuprātipadike* (*itar. dv.*), *tayoḥ* /
(*luk* # 58)
supo vibhakter dhātusaṃjñāyāḥ prātipadikasaṃjñāyāś ca lug bhavati
A *sUP* (4.1.2 *svaujas...*) which occurs as part of a *dhātu* 'root' or a *prātipadika* 'nominal stem' is deleted by *LUK*.

EXAMPLES:

putrīyati 'he wishes a son for himself'
rājaputraḥ 'king's son, prince'

1. *Kāśikā* (II: 316) invokes *paribhāṣā* (*PŚ*: 90) *tadantargatās tadgrahaṇena gṛhyante* in connection with the interpretation of this rule. This *paribhāṣā* allows a variable to refer also to something contained within it. The terms *dhātu* and *prātipadika* could, therefore, also apply to items contained within them. If this *paribhāṣā* were not accepted, problems would arise in relation to the *sUP* contained, for instance, in *putrīya*. This is a verbal root which is derived from the string

putra + *am* + *KyaC*

(3.1.8 *supaḥ ātmanaḥ kyac*), where rule 7.4.33 *kyaci ca* replaces the final *a* of *putra* with *ī*, to yield:

putr + *ī* + (*K* → ∅) *ya* + (*C* → ∅).

The resultant unit

putrī + *am* + *ya*

is termed *dhātu* by 3.1.32 *sanādyantā dhātavaḥ*. Our present rule then applies to delete the *am* to yield *putrīya*.

However, if one interprets the dual ending in *dhātuprātipadikayoḥ* as locative (*saptamī*), a problem could arise in deleting *am* by the present rule. The locative, then, could only denote *upaśleṣa* 'proximity'. This being the case, rule 2.4.71 would become applicable only to, for example, instances such as the *sU* of *vṛkṣa* + *sU*, where *sU* must remain in the proximity of the nominal stem *vṛkṣa*. Alternatively, if a genitive dual interpretation is accepted within the stipulation of the *paribhāṣā* # 90, everything will be in order. That is, deletion of a *sUP* then does not have to be conditioned by the proximity with a nominal stem.

The *paribhāṣā* is especially necessary so that a *sUP*, such as *am*, contained within a root like

putrī + *am* + *ya*,

could still be recognized as separate from the group (*samudāya*) for purposes of this deletion. For, a part (*avayava*) contained within a group may also qualify for the term applicable to the group: *samudāyeṣu hi pravṛttāḥ śabdāḥ avayaveṣv api varttante*. The nominal ending thus can be termed either a nominal stem, or a verbal root. This will obviously create further problems in deleting the *sUP*.

2.4.72 **अदिप्रभृतिभ्यः शपः**

adiprabhṛtibhyaḥ śapaḥ
/ *adiprabhṛtibhyaḥ* 5/3 = *adiprabhṛti yeṣāṃ te* = *adiprabhṛtayaḥ* (*bv.*), *tebhyaḥ*; *śapaḥ* 6/1 /
(*luk* # 58)
adiprabhṛtibhya uttarasya śapo lug bhavati
Affix *ŚaP* (3.1.68 *karttari*...) is deleted by *LUK* when it occurs after roots enumerated in the list headed by *adĀ* 'to eat'.

EXAMPLES:

atti 'he eats'
hanti 'they kill'

2.4.73 **बहुलं छन्दसि**

bahulaṃ chandasi
/ *bahulam* 1/1 *chandasi* 7/1 /
(*luk* # 58, *adiprabhṛtibhyaḥ śapaḥ* # 72)
chandasi viṣaye śapo bahulaṃ lug bhavati
Affix *ŚaP* is variously deleted by *LUK* in the Vedic when it occurs after roots enumerated in the list headed by *adĀ*.

EXAMPLES:

vṛtraṃ hanati 'he kills Vṛtra'
ahiḥ śayate 'the snake reclines'
trādhvaṃ no devāḥ 'O gods, protect us'

1. Note that *bahulam* 'variously' means that a given provision, such as the deletion of *ŚaP*, applies irregularly.

2.4.74 **यङोऽचि च**

yaṅo 'ci ca
/ *yaṅaḥ* 6/1 *aci* 7/1 *ca* Ø /
(*luk* # 58, *bahulaṃ chandasi* # 73)
yaṅo lug bhavati aci pratyaye parataḥ; cakāreṇa bahulagrahaṇam anukṛṣyate, na tu chandasīti
Affix *yaṄ* (3.1.22 *dhātor...*) is variously deleted by *LUK* when affix *aC* (3.1.134 *nandigrahi...*) follows.

EXAMPLES:

loluvaḥ 'he who cuts again and again'
popuvaḥ 'he who wipes again and again'
śākuniko lālapīti 'the bird hunter speaks again and again'
dundubhir vāvadīti 'the drum is sounding again and again'

1. The *ca* of this rule is used to attract *bahulam*, and not *chandasi*. Consequently, affix *yaṄ* is variously deleted in both the Vedic and Classical languages (*bhāṣā*). By *bahulam*, we understand that deletion or the lack of it obtains where it is desired, or undesired, respectively. The *aC* refers to affix *aC*, not to the abbreviatory term *aC* which denotes vowels. It is for this reason that the *Kāśikā* in its gloss uses *ac-pratyaye*. It is also stated that, because of *bahulam*, deletion may become applicable to *yaṄ* occurring even before a non-*aC* affix. Obviously, this all constitutes some further expatiation of the notion of *bahulam*.

2.4.75 **जुहोत्यादिभ्यः श्लुः**

juhotyādibhyaḥ śluḥ
/ *juhotyādibhyaḥ* 5/3 = *juhoti ādir yeṣāṃ te* = *juhotyādayaḥ* (*bv.*), *tebhyaḥ*; *śluḥ* 1/1 /
(*śapaḥ* # 72)
juhotyādibhya uttarasya śapaḥ ślur bhavati
Affix *ŚaP* is deleted by *ŚLU* when it occurs after roots enumerated in the list headed by *hu* 'to call; to perform a ritual sacrifice'.

EXAMPLES:

juhoti 'he performs the ritual'
bibharti 'he provides for...'

1. This rule only carries the *anuvṛtti* of *ŚaP*, and not of *yaṄ*. Additionally, *ŚaP* is replaced by *ŚLU* to thereby cause reduplication (*dvitva*) by 6.1.10 *ślau*.

2.4.76 **बहुलं छन्दसि**

bahulaṃ chandasi
/ *bahulam* 1/1 *chandasi* 7/1 /
(*śapah* #72, *juhotyādibhyaḥ śluḥ* #75)
chandasi viṣaye bahulaṃ śapaḥ ślur bhavati
Affix *ŚaP* is variously deleted by *ŚLU* in the Vedic when it occurs after roots enumerated in the list headed by *hu*.

EXAMPLES:

dāti priyāṇi 'he gives pleasant things'
dhāti priyāṇi 'he holds pleasant things'

1. Here again *bahulam* implies *yatroktaṃ tatra na bhavati anyatrāpi bhavati* 'it does not apply where provided for but does apply elsewhere'. That is, it does not apply after roots belonging to the class headed by *hu* 'to call', while elsewhere it does apply.

2.4.77 **गातिस्थाघुपाभूभ्यः सिचः परस्मैपदेषु**

gātisthāghupābhūbhyaḥ sicaḥ parasmaipadeṣu
/ *gāti...bhyaḥ* 5/3 = *gātiś ca sthāś ca ghuś ca pāś ca bhūś ca* = *gātisthāghupābhūvaḥ* (*itar. dv.*), *tebhyaḥ*; *sicaḥ* 6/1 *parasmaipadeṣu* 7/3 /
(*luk* # 58)
'*gāti sthā, ghu, pā, bhū*' *ity etebhyaḥ parasya sico lug bhavati parasmaipadeṣu*
Affix *sIC* (3.1.44 *cleḥ sic*) is deleted by *LUK* when it occurs after *gā* 'to go', *sthā* 'to stand', *ghu* 'roots termed *ghu*'. (cf. 1.1.20 *dādhāghv adāp*), *pā* 'to drink', or *bhū* 'to be, become', and a *parasmaipada* (1.4.99 *laḥ paras...*) affix follows.

EXAMPLES:

agāt 'he went'
asthāt 'he stayed'
adāt 'he gave'
adhāt 'he held'
apāt 'he drank'
abhūt 'it became...'

1. Note that only *LUK*, and not *ŚLU*, is carried to this rule. Additionally, *gāti* refers to the replacement *gā* of verbal root *iṆ* 'to go', as is provided for by rule 2.4.45 *iṇo gā luṅi*. It is further stated that *pā* refers to *pib* 'to drink'. The term *ghu* is assigned by rule 1.1.20 *dādhāghv adāp*. Finally, *LUK* obtains only in *parasmaipada* 'active'.

2.4.78 **विभाषा घ्राधेट्शाच्छासः**

vibhāṣā ghrādheṭśācchāsaḥ
/ vibhāṣā 1/1 *ghrādheṭśācchāsaḥ* 5/1 = *ghrāś ca dheṭ ca śāś ca chāś ca sāś ca* = *ghrādheṭśācchāsam* (*sam. dv.*), *tasmāt /*
(*luk* # 58, *sicaḥ parasmaipadeṣu* # 77)
'*ghrā, dheṭ, śā, chā, sā*' *ity etebhya uttarasya sicaḥ parasmaipadeṣu vibhāṣā lug bhavati*
Affix *sIC* optionally is deleted by *LUK* when it occurs after *ghrā* 'to smell', *dheT* 'to suck, drink', *śā (śo)* 'to pare', *chā (cho)* 'to cut', or *sā (so)* 'to destroy', and a *parasmaipada* affix follows.

EXAMPLES:

aghrāt 'he smelled'
aghrāsīt 'id.'
adhāt 'he sucked'
adhāsīt 'id.'
aśāt 'he pared'
aśāsīt 'id.'
acchāt 'he cut'
acchāsīt 'id.'
asāt 'he destroyed'
asāsīt 'id.'

1. Note that verbal root *dheṬ* is assigned the term *ghu*. As such, it already had the deletion of *sIC* made obligatorily available (*prāpta*) by the preceding rule. Our present rule makes that obligatory provision optional. In case of the other cited roots, no provisions have previously been made available (*aprāpta*). This rule makes it optionally available. See the appendix for derivational details.

2.4.79 **तनादिभ्यस्तथासोः**

tanādibhyas tathāsoḥ
/ tanādibhyaḥ 5/3 = *tan ādir yeṣāṃ te* = *tanādayaḥ* (*bv.*), *tebhyaḥ*; *tathāsoḥ* 7/2 = *taś ca thāś ca* = *tathāsau* (*itar. dv.*), *tayoḥ /*
(*luk* # 58, *sicaḥ parasmaipadeṣu* # 77, *vibhāṣā* # 78)
tanādibhya uttarasya sicas tathāsoḥ parato vibhāṣā lug bhavati

Affix *sIC* optionally is deleted by *LUK* when it occurs after roots enumerated in the class headed by *tanU* 'to expand', and when affixes *ta* 'third person singular *ātmanepada*' and *thās* 'second person singular *ātmanepada*' follow.

EXAMPLES:

atata 'he expanded'
ataniṣṭa 'id.'
atathāḥ 'you expanded'
ataniṣṭhāḥ 'id.'

1. Note that the earlier rules have this deletion taking place in the active. This rule, however, requires the deletion before middle affixes *ta* and *thās*. Affix *ta*, because of its association (*sāhacarya*) here with *thās*, refers to *ātmanepada* 'middle'. See the appendix for derivational details.

2.4.80 **मन्त्रे घसह्वरणशवृदहाद्वृच्कृगमिजनिभ्यो लेः**

mantre ghasahvaraṇaśavṛdahādvṛckṛgamijanibhyo leḥ
/ *mantre* 7/1 *ghasa...janibhyaḥ* 5/3 = *ghasaś ca hvaraś ca ṇaśaś ca vṛ ca dahaś ca āc ca vṛj ca kṛ ca gamiś ca janiś ca* = *ghasahvara...janayaḥ* (*itar. dv.*), *tebhyaḥ*; *leḥ* 6/1 /
(*luk* # 58)
mantraviṣaye 'ghasa, hvara, ṇaśa, vṛ, daha, āt, vṛc, kṛ, gami, jani' ity etebhya uttarasya ler lug bhavati
Affix *LI* (*CLI*; 3.1.43 *cli luṅi*) is deleted by *LUK* in the Vedic when it occurs after *ghasL* 'to eat', *hvṚ* 'to be crooked', *ṇaśĀ* 'to be destroyed', *vṛÑ* to 'choose, cover', *dah* 'to burn', *āT* 'roots which end in *ā*', *vṛcĀ* 'to avoid', *DUkṛÑ* 'to make, do', *gamI* 'to go', or *janI* 'to be born'.

EXAMPLES:

akṣan pitaro' mīmadanta pitaraḥ (*Tai Sam*1.8.5.3) 'our forefathers ate the ritual oblation and were pleased'
mā hvarmitrasya tvā (*Tai Sam* 1.1.4.1) 'you should not have acted deceitfully toward friends'
dhūrtiḥ praṇaṅ martyasya (*RV* 1.18.3) '...destruction brought by humans'
suruco vena āvaḥ (*Vāj* 13.3) 'the glowing sun illuminated (covered) the universe'
ādhak (*RV* 6.61.14) '...has burnt'
āprā dyāvāpṛthivī antarikṣam (*RV* 1.115.1) '...filled the sky, earth, and horizon with its rays'
parā varg bhārabhṛdyathā (*RV* 8.75.12) '...threw like one who carries loads'

akran 'they made'
agman 'they went'
ajñata vā asya dantāḥ (*Ait* 7.14.2) 'his teeth had not then appeared'

1. The word *mantra* is used here as an *upalakṣaṇa* 'indicator, mark' for *chandas* 'Vedic in general'. Jinendrabuddhi (*Nyāsa* ad *Kāś* II: 325-26) raises the question of using *LI* when *sIC* is already in use. The *LI* here refers to *CLI* which, in turn, is substituted by *sIC* (3.1.44 *cleḥ sic*). It is stated that *LI* is mentioned for subsequent rules. Additionally, it is used here to indicate that operations relative to *sIC* provided, for example, by rule 6.1.187 *ādiḥ sico' nyatarasyām*, are not carried. See the appendix for derivational details.

2.4.81 **आमः**

āmaḥ
/ *āmaḥ* 5/1 /
(*luk* # 58, *leḥ* # 80)
āmaḥ parasya ler luk bhavati
Affix *LI(LIṬ)* is deleted by *LUK* when it occurs after affix *ām* (3.1.35 *kāspraty...*).

EXAMPLES:

īhāṃcakre 'he exerted...'
ūhāṃcakre 'he reasoned...'
īkṣāṃcakre 'he desired...'

1. Note that *āmaḥ* refers to affix *ām* which, in turn, is introduced after verbal root *īhĀ* 'to strive' by rule 3.1.36 *ijādeś ca...*, under the condition of a following affix, namely *LIṬ*. This also means that *LI*, carried from the preceding rule, is now making the reference to *LIṬ*. A reference to *CLI*, as in the previous rule, would not make sense here. Derivational details are given under rule 1.1.63 *āmpratyayavat....*

2.4.82 **अव्ययादाप्सुपः**

avyayād āpsupaḥ
/ *avyayāt* 5/1 *āpsupaḥ* 6/1 = *āp ca sup ca* = *āpsup* (*sam. dv.*), *tasya* /
(*luk* # 58)
avyayād uttarasyāpaḥ supaś ca lug bhavati
Affixes *āP* (*ṬāP*, *ḌāP*, *CāP*; feminine affixes, cf. 4.1.3 *striyām*) and *sUP* are deleted by *LUK* when they occur after an *avyaya* 'indeclinable'.

EXAMPLES:

tatra śālāyām 'there in the house'
yatra śālāyām 'in the house where...'

kṛtvā 'having made'
hitvā 'having impelled'

1. The word *tatra* and *yatra* are derived by introducing affix *traL* after specific bases ending in *saptamī* 'seventh triad of *sUP*' (5.3.10 *saptamyās*...). *Kāśikā* offers the first example

tatra śālāyām 'there in the house'

where *tatra* ends in *traL* and is termed an *avyaya* (1.1.38 *taddhitaś cā*...). The term 'indeclinable' is available to *tatra* on the strength of its being a form ending in a *taddhita*. The word *śālā* ends in the feminine affix *ṬāP* and is modified by *tatra*. Because it is a qualifier (*viśeṣaṇa*), the affix must also end in feminine, like *śālā*, which is the qualified (*viśeṣya*). This requires the introduction of *ṬāP* after *tatra*, which our present rule deletes by *LUK*. Similarly, *sUP* affixes introduced after nominal stems termed *avyaya* are also deleted. A case in point could be the *avyayībhāva* compound which is termed an *avyaya*, as well as a nominal stem (1.2.45 *kṛttaddhitasamāsāś ca*). The details of a deletion of *sUP* after an *avyayībhāva* compound are to be found under relevant rules.

2.4.83 **नाव्ययीभावादतोऽम्त्वपञ्चम्याः**

nāvyayībhāvād ato 'm tv apañcamyāḥ
| na ∅ avyayībhāvāt 5/1 *ataḥ* 5/1 *am* 1/1 *tu ∅ apañcamyāḥ* 6/1 = *na pañcamī* = *apañcamī* (*nañ. tat.*), *tasyāḥ |*
(*luk #* 58, *avyayād āpsupaḥ#* 82)
adantād avyayībhāvād uttarasya supo na lug bhavati, amādeśas tu tasya supo bhavaty apañcamyāḥ
A *sUP* which occurs after an *avyayībhāva* compound ending in *aT* (*a*; 1.1.70 *taparas*...) is not deleted; instead, *sUP* is replaced by *am* provided it is not a *pañcamī* 'fifth triplet of *sUP*'.

EXAMPLES:

upakumbhaṃ tiṣṭhati '... is sitting near the pitcher'
upakumbhaṃ paśya '... see near the pitcher'

1. This rule makes two provisions:
(*i*) for the negation (*pratiṣedha*) of the *LUK*-deletion of a *sUP* which occurs after an *avyayībhāva* compound ending in *a*; and
(*ii*) for the replacement by *am* of that same *sUP*, except when it is an ablative (*pañcamī*).

The rule, therefore, forms an exception to that which precedes it. It also requires that two operations should be performed simultaneously (*yugapad*). Further, we are dealing with a negative as well as a positive

provision. If both provisions are given in the form of a single rule problems may occur. For instance, an *am* replacement may also be negated, on account of its association with the negation of *LUK*-deletion.

The *Mahābhāṣya* (III: 902-3) discusses the proposal to split this rule into two *(yogavibhāga)*, as follows.

(*i*) ***nāvyayībhāvād ataḥ...*** 'deletion by means of *LUK* of a *sUP* which occurs after an *avyayībhāva* compound ending in *a* does not take place...'

(*ii*) ***am tv apañcamyāḥ*** 'a *sUP* which occurs after an *avyayībhāva* compound ending in *a* which is not a *pañcamī* is replaced by *am*'

This arrangement separates the two provisions of the rule. The negation of *apañcamyāḥ* in this split interpretation is read in the context of *paribhāṣā* 62:

> *anantarasya vidhir vā bhavati pratiṣedho vā* 'an operation (*vidhi*) or negation (*pratiṣedha*) applies to that which is most immediate (*anantara*)'.

The *Mahābhāṣya*, however, rejects the proposed rule-splitting, saying that *tu*, itself, will account for this. In what way? This word *tu* 'indeed' would become restrictive (*niyāmaka*), and would mean:

'*pañcamī* '...ablative' indeed will not be replaced by *am*'.

Note that *Kāśikā*, perhaps for the sake of clarity, puts the *vṛtti* of this rule into two sentences:

> *adantād avyayībhāvād uttarasya supo na lug bhavati /*
> *amādeśas tu tasya supo bhavaty apañcamyāḥ//*

2.4.84 तृतीयासप्तम्योर्बहुलम्

tṛtīyāsaptamyor bahulam

/ tṛtīyāsaptamyoḥ 6/2 *tṛtīyā ca saptamī ca = tṛtīyāsaptamyau* (*itar. dv.*), *tayoḥ; bahulam* 1/1 /

(*nāvyayībhāvād ato 'm tv apañcamyāḥ* # 83)

tṛtīyāsaptamyor vibhaktyor bahulam ambhāvo bhavati

A *tṛtīyā* or *saptamī* is variously replaced by *am* when it occurs after an *avyayībhāva* compound which ends in *a*.

EXAMPLES:

upakhumbhena kṛtam 'made near the pitcher'
upakumbhaṃ kṛtam 'id.'
upakumbhe nidhehi 'place it near the pitcher'
upakumbhaṃ nidhehi 'id.'

1. Note that rule 2.4.83 *nāvyayībhāvād...* provides for an obligatory

replacement of a nominal ending by *am* after an *avyayībhāva* compound. It offers *am* by way of negating the deletion of an ending by *LUK*. The present rule makes the obligatory provision of *am* 'various' (*bahulam*). As a consequence *am* may or may not replace the *tṛtīyā* or *saptamī* which occurs at the end of an *avyayībhāva* compound ending in *a*. Note that *am* was offered by the previous rule to block the *LUK*-deletion. The same will happen here. That is, if *am* does not replace an ending, deletion will not apply. Thus, we get examples like the first pair given above.

2.4.85 लुटः प्रथमस्य डारौरसः

luṭaḥ prathamasya ḍāraurasaḥ
/ *luṭaḥ* 6/1 *prathamasya* 6/1 *ḍāraurasaḥ* 1/3 = *ḍāś ca rauś ca raś ca* (*itar. dv.*) / *luḍādeśasya prathamapuruṣasya parasmaipadasyātmanepadasya ca 'ḍā, rau, ras' ity ete ādeśā bhavanti yathāsaṃkhyam*
The third person *tiṄ*-replacements of *LUṬ* (3.3.15 *anadyatane...*) are replaced by *Ḍā*, *rau*, and *ras*, respectively.

EXAMPLES:

kartā 'he will make'
kartārau 'they two will make'
kartāraḥ 'they will make'
adhyetā 'he will study'
adhyetārau 'they two will study'
adhyetāraḥ 'they will study'

1. Our rule concerns the third personal (*prathama*; 1.4.101 *tiṅa-strīṇitrīṇi...*) replacements of *LUṬ* (3.3.15 *anadyatane luṭ*), which are *tiP*, *tas*, and *jhi* of *parasmaipada* (1.4.99 *laḥ parasmaipadam*); and *ta*, *ātām*, and *jha* of *ātmanepada* (1.4.100 *taṅānāv ātmanepadam*). The rule here requires that these should be replaced by *Ḍā*, *rau*, and *ras*. Obviously, such replacement entails six substitutes for three substituenda. The assignment of equivalency in terms of the order of enumeration (*saṃkhyātānudeśa*; 1.3.10 *yathāsaṃkhyam anudeśaḥ samānām*) is ruled out because of the unequal number of the corresponding substituenda. Equivalency has therefore to be assigned by the most immediate context (*ānantarya*) of meaning (*artha*). This happens to be the singular, dual, and plural in each category of *parasmaipada* and *ātmanepada*. That is, the same three replacements will replace the singular, dual, and plural elements in the categories of *parasmaipada* and *ātmanepada*. Rule 1.3.10 regulates equivalency within the single categories of *parasmaipada* and *ātmanepada*. Thus, *Ḍā*, *rau*, and *ras* replace *tiP*, *tas*, and *jhi* respectively in *parasmaipada*. Similarly, they replace *ta*, *ātām*, and *jha* in *ātmanepada*.

Adhyāya Three

3.1.1 प्रत्ययः

pratyayaḥ
/pratyayaḥ 1/1/
pratyayaśabdaḥ saṃjñātvenādhikriyate
An affix...

EXAMPLES:

kartavyám 'that which should be done'
karaṇīyám 'that which is to be done'

1. This is an *adhikāra*, and as such, *pratyayaḥ*, a name (*saṃjñā*), carries to all rules through the end of book five (*adhyāya*). Consequently, all items introduced in this domain, within specified contexts, will be termed *pratyaya*. An exact specification as to what qualifies assignment of the term *pratyaya* within this domain follows. But first, it is important to understand the nature of this term.

The term *pratyaya* is introduced by way of an *adhikāra* so assignment of the term, as well as operations relative to it, can be accomplished with economy (*lāghava*). It would, obviously, be prolix (*gaurava*) if individual rules were formulated to assign the term *pratyaya* each time a *pratyaya* was introduced. The reason, simply put, is that the *saṃjñā* is one and the name bearers (*saṃjñin*) many; there is hardly a shared, or common, feature by which assignment of the term can easily be made. Hence, it is not possible, for example, to formulate a rule similiar to 1.1.73 *vṛddhir yasyācām ādis tad vṛddham*, whereby assignment of the term *pratyaya* could be made following the pattern of the term *vṛddha*.

Formulating a general rule *sap pratyayaḥ* to assign the term *pratyaya* to items denoted by the abbreviatory term *saP* would not be successful. For it is not, necessarily, an accurate assumption that our abbreviation *saP* is formed by joining the *sa* of 3.1.7 *dhatoḥ samānakartṛkād icchāyāṃ vā san* and the *P* of 5.4.151 *uraḥ prabhṛtibhyaḥ kap*. For example, consider rules 3.1.34 *sib bahulaṃ leṭi* and 3.1.106 *vadaḥ sup kyap ca*, etc. If one were to operate in accordance with *pratyāsatti-nyāya*, the maxim of proximity, the *P* of *saP* would be interpreted as that of the *siP* in 3.1.34 *sib bahulaṃ leṭi*. It is, therefore, argued that the maxim of pervasion, or extended limit (*vyāpti*), should be accepted. Consequently, the *P* would be interpreted as the *P* of *tanaP* (7.1.45 *taptanapta...*). However, this mode of assignment for the term *pratyaya* will just not work. For, there are many other *P* used as *it*.

2. Commentators identify two types of meanings: *laukika*, the general meaning obtained from usage; and *śāstrīya*, the meaning one gets both by the process of concurrent presence (*anvaya*) and concurrent absence (*vyatireka*). This second is called the technical (*śāstrīya*) meaning as it is only valid within the realm of grammar. Pāṇini assigns certain meanings to affixes which can be discerned by comparing forms through the technique of *anvaya* and *vyatireka*. The idea is to compare forms and assign meaning differentials to corresponding units of formal differences.

The term *pratyaya* can be treated as used in its traditional etymological sense (*anvarthasaṃjñā*) of 'that by means of which meaning is made comprehensible' (*pratiyanty anena artham*). This also includes instances where the particular meaning of an affix is left without any specification (*anirdiṣṭa*). Such affixes must then be interpreted as denoting *svārtha*, the sense of the base after which they are introduced (*anirdiṣṭāḥ pratyayāḥ svārthe bhavanti*).

The preceding discussion begs the question as to whether or not a *vikaraṇa* such as *ŚaP* (3.1.68 *karttari śap*), or an *āgama* 'augment' such as *aṬ* can be assigned the term *pratyaya*. It can be argued, here, that since such affixes are not assigned any meaning they should not qualify for the term. This argument is countered, however, on grounds that traditionally when they have not been assigned any particular meaning, they denote *svārtha*. This assumption qualifies them for the assignment of the term *pratyaya*.

The tradition treats *āgama*, a term which Pāṇini did not use, as secondary elements (*guṇībhūta*). That is, *āgama* are introduced to items as their initial (*ādi*), final (*antya*), or inserted elements, depending on whether they are marked with *Ṭ*, *K*, or *M*, respectively (1.1.46 *ādyantau*...; 1.1.47 *mid aco' ntyāt paraḥ*). Refer also to the *Pbh.* (12): *yadāgamās tadguṇībhūtās tadgrahaṇena gṛhyante* whereby a reference to an *āgama* is to be made by that whose part it has become. This then implies that an *āgama* can be called an affix only when it becomes the part of an affix. Assignment of the term will apply only to the larger unit which includes the *āgama*, and not to the *āgama* per say. Thus, an *āgama*, from this viewpoint, is not an affix. In contrast, *vikaraṇas* have been accepted as affixes as is obvious from their operational contexts. Moreover, an affix is generally introduced (*vidhīyate*) with reference to a *dhātu* (3.1.91 *dhātoḥ*), or a *prātipadika* (4.1.1 *ṅyāp-prātipadikāt*), its subject (*uddeśya*). That is, an affix constitutes the predicate (*vidheya*) in relation to its base. Such a relationship is not possible in case of an *āgama*. A *vikaraṇa*, such as *ŚaP* (3.1.68 *kartari śap*), can be introduced under the condition of the assignment of the technical term *sārvadhātuka* (3.4.113 *tiṅśit sārvadhātukam*), relative to a *dhātu*, with operational consequences. We already know that items denoted by the abbreviatory term *tiṄ* are termed affixes. The association of *tiṄ* with *śit*

(in rule 3.4.113), referring to items such as *ŚaP*, also qualifies *ŚaP*, etc., to be similarly called affixes. Rule 3.1.93 *kṛd atiṅ*, indeed, assigns the term *kṛt* to affixes other than those denoted by the abbreviatory term *tiṄ*. Pāṇini, again, does not use the term *vikaraṇa*.

Scope: 1.1.62 *pratyayalope pratyayalakṣaṇam*, etc.

3.1.2 परश्च

paraś ca
/paraḥ 1/1 *ca* Ø/
(*pratyayaḥ* #1)
paraś ca sa bhavati dhātor vā prātipadikād vā yaḥ pratyayasaṃjñaḥ
And that which is termed an affix occurs subsequently....

EXAMPLES:

karttavyam 'that which should be done'
taittirīyam 'a treatise composed by Tittiri'

1. This rule is also an *adhikāra*. Or else, it can be interpreted as a *paribhāṣā*. For rule 3.1.2, when joined with rule 3.1.1, yields the following interpretation:

'that which is assigned the term *pratyaya* occurs subsequently...'

If one treats rule 3.1.2 as an *adhikāra* then one also has to accept that it is carried to each and every rule (*pratiyogam upatiṣṭhate*) of the domain headed by rule 3.1.1 *pratyayaḥ*. A *paribhāṣā* interpretation would enable it to sit in one place (*ekadeśastha*), though at the same time be applicable throughout the domain (*sarvatra śāstre vyāpriyate*) like a lamp placed in one place yet capable of illuminating the entire room (*sarvaṃ veśmam abhijvalayati*). It, however, does not have to be carried to each and every rule of the domain (*na tu pratiyogam upatiṣhate*). If it is an interpretive provision (*paribhāṣā*), then it must also have a characteristic mark (*liṅga*). Of course, the characteristic mark, in this case, is the assignment of the term *pratyaya* itself.

The purpose of *ca*, when it does not function to bring anything unstated close to a given context (*anuktasamuccaya*), is *avadhāraṇa* 'delimitation, exact specification'. Consequently, we understand that what is assigned the term *pratyaya* occurs only after a root (*dhātu*), or a nominal stem (*prātipadika*). Incidentally, since *dhātu* is generally identified as 'that which denotes an action', an affix can be introduced after anything that denotes action. This way, a *pada* which ends in a *tiṄ* can also qualify for the introduction of an affix. Similarly, a *pada* which ends in a *sUP* along with items which may end in feminine affixes (4.1.1 *ṅyāp-prātipadikāt*), would also qualify for the introduction of an affix. This obligatory requirement of subsequent occurrence may not restrict an *uṇādi* affix to occur only subsequently because of *bahulam* 'variously' of 3.3.1 *uṇādayo bahulam*.

With the condition of *paratva* no longer obligatory, the *uṇādi* affixes can be preposed, postposed, or even infixed.

3.1.3 आद्युदात्तश्च

ādyudāttaś ca
/*ādyudāttaḥ* 1/1 = *ādir udātto yasya (bv.); ca* Ø/
(*pratyayaḥ* #1, *paraś ca* #2)
ādyudāttaś ca bhavati yaḥ pratyayasaṃjñaḥ
That which is termed an affix, and occurs subsequently, is high-pitched initially.

EXAMPLES:

kārttavyám
taittirīyám

3.1.4 अनुदात्तौ सुप्पितौ

anudāttau suppitau
/*anudāttau* 1/2 *suppitau* 1/2/
(*pratyayaḥ* #1, *paraś ca* #2)
supaḥ pitaś ca pratyayānudāttā bhavanti
That which is termed an affix, occurs subsequently, and is denoted by *sUP* (*svaujas....*, 1.4.103 *supaḥ*), or is marked with *P* as an *it*, is low-pitched initially.

EXAMPLES:

dṛṣadau 'nom. du. of *dṛṣad* 'pebble'
dṛṣadáḥ 'nom. plural ...'
pacáti 'he is cooking'
paṭháti 'he is reading, reciting'

1. This rule constitutes an exception to the preceding one. That is, what the preceding rule made unavailable (*aprāpta*) is made available (*prāpta*) here by the present rule. The *sUP*, in this rule, refers to the *pratyāhāra* 'abbreviatory term' *sUP*, which denotes nominal endings (4.1.2 *svaujas*...). Why can it not be interpreted as the locative plural (*saptamī bahuvacana*) *suP*? In that case, the *anudātta* accent would thus become available to it automatically on the basis of the inclusion of *pit* within this rule. To make a specific provision for *anudātta* by means of a locative (*saptamī*) would thus become unnecessary. Therefore, the interpretation of *sUP* as the *suP* of locative plural would just not make any sense. The last two examples illustrate accent as conditioned by affix *tiP* which, obviously, is an item marked with *P* (*Pit*).

3.1.5 गुप्तिज्किद्भ्यः सन्

guptijkidbhyaḥ san
/*guptijkidbhyaḥ* 5/3 (*dv.*) / *san* 1/1 /
(*pratyayaḥ* # 1, *paraś ca* # 2)
'gupa gopane, tija niśāne, kita nivāse' etebhyo dhātubhyaḥ san pratyayo bhavati
Affix *saN* occurs after verbal roots *gupA* 'to protect, preserve, hide', *tijA* 'to sharpen' and *kitA* 'to dwell, to percieve'.

EXAMPLES:

jugupsate 'he censures, despises...'
titikṣate 'he forbears, endures...'
cikitsate 'he cures (a disease)...'

1. Note that this rule does not specify the semantic condition under which affix *saN* is to be introduced. It is generally believed that affixes which are not assigned a particular meaning are treated as denoting the sense of their bases (*anirdiṣṭāḥ pratyayāḥ svārthe bhavanti*). A *vārttika* (cf. *Kāśikā* under this rule) states that *saN* is desired when the derivates denote *nindā* 'censure', *kṣamā* 'forgiving', and *vyādhipratīkāra* 'curing diseases'. Haradatta (*PM* ad *Kāśikā*) calls this meaning qualification non-universal (*prāyikam etad upādhivacanam*). *Nyāsa* states that *nindā*, etc., indeed constitute the denotata of *saN*. This can be ascertained by employing the technique of *anvaya* 'concurrent presence' and *vyatireka* 'concurrent absence'. Thus, given *jugupsate* and *gopayati* 'hides', a comparison marked by the presence of *saN* in the first, and its absence in the second, also corresponds to the presence and absence of the meaning of *nindā*, etc. This difference in meaning is to be attributed to *saN*. Incidentally, affix *SaN* is to be introduced after specified verbal roots used with meanings discussed here. Elsewhere, these roots will take their regular forms, *gopayati*, etc.

2. Commentators explain that introduction of *saN* here, as well as in the next rule, is made with reference to individual roots, and not with the express mention of *dhātoḥ* 'after a verbal root'. It is for this reason that this *saN* is not assigned the term *ārdhadhātuka* by rule 3.4.114 *ārdhadhātukaṃ...* As a consequence, *saN* cannot condition the introduction of augment *iṬ* by rule 7.2.35 *ārdhadhātukasyeḍ valādeḥ*. This absence of *iṬ* constitutes the major operational difference between the *saN* of these two rules and the *saN* which is introduced by rules 3.1.7 *dhātoḥ...*, etc. *Kāśikā* claims that the *anudātta* vowel in *gupĀ* 'to hide', etc., as an *it*, is intended for *ātmanepada* endings by rule 1.3.12 *anudāttaṅita ātmanepadam*. It is because *anudātta* is an *it* that *gupĀ*, here, could not refer to '*gupA*' 'be agitated' or '*gupU*' 'to preserve, protect'.

3.1.6 मान्बधदान्शान्भ्यो दीर्घश्चाभ्यासस्य

mānbadhadānśānbhyo dīrghaś cābhyāsasya
/ mān...śānbhyaḥ 5/3 *dīrghaḥ* 1/1/ *ca* ∅ *abhyāsasya* 6/1/
(pratyayaḥ # 1, *paraś ca* # 2, *san* # 5)
'māna pūjāyām, badha bandhane, dāna avakhaṇḍane, śāna avatejane' ity etebhyo dhātubhyaḥ san pratyayo bhavati,
abhyāsasya cekārasya dīrghādeśo bhavati
Affix *saN* occurs after verbal roots *mānA* 'to honor, respect', *badhA* 'to bind, tie', *dānA* 'to split, cut in pieces' and *śānA* 'to sharpen'; in addition, long *ī* replaces the short *i* of the *abhyāsa* 'reduplicated syllable'.

EXAMPLES:

mīmāṃsate 'he investigates...'
bībhatsate 'he detests...'
dīdāṃsate 'he straightens out...'
śīśāṃsate 'he sharpens...'

1. Note that out of the four verbal roots *mānA*, *badhA*, *dānA*, and *śānA*, the first two are marked with *anudātta* as their *it*. The last two are marked with *svarita* as an *it*. Consequently, the first two get the *ātmanepada* endings by rule 1.3.12 *anudāttaṅita ātmanepadam* as opposed to the last two which get *ātmanepada* by rule 1.3.72 *svaritañitaḥ kartrabhiprāye...* It is obvious that this rule orders two operations: the introduction of *saN* and the long -*ī* replacement for the short -*i* of the reduplicated syllable. The *saN* again is intended under specific semantic conditions. Thus, it is introduced after *mānA* in the sense of 'desire to know' (*jijñāsā*); after *badhA* when the sense is *vairūpya* 'ugliness, disgust'; and after *śānA* when the sense is *tīkṣṇīkaraṇa* 'sharpening'.

Kāśikā proposes that '*vā*' of the following rule should be read as part of this rule. This makes the introduction of *saN* optional and hence, *mānayati*, *bādhayati*, *dānayati* and *niśānayati* are derived parallel to forms in *saN*.

3.1.7 धातोः कर्मणः समानकर्तृकादिच्छायां वा

dhātoḥ karmaṇaḥ samānakartṛkād ichāyāṃ vā
/dhātoḥ 5/1 *karmaṇaḥ* 6/1 *samānakartṛkāt* 5/1 = *samānaḥ kartā yasya tasmāt (bv.); icchāyām* 7/1 *vā* ∅/
(pratyayaḥ #1, *paraś ca* #2, *san* # 5)
iṣikarma yo dhātor iṣiṇaiva samānakartṛkaḥ tasmād icchāyām arthe vā san pratyayo bhavati
Affix *saN* optionally occurs to denote *icchā* 'wish' after roots which underlie the object of, and share the same agent with, *iṣ* 'to wish'.

EXAMPLES:

cikīrṣati 'he wishes to do'
jihīrṣati 'he wishes to carry away'

1. Note that *dhātoḥ* 'after a verbal root', *karmaṇaḥ* 'after that which is an object', and *samānakartṛkāt* 'after that which has its agent similar to the agent of' are all presented with *pañcamī* 'the fifth triad of nominal ending'. The semantic condition of *icchāyām* 'in the sense of 'to wish' is given in the locative (*saptamī*). The above translation shows the object in syntactic coordination (*sāmānādhikaraṇya*) with the verbal root which, in turn, denotes action. Recall that object (*karman*) is defined by rule 1.4.49 *kartur īpsitatamaṃ karma*, a participant in an action which the agent most desires to reach. How could the participant most desired by the agent, as interpreted by way of his action, be constituted by a *dhātu* which denotes that action? For, a *karman* is a participant in the action which the root denotes. Commentators explain that *dhātvartha*, the sense of a root, can constitute *karman*, but the sense cannot be constituted by the word-form *dhātu*. Pāṇini's use of *karmaṇaḥ* as a modifier to *dhātu*, thus, refers to the object constituted by the sense of *dhātu*. The *karmatva* 'objectness' and *samānakartṛkattva* 'same agentness' of the sense of the root (*dhātvartha*) is extended to the *dhātu* 'root' by way of its meaning (*arthadvāra*). Since *artha* 'meaning' constitutes the object and shares the identical agent, that which denotes *artha*, namely *dhātu*, by extension, can also be treated as such. Consider for example, rule 2.4.2 *dvandvaś ca...* where *prāṇyaṅga* 'part of a living organism' is also treated as the organism which it denotes it (cf. *Nyāsa* ad *Kāśikā* II:347: *artho dvāram upāyo yasya tad arthadvāram iti. arthasya karmatvāt samānakartṛkatvāc ca tad vacano' pi dhātur artha-dharmeṇopacārāt karmasamānakartṛkaś...*). Sense, thus, becomes the means for the transference of *karmatva* and *samānakartṛkatva* to the root which denotes it. This may appear to be problematic, but meaning is the only way for *karmaṇaḥ* and *samānakartṛkāt* to become modifiers (*viśeṣaṇa*) to *dhātu* in this context.

2. Why should Pāṇini explicitly state *dhātoḥ* in the rule where the same could be easily understood through the use of *karmaṇaḥ* and *smānakartṛkāt*? Commentators explain two special purposes for the explicit use of *dhātoḥ* in this rule:

(*a*) so that *saN* can not be introduced after a verbal root used with a preverb (*upasṛṣṭa*), and (*b*) so that *saN* can be assigned the term *ārdhadhātuka* under the provisions of rule 3.4.114 *ārdhadhātukaṃ śeṣaḥ*. *Kāśikā* explains the first of these functions with the example *prācikīrṣat* parallel to *prakartum aicchat* '...wished to do' where *saN* is to be introduced after *kṛ* and not after *pra+ kṛ*, *kṛ* used with the preverb *pra*. There would obviously be some derivational problems if one introduced *saN* after *prakṛ*.

First, *pra* of *prakṛ* would qualify for doubling (*dvitva*). Secondly, a *saN*-derivate with *prakṛ* would qualify to receive affixes *LAṬ*, etc., consequent upon the assignment of the term *dhātu* by rule 3.1.32 *sanādyantā dhātavaḥ*. Given these operations, especially before affix *LUṄ*, the preverb would become part of the *aṅga* (1.4.13 *yasmāt pratyayavidhis...*). Consequently, augment *āṬ* would have to be introduced to it. The resultant derivate would be incorrect, with the augment preposed to the formal unit termed an *aṅga*.

To understand the second purpose served by the explicit use of *dhātoḥ* in this rule, one can contrast it with the introduction of *saN* covered by the preceding two rules. No explicit mention of *dhātoḥ* in the preceding two rules, explain the commentators, blocks the assignment of the term *ārdhadhātuka* to their *saN*. In contrast, the assignment of the term *ārdhadhātuka* should only be made to that *saN* which is introduced with the explicit mention of *dhātoḥ*. This perhaps follows from the fact that rule 3.4.114 *ārdhadhātukaṃ...*, which assigns the term *ārdhadhātuka*, is contained in the domain of 3.1.91 *dhātoḥ* (cf. *Nyāsa* ad *Kāśikā* II:351 *ārdhadhātukaṃ śeṣaḥ ity anena dhātor ity evaṃ dhātuśabdam uccārya vihitasya pratyayasyārdhadhātukasaṃjñāvidhānāt. iha dhātor ity eva sano vidhānam ity ārdhadhātukasaṃjñā bhavati* 'because the assignment of the term *ārdhadhātuka* to an affix is made by rule 3.4.114 *ārdhadhātukaṃ śeṣaḥ* through explicit use of the word *dhātoḥ*, here, too, the term *ārdhadhātuka* can only be assigned at the strength of the introduction of *saN* with the explicit mention of *dhātoḥ*)'.

How do we know that the consequence of introducing affix *saN* with the explicit mention of the term *dhātu* is limited to the assignment of the term *ārdhadhātuka*? It is stated that assignment of the term *ārdhadhātuka* and its relative effect is the only difference seen between the derivates of this rule and those of the preceding two rules. Because this term *ārdhadhātuka* is available to the derivates under this rule, they receive the augment *iṬ* (7.2.35 *ārdhadhātukasyeḍ valādeḥ*). Obviously, this augment is lacking in the derivates of the preceding rules.

3. The conditions of *karmaṇaḥ* and *samānakartṛkāt* are given so that, for example, *saN* could not be introduced to produce a derivate parallel to *gamanena icchati* '...he wishes by means of his action of going'. The *tṛtīyā* in *gamanena* expresses *karaṇa*. The condition of *samānakartṛkāt* is required so that a *saN* derivate parallel to *bhojanam icchati* of *devadattasya bhojanam icchati yajñadattaḥ* 'Yajñadatta wishes for Devadatta to eat' is blocked on grounds that the agent of *iṣ* 'to wish' and *bhojana* 'eating' are not the same.

4. There are two interesting *vārttika* (*Mbh.* III:40-45) under this rule whereby a provision is made so that: (*a*) *saN* can be introduced when mere *āśaṃkā* 'fear, suspicion, premonition' is expressed, and (*b*) *saN*

can not be introduced after a form which already ends in *saN*. Consider the following examples:

(*i*) *pipatiṣati kūlam* 'the embankment is about to fall'
(*ii*) *śvā mumūrṣati* 'the dog is about to die'
(*iii*) *cikīrṣitum icchati* '...wishes to wish to do'

The first two examples illustrate *āśaṃkā*. These sentences can literally be translated as: 'the embankment wishes to fall' and 'the dog wishes to die' respectively. Commentators (*Nyāsa* ad *Kāś.* II:351-52) note that, in the instance of the embankment (*kūla*), *āśaṃkā* seems to be the logical meaning since *kūla*, for reasons of being inanimate, lacks the faculty of wishing. We have to additionally invoke the *āśaṃkā* meaning in case of sentence (*ii*) where, although the dog is animate, and may be spoken of as being capable of wishing, the desire to live is so strong that someone's desire to die is hard to believe.

5. Note that the restriction illustrated by sentence (*iii*) relative to the second *vārttika* can be shown to be also valid in case of at least three kinds of affixes. Consider the following verse (*Mbh.* III:45):

śaiṣikān matubarthīyāc
chaiṣiko matubarthikaḥ/
sarūpaḥ pratyayo neṣṭaḥ
sannantān na san iṣyate//

'a *śaiṣika* affix similar in form is not to be introduced after items which end in a *śaiṣika* (a *taddhita* affix introduced in the sense of something other than what has already been stated by rules prior to 4.2.92 *śeṣe*), or one that denotes the sense of *matUP* (possession; cf. 4.2.94 *tad asyāsty asminn iti matup*) ; a *saN* is also not desired after a form which ends in *saN*'

3.1.8 सुप आत्मनः क्यच्

supa ātmanaḥ kyac
/supaḥ 5/1 *ātmanaḥ* 6/1 *kyac* 1/1/
(pratyayaḥ #1, *paraś ca* #2, *karmaṇaḥ, icchāyām, vā* #7)
iṣikarmaṇaḥ eṣitur ātmasambandhinaḥ subantād icchāyām arthe vā kyac pratyayo bhavati
Affix *kyaC* optionally occurs to denote *icchā* after a *pada* which ends in *sUP* and denotes the object of one's own wish.

EXAMPLES:

putrīyati 'he wishes a son for himself'

1. As is obvious from the *vṛtti* of this rule, both *karmaṇaḥ* and *iccāyāṃ vā* are carried. This rule allows for the introduction of affix *KyaC* after a

pada which ends in a *sUP*. This *pada* ending in a *sUP* is qualified, as was *dhātoḥ* in the preceding rule, by *karmaṇaḥ*. Consequently, the *pada* after which *KyaC* is to be introduced is to constitute the object of *iṣ* 'to wish'. Furthermore, *ātmanaḥ* 'one's own' is interpreted as denoting the object of the wish by the agent of *iṣ*. Again the derivate is optional. Thus, *putrīyati*, a derivate in *KyaC* introduced after *putra* + *am*, a *pada* which ends in a *sUP* and constitutes the object of *iṣ*, can be used alternately with *ātmanaḥ putram icchati* 'he wishes a son for himself'.

Note that the condition of *supaḥ* is included so that *KyaC* can be introduced after a *pada*. Obviously, *supa* is here interpreted as denoting a form which ends in a *sUP* (*subantāt*). This is possible in view of the *Paribhāṣā* (24): *pratyayagrahaṇe tadantā grāhyāḥ*. Of course, the two conditions of *karmaṇaḥ* and *icchāyāṃ vā* must also be met. It is further stated that the condition of *sUP* is included so that **mahāputrīyati* parallel to *mahāntaṃ putram icchati* '...wishes a great son...' could not be derived by introducing *KyaC* after a sentence (*vākya*). Note, however, that *mahāputrīyati* can still be derived parallel to the string *mahāputram icchati* by first combining *mahat* + *sU* + *putra* + *sU* to yield *mahāputra* and then providing *mahāputra* + *am* for this introduction of *KyaC*.

The condition of *ātmanaḥ* runs parallel to *samānakartṛkāt* of the preceding rule. The condition of *samānakartṛkatva* 'identical agent' makes it possible for the object denoted by *karmaṇaḥ* to be wished for by somebody else (*parārtha*). The introduction of a new condition in *ātmanaḥ* not only clearly demarcates the domains of *saN* and *KyaC* but also facilitates the cancellation of the condition of *samānakartṛkatva*. *KyaC* is to be introduced not only after a *pada* which ends in a *sUP*, but also when the object of wish is not intended for somebody else (*parārtha*). Thus, *rājñaḥ putram icchati* '...wishes a son for the king' does not qualify for *KyaC* to produce **rājaputrīyati*.

2. Affix *KyaC* is marked with *K* so that reference to it can be made by the *kye* of 1.4.15 *naḥ kye*. That is, given the provision that an item ending in *n* alone be termed a *pada* when an affix marked with *K* follows, *KyaC*, if not marked with *K*, would be excluded. Consequently, in *rājīyati* '...acts as if he were a king' derived from *rājan* + *am* + *KyaC*, *n* could not be deleted by rule 8.2.7 *na lopaḥ prātipadikāntasya*.

The *C* as an *it* in *KyaC* is used to distinguish it from *KyaṄ* and *KyaṢ*. It is also used to facilitate *sāmānya-grahaṇa*, a general reference to all three affixes *KyaC*, *KyaṄ* and *KyaṢ*, with a single term. Supposing this reference was made by use of the term *Kit*, *Kya* without *C* could not be included as a referent along with *KyaṄ* and *KyaṢ*. For, these two would have two *it*-elements as opposed to the single *it* of *Kya*. It is to save the general reference from being impaired (*sāmānyagrahaṇavighāta*) that *C* is used as an *it* in *KyaC*. The idea that *C* of *KyaC* is used to obtain *udātta*

accent is an undesirable one. Besides, this accent can be easily made available at the strength of the assignment of the term *dhātu* to the item ending in *KyaC*, or the term *pratyaya* to *KyaC* (3.1.3 *ādyudāttaś ca*) itself.

3. A *vārttika* prohibits the introduction of *KyaC* parallel to *idam icchati* 'he wishes for it' and *uccaiḥ icchati* 'he wishes for something loudly' where the first involves a nominal stem ending in *-m* and the second an indeclinable (*avyaya*).

3.1.9 काम्यच्च

kāmyac ca
/*kāmyac* 1/1 *ca* Ø/
(*pratyayaḥ* #1, *paraś ca* #2, *karmaṇaḥ, icchāyām vā* #7, *supaḥ, āmanaḥ* #8)
Affix *kāmyaC*, too, optionally occurs to denote *icchā* after a *pada* which ends in a *sUP* and denotes the object of one's (own) desire.

EXAMPLES:

putrakāmyati 'he wishes a son for himself'
vastrakāmyati 'he wishes clothes for himself'

1. The question is raised as to why this rule was not formulated as: *supa ātmanaḥ kyackāmyacau*, thereby collapsing this, as well as the preceding rule, into one. After all, *KyaC* and *kāmyaC* are both introduced after a *pada* which ends in a *sUP* (*subanta*). In addition to being economical, this would eliminate the need for *ca* in this rule. But apparently, Pāṇini saw a problem in introducing both suffixes by means of one rule. First of all, if the affixes were given as part of one rule, they would both qualify for *anuvṛtti* in the subsequent rule. Note that only *KyaC* is required to be carried subsequently (*uttaratra*). In addition, *k* of *kāmyaC* is not considered an *it*. Had it been so, it would invoke the application of rules 1.3.8 *laśakv ataddhite* and 1.3.9 *tasya lopaḥ*. Therefore, to treat the *k* of *kāmyaC* as an *it* would serve no purpose. This, again, would have occasioned the separate mention of the two affixes.

3.1.10 उपमानादाचारे

upamānād ācāre
/*upamānāt* 5/1 *ācāre* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *karmaṇaḥ, vā* #7, *supaḥ, kyac* #8)
upamānāt karmaṇaḥ subantād ācāre' rthe vā kyac pratyayo bhavati
Affix *KyaC* optionally occurs to denote *ācāra* 'conduct, treatment' after a *pada* which ends in a *sUP* and denotes an *upamāna* 'object of comparison'.

EXAMPLES:

putrīyati chātram 'he treats the student as his son'
prāvārīyati kambalam 'he treats (uses) the blanket as an upper garment'

1. It should be clear from our discussion of rule-splitting (*yogavibhāga*) under the preceding rule that *KyaC* alone is carried over. Furthermore, since the sense of the affix is stated to be the action denoted by *ācāra*, the object (*karman*) is to be determined accordingly. That is, the affix is introduced after a *pada* which denotes the object of *ācāra* and also serves as an *upamāna* 'standard of comparison'. In this sense the object is determined via the affixal meaning denoted by the action. For example, *putram iva ācarati chātram ācāryaḥ* 'the teacher treats the student as his own son' where *putra* 'son' is the standard of comparison and the student is the thing compared (*upamita*). Consequently, after *putra* + *am*, the *upamāna*, affix *KyaC* can optionally be introduced to denote the sense of *ācāra* which in this case happens to be the action underlying *ācarati*, the verbal *pada*. The object status of the *upamāna* is determined here via the meaning of the affix similar to the action denoted by the verb.

2. A *vārttika* under this rule states that *KyaC* can also be used after a *pada* which denotes *adhikaraṇa* 'locus'. Thus, we get: *prāsādīyati kuṭyām* 'he treats (enjoys living in) the hut as if (he were living in) a palace'. This *vārttika* is necessary because, similar to the *upameya*, the thing compared (*kuṭyām*), one also expects the *upamāna*, the standard of comparison (*prāsāda*), to end in *saptamī*, the seventh triad of *sUP*. But were this the case, it would make it impossible for *prāsāda* to still denote the object since *saptamī* generally denotes locus (*adhikaraṇa*). It is to accommodate usage such as the preceding, as well as ones such as *kuṭīyati prāsāde* 'treats (feels the comforts of) living in a palace as (the discomforts of) living in a hut', that this *vārttika* is required.

Note that *Kāśikā* uses *kuḍye* in place of *kuṭyām* in the above example. Haradatta (*PM* ad *Kāś.* II: 361) cites *kuṭyām* as the appropriate reading (cf. *kuṭyām iti tu yuktaḥ pāṭhaḥ*). I have accepted *kuṭyām* mostly because it is in consonance with the *Mahābhāṣya*.

3. Also see note 2 under the next rule.

3.1.11 कर्त्तुः क्यङ् सलोपश्च

karttuḥ kyaṅ salopaś ca
/*karttuḥ* 5/1 *kyaṅ* 1/1 *salopaḥ* 1/1 *ca* 0/
(*pratyayaḥ* #1, *paraś ca* #2, *vā* #7, *supaḥ* #8, *upamānād ācāre* #10)
upamānāt karttuḥ subantād ācāre' rthe vā kyaṅ pratyayo bhavati, sakārasya ca lopo bhavati

Affix *KyaṄ* optionally occurs to denote *ācāra* after a *pada* which ends in a *sUP* and denotes an agent serving as an *upamāna*; in addition, the final - *s* of the nominal stem (*prātipadika*) is deleted.

EXAMPLES:

śyenāyate kākaḥ 'the crow appears (behaves) as if it were a falcon'
puṣkarāyate kumudaḥ 'the lily appears like a blue lotus'
payāyate (takram) 'the buttermilk appears, or tastes like, milk'
payasyate (takram) 'id'

1. This rule, unlike the general pattern, provides for two operations (*kārya*) to take place simultaneously (*yugapad*). Thus, we find that affix *KyaṄ* is introduced after a *pada* which ends in a *sUP* (in the present case a nominative), denotes the agent of *ācāra*, and additionally serves as a standard of comparison (*upamāna*). Note that *ācāra* is carried here to ensure that the agency of the thing serving as *upamāna* be restricted to the action denoted by *ācāra*. We also find that the rule also requires deletion of the final *-s* of the nominal stem. Since both operations are given at the same time, one may expect them to apply at the same time. That is, where one applies, so must the other. Therefore, one would assume that *KyaṄ* should be introduced only when there is a nominal stem which ends in *-s*, which thereby enables the application of its deletion. This interpretation, however, is incorrect. The *Mahābhāṣya* (III: 56-57) observes that *KyaṄ* is given as the principal provision (*pradhānanśiṣṭa*) in contrast with the deletion of *-s* which is secondary (*anvācayaśiṣṭa*). It is as if a person who, when ordered *grāme bhaikṣaṃ cara devadattaṃ cānaya* 'go beg for food in the village; also bring Devadatta', goes to the village and primarily begs for food though secondarily, brings Devadatta (if he can find him). That is, one would introduce *KyaṄ* with the understanding that one must also delete *-s* if it occurs.

2. *Nyāsa* ad *Kāś.* (II:361) observes that the *ca* of this rule is used for the sake of *anvācaya* 'secondary provision'. This will offer two interpretations:

(*i*) *karttuḥ kyaṅ bhavati sarvatra* 'affix *KyaṄ* occurs universally after a *pada* which denotes *kartṛ*...'
(*ii*) *yatra tv asti sakāras tatra tasyāpi lopaḥ* 'a final *-s*, if there is one, is deleted in the process'

Interpretation of *ca* as *samuccaya* 'aggregation' implies that one entity anticipates the presence of the other. More directly, both operations are considered to be primarily provided. This means that where one applies the other must also apply. Or, when two strictly simultaneous provisions are made, one in the absence of the other gets cancelled. Conversely,

an interpretation of *ca* as *anvācaya* maintains that *KyaṄ* can be introduced irrespective of whether or not deletion of *-s* occurs. For, here *KyaṄ* is the primary provision.

Now consider some examples:

(*iii*) *payāyate takram* 'the buttermilk appears (tastes) like milk'
where given the string *payas* + *sU* + *KyaṄ*, this rule deletes the final *-s* of the nominal stem *payas* 'milk'. However, consider

(*iv*) *śyenāyate kākaḥ* 'the crow appears (behaves) as if it were a falcon'
where though *KyaṄ* is introduced, there is no *s*-deletion. This is because *śyena* 'falcon' does not end in *-s*. For, *Kāśikā* clearly states:

> *anvācayaśiṣṭaḥ salopaḥ tad abhāve' pi kyaṅ bhavaty eva* '*s*-deletion is provided for secondarily; (therefore) even in its absence, *KyaṄ* must be introduced'.

3. Note that *vā* 'or not; optionally' carried from rule 3.1.7 *dhātoḥ...* makes the introduction of *KyaṄ* optional, and since *KyaṄ* is associated with the deletion of *-s*, the deletion of *-s* becomes optional as well. However, looking at the *vārttika* (*Mbh.* III: 58) *ojasopsarasor nityaṃ payasas tu vibhāṣayā*, we find that the deletion of *-s* is obligatory (*nitya*) in case of *ojas* 'vigor' and *apsaras* 'celestial beauty.' This contrasts with the case of *payas* where *-s*-deletion is optional. We assume from this discrepancy that the optional *s*-deletion made available by *vā* is a *vyavasthitavibhāṣā* 'fixed option'. Such options are limited to selected forms only. This explains that we must have *ojāyate* and *apsarāyate* with deletion of *-s* required, and yet can also derive forms such as *payāyate* and *payasyate*, where the option for *s*-deletion applies.

Note that *karttuḥ*, in the context of *s*- deletion, must be interpreted as ending in the genitive (*ṣaṣṭhī*) denoting 'in place of' (*sthānaṣaṣṭhī*)'. This genitive, read with 1.1.52 *alo' ntyasya*, will identify the locus of the operation of *s*-deletion; the *-s* which is to be deleted has to be the final (*antya*). For example, it is the final *-s* of *payas*, as opposed to the penultimate *s*, similar to one as in *hiṃsa*, which becomes the object of deletion.

4. An additional *vārttika* under this rule provides for optional introduction of affix *KvIP* after *avagalbha* 'dare-devil', *klība* 'coward, impotent' and *hoḍa* 'insulting'. Affix *KyaṄ* can be introduced if the option of *KvIP* is not accepted. Forms such as *avagalbha*, etc., are given as ending in affix *aC* via rule 3.1.33 *nandigrahipacādi....* As a consequence, the status of *anunāsikatva* 'nasality' and *anudāttatva* 'low-pitch' is brought to *avagalbha* with reference to its *aC*. The *aC*, which occurs before *KvIP*, is deleted by 6.4.48 *ato lopaḥ*. The introduction of the *ātmanepada* affix after *avagalbha*, etc., will thus be ensured by *anudātta* (1.3.12 *anudattāṅita...*), subsequent to the introduction of *KvIP*. Actually, *ātmanepada*, can still be available to

these forms simply because they are cited with *anudātta* to begin with. The introduction of affix *KvIP*, a *kṛt* (3.1.93 *kṛd atiṅ*), does not result in the assignment of the term *prātipadika* under the provision of rule 1.2.46 *kṛttaddhitasamāsāś ca*. For, that would block the introduction of the verbal inflectional endings, *tiṄ*. Needless to say, *tiṄ* can only be introduced, as a replacement of *LA*, after items termed *dhātu*. The authority on which the application of 1.2.46 *kṛttaddhitasamāsāś ca* is blocked in the case of items which end in *KvIP* lies within the statement *kvibantā dhātutvaṃ na jahati* (cf. *Udyota* ad *Mbh.* V: 62).

The purpose of citing *avagalbha*, etc., as ending in *aC* is to make them *anekāc* 'that which consists of more than one vowel'. This, in turn, will block the application of the *vārttika* ad 3.1.35 *kāspratyayād...*, *kāsgrahaṇe cakās upasaṃkhyānam* (*Mbh.* III:114). The forms, because they end in an affix, will still qualify for the introduction of *ām* thereby yielding derivates such as *avagalbhāṃcakre*, etc. Note that the status of *anekāctva* 'more-than-one vowelness' is not determined by consideration of the root along with the preverb. The optional introduction of *KvIP* secures the introduction of *ām*. The result is a variety of forms such as: *galbhate* (with no *aC*, no *KvIP*), *avagalbhate* (with *aC* and *KvIP*); *avagalbhāyate* (with *aC* and *KyaṄ*), and *avagalbhāṃcakre* (with *aC*, *KvIP* and *ām*).

3.1.12 भृशादिभ्यो भुव्यच्वेर्लोपश्च हलः

bhṛśādibhyo bhuvy acver lopaś ca halaḥ
|bhṛśādibhyaḥ 5/1 *bhuvi* 7/1 *acveḥ* 5/1 *lopaḥ* 1/1 *ca* Ø
halaḥ 6/1/
(*pratyayaḥ* #1, *paraś ca* #2, *vā* #7, *kyaṅ* #11)
'bhṛśa' ity evam ādibhyaḥ prātipadikebhyo' cvyantebhyo bhuvi bhavaty arthe kyaṅ pratyayo bhavati, halantānāṃ ca lopaḥ
Affix *KyaṄ* optionally occurs to denote the sense of *bhū* 'be, become' after nominal stems enumerated in the list headed by *bhṛśa* 'bountiful, bright' when those stems do not end in affix *CvI*; in addition, any final consonant (*hal*) of the stem is replaced by zero.

EXAMPLES:

bhṛśāyate 'what was less becomes bountiful'
śīghrāyate 'he, who was slow, becomes fast'
unmanāyate 'he, who was not interested, becomes interested'

1. This rule provides for the introduction of affix *KyaṄ* as its principal (*pradhāna*) provision. It also allows the deletion of the final consonant of a nominal stem as a secondary provision (*anvācaya*). Thus, *KyaṄ* will be introduced irrespective of the deletion of a final consonant. This affix is

introduced in the sense of *ācāra* under the provisions of the preceding rule. It is introduced here to denote the sense of *bhū* 'to become'.

2. Why is it necessary to state the negation (*pratiṣedha*) of *acveḥ* 'when not ending in affix *CvI*'. The stipulation, here, is that rule 5.4.50 *abhūtatadbhāve kṛbhvastiyoge...*, read with a corresponding *vārttika* (*Mbh.* III:60), introduces affix *CvI* in the sense of *abhūtatadbhāva* 'the sense of becoming something which it previously was not'. Logically, affix *KyaṄ* cannot be introduced after a form to denote *abhūtatadbhāva* because that would be redundant. It is stated that the negation would become vacuous (*vyartha*) if *KyaṄ* were introduced after a form which ended in *CvI*. Or conversely, if *CvI* were introduced after a word enumerated under the list headed by *bhṛśa*. By stating *acveḥ*, Pāṇini accepts that items listed in the set headed by *bhṛśa* may or may not be used with *CvI*. Affix *KyaṄ* is introduced after that which does not end in *CvI*.

3. Note that forms which belong to the *bhṛśādi* list, and do not end in *CvI*, not only qualify for the introduction of *KyaṄ* but also constitute an exception to 5.4.50 *kṛbhvastiyoge....* A form in *CvI*, because it denotes *abhūtatadbhāva* (even if it belongs to the *bhṛśādi* class), is blocked from receiving *KyaṄ* since it already expresses the sense of the affix to be introduced. Therefore, it would follow that *acveḥ* should not have been stated. However, Pāṇini states *acveḥ* in order to inform us that forms which end in *KyaṄ* are similar (*sadṛśa*) to those ending in *CvI*. The word *acveḥ*, or its *naÑ* 'negative particle', is interpreted as *paryudāsa* and gives the sense of *tadbhinnatatsadṛśa* 'similarly dissimilar' (cf. my notes under 1.2.45 *arthavad...*). Obviously, the similarity between forms ending in *KyaṄ* with those ending in *CvI* is based on meaning (*artha*), not form (*śabda*). It is because of the *abhūtatadbhāva* meaning via the *paryudāsa* interpretation of the negation in *acveḥ* that *kva divā bhṛśā bhavanti ye rātrau bhṛśāḥ* 'what becomes of the bright stars of the night during the day?' does not have a corresponding *KyaṄ* derivate. In this example, it is because of *bhṛśa*, which here means *nakṣatra* 'star'. Affix *KyaṄ* is thus introduced to denote the sense of *bhavati* after items enumerated in the list headed by *bhṛśa* within the context of *abhūtatadbhāva*.

Note, also, that if an item is cited in the list headed by *bhṛśa* with a prefix, only the form without the prefix qualifies for the introduction of the affix. This allows for forms such as *unmanāyate*, where augment *āṬ* is introduced with reference to an *aṅga* (1.4.13 *yasmāt...*) which does not include a prefix (*anupasṛṣṭa*).

3.1.13 लोहितादिडाज्भ्यः क्यष्

lohitādiḍājbhyaḥ kyaṣ
/lohitādiḍājbhyaḥ 5/3 kyaṣ 1/1/
(pratyayaḥ #1, paraś ca #2, vā #7, bhuvi acveḥ #12)

lohitādibhyo ḍājantebhyaś ca bhavaty arthe kyaṣ pratyayo bhavati
Affix *KyaṢ* optionally occurs to denote the sense of *bhū* 'to be, become' after a non-*CvI* nominal stem enumerated in the list headed by *lohita* 'red', and also after an item which ends in affix *ḌāC* (5.4.57 *avyaktānukaraṇād...*).

EXAMPLES:

lohitāyati 'that which was not red becomes red'
lohitāyate 'id.'
paṭapaṭāyati '... makes *paṭapaṭa* noise'
paṭapaṭāyate 'id.'

1. This rule introduces affix *KyaṢ* after items cited in the list headed by *lohita*, and also after those which end in affix *ḌāC* (5.4.57 *avyaktānukaraṇād...*). Of course, *abhūtatadbhāva*, the condition which governs meaning, as well as the restriction of *acveḥ*, is still valid here.

The *Mahābhāṣya* (III:366) suggests that the rule should have been formulated only as *lohitaḍājbhyaḥ kyaṣ* thereby reducing *lohitādi* to *lohita*. This, apparently, is because there is no *gaṇa* 'listing of stems in groups' known as *lohitādi*. Affix *KyaṢ*, as opposed to *KyaṄ*, is selected so that *parasmaipada* affixes can optionally be introduced after these items in accordance with the provision of rule 1.3.90 *vā kyaṣaḥ*.

Kāśikā recognizes the *lohitādi* as an *ākṛtigaṇa*. This kind of listing is in general open-ended, and in particular includes a limited number of items. Thus, *lohitādi* according to the *Kaśikā*, is a *gaṇa* with a possibility for addition when one finds forms which share operational features common to forms already on the list. *Kāśikā*, indirectly, admits, that some of the words which belong to the *bhṛśādi* group may also be found in the *lohitādi* list. Similarly, some of the *lohitādi* words may be found under the *bhṛśādi* list. Those of the *lohitādi* listed under the *bhṛśādi*, says *Kāśikā*, must end in *KyaṄ*. Those of the *bhṛśādi* listed in the *lohitādi* will take *KyaṢ*.

2. The *Paribhāṣā* (72) *prātipadikagrahaṇe liṅgaviśiṣṭasyāpi grahaṇam* 'a citation made by means of a *prātipadika* 'nominal stem' also includes references to corresponding forms in different genders'. This enables *lohinī*, the feminine counterpart of *lohita*, also to qualify for the introduction of *KyaṢ*.

3. I have already explained that the *K* of *KyaṢ* is intended as an *it* for generally referencing this affix along with *KyaC* and *KyaṄ*. For example, consider rule 1.4.15 *naḥ kye* where a general reference to these affixes is made by means of *K*. Note, also, that *KyaṢ* makes the optional introduction of *parasmaipada* with the *ātmanepada* (1.3.90 *vā kyaṣaḥ*) possible. Thus we get: *lohitāyati*; *lohitāyate*.

4. There are forms such as *nidrā* 'sleep', etc., which are treated as part of the *lohitādi* group. Now, *nidrā* refers to a property (*dharma*) as opposed to a thing (*dravya; dharmin*) which other *lohitādi* stems denote. Commentators indicate that, for the purpose of introducing *KyaṢ* (*kyaṣvidhi*), stems such as *nidrā* are treated as if denoting a thing. This is natural given the denotational power of words (*śabdaśaktisvabhāva*). Accordingly, usages such as *nidrāyate*, parallel to *anidrāvān nidrāvān bhavati* 'he who did not feel sleepy earlier is feeling so now,' can be accounted for.

3.1.14 **कष्टाय क्रमणे**

kaṣṭāya kramaṇe
/kaṣṭāya 4/1 *kramaṇe* 7/1
(pratyayaḥ #1 *paraś ca* #2, *vā* #7, *kyaṅ* #11*)*
kaṣṭaśabdāc caturthīsamarthāt kramaṇe' rthe' nārjave kyaṅ pratyayo bhavati
Affix *KyaṄ* optionally occurs to denote *kramaṇa* 'striving, moving' after a syntactically related *pada* which underlies *kaṣṭa* 'suffering, wrong, wicked', and ends in *caturthī* 'fourth triplet of nominal ending'.

EXAMPLES:

kaṣṭāyate '...is moving with wicked intentions'

1. Note that *kaṣṭa* specifies the left context for the introduction of affix *KyaṄ*. Commentators explain that *kaṣṭa* is specified in *caturthī* so that *KyaṄ* can not be introduced after *kaṣṭa* used with any other nominal ending. This *caturthī* enables *kaṣṭa* to be syntactico-semantically relatable (*saṃgatārtha*) with *kramaṇa*, the meaning condition for affix *KyaṄ*. The word *kramaṇa* in the context of this rule means *anārjava* 'crookedness; wickedness'. Incidentally, it is *KyaṄ*, and not the *KyaṢ*, which is carried via *anuvṛtti*. We know this from the mark of *svarita* which is available only with *KyaṄ* (cf. Nyāsa ad *Kāś. kyaṅ eva svaritatvāt*). Besides, *KyaṄ* is desired also for *ātmanepada*.

2. A *vārttika* (*Mbh.* III:367) states that *KyaṄ*, in addition to *kaṣṭa*, should also be introduced after *sattra*, *kakṣa*, *kṛcchra* and *gahana* to denote *pāpacikīrṣā* 'desire to commit a sinful act'. *KyaṄ* cannot be introduced in its general sense (*sāmānyārtha*) of *kramaṇa* commonly paraphrased as *pādaviharaṇa* 'treading along'. Consequently, as *Nyāsa* puts it: *anārjavalakṣaṇaṃ yat kramaṇaṃ tatraiva pratyayaḥ* 'the affix should be introduced only where *kramaṇa* is characterized by *anārjava* 'crookedness'.

3.1.15 **कर्मणो रोमन्थतपोभ्यां वर्त्तिचरोः**

karmaṇo romanthatapobhyāṃ vartticaroḥ

/*karmaṇaḥ* 5/1 *romanthatapobhyām* 5/2 *vartticaroḥ* 7/2/
(*pratyayaḥ* #1, *paraś ca* #2, *vā* #7, *kyan* #11)
romanthaśabdāt tapaḥśabdāc ca karmaṇo yathākramaṃ vartticaror arthayoḥ kyaṅ pratyayo bhavati.
Affix *kyaṄ* optionally occurs after *romantha* 'chewing the cud', and *tapas* 'penance, austerity' when these end in *dvitīyā* 'the second triad of *sUP*' and denote the object of *vartti* 'to repeat' and *cara* 'to observe, perform' respectively.

EXAMPLES:

romanthāyate gauḥ 'the cow is chewing the cud'
tapasyati 'he observes austerity'

1. The *Mahābhāṣya* (III: 68) explains *romantha* as *mantha* 'chewing' something *udgīrṇa* 'thrown out' or *nigīrṇa* 'passed out as waste'.

2. The word *karmaṇaḥ* is interpreted as ending in the ablative (*pañcamī*), on account of its syntactic coordination (*sāmānādhikaraṇya*) with *romanthatapobhyām*, and forms the left context for the introduction of affix *KyaṄ*. Since *romanthatapobhyām* is given in the ablative dual (*dvivacana*), it should also follow that *karmaṇaḥ* be given in the dual. It is given in the singular (*ekavacana*) since it modifies *romanthatapobhyām*, a compound with two constituents where each yields separate sentences of interpretation: *romanthaṃ varttayati* '...is chewing the cud' and *tapaś carati* '...is practicing penance'. Obviously, *romantha* and *tapas* are *karman* of actions denoted by *vartti* 'to cause to turn' and *car* 'to wander'. Incidentally, parallel to *romanthāyate gauḥ*, one would also expect the *ātmanepada* ending rather than the *parasmaipada* in *tapasyati tapaḥ*. The *ātmanepada* is appropriate, here, because affix *KyaṄ* is marked with *Ṅ* as an *it*. An *iṣṭi* of the *Mahābhāṣya* provides for the *parasmaipada* ending after *tapas*.

The *Mahābhāṣya* makes yet another proposal requiring that the sense of *vartti* be qualified with *hanucalana* 'jaw movement'. It implies that *kīṭo romanthaṃ varttayati* 'the insect is rolling up the ball of feces' could not qualify for a parallel *KyaṄ* derivate. For, obviously, 'rolling up' does not entail 'jaw movement'. The affix is clearly introduced after a *pada* which constitutes the object of the action denoted by *romantha* 'chewing the cud'. The *romantha* of the counter-example *kīṭo romanthaṃ varttayati*, does not entail any such action.

3.1.16 **बाष्पोष्मभ्यामुद्वमने**

bāṣpoṣmabhyām udvamane
/*bāṣpoṣmabhyām* 5/2 *udvamane* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *vā* #7, *kyaṅ* #11, *karmaṇaḥ* #15)
bāṣpaśdbdād ūṣmaśabdāc ca karmaṇa udvamane' rthe kyaṅ pratyayo bhavati

Affix *KyaṄ* optionally occurs to denote *udvamana* 'emission' after a *pada* which contains *bāṣpa* 'vapor, steam' and *ūṣman* 'heat' when these nominals end in *dvitīyā* to denote object.

EXAMPLES:

bāṣpāyate kūpaḥ 'the waterwell emits vapor'
uṣmāyate '...emits steam'.

1. A *vārttika* which provides *KyaṄ* after *phena* 'foam' is also given under this rule to account for *phenāyate* parallel to *phenam udvamati* '...emits foam'.

3.1.17 शब्दवैरकलहाभ्रकण्वमेघेभ्यः करणे

śabdavairakalahābhrakaṇvameghebhyaḥ karaṇe
/*śabda... meghebhyaḥ* 5/3 *karaṇe* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *vā* #7, *kyaṅ* #11, *karmaṇaḥ* #15)
śabda, vaira, kalaha, abhra, kaṇva, megha' ity etebhyaḥ karaṇe karoty arthe kyaṅ pratyato bhavati
Affix *KyaṄ* optionally occurs to denote *karaṇa* 'doing' after *śabda* 'sound, noise', *vaira* 'hostility', *kalaha* 'quarrel', *abhra* 'cloud', *kaṇva* 'sin', or *megha* 'cloud', when they denote the object of making or doing.

EXAMPLES:

śabdāyate '...makes noise'
vairāyate '...becomes hostile'
kalahāyate '...quarrels'
abhrāyate '...causes the clouds to form'
kaṇvāyate '...commits a sinful act'
meghāyate ūṣmā 'the heat creates clouds'

1. The word *karaṇa* of *karaṇe* is interpreted here as meaning 'action', and should not be confused with the *kāraka* named *karaṇa* as per 1.4.42 *sādhakatamaṃ....* To interpret *karaṇa* as denoting the *kāraka* would bring the sense of affix *KyaṄ* in direct conflict with the *karman* 'object' denoted by the base after which the affix is introduced to denote *karaṇa*.

Note that forms such as *śabdāyati* would derive from *śabda* + *am* + *ṆiC* where *ṆiC* will be introduced after *śabda* + *am* to denote the sense of *karoti* '...does'. This, of course, will happen when the option of *KyaṄ* is not availed.

2. A *vārttika* also provides for the introduction of affix *KyaṄ* after *sudina* 'happy days', *durdina* 'sad days' and *nīhāra* 'fog' to account for *sudināyate, durdināyate,* and *nīhārāyate.* The *Amarakośa* explains *durdina* as *meghācchanna* 'an overcast day'.

3.1.18 सुखादिभ्यः कर्तृवेदनायाम्

sukhādibhyaḥ kartṛvedanāyām
/sukhādibhyaḥ 5/3 *kartṛ (deleted* 6/1) *vedanāyām* 7/1/
(pratyayaḥ #1, *paraś ca* #2, *vā* #7, *kyaṅ* #11, *karmaṇaḥ* #15)
'sukha' ity evam ādibhyaḥ karmabhyo vedanāyām arthe' nubhave kyaṅ pratyayo bhavati, vedayituś cet kartuḥ sambandhīni sudkādīni bhavanti

Affix *KyaṄ* optionally occurs after nominal stems enumerated in the list headed by *Sukha* 'pleasure, happiness' provided the derivate denotes agent's own experience (*kartṛvedanā*).

EXAMPLES:

sukhāyate devadattaḥ 'Devadatta experiences pleasure'
duḥkhāyate devadattaḥ 'Devadatta experiences grief'

1. This rule introduces affix *KyaṄ* to denote *vedanā* 'experience' after a *pada* which is constituted by *sukha*, etc., and denotes *karman* provided *vedanā* is relatable to the agent's own experience of joy, etc. That is, *KyaṄ* is to be introduced after a *pada* which constitutes the object of the agent's own experience. Thus, *sukhāyate* of *sukhāyate devadattaḥ* is derived by introducing *KyaṄ* after *sukha* + *am* which is the object of Devadatta's experience. This explains why the rule has *kartṛ*. One must also note that *kartṛ* qualifies *sukha*, etc. That is, it does not qualify *vedanā*. For, if it qualified *vedanā*, *devadattasya sukhaṃ vedayate prasādhakaḥ* 'the attendant of Devadatta experiences his (Devadatta's) joy' would also come under the purview of this rule. After all, *prasādhaka*, here, is the agent of *vedanā* as is Devadatta. However, **sukhāyate prasādhako devadattasya* will be blocked because what is experienced is not the 'joy' of the 'attendant', the agent of *vedanā*. But there still is a problem. If *kartṛ* is not a modifier to *vedanā* then the *sāmarthya* 'syntactic connection' between them is impaired. This will not permit the compound *kartṛvedanā*.

Nyāsa (II:375) observes that compound formation must be valid because Pāṇini, himself, uses it in the rule (*sautratvāt*). Or, one can accept that *kartṛ* is used with deleted genitive (*luptaṣaṣṭhīka*). This preference would not subscribe to the formation of a compound with *kartṛ* and *vedanā* as constituents (*sautratvān nirdeśasya saty api asāmarthye samāso bhavaty adoṣaḥ. atha vā, asamāsa eva, ṣaṣṭhyās tv aśravaṇaṃ 'supāṃ suluk' iti luptatvāt*). Note that accepting the compound based on its usage in the *sūtra* (*sautratvāt*) is conducive to economy (*lāghava*). A proposal with the ad hoc (*nipātana*) deletion of *ṣaṣṭhī* is prolix (*gaurava*).

The genitive in *kartuḥ*, as a modifier to *sukha*, etc., has to be interpreted to denote *āśrayāśrayin* 'locus and object of locus' relation. This way, the agent becomes the locus (*āśraya*) where the object of locus (*āśrayin*), such as *sukha*, etc., are located.

3.1.19 नमोवरिवश्चित्रङः क्यच्

namovarivaścitraṅaḥ kyac
/*namovarivaścitraṅaḥ* 5/1 *kyac* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *vā* #7, *karmaṇaḥ* #15, *karaṇe* #17)
'namas, varivas, citraṅ' ity etebhyo vā kyac pratyayo bhavati, karaṇaviśeṣe pūjādau
Affix *KyaC* optionally occurs to denote *karaṇa* 'doing' after *padas* which underlie *namas* 'salutation', *varivas* 'honor, service' or *citraṄ* 'wonder', and end in *dvitīyā* to express the object of doing.

EXAMPLES:

namasyati devān 'he offers salutations to the gods'
varivasyati gurūn 'he honors teachers'
citrīyate '...causes to wonder...'

1. The word *karaṇe* is still carried. Although it refers to action in general (*sāmānya*), it is interpreted in this rule in the sense of particular actions such as *pūjā* 'worship', etc. This particular meaning contrasts with the general meaning, but is not difficult to obtain knowing the denotational power of words (*śabdaśaktisvabhāva*). Contextually, *namas* 'obeissance' also relates to the action of paying respect which is denoted by *pūjā*. Likewise, interpretations of *varivas* and *citra* are not hard to determine. Thus, *varivas* relates to the action denoted by *paricaryā* 'serving, nursing' where as *citra* relates to *āścarya* 'astonishment'.

2. Commentators cite *namasyati gurūn* 'he pays obeissance to his teacher' as an example for *namas* . They, however, question the use of *dvitīyā* 'second triplet of nominal ending' after *guru* 'teacher' especially in view of *caturthī* 'fourth triplet of nominal ending' already provided for by rule 2.3.16 *namaḥ svastisvāhā...* This rule requires the use of *caturthī* when words such as *namaḥ, svasti, svāhā*, etc., are in construction. Thus our example sentence should instead be: *namasyati gurubhyaḥ*. It is stated that the word *namas*, in *namasyati gurūn*, is used secondarily (*guṇībhūta*) to the meaning of affix (*pratyayārtha*) *KyaṄ*. This would leave *namas* with practically no signification at all (*anarthaka*). Rule 2.3.16 cites *namas* with its primary signification of obeissance. It is therefore not *anarthaka* in rule 2.3.16. According to the *Paribhāṣā* (15) *arthavad grahaṇe nānarthakasya* 'when a citation is made with reference to something with signification, this does not include reference to any corresponding non-significant citation'. This way, *caturthī* should not be used in *namasyati gurūn*.

Yet another way out is suggested by treating *namasyati gurūn* as the paraphrase of *namaskāreṇa pūjayati gurūn*, where *namaskāra* becomes the means by which one worships the teacher. The *tṛtīyā* in *namaskāreṇa*

as well as the *dvitīyā* in *gurūn* thus denote the *kāraka* namely *karaṇa* and *karman* respectively. The *caturthī* of rule 2.3.16 is a nominal ending (*vibhakti*) required because of a conjoined condition (*upapada*) of *namas*, etc. This *caturthī* is thus an *upapada-vibhakti,* a nominal ending which is introduced based on a specific cooccurrence condition. This invokes the *Paribhāṣā* (103) *upapadavibhakteḥ kārakavibhaktir balīyasī* whereby a nominal ending introduced relative to a *kāraka* is treated as stronger than one introduced relative to a conjoined condition. This way, the *dvitīyā* in *namasyati gurūn* will block the *caturthī* which would have otherwise obtained.

3. Commentators explain that the *Ṅ* of *citraṅaḥ* is intended to secure *ātmanepada* in *citrīyate* and is contrasted with *parasmaipada* of ★*citrīyati*. The *Ṅ* would automatically invoke rule 1.3.12 *anudāttaṅita ātmanepadam*. Note that *citrīyate* may be interpreted as denoting either 'X is astonished', or 'X causes Y to be astonished'. Some prefer the causal meaning over the non-causal.

3.1.20 पुच्छभाण्डचीवराण्णिङ्

pucchabhāṇḍacīvarāṇ ṇiṅ
/*pucchabhāṇḍacīvarāt* 5/1 *ṇiṅ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *vā* #7, *karmaṇaḥ* #15, *karaṇe* #17)
'*puccha bhāṇḍa civāra' ity etebhyo ṇiṅ pratyayo bhavati karaṇaviśeṣe*
Affix *ṆiṄ* optionally occurs to denote *karaṇa* after a *pada* which contains *puccha* 'tail,' *bhāṇḍa* 'pot' or *cīvara* 'rags', a monk's robe' and denotes the object of doing.

EXAMPLES:

utpucchayate gauḥ 'the cow tosses its tail upward'
saṃbhāṇḍayate 'he arranges the pots in a pile'
saṃcīvarayate bhikṣuḥ 'the monk obtains or wears the *cīvara*'

1. The word *karaṇe* is still carried. This rule then introduces affix *ṆiṄ* after *puccha, bhāṇḍa,* and *cīvara* which end in *dvitīyā* and denote *karman.* The word *karaṇa* of *karaṇe* is again interpreted as denoting a particular action (*karaṇaviśeṣa*). There are several *iṣṭi* whereby *Kāśikā* outlines the meanings relative to the three bases identified in the rule. Thus, a *ṆiṄ* derivate of *puccha* used with the preverbs *ud* and *pari* would signify 'hurling up' and 'hurling around' the tail (cf. *pucchād udasane paryasane vā*). Thus we get: *utpucchayate/paripucchayate gauḥ* 'the cow is hurling up/hurling around its tail', respectively. We similarly get *saṃbhāṇḍayate* and *saṃcīvarayate* from nominals such as *bhāṇḍa* and *cīvara* in the sense of 'collecting pots' and 'procuring or wearing rags' respectively. These

iṣṭi thus assign the meanings of *samācayana* 'collecting' and *arjana* 'procuring' or *paridhāna* 'wearing' to *ṆiṄ* in the above contexts.

2. The *Ṇ* of the affix is used for general reference (*sāmānyagrahaṇārtha*). Refer for example to rule 6.4.51 *ṇer aniṭi* where *Ṇ* is used to invoke reference to affixes with *Ṇ* as an *it*. The *Ṅ* of the affix, as usual, is used for *ātmanepada*. This is why *puccha*, etc., cannot be read as part of the items in the subsequent rule. The endings required in the rule are *parasmaipada*.

Note, also, that because these newly derived roots inhere their objects, they are considered intransitives (*akarmaka*).

3.1.21 मुण्डमिश्रश्लक्ष्णलवणव्रतवस्त्रहलकलकृततूस्तेभ्यो णिच्

muṇḍamiśraślakṣṇalavaṇavratavastrahalakalakṛtatūstebhyo ṇic
/*muṇḍa...tūstebhyaḥ* 5/3 *ṇic* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *vā* #7, *karmaṇaḥ* #15, *karaṇe* #17)
'*muṇḍa, miśra, ślakṣṇa, lavaṇa, vrata, vastra, hala, kala, kṛta, tūsta*' *ity etebhyo karaṇe ṇic pratyayo bhavati*

Affix *ṆiC* optionally occurs to denote *karaṇa* after *padas* which contain *muṇḍa* 'bald, shaven', *miśra* 'mixed', *ślakṣṇa* 'smooth', *lavaṇa* 'salt, salty', *vrata* 'ritual vow', *vastra* 'attire', *hala* 'a big plow', *kala* 'a bud, dice', *kṛta* 'favour, dice' or *tūsta* 'cleaning, combing (hair)', and which denote the object of doing.

EXAMPLES:

muṇḍayati 'he shaves head'
miśrayati 'he mixes something with something else'
ślakṣṇayati 'he smooths...'
lavaṇayati 'he makes something salty'
payo vrtayati 'he observes the ritual vow to subsist on milk'
saṃvastrayati 'he covers with or wears a garment'
halayati 'he takes a big plow'
kalayati 'he picks a bud or die'
kṛtayati 'he accepts a favor, or holds a die'
vitūstayati keśān 'he combs, or cleans his hair'

1. Jinendrabuddhi (*Nyāsa* ad *Kāś.* II:377) recalls that the formulation of rule 3.2.21 *muṇḍamiśra...* where the condition of *karaṇe* is nothing but an expatiation (*prapañca*) of a couple of *gaṇasūira*. With this rule Pāṇini provides for something which is already made available by the *gaṇasūtra: prātipadikād dhātvarthe bahulam iṣṭhavac ca* 'affix *ṆiC* variously occurs after a nominal stem (*prātipadika*) to denote the sense of the verbal root.... Why does he do that? Apparently, out of his compassion (*anugraha*) for the slow-witted (cf. *mandabuddhīnām anugrahāya*).

Why did Pāṇini not include the examples of this rule under rule 3.1.25 *satyāpapāśa...*? Because this rule involves some examples where introduction of *ṆiC* will be blocked due to the impairement of the required syntactico-semantic condition (*sāmarthya*).

This *gaṇasūtra* is cited as part of the *curādi* group of roots along with the following:

> *tat karoti tad ācaṣṭe* 'affix *ṆiC* occurs after a nominal stem in the sense of '...makes, or does that', or '...says that''

Of course, 'that' is a variable, and the use of the present tense (in *karoti* and *ācaṣṭe*) is just for illustration (*nidarśana*). That is, use of *ṆiC* occurring after a nominal stem with the above two meanings is not restricted to the current time (*varttamāna*) only.

The meaning of the action in connection with *muṇḍa, miśra, ślakṣṇa,* and *lavaṇa* can be easily comprehended. *Kāśikā* informs, however, that a *ṆiC* derivate of *vrata* could denote *bhojana* 'consuming', or 'refraining from consuming' (*tannivṛtti*). Thus, we get *payo vratayati* '... is drinking milk, or refraining from drinking it'; and *vṛṣalānnaṃ na vratayati* '...refrains from eating food offered by a lowly untouchable'.

3.1.22 **धातोरेकाचो हलादेः क्रियासमभिहारे यङ्**

> *dhātor ekāco halādeḥ kriyāsamabhihāre yaṅ*
> /*dhātoḥ* 5/1 *ekācaḥ* 5/1 = *eko' c yasmin sa (bv.), tasmāt; halādeḥ* 5/1 = *hal ādir yasya sa* =*halādeḥ (bv.) tasmāt;*
> *kriyāsamabhihāre* 7/1 *yaṅ* 1/1/
> (*pratyayaḥ* #1, *paraś ca* #2, *vā* #7)
> *ekāj yo dhātur halādeḥ kriyāsamabhihāre vartate tasmād yaṅ pratyayo bhavati*
> Affix *yaṄ* optionally occurs after a monosyllabic verbal root beginning with a consonant when *kriyāsamabhihāra* 'repetitious or intense action' is denoted.

EXAMPLES:

> *pāpacyate* 'cooks repeatedly'
> *yāyajyate* 'repeatedly performs ritual sacrifice'
> *jājvalyate* 'illuminates or burns intensely'

1. This rule introduces affix *yaṄ* after a verbal root which begins with a consonant *(halādi)*, consists of a single vowel *(ekāc)*, and is used to denote the intensity or frequency of an action (*kriyāsamabhihāra*). The word (*kriyāsamabhihāra*) has been explained as (*paunaḥpunya*) 'intensity, or repetition of an action, or *bhṛśārtha* 'signification of abundance, multiplicity'. Thus, *punaḥ punaḥ pacati* '...cooks again and again' yields a corresponding *yaṄ*-derivative *pāpacyate.* Haradatta (*PM* ad *Kāś* II:380) sums up an

interesting distinction between *bhṛśārtha* and *paunaḥpunya*, the two interpretations of *kriyāsamabhihāra*, as follows:

...pradhānakriyāṇāṃ paunaḥpunyaṃ samabhihāraḥ... avayavakriyāṇāṃ bhṛśārthatā samabhihāraḥ 'repetition of the principal action is *kriyāsamabhihāra*; in the case of secondary actions, it is their multiplicity which is termed *samabhihāra*'. Note that Indian grammarians consider a given action to be a composite of several actions such that the principal among them is identified with the fruit of the action. Thus, verbal root *pac* denotes the act of cooking while the fruit of this action is known as *viklitti* 'softening'. The act of cooking rice (*taṇḍula*), for example, is considered as a composite of several actions, such as 'washing the rice', 'preparing the fire', 'putting rice in the pot', 'placing the pot on the stove', and 'increasing or decreasing the heat', etc. These, ultimately, lead to the realization of the principal action called *viklitti*. This is what the verbal root *pac* denotes. *Nyāsa* recognizes the meaning of *kriyāsamabhihāra* in the context of secondary actions as *phalātireka* 'exuberance in the fruit of action'.

2. The word *dhātu* (of *dhātoḥ*) must be stated so that introduction of affix *yaṄ* does not obtain after a verbal root used with a preverb. If *dhātu* were intended in this rule to refer to a word-form which simply denoted an action (*kriyā*), then the rule need not have used *dhātu* explicitly. This purpose of *dhātoḥ* could easily be served by the context of *kriyāsamabhihāra*. For, one talks about *kriyāsamabhihāra* only in the context of an action which, in turn, is denoted by a verbal root, used with or without a preverb (*upasarga*). Pāṇini, by explicit use of the word *dhātoḥ*, indicates that *yaṄ* should be introduced after a non-prefixed (*anupasṛṣṭa*) verbal root. This is desired for operational reasons such as non-doubling of the preverb, etc. I have already explained this under 3.1.7 *dhātoḥ karmaṇaḥ....* But this could hardly be the main purpose of explicitly using the word *dhātoḥ*. The assignment of the term *ārddhadhātuka* by rule 3.4.114 *ārddhadhātukaṃ śeṣaḥ* is the primary reason. For, in the absence of the assignment of this term operations relative to rules such as 2.4.53 *bruvo vaciḥ* cannot apply.

Note that *dhātoḥ* is qualified here with *halādi* 'that which has a consonant at its beginning' so that *yaṄ* can not be introduced after *īkṣ* 'to see', a root obviously beginning with a vowel. The word *ekāc* constitutes another qualification which blocks the introduction of *yaṄ* after roots such as *jāgṛ* 'to wake up', which consists of more than one vowel. Incidentally, *ekāc*, like *halādeḥ*, must also be interpreted as a *bahuvrīhi* compound as I have already shown here in connection with the text of this rule. That is, it should not be interpreted as a *tatpuruṣa*.

Note further that a *vārttika* enumerates a list of verbal roots after which *yaṄ* is introduced, even though the roots violate the conditions of *halādi* or of *ekāc*, or of both.

3.1.23 नित्यं कौटिल्ये गतौ

nityaṃ kauṭilye gatau
/nityaṃ 1/1 *kauṭilye* 7/1 *gatau* 7/1/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ, yaṅ* #22)
gativacanād dhātoḥ kauṭilye gamyamāne nityaṃ yaṅ pratyayo bhavati
Affix *yaṄ* obligatorily occurs after a verbal root with the signification of *gati* 'movement', provided *kauṭilya* 'crookedness' is denoted.

EXAMPLES:

caṅkramyate 'walks in a crooked way'
dandramyate 'moves in a crooked way'

1. This rule introduces affix *yaṄ* obligatorily (*nityam*) after a verbal root with the signification of *gati* 'motion' provided that *kauṭilya* 'crookedness' is denoted. The word *gatau* thus becomes a modifier to the base, i.e., *dhātu*, with the interpretation: *gatyarthe varttamānād dhātoḥ* 'after a verbal root used with the signification of motion'. Obviously, affix *yaṄ* is used here in the sense of something other than *kriyāsamabhihāra*. The affix must also be obligatorily introduced to account for the fact that there is no usage parallel to the *yaṄ*-derivate which could express the desired meaning. But this is paradoxical. Why does one have to account for a parallel expression when that expression is already non-existent? The word *nitya* then must have some other purpose for its use. *Kāśikā* states that *nitya* is used here to clearly demarcate the scope (*viṣayaniyamārtha*). That is, *yaṄ* must be introduced after a verbal root which signifies *gati* with accompanying *kauṭilya*. That is, *yaṄ* should occur after a verbal root with the meaning of *gati* only when *kauṭilya* is denoted. It should never be introduced when *kriyāsamabhihāra* is signified. Haradatta thinks that the formulation of the *sūtra* (without *nitya*) itself should be sufficient. For, the preceding rule introduces *yaN* after roots in general where as this one introduces it after a class of roots in particular. The qualification of *kauṭilye* would constitute an exception to *kriyāsamabhihāra*. Thus, by *takrakauṇḍinyanyāya* (cf. vol. I, p.15 ff.), *kriyāsamabhihāra* will be blocked. Haradatta concludes that the use of *nitya* is thus questionable (*cintya*).

Why did Pāṇini use *nityam* when its purpose could have been served by invoking *takrakauṇḍinyanyāya*? *Tattvabodhinī* (ad *SK* III:470) claims that the explicit use of *nityam* is made to show that *takrakauṇḍinyanyāya* is not universally valid. The paraphrase of *SK* presents the meaning and scope of this rule as follows:

gatyarthāt kauṭilya eva yaṅ syān na tu kriyāsamabhihāre

'affix *yaṄ* should occur after a verbal root with the signification of *gati* when *kauṭilya*, and not when *kriyāsamabhihāra*, is denoted'

Obviously, Bhaṭṭoji interprets *nityam* as used in the sense of 'only' (*eva*). The *Mahābhāṣya* maintains that the analyzed form of a derivate such as *caṅkramyate* does not denote *kriyāsamabhihāra*. Consequently, *yaṄ* cannot be used in that sense anyway. This, in turn, makes the use of the word *nityam* unnecessary, as is also true in connection with *bhāvagarhā* of the following rule.

3.1.24 लुपसदचरजपजभदशगृभ्यो भावगर्हायाम्

lupasadacarajapajabhadaśagṝbhyo bhāvagarhāyām
/lupa...gṝbhyaḥ 5/3 *bhāvagarhāyām* 7/1/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ, yaṅ* #22, *nityam* #23)
'lup sad car jap jabh gṝ ity etebhyo bhāvagarhāyāṃ yaṅ pratyayo bhavati

Affix *yaṄ* obligatorily occurs after verbal roots *lupĀ* 'to break, cut' *sadĀ* 'to sit', *carĀ* 'to move, walk', *japĀ* 'to chant', *jabhĀ* 'to yawn', *dah* 'to burn' and *gṝ* 'to swallow' only when *bhāvagarhā* 'contempt for action' is denoted.

EXAMPLES:

lolupyate '...cuts, breaks in a contemptible manner
sāsadyate '...sits in a contemptible manner'
cañcūryate '...walks, moves in a contemptible manner'
jañjapyate '...chants in a contemptible manner'
jañjabhyate '...yawns in a contemptible manner'
dandahyate '...he burns in a contemptible manner'
dandaśyate '...he bites in a contemptible manner'
nijegilyate '...he swallows in a contemptible manner'

1. This rule introduces affix *yaṄ* after a select number of roots when *bhāvagarhā* 'censure of the action denoted by the root' is denoted. This rule also carries the word *nityam* thereby, again, meaning: *yaṄ* is to be introduced after these roots only when *bhāvagarhā* is to be denoted. The use of *nitya*, then, becomes a means to demarcate the exact scope of the denotation of *yaṄ*. Thus, *lolupyate* denotes the censurable manner in which someone is carrying out the action of *chedana* 'cutting'.

Kāśikā cites the counter-example *sādhu japati* '...is chanting beautifully' to show that *yaṄ* can not be introduced when the root-sense is being praised. Similarly, *mantraṃ japati vṛṣalaḥ* 'the lowly untouchable is chanting the hymns' can not qualify for a parallel derivate in *yaṄ* because what is censured is a *vṛṣala*, the means (*sādhana*), and not the action (*bhāva*).

Haradatta explains the counter-example as *sādhanagarhā* since a *śūdra*, let alone a *vṛṣala*, does not have the right to chant the Vedic hymns. The

right (*adhikāra*) is here the means by which the *śūdra* could accomplish the act. When an action cannot be accomplished because there is a lack of proper means, the action becomes subject to censure. There are severe pronouncements against a *śūdra* chanting the hymns: *śūdrasya vedam upaśṛṇvatas trapujatubhyāṃ śrotrapratipūraṇam; uccāraṇe jihvācchedaḥ, dhāraṇe tu śarīrabhedaḥ* 'should a *śūdra* be found listening to the chanting of a Vedic hymn, his ears should be filled with hot lead and lac; should he be found studying the Veda, his tongue should be chopped off; and should he be found internalizing it he is to be dismembered'.

3.1.25 सत्यापपाशरूपवीणातूलश्लोकसेनालोमत्वचवर्मवर्णचूर्णचुरादिभ्यो णिच्

satyāpapāśarūpavīṇātūlaślokasenālomatvacavarmavarṇacūrṇacurādibhyo ṇic
/*satyāpa...curādibhyaḥ* 1/1 *ṇic* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)
satyādibhyaś cūrṇaparyantebhyaḥ, curādibhyaś ca ṇic pratyayo bhavati
Affix *ṆiC* occurs after nominal stems *satya* 'truth, *pāśa* 'snare', *rūpa* 'form, shape' figure', *vīṇā* 'lute', *tūla* 'cotton', *śloka* 'verse', *senā* 'army', *loma* 'hair on the body', *tvac* 'skin', *varma* 'protective armor', and *cūrṇa* 'powder'; it also occurs after verbal roots belonging to the class headed by *cur* 'to steal'.

EXAMPLES:

satyāpayati 'he speaks the truth'
vipāśayati 'he frees from a snare'
rūpayati 'he brings into form, sees'
upavīṇayati 'he sings to the accompaniment of the *vīṇā* (lute)'
anutūlayati 'he makes swabs from cotton and straw'
upaślokayati 'he praises or sings by chanting a verse'
abhiṣeṇayati 'he attacks with an army'
anulomayati 'he massages to clear the roots of the hair'
tvacayati 'he pinches'
avacūrṇayati 'he sprinkles powdered medicine on the wound'
corayati 'he steals...'
cintayati 'he worries; thinks...'

1. This rule introduces affix *ṆiC* after two sets of forms: (*i*) after the twelve items enumerated which begin with *satyāpa*, etc., and (*ii*) after roots listed in the group headed by *cur* 'to steal'. The word *satyāpA* carries its final *A* just for the sake of pronunciation (*uccāraṇārtha*). Furthermore, *satyāpA* is treated as derived by the introduction of *āpUK*, an augment (*āgama*), to *satya*. Thus, *satya* + *āp*(*UK* → ∅) = *satyāp*. Pāṇini makes

the citation as *satyāpA*. A proposal in the *Mahābhāṣya* states that the introduction of *āpUK* must be stated in connection with *artha*, *satya*, and *veda*. As far as *satyāpa* is concerned, the *āpUK* has to come via *nipātana* 'ad hoc' as Pāṇini provides for. It is because of *āpUK* that no deletion of *ṭi* (1.1.64 *aco' ntyādi ṭi*) by 6.4.155 *ṭeḥ* is applicable.

Note, in connection with this, that rule 6.4.155 *ṭeḥ* deletes the *ṭi* part of an *aṅga* before affixes *iṣṭhaN*, etc., by the *gaṇasūtra: prātipadikād dhātvarthe bahulaṃ iṣṭhavac ca* 'operations similar to affix *iṣṭhaN* take place variously after a nominal stem when the sense of the root is to be denoted'. The derivate could thus have been accomplished. But along with *ṭeḥ* application, *ṭi*-deletion would become applicable. Additionally, as is the case with all *iṣṭhaN* (5.3.55 *atiśāyane tamabiṣṭhanau*) derivates, masculine transformation (*puṃvadbhāva*; 6.3.34 *striyāḥ puṃvad bhāṣitapuṃskād*...) also applies. However, masculine transformation is also blocked in the context of *āpUK*.

The tradition believes that *ṆiC* after a nominal stem is introduced in two senses of *tat karoti* '...does or makes that', or *tad ācaṣṭe* '...says that'. Thus we get: *satyāpayati* parallel to *satyam ācaṣṭe* '...speaks the truth'. Perhaps, commentators explain the particular meanings of the cited formations because the sense of *tat karoti* and *tad ācaṣṭe* often becomes rather difficult to clearly establish. My glosses of relevant examples are an effort toward capturing the instances in which the commentators think these derivates are used. Haradatta (*PM* ad *Kāś* II:386-87) states that the distinction between meanings is based on generalizations . This does not rule out usages in other more specific meanings.

In contrast, note that in the case of *curādi* roots, the sense of affix *ṆiC* has to be the root-sense (*svārtha*) as no meaning has been specified (*nirdiṣṭa*) in this context.

2. The *Ṇ* of affix *ṆiC* is given as an *it* for *vṛddhi* by rule 7.2.115 *aco' ñṇiti*. The *C* as an *it* is given to secure the final (*anta*) high pitch (*udātta*) by rule 6.1.163 *citaḥ*.

3.1.26 हेतुमति च

hetumati ca

/*hetumati* 7/1 *ca* Ø/

(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *ṇic* #25)

hetor vyāpāraḥ hetumān, tasminn abhidheye dhātor ṇicpratyayo bhavati

Affix *ṆiC* occurs after verbal roots when *hetumat* 'causal action' is expressed.

EXAMPLES:

kaṭaṃ kārayati 'he has someone make the mat'

odanaṃ pācayati 'he has someone cook the rice'

1. This rule introduces affix *ṆiC* after a verbal root when causal action is expressed. The word *hetu* is used in this grammar in both the sense of cause (*nimitta*) and as the causal agent (*hetu*). Thus, we have rule 1.4.55 *tatprayojako hetuś ca* whereby the instigator (*prayojaka*) of an independent agent is additionally termed *hetu*. This, obviously, has derivational consequences. Consider, for example, the sentence *devadatto yajñadattena taṇḍulaṃ pācayati* 'Devadatta has Yajñadatta cook the rice' where Devadatta is prompting Yajñadatta to cook the rice. Yajñadatta is still the independent agent (*svatantrakartṛ*; 1.4.54 *svatantraḥ karttā*) though with a qualification. He is now being prompted by Devadatta. In this context, Devadatta is the prompter or causal agent. He is an agent independent of the action of prompting. He, therefore, is assigned the additional term *hetu*. Rule 3.1.26 *hetumati ca* requires the introduction of affix *ṆiC* when the activity of agent termed *hetu* is to be expressed.

Commentators caution that the condition of *hetumati* should not be interpreted as meaning 'causal agent' per se. It should instead be interpreted as denoting the characteristic action (*vyāpāra*) of instigation (*preraṇa*). Thus, the action of instigation characteristic of the causal agent (*prayojakavyāpāra*) is the denotatum of *hetumat*.

Let us understand this in view of the derivation of *pācayati*. This verbal form is derived from *pac* + (*Ṇ* → ∅)*i* (*C* → ∅), where rule 3.1.26 introduces affix *ṆiC*. This yields *pāci*, a verbal root (*dhātu*; 3.1.32 *sanādyantā dhātavaḥ*) after which 3.2.123 *varttamāne laṭ* introduces affix *LAṬ*. Note that *LA* affixes are introduced after a transitive root when either the agent or the object is to be denoted; they are introduced after an intransitive root when either the agent or the root-sense (*bhāva*) is to be denoted (3.4.69 *laḥ karmaṇi ca bhāve cākarmakebhyaḥ*). Coming back to the context of *pāci* + *LAṬ*, we replace *LAṬ* with *ti*(*P* → ∅) as per rules 3.4.77 *lasya* and 3.4.78 *tiptasjhi...* This *ti* is selected to denote the agent of *pāci*, i.e., the causal agent Devadatta. But this agent is also termed *hetu* by rule 1.4.55 *tatprayojako....* Affix *ṆiC*, introduced by 3.1.26 *hetumati ca*, is intended to denote this *hetumat*, i.e., the action (*vyāpāra*) of instigation (*preraṇa*). The prompted agent, in this case Yajñadatta, will then have to be denoted by *tṛtīyā* 'third triplet of nominal endings' introduced by rule 2.3.18 *kartṛkaraṇayos tṛtīyā*. For, the causal agent is denoted by the verb. I have omitted some derivational details which can be found in the appendix.

3.1.27 **कण्ड्वादिभ्यो यक्**

kaṇḍvādibhyo yak
/*kaṇḍvādibhyaḥ* 5/3 *yak* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)

'kaṇḍūñ' ity evam ādibhyo yak pratyayo bhavati
Affix *yaK* occurs after verbal roots enumerated in the list headed by *kaṇḍūÑ* 'to scratch' to denote *bhāva* 'root sense'.

EXAMPLES:

kaṇḍūyati 'he scratches...'
kaṇḍūyate 'id.'
mantūyati 'he offends...'
mantūyate 'id.'

1. This rule introduces affix *yaK* after items enumerated in the list headed by *kaṇḍūÑ* 'to itch, scratch'. These items are treated as both a *dhātu* and a *prātipadika*. What then should we accept here as the base for affix *yaK*? The *Mahābhāṣya* states that *yaK* should be introduced after *dhātu* because *dhātu* is here provided for by the context (cf. 3.1.22 *dhātor ekāco...*). Besides, the *K* of *yaK* as an *it* is used here to block *guṇa*. If *yaK* were to be introduced after a nominal stem, *K* as an *it* for the affix becomes useless. For, the *guṇa* which is to be blocked by the *it* obtains before an affix introduced only after a verbal root.

What makes us understand that *kaṇḍū*, etc., can also be nominal stems? Pāṇini indicates this usage by citing *kaṇḍū*, etc. with a built-in long vowel. For, the long vowel, say the *ū* of *kaṇḍūÑ*, could easily be implemented by the application of rule 7.4.25 *akṛtsārvadhātukayor dīrghaḥ*. Pāṇini, thus, did not jump the derivational process without a specific purpose in mind. The *Mahābhāṣya* (III:101) sums up the preceding explanation with the following verse:

dhātuprakaraṇād dhātoḥ,
kasya cāsañjanād api/
āha cāyam imaṃ dīrghaṃ,
manye dhātur vibhāṣitam//

2. The *Ñ* of *kaṇḍūÑ*, and the like, is intended for the selection of the *ātmanepada* (1.3.12 *svaritañitaḥ...*).

3. In the absence of any meaning specification, *yaK* should be introduced to denote *svārtha*, the sense of the root itself. Bhoṭṭoji (*SK* III:544) states that *yaK* is introduced obligatorily *(nıtyam)* after these roots when *dhātvartha* 'root-sense' is denoted. The word *kaṇḍū* is explained as *gātra-vikarṣaṇa* 'scratching' while *mantūÑ* is paraphrased as *aparādha* 'guilt, crime'. Similar meaning specifications are also available for others.

4. Items such as *magadha*, *sukha*, *duḥkha*, etc., which are read with a final *a*, undergo through its deletion (6.4.48 *ato lopaḥ*). This yields forms such as *magadhyati*, *sukhyati*, and *duḥkhyati*, etc. This list also includes items such as *loṭ* and *leṭ* which are independent word- forms, and should not be confused with the abstract suffixes *LOṬ* and *LEṬ*. This distinction

is only logical in view of the nature of the items enumerated. The list is not an enumeration of affixes. Thus, because of their association (*sāha-carya*) with other non-affixes, *loṭ* and *leṭ* will be treated as non-affixal units meaning 'shine' and 'a bit' respectively.

5. When affix *yaK* is not introduced, *kaṇḍū*, etc., can be treated as nominal stems. Affixes such as *KvIP*, etc., can thus be introduced to derive *kaṇḍūḥ, kaṇḍūtiḥ* 'itching', etc., where *sU* is introduced after *kaṇḍū* and *kaṇḍūti* subsequent to the deletion of *KvIP*. These derivates of *KvIP* are treated as feminine.

3.1.28 गुपूधूपविच्छिपणिपनिभ्य आयः

gupūdhūpavicchipaṇipanibhya āyaḥ
/gupūdhūpavicchipaṇipanibhyaḥ 5/3 *āyaḥ* 1/1/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #22)
'gupū...pana' ity etebhyo dhātubhya āya pratyayo bhavati
Affix *āya* occurs to denote root-sense after verbal roots *gupŪ* 'to protect, preserve', *dhūpa* 'to heat, fumigate, torture', *vicchI* 'to move toward, approach', *paṇI* 'to praise' and *panI* 'to praise'.

EXAMPLES:

gopāyati 'he preserves, protects...'
dhūpāyati 'he heats, fumigates...'
vicchāyati 'he moves toward...'
paṇāyati 'he praises...'
panāyati 'id.'

1. Affix *āya*, in the absence of a particular specification of meaning (*arthanirdeśābhāvāt*) again denotes *svārtha* 'root-sense'. I have tried to capture the specific meanings of the roots in question in the translation. There are two meanings generally assigned to *pan*, namely 'to barter' and 'to praise' (*stuti*). The 'praise' meaning is accepted, here, because of the associated listing of this root with *paṇ*, which also means 'to praise'.

Note that *vicchI* has been enumerated in the group of roots headed by *tud*. On this basis, its *āya*-derivates will take the augment *Śa* (3.1.77 *tudādibhyaḥ...*) and not *ŚaP*.

2. Note that *paṇA* and *panA* have an *anudātta* vowel as their *it*. As such they are qualified for the introduction of the *ātmanepada* affixes. But their derivates in *āya* do not receive the *ātmanepada* affixes. That is, forms such as *gopāyate* are not correct. *Kāśikā* adds that these newly derived roots do not take *ātmanepada* affixes since they are altogether different roots. But what about their being marked with an *anudātta* vowel? Does that marking not become vacuous (*vyartha*)? On the contrary, the mark (*liṅga*), in this case the *anudātta* vowel as an *it*, has already

performed its function (*kṛtakārya*) in connection with roots which did not terminate in affix *āya*. The question of a mark becoming vacuous arises in view of the *Paribhāṣā* (cf. *PŚ* 107.) *avayaveṣv acaritārthaṃ liṅgaṃ samudāyasya viśeṣakaṃ bhavati* 'a mark made on a part qualifies the derived whole (*samudāya*) if it has yet to accomplish what it was used for'.

3.1.29 ऋतेरीयङ्

ṛter īyaṅ
ṛteḥ 5/1 *īyaṅ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)
ṛter īyaṅ pratyayo bhavati
Affix *īyaṄ* occurs to denote root-sense after verbal root *ṛtI* 'to hate'.

EXAMPLE:

ṛtīyate 'he hates...'

1. This verbal root is treated as *sautra* because it is only available in the *sūtra*. That is, it is not available in the listing of roots of the *Dhātupāṭha* (*DP*). *Kaśikā* informs that this root is used in the sense of 'censure, despise' (*ghṛṇā*). In the absence of any specific meaning given for *īyaṄ*, *dhātvartha* 'root-sense' becomes the denotation of the affix. The root, according to some (*eke*), may also mean *kṛpā* 'compassion, mercy' though in the context on hand it is 'to despise'.

2. A question is raised as to why Pāṇini did not formulate the rule as *ṛteś chaḥ*, thereby deriving *ṛtīyate* via *īy* as a replacement for affix *cha* by 7.1.2 *āyaneyīnī...* *Kāśikā* explains that Pāṇini preferred to introduce *īyaṄ* to indicate (*jñāpanārtha*) that 7.1.2 does not apply in case of affixes introduced after a verbal root.

Note that the root is here interpreted as ending in the consonant *t*. It should not be treated as ending in *i*. For, if Pāṇini intended the root to end in *i* he would not have specified the affix with a long *īyaṄ*. The short *i* of *iyaṄ* would have produced the long *ī* of the derivates through *savarṇadīrgha* 'homogenous long vowel replacement'.

3.1.30 कमेर्णिङ्

kamer ṇiṅ
/*kameḥ* 5/1 *ṇiṅ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)
kamer dhātor ṇiṅ pratyayo bhavati
Affix *ṆiṄ* occurs to denote root-sense after verbal root *kamU* 'to wish'.

EXAMPLE:

kāmayate 'he wishes for...; loves...'

1. The *Ṇ* of affix *ṆiṄ* is to facilitate *vṛddhi* by rule 7.2.116 *ata upadhāyāḥ*. The *Ṅ*, as usual, conditions the selection of *ātmanepada*. The resultant form, i.e., *kāmi*, becomes a verbal root in view of 3.1.32 *sanādyantā dhātavaḥ*.

3.1.31 **आयादय आर्द्धधातुके वा**

āyādaya ārddhadhātuke vā
/*āyādayaḥ* 1/3 *ārddhadhātuke* 7/1 *vā* Ø/
(*pratyayaḥ* #1; *paraś ca* #2)
ārddhadhātukaviṣaye ārddhadhātukavivakṣāyām āyādayaḥ pratyayā vā bhavanti
Affixes *āya*, etc., optionally occur after a verbal root when an *ārddhadhātuka* affix (3.1.114 *ārddhadhātukaṃ śeṣaḥ*) is to follow.

EXAMPLES:

goptā 'he who will protect'
gopāyitā 'id.'
arttitā 'he who will hate'
ṛtīyitā 'id.'
kamitā 'he who will love'
kāmayitā 'id.'

1. This rule makes the introduction of three preceding affixes, *āya*, *īyaṄ*, and *ṆiṄ*, optional when one anticipates the introduction of an *ārddhadhātuka* (3.4.114 *ārddhadhātukam...*) affix. The basis for introduction of an affix in anticipation lays in an interpretation of the locative of *ārddhadhātuke* as *viṣayasaptamī* 'locative of domain'. This locative here cannot be interpreted as *parasaptamī*, a locative specifying the right context for an operation to obtain on what precedes. For, that would require the *ārddhadhātuka* affix to be already in place after the root. That is, an affix termed *ārddhadhātuka* would have to be introduced prior to *āya*, etc. This would create problems. For example, consider the feminine base *gupti* derived by introducing affix *KtiN* (3.3.94 *striyāṃ ktin*) after *gup* where the option of introducing *āya* from this rule is not accepted. There are no derivational problems in this case. However, given the string *gup* + *KtiN*, if one introduces affix *āya* under the condition of the *ārddhadhātuka* affix *Ktin*, an undesired form *gopāti* would result. That is, given *gup* + *āya* + *ti*, *ya* will be deleted in view of rules 6.1.66 *ato lopaḥ* and 6.4.48 *lopo vyor valiḥ*. The desired form *gopāyā*, a feminine optional to *gupti*, is derived by introducing *āya* in anticipation of the *ārddhadhātuka* affix *a* of 3.3.102 *a pratyayāt*. Thus we have:

gopaya + *a* → *gopāyā*

Note that the *guṇa* in *gupti* is blocked by the *K* of *KtiN*. The same cannot be blocked in case of *gopāyā*. The optional introduction of affixes *āya*, etc., would have become obligatory had this rule not been formulated. This way, it is possible to select desired affixes. Thus, in the above illustration, *KtiN* is dropped in anticipation of the *ārddhadhātuka* affix *a* when *āya* is introduced to derive a feminine form. Refer to the appendix for derivational details; cf. *PM* (ad *Kāś*. II:406) for a finer interpretation of *saptamī* in *ārddhadhātuke* of this rule.

3.1.32 सनाद्यन्ता धातवः

sanādyantā dhātavaḥ
/*sanādyantāḥ* 1/3 *dhātavaḥ* 1/3/
sanādyantāḥ samudāyā dhātusaṃjñā bhavanti
Forms which end in affixes *SaN*, etc., are termed *dhātu* 'verbal root'.

EXAMPLES:

cikīrṣati 'he wishes to do'
putrīyati 'he wishes a son for himself'
putrakāmyati 'id.'

1. *Kāśikā* explains *sanādyantāḥ* in two steps as follows:
(*a*) *san ādir yeṣāṃ te sanādayaḥ* 'items which are enumerated with *saN* at their beginning are called *sanādayaḥ*'
(*b*) *sanādayo' nte yeṣāṃ te sanādyantāḥ* 'items in whose final position affixes *saN*, etc., occur are called *sanādyanta*'.

The (*b*) above is thus a *tadguṇasaṃvijñāna* interpretation of the *bahuvrīhi* compound underlying *sanādyantāḥ*, where *anta* is treated as a constituent which denotes an *avayava* 'part of a whole'. As such, *sanādyantāḥ* could be paraphrased as: *sanādayo' ntāvayavā yeṣāṃ samudāyānām* 'those composites which have affixes *saN*, etc., as their final element'. A *tadguṇasaṃvijñāna-bahuvrīhi* entails construing one of its constituents with the verb.

The word *dhātu*, here, refers to the technical term *dhātu* (*svarūpapadārthaka*). It does not refer to, for example, its usual denotata referred to by rule 1.3.1 *bhūvādayo dhātavaḥ*. If it did refer to *bhū*, etc., here, this term assignment would not make any sense.

2. Note that affixes *saN*, etc., are referenced here in the context of term assignment (*saṃjñāvidhi*). This way, as has been illustrated in connection with rule 1.4.14 *suptiṅantaṃ padam*, the *Paribhāṣā* (28) *saṃjñāvidhau pratyayagrahaṇe tadantagrahaṇaṃ nāsti* finds its scope. Since this rule relates to an operation relative to a term (*saṃjñā*) entailing affixes (*pratyaya*), items which may end in affixes referenced here may be thrown out of the scope of this rule. That is, items which end in affixes *saN*, etc., will

not qualify for assignment of the term *dhātu*. It is to indicate that *tadanta-vidhi* is desired in the context of this assignment of the term *dhātu* that the word *anta* is explicitly used in this rule. It is argued, however, that with the explicit introduction of the word *anta* in rule 1.4.14 *suptiṅantaṃ padam*, Pāṇini already exhausted any further application (*kṛtapravṛt-tivighāta*) of this unique method of *tadantavidhi*. Commentators refute this interpretation by saying that the use of the word *anta* again in this rule simply makes the reinforcement (*pratiprasava*) of that *tadantavidhi* application. This also clears the way for the assignment of the term *dhātu* to those forms which not only begin with the base after which the affix is introduced but also those which end in it. Consequently, given *devadattaś cikīrṣati*, the term *dhātu* cannot be assigned to the form which begins with *devadatta* and ends in affix *saN*.

3. A question is further raised as to why this term assignment of *dhātu* was not formulated as *sanādyantāś ca* and placed immediately after 1.3.1 *bhūvādayo dhātavaḥ*, a rule which also assigns the same term. This way, the word *dhātavaḥ* would not have to be repeated. Commentators explain that this could not be possible. Such a formulation would have lacked clarity with regard to the exact specification of desired affixes. With the rule formulated the way it is, and also sequenced where it is, one clearly understands *sanādi* as referring to the eleven (twelve if *KvIP* is also included) affixes (*saN, KyaC, kāmyaC, KyaṄ, KyaṢ, ṆiṄ, ṆiC, yaṄ, yaK, āya, īyaṄ*) enumerated in the list headed by *saN*. It may further be argued, in view of economy and contextual proximity, to leave the rule the way it is but to have 1.3.1 follow it with a rephrased reading *bhūvādayaś ca*.

However, commentators also see problems with this set of formulation. They say that this order would enable the term *dhātu* to be assigned to only those *bhū*, etc., which terminated in affixes *saN*, etc. Consequently, verbal roots *gup*, etc., would still qualify for the term but many other forms would be excluded. It is, therefore, suggested to leave the rule the way it is.

4. The function of this term assignment is to bring the derivates of this rule functionally on a par with items referred to by rule 1.3.1 *bhūvādayo*.... Consequently, the derivates of this rule also qualify for the introduction of affixes, and subsequent operations, in the domain of rule 3.1.91 *dhātoḥ*.

3.1.33 **स्यतासी लृलुटोः**

syatāsī lṛluṭoḥ
/syatāsī 1/2 = *syaś ca tāsiś ca (itar. dv.); lṛluṭoḥ* 7/2 = *lṛ ca luṭ ca (itar. dv.)/*
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #22)

lṛ-rūpaṃ utsṛṣṭānubandhaṃ sāmānyam eva, tasmin luṭi ca parato dhātor yathāsaṃkhyaṃ syatāsī pratyayau bhavataḥ
Affixes *sya* and *tāsI* respectively occur after verbal roots when *LṚ* and *LUṬ* follow.

EXAMPLES:

kariṣyati '...will make or do tomorrow'
akariṣyat '...made or did yesterday'
śvaḥ karttā '...will make or do tomorrow'
mantā '...will think'

1. The word *LṚṬ* is interpreted, here, as referring to both the *LṚṬ* and *LṚṄ* affixes. Dropping the *it* to thereby make a general reference by means of *LṚ*, also serves another purpose. Note that *LṚṬ*, *LṚṄ* and *LUṬ*, three affixes form the right context for the introduction of two affixes *sya* and *tāsI*. That is, there are three conditioning factors (*nimitta*) for two conditioned elements (*nimittin*). Obviously, this impairs assignment of equivallancies in accordance with the number of elements enumerated (*saṃkhyātānudeśa*; 1.3.10 *yathāsaṃkhyam...*). Commentators explain that, in making a common reference with *LṚ* to *LṚṬ* and *LṚṄ*, Pāṇini saves the *saṃkhyātānudeśa* from impairment. As such, *sya* can be introduced when replacement of either a *LṚṬ* or *LṚṄ* follows. Similarly, *tāsI* can be introduced when a replacement of *LUṬ* follows.

2. Note, also, that *tāsI* is given with a final *I* which *Kāśikā* (in the section supposedly written by Jayāditya) identifies as an *it*. The purpose of this *it* is to block the deletion of *n* in, for example, *mantā*, which is briefly derived as follows

(*a*) *man* + (*LUṬ*→*ta*→ *Ḍā*) = *man* + *ā*)
(*b*) *man* + *tās*(*I*→∅) + *ā* → *man* + *tās* + *ā*
(*c*) *man* + *t*(*ās*→ ∅) + *ā* → *man* + *t* + *ā* (6.4.143 *ṭeḥ*)
(*d*) *man* + *t* + *ā*→6.4.24 *aniditāṃ hal...*
ma (*n*→∅) *t* +*ā* = **matā*

I have omitted here the initial details of this derivation. Refer to the derivation of *paṭhitā* and *kaṇitā* in the appendix of rule 1.1.6 *dīdhīvevīṭām* for further details.

Note that the deletion of *n* in (*d*) will obtain because (*Ḍ*)*ā*, a substitute of *LUṬ* via *ta* (2.4.85 *luṭaḥ prathamasya...*), is treated as if marked with *Ṅ* by 1.2.4 *sārvadhātukam apit*. For, the *aṅga*, i.e., *man* + *t*, will not be able to meet the condition of *anidita* 'that which does not have *i* as an *it*' of 6.4.24 *aniditām....* Thus, the application of rule 6.4.24 *aniditām hal...* is blocked by treating the *tāsI* of *mantāsI* as marked with *I* as an *it*. Vāmana, the co-author of the *Kāśikā*, treats the final *I* of *tāsI* as added simply for ease of articulation (*uccāraṇa*; cf. Vāmana under rule 7.1.58 *idito num...*).

Nyāsa (III: 410–11) hastens to add that Vāmana's statement does not constitute a conflict between the co-authors. Actually, the *n* which is the object of this deletion must also be the penultimate (*upadhā*; 1.1.65 *alo' ntyāt pūrva*...). Note that rule 6.4.24 *aniditām hal*... is contained in the section headed by 6.4.22 *asiddhavad atrābhāt*. This rule makes the application of a *sūtra* suspended (*asiddha*) in view of the application of any other rule prior to rule 6.4.129 *bhasya*. In view of this, the application of rule 6.4.24 renders the application of rule 6.4.143 *ṭeḥ* without scope. This means that the output of step (*c*), as far as rule 6.4.24 was concerned, will still be: *man* + *tās* + *ā*. That is, *n* which 6.4.24 would ordinarily delete, no longer constitutes the penultimate segment of the presuffixal base (*aṅga*). Consequently, the question of the deletion of *n*, as well as the addition of *I* as an *it* to *tās*, will not arise. It is with this understanding that Vāmana says that the *I* is used for ease of articulation.

Vāmana's view is tenable only if one does not accept that the deletion of *ṭi* can be accomplished at the strength of the *ḍit* (*Ḍ* as an *it*) status of an item even when lacking the assignment of the term *bha* (cf. *Mbh.* IV: 783: *ḍity abhasyāpi anubandhakaraṇa-sāmarthyāt*). I do not offer any additional detail on this for fear of expatiation. Note, however, that taking recourse to the *ḍit* status for the application of rule 6.4.143 *ṭeḥ* is a fairly general practice in the Pāṇinian parlance. Consequently, the *i* of *tāsi* is treated as facilitating pronunciation. Refer to the derivation of *bhavitā*, etc., under rule 1.1.49 *ṣaṣṭhī*... for derivational details.

Some claim that without the *I* as an *it*, it would be impossible to save the *s* of *tāsI* from being designated as an *it* by 1.3.3 *halantyam*. Consequently, rule 1.3.9 *tasya lopaḥ* would delete the *s*. Therefore, *I* is used to save the *s* from deletion. This view should be abandoned. What could possibly be the purpose of assigning the term *it* to *s*? A *s* as an *it* may invoke the assignment of the term *pada* by rule 1.4.16 *siti ca*. But this will create difficulty in connection with the derivation of forms such as *hantā* 'he who will kill' where 8.2.7 *nalopaḥ*...would then demand the deletion of-*n*.

3. Note that the tradition accepts *sya*, etc., as an exception to *ŚaP* (3.1.68 *kartari śap*).

3.1.34 **सिब्बहुलं लेटि**

sib bahulaṃ leṭi
/*sip* 1/1 *bahulaṃ* 1/1 *leṭi* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)
dhātoḥ sip pratyayo bhavati bahulaṃ leṭi parataḥ
Affix *sIP* occurs variously after a verbal root when *LEṬ* follows.

EXAMPLES:

joṣiṣat 'may he make us happy'

tāriṣat 'may he move ahead'

1. This rule, on account of being marked with *bahulam,* applies variously. That is, sometimes it applies, at others it does not; sometimes it applies only optionally, yet, on occasion, it applies in an entirely different manner. Of course, it applies when *LEṬ* (3.4.7 *liṅarthe leṭ*) follows. Note that *LEṬ* usages are exclusive to the Vedic. The *I* of *sIP* is used to facilitate pronunciation whereas its *P* as an *it* intended for proper accentuation (3.1.4 *anudāttau suppitau*).

3.1.35 **कास्प्रत्ययादाममन्त्रे लिटि**

kāspratyayād ām amantre liṭi
/*kāspratyayāt* 5/1 *ām* 1/1 *amantre* 7/1 *liṭi* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)
'kāsṛ' śabdakutsāyām tataḥ pratyayāntebhyaś ca dhātubhya ām pratyayo bhavati liṭi parato' mantraviṣaye
Affix *ām* occurs after *kāsR̥* 'to cough' and roots which end in an affix, provided *LIṬ* follows and the usage is not the Mantra part of the Vedic.

EXAMPLES:

kāsāñcakre 'he coughed'
lolūyāñcakre 'he cut repeatedly'

1. The word *pratyaya* is, here, used to refer to affixes *saN*, etc. Consequently, and also in consonance with the *Paribhāṣā* (24) *pratyayagrahaṇe...*, *pratyaya* denotes items ending in affixes *saN*, etc. (*sannantebhyaḥ*). This, in turn, becomes a qualifier to *dhātu* as this is the domain of *dhātu.* This yields the following interpretation:

...pratyayāntebhyo dhātubhya... '...after verbal roots ending in affixes *saN*, etc.,...'

Thus, affix *ām* is to be introduced after verbal root *kāsR̥*, or after verbal roots which end in affixes *saN*, etc.

The negation of *amantre* entails *viṣayasaptamī* 'locative of domain, topic'. It is not an instance of *parasaptamī,* the locative which forms the right context for an operation to take place on what precedes. A *viṣaya-saptamī* interpretation of the negation of *amantre* will reduce the scope of application of this rule to *bhāṣā* 'classical Sanskrit' and the *brāhmaṇa.* The word *mantra* (cf. *PM* ad *Kāś.* II:414) refers to the three Vedas: *ṛk, yajuṣ* and *sāman* where *atharvā* is treated as included within the first two. Why did Pāṇini not use *chandasi* as is his general practice? The use of *chandasi* would exclude the *brāhmaṇa* usages from the scope of this rule. Thus, *mantra* is used here to bring *brāhmaṇa* usages within the scope of this rule additionally with those of the *bhāṣā* 'classical Sanskrit'.

The *m* of *ām* cannot be deleted by the joint application of 1.3.3 *halantyam* and 1.3.9 *tasya lopaḥ*. Note that such a deletion would be vacuous (*vyartha*) because of lack of any definite purpose (*phalābhāva*). The single purpose for which *M* is made an *it* is to facilitate the application of rule 1.1.47 *mid aco' ntyāt paraḥ*. This rule allows for the introduction of an item marked with *M* as an *it* after the final vowel of the item for which the specification is made. Our rule on hand, does not require invoking 1.1.47 *mid aco....* Rule 3.1.1 *pratyayaḥ* and 3.1.2 *paraś ca* will govern the situation here. Furtliermore, *ām* is introduced after *kās* (by this rule) and *ās* (by 3.1.37 *dayāyāsaś ca*). If *m* of *ām* was an *it* then *ā* will have to be introduced after the long vowel of *kās* and *ās*. This produces *kā* + *ā* + *s* => *kās* and *ā* + *ā* + *s* => *ās*, the same form. Why introduce *ā(M)* when the desired form can be gotten without introducing it? That the introduction of *ām* is not futile becomes an indication (*jñāpaka*) for not treating the *M* of *ām* as an *it*.

2. A *vārttika* under this rule proposes that *ām* should be stated to occur also after polysyllabic (*anekāc*) roots so that *culumpāñcakāra* 'he fondled...' and *daridrāñcakāra* 'he became poor or displayed poor taste', etc., can be accounted for. This proposal also requires *anekācaḥ* 'that which consists of more than one vowel' to replace *pratyayāt* of this rule.

Note, in connection with this, that *ām* is a *kṛt* affix (3.1.93 *kṛd atiṅ*) termed *ārddhadhātuka* (3.4.114 *ārddhadhātukaṃ...*). Forms which end in *ām* are termed nominal stem by rule 1.2.46 *kṛttaddhita....* But the nominal endings introduced after an item which ends in *ām* are deleted by 2.4.82 *avyayād āp supaḥ*. Such items are termed *avyaya* on account of being *kṛdanta* terminating in *-m* (1.1.38 *kṛn mejantaḥ*).

Also note that rule 3.1.40 *kṛñcānuprayujyate...* will provide for the tagged (*anuprayukta*) verbal roots *kṛ*, *bhū* and *as* before *LIṬ*. This *LIṬ*, however, is deleted by 2.4.81 *āmaḥ*. Normally, one would expect *ātmanepada-parasmaipada* affixes to replace the *LA*-affixes as is provided for by rule 3.4.78 *tiptasjhi...* read with 3.4.77 *lasya* . But in an example such as *īhāñcakre*, *LIṬ* gets deleted and *ātmanepada* ending *-ta* is introduced as a replacement for a freshly introduced *LIṬ* after forms which end in *-ām*.

3.1.36 इजादेश्च गुरुमतोऽनृच्छः

ijādeś ca gurumato 'nṛcchaḥ
/*ijādeḥ* 5/1 *ca* Ø *gurumataḥ* 5/1 *anṛcchaḥ* 5/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *ām, amantre, liṭi* #35)
ijādir yo dhātur gurumān ṛcchativarjitas tasmāc ca liṭi parata ām pratyayo bhavati

Affix *ām* occurs after a verbal root which begins with *iC* (*i,u,ṛ,ḷ,e, o, ai, au*; *Śs* 1-4) and contains a *guru* vowel (1.4.11 *saṃyoge...*),

though is not *ṛcch* 'to go', provided *LIṬ* follows and the usage is not from the Mantra part of the Vedic.

EXAMPLES:

īhāñcakre 'he tried'
ūhāñcakre 'he reasoned about'

1. This rule provides for *ām* after a verbal root which begins with *iC* and has a *guru* vowel, but is not constituted by *ṛcch*. Other conditions remain the same. It is interesting to note that a vowel denoted by *iC* can satisfy both the conditions of *ijādi* and *gurumān*. Why did Pāṇini not state just the condition of *gurumān*? That would qualify verbal roots *takṣ*, and *rakṣ* for the introduction of *ām*, an undesired situation in view of their derivates namely *katakṣa* and *rarakṣa*. This rule requires that the root which begins with *iC* (*ijādiḥ*) must also be *gurumān*; that which contains a vowel termed *guru*.

2. A *vārttika*, obviously to account for forms such as *prorṇunāva* '...covered properly', demands that verbal root *ūrṇuÑ* 'to cover' should be treated as an exception.

3.1.37 दयायासश्च

dayāyāsaś ca
/*dayāyāsaḥ* 5/1 = *dayaś ca ayaś ca* = *dayāyās tasmāt (sam. dv.)*; *ca* 0/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *ām*, *amantre*, *liṭi* #35)
'daya-aya-āsa' ity etebhyaś ca liṭi parata ām pratyayo bhavati
Affix *ām* also occurs after verbal roots *dayA* 'to give, to go, to protect', *ayA* 'to go' and *āsA* 'to sit' provided *LIṬ* follows and the usage is not from the Mantra part of the Vedic.

EXAMPLES:

dayāñcakre 'he protected'
palāyāñcakre 'he ran away'
āsāñcakre 'he sat down'

1. Verbal roots *ayA* and *āsA* are explained as signifying *gati* 'movement' and *upaveśana* 'sitting' respectively. However, *dayA* is explained as signifying *dāna* 'giving', *gati* as well as *rakṣaṇa* 'protection'. This rule introduces affix *ām* under the condition of a following *LIṬ*. Given *parā* + *ay* + *ām* + *cakre* where verbal root *ayA* is used with the preverb *parā*, the *-r* of *parā* gets replaced with *-l* by 8.2.19 *upasarga...*

3.1.38 उषविदजागृभ्योऽन्यतरस्याम्

uṣavidajāgṛbhyo 'nyatarasyām

|uṣavidajāgṛbhyaḥ 5/3 *anyatarasyām* 7/1/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #22, *ām, amantre, liṭi* #35)
'uṣa vida jāgṛ' etebhyo liṭi parato 'nyatarasyām ām pratyayo bhavati
Affix *ām* optionally occurs after verbal roots *uṣA* 'to burn', *vidA* 'to know' and *jāgṛ* 'to wake up' provided *LIṬ* follows and the usage is not from the Mantra part of the Vedic.

EXAMPLES:

oṣāñcakāra 'he burned'
uvoṣa 'id.'
vidāñcakāra 'he perceived'
viveda 'id.'
jāgarāñcakāra 'he woke up'
jajāgāra 'id.'

1. This rule makes the introduction of *ām* optional after the three verbal roots cited as above. Note that *vidA* is interpreted as active (*parasmaipada*), signifying *jñāna* 'knowledge', because of its association with *uṣA* and *jāgṛ* which are active. That is, *vidA* is neither interpreted as the middle (*ātmanepada*) root meaning 'to exist, think', nor as active-middle (*ubhayapadī*) with the signification 'to gain, benefit'. Furthermore, because of its association with *jāgṛ* which is an *adādi* root, it is treated, here, as belonging to the *adādi* group of roots. The final *A* with *vid* is used so that the penultimate *guṇa* can be blocked. Note, however, that citation of *vidA* with its final *A* is restricted only to the context of affix *ām*. That is, absence of *guṇa* is only applicable in the context of the following *ām*.

3.1.39 भीह्रीभृहुवां श्लुवच्च

bhīhrībhṛhuvāṃ śluvac ca
|bhīhrībhṛhuvām 6/3 *śluvat* Ø *ca* Ø/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #22, *ām, amantre, liṭi* #35, *anyatarasyām* #38)
'ñibhī hrī ḍubhṛñ hu' ity etebhyo liṭi parata ām pratyayo bhavaty anyatarasyām, ślāv iva cāsmin kāryaṃ bhavati
Affix *ām* optionally occurs after verbal roots *ÑIbhī* 'to fear', *hrī* 'to be bashful, to be ashamed', *ḌUbhṛÑ* 'to hold, provide for' and *hu* 'to offer ritual oblation, to call' provided *LIṬ* follows and the usage is not from the Mantra part of the Vedic; in addition, these roots undergo operations similar to those which occur when *ŚLU* follows.

EXAMPLES:

bibhayāñcakāra 'he became frightened'

bibhāya 'id.'
jihrayāñcakāra 'he became ashamed'
jihrāya 'id.'
bibharāñcakāra 'he provided for'
babhāra 'id.'
juhavāñcakāra 'he offered ritual oblation'
juhāva 'id.'

1. This rule not only optionally introduces affix *ām* before *LIṬ* occurring after the roots cited, but also orders an additional operation similar to that with *ŚLU* (*śluvat*). This additional operation results into reduplication (*dvitva*) by rule 6.1.10 *ślau*, and a replacement in - *i* (*itva*; 7.4.76 *bhīhrībhṛñām*...). Note that *śluvat* contains affix *vatI* ruled, in view of rule 5.1.116 *tatra tasyeva*, after a syntactically related *pada* which ends in locative (*saptamī*), particularly *tatra*, as the variable *tad* in rule 5.1.116 suggests. This *pada*, of course, is *ślu* + *Ṅi* which with *vatI*, yields the interpretation *ślau iva* 'as if when *ŚLU* follows'. Obviously, *śluvat* marks an extension (*atideśa*) of an operational type (*kāryātideśa*). If this extension is not ordered, reduplication, for the reason of *ām* intervening between the root and *LIṬ*, will be blocked. Similarly, *itva* also would not obtain.

3.1.40 **कृञ्चानुप्रयुज्यते लिटि**

kṛñ cānuprayujyate liṭi
/*kṛñ* 1/1 *ca* Ø *anuprayujyate* (form in *tiṄ*) *liṭi* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *ām* #35)
ām pratyayasya paścāt kṛñ anuprayujyate liṭi parataḥ.
Verbal roots denoted by the abbreviatory term *kṛÑ* occur after an item which ends in affix *ām* when *LIṬ* follows.

EXAMPLES:

pācayāñcakāra 'he cooked'
pācayāmbabhūva 'id.'
pācayāmāsa 'id.'

1. Commentators explain that *kṛÑ* does not, here, refer to the single root *DukṛÑ*. Instead, it is an abbreviatory term formed with *kṛ* of rule 5.4.50 *kṛbhvastiyoge*... and the *Ñ* of 5.4.58 *kṛño dvitīyatṛtīya*... (cf. *Mbh.* III:122: *kṛñ iti nedaṃ dhātugrahaṇam; kiṃ tarhi? pratyāhāragrahaṇam. kva sanniviṣṭānāṃ pratyāhāraḥ? kṛbhvastiyoge ity ataḥ prabhṛty akṛño ñakārāt*). The abbreviatory term should technically denote four roots, i.e., *kṛ*, *bhū*, *as*, and *pad*, used with the preverb *sam*. However, the first three verbs denote generalized action, and their *LIṬ* forms are tagged after items which terminate in *ām* introduced after roots denoting particular actions. Since verbal root *pad*, used with the preverb *sam*, does not denote a

generalized action, its derivate in *LIṬ* can not be tagged (SK III: 57: *teṣāṃ kriyāsāmānyavācitvād āmprakṛtīnāṃ viśeṣavācitvāt tadarthayor abhedenānvayaḥ; sampadis tu pratyāhāre'ntarbhūto' py ananvitārthatvān na prayujyate*). Note, also, that *as*, in the context of this rule, cannot be replaced with *bhū* (2.4.52 *aster bhūḥ*). For, if Pāṇini intended this replacement, he would not have included *bhū* in 5.4.50 *kṛbhvastiyoge....* Besides, he could have formulated this rule simply as *kṛbhvanuprayujyate liṭi.*

3.1.41 विदाङ्कुर्वन्त्वित्यन्यतरस्याम्

vidāṃkurvantv ity anyatarasyām
/vidāṃkurvantu (form ending in *tiṄ*) *iti* Ø *anyatarasyām* 7/1/
vidāṃkurvantv ity etad anyatarasyām nipātyate
The form *vidāṃkurvantu* is optionally derived by *nipātana.*

EXAMPLES:

vidāṃkurvantu 'let them know'
vidantu 'id.'

1. This is an ad hoc (*nipātana*) rule which provides for *vidāṃkurvantu,* a form of the verbal root *vidA* ending in *-ām* and tagged with *kṛ* terminating in *LOṬ*. We know that the tagged form of *kṛ, bhū,* and *as* are only available in *LIṬ*. The first ad hoc provision of this rule is to provide for the tagged forms also in *LOṬ*. We thus get: *vid* + *LOṬ*. Secondly, this rule, again by *nipātana,* blocks the *guṇa* before *ām*. Thirdly, this rule provides for the deletion of *LOṬ* to produce *vidām*. Finally, a *LOṬ* form of *kṛ, bhū,* or *as* will be tagged, again, under the ad hoc provision of this rule (cf. SK III:289 *vetter leṭy ām guṇābhāvo loṭo luk loḍantakaroty anuprayogaś ca vā nipātyate*).

It should be noted here, that in the absence of availing the option of tagging a form of *kṛ, bhū,* or *as* in *LOṬ*, the resultant form will be *vidantu.*

2. Pāṇini cites only one form *vidāṃkurvantu,* a third person plural, perhaps because of its greater frequency. This, however, does not rule out the existence of other forms. The use of *iti* in the rule is, perhaps, made to indicate just that.

3.1.42 अभ्युत्सादयांप्रजनयांचिकयांरमयामकःपावयांक्रियाद् विदामक्रन्निति छन्दसि

abhyutsādayāṃprajanayāṃcikayāṃramayāmakaḥpāvayāṃkriyād vidāmakrann iti cchandasi
/abhyutsādayām...ramayāmakaḥ 1/1 *pāvayāṃkriyād vidāmakran* (forms ending in *tiṄ*) *iti* Ø *chandasi* 7/1/
(*anyatarasyām* #41)
'abhyutsādayām' ity evam ādayaś chandasi viṣaye' nyatarasyāṃ nipātyante

Forms such as, *abhyutsādayāmakaḥ*, *prajanayāmakaḥ*, *cikayāmakaḥ*, *ramayāmakaḥ*, *pāvayāṃkriyāt* and *vidāmakran* are derived optionally by *nipātana* when the usage is Vedic.

EXAMPLES:

abhyutsādayāmakaḥ 'x had y sit on top of...'
prajanayāmakaḥ 'x brought about the existence of...'
cikayāmakaḥ 'x had y arrange...'
ramayāmakaḥ 'x had y play around...'
pāvayāṃkriyāt 'may x have y purified...'
vidāmakran 'x attained the knowledge of...'

1. This rule optionally provides for ad hoc formations such as *abhyutsādayāmakaḥ*, *prajanayāmakaḥ*, *cikayāmakaḥ*, *ramayāmakaḥ*, *pāvayāṃkriyāt*, and *vidāmakran*. The *akaḥ* of the rule, obviously, has to be read at the end of each one of the cited forms: *abhyūtsādayām*, etc. Here, as also is the case with the previous rule, *nipātana* provides for diverse operations. For example, verbal roots *sad*, *jan* and *ram* (*sadḶ.*, *janḶ*, *ramU*) are treated as ending in *ṆiC*. Given *jani*, *rami* and *sadi*, used with relevant preverbs, *ām* is introduced under the condition of the following *LUṄ*. The *akaḥ*, of course, is tagged subsequently. The *vṛddhi*, for example, in *abhyutsādayāmakaḥ* is also availed by *nipātana*. Verbal root *ciÑ* in *cikayāmakaḥ* receives *ām* before *LUṄ* but doubling (*dvitva*) and replacement of *c* by *k* (*kutva*) is availed by *nipātana*. The *i* of *ṆiC* in *ciki* goes through *guṇa (e)* and its subsequent *ay* replacement, again by *nipātana*. The next derivate *pāvayāṃkriyāt* also has *ām*. After the *ṆiC* form of *pūÑ*, *ām* is introduced before *LIṄ*. The *LIṄ* form of *kṛ*, i.e., *kriyāt*, is also subsequently tagged. Our final derivate *vidāmakran* receives *ām* before *LUṄ* after *vidA*. The *guṇa* of *i*, in *vid*, is blocked by *nipātana* and *akran* is subsequently tagged.

Note that derivational details, such as those above, are provided to show that what Pāṇini provides, is ad hoc; citation of fully derived forms automatically rules out any need toward furnishing derivational details.

Note, also, that parallel to these ad hoc forms in the Vedic, we find *abhyudasīṣadat*, *prajījanat*, *acaiṣīt*, *arīramat*, *pāvyāt* and *avediṣuḥ* in the classical language. Check the appendix for derivational details.

3.1.43 च्लि लुङि

cli luṅi
/*cli* (1/1 *deleted*) *luṅi* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)

dhātoś cliḥ pratyayo bhavati luṅi parataḥ
Affix *CLI* occurs after a verbal root when *LUṄ* follows.

EXAMPLES:

See under subsequent rules for examples.

1. This rule provides for the introduction of affix *CLI* after a root when *LUṄ* follows. Note that in addition to the *anuvṛtti* of 3.1.1 *pratyayaḥ*, 3.1.2 *paraś ca*, etc., this rule also gets the *anuvṛtti* of *dhātoḥ* from 3.1.22 *dhātor ekāco... Kāśikā* states that I in *CLI* is for ease of pronunciation. Obviously, a sequence of *C* and *l* will be hard to pronounce without a vowel. Refer to my notes under the following rule for additional details. The *C* is used as an *it* for final *udātta* accent by 6.1.163 *citaḥ*. The *C* is assigned the term *it* by 1.3.7 *cuṭū*. Our present rule is an exception to rules 3.1.68 *kartari śap*, etc., whereby the *vikaraṇa*, namely *ŚaP*, etc., are introduced.

3.1.44 च्लेः सिच्

cleḥ sic
/*cleḥ* 6/1 *sic* 1/1/
(*luṅi* #43)
cleḥ sij ādeśo bhavati
Affix *CLI* is replaced with *sĪC* after a verbal root when *LUṄ* follows.

EXAMPLES:

akārṣīt 'he made something'
ahārṣīt 'he carried something'

1. This rule introduces *sĪC* as a replacement for *CLI* where, according to *Kāśikā*, *Ī* is used to facilitate pronunciation. The *C* is used, as previously, for accent. Bhaṭṭoji, in consonance with the *Mahābhāṣya*, accepts *Ī* as an *it*. This position is necessary so that the deletion of the penultimate *-n* of the root, for example in *amaṃsta* 'he knew', can be blocked. Thus, given *aṬ* + *man* + *sĪC* + *ta* → *amans* + *ta*, rule 6.4.24 *aniditāṃ hala...* becomes applicable. This rule will delete *-n* unless its introduction is conditioned by *Ī* as an *it*. The *n* of *amaṃsta* is saved from deletion since *Ī* in *sĪC* is an *it*. An additional condition of *Ṅit* required for the application of 6.4.24 is met by treating *ta* as if it were *Ṅit* (1.2.4 *sārvadhātukam apit*).

Kāśikā, apparently, does not accept this interpretation. How else can *Kāśikā* block the deletion of *n*? By taking recourse to an indication (*jñāpaka*)

from rule 1.2.14 *hanaḥ sic* which extends to *sIC* occurring after *han* the status of *kit* 'marked with *K* as an *it*'. *Kāśikā* maintains that this extension of status as *kit* serves as a *jñāpaka*. It indicates that the deletion (*lopa*) of a penultimate (*upadhā*) sound of an item which ends in *sIC* (*sijanta*) does not take place.

A question as to why *sIC* had to be marked with *C* as an *it* becomes pertinent here. For, since a replacement of *CLI*, it would already be treated as marked with *C*. Commentators explain that *C* is retained in the replacement to secure the *anudātta* accent (6.1.163 *citaḥ*) which otherwise could become unavailable. Besides, if *sIC* was not marked with *C* rule 2.4.80 *mantre ghasahva...* would have to state *ser luk* instead of *ler luk*. This would cause the application of rule 6.1.187 *āditaś ca* whereby an optional initial high-pitch (*ādyudātta*) accent will be made available. A reference to *sIC* without *C* especially as *seḥ* will create other problems also (cf. SK and *Tattvabodhinī* under this rule).

Note that Pāṇini provides for *CLI* as a general affix before *LUṄ*. He, subsequently, replaces it with *sIC* to which *Ksa*, etc., form an exception. Why did Pāṇini not introduce *sIC* in general (*utsarga*) before *LUṄ*, and make *Ksa*, etc., its exception. This would have made the introduction of *CLI* unnecessary. Commentators explain that *sIC* is intervened by *CLI* so that *aniṭaḥ* of the subsequent rule can be construed as a qualifier to *CLI*. For, in its absence, *aniṭaḥ* may be construed as a qualifier to the verbal root (*dhātoḥ*). The following is the interpretation of rule 3.1.45 where *aniṭaḥ* is treated as a qualifier to *CLI*:

> *śalanto yo dhātur igupadhas tasmāt parasya cleḥ aniṭaḥ ksa ādeśo bhavati* '*Ksa* comes in place of *CLI* when it is used without *iṬ* after a verbal root which...'

If *aniṭ* were made a qualifier to *dhātoḥ* instead, then *Ksa* could not be used in place of a *CLI* which occurs after a root that is *aniṬ*. For example, *aghukṣat* from *guhŪ* + *LUṄ*, where *CLI* is replaced with *Ksa*, cannot be derived. For, verbal root *guhŪ* is used with *iṬ*. If one considers it as *aniṭ* on account of its *Ū* as an *it* then *Ksa* will have to be introduced obligatorily over *sI*. Note in this connection that rule 7.2.44 *svaratisūtisūyati...* introduces *iṬ* to an affix occurring after verbal root *guhŪ*. This partial *aniṭ* status of the root gets cancelled by the equally partial *iṬ* status. It is thus desired to let *aniṭ* modify *CLI*. This way, *Ksa* will replace *CLI* optionally when it is *aniṭ*; elsewhere, it will be replaced with *sIC*. See *PM* and *Nyāsa* ad *Kāś.* (II: 429-30) for further details.

But the *aniṭ* status of *CLI* will be held up in the derivation. For example, *sIC* will be blocked by *Ksa* because this latter is an exception in view of the *Paribhāṣā* (cf. *PŚ*. 64): *prakalpya cāpavādaviṣayam utsargo' bhiniviśate*. The

Ksa will be held up until *iṬ* is available to *CLI* only to be blocked by 7.2.10 *ekāca upadeśe*. Now the *aniṭ* status of *CLĪ* will be established.

3.1.45 शल इगुपधादनिटः क्सः

śala igupadhād aniṭaḥ ksaḥ
/*śalaḥ* 5/1 *igupadhāt* 5/1 *aniṭaḥ* 5/1 *ksaḥ* 1/1/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44)
śalanto yo dhātur igupadhas tasmāt parasya cler aniṭaḥ ksa ādeśo bhavati
Ksa replaces *CLI* before *LUṄ* when *CLI* occurs without *iṬ* after a verbal root which terminates in *ŚL* (*ś., ṣ., s, h;* cf. *Śs.* 13-14) and has an *iK* (*i, u, ṛ, ḷ, Śs.* 1-2) in its penultimate (*upadhā*) position.

EXAMPLES:

adhukṣat 'he milked (the cow)'
alikṣat 'he licked (the milk)'

1. This rule is an exception to the *sĪC* replacement of *CLI*. The *K* is made an *it* to block the *guṇa* of the short penultimate vowel (*laghūpadhaguṇa*). Note that *K* is not intended to block *vṛddhi*. For, that will obtain only with *sĪC*. For additional details refer to note #2 under the previous rule. Also refer to derivations under this rule in the appendix.

3.1.46 श्लिष आलिङ्गने

śliṣ āliṅgane
/*śliṣaḥ* 5/1 *āliṅgane* 7/1/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *ksaḥ* #45)
śliṣer dhātor āliṅganakriyāvacanāt parasya cleḥ ksa ādeśo bhavati
Ksa occurs in place of affix *CLI* after verbal root *śliṣA* when *LUṄ* follows and *āliṅgana* 'embracing' is expressed.

EXAMPLE:

āślikṣat kanyāṃ devadattaḥ 'Devadatta embraced the girl'

1. The nature of this rule is restrictive (*niyama*). That is, it restricts the introduction of *Ksa* as a replacement for *CLI* after verbal root *śliṣ* only when *āliṅgana* 'embracing' is denoted.

Note that verbal root *śliṣ* is enumerated in the list headed by *puṣ* 'to nourish'. Consequently, it must have its *CLI* replaced with *aṄ* in view of rule 3.1.55 *puṣādidyutādi....* The restrictive provision of *Ksa*, as a replacement for *CLI* made by this rule, seems out of order. For, only that provision is accepted as restrictive which happens to be made against an already existing positive provision (cf. *PŚ* 20: *siddhe sati ārambho niyamāya bhavati*).

Since no such provision has been made, the replacement in *aṄ* blocks the replacement in *Ksa*. This is the difficulty.

A proposal for a split interpretation (*yogavibhāga*) of the rule is, therefore, made to resolve this difficulty. The following are the two split-rules:

(*a*) *śliṣaḥ* (read with *Ksa* of the preceding rule) '*Ksa* occurs in place of *sIC* occurring after verbal root *śliṣ*' and

(*b*) *āliṅgane ksa* '*Ksa* occurs in place of *sIC* occurring after verbal root *śliṣ* only when *āliṅgana* is denoted'.

The conflict can thus be removed. For, the split interpretation enables the first rule to make a positive provision for *Ksa* which can then be restricted in the context of *āliṅgana*.

Note, however, that the preceding resolution of the difficulty also has its own problem. That is, the restrictive provision of *Ksa* may also block the provision of *CiṆ* of 3.1.66 *ciṇ bhāvakarmaṇoḥ* the way it blocks the provision of *aṄ* of rule 3.1.55 *puṣādi*.... Consequently, *samāśleṣi* of *samāśleṣi kanyā devadattena* 'the girl was hugged by Devadatta' cannot be derived. Commentators explain that since a prior exception (*purastāpavāda*) can only block the most immediately available subsequent provision, and not any other provision made thereafter, *Ksa* should only be able to block *aṄ*. The blocking of *CiṆ* can, thus, be averted in view of *Paribhāṣā* (*PŚ* 60): *purastāpavādā anantarān vidhīn bādhante nottarān*. Commentators also suggest another alternative. They say that *Ksa* made available by this rule will be negated by the subsequent rule. Once *Ksa* is blocked, *sIC* and *aṄ*, for example in deriving *adṛśat*, or *adrākṣīt* 'he saw', can be made available by rule 3.1.57 *irito vā*. This, also, would not affect the *CiṆ* of 3.1.66 *Ciṇ bhāvakarmaṇoḥ*.

3.1.47 न दृशः

na dṛśaḥ
/*na* Ø *dṛśaḥ* 5/1/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *ksaḥ* #45)
dṛśer dhātoḥ parasya cleḥ ksādeśo na bhavati
Ksa does not occur in place of *CLI* after verbal root *dṛśIR* 'to see' when *LUṄ* follows.

EXAMPLES:

adarśat 'he saw...'
adrākṣīt 'id.'

3.1.48 णिश्रिद्रुस्रुभ्यः कर्त्तरि चङ्

ṇiśridrusrubhyaḥ kartari caṅ
/*ṇiśridrusrubhyaḥ* 5/3 *kartari* 7/1 *caṅ* 1/1/

(dhātoḥ #22, *luṅi* #43, *cleḥ* #44)
ṇyantebhyo dhātubhyaḥ 'śri-dru-sru' ity etebhyaś ca parasya cleś caṅādeśo bhavati kartṛvācini luṅi parataḥ
CaṄ occurs in place of affix *CLI* after verbal roots ending in *Ṇi*, or after *śri* 'to serve', *dru* 'to move' and *sru* 'to drip', when *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

acīkarat 'he had someone made something...'
ajīharat 'he had someone take something away...'
aśiśriyat 'he served...'
adudruvat 'he went away'
asusruvat 'it dripped, or flowed'

1. This rule introduces *CaṄ*, as an exception to *sIC*, the replacement for *CLI*, after two sets of verbal roots: (*a*) those which terminate in *Ṇi*, and (*b*) those which are constituted by *śri*, dru and *sru* provided *LUṄ*, which follows, denotes *kartṛ*.

Note that *ṇi* here makes a generalized reference to both affixes *ṆiC* and *ṆiṄ* (3.1.31 *āyādayaḥ* ...). The *C* of affix *CaṄ* is used to distinguish it from affix *aṄ* of 3.1.52 *asyativakti*... Consequently, 6.1.12 *caṅi* does not include any reference to *aṄ*. The *aṄ* derivates thus are not subject to reduplication. The *Ṅ* of *caṄ* as an *it* is intended to block *guṇa* or *vṛddhi* (cf. 1.1.5 *kṅiti ca*).

Note also that *śri* is a root which can take both the active (*parasmaipada*) as well as middle (*ātmanepada*) endings. Thus we will get two forms: *aśiśriyat* / *aśiśriyata*. The condition of *kartari* rules out passives such as:

akārayiṣātāṃ kaṭau devadattena 'two mats were caused to be made by Devadatta'

where *sIC* comes as a replacement for *LIṄ*.

2. A *vārttika* under this rule requires that verbal root *kamI* should also be cited along with *śri*, *dru* and *sru*. But what is the purpose of making this provision when *kamI*, after receiving *ṆiṄ* from 3.1.30 *kamer ṇiṅ*, would automatically get *caṄ*? The enumeration is required so that *caṄ* can be made available to *kamI* even when it does not receive *ṆiṄ*. Thus, consider *acakamata* 'he loved' as opposed to *acīkamata* 'id' where the second example entails the introduction of *ṆiṄ*. Refer to 7.4.93 *sanval laghuni*..., etc., for the option of *ṆiṄ* in connection with affix *caṄ*.

3.1.49 विभाषा धेट्श्व्योः

vibhāṣā dheṭśvyoḥ

/vibhāṣā 1/1 dheṭśvyoḥ 6/2/
(dhātoḥ #22, luṅi #43, cleḥ #44, kartari, caṅ #48)
dheṭ pāne ṭuośvi gativṛddhyoḥ etābhyām uttarasya cler vibhāṣā caṅādeśo bhavati
CaṄ optionally occurs in place of affix *CLI* after verbal roots *dheṬ* 'to suck, drink' and *ṬUOśvi* 'to go, grow' when *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

adadhat 'he suckled...'
adhāt 'id.'
adhāsīt 'id.'
aśiśviyat 'he grew...'
aśvat 'id.'
aśvayīt 'id.'

1. This rule makes the *CaṄ* replacement of *CLI* optional in case of verbal roots *dheṬ* and *ṬUOśvi*. Obviously, when the option of *CaṄ* is not availed, *CLI* will be replaced with *sIC*. This *sIC* will be deleted via *LUK* by rule 2.4.78 *vibhāṣā...* Since the deletion of *sIC* is also optional, there will be two forms as is illustrated by *adhāt* and *adhāsīt*. Note, in connection with this, that *ṬUOśvi* is also qualified to receive *aṄ* as a replacement for *CLI*, by rule 3.1.58 *jṝ stambhumrucumlucu....* Obviously, for *TUOśvi*, we get three possibilities:
(*a*) *sIC* by 3.1.44 *cleḥ sic*,
(*b*) *CaṄ* optionally to *sIC* by 3.1.49 *vibhāṣā dheṭśvyoḥ*, and
(*c*) *aṄ* optionally to *siC* by rule 3.1.58 *jṝ stambhumrucumlucu...*
Of course, all the options covered by this rule will obtain only when *LUṄ* is used to denote *kartṛ*, since *kartari* from the preceding rule continues.

3.1.50 गुपेश्छन्दसि

gupeś chandasi
/gupeḥ 5/1 chandasi 5/1/
(dhātoḥ #22, luṅi #43, cleḥ #44, kartari #48, vibhāṣā #49)
gupeḥ parasya cleś çhandasi viṣaye vibhāṣā caṅādeśo bhavati
CaṄ also occurs in place of affix *CLI* after verbal root *gupl* 'to protect, preserve', when the usage is Vedic and LUṄ which denotes *kartṛ* follows.

EXAMPLES:

imán no mitrāvaruṇau gṛhāṇajūgupatam

'Mitra and Varuṇa protected these houses of ours'
agauptam 'he protected...'
agopiṣṭam 'id.'
agopāyiṣṭam 'id.'

1. This rule makes the *CaṄ* replacement of *CLI* optional for verbal root *gupŪ* in Vedic. *Kāśikā* states that this *gupŪ* should be treated as a root which does not terminate in affix *āya* (of 3.1.28 *gupūdhūpa*...). Obviously, *gupŪ*, when terminated with *āya*, will be treated as a different verbal root. Thus, we get the following forms:

(*a*) *ajūgupatam* where the option of *CaṄ* is availed in accordance with this rule;

(*b*) *agauptam* where the available *sIC* replacement of *CLI* is accepted with the understanding that *SIC* will be deleted by 8.2.26 *jhalojhali*;

(*c*) *agopiṣṭam* where, on account of *gupŪ* being marked with *Ū* as an it, rule 7.2.44 *svaratisūti*... will optionally introduce the augment *iṬ*. Rule 7.2.4 *neṭi* will then block the *vṛddhi* in favor of penultimate *guṇa* of the short (*laghūpadha*) vowel.

(*d*) *agopāyiṣṭam* where *sIC* occurs after *gupŪ* terminating in *āya* and receiving *iṬ*.

Of course, these provisions are given with reference to the Vedic. The *CaṄ* form is not available in the classical language. Refer to the appendix for derivational details.

3.1.51 **नोनयतिध्वनयत्येलयत्यर्दयतिभ्यः**

nonayatidhvanayatyelayatyardayatibhyaḥ
/*na* Ø *ūnayatidhvanayatyelayatyardayatibhyaḥ* 5/3 (*itar. dv.*)/
(*dhātoḥ* # 22, *luṅi* # 43, *cleḥ* # 44, *kartari* # 48, *vibhāṣā* # 49, *chandasi* # 50)

'ūna parihāṇe, dhvana śabde, ila preraṇe, arda gatau yācane ca' ity etebhyo (dhātubhyo ṇyantebhyaḥ pūrveṇa cleś caṅi prāpte chandasi viṣaye na bhavati
CaN does not occur in place of affix *CLI* after verbal roots *unA* 'to decrease, lessen', *dhvanA* 'to sound', *ilA* 'to send' or *ardA* 'to go, beg', when the usage is Vedic, the roots are used with *Ṇi*, and *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

ūnayīḥ '...has decreased'
dhvanayīt '...has sounded'
ailayīḥ '...has sent'
arddayīt '...has begged'

1. The option of a *CaṄ* replacement for *CLI* in the Vedic is hereby blocked in case of the causal (*ṆIC*) forms of verbal roots *ūnA*, *dhvanA*, *ilA* and *ardA*. This rule is, thus, an exception to rule 3.1.48 *ṇiśridru...* That is, in the Vedic usages of the specified roots, *sIC*, as opposed to *CaṄ*, will replace *CLI*. Affix *CaṄ* will replace *CLI* in the classical language. Consequently, this leads to reduplication by 6.1.11 *caṅi*. The parallel classical forms will be: *auninat*, *adidhvanat*, *aililat*, and *ārddidat*.

3.1.52 अस्यतिवक्तिख्यातिभ्योऽङ्

asyativaktikhyātibhyo ṅ
/*asyativaktikhyātibhyaḥ* 5/1 *aṅ* 1/1/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *kartari* #48)
'asu kṣepaṇe, vaca paribhāṣaṇe, brūñ ādeśo vā; khyā prakathane cakṣiṅādeśo vā' ity etebhyaḥ parasya cler aṅādeśo bhavati kartṛvācini luṅi parataḥ
Affix *CLI* is replaced with *aṄ* after verbal roots *asU* 'to toss, throw', *vacA* 'to speak' or *khyā* 'to relate, tell' when *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

paryāsthata '...has tossed...around...'
avocat '...has spoken...'
ākhyat '...has declared...'

1. Note that *asyati*, on account of being used with the *vikaraṇa ŚyaN*, refers to *asU* 'to throw, hurl', a *divādi* root. The remaining two forms refer to the verbal roots *vac* 'to speak' and *khyā* though with a qualification. Verbal root *vac* as well as the *vac* replacement of *brūÑ* 'to speak' are both referenced here by *vakti*. However, *khyā* only refers to the *khyāÑ* replacement of *cakṣIṄ* (2.4.54 *cakṣiṅaḥ khyāñ*). It does not, here, refer to verbal root *khyā* 'to speak'.

2. This rule offers *aṄ* as an exception to *CaṄ* to replace *CLI* when *LUṄ* which denotes *kartṛ* follows.

Since *as* is a verbal root of the *divādi* group, also contained in the subgroup of *puṣādi* (3.1.55 *puṣādi...*), *aṄ* is available to it automatically. Why this inclusion of *asU* in this rule? It is stated that this inclusion is to enable *as* to qualify for *ātmanepada* endings. Rule 3.1.55 allows for only the *parasmaipada*. Note that *paryāsthata* is a derivate with the third singular *ātmanepada* ending *-ta*.

3.1.53 लिपिसिचिह्वश्च

lipisicihvaś ca

/lipisicihvaḥ 5/1 *ca* Ø/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *kartari* #48, *aṅ* #52)
'lipa upadehe, sica kṣaraṇe hveñ sparddhāyām' ity etebhyaś ca parasya cler aṅādeśo bhavati
Affix *CLI* is replaced with *aṄ* also after verbal roots *lipA* 'to coat, smear', *sicA* 'to pour out, sprinkle' or *hvēN* 'to challenge' when *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

alipat 'he coated something with...'
asicat 'he watered...'
āhvat 'he challenged...'

1. This rule separately provides for *caṄ* as a replacement for *CLI* after verbal roots *lipA*, *sicA* and *hveÑ*. Why did Pāṇini not include these roots in the preceding rule? So that only this *aṄ* is made optional under the condition of an *ātmanepada* affix following these three roots. A combined listing would have brought all the roots under the purview of rule 3.1.54 *ātmanepadeṣv*...which makes such optional provision. The first two roots, i.e., *lipA* and *sicA*, receive *ātmanepada* by 1.3.12 *svaritañitaḥ*... because of a *svarita* vowel as their *it*; *hveÑ* recieves *ātmanepada* because it has *Ñ* as an *it*.

3.1.54 आत्मनेपदेष्वन्यतरस्याम्

ātmanepadeṣv anyatarasyām
/ātmanepadeṣu 7/3 *anyatarasyām* 7/1/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *kartari* #48, *aṅ* #52, *lipisicihvaḥ* #53)
lipisicihva ātmanepadeṣu parataś cler aṅādeśo bhavati anyatarasyām
Affix *CLI* is optionally replaced with *aṄ* after verbal roots *lipA*, *sicA* and *hveÑ*, when an *atmanepada* replacement of *LUṄ* which denotes *kartṛ* (1.4.100 *taṅānāv ātmanepadam*) follows.

EXAMPLES:

alipata 'he coated something with...'
alipta 'id.'
asicata 'he sprinkled...'
asikta 'id.'
ahvata 'he challenged...'
ahvāsta 'id.'

1. See my note under the preceding rule.

3.1.55 पुषादिद्युताद्यॢदितः परस्मैपदेषु

puṣādidyutādyḷditaḥ parasmaipadeṣu
/*puṣādidyutādyḷditaḥ* 5/1 *parasmaipadeṣu* 7/1/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *kartari* #48, *aṅ* #52)
puṣādibhyaḥ dyutādibhyaḥ ḷdidbhyaś ca dhātubhyaḥ parasya cleḥ parasmaipadeṣu parato' ṅādeśo bhavati
Affix *CLI* is replaced with *aṄ* after verbal roots enumerated in the groups headed by *puṣA* 'to nourish, thrive' and *dyutA* 'to shine,' and after roots which have *Ḷ* as their *it*, when a *parasmaipada* (1.4.100 *laḥ parasmaipadam*) replacement of *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

apuṣat '...nourished, or... thrived...'
adyutat '... shined...'
agamat '...went...'
aśakat '... became capable...'

1. The word *puṣādi* '*puṣA*, etc.' may refer to sets of roots classified in all four groups; the *bhvādi*, *divādi*, *kryādi* and *curādi*. This may create confusion. However, *puṣādi* cannot refer to *bhvādi* because *dyutādi* is a subsection of it. That is, since Pāṇini makes a separate mention of *dyutādi*, *puṣādi* must be other than that of its own class *bhvādi*.

This establishes *dyutādi* as *bhvādi*. Could *puṣādi* be interpreted here as referring to the *kryādi* class of roots? It can not. For, there will thus be only four roots *puṣA* 'to prosper', *muṣA* 'to steal', *khacA* 'to reappear' and *grahA* 'to hold'. Pāṇini would have been better off by marking them with *Ḷ* as an *it*. This way, he would not have needed to state *puṣādi*. By deduction then *puṣādi* must be interpreted to refer to a subgroup of *divādi*. The context also favors this interpretation, and repeating *asU* marked with *ŚyaN* in 3.1.52 *asyati...* further strengthens this position.

Why does Pāṇini not mark *puṣādi* and *dyutādi* also with *Ḷ*? This way, he does not have to make a three-way mention of these roots. Besides, *aṄ* in place of *CLI* could then be introduced in a much more straightforward manner. *Nyāsa* states that it will create problems. For, there are several roots within this *puṣādi* type, now proposed to be marked with *Ḷ* as an *it*, which are also marked with *U* or *A* as an *it*. As such, operations relative to 7.2.56 *udito vā* and 7.2.16 *āditaś ca* may be blocked on account of *Ḷ* as an *it*. The *dyutādi* verbs could also not be cited with *Ḷ* as an *it*.

The *puṣādi* group within *divādi* contains roots beginning with *puṣA* through *gṛdhŪ* 'to wish'. The *dyutādi* within the *bhvādi* class contains roots beginning with *dyutA* 'to glow, shine' through *kṛpŪ* 'to be capable'.

3.1.56 सर्त्तिशास्त्यर्त्तिभ्यश्च

sarttiśāstyarttibhyaś ca
/sarttiśāstyarttibhyaḥ 5/3 *ca* Ø/
(dhātoḥ #22, *luṅi* #43, *cleḥ* #44, *kartari* #48, *aṅ* #52,
parasmaipadeṣu #55)
'sṛ gatau, śāsu anuśiṣṭau, ṛ gatau' ity etebhyaḥ parasya cler aṅādeśo bhavati
Affix *CLI* is replaced with *aṄ* after verbal roots *sṛ* 'to move, go', *śāsU* 'to instruct' and *ṛ* 'to go' when a *parasmaipada* replacement of *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

asarat 'it moved...'
aśiṣat 'he instructed...'
ārat 'he went...'

1. The purpose of stating this rule separately is to enable specified roots to receive *aṄ* as a replacement for their *CLI*. Then, Pāṇini, indeed, should have formulated rule 3.1.55 as *puṣādi...sarttiśāstyarttibhyaś ca parasmaipadeṣu*. That way, he would have saved one rule. But that formulation could provide for *aṄ* only when a *parasmaipada* affix followed. This rule, on account of its separate formulation, enables the cited roots to receive *aṄ* as a replacement for *CLI* also when an *ātmanepada* affix follows. In the absence of this special provision, the effort (*yatna*), made in formulating this rule separately becomes vacuous (*vyartha*). What is the purpose of the *ca*? So that *parasmaipada* can still be made available to subsequent rules.

2. Bhaṭṭoji informs us (*SK* III: 218-19) that, on account of their association (*sāhacarya*) with *śās*, cited here with its deleted *vikaraṇa* *ŚaP* (3.1.68 *kartari śap*), *sṛ* and *ṛ* should also be interpreted as belonging to the class where the *vikaraṇa* gets deleted. Verbal roots *sṛ* and *ṛ* are thus not interpreted as belonging to the *bhvādi* class. Instead, they are interpreted as *juhotyādi*, roots where the *vikaraṇa* gets deleted by 2.4.75 *juhotyādibhyaḥ śluḥ*. Also see *PM* ad *Kāśikā* (II: 442).

3.1.57 इरितो वा

irito vā
/iritaḥ 5/1 *vā* Ø/
(dhātoḥ #22, *luṅi* #43, *cleḥ* #44, *kartari* #48, *aṅ* #52, *parasmaipadeṣu* #55)
irito dhātoḥ parasya cler aṅādeśo vā bhavati
Affix *CLI* is optionally replaced with *aṄ* after verbal roots marked

with *ĪR* as an *it* when a *parasmaipada* replacement of *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

abhidat 'he split something'
abhaitsīt 'id.'
acchidat 'he cut something'
acchaitsīt 'id.'

1. The replacement in *aṄ* for *CLI* is made optional in case of roots which have *ĪR* as an *it*. The assignment of the term *it* to *Ī* and *R* of *ĪR* should be made separately by rules 1.3.2 *upadeśe...* and 1.3.3 *halantyam*. For, there is no single rule whereby *ĪR* can be assigned the term. Note also that the *ātmanepada* endings can be introduced at the strength of the *svarita* vowel *Ī* as an *it* (1.3.72 *svaritañitaḥ kartrabhiprāye...*).

2. Note that *sĪC* will replace *CLI* if the option of *aṄ* is not accepted. Obviously, this will lead to operations such as the introduction of *iṬ* (*iḍāgama*; 7.3.96 *astisico...*), a replacement in *vṛddhi* characterized by the final consonant (*halantalakṣaṇā*; 7.2.3 *vadavraja ...*) of the presuffixal base (*aṅga*), etc. Refer to the appendix for derivational details.

3.1.58 जृस्तम्भुम्रुचुम्लुचुग्रुचुग्लुचुग्लुञ्चुश्विभ्यश्च

jṝstambhumrucumlucugrucuglucugluñcuśvibhyaś ca
/jṝsta... śvibhyaḥ 5/3 = *(itar.dv.); ca* Ø/
(dhātoḥ #22, *luṅi* #43, *cleḥ* #44. *kartari* #48, *aṅ* #22, *parasmaipadeṣu* #55, *vā* #57)
jṛsvayohānau, stambhu sautro dhātuḥ, mrucu mlucu gatyarthau, grucu glucu steyakaraṇe, gluñcu ṣasja gatau, ṭuośvi gativṛddhyoḥ' ity etebhyo dhātubhyaḥ parasya cler vā aṅādeśo bhavati

Affix *CLI* is also optionally replaced with *aṄ* after verbal roots *jṝsA* 'to waste away, grow old', *stambhU* 'to stop', *mrucU* and *mlucU* 'to go, move', *grucU* and *glucU* 'to steal', *gluñcU* 'to move, go', and *ṬUOśvi* 'to go, grow', when a *parasmaipada* replacement of *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

ajarat 'he wasted away, ...grew old'
ajārīt 'id.'
astabhat 'he stopped...'
astambhīt 'id.'

amrucat 'he moved'
amrocīt 'he moved'
amlucat 'he stole'
amlocīt 'id.'
agrucat 'he stole...'
agrocīt 'id.'
aglucat 'id.'
aglocīt 'id.'
aglañcat 'he went...'
agluñcīt ' id.'
aśvat 'he grew...'
aśvayīt 'id.'
aśiśviyat 'id.'

1. This rule provides for *aṄ* as an optional replacement to *sĪC* for *CLI* after the eight verbs enumerated here. The *anuvṛtti* of *cleḥ*, *aṅ*, and *vā*, all three, is valid here. Commentators state that. even though *glucU* and *gluñcU* both are cited, there are only three forms one needs to account. That is, *aglucat*, *aglocīt* of *glucU*, and *agluñcīt* of *gluñcU*. But using only one of the roots in the rule can refer to both, and hence, can account for all the three forms. For example, a reference made with *glucU* will yield two of its own forms: *aglucat* and *aglocīt*, with *aṄ* and *sĪC* respectively. A third form, i.e., *agluñcīt*, will be derived with *sĪC* relative to *gluñcU*. A reference made with *gluñcU* similarly yields two of its own forms, i.e., *aglucat* and *agluñcīt*. The third form *aglocīt* will be derived with *sĪC* relative to *glucU*. *Kāśikā* claims meaning difference *(arthabhedāt)* as the basis for dual citation. Hardatta *(PM* ad *Kāś.* II:444) claims that the *arthabheda* theory of dual citation goes against Patañjali's position of *anekārthatvād dhātūnām arthabhedo na prayojaka ubhayopadānasya* 'semantic difference of verbal roots based on the multiplicity of meaning should not constitute the basis for the citation by means of both'. Besides, *Padamañjarī* emphatically rejects the proposal of using only one verb to refer to both by saying: *idaṃ bhāṣyaviruddham* 'this is against the position of the *Mahābhāṣya*'. Some *(kecit)* further claim that non-deletion of *ñ* in *agluñcat* is assured on the very basis of dual citation (see *Kāśikā* II:444). *Kāśikā* remarks that *stambhU*, as a root, is only attested by the usage of the Pāṇinian rule *(sautra)*.

3.1.59 **कृमृदृरुहिभ्यश्छन्दसि**

kṛmṛdṛruhibhyaś chandasi
/*kṛmṛdṛruhibhyaḥ* 5/3 *chandasi* 7/1/
(dhātoḥ #22, *luṅi* #43, *cleḥ* #44, *kartari* #48, *aṅ* #52)

'kṛ mṛ dṛ ruhi' ity etebhyaḥ parasya cleś chandasi viṣaye' ṅādeśo bhavati
Affix *CLI* is replaced with *aṄ* after verbal roots *ḌUkṛÑ* 'to do, make', *mṛṄ* 'to die', *dṛ* 'to tear apart' and *rhuA* 'to grow', when the usage is Vedic and a *parasmaipada* replacement of *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

akarat '...made'
amarat '...died'
adarat '...ripped apart...'
parvatam āruhat 'climbed up the mountain'

1. This *aṄ* replacement of *CLI* is Vedic. The first three verbs receive *aṄ* as against *sIC* . Verbal root *ruh* receives *aṄ* against *Ksa* of rule 3.1.45 *śala igupadhād....* Note that *parasmaipada* in *amarat* is made available by 3.1.85 *vyatyayo bahulam*. For, *mṛṄ* should receive *ātmanepada* based upon its *Ṅ* as an *it* (1.3.12 *anudāttaṅita...*). We get forms such as *akārṣīt, amṛta, adārīt* and *arukṣat* in the Classical language.

3.1.60 **चिण् ते पदः**

ciṇ te padaḥ
/*ciṇ* 1/1 *te* 7/1 *padaḥ* 5/1/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *kartari* #48)
pada gatau asmād dhātoḥ parasya cleś ciṇ ādeśo bhavati
CIṆ occurs in place of affix *CLI* after verbal root *padA* 'to go' when the *ta* replacement of *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

udapādi sasyam 'he cultivated the young crop'
samapādi bhaikṣam 'he procured food from charity'

1. The *ta* is the third singular middle (*ātmanepada*) suffix. It can not be interpreted here as referring to the *ta*-replacement of the second personal active (*parasmaipada*) suffix (cf. 3.4.101 *tasthasthamīpām...*) because verbal root *padA* is only used in the *ātmanepada*. Note that, in case of the third plural middle ending *jha*, rule 7.1.5 *ātmanepadeṣv...* will introduce *at* as a replacement to yield *udapatsata* 'they pulled out...'.

2. Pāṇini did not intend *vā* to be carried to this rule. For, he uses *anyatarasyām* in the next rule. That is, he would not have stated *anyatarasyām* in the next rule if *vā* were already available via *anuvṛtti* from this rule.

3.1.61 **दीपजनबुधपूरितायिप्यायिभ्योऽन्यतरस्याम्**

dīpajanabudhapūritāyipyāyibhyo' nyatarasyām

/dīpa...pyāyibhyaḥ 5/3 *anyatarasyām* 7/1/
(dhātoḥ #22, *luṅi* #43, *cleḥ* #44, *kartari* #48 *ciṇ, te* #60)
'dīpī dīptau, jani prādurbhāve, budha avagamane, pūrī āpyāyane, tāyṛ santānapālanayoḥ, opyāyī vṛddhau' ity etebhyaḥ parasya cleś taśabde parato' nyatarasyāṃ ciṇ ādeśo bhavati
CiṆ optionally occurs in place of affix *CLI* after verbal roots *dīpI* 'to shine', *janĪ* 'to be born', *budhA* 'to know, perceive', *pūrĪ* 'to overfill', *tāyṚ* 'to stretch' and *Opyāyī* 'to grow' when the *ta* replacement of *LUṄ* which denotes *kartṛ* follows.

EXAMPLES:

adīpi 'it shined...'
adīpiṣṭa 'id.'
ajani '...was born...'
ajaniṣṭa 'id.'
abodhi 'he perceived...'
abuddha 'id.'
apūri 'it overfilled...'
apūriṣṭa 'id.'
atāyi 'it stretched...'
atāyiṣṭa 'id.'
apyāyi 'it grew...'
apyāyiṣṭa 'id.'

1. This provision of *CiṆ* to replace *sĪC* is, once again, made for the selected verbal roots under the condition of the third singular *ātmanepada* suffix-*ta*. Furthermore, *CiṆ* is made optional only when *ta* denotes agent (*kartṛ*). For, when the *ta* replacement of *LUṄ* denotes *bhāva* (3.4.69 *laḥ karmaṇi...*), rule 3.1.66 *ciṇ bhāvakarmaṇoḥ* will obligatorily demand *CiṆ*. Verbal roots *janĪ* and *budhA* are not interpreted as accepting the *parasmaipada* affixes because of their association (*sāhacarya*) in this rule with roots which accept the *ātmanepada* affixes. Of course, the option is available only when *ta* denotes agent.

3.1.62 **अचः कर्मकर्त्तरि**

acaḥ karmakartari
/acaḥ 5/1 *karmakartari* 7/1/
(dhātoḥ #22, *luṅi* #43, *cleḥ* #44, *ciṇ, te* #60, *anyatarasyām* #61)
ajantād dhātoḥ cleḥ karmakartari taśabde parataś ciṇ ādeśo bhavati
CiṆ optionally occurs in place of affix *CLI* after verbal roots which end in *aC* (a vowel) when the *ta* replacement of *LUṄ* which denotes *karmakartṛ* 'object treated as agent' follows.

EXAMPLES:

akāri kaṭaḥ svayam eva 'the mat (was) made (by) itself'
akṛtaḥ kaṭaḥ svayam eva 'id.'
alāvi kedāraḥ svayam eva 'the harvest got harvested by itself'
alāviṣṭa kedāraḥ svayam eva 'id.'

1. This rule allows for an optional replacement of *CiṆ* when *ta* follows roots which terminate in a vowel. However, note that *ta* must, in this context, denote an object turned agent (*karmakartṛ*). An object becomes agent when, relative to its action, one wishes to express it as the agent on account of its extreme conduciveness toward accomplishing that action. For example, consider the following sentences.

(*a*) *devadattaḥ kaṭaṃ akarot* 'Devadatta made the mat'
(*b*) *akāri kaṭo devadattena* 'the mat was made by Devadatta'
(*c*) *akāri kaṭaḥ svayam eva* 'the mat (was) made (by) itself'

The first sentence is active where the verb expresses the agent by means of the third singular verbal ending *ti*. Devadatta, of course, is the agent of making the mat. The second sentence expresses the object *kaṭa* 'mat' by the verbal form, and the agent, by the instrumental singular ending in (*b*) *Devadattena*. The third sentence again expresses the agent with the verb, but this agent is object turned agent. That is, the speaker wishes to express the extreme facility with which, for example, the material, as if by itself, turned into a mat. This is the reason why *kaṭa* is put in the nominative to express the nominal stem notion only. See also my discussion of *karmakartṛ* under rule 3.1.87 *karmavat...* for additional details.

An object is extended the status of an agent by rule 3.1.87 *karmavat karmaṇā tulyakriyaḥ*. Consequently, operations relative to rule 3.1.66 *ciṇ bhāvakarmaṇoḥ* become available. Note, however, that this provision for *CiṆ* replacement of *CLI* under rule 3.1.66 is obligatory (*nitya*). Our present rule (3.1.62) makes it optional. Since the option is made in view of what was already made available by 3.1.87 *karmavat...*, this rule entails the *prāptavibhāṣā* type of option. The verbs expressing *karmakartṛ* will receive the *ātmanepada* endings by rule 1.3.13 *bhāvakarmaṇoḥ*. If the option of *CiṆ* is not accepted, derivates will involve a replacement in *sIC*. The *anuvṛtti* of *karmakartṛ* covers rules up to 3.1.65.

3.1.63 दुहश्च

duhaś ca
/*duhaś* 5/1 *ca* Ø/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *ciṇ, te* #60 *anyatarasyām* #61, *karmakartari* #62)

duha parpūraṇe asmāt parasya cleś ciṇ ādeśo bhavaty anyatarasyām
CiṆ also optionally occurs in place of *CLI* after verbal root *duhA* 'to milk' when the *ta* replacement of *LUṄ* which denotes *karmakartṛ* follows.

EXAMPLES:

adohi gauḥ svayam eva 'the cow milked itself'
adugdha gauḥ svayam eva 'id.'
adohi gaur gopālakena 'the cow was milked by the cowherd'

1. This rule provides, again optionally, a replacement in *CiṆ* for *CLI* after verbal root *duh*. This type of option is technically known as *aprāpta-vibhāṣā*; an option made available which it was previously not. That is, what rule 3.1.89 *duhsnunamāṃ yakciṇau* obligatorily denies to *duh* is optionally available to it by this rule. Of course, the conditions of *ta* and *karma-kartṛ* still apply. Consider the following sentences:
(*a*) *adohi gaur gopālakena*
'the cow was milked by the cowherd'
(*b*) *adohi gauḥ Svayam eva*
'the cow (was) milked (by) itself'
where *adohi* in (*a*) expresses the object as opposed to the object-turned agent of (*b*). The *CiṆ* replacement in case of the straight *karman* in (*a*) is obligatory (*nitya*), whereas it is optional in (*b*). If, however, this option is not availed, rule 3.1.45 *śala igupadhād...* will provide for *Ksa* to yield (*c*) *adugdha gauḥ svayam eva* parallel to (*b*).

3.1.64 न रुधः

na rudhaḥ
/*na* Ø *rudhaḥ* 5/1/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *ciṇ, te* #60, *anyatarasyām* #61, *karmakartari* #62)
rudhir āvaraṇe asmāt parasya cleḥ karmakartari ciṇ ādeśo na bhavati
CiṆ does not optionally occur in place of affix *CLI* after verbal root *rudhIR* 'to obstruct' when the *ta* replacement of *LUṄ* which denotes *karmakartṛ* follows.

EXAMPLE:

anvavāruddha gauḥ svayam eva 'the cow stopped by itself'

1. This rule blocks the *CiṆ* replacement for *CLI* after verbal root *rudhIR* 'to obstruct'. Note that this negation is applicable to the positive provision made by rule 3.1.87 *karmavat karmaṇā tulyakriyaḥ*.

3.1.65 तपोऽनुतापे च

tapo' nutāpe ca
/tapaḥ 5/ *anutāpe* 7/ *ca* 0/
(dhātoḥ #22, *luṅi* #43, *cleḥ* #44, *ciṇ, te* #60, *karmakartari* #62, *na* #64)
tapa santāpe asmāt parasya cleś ciṇ ādeśo na bhavati karmakartary anutāpe ca
CiṆ does not occur in place of affix *CLI* after verbal root *tapA* 'to heat, be hot' when the *ta* replacement of *LUṄ* denotes *karmakartṛ*, or *anutāpa* 'repentance' is signified.

EXAMPLES:

atapta tapas tāpasaḥ 'the ascetic observed the penance'
anvavātapta pāpena karmaṇā 'he repented for his sinful acts'

1. This rule again blocks the *CiṆ* replacement for *CLI* after verbal root *tapA* 'to observe penance, be hot', and additionally also when *anutāpa* 'repentance' is denoted. Consider the following sentences:

(*a*) *atapta tapas tāpasaḥ*
'the penance tormented the ascetic'
(*b*) *atapta tapas tāpasaḥ*
'the ascetic observed the penance'
(*c*) *anvavātapta pāpena karmaṇā*
'...repented (was tormented by) the sinful deed'

Note that (*a*) and (*b*) list the same sentence with different interpretations. Sentence (*a*) implies that the observance of penance (*tapas*) with its characteristic marks such as fasting (*upavāsa*), etc., tormented the ascetic (*tāpasa*). Obviously, the penance is the agent (*kartṛ*) of tormenting the ascetic (*karman*). Sentence (*b*) implies that the ascetic (*kartṛ*) with his desire to achieve heaven (*svarga*) observed the penance (*karman*) willfully enduring all the torment in the process. In this instance, *tapas*, as Jinendrabuddhi observes, is used in the sense of special knowledge (*jñānaviśeṣa*) leading toward enlightenment. Sentence (*b*) alone constitutes an example of *karmakartṛ* in view of this rule.

Sentence (*c*) implies that someone repented some sinful acts he earlier performed. Verbal root *tapA* used with the preverb *anu* is, here, treated as intransitive and denotes the sense of repentance. The instrumental ending in *pāpena* is used to denote the *hetu* 'cause' of repentance. The *ta* of *atapta* denotes the action (*bhāva*). Or else, *pāpa* could also be treated as the agent where *ta* would denote the object, i.e., the sinner, thereby implying the sinner was haunted by the sinful deed. The word *pāpa* can thus be interpreted here in the sense of both the 'sinner' as well as the 'sin'.

3.1.66 **चिण् भावकर्मणोः**

ciṇ bhāvakarmaṇoḥ
/*ciṇ* 1/1 *bhāvakarmaṇoḥ* 7/2/
(*dhātoḥ* #22, *luṅi* #43, *cleḥ* #44, *te* #60)
dhātoḥ parasya cleś ciṇ ādeśo bhavati bhāve karmaṇi taśabde parataḥ
CiṆ occurs in place of affix *CLI* after a verbal root when the *ta* replacement of *LUṄ* which denotes *bhāva* 'root-sense' or *karman* 'object' follows.

EXAMPLES:

aśāyi bhavatā 'you slept'
akāri kaṭo devadattena 'a mat was made by Devadatta'
ahāri bhāro yajñadattena 'the load was carried by Yajñadatta'

1. A question is raised regarding the explicit use of *CiṆ* when the same could have been made available via *anuvṛtti* from rule 3.1.60 *ciṇ te padaḥ*. This rule uses *CiṆ* explicitly because *ciṆ* of 3.1.60 is associated with *anyatarasyām* 'optionally' of 3.1.61 *dīpajanabudha...*, and its subsequent negation (*niṣedha*) by *na* of 3.1.64 *na rudhaḥ*. If *CiṆ* of 3.1.60 *ciṇ te padaḥ* is carried via *anuvṛtti*, *anyatarasyām* and *na*, on account of association (*sāhacarya*), must also be carried.

But *anyatarasyām* could automatically be blocked by *na* since negation only obtains when a provision (such as the one made by *anyatarasyām*) already exists (*prāptipūrvakatvāc ca niṣedhasya*). But since the provision of *CiṆ*, before a *ta* which denotes *bhāva* and *karman* is not made previously, the question of carrying *na* to negate it also does not arise. Thus, the *anuvṛtti* of *anyatarasyām* and *na* will automatically be blocked. That is, *CiṆ* could still be carried. But note that *CiṆ* of 3.1.60 *ciṇ te padaḥ* is used within the context of *kartari*. Our present rule requires *CiṆ* in the context of *bhāva* and *karman*. This still could not justify the explicit use of *CiṆ* as *bhāvakarmaṇoḥ* would counter *kartari*. Why, then, is *CiṆ* used explicitly? It is used for clarity (*vispaṣṭārtham*). Or else, an explicit use of *CiṆ* is made out of compassion for the slow-witted (*mandadhiyam anugṛhītum*).

For a detailed explanation of *bhāva* and *karman*, see my notes under rules 1.3.67 *ṇer aṇau...*, 1.4.49 *kartur īpsitatamam...* See relevant examples in the appendix for derivational details.

3.1.67 **सार्वधातुके यक्**

sārvadhātuke yak
/*sārvadhātuke* 7/1 *yak* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *bhāvakarmaṇoḥ* #66)

bhāvakarmavācini sārvadhātuke parataḥ dhātor yak pratyayo bhavati
Affix *yaK* occurs after a verbal root when a *sārvadhātuka* (3.4.113 *tiṅśit...*) affix which denotes *bhāva* or *karman* follows.

EXAMPLES:

āsyate bhavatā 'you are seated'
kriyate kaṭaḥ 'a mat is being made'
gamyate grāmaḥ 'the village is gone to'

1. This rule introduces affix *yaK* after a verbal root when a *sārvadhātuka* (3.4.113 *tiṅśit sārvadhātukam*) affix which denotes *bhāva* 'root sense' and *karman* 'object' follows. Obviously, *bhāvakarmaṇoḥ*, carried from the preceding rule, is used as a qualifier (*viśeṣaṇa*) to *sārvadhātuke*. How come this rule was not formulated as *bhāvakarmaṇayoḥ* with the following interpretation: *bhāvakarmaṇayoḥ* (*abhidheyayoḥ*) *sārvadhātuke* (*parataḥ*) *yak pratyayo bhavati* 'affix *yaK* occurs after a verbal root before a following *sārvadhātuka* affix when *bhāva* and *karman* are denoted'? This formulation could not be made because, in this grammar (*śāstre*), it is only at the strength of the *sārvadhātuka* that the denotation of *bhāva* and *karman* is comprehended. How do we know this? From rule 3.4.69 *laḥ karmaṇi...*, where it is the replacement of *LA* (3.4.113 *tiṅśit sārvadhātukam*), a *sārvadhātuka*, which makes the denotation known? This question is raised in view of deciding whether *bhāva* and *karman* were the denotata of the *sārvadhātuka* affix, or of *yaK*, the *vikaraṇa*.

2. A *vārttika* (*Mbh.* III: 146) states that *karmakartṛ* should also be mentioned as a *nimitta* 'condition' for the introduction of *yaK*. But since that could be accomplished automatically by the extension of *karmavat* of 3.1.87 *karmavat...*, *karmakartṛ* should not be mentioned in this rule. But 3.1.68 *kartari śap* will block it on the basis of *vipratiṣedha* (1.4.2 *vipratiṣedhe...*). That is, 3.1.67 *sārvadhātuke yak* will find its scope in connection with the denotation of straight (*śuddha*) *karman* as in *pacyata odanaḥ* 'the rice is being cooked'. Rule 3.1.68 *kartari śap* will find its independent scope in sentences like *odanaḥ pacati* 'the rice is cooking'. In the context of *karmakartṛ*, *karma* and *kartṛ* will both be simultaneously applicable. Rule 3.1.68 will thus block 3.1.67 on the basis of being subsequent (*paratva*). It is suggested by the *vārttika* that *karmakartṛ* should be stated in the rule. The *Mahābhāṣya* rejects the *vārttika* on grounds that *yaK* obtains in the context of *karmakartṛ*. Besides, blocking by *ŚaP* entails *śāstrātideśa*, extension of a rule, whereas *yaK* of 3.1.87 is an instance of *kāryātideśa*, the extension of an operation. This makes the provision of *kāryātideśa* which introduces *yaK* more powerful than the *śāstrātideśa* provision of *ŚaP*. Consequently, the 3.1.87 provision for *yaK* will win in the conflict. Thus, we get *pacyata odanaḥ svayam eva* 'the rice is cooking by itself'.

3. The *K* of *yaK* is used as an *it* to block *guṇa* and *vṛddhi*, and to facilitate *samprasāraṇa*. For example, given *bhū* + *yaK* + *ta* = *bhūyate*, rule 7.3.84 *sārvadhātukārddhadhātukayoḥ* is blocked from introducing *guṇa* for *u* of *bhū*. Similarly, given *mṛj* + yaK + *ta* = *mṛjyate*, rule 7.3.114 *mṛjer vṛddhiḥ* is blocked from introducing *vṛddhi* for the *ṛ* of *mṛj*. The *K* of *yaK* also facilitates the *samprasāraṇa*, for example in *ijyate*, by rule 6.1.15 *vacisvapiyajādīnāṃ kiti* where *K* forms the right context.

3.1.68 **कर्त्तरि शप्**

kartari śap
/*kartari* 7/1 *śap* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22 *sārvadhātuke* #67)
kartṛvācini sārvadhātuke parato dhātoḥ śap prayayo bhavati
Affix *ŚaP* occurs after a verbal root when a *sārvadhātuka* affix which denotes *kartṛ* 'agent' follows.

EXAMPLES:

paṭhati 'he reads or recites'
apaṭhat 'he read or recited'

1. Note that *P* as an *it*, in affix *ŚaP*, is intended for accent (*svara*; 3.1.3 *anudāttau suppitau*). The *Ś* as an *it* facilitates the assignment of the term *sārvadhātuka* (3.4.113 *tiṅśit sārvadhātukam*). The same applies to the *Ś* of *ŚyaN*, etc.

3.1.69 **दिवादिभ्यः श्यन्**

divādibhyaḥ śyan
/*divādibhyaḥ* 5/3 *śyan* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68)
'div'ity evam ādibhyo dhātubhyaḥ śyan pratyayo bhavati
Affix *ŚyaN* occurs after verbal roots enumerated in the class headed by *div* 'to play' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

dīvyati 'he is playing'
sīvyati 'he is sewing'

1. This rule constitutes an exception to the preceding rule. The *N* as an *it* in *ŚyaN* is intended for accent. Thus, by rule 6.1.191 *ñnityādir nityam*, we get an obligatory high-pitch accent (*ādyudātta*) initially.

3.1.70 वा भ्राशभ्लाशभ्रमुक्रमुक्लमुत्रसित्रुटिलषः

vā bhrāśabhlāśabhramukramuklamutrasitruṭilaṣaḥ
/*vā* Ø *bhrāśa... laṣaḥ* 5/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68, *śyan* #69)
'*ṭubhrāśṛṭubhlāśṛbhramukramuklamutrasitruṭilaṣa*' *ity etebhyo vā śyan pratyayo bhavati*
Affix *ŚyaN* optionally occurs after verbal roots *ṬUbhrāśṚ* 'to shine, glitter' *ṬUbhlāśṚ* 'to shine, glitter', *bhramU* 'to wander, rove', *kramU* 'to walk', *klamU* 'to be tired or exhausted', *trasI* 'to be afraid, scared', *truṭI* 'to break, split, tear' and *laṣ* 'to shine' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

bhrāśate 'it shines, glitters'
bhrāśyate 'id.'
bhlāśate 'id.'
bhlāśyate 'id.'
bhramati 'he wanders around'
bhrāmyati 'id.'
krāmati 'he walks'
krāmyati 'id.'
klāmati 'he becomes tired'
klāmyati 'id.'
trasati 'he is afraid of...'
trasyati 'id.'
truṭati 'he breaks...'
truṭyati 'id.'
laṣati 'it shines...
laṣyati 'id.'

1. Note that *bhram* denotes both *bhram* 'to wander', a root of the *bhū* class (*bhvādi*), and *bhram* 'to move', a root of the *div* class (*divādi*). The *divādi bhram* yields *bhrāmyati* with *ŚyaN* where lengthening (*dīrgha*) of the root vowel is ordered by 7.3.74 *śamām aṣṭānāṃ dīrghaḥ śyani*. The *ŚaP* forms of both *divādi* as well as *bhvādi* are the same: *bhramati*. We will also get two additional forms: *bhramyati* and *bhrāmyati* where the first is the *ŚyaN* form of the *bhvādi* root. The second, with the lengthened vowel, is the derivate of the *divādi* root. The *dīrgha* by 7.3.74 is not applicable to *bhvādi*. Verbal roots *kram* and *tras* are listed in the *divādi* group as against *truṭ* which is *tudādi*. The other verbal roots are all *bhvādi*.

2. Note that the *vā* of the rule denotes the option (*vibhāṣā*) of the *ubhayatra* type. That is, the option is available in both instances: where it was

previously available (*prāpta*), and where it was not (*aprāpta*). For example, *bhram*, *klam* and *tras* already have *ŚyaN* because of their membership in the *divādi* class. Verbal root *truṭ* has *ŚyaN* available on account of its being a *tudādi* root. The *bhvādi* roots are provided the option which was previously unavailable. In case of the *divādi* roots, the *ŚyaN* was available obligatorily (*nitya*).

3.1.71 **यसोऽनुपसर्गात्**

yaso 'nupasargāt
/*yasaḥ* 5/1 *anupasargāt* 5/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68, *śyan* #69, *vā* #70)
yaso' nupasargād vā śyan pratyayo bhavati
Affix *ŚyaN* occurs optionally after verbal root *yasU* 'to strive' used without a preverb when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

yasati 'he strives'
yasyati 'id.'

1. Note that *yasU* is a *divādi* root. Consequently, it will obligatorily have *ŚyaN*. This rule makes the provision optional when the root is used without a preverb (*upasarga*). Note, also, that the following rule provides for this optional introduction of *ŚyaN* after *yasU* when used with the preverb *sam*. Thus we get: *saṃyasyati* with *ŚyaN*, and *saṃyasati* with *ŚaP*. This optional provision of *ŚyaN* made for *yasU* when used with the preverb *sam* is restrictive (*niyama*) in nature. That is, *ŚyaN* is optional to *ŚaP*, in case of *yasU*, only when the root is used with the preverb *sam*.

3.1.72 **संयसश्च**

saṃyasaś ca
/*saṃyasaḥ* 5/1 *ca* 0/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68, *śyan* #69, *vā* #70)
saṃpūrvāc ca yaser vā śyan pratyayo bhavati
Affix *ŚyaN* optionally occurs after verbal root *yasU* used with the preverb *sam* when a *sarvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

saṃyasati 'he strives...
saṃyasyati 'id.'

1. The *ca* of this rule brings *vā* from the preceding rule. Why is *yasU* explicitly stated in the rule when it could have been made available via *anuvṛtti*? So that there is no confusion about some other verb (*dhātvantarāśaṃkā*). The reader may think that *yasU*, since it is not carried from the *anuvṛtti*, refers, here, to some other verb. That is, the rule should have been stated as *samaḥ* with *yasU* carried via *anuvṛtti*. However, this is not acceptable, since *samaḥ* may then be misinterpreted as yielding the meaning: 'after the verbal roots *ṣamA* and *ṣṭamA*'. This reference to roots by *samaḥ* could be made possible because of the discontinuation of *yasU*. The rule therefore must make explicit reference to *yasU*. For, this does not cause any confusion.

3.1.73 **स्वादिभ्यः श्नुः**

svādibhyaḥ śnuḥ
/*svādibhyaḥ* 5/3 *śnuḥ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68)
Śruvaḥ śnupratyay bhavati śruvaḥ' śruvaḥ 'śṛ'ity ayam ādeśo bhavati
Affix *Śnu* occurs after verbal roots enumerated in the class headed by *ṣuÑ* 'to press out, squeeze' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

sunoti 'he presses out (the Soma)'

1. This rule introduces *Śnu*, an exception to *ŚaP*, after verbal roots of the *svādi* group. Note that in the derivation of *sunoti*, the *u* of the root does not undergo *guṇa* since rule 1.2.4 *sārvadhātukam apit* blocks it via extending *Śnu* the status of being marked with *Ṅ*. The *guṇa* of *u* in *Śnu* could not be blocked before the *sārvadhātuka* affix *tiP* since it is marked with *P* as *it*. Needless to say, 1.2.4 cannot extend the *Ṅit* status to *tiP*. The *Ś* of *Śnu* is intended as an *it* for the assignment of the term *sārvadhātuka* by 3.4.113 *tiṅśit sārvadhātukam*.

3.1.74 **श्रुवः शृ च**

śruvaḥ śṛ ca
/*śruvaḥ* 5/1 *śṛ* (*deleted* 1/1) *ca* Ø/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68, *śnuḥ* #73)
śruvaḥ śnupratya bhavati śruvaḥ 'śṛ' ity ayam ādeśo bhavati
Affix *Śnu* occurs after verbal root *śru* 'to hear' when a *sārvadhātuka* affix which denotes *kartṛ* follows; in addition, *śru* is replaced by *śṛ*.

EXAMPLES:

śṛṇoti 'he hears...'

śṛṇutaḥ 'they two hear...'
śṛṇvanti 'they (plural) hear...'

1. This rule introduces two things:
(*a*) *Śnu* after verbal root *śru*, and
(*b*) *śṛ* as a replacement for *śru*.
Verbal root *śru*, because it is a *bhvādi* root, only qualifies for *ŚaP*. This rule provides for *Śnu*. Again, this is an exception to *ŚaP*. Note that these two provisions are both made in conjunction so that the *śṛ* replacement for *śru* is not applicable in connection with some other affix. The word-form *śruvaḥ* is interpreted as ending in *pañcamī* in consonance with the context of the introduction of an affix (*pratyayavidhi*). When related to the context of the replacement of *śru* with *śṛ*, it will be read as ending in genitive (*ṣaṣṭhī*) to denote 'in place of'.

3.1.75 **अक्षोऽन्यतरस्याम्**

akṣo' nyatarasyām
/*akṣaḥ* 5/1 *anyatarasyām* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68, *śnuḥ* #73)
akṣo' nyatarasyām śnu pratyayo bhavati
Affix *Śnu* optionally occurs after verbal root *akṣŪ* 'to pervade' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

akṣṇoti 'he pervades...
akṣati 'id.'

1. Verbal root *akṣU* is again a *bhvādi* root. Consequently, it does not have *Śnu* available to it. This rule provides the option of *Śnu* against *ŚaP*. Thus, on account of making something available which previously was not, this rule illustrates an instance of *aprāptavibhāṣā*.

3.1.76 **तनूकरणे तक्षः**

tanūkaraṇe takṣaḥ
/*tanūkaraṇe* 7/1 *takṣaḥ* 5/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68, *śnuḥ* #73, *anyatarasyām* #75)
takṣaḥ tanūkaraṇe vartamānād anyatarasyām śnu pratyayo bhavati
Affix *Śnu* optionally occurs after verbal root *takṣŪ* when it signifies *tanūkaraṇa* 'to reduce by planning' and a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

takṣṇoti kāṣṭham 'he planes the wood'
takṣati kāṣṭham 'id.'

1. This, again, is a *bhvādi* root. The *tanūkaraṇa* qualifier is used to indicate that the verb can be used in more than one sense. The optional provision of *Śnu* is made only when *takṣŪ* is used in the sense of *tanūkaraṇa*.

3.1.77 **तुदादिभ्यः शः**

tudādibhyaḥ śaḥ
/tudādibhyaḥ 5/3 *śaḥ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68)
tudādibhyo dhātubhyaḥ śaḥ pratyayo bhavati
Affix *Śa* occurs after verbal roots enumerated in the class headed by *tudA* 'to hurt, torment' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

tudati 'he torments'
nudati 'he moves, investigates, or pushes...'

1. Here, again, *Śa* is used to block *ŚaP*.

3.1.78 **रुधादिभ्यः श्नम्**

rudhādibhyaḥ śnam
/rudhādibhyaḥ 5/3 *śnam* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoh* #22. *sārvadhātuke* #67, *kartari* #68)
rudhādibhyo dhātubhyaḥ śnam pratyayo bhavati
Affix *ŚnaM* occurs after verbal roots enumerated in the class headed by *rudhIR* 'to hold down, round up' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

ruṇaddhi 'he holds down, or rounds up...'
bhinatti 'he splits...'

1. Note that the *Ś* of *ŚnaM* is not intended here as an *it* to facilitate assignment of the term *sārvadhātuka* (3.4.113 *tiṅśit...*). Instead, it is treated as an *it* to qualify *na* so that rule 6.4.23 *śnān nalopaḥ* can be interpreted as: '...deletion of *na* occurring after the *na* qualified with *Ś*'. Obviously, *na*, qualified with *Ś*, here relates to *ŚnaM*. Rule 6.4.111 *śnāsor al lopaḥ* entails the same. The *Ś* is not an *it* for the assignment of the term

sārvadhātuka, since operations relative to this term assignment (deletion of *a* (*allopa*); *guṇa*; and introduction of *iṬ* (*iḍāgama*, etc.)) do not obtain in case of the *rudhādi* roots.

The *M* of *ŚnaM* is intended here as an *it* to locate the place of operation (*deśaviddhyartha*). That is, given *M* as an *it*, *ŚnaM* is introduced after the last among the vowels of an item (1.1.47 ***mid aco' ntyāt paraḥ***).

3.1.79 **तनादिकृञ्भ्यः उः**

tanādikṛñbhya uḥ
/*tanādikṛñbhyaḥ* 5/3 *uḥ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68)
tanādibhyo dhātubhyaḥ kṛñaś ca u pratyayo bhavati
Affix *u* occurs after verbal roots enumerated in the class headed by *tanU* 'to stretch, expand' and also after verbal root *kṛÑ* 'to make, do' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

tanoti 'he stretches...'
karoti 'he makes...'

1. Note that Pāṇini refers to *kṛÑ* separately from the *tanādi* roots. This gives rise to the speculation that either (*a*) he did not consider *kṛÑ* as a root of the *tanādi* class, or (*b*) he intended something special in connection with *kṛÑ*. These speculations are valid since *kṛÑ* is now available as part of the *tanādi* group. The *Mahābhāṣya* (III:156) rejects *kṛÑ* as part of the rule because Patañjali also accepts *kṛÑ* as the root of the *tanādi* class. Bhaṭṭoji Dīkṣita (*SK* III: 289) states that by mentioning *kṛÑ* separately Pāṇini indicates the irregularity of operations relative to *gaṇa* 'listing of items in classes'. He argues that the derivation of *viśvaset* is made possible because of this irregularity. That is, verbal root *śvas*, used with the preverb *vi*, should have lost its *ŚaP* on account of being an *adādi* root (2.4.72 *adiprabhṛtibhyaḥ śapaḥ*). That *ŚaP* was not deleted is explained by the irregular nature of operations relative to *gaṇa*.

Kāśikā states that *kṛÑ* is mentioned separately from *tanādi* so that any other operation relative to *tanādi* will not apply to *kṛÑ*. That is, no other operation characteristic of the *tanādi* verbs, other than one covered by this rule, applies to *kṛÑ* (*tanādipāṭhād eva upratyaye siddhe karoter upādānaṃ niyamārtham. anyat tanādikāryaṃ mā bhūd iti*). In case of *kṛÑ*, the optional *LUK*- deletion of *sIC* made available to the *tanādi* roots by rule 2.4.79 *tanādibhyas tathāsoḥ* will be blocked.

3.1.80 **धिन्विकृण्व्योर च**

dhinvikṛṇvyor a ca

/dhinvikṛṇvyoḥ 6/2 *a (deleted* 1/1*) ca* Ø/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68, *uḥ* #79)
'dhinvikṛṇyor' ity etayor dhātvor upratyayo bhavati akāraś cāntādeśaḥ
Affix *u* occurs after verbal roots *dhinvI* 'to please, satisfy, or to be pleased, be satisfied' and *kṛṇvI* 'to hurt, injure' when a *sārvadhātuka* affix which denotes *kartṛ* follows; in addition, the final sound segment of the root is replaced with *a*.

EXAMPLES:

dhinoti 'he is happy'
kṛṇoti 'he hurts...'

1. This rule orders two operations in conjunction: affix *u*, and a final replacement in *-a* for verbs. Note that both of these roots are *bhvādi*. Hence, they have *ŚaP* available to them. This rule provides for *u*.

That is, given *dhi* + *nUM* + *v* + *tiP* = *dhinv* + *tiP*, *u* is ordered along with the final replacement in *-a*. This yields: *dhin (v → a)* + *u* + *tiP* = *dhin* + *u* + *ti* where *a* is deleted by 6.4.48 *ato lopaḥ*. A question is raised as to why the short penultimate vowels of the *aṅga* do not undergo *guṇa* by 7.3.86 *pugantalanghūpadhasya ca*. Rule 1.1.57 *acaḥ parasmin pūrvavidhau* states that a replacement of *aC* (vowel), conditioned by a subsequent element, is treated as what it replaced when an operation on what precedes is to be performed. That is, the string, for purposes of the *guṇa*-replacement of the short penultimate vowel (*laghūpadha-guṇa*), will still be: *dhinv* + *u* + *ti*. As a result, rule 7.3.86 does not find a short vowel in the penultimate position for its application.

3.1.81 क्र्यादिभ्यः श्ना

kryādibhyaḥ śnā
/kryādibhyaḥ 5/1 *śnā* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68)
kryādibhyo dhātubhyaḥ śnā pratyayo bhavati
Affix *Śnā* occurs after verbal roots enumerated in the class headed by *ḌUkṛÑ* 'to buy, barter' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

krīṇāti 'he purchases...'
krīṇītaḥ 'they two purchase...'

1. This, again, is an exception to the *ŚaP* though the *Ś* of *Śnā*,

similar to that of *ŚaP*, is intended as an *it* for the assignment of the term *sārvadhātuka*.

3.1.82 स्तम्भुस्तुम्भुस्कम्भुस्कुम्भुस्कुञ्भ्यः श्नुश्च

stambhustumbhuskambhuskumbhuskuñbhyaḥ śnuś ca
/stambhu...skuñbhyaḥ 5/3 *śnuḥ* 1/1 *ca* Ø/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22, *sārvadhātuke* #67, *kartari* #68, *snā* #81)
ādyāś catvāro dhātavaḥ sautrāḥ 'skuñ āpravaṇe' ity etebhyaḥ śnā pratyayo bhavati

Affix *Śnā*, as well as *Śnu*, occurs after verbal roots *stambhU*, *stumbhU*, *skambhU*, *skumbhU* 'to stop, block or restrain' and *skuÑ* 'to jump, cover' when a *sārvadhātuka* affix which denotes *kartṛ* follows.

EXAMPLES:

stabhnāti 'he stops...'
stabhnoti 'id.'
stubhnāti 'id.'
stubhnoti 'id.'
skabhnāti 'id.'
skabhnoti 'id.'
skubhnāti 'id.'
skubhnoti 'id.'
skunāti 'he jumps; covers...'
skunoti 'id.'

1. The first four verbal roots are *sautra*, as attested by their use within the rules. The *ca* in the rule is used to bring *Śnā*. This means, that both *Śnā* as well as *Śnu* are made available to these roots. Note, however, that the two applications are to take place in turn (*paryāya*). Wrong forms will result if they are introduced simultaneously (*yugapad*).

Because of the *sautra* nature of most of the roots, and also because of their association here with *Śnā* and *Śnu*, one may infer that the operational scope of these roots is limited to *Śnā* and *Śnu* only. This, however, is not true. These roots avail general operational scope (*sāmānyaviṣayatā*) at the strength of their citation with *Ū* as an it. As a result, they receive *Ktvā*, and the optional *iṬ* by rule 7.2.56 *udito vā*. Similarly, in *niṣṭhā* (1.1.26 *ktaktavatū niṣṭhā*), rule 7.2.15 *yasya vibhāṣā* blocks *iṬ*. Note that the penultimate *-n* of these roots is also deleted by rule 6.4.24 *aniditāṃ hala...*

3.1.83 हलः श्नः शानज्झौ

halaḥ śnaḥ śānajjhau

/halaḥ 5/1 *śnaḥ* 6/1 *śānac* 1/1 *hau* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)
hala uttarasya śnā pratyayasya śānaj ādeśo bhavati hau parataḥ
Affix *Śnā* is replaced by *ŚānaC* if *Śnā* occurs after a verbal root which ends in *hL*(a consonant) and *hi* (a replacement of the second person singular active ending *siP*; cf. 3.4.87 *ser hya...*) follows.

EXAMPLE:

muṣāṇa ratnāni 'you steal the jewels'

1. *Kāśikā* states that *Śnaḥ* in this rule is included to clearly mark what *ŚānaC* will replace (*sthāninirdeśa*). In the absence of *śnaḥ*, there will be confusion as to whether *Śnā* was also carried to the context of the replacement by *ŚānaC*.

A question is raised as to why *ŚānaC* is to be marked with *Ś* as an *it* when the same can be made available via *sthānivadbhāva* (1.1.56 *sthānivad ādeśo' nalvidhau*). Haradatta (*PM* ad *Kāśikā* III: 460) is against this duplication since *ŚānaC* will receive its *Śit* status on account of being a replacement for *Śnā*. *Nyāsa* (ad *Kāśikā* III: 460-61) states that the explicit *Ś* marking of *ŚānaC* is intended so that when *Śnā* is introduced variously (*bahulam*; 3.1.85 *vyatyayo bahulam*), *ŚānaC* can still replace it. Thus, given the string *mid* + (*Śnā* → *ŚānaC*) = *mid* + *āna*, we get *midāna*. This also blocks the application of 7.3.82 *mider guṇaḥ*. Otherwise, similar to the derivation of *medhyati*, we will end up with *medāna*, a wrong form. For how Haradatta accounts for the blocking of *guṇa* in *midāna*, and also for additional purposes for which *Ś* as an *it* in *ŚānaC* is to be restated, see *PM* and *Nyāsa* ad *Kāśikā* under this rule.

3.1.84 छन्दसि शायजपि

chandasi śāyaj api
/chandasi 7/1 *śāyac* 1/1 *api* 0/
chandasi viṣaye śnaḥ śāyaj ādeśo bhavati, śānaj api
Śnā, in the Vedic, is replaced with *ŚāyaC* and *ŚānaC*, when it occurs after a verbal root ending in a consonant (*hal*) and *hi* follows.

EXAMPLES:

gṛbhāya jihvayā madhu 'take with your tongue the sweet (Soma)'
badhāna paśum 'you kill the animal'

3.1.85 व्यत्ययो बहुलम्

vyatyayo bahulam
/vyatyayaḥ 1/1 *bahulam* 1/1/
(*chandasi* #84)

yathāyathaṃ vikaraṇāḥ śabādayo vihitāḥ, teṣāṃ chandasi viṣaye bahulaṃ vyatyayo bhavati
There are, in the Vedic, diverse variations from the rules.

EXAMPLES:

bhedati '...shatters...'
marati '...dies'
nesatu 'may he lead'
taruṣema 'may we go across'

1. This rule is formulated to indicate that rules relative to these *vikaraṇa* apply variously in the Vedic. The word *vyatyaya* is explained as going against the rules (*vyatigamana*). The word *bahulam* 'variously' is used to indicate that a given *vikaraṇa* may also be found introduced in consonance with a given rule. Similarly, many different operations contrary to the rules can be accomplished with *bahulam*. The contradiction of a given rule may entail introduction of *ŚaP* where *ŚnaM* is expected. An example is *bhedati*. Similarly, *marati* illustrates how *ŚaP* is introduced in place of *Śa*. In addition, the *parasmaipada* ending is also introduced via *vyatyaya* in *marati*. Now consider *neṣatu* and *taruṣema* where the first is derived from *nī* + *siP* + *ŚaP* + *tu*, and the second from *tṛ* + *u* + *siP* + *ŚaP* + *ti* + *mas*. The first string has two personal endings, as compared to the second which has three. The second also has two *vikaraṇa*, i.e., *u* and *ŚaP*, in contrast with the single *ŚaP* of the first.

3.1.86 **लिङ्याशिष्यङ्**

liṅy āśiṣy aṅ
/*liṅi* 7/1 *āśiṣi* 7/1 *aṅ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #22)
āśiṣi viṣaye yo liṅ tasmin parataś chandasi viṣaye' ṅ pratyayo bhavati
In Vedic, *aṄ* occurs after verbal roots when *LIṄ* which denotes *āśīḥ* 'benediction' follows.

EXAMPLES:

upashtheyam 'may I resolve...'
upageyam 'may I sing...'
gamema 'may we go...'
vocema 'may we speak...'
videyam 'may I know...'
śakeyam 'may I be able to...'
āruheyam 'may I ascend to...'

1. This rule introduces affix *aṄ* when, in the Vedic, affix *LIṄ* which denotes benediction (3.3.173 *āśiṣi liṅloṭau*) follows. This is an exception

to *ŚaP*. Affix *LIṄ* is assigned the term *sārvadhātuka* by rule 3.4.117 *chandasy ubhayathā*. *Kāśikā* states that this rule is applicable only in the context of verbal roots *sthā* 'to stand', *gā* 'to sing', *gam* 'to go', *vac* 'to speak', *vid* 'to know', *śak* 'to be able to' and *ruh* 'to grow'. Note that a *vārttika* proposes that, in the case of the verbal root *dṛś* 'to see', *aK*, and not *aṄ*, should be the affix. This is needed for the derivation of *dṛśeyam* where, because of the *Kit* status of *aK*, *guṇa* which obtains because of *aṄ* by rule 7.4.16 *ṛdṛśo' ṅi guṇaḥ*, could be blocked.

3.1.87 कर्मवत्कर्मणा तुल्यक्रियः

karmavat karmaṇā tulyakriyaḥ
/karmavat Ø *karmaṇā* 3/1 *tulyakriyaḥ* 1/1/
karmaṇi kriyā karma, karmasthayā kriyayā tulyakriyaḥ karttā karmavad bhavati
When the *kartṛ* of a given *kriyā* 'action' behaves in the same way as does a *karman* 'object', the *kartṛ* is treated as if it were the *karman*.

EXAMPLES:

bhidyate kāṣṭham svayam eva 'the wood is splitting by itself'
abhedi kāṣṭham 'the wood split'
kāriṣyate kaṭaḥ svayam eva 'the mat will make itself'

1. This is an extension rule (*atideśa*) whereby an operation (*kārya*) is extended (*atidiśyate*) to an entity for which it previously did not qualify. This type of *atideśa* is called *kāryātideśa* 'extension of an operation'. Affix *vatI* in *karmavat* is ruled in consonance with 5.1.115 *tena tulyam...* It is not ruled in view of 5.1.116 *tatra tasyeva* as is known from the nominative (*prathamā*) of *tulyakriyaḥ*. If it were, Pāṇini would have used *tulyakriya* either as *tulyakriye* in the locative (*saptamī*), or as *tulyakriyasya* in the genitive (*ṣaṣṭhī*). Note that the use of the variable *tad* 'that' in the two rules, 5.1.115 and 5.1.116, as in many *taddhita* and non-*taddhita* rules, requires that its referents be reconstructed in accordance with the nominal endings of the variable in the rule.

2. The word *tulya* denotes the sense of similar (*sadṛśa*). The compound *tulyakriyaḥ* is interpreted as 'that which has its action similar to...'. It would seem, the word *karman*, in this sense, is interpreted in its non-technical meaning of *kriyā* 'action'. But this way, *karmaṇā tulyakriyaḥ* would yield the interpretation: *kriyayā tulyā kriyā yasya* 'that which has its action similar to an action'. This does not make any sense. Therefore, it may be better to interpret *karman* as *sādhana* 'means', i.e., a *kāraka* 'participant'. This, then, will be its technical interpretation. But that may also create a problem when interpreting *karmavat karmaṇā tulyakriyaḥ*. The *karman* 'object' and *kriyā* 'action' are two different things. The first

has *dravya*, a thing, as its locus whereas the second does not. How could there be a similarity between the object, a *sādhana*, with that which is to be accomplished (*sādhya*) via its participation. It is, therefore, suggested that this similarity be established on the basis of the action located in the *sādhana*, the object. Now *karman* of *karmaṇā tulyakriyaḥ* can primarily denote the action located within it (*tatstha*). Its *sādhana* denotatum becomes secondary (*gauṇa*). That is, *karma* becomes *karmasthakriyāvāci* 'that which denotes the action located within the object'. It is for this reason that *Kāśikā* glosses *karmaṇā tulyakriyaḥ* as *karmasthayā kriyayā tulyakriyaḥ* 'that which has its action similar to the action located within the object'. The word *tulyakriyaḥ* becomes the qualifier (*viśeṣaṇa*) to the agent (*kartṛ*).

There are two participants *karman* and *kartṛ* involved here. For a *kartṛ* to be treated as if *karman*, the action of the *kartṛ* should be identical with the action located within the object. In view of this, *Kāśikā* paraphrases the rule as: *yasmin karmaṇi kartṛbhūte' pi tadvat kriyā lakṣyate yathā karmaṇi sa karttā karmavad bhavati* 'an agent is treated as if it was an object when its action is similar to the action located in the object prior to its turning into an agent'. The similarity of the action demanded by this rule implies that (*a*) an object has turned agent, and (*b*) that the action of this object turned agent is similar to the action for which it served as the locus before turning agent. An agent can be treated as if it is an object if the action remains the same even when the object has turned agent.

3. Commentators make a distinction between *kriyā* 'action' and *bhāva* 'root-sense' where the first is *sādhya* 'to be accomplished by the participants' and the second has already been accomplished (*siddha*). An action can be viewed as located in its object *karmasthakriyaka*. The root-sense (*bhāva*) with its object as locus can be called *karmasthabhāvaka*. An action which has its agent as locus is termed *kartṛsthakriya*. This term contrasts with the *kartṛsthabhāvaka*, where the agent is viewed as the locus of *bhāva*. Let us consider the following sentences:

(1) *devadattaḥ kāṣṭhaṃ bhinatti* 'Devadatta splits the firewood'
(2) *agniḥ ghaṭaṃ pacati* 'the fire cooks the earthen jar'
(3) *devadatto grāmaṃ gacchati* 'Devadatta goes to the village'
(4) *devadatta āste* 'Devadatta sits'

The action, 'to split' (*dvidhābhavana*) denoted by *bhid*, is located in the object (*karman*) here identified as the *kāṣṭha*. The action denoted by *bhid* is thus *karmasthakriya*. The *bhāva* of the accomplished action, denoted by *pac*, is located in its object *ghaṭa* 'jar'. Sentences (3) and (4) similarly illustrate instances of actions called *kartṛsthakriya* and *kartṛsthabhāvaka*. Commentators characterize the differences between *bhāva* and *kriyā* by *aparispandanasādhanasādhyo dhātvartho bhāvaḥ* '*bhāva* is that which is

accomplished without movement serving as the means'. In contrast, *kriyā* is accomplished as *saparispandanasādhanasādhya* with movement serving as the means. The treatment of an agent as if it were an object (*karmavadbhāva*) is generally limited to actions of the *karmasthakriya* and *karmasthabhāvaka* type. Consider now the following sentences:

(5) *kāṣṭhaṃ bhidyate svayam eva* 'the firewood splits by itself'
(6) *kāṣṭhena bhidyate svayam eva* 'id.'

If we compare sentences (1) and (5) we find that *kāṣṭha* is the object in (1) and the agent in (5). That is, the same object has turned agent in sentences (5) and (6). The *ya* in *bhidyate* is introduced by 3.1.67 *sārvadhātuke yak* under the condition of *te* which denotes the object (*karman*). It is for this reason that *kāṣṭham* in the nominative denotes the nominal stem notion (*prātipadikārtha*). If one wishes to denote *bhāva* with the *LA* affix introduced after the verbal root, one will then have to denote the agent with the nominal ending as is the case in (6). The instrumental after *kāṣṭha* denotes *kartṛ*. For further details of the notion of an object turned agent, see my detailed comments under rule 1.3.67 *ṇer aṇau yat...*

Note that *karmavadbhāva* has certain operational consequences. For example, it entails the application of rule 1.3.13 *bhāvakarmaṇoḥ* whereby *ātmanepada* affixes are introduced as replacements for the *LA* affixes. It also entails the application of 3.1.67 *sārvadhātuke yak* whereby affix *yaK* is introduced.

4. Now consider rule 6.4.62 *syasicsīyuṭtāsiṣu bhāvakarmaṇor...* which extends operations similar to *CiṆ* (*ciṇvadbhāva*) in connection with a set of roots. That is, certain operations become applicable to an *aṅga* similar to those when affix *CiṆ* follows. The *Mahābhāṣya* (ad IV: 739) sums up operations relative to *ciṇvadbhāva* as follows:

ciṇvad vṛddhir yuk ca hanteś ca ghatvaṃ
dīrghaś cokto yo mitāṃ vā ciṇīti/
iṭ cāsiddhas tena me lupyate ṇir
nityaś cāyaṃ valnimitto vibhāti//

'*vṛddhi*, augment *yuK*, the *gh* replacement for *han*, and the optional lengthening of those marked with *M*, obtain here in *ciṇvadbhāva* as they do when *CiṆ* follows; the *iṬ* available through *ciṇvadbhāva* is *asiddha* 'suspended' because of being *ābhīya* (6.4.22 *asiddhavad atrā' bhāt*); hence, *Ṇi* gets deleted (6.4.21 *ṇer aniṭi*); this *iṬ* is obligatory (*nitya*) as opposed to the *valādi iṭ* (7.3.35 *ārdhadhātukasya...*) which is *anitya* 'non-obligatory''

The following are the major operations resulting out of *ciṇvadbhāva*:

(7) Rules 7.2.115 *aco'ñṇiti* and 7.2.116 *ata upadhāyāḥ* order *vṛddhi* conditioned by an affix marked by *Ṇ* as an *it*.
(8) Rule 7.3.33 *āto yuk ciṇkṛtoḥ* orders the introduction of augment *yuK* to roots which terminate in *ā*.

(9) Since affix *CiṆ* is marked with *Ṇ*, rule 7.3.54 *ho hanter...* applies to replace the *h* of *han* with *gh*.
(10) Rule 6.4.93 *ciṇṇamulor dīrgho' nyatarasyām* also orders optional lengthening of short penultimate vowels of an *aṅga* marked with *M*. Refer to the appendix for derivational details.

3.1.88 तपस्तपःकर्मकस्यैव

tapastapaḥ karmakasyaiva
/tapastapaḥ 6/1 *karmakasya* 6/6 *eva* Ø/
(*karmavat* #87)
tapa santāpe asya karttā karmavad bhavati, sa ca tapaḥ karmakasya nānya-karmakasya
The *kartṛ* of an action denoted by ***tapA*** is to be treated as ***karman*** only when the object in question is ***tapas*** **'austerity, penance'.**

EXAMPLES:

tapyate tapas tāpasaḥ 'the ascetic observes penance'
atapta tapas tāpasaḥ 'the ascetic observed penance'

1. This rule allows for treatment of the agent of the verbal root *tapA* as an object, if and only if, the action denoted by the root constitutes *tapas* 'penance' alone as its object. Obviously, if *tapA* is to be the object, the notion of *karmasthakriya*, where *karmavadbhāva* was permitted by the previous rule, would not be valid here. For, *tapas* cannot serve as the locus of the action denoted by the root. This rule thus provides for *karmavadbhāva* which previously was unavailable. This rule does not carry '*karmaṇaḥ tulyakriyaḥ*', since the *anuvṛtti* would require the similarity of actions (*kriyāṣādṛśya*). This rule, however, offers an instance of dissimilarity of actions (*kriyāvaisādṛśya*). Consider, for example, the following sentences:

(1) *upavāsāni tapāṃsi tāpasaṃ tapanti* 'austerities such as fasting, etc., torment the ascetic'
(2) *tāpasaḥ tapas tapyate svargāya* 'the ascetic observes penance for attaining heaven'
(3) *tapyate tapas tāpasaḥ* 'id.'

The first sentence denotes an action whereby practice of austerities results in suffering. The second does not entail suffering. It entails earning merits (*puṇyārjana*) which will enable the ascetic to reach heaven. The third of course denotes the same action as (2). Both (2) and (3) represent sentences where *karmavadbhāva* has applied. Instances such as (4) *uttapati suvarṇaṃ suvarṇakāraḥ kuṇḍalābhyām* 'the goldsmith is heating up the gold for (making) earrings' would not qualify for *karmavadbhāva* since the object here is gold (*suvarṇa*).

3.1.89 न दुहस्नुनमां यक्चिणौ

na duhasnunamāṃ yakciṇau
/na Ø duhasnunamām 1/2 *yakciṇau* 1/2/
(karmavat #87)
'duha snu nam' ity eteṣāṃ karmakartari yakciṇau karmavadbhāvāpadiṣṭau na bhavataḥ
Affixes *yaK* and *CiṆ* do not occur after verbal roots *duh* 'to milk', *snu* 'to drip' and *nam* 'to bend' when their *kartṛ* is treated as *karman.*

EXAMPLES:

dugdhe gauḥ 'the cow yields milk'
prasnute śoṇitam 'the blood drips'
namate daṇḍaḥ 'the stick bends'

1. This rule negates the provisions of *yaK* and *CiṆ* made available via the process of *karmavadhāva.* That is, out of the four basic operations made available via *karmavadbhāva,* only *ātmanepada* and *ciṇvadbhāva* are allowed in situations where these verbs occur. This last has been provided for only those *aṅga* which end in a vowel. This requirement disqualifies *duh* and *nam.* Thus, *ciṇvadbhāva* is only available to *snu* As far as the restriction of *CiṆ* is concerned, *duh* will still optionally receive it from rule 3.1.63 *duhaś ca.* Thus, only *yaK* is denied to *duh* by this rule.

Note that negation of *yaK* makes *ŚaP* available unless otherwise stated. The negation of *CiṆ* results in the introduction of *sIC.* For further details of these and other operational consequences, see the appendix.

2. It has been suggested via *vārttika* proposals to extend this negation of *yaK* and *CiṆ* to roots which are causal (*ṆiC*; 3.1.26 *hetumati ca*). Additionally, the negation should be extended to *śranthA* 'to loosen', *granthA* 'to bind, compose', and *brūÑ* 'to speak', as well as to intransitive roots qualified for *ātmanepada* terminations. This will account for *kārayate kaṭaḥ svayam eva* 'the mat is caused to be made by itself', *brūte ślokaḥ svayam eva* 'the verse is being recited by itself', and *vikurvate saindhavāḥ svayam eva* 'the horses gallop beautifully by themselves', etc.

3.1.90 कुषिरजोः प्राचां श्यन् परस्मैपदं च

kuṣirajoḥ prācāṃ śyan parasmaipadaṃ ca
/kuṣirajoḥ 6/2 *prācām* 6/3 *śyan* 1/1 *parasmaipadam* 1/1 *ca* Ø/
kuṣa niṣkarṣe rañja rāge anayor dhātvoḥ karmakartari prācām ācāryāṇāṃ matena śyan pratyayo bhavati parasmaipadaṃ ca
According to Eastern grammarians, affix *ŚyaN,* as well as a following *parasmaipada,* may occur after verbal roots *kuṣA* 'to drag (out)' and *rañjA* 'to color, dye' when their *kartṛ* is treated as if it were *karman.*

EXAMPLES:

kuṣyati pādaḥ svayam eva 'the foot is dragging by itself'
rajyati vastraṃ svayam eva 'the cloth is dyeing by itself'

1. This rule is an exception to the *yaK* and *ātmanepada* made available under the provisions of 3.1.85 *karmavat karmaṇā tulyakriyaḥ*, etc. The use of the word *prācām*, in the opinion of the Eastern grammarians, is simply used for showing variation or option. It cannot be interpreted here as denoting respect (*pūjā*) to the Eastern grammarians since that will not allow option. In this view, *ŚyaN* and *parasmaipada* endings are to be used as opposed to the *yaK* and *ātmanepada*. The difference in the derivates parallel to the use of *yaK* and *ŚyaN* is mainly in the area of augment *nUM* and the accent. Thus, in case of *ŚyaN*, augment *nUM* is obligatory (*nitya*) by rule 7.1.81 *śapśyanor nityam*. The initial *udātta* 'high-pitch' accent is also obtained on account of *ŚyaN* being marked with *N*. In case of *yaK*, the *nUM* becomes optional by 7.1.80 *āc chīnadyor num*, and *yaK* alone is marked with the initial high-pitch.

3.1.91 **धातोः**

dhātoḥ
/dhātoḥ 5/1/
dhātor ity ayam adhikāro veditavyaḥ ā tṛtīyādhyāyaparisamāteḥ
After a verbal root...

EXAMPLES:

karttavyam 'that which should be done'
karaṇīyam 'that which is to be done'

1. This is a governing rule (*adhikāra*) which extends as far as the end of book three. Affixes introduced within this domain are to be introduced 'after a verbal root'. A question is raised as to why *dhātoḥ* is explicitly stated when it can be brought via *anuvṛtti* from rule 3.1.22 *dhātor ekāco*.... *Kaśikā* states that *dhātoḥ* is explicitly stated as a heading (*adhikāra*) so that terms *kṛt* and *upapada* do not apply outside this domain. For example, if it were not made a separate domain containing 3.1.92 *tatropapadaṃ saptamīstham*, the word *upapada* could also apply in the previous contexts. Consequently, given 3.1.43 *cli luṅi*, one would interpret it as: '*CLI* occurs when *LUṄ* is conjoined with it'. Similar problems arise when assigning the term *kṛt* as per rule 3.1.93 *kṛd atiṅ*. Affixes introduced in the previous sections would also have qualified for assignment of this term. This would lead further to the assignment of the term *prātipadika* (cf. 1.2.46 *kṛttaddhitasamāsāś ca*) and the introduction of affixes termed *sUP* (4.1.2 *svaujasmauṭ*... within the domain of rule 4.1.1 *ṅyāp-prātipadikāt*...). Of course, this would result in undesired derivations.

A third purpose for the explicit mention of *dhātoḥ* is to block assignment of the term *ārdhadhātuka* outside this domain. For, if the term is not blocked, examples such a *jugupsate* would qualify for augment *iṬ* by 7.2.35 *ārdhadhātukasyeḍ valādeḥ*. Blocking the interaction of rules not included in the domain of 3.1.91 *dhātoḥ* with those characterizing '*vā' sarūpavidhi*' of rule 3.1.94 *vā' sarūpo...* is an additional purpose for explicit use of '*dhātoḥ*'.

3.1.92 तत्रोपपदं सप्तमीस्थम्

tatropapadaṃ saptamīstham
/*tatra* Ø *upapadam* 1/1 *saptamīstham* 1/1/
(*dhātoḥ* # 91)
tatraitasmin dhātvadhikāre tṛtīye yat saptamīnirdiṣṭaṃ tad upapadasaṃjñaṃ bhavati
That which is specified here (in this domain of rule 3.1.91 *dhātoḥ*) by means of *saptamī* 'seventh triplet of nominal endings' is termed an *upapada* 'a word which occurs in conjunction' with another word.

EXAMPLE: .

kumbhakāraḥ 'potmaker'

1. The word *saptamīstha* is explained as *saptamyā nirdiṣṭam* 'that which has been specified by means of *saptamī*'. The term *upapada* 'conjoined word' applies only to that word which has been specified with the use of the locative ending in the domain of 3.1.91 *dhātoḥ*. Thus, *upapada* is a name (*saṃjñā*) applicable to a *pada* that ends in the locative, its nominatum (*saṃjñin*). The word *stha* is used so that a specification made by means of *saptamī* can be interpreted as 'that which ends in *saptamī*'. If *stha* were not used in the rule, *Paribhāṣā* (28) *saṃjñāvidhau pratyayagrahaṇe tadantavidhir nāsti* would impose an interpretation that blocks *tadantavidhi* 'interpretation of *X* as ending in *Y* if *Y* specifies *X*, and is also an affix.' The stated *paribhāṣā* disallows *tadantavidhi* in the context of the assignment of a name. Assignment of the term *upapada* is characterized by the use of *saptamī* relative to a rule (*sautra*) and is, thus, universally valid in this domain. Consider 3.2.1 *karmaṇy aṇ*, where *karmaṇi* is specified by means of *saptamī*. This rule, when read with 3.1.92, is interpreted as: affix *aṆ* occurs after a verbal root when 'that which ends in this rule in *saptamī*, occurs with the root as an *upapada*'. What is given here in *saptamī* is *karman* 'object'. Consequently, we learn that affix *aṆ* is introduced when 'an *upapada* which denotes *karman* (as per specification of 3.1.92 *tatropapadam...*) is used in conjunction with the verbal root.'

It is also stated that normally *saṃjñā* are meant for economy. Why does Pāṇini use the long term *upapada*? So an etymological interpretation can

be made: *upoccāritaṃ padam upapadam* 'that which is spoken nearby is termed *upapada*'. Here, the word *pada*, itself, is to be interpreted in its etymological sense: *padyate gamyate artho yena* 'that by means of which meaning is comprehended'. The technical interpretation of *pada* (1.4.14 *suptiṅantaṃ padam*) 'that which ends in a *sUP*, or *tiṄ*', will demand the conjoined word to end in *sUP* before compound formation can take place. This is the expatiation (*prapañca*) of the *Paribhāṣā* (76): *gati kārakopapadānāṃ...* whereby the compound formation of an *upapada* and an item ending in a *kṛt* affix is required to take place prior to the introduction of *sUP*. This, obviously, brings the requirements of the *samartha-paribhāṣā* (2.1.1 *samarthaḥ padavidhiḥ*) close to this context via specification of the term *upapada*.

3.1.93 कृदतिङ्

kṛd atiṅ
/*kṛt* 1/1 *atiṅ* 1/1/
(*pratyayaḥ* #1, *dhātoḥ* #91, *tatra* #92)
asmin dhātvadhikāre tiṅvarjitaḥ pratyayaḥ kṛt saṃjño bhavati
A non-*tiṄ* (3.4.78 *tiptas...*) affix is termed *kṛt*.

EXAMPLES:

karttavayam 'that which should be done'
karaṇīyam 'that which is to be done'

1. One major purpose for assigning the term *kṛt* to non-*tiṄ* affixes is to qualify their derivates for the assignment of the term *prātipadika* 'nominal stem' by rule 1.2.46 *kṛttaddhita....* This will eventually lead to operational provisions made for nominal stems in the domain of 4.1.1 *ṅyāp....*

3.1.94 वाऽसरूपोऽस्त्रियाम्

vā' sarūpo striyām
/*vā* Ø *asarūpaḥ* 1/1 *astriyām* 7/1/
(*pratyayaḥ* #1, *dhātoḥ* #91, *tatra* #92)
asmin dhātvadhikāre' samānarūpaḥ pratyayo' pavādo vā bādhako bhavati stryadhikāravihitapratyayaṃ varjayitvā
A formally different (*asarūpa*) affix, introduced by an exception rule in this domain of *dhātoḥ*, optionally blocks the introduction of its general counterpart except when the affix relates to the domain of rules which allow the derivation of feminine forms.

EXAMPLES:

vikṣepakaḥ 'trouble(maker)'
vikṣeptā 'id.'

vikṣipaḥ 'id.'
cikīrṣā 'desire to do'
jihīrṣā 'desire to carry, fetch'

1. This *paribhāṣā* is important because an exception which (*a*) belongs to the domain of 3.1.91 *dhātoḥ*, (*b*) is not relative to a rule contained in the subdomain of 3.3.94, and (*c*) is constituted by an affix dissimilar in form, optionally blocks its general counterpart. Note that all three conditions must be met to qualify for optional blocking. Thus, rule 3.1.133 *ṇvultṛcau* introduces affixes *ṆvuL* and *tṛC* as part of a general provision. Rule 3.1.135 *igupadhajñāprīkiraḥ* introduces affix *Ka* as an exception. Both of these rules, given in the domain of 3.1.91, introduce affixes which are dissimilar in form (*asarūpa*) and do not belong to the subdomain of rule 3.3.94 *striyāṃ ktin*. Given this, affix *Ka* optionally blocks affixes *ṆvuL* and *tṛC*. Note that the application of a general rule is normally blocked by its exception. Rule 3.1.94 provides for optional blocking. Furthermore, formal similarity of the affixes, or lack of it, should be determined independently of their *it*. Consider the following rules:

3.1.97 *aco yat* 'affix *yaT* occurs after a verbal root which terminates in a vowel...'
3.1.124 *ṛhalor ṇyat* 'affix *ṆyaT* occurs after a verbal root which ends in *ṛ* (short or long) or a consonant'

This first is a general rule to which the second is an exception. Affixes *yaT* and *ṆyaT*, given in the domain of 3.1.91 *dhātoḥ*, do not belong to its subdomain headed by rule 3.3.94 *striyāṃ ktin*. However, the formal difference between these affixes is zero. That is, they are not dissimilar (*asarūpa*) in form. Consequently, *ṆyaT* will obligatorily block *yaT*.

Now consider the following rules:

3.3.94 *stiyāṃ ktin* 'affix *KtiN* occurs after a verbal root when action is denoted in feminine'
3.3.102 *a pratyayāt* 'affix *a* occurs after a verbal root which terminates in an affix, and when action is denoted in feminine.

Obviously, these two rules are both contained in the subdomain headed by 3.1.94 *striyāṁ....* Affixes *KtiN* and *a* are dissimilar in form, yet *a*, as an exception, will obligatorily block its general counterpart *KtiN*. The nature of this obligatory blocking by a rule of the subdomain of 3.1.91 *dhātoḥ* can also be understood by analyzing the provision of rule 3.1.94 *vā' sarūpo' striyām* itself.

Rule 3.1.94 makes the following provisions:

(*i*) a formally dissimilar affix ruled as an exception in the domain of 3.1.91 *dhātoḥ* blocks its general counterpart only optionally, and

(*ii*) what is provided for by 3.1.94 *vā' sarūpa...* in the preceding statement (*i*) is not valid in connection with rules contained in the subdomain headed by 3.3.94 *striyāṃ ktin.*

The provision for optional blocking, available for formally dissimilar affixes, and introduced in the general domain of 3.1.91 *dhātoḥ*, is obligatorily denied its particular subdomain of 3.3.94 *stryām ktin*.

2. It should be remembered, in the context of rule 3.3.94, that the tradition notes some exceptions to its provision commonly referred to as *vā' sarūpavidhi*. Consider these three exceptions:

(*a*) *tācchīlikeṣu vā' sarūpavidhir nāsti* 'the process of *'vā' sarūpa'* does not apply to rules relative to affixes generally known as *tacchīlika* (3.2.134 *ākves...*, etc.).

(*b*) *ktalyuṭtumunkhalartheṣu vā' sarūpavidhir nāsthi* 'the process of *'vā' sarūpa'* does not apply to rules relative to affixes *Kta* (1.1.26 *ktaktavatū...*), *LyuṬ* (3.3.113 *kṛtyalyuṭo...*), *tumUN* (3.3.10 *tumunṇvulau...*), as well as those which may have the signification of *KHaL* (3.4.70 *tayor eva...*)'

(*c*) *lādeśeṣu vā' sarūpavidhir nāsti* 'the process of *'vā' sarūpa'* does not apply relative to affixes (3.4.78 *tiptasjhi...*, etc.) which come in place of *LA*'

The implications of these preceding have been explained at appropriate places in the appendix.

3.1.95 कृत्याः

kṛtyāḥ
/*kṛtyāḥ* 1/3/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91)
ṇvultṛcau iti vakṣyati, prāg etasmāṇ ṇvulsaṃśabdanād yān ita ūrdhavam anukramiṣyāmaḥ kṛtyasaṃjñakās te veditavyāḥ
Affixes introduced hereafter are termed *kṛtya*.

EXAMPLE:

Refer to relevant rules subsequently.

1. Note that *Kāśikā* reads the *sūtra* as *kṛtyāḥ prāṅ ṇvulaḥ*. Kaiyaṭa (*Pradīpa* ad *Mbh.* III: 200) informs that the *sūtra* was formulated simply as *kṛtyāḥ*. Haradatta explains that *prāṅ ṇvulaḥ* was further added by the authors of the *Kāśikā*. Obviously, *Kāśikā*'s addition is intended to clearly demarcate the extent (*avadhi*) to which this *adhikāra* carries (*adhikriyate*). The scope of this rule extends up to 3.1.133 *ṇvultṛcau*. But why could the scope not be interpreted as extending up to 3.3.108 *rogākhyāyāṃ ṇvul bahulam*. This could not be accepted as the 'extent' (*avadhi*) since 3.3.169 *arhe kṛtyatṛcaś ca* makes the reference to *tṛC* separately from *kṛtya*. Similarly, a separate

mention of *ṆvuL* without *tṛC* in rule 3.3.108 *rogākhyāyām...* should not be treated as marking the extent of the scope of this rule. In view of this, 3.1.133 *ṇvultṛcau* is accepted as marking the extent. If this is how an extent could be correctly understood, then *prāṇ ṇvulaḥ* need not be stated explicitly with the rule. This is what Haradatta means when he says that the rule is simply formulated as *kṛtyāḥ* by Pāṇini (*PM* ad *Kāśikā* III: 495: '*kṛtyāḥ*' *etad eva paṭhitaṃ sūtrakāreṇa*).

2. *Kāśikā* cites rules 2.1.33 *kṛtyair adhikārthavacane* and 2.3.71 *kṛtyānāṃ karatari vā*, etc., to explain the operational scope of the term *kṛtya* (3.1.91 *kṛd atiṅ*). The first rule illustrates how a *tatpuruṣa* compound can be formed with a constituent termed *kṛtya*. The second illustrates the optional use of *ṣaṣṭhī* to denote the agent in conjunction with an item which ends in affixes termed *kṛtya*.

3.1.96 तव्यत्तव्यानीयरः

tavyattavyānīyaraḥ
/*tavyattavyānīyaraḥ* 1/3/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91)
dhātos tavyat tavya anīyar ity ete pratyayā bhavanti
Affixes *tavya*, *tavyaT* and *anīyaR* occur after verbal roots.

EXAMPLES:

karttavyám 'that which should be done'
karaṇīyám 'that which is to be done'

1. The *T* of *tavyaT* and the *R* of *anīyaR* are given as *it* for the purpose of accent (*svarārtha*). Thus, the *ya* of *tavya* is marked *svarita* in accordance with rule 6.1.179 *tit svaritam*. Rule 6.1.211 *upottamaṃ riti* similarly requires that *anīya* be marked *udātta* in the middle (*madhyodātta*). Note, here, that *tavya* is marked *udātta* initially, in accordance with 3.1.3 *ādyudāttaś ca*.

2. There are two *vārttikas* under this rule. The first states that affix *tavyaT* also occurs to denote *kartṛ* after verbal root *vas* 'to dwell'; additionally, the affix is considered to be marked with *Ṇ*. This latter provision facilitates *vṛddhi* in deriving *vāstavyaḥ* 'the resident of...'. It is suggested that the *vārttika* is unnecessary since 3.3.113 *kṛtyalyuṭo bahulam* provides for this.

The second *vārttika* requires the addition of affix *KelimaR* to this rule. This enables usage such as *bhidelimāni kāṣṭhāni* 'the firewood splits...'. *Kāśikā* further adds that *KelimaR* is also intended in the context of *karmakartṛ* 'object turned agent'. The *Mahābhāṣya* illustrates *KelimaR* only in the context of the straight (*śuddha*) *karman*. It is suggested that this *vārttika* is also not required since 3.3.113 *kṛtyallyuṭo bahulam* could also account for *KelimaR*.

3.1.97 अचो यत्

aco yat
/*acaḥ* 5/1 *yat* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91)
ajantād dhātor yat pratyayo bhavati
Affix *yaT* occurs after a verbal root which ends in *aC* (vowel; cf. *Śs* 1–4).

EXAMPLES:

geyam 'that which is to be sung'
peyam 'that which is to be drunk'
jeyam 'that which is to be won'

1. The *T* as an *it* in affix *yaT* is intended for the initial high-pitch accent (*ādyudātta*) of the derivate by rule 6.1.213 *yato' nāvaḥ*.

What is the purpose of stating 'after roots which end in a vowel'? One can easily understand this from the fact that affix *ṆyaT* is introduced after roots ending in a consonant (3.1.124 *ṛhalor ṇyat*). A simple deduction could account for *yaT* after roots which terminate in a vowel. *Kāśikā* informs that '*acaḥ*' 'after...ending in a vowel' is included so that a root which initially ended in a vowel, but does not do so at a later derivational stage, can also qualify for *yaT*. Thus, consider the derivation of *ditsyam* 'that which is wished to be cut' and *dhitsyam* 'that which is wished to be held' from verbal roots *dā* 'to cut' and *dhā* 'to hold' used with affix *saN*, to yield the forms *dits* and *dhits* after the deletion of the final *-a* by rule 6.4.48 *ato lopaḥ*. If *ṆyaT* were to be introduced, thinking that the root ended in a consonant, rule 6.1.185 *tit svaritam* would order the *svarita* accent. This would result in a wrong derivation. The correct derivation requires the initial high-pitch ruled by 6.1.213 under the condition of *yaT*. This, however, is acceptable only when one thinks that the deletion of the final *-a* took place prior to the introduction of suffix *yaT*. Since the deletion of the final *-a* by 6.4.48 *ato lopaḥ* requires an *ārdhadhātuka* affix to follow, *-a* cannot be deleted prior to the introduction of *yaT*. Thus, to say that *acaḥ* is used for the purpose of accommodating roots which previously ended in *aC*, but which do not now, is not acceptable. What, then, is the purpose of explicitly stating *acaḥ*? None other than: *vispaṣṭārtham* 'for clarity'.

Nyāsa discovers yet another twist to this conclusion. What if one deletes *a* with the assumption that an *ārdhadhātuka* affix will find its scope even when it does not follow at the time of the deletion? In that case, one will have to interpret the locative of *ārdhadhātuke*, which forms the condition of deletion, as *viṣayasaptamī* 'locative of domain'. The introduction of *yaT* will then be accomplished after a root which previously ended in *a* but

did not end at the time of the affixal introduction. But this will still be accepted as partially (*pākṣika*) true. That is, true if one accomplishes the deletion under the assumed scope of an affix termed *ārdhadhātuka*. Not so if the deletion is accomplished under the condition of an *ārdhadhātuka* affix which follows.

2. It has been suggested by a *vārttika* that verbal roots *tak* 'to fly', *śas* 'to leap', *cat* 'to ask', *yat* 'to strive' and *jan* 'to be born' should also be mentioned so that, by the introduction of *yaT*, we can get *takyam*, etc. Note that these roots all end in a consonant, and hence normally, affix *ṆyaT* should be introduced after them. However, their correct derivation must involve *yaT*. This makes the *vārttika* necessary.

Yet another *vārttika* proposes that *yaT* not only be optionally introduced after the verbal root *han* 'to kill', but *han* should also be replaced with *vadha*. This is to account for *vadhyam* 'he who is to be killed' used optionally with *ghātyam*, a derivate of *ṆyaT*.

3.1.98 पोरदुपधात्

por adupadhāt
/poḥ 5/1 *adupadhāt* 5/1/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #91, *yat* #97*)*
pavargāntād dhātor akāropadhād yat pratyayo bhavati
Affix *yaT* occurs after a verbal root which ends in *pU (p, ph, b, bh, m;* cf. 1.1.69 *aṇudit...)* and has an *aT* (1.1.70 *taparas...*) in its *upadhā* 'penultimate position'(1.1.65 *alo' ntyāt pūrva upadhā*).

EXAMPLES:

śapyam 'that which is to be cursed'
labhyam 'that which is to be attained'
japyam 'that which is to be chanted'

1. This rule provides for the introduction of affix *yaT* after a verbal root which ends in *pU* (*p, ph, b, bh, m*) and also has *a* in its penultimate position. The *taparakaraṇa* of *aT* in *adupadhāt* is intended to specify the vowel quality *-a* in consonance with 1.1.70 *taparas tatkālasya*.

Consequently, a root such as *āp* 'to obtain' which ends in *p*, but which has a long *ā* in its penultimate position, does not qualify for the introduction of affix *yaT*. It must therefore take affix *ṆyaT* to derive *āpyam* 'that which is to be obtained'.

2. Note that the formulation of this rule in many ways constitutes an exception to affix *ṆyaT*. Rule 3.1.124 *ṛhalor ṇyat* provides for the introduction of affix *ṆyaT* after verbal roots which terminate in a consonant. The context of the introduction of *ṆyaT* is similar to this context characterized

by *poḥ* 'after that which ends in *p, ph, b, bh, m*. These labial stops, along with their corresponding nasal *m*, are consonants. The condition of *poḥ*, when not satisfied, results in the introduction of affix *ṆyaT* after roots which end in a consonant other than ones denoted by *pU*, and which also have *a* in their *upadhā*. Thus we will get *ṆyaT* derivates such as *pākyam* 'that which is to be cooked' and *vākyam* 'that which is to be spoken; a sentence'. This is why our present rule has the condition of *poḥ*.

The next condition, characterized as *adupadhāt* 'after that which has *a* as next to its last sound', is required to again block affix *ṆyaT*. Consider, thus, the examples *gopyam* 'that which is to be concealed' and *kopyam* 'to be angry about', derived with *ṆyaT* introduced after verbal roots *gup* 'to conceal, preserve' and *kup* 'to be angry', respectively. These examples are assigned *svarita* accent by rule 6.1.185 *tit svaritam*. The *yaT* derivates of our present rule will get the initial high pitch accent by 6.2.213 *yato' nāvaḥ*. Incidentally, *gup* has been glossed by commentators as denoting *gopanakutsana* 'to conceal, censure' and *vyākulīkaraṇa* 'to agitate'. Their membership in varying classes and the assignment of *ātmanepada-parasmai-pada* affixes is not crucial to the context of this rule.

3.1.99 शकिसहोश्च

śakisahoś ca
/*śakisahoḥ* 6/2 *ca* Ø/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91)
'*śakḷ śaktau, ṣaha marṣaṇe,*'
anayor dhātvor yat pratyayo bhavati
Affix *yaT* also occurs after verbal roots *śakḶ* 'to be strong, capable' and *ṣahA* 'to endure, forgive'.

EXAMPLES:

śakyam 'possible to do'
sahyam 'endurable'

3.1.100 गदमदचरयमश्चानुपसर्गे

gadamadacarayamaś cānupasarge
/*gadamadacarayamaḥ* 5/1 *ca* Ø *anupasarge* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *yat* #97)
'*gada vyaktāyāṃ vāci, madī harṣe, cara gatibhakṣaṇayoḥ, yama uparame*'
ity etebhyaś cānupasargebhyo yat pratyayo bhavati
Affix *yaT* also occurs after verbal roots *gadA* 'to speak', *madA* 'to rejoice, be drunk', *carA* 'to move, eat' and *yamA* 'to sustain, hold, control' when no *upasarga* 'preverb' is used.

EXAMPLES:

gadyam 'that which is worth speaking'
madyam 'that which is worth being happy about'
caryam 'that which is worth eating'
yamyam 'that which is controllable'

1. This rule forms an exception to *ṆyaT* of 3.1.124 *ṛhalor ṇyat*. Note that verbal root *yam* is included in this rule to restrict it from receiving *yaT*, though only when used without a preverb. Affix *yaT* is already available to *yam*, when used with a preverb, from rule 3.1.98 *por adupadhāt.*

2. Note that *anupasarge* which ends in the locative (*saptamī*) is interpreted here as *anupasargebhyaḥ* 'after those... which do not have any preverb present' (*avidyamānopasargebhyaḥ*). This interpretation clearly construes the locative (*saptamī*) of *anupasarge* as an ablative (*pañcamī*). How could the *saptamī* be interpreted as *pañcamī*? By transposing *saptamī* with *pañcamī* in consonance with the context.

Why can the *saptamī* of *anupasarge* not be interpreted as characterizing an *upapada* in view of rule 3.1.92 *tatropapadam*...? This, as well as the *paryudāsa* and *prasajya* interpretation of *naÑ* 'negative' with possible consequences, has been discussed in the commentaries which I omit here for lack of interest.

3.1.101 अवद्यपण्यवर्या गर्ह्यपणितव्यानिरोधेषु

avadyapaṇyavaryā garhyapaṇitavyānirodheṣu
/*avadyapaṇyavaryā* 1/1 *garhyapaṇitavyānirodheṣu* 1/3/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *yat* #97)
'avadya, paṇya, varyā' ity ete śabdā nipātyante, 'garhya, paṇitavya, anirodha' ity eteṣv artheṣu yathāsaṃkhyam
Affix *yaT* occurs in the derivation of *avadya, paṇya* and *varyā* when they denote *garhya* 'fit for censure', *paṇitavaya* 'fit to be purchased' and *anirodha* 'to be unrestrained' respectively.

EXAMPLES:

avadyam pāpam 'a sin fit to be censured'
paṇyaḥ kambalaḥ 'a blanket fit to be purchased'
paṇyā gauḥ 'a cow fit to be purchased'
śatena varyā kanyā 'a girl worthy to be aspired by hundreds of suitors'

1. This rule offers, by *nipātana*, three derivates *avadya, paṇya* and *varyā* used with *yaT* to denote *garhya, paṇya* and *anirodha* respectively. The final word is derived in the feminine from verbal root *vṛÑ* 'to choose'. In a sense, other than *anirodha*, affix *KyaP* is to be chosen for *vṛÑ*

(3.1.109 *etistuśās...*). *KyaP* is available after *vad* by rule 3.1.106 *vadaḥ supi kyap*. Verbal root *paṇ* is qualified for *ṆyaT* by 3.1.124 *ṛhalor ṇyat*. Our present rule provides for *yaT*.

3.1.102 **वह्यं करणम्**

vahyam karaṇam
/*vahyam* 1/1 *karaṇam* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *yat* #97)
vaher dhātoḥ karaṇe yat nipātyate
Affix *yaT* occurs after verbal root *vahA* 'to carry' to derive *vahya* by *nipātana* when *karaṇa* 'means, instrument' (1.4.42 *sādhakatamam...*) is denoted.

EXAMPLE:

vahyaṃ śakaṭam 'a cart by means of which things are carried'

1. Note that *kṛtya* affixes are introduced to denote *bhāva* and *karman* only (3.4.70 *tayor eva kṛtyaktakhalarthāḥ*). This rule provides for *yaT* by *nipātana* with an additional requirement that the derivate denote *karaṇa* 'instrument' (1.4.42 *sādhaka...*).

3.1.103 **अर्यः स्वामिवैश्ययोः**

aryaḥ svāmivaiśyayoḥ
/*aryaḥ* 1/1 *svāmivaiśyayoḥ* 7/2/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *yat* #97)
ṛ gatau asmān ṇyati prāpte svāmivaiśyayor abhidheyayor yat pratyayo nipātyate
Affix *yaT* occurs after verbal root *ṛ* 'to go' to derive *arya* by *nipātana* when the derivate denotes *svāmin* 'lord, master' or *vaiśya* 'trader; person of the Vaiśya caste'.

EXAMPLES:

aryaḥ svāmī 'a respectable master'
aryo vaiśyaḥ 'a respectable Vaiśya'

1. This rule, again, provides for *yaT*, rather than *ṆyaT*, by way of *nipātana*, to derive *aryaḥ* with the denotata of *svāmī* and *vaiśya* . The word *aryaḥ* of this rule is treated as two for purposes of accent. The one, derived with the denotatum of *vaiśya*, should be marked high-pitched initially. We know this from the *Phiṭsūtra* (17) *aryasya svāmyākhyāyām* especially at the strength of the word *ākhyā* 'denotation'. The *arya* with the denotation of 'master' will be marked high-pitched finally (*antodātta*).

3.1.104 उपसर्या काल्या प्रजने

upasaryā kālyā prajane
/*upasaryā* 1/1 *kālyā* 1/1 *prajane* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *yat* #97)
'*upasaryā' ity nipātyate kālyā cet prajane bhavati*
Affix *yaT* occurs after verbal root *upasṛ* 'to approach' to derive *upasaryā* by *nipātana* when *kālyā prajane* 'she who has approached the time fit for first breeding' is denoted.

EXAMPLES:

upasaryā gauḥ 'a cow which has approached the time fit for its first breeding'
upasaryā vaḍavā 'a mare which has approached the time fit for its first breeding'

1. This rule provides for the ad hoc derivation of *upasaryā*, obviously a feminine, with the introduction of affix *yaT* after verbal root *sṛ* used with the preverb *upa*. The word *kālyā* means 'she who has approached the time for...'. The word *prajana* is used in the sense of 'first impregnation' (*prathmagarbhagrahaṇam*).

3.1.105 अजर्यं सङ्गतम्

ajaryaṃ saṃgatam
/*ajaryam* 1/1 *saṃgatam* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *yat* #97)
'*ajaryam' ity nipātyate saṃgataṃ ced bhavati*
Affix *yaT* occurs by *nipātana* after verbal root *jṛṣA* 'to waste away, decay' used with *naÑ* 'not' to derive *ajarya* 'imperishable' when *saṃgata* 'friendship' is denoted.

EXAMPLE:

ajaryaṃ no' stu saṃgatam 'may our friendship remain imperishable'.

1. This rule provides for the ad hoc derivation of *ajarya* with *yaT* in the sense of *saṃgamana* 'companionship'. Affix *yaT* is here used with the denotation of an agent by *nipātana*. Of course, being a *kṛtya*, it can only denote *bhāva* or *karman*. Because it denotes *kartṛ*, *yaT* forms an exception to *tṛC*. A parallel *tṛC* derivate would be *ajaritā* as in *ajaritā kambalaḥ* 'a fairly new blanket.'

3.1.106 वदः सुपि क्यप् च

vadaḥ supi kyap ca
/*vadaḥ* 5/1 *supi* 7/1 *kyap* 1/1 *ca* Ø/

(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *yat* #97, *anupasarge* #100)

vader dhātoḥ subante upapade anupasarge kyap pratyayo bhavati cakārād yac ca

Affix *KyaP* occurs after verbal root *vadA* 'to speak' used without a preverb when a *pada* (1.1.14 *suptiṅantaṃ padam*) which ends in *sUP* (4.1.2 *svaujasmauṭ...*) occurs in conjunction.

EXAMPLES:

brahmodyam 'a discussion about the Brahman (creator); the recitation of the Vedas'
brahmavadyam 'id.'
satyodyam 'the speaking of truth'

1. Note that *vad* is interpreted, here, as used without a preverb because *anupasarge* is carried. The word *supi*, since it ends in the locative (*saptamī*) dictates, the cooccurrrence condition of a word ending in *sUP* (3.1.92 *tatropapadaṃ saptamīstham*; also see 1.1.72 *yena vidhis tadantasya*). The *ca* is used to optionally provide for affix *yaT*. We will thus get two forms: one with *KyaP* and the other with *yaT*.

3.1.107 भुवो भावे

bhuvao bhāve

/*bhuvaḥ* 5/1 *bhavē* 7/1/

(*pratyayaḥ* # 1, *paraś ca* # 2, *dhātoḥ* # 91, *anupasarge* # 100, *supi*, *kyap* # 106)

bhavater bhāve kyap pratyayo bhavati

Affix *KyaP* occurs to denote *bhāva* 'root-sence' after verbal root *bhū* 'to be, become' used without a preverb when a *pada* which ends in *sUP* occurs in conjunction.

EXAMPLES:

brahmabhūyaṃ gataḥ 'became one with the Brahman (creator); passed away'
brahmatvaṃ gataḥ 'id.'
devabhūyaṃ gataḥ 'became one with the gods; passed away'
devatvaṃ gataḥ 'id.'

1. This rule provides for *KyaP* to denote *bhāva* 'root-sense' after verbal root *bhū* under the conditions of both *anupasarge* and *supi*. Of course, *yaT* is not carried here.

2. *Kāśikā* states that the word *bhāve* is used here for *anuvṛtti* in the subsequent (*uttarārtha*) rule. As for as this rule is concerned, *KyaP* cannot denote anything other than *bhāva*. Consequently, *bhāve* should not be

stated in the rule. How do we know that *KyaP* in this rule cannot denote anything other than *bhāva*. From the fact that *kṛtya* affixes denote *bhāva* and *karman* (3.4.70 *tayor eva...*); and in case of *bhū*, an intransitive (*akarmaka*) wihtout the use of any preverb (*upasarga*), the question of the denotation of *karman* does not arise.

3.1.108 हनस्त च

hanas ta ca
/hanaḥ 5/1 *ta* (*deleted nominative*) *ca*Ø/
(*pratyayaḥ* #1, *paraś ca* # 2, *dhātoḥ* #91, *anupasarge* #100, *supi kyap*#106, *bhāve* #107)
hanter dhātoḥ subanta upapade' nupasarge bhāve kyap pratyayo bhavati takāraś cāntādeśaḥ
Affix *KyaP* occurs to denote *bhāva* after verbal root *han* 'to kill' used without a preverb, when a *pada* which ends in *sUP* occurs in conjunction; additionally, *t* comes in place of the root final *n*.

EXAMPLES:

brahmahatyā 'the killing of a *brāhmaṇa*'
aśvahatyā 'the killing of a horse'

1. This rule carries *anupasarge*, *supi* and *bhāve*, and introduces affix *KyaP*. Additionally, the rule orders -*t* as a replacement for the final -*n* of *han* (cf. 1.1.52 *alo' ntyasya*).

3.1.109 एतिस्तुशास्वृदृजुषः क्यप्

etistuśāsvṛdṛjuṣaḥ kyap
/etistuśāsvṛdṛjuṣaḥ 5/1 *kyap* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *kyap* #106)
eti, stu, śās, vṛ, dṛ, juṣ ity etebhyaḥ kyap pratyayo bhavati
Affix *KyaP* occurs after verbal roots *iṆ* 'to go', *ṣṭu* 'to praise, *śās* 'to instruct', *vṛÑ* 'to choose', *dṛṄ* 'to honor' and *juṣĪ* 'to enjoy'.

EXAMPLES:

ityaḥ 'that which is to be gone to'
stutyaḥ 'he who is to be praised'
śiṣyaḥ 'he who is to be instructed; a student'
vṛtyaḥ 'that which is to be selected'
ādṛtyaḥ 'he who is to be honored'
juṣyaḥ 'that which is to be enjoyed'

1. Note that *anupasarge*, *supi* and *bhāve* are not carried here. For, *KyaP* is here introduced after a root in general (*sāmānya*).

A question is raised as to why *KyaP* is to be stated in the rule when it is already available from *anuvṛtti*. Commentators explain that *KyaP* is stated here to serve a restrictive purpose (*niyamārtha*). It does not allow this rule to be blocked by any other rule of this section in the context of the enumerated verbs. Thus, *KyaP* is cited to block a rule which might otherwise block the application of this rule (*bādhakabādhana*). For example, it blocks the *ṆyaT* of 3.1.125 *or āvaśyake* in the derivation of *avaśyastutyaḥ* 'he who is definitely to be praised'.

Note that *vṛ* in this rule refers to verbal root *vṛÑ* 'to choose' and not to *vṛṄ* 'to praise, serve'. Similarly, *eti* refers to verbal root *iṆ* 'to go', and not *iṄ* 'to study' which normally occurs with the preverb *adhi*.

2. A *vārttika* proposes the optional introduction of *KyaP* after verbal roots *śaṃs*, *duh* and *guh* to derive *śaṃsyam*, *dohyam* and *gohyam* parallel to *śasyam* 'that which to be praised', *duhyam* 'that which is to be milked' and *guhyam* 'that which is to be hidden'. The glossed examples are derived with *yaT*.

Yet another *vārttika* mentions that *KyaP* should be introduced after verbal root *añj* 'to anoint' used with the preverb *āṄ* when the denotation is a name (*saṃjñā*). This should account for *ājyam* 'clarified butter'.

3.1.110 ऋदुपधाच्चाक्लृपिचृतेः

ṛdupadhāc cākḷpicṛteḥ
/*ṛdupadhāt* 5/1 *ca* Ø *akḷpicṛteḥ* 5/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *kyap* #106)
ṛkāropadhāc ca dhātoḥ kyap pratyayo bhavati kḷpicṛtī varjayitvā
Affix *KyaP* also occurs after a verbal root which, with the exception of *kḷpĪ* 'to be able to' and *cṛtI* 'to hurt', has *ṛ* in its *upadhā* (1.1.65 *alo' ntyātpūrva...*).

EXAMPLES:

vartyam 'that which is to be observed'
vṛddhyam 'that which is to be grown'

1. Note that *taparakaraṇa* (1.1.70 *taparas tatkālasya*) in *ṛT* is intended so that only the short *-ṛ* is specified for the penultimate position of a root. Thus, it excludes *kṝtA* 'to chant' which derives *kīrtyam* 'that which is to be chanted'.

2. A *vārttika* proposes for verbal root *sṛj* 'to create' to receive *ṆyaT* when the same is used in conjunction with a word which contains *pāṇi* 'hand'. This dervies *pāṇisargyā* of *pāṇisargyā rajjuḥ* 'a rope to be made by twisting with the hands'. *ṆyaT* is also provided after *sṛj* used with the preverbs *sam* and *ava* to derive *samavasargyā* 'that (feminine) who is to be abandoned'.

3.1.111 ई च खनः

ī ca khanaḥ
/ī 1/1 Ø *khanaḥ* 5/1/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, kyap #106)
khaner dhātoḥ kyap pratyayo bhavatīkāraś cāntādeśaḥ
Affix *KyaP* occurs after verbal root *khanU* 'to dig'; in addition, the root-final *n* is replaced by *ī*.

EXAMPLES:

kheyam 'that which is to be dug'

1. Commentators debate whether the long *ī* as a replacement is justified. For, to derive *kheyam*, one must apply rule 6.1.87 *ād guṇaḥ* which, given the string *kha* + *ī* + *KyaP*, orders a single *guṇa* replacement *e* in place of both *a* + *ī*. This *guṇa* replacement is applicable even when the -*n* of the root is replaced with a short -*i*. This leads us to question why Pāṇini should order a long replacement when a short is easier to pronounce (*supaṭha*), and which does not create any problem in derivation.

It is stated that the long replacement is specified in the composite (*praśliṣṭa*) form of *ī* which results out of a sequence of *i* + *i* subsequent to the application of 6.1.101 *akaḥ savarṇe dīrghaḥ*. The first -*i* is intended as a replacement for the -*n*, whereas the second is required to block a rule which otherwise may block the provision of this rule (*bādhakabādhanārtha*). What is blocked here is rule 6.4.41 *ye vibhāṣā* which may order long -*ā* to replace the final sound segment of the root. I omit any further details for reasons of the complexity of arguments.

3.1.112 भृञोऽसंज्ञायाम्

bhṛño' saṃjñāyām
/bhṛñaḥ 5/1 *asaṃjñāyām* 7/1/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, kyap #106)
bhṛñor dhātor asaṃjñāyām viṣaye kyap pratyayo bhavati
Affix *KyaP* occurs after verbal root *bhṛÑ* 'to provide for' when *saṃjñā* 'name' is not denoted.

EXAMPLE:

bhṛtyāḥ karmakarāḥ 'the servants who are to be provided for'

1. This rule provides for the derivation of *bhṛtyāḥ* 'those who are to be provided for; servants' under the condition of *asaṃjñā* 'no name'. If one wishes to derive, for example *bhārya*, the name of a *kṣatriya*, one must introduce affix *ṆyaT*.

2. A *vārttika* makes the *KyaP* optional, however, when the root is used with the preverb *sam*. This yields dual forms: *saṃbhṛtyaḥ/saṃbhāryaḥ*

where the condition of *asaṃjñā* still persists. Haradatta (*PM* ad *Kāśikā* III: 508) states that the optional provision of the *vārttika* is *prāptavibhāṣā*. That is, *KyaP* was formerly obligatory. The *vārttika* now provides for it optionally.

3.1.113 मृजेर्विभाषा

mṛjer vibhāṣā
/*mṛjeḥ* 5/1 *vibhāṣā* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *kyap* #106)
mṛjer dhātoḥ kyap pratyayo bhavati
Affix *KyaP* occurs optionally after verbal root *mṛjŪ* 'to wipe, cleanse'.

EXAMPLES:

parimṛjyaḥ 'that which is to be cleansed'
parimārgyaḥ 'id.'

1. The optional provision of this rule is recognized as *prāptavibhāṣā*. For, this rule makes the obligatory provision of 3.1.110 *ṛdupadhāc...* optional. Note that *mṛj* had the obligatory *KyaP* available to it on account of its penultimate *ṛ*. The option parallel to *KyaP* will entail *ṆyaT*.

3.1.114 राजसूयसूर्यमृषोद्यरुच्यकुप्यकृष्टपच्याव्यथ्याः

rājasūyasūryamṛṣodyarucyakupyakṛṣṭapacyāvyathyāḥ
/*rājasūya...vyathyāḥ* 1/3/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *kyap* #106)
rājasūya, sūrya, mṛṣodya, rucya, kupya, kṛṣṭapacya, avyathya ity ete śabdāḥ kyapi nipātyante
Affix *KyaP* occurs in the derivation of *rājasūya, sūrya, mṛṣodya, rucya, kupya, kṛṣṭapacya,* and *avyathya* via *nipātana*.

EXAMPLES:

rājasūyaḥ 'a great ritual sacrifice performed at the time of the coronation of a king.'
sūryaḥ 'sun'
mṛṣodyam 'untruth'
rucyam 'that which is pleasing'
kupyam 'that which is to be hidden'
kṛṣṭapacyāḥ 'vegetation which dries up easily after the field has been plowed'
avyathyaḥ 'he who does not become anguished'

1. This rule presents seven derivates of *KyaP* by *nipatāna*. They not only involve *KyaP* by *nipātana* but also entail diverse operations which

would otherwise not obtain. Thus, in deriving *rājasūya*, *nipātana* also provides for the lack of *tUK* and the lengthening (*dīrgha*) of the *u* of the root. Similarly, *kupyam* entails the introduction of *KyaP* in the context of a name (*saṃjñā*) along with devoicing (*aghoṣatva*) of the root-initial *g*. This derivate, thus, underlies the verbal root *gup*. As the glosses of the above derivates suggest, they are diversely derived to denote *saṃjñā* 'name'; *asaṃjñā* 'non-name', *kartṛ* 'agent', and *karman* 'object'.

3.1.115 भिद्योद्ध्यौ नदे

bhidyoddhyau nade
/*bhidyoddhyau* 1/2 *nade* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *kyap* 106)
bhider ujjheś ca kyab nipātyate nade' bhidheye
Affix *KyaP* occurs by *nipātana* in the derivation of *bhidya* and *uddhya* when *nada* 'river' is denoted as the agent.

EXAMPLES:

bhidyaḥ 'a river which undercuts its banks'
uddhyaḥ 'a river which washes its banks'

1. These two derivates are listed separately from the examples of the preceding rule because of difference in their meaning condition as specified by *nade*.

3.1.116 पुष्यसिद्ध्यौ नक्षत्रे

puṣyasiddhyau nakṣatre
/*puṣyasiddhyau* 7/2 *nakṣatre* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *kyap* #106)
puṣeḥ siddheś cādhikaraṇe kyab nipātyate nakṣatre' bhidheye
Affix *KyaP* occurs after verbal roots *puṣA* 'to thrive' and *sidhU* 'to succeed', to derive *puṣya* and *siddhya* by *nipātana*, when the derivates denote *nakṣatra* 'constellation'.

EXAMPLES:

puṣya 'name of the eighth constellation'
siddhya 'id.'

1. This rule offers two ad hoc derivates of *KyaP* under the meaning condition of *nakṣatra* . In this context *KyaP* denotes the locus (*adhikaraṇa*) of moon (*candra*).

3.1.117 विपूयविनीयजित्या मुञ्जकल्कहलिषु

vipūyavinīyajityā muñjakalkahaliṣu
/*vipūyavinīyajityāḥ* 1/3 *muñjakalkahaliṣu* 7/3/

(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, kyap #106)
vipūya, vinīya, jitya ity ete śabdā nipātyante yathāsaṃkhyaṃ muñja, kalka, hali ity eteṣv artheṣu bodhyeṣu
Affix *KyaP* occurs after a verbal root to derive *vipūya, vinīya* and *jitya* by *nipātana* when *muñja* 'reed', *kalka* 'sediment' and *hala* 'plow' are denoted respectively.

EXAMPLES:

vipūyo muñjaḥ '*muñja*, a particular reed, which is to be processed for making...'
vinīyaḥ kalkaḥ 'medicinal sediment to be removed'
jityo haliḥ 'a big board used for levelling the field after plowing'

1. This rule offers three ad hoc derivates *vipūya, vinīya* and *jitya* with their corresponding denotation of *muñja, kalka* and *hala.* Note that the underlying roots, because they end in a vowel, qualify to receive *yaT* by 3.1.97 *aco yat.* The *yaT* derivates, which denote something outside the meaning condition of this rule, will be: *vipavya* 'that which is to be thoroughly cleaned', *vineya* 'that which is to be removed' and *jeya* 'that which is to be won'.

3.1.118 प्रत्यपिभ्यां ग्रहेश्छन्दसि

pratyapibhyāṃ graheḥś chandasi
/*pratyapibhyām* 5/2 *graheḥ* 5/1 *chandasi* 7/1/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, kyap #106)
'praty api' ity evam pūrvād graheḥ kyap pratyayo bhavati chandasi viṣaye
Affix *KyaP* occurs in the Vedic after verbal root *grahI* 'to hold, seize, accept' when the root is used with the preverbs *prati* and *api.*

EXAMPLES:

mattasya na pratigṛhyam '(a gift) not to be accepted from an arrogant person'
tasmān nāpigṛhyam '(a gift) thus not to be accepted...'

1. This rule accounts for Vedic usages *pratigṛhyam* and *apigṛhyam* parallel to classical usages *pratigrāhyam* and *apigrāhyam.* The Vedic derivates involve *samprasāraṇa* (6.1.16 *grahijyāvayi...*). The compound-formation between *api, prati,* and *grāhyam* is in accordance with rule 2.2.18 *kugatiprādayaḥ.*

3.1.119 पदास्वैरिबाह्यापक्ष्येषु च

padāsvairibāhyāpakṣyeṣu ca
/*padāsvairibāhyāpakṣyeṣu* 7/3 *ca* Ø/

(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, kyap #106)
pade' svairiṇi bāhyāyāṃ pakṣe cārthe graher dhātoḥ kyap pratyayo bhavati
Affix *KyaP* also occurs after verbal root *grahI* when the derivates denote *pada* 'word', *asvairī* 'not independent', *bāhyā* 'gone outside' and *pakṣya* 'partisan'.

EXAMPLES:

pragṛhyaṃ padam 'a *pada* termed *pragṛhya*' (1.1.11 *īdūded...*)
avagṛhyaṃ padam 'a *pada* with the contracted *a* (*avagraha*)'
gṛhyakā ime 'these are not independent'
grāmagṛhyā senā 'an army on the outside of the village'
nagaragṛhyā senā 'an army on the outside of the city'
vāsudevagṛhyāḥ 'those who are on Vāsudeva's side'

1. This rule provides for *KyaP* after verbal root *grahI* when the derivates denote *pada*, *asvairī*, *bāhyā* and *pakṣya*. Note that *bāhyā* is given in the feminine. It does not, however, mean, by extension, that *bāhyaḥ* or *bāhyam* (masculine, neuter) are not permitted.

3.1.120 **विभाषा कृवृषोः**

vibhāṣā kṛvṛṣoḥ
/*vibhāṣā* 1/1 *kṛvṛṣoḥ* 6/2/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, kyap # 106)
kṛño vṛṣeś ca vibhāṣā kyap pratyayo bhavati
Affix *KyaP* optionally occurs after verbal roots *ḌUkṛÑ* 'to do, make' and *vṛṣU* 'to rain'.

EXAMPLES:

kṛtyam 'that which is to be done'
kāryam 'id.'
vṛṣyam 'that which is to be showered upon'
varṣyam 'id.'

1. This rule makes the optional provision for *KyaP* after verbal roots *kṛ* and *vṛṣ*. Note that *kṛ* would have qualified for affix *ṆyaT* of 3.1.124 *ṛhalor ṇyat*. Affix *KyaP* could have been obligatorily available to *vṛs* on account of its penultimate *ṛ*. This rule makes both of these provisions optional to *KyaP*.

3.1.121 **युग्यं च पत्रे**

yugyaṃ ca patre
/*yugyam* 1/1 *ca* Ø *patre* 7/1/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, kyap #106)
yugyam iti nipātyate patraṃ ced bhavati

Affix *KyaP* occurs after verbal root *yuj* to derive *yugyam* by *nipātana* when the derivate denotes *patra* 'cart, conveyance'.

EXAMPLES:

yugyo gauḥ 'that to which a bull is yoked; a cart'
yugyo' śvaḥ 'that to which a horse is yoked; a cart'

1. This rule offers the *KyaP* derivate *yugya* in the sense of conveyance (*vāhana*) by *nipātana*. The *j* of *yuj* is changed to *g* also by *nipātana*.

3.1.122 **अमावस्यदन्यतरस्याम्**

amāvasyad anyatarasyām
/*amāvasyat* 1/1 *anyatarasyām* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91)
amāśabdaḥ sahārthe varttate, tasminn upapade vaser dhātoḥ kāle' dhikaraṇe ṇyat pratyayo bhavati, tatra anyatarasyāṃ vṛddhyabhāvo nipātyate
Affix *ṆyaT* optionally occurs after verbal root *vas* to derive *amāvasyā* by *nipātana*.

EXAMPLES:

amāvasyā 'the time when sun and moon are in conjunction'
amāvāsyā 'id.'

1. This rule offers *amāvasyā* as an option to *amāvāsyā* via the ad hoc provision of *nipātana*. The word *amāvasyā* brings *amāvāsyā* as the focus of *anyatarasyām* on the basis of the *Paribhāṣā* (38) *ekadeśavikṛtam ananyavat* 'that which is modified in part does not become a different whole'. A reference to *amāvāsyā* should also bring *amāvasyā* close to that context accordingly.

3.1.123 **छन्दसि निष्टर्क्यदेवहूयप्रणीयोन्नीयोच्छिष्यमर्यस्तर्याध्वर्यखन्यखान्यदेवयज्यापृच्छ्यप्रतिषीव्यब्रह्मवाद्यभाव्यस्ताव्योपचाय्यपृडानि**

chandasi niṣṭarkyadevahūyapraṇīyonnīyocchiṣyamaryastaryādhvaryakhanyakhānyadevayajyāpṛcchyapratiṣīvyabrahmavādyabhāvyastāvyopacāyyapṛḍāni
/*chandasi* 7/1 *niṣṭarkya...pṛḍāni* 1/3/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91)
niṣṭarkyādayaḥ śabdāś chandasi viṣaye nipātyante
Forms such as *niṣṭarkya*, etc., are derived in the Vedic by *nipātana*.

EXAMPLES:

niṣṭarkyaṃ cinvīta paśukāmaḥ 'one who wishes for the wealth of animals should arrange the (ritual) fire on *viṣṭavarya* bricks'
devahūyaḥ 'invocation to gods'

praṇīyaḥ 'fit to be carried'
unnīyaḥ 'fit to be carried up high'
ucchiṣyáḥ 'fit to be abandoned'
maryaḥ 'fit to die'
staryā 'fit to be spread'
dhvaryaḥ 'fit to be bent'
khanyaḥ 'fit to be dug'
khānyaḥ 'id.'
dévayajyā 'ritual sacrifice fit for the gods'
āpṛcchyáḥ 'fit to be asked'
pratisīvyaḥ 'fit to be sewn'
brahmavádyaḥ 'a discussion about Brahman'
bhāvyaḥ 'fit to exist'
stavyaḥ 'fit to be praised'
upacāyyapṛḍam 'gold fit to be collected'

1. This rule offers a series of ad hoc derivations with affixes *KyaP*, *ṆyaT*, and *yaT*. Obviously, regular rules would otherwise have made these derivations impossible. For example, in case of *niṣṭarkya*, the root *kṛt*, used with *nis*, would have qualified for *ṆyaT*. This rule allows for *KyaP*. There is also the transposition (*viparyaya*) of the root-final *t* with its initial *k* again by *nipātana*. This same *nipātana* is also responsible for the *s* of *nis* to change to *ṣ*. Similarly, affix *ṆyaT*, as well as a replacement in *āy* (*āyādeśa*), will also be made available to *upacāyya*, again by *nipātana*. The following verse sums it up:

> *niṣṭarkye vyatyayaṃ vidyān nisaḥ ṣatvaṃ nipātanāt/*
> *ṇyadāyādeśa ity etāv upacāyye nipātitau//*

Similar *nipātana* provisions are made in connection with other derivates. The following verse specifies individual derivates with affixes and verbal roots:

> *ṇyad ekasmāc caturbhyaḥ kyap caturbhyaś ca yato vidhiḥ/*
> *ṇyad ekasmād yaśabdaś ca dvau kyapau ṇyad vidhiś catuḥ//*
> 'affix *ṆyaT* occurs after one verbal root (*niṣṭarkya*); *KyaP* and *yaT* after four each (*devahūya* through *khanya* respectively); and *ṆyaT* and *ya* in one each (*khānya* and *devayajyā*); *KyaP* twice (in *āpṛcchya*, *pratiṣīvya*); and *ṆyaT* again four times (in *brahmavādya*, etc.)'

3.1.124 ऋहलोर्ण्यत्

ṛhalor ṇyat
/*ṛhaloḥ* 6/1 *ṇyat* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91)
ṛvarṇāntād dhātor halantāc ca ṇyat pratyayo bhavati

Affix *NyaT* occurs after a verbal root which ends in *ṛ* or in a consonant.

EXAMPLES:

kāryam 'that which is to be done'
hāryam 'that which is to be carried'
dhāryam 'that which is to be held'
vākyam 'that which is to be said'
pākyam 'that which is to be cooked'

1. Note that the *ṣaṣṭhī* of *ṛhaloḥ* is used in the sense of *pañcamī* which is required to mark the left context for introduction of the affix.

3.1.125 ओरावश्यके

or āvaśyake
loḥ 5/1 *āvaśyake* 7/1/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #91, *ṇyat* #124)
uvarṇāntād dhātor ṇyat pratyayo bhavaty āvaśyake dyotye
Affix *NyaT* occurs after a verbal root which ends in *u* when *āvaśyaka* 'necessary, urgent' is denoted.

EXAMPLES:

lāvyam 'that which is to be cut'
pāvyam 'that which is to cleansed'

1. Note that *oḥ* refers to roots ending in *u* (1.1.72 *yena vidhis tadantasya*). The *NyaT* of this rule becomes an exception to the *yaT* of 3.1.97 *aco yat*. See further details in the appendix.

3.1.126 आसुयुवपिरपिलपित्रपिचमश्च

āsuyuvapirapilapitrapicamaś ca
/*āsuyu...camaḥ* 5/1 *ca* Ø/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #91, *ṇyat* #124)
āṅpūrvāt sunoteḥ yu, vapi, rapi, lapi, trapi, cam ity etebhyaś ca ṇyat pratyayo bhavati
Affix *NyaT* also occurs after verbal roots *ṣūÑ* 'to press out', used with the preverb *āṄ*, *yu* 'to mix', *ḌUvapA* 'to sow', *rapA* and *lapA* 'to speak', *trapŪṢ* 'to be ashamed' and *camU* 'to sip'.

EXAMPLES:

āsāvyam 'fit to be fermented'
yāvyam 'fit to be mixed'
vāpyam fit to be sown'

rāpyam 'fit to be spoken'
lāpyam 'id.'
trāpyam 'fit to be ashamed about'
ācāmyam 'fit to be sipped or consumed'

1. The derivates covered by this rule constitute exceptions to rules 3.1.97 *aco yat* and 3.1.98 *por adupadhāt*. Verbal root *ṣūÑ* is intended to be used with the preverb *āṄ*. The *yu* 'to mix' should not be confused with *yuÑ* 'to tie'. A reference to *yuÑ* will be blocked because '*yu*' is given without any *it*. The *ca* is used to account for what may have been left out (*anukta-samuccayārtha*). A case in point is: *dābhyam* 'that which is to be cleansed' derived from *dabhI*.

3.1.127 आनाय्योऽनित्ये

ānāyyo' nitye
/*ānāyyaḥ* 1/1 *anitye* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *ṇyat* #124)
ānāyyaḥ iti nipātyate nitye' bhidheye
Affix *ṆyaT* occurs to derive *ānāyyaḥ* by *nipātana* when the derivate denotes *anitya* 'impermanence, non-eternal'.

EXAMPLES:

ānāyyo dakṣiṇāgniḥ 'the *dakṣiṇāgni*, one of the three ritual fires, is called *ānāyyaḥ*'

1. The word *ānāyya* is derived by *nipātana* with *ṆyaT* introduced after verbal root *ṇīÑ* 'to lead' used with the preverb *āṄ*. The word itself denotes *dakṣiṇāgni* 'the southern fire', though it is not the real *dakṣiṇāgni*. Instead, it is the fire which is brought from the *gārhapatya* fire to ritually ignite the *dakṣiṇāgni* fire. The *dakṣiṇāgni* is called *anitya* 'impermanent' since its source or place is not definite. Besides, it is not kept burning all the time.

Note that when the fire is brought from a source other than the *gārhapatya*, the derivate will be *āneya*. The *dakṣiṇāgni* can also be ignited by bringing the fire from the house of a *vaiśya*, or *bhrāṣṭra* 'commercial place where grains are roasted'.

2. The replacement in *āya* for *ai* of *n(ī→ai)* + *ya* is made possible by *nipātana*.

3.1.128 प्रणाय्योऽसम्मतौ

praṇāyyo' sammatau
/*praṇāyyaḥ* 1/1 *asammatau* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *ṇyat* #124)
praṇāyyaḥ iti nipātyate' sammatāv abhidheye

Affix *ṆyaT* occurs to derive *praṇāyya* by *nipātana* when *asammati* 'disapproval' is denoted.

EXAMPLES:

praṇāyyaḥ 'thief'

1. This rule provides for the ad hoc derivation of *praṇāyya* from *praṇīÑ* when the meaning is *asammati*. Thus we get: *praṇāyya* of *praṇāyyaś chauraḥ* 'the thief; the one who is to be censured'. The regular form parallel to this *nipātana* will be *praṇeya* 'tractable' derived with *ya*.

2. The word *praṇāyya* is also used in the sense of 'disciple, initiate' (*antevāsī*) where the usage is conditioned by the semantic condition of lack of desire for results. Thus, we get the following in the *Kāśikā*:

> *jyeṣṭhāya putrāya pitā brahma prabrūyyāntevāsine, nānyasmai kasmaicaneti* 'the father should initiate the oldest son, the one who is closeby, the disciple, with the single syllable mantra *oṃ* which symbolizes *brahman* 'the supreme being' and not to just anybody'

The word *sammati*, in this preceding context, means *abhilāṣā* 'desire' (*niṣkāmatayā*), in the absence of which (*tadabhāvena*), with lack of desire serving as means, one becomes *antevāsī*. It is therefore proper (*yujyate*) to offer initiation to that closeby initiate (*tasmai praṇāyyāyāntevāsine*) who, with no desire for results (*niṣkāmāya*), strives to obtain *mokṣa* 'release' (*mokṣārthaṃ yatamānāya*).

3.1.129 पाय्यसान्नाय्यनिकाय्यधाय्या मानहविर्निवाससामिधेनीषु

pāyyasānnāyyanikāyyadhāyyā mānahavirnivāsasāmidhenīṣu
/*pāyya...dhāyya* 1/3 *māna...sāmidhenīṣu* 7/3/
(*prayayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *ṇyat* #124)
pāyyādayaḥ śabdā nipātyante yathāsaṃkhyaṃ māne, haviṣi, nivāse, sāmidhenyāṃ cābhidheyāyām
Affix *ṆyaT* occurs to derive *pāyya, sānnāya, nikāyya* and *dhyyā* by *nipātana* when the derivatives denote *māna* 'standard measure', *havi* 'ritual oblation of food', *nivāsa* 'place of residence' and *sāmidhenī* 'a particular hymn' respectively.

EXAMPLES:

pāyyam 'any standard measure of weight'
sānnāyam 'ritual oblation of food'
nikāyyaḥ 'place of residence'
dhāyyā 'the *sāmidheni* hymn'

1. This rule offers the ad hoc derivation of four forms *pāyya, sānnāyya, nikāyya,* and *dhāyyā* respectively in the sense of *māna* 'standard of measure',

havi 'ritual oblation of food', *nivāsa* 'dewelling', and *sāmidhenī* 'a hymn of the *Ṛgveda*'.

Note that all these examples would have qualified for affix *yaT* since their roots end in vowels. Pāṇini chose to state them as derived by *nipātana* since there are diverse operational things for which the roots, even with *ṆyaT*, would not qualify. The safest course for him was then to cite the forms as derived.

Consider for example *pāyya* derived from: *mā* (*Ṅ*→∅) + (*Ṇ*→∅) *ya*(*T*→∅)→*mā* + *ya*, where affix *ṆyaT* occurs after verbal root *māṄ* 'to measure' via *nipātana*. In order for this string to derive *pāyya*, the root-initial *m* is to be replaced with *p* again by *nipātana*. Furthermore, rule 7.3.33 *āto yuk* has to introduce the augment *yUK*. This will then yield: (*m* → *p*) *ā* + (*y* (*UK* → ∅) + *ya* → *pā* + *y* + *ya* = *pāyya*. The *c* of *ciÑ* is similarly replaced with *k* in the ad hoc derivation of *nikāyya*. Furthermore, there is *i* → *ai* (*vṛddhi*) which subsequently produces *ai* → *āy*. Thus, *ni* + *ci*(*Ñ* → ∅) = *ni*(*c* → *k*)(*i* → *ai*) + (*Ṇ* → ∅)*ya*(*T* → ∅) = *nik*(*ai* → *āy*) + *ya* = *nikāyya*. Similar derivational situations are found in other examples.

3.1.130 क्रतौ कुण्डपाय्यसंचाय्यौ

> *kratau kuṇḍapāyyasaṃcāyyau*
> /*kratau* 7/1 *kuṇḍapāyyasaṃcāyyau* 1/2/
> (*pratyayaḥ* # 1, *paraś ca* # 2, *dhātoḥ* # 91, *ṇyat* # 124) .
> *kuṇḍapāyya saṃcāyya ity etau śabdau nipātyete kratāv abhidheye*
> Affixes *yaT* and *ṆyaT* occur by *nipātana* to derive *kuṇḍapāyya* and *saṃcāyya* when the derivates denote *kratu* 'sacrifice'.

EXAMPLES:

> *kuṇḍapāyyáḥ* 'a ritual sacrifice in which *Soma* is drunk from a bowl'
> *saṃcāyyaḥ* 'a ritual sacrifice in which *Soma* is pressed out'

1. This rule offers *kuṇḍapāyya* and *saṃcāyya* to denote specific ritual sacrifices, again by *nipātana*. The word *kuṇḍapāyya* is said to have been derived by the introduction of affix *yaT*, in the sense of locus (*adhikaraṇa*), after verbal root *pā* 'to drink' under the condition of a cooccurring word which underlies *kuṇḍa* and ends in the instrumental (*tṛtīyā*). Our next example *saṃcāyya* could have been derived similarly by the introduction of affix *ṆyaT* after verbal root *ciÑ* used with the preverb *sam*. Affix *yaT*, in the first example, is intended for accent by 6.1.213 *yato' nāvaḥ*. Of course, *ṆyaT* would bring 6.1.185 *tit svaritam* for accentuation.

If a particular ritual sacrifice is not denoted, derivates parallel to these ad hoc ones will be *kuṇḍapānam* 'to drink out of a pitcher or bowl' and *saṃceyaḥ* 'to be gathered, arranged'.

3.1.131 अग्नौ परिचाय्योपचाय्यसमूह्याः

agnau paricāyyopacāyyasamūhyāḥ
/*agnau* 7/1 *paricāyya...samūhyāḥ* 1/3/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *ṇyat* #124)
paricāyya-upacāyya-samūhya ity ete śabdā nipātyante agnāv abhidheye
Affix *ṆyaT* occurs after verbal root *ciÑ* to derive *paricāyya, upacāyya* and *samūhya* by *nipātana* when *agni* 'fire' is denoted.

EXAMPLES:

paricāyyáḥ 'a place where the ritual fire is placed'
upacāyyaḥ 'a fire which has gone through ritual purification'
samūhyám cinvīta paśukāmaḥ 'one who wishes for wealth of cattles should arrange the ritual fire'

1. Our three ad hoc derivates *paricāyya, upacāyya* and *samūhya* are derived with the denotatum of *agni* 'fire'. Elsewhere, the forms will be *pariceyam* 'to be collected from all sides', *upaceyam* 'to be heaped up', and *saṃvāhyam* 'to be carried'.

The first word *paricāyya* is derived from *pari* + *ci* by the introduction of affix *Ṇyat* where *i->ai->āy* also comes via *nipātana*. Thus, *paric* (*i→ai→āy*) + (*Ṇ→∅*) *ya* (*T→∅*) = *paricāy* + *ya* = *paricāyya*. Our second example is similar to the first. The third *samūhya* is derived from verbal root *vah* used with the preverb *sam*. This root, because it ends in a consonant, is already qualified for *ṆyaT*. Why do we, then, have to bring *ṆyaT* via *nipātana*? Note that *vah* also undergoes *samprasāraṇa* (1.1.45 *ig yaṇaḥ samprasāraṇam*) in the ad hoc derivation which would otherwise be blocked because *ṆyaT* is not marked with *K* (*akit*). Furthermore, the *a* of *vah* is replaced with its long counterpart (*dīrgha*) *ā* which would otherwise not be available under the provisions of 6.4.2 *halaḥ*. Thus, all functions come via *nipātana*.

3.1.132 चित्याग्निचित्ये च

cityāgnicitye ca
/*cityāgnicitye* 1/2 *ca* ∅/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *agnau* #131)
cityaśabdo' gnicityā śabdaś ca nipatyete
Affixes *KyaP* and *ya* occur by *nipātana* to also derive *citya* and *agnicityā*, respectively when *agni* is denoted.

EXAMPLES:

cityaḥ 'fire of the funeral pyre'
agnicityā 'heaping or arranging fire'

1. This rule offers *citya* and *agnicityā*, both derived by *nipātana*, with affixes *KyaP* and *ya* denoting *karman* and *bhāva* respectively. The augment *tUK* in *citya* is ordered by 6.1.69 *hrasvasya*... Our next example, *agnicityā*, entails affix *ya* introduced under the cooccurrence condition of *agni*. The augment *tUK*, as well as no *guṇa* for *-i*, comes via *nipātana*. Because of the introduction of *ya* by *nipātana*, this derivate gets the final high-pitch (*antodātta*) by 3.1.3 *ādyudāttaś ca*. Note that *ṆyaT* would bring *svarita* to the affix by 6.1.185 *tit svaritam*.

2. Note that *Kāśikā* and *Nyāsa* both seem to accept these ad hoc derivations by means of affix *ya*. Haradatta clearly states that *citya* is derived with *KyaP*, an exception to *yaT*, to denote the object (*karman*) here given as *agni*. This, in turn, causes the derivate to be marked with the *udātta* accent initially. The second example is derived with *ya* to denote *bhāva* 'action'. Haradatta states that deriving the second example with *KyaP* would not have required the introduction of *tUK*, but then there would have been problem with the accent. It is therefore to secure the final *udātta* accent that the second example is derived with *ya*.

Should we then accept that the authors of *Kāśikā* and *Nyāsa* are wrong? Perhaps not. First of all, these derivations are ad hoc. That is, anything is possible. Secondly, what is specified by them as *yakāra* 'the *ya*' may refer to both *KyaP* and *ya*. It is just that these authors did not feel it necessary to provide any additional details of the derivation of *citya*.

3.1.133 ण्वुल्तृचौ

ṇvultṛcau
/ṇvultṛcau 1/2/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91)
sarvadhātubhyo ṇvultṛcau pratyayau bhavataḥ
Affixes *ṆvuL* and *tṛC* occur after verbal roots.

EXAMPLES:

kārakaḥ 'he who is the doer'
karttā 'id.'
hārakaḥ 'he who fetches'
harttā 'id.'

1. This rule introduces affixes *ṆvuL* and *tṛC* after roots in general. Since both the affixes cannot be introduced concurrently, they are to be introduced in turn (*paryāya*). The *C* of *tṛC* is not used for accent. For, that is automatically accounted for by the affixal accentuation (*pratyayasvara*; 3.1.3 *ādyudāttaś ca*). Thus, *C* is instead intended to distinguish (*bhedaka*) *tṛC* from *tṛN* (3.2.135 *tṛn*). A reference with *tṛ* without any *it* could denote both *tṛC* and *tṛN* as in rules 5.3.59 *tuś chandasi* and 6.4.154 *tur iṣṭhemeyassu*.

3.1.134 नन्दिग्रहिपचादिभ्यो ल्युणिन्यचः

nandigrahipacādibhyo lyuṇinyacaḥ
/nandigrahipacādibhyaḥ 5/3 *lyuṇinyacaḥ* 1/3/
(pratayayaḥ #1, *paraś ca* #2, *dhātoḥ* #91*)*
nandyādibhyo lyuḥ, grahādibhyo ṇiniḥ, pacādibhyo' c pratyayā bhavanti
Affixes *Lyu, ṆinI* and *aC* occur after verbal roots enumerated in the groups headed by *nandI* 'to please', *grahI* 'to take, accept' and *pac* 'to cook' respectively.

EXAMPLES:

nandanaḥ 'he who is pleasing; a son'
vāsanaḥ 'that which chirps; a bird'
grāhī 'he who accepts or holds'
utsāhī 'enthusiast'
śvapacaḥ 'he who eats a dog; a person of the very low untouchable *śūdra* caste'

1. This rule introduces three affixes after three corresponding verbal groups. The assignment of the three affixes to their corresponding verbal groups is made in view of rule 1.3.10 *yathāsaṃkhyam*... The word *ādi* has to be read with each constituent of the *dvandva* compound *nandigrahipacaḥ* *(dvandvānte śrūyamāṇaṃ pratyekam abhisambadhyate)*. Consequently, we get the interpretation: *nandi*, etc., *grahi*, etc., and *paci*, etc. Note that these roots are not referenced here as listed in the *DP*. Instead, they are abstracted from the listing of nominal stems in the *GP*. Thus, given *nandanaḥ*, one can abstract the verbal root *ṬUnadI* 'to please; prosper', etc. (see *Kāś: nandigrahipacādayaś ca na dhātupāṭhataḥ sanniviṣṭā gṛhyante, kiṃ tarhi; 'nandana ramaṇa' ity evam ādiṣu prātipadikagaṇeṣv apoddhṛtya ye paṭhyante te nirdiśyante)*. See the appendix for derivational details.

3.1.135 इगुपधज्ञाप्रीकिरः कः

igupadhajñāprīkiraḥ kaḥ
/igupadhajñāprīkiraḥ 5/1 *kaḥ* 1/1/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #91*)*
igupadhebhyo jānāteḥ prīṇāteḥ kirateś ca kapratyayo bhavati
Affix *Ka* occurs after verbal roots which have an *iK* (*i, u, ṛ, ḷ; Śs.* 1-2) in their *upadhā;* and after *jñā* 'to know', *prīÑ* 'to please' and *kṝ* 'to scatter'.

EXAMPLES:

vikṣipaḥ 'he who makes trouble'
vilikhaḥ 'he who writes'
budhaḥ 'he who knows'

kṛśaḥ 'he who is thin'
priyaḥ 'he who endears'
kiraḥ 'he who scatters'

1. This rule introduces affix *Ka* after verbal roots *jñā, prīÑ* and *kṛ*, or after any verb which may have a vowel denoted by the abbreviatory term *iK* (*Śs* 1–2) in its penultimate (*upadhā*) position. The *K* as an *it* in *Ka* is used to block *guṇa*. *Kāśikā* informs that *deva* 'god', *seva* 'service' and *meṣa* 'ram' should not be treated as derived with *Ka*. They should be treated as part of *pacādi* of 3.1.135. Note in this connection that *pacādi* is treated as an open-ended *ākṛtigaṇa*. See the appendix for derivational details.

3.1.136 आतश्चोपसर्गे

ātaś copasarge
/*ātaḥ* 5/1 *ca* Ø *upasarge* 7/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *kaḥ* #135)
ākārāntebhyo dhātubhya upasarga upapade kapratyayo bhavati
Affix *Ka* also occurs after verbal roots which end in *ā* (cf. 1.1.70 *taparas tatkālasya*) when the root cooccurs with a *pada* constituted by an *upasarga* 'preverb'.

EXAMPLES:

prasthaḥ 'mountain'
suglaḥ 'very weary'
sumlaḥ 'very despondent'

1. This rule again introduces affix *Ka*, though requires that the roots end in -*ā* and cooccur with a word constituted by an *upasarga* 'prefix'. Note that affix *Ka* is introduced here as an exception to affix *Ṇa* of 3.1.141 *śyādvyadhāsru...*

3.1.137 पाघ्राध्माधेट्दृशः शः

pāghrādhmādheṭdṛśaḥ śaḥ
/*pāghrādhmādheṭdṛśaḥ* 5/3, *śaḥ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *upasarge* #136)
pādibhyo dhātubhya upasarga upapade śapratyayo bhavati
Affix *Śa* occurs after verbal roots *pā* 'to drink', *ghrā* 'to smell', *dhmā* 'to blow, beat', *dheṬ* 'to suck' and *dṛś* 'to see' when the roots cooccur with a *pada* constituted by an *upasarga*.

EXAMPLES:

utpibaḥ 'he who picks up and drinks'
vipibaḥ 'he who drinks in a typically bad manner'

ujjighraḥ 'he who smells something'
vijighraḥ 'he who smells something in a typically bad manner'
uddhamaḥ 'he who blows or beats something'
vidhamaḥ 'he who blows or beats against something'
uddhayaḥ 'he who drinks '
vidhayaḥ 'he who drinks in a typically bad manner'
utpaśyaḥ 'he who looks up'
vipaśyaḥ 'he who looks in a typically bad manner'

1. This rule introduces affix *Śa* after verbal roots *pā, ghrā, dhmā, dheṬ*, and *dṛś*. Other conditions remain similar to the preceding rule. The first four, since they yield a form terminated in *-ā*, are allowed *Śa* as opposed to *Ka* or *Ṇa*. The last verbal root has *ṛ* in its penultimate position, and hence qualifies for *Ka* by 3.1.135 *igupadh...*

2. *Kāśikā* informs that some, which also includes the *Mbh.*, do not accept the *anuvṛtti* of *upasarge* in this rule. In that case, we will not get *Śa*. For example, *dṛś* will then have the *Ka*-derivate: *paśyaḥ* 'he who sees'.

The *Ś* of the affix is intended as an *it* for assignment of the term *sārvadhātuka* (3.4.113 *tiṅśit...*).

A *vārttika* prohibits *ghrā* to avail *Śa* when the derivate is to denote a name. Obviously, what is in focus is *vyāghraḥ* 'tiger'.

3.1.138 **अनुपसर्गाल्लिम्पविन्दधारिपारिवेद्युदेजिचेतिसातिसाहिभ्यश्च**

anupasargāl limpavindadhāripārivedyudejicetisātisāhibhyaś ca
lanupasargāt 5/1 *limpa...sāhibhyaḥ* 5/3 *ca* Ø/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, śa #138)
anupasargebhyo limpādibhyaḥ śapratyayo bhavati
Affix *Śa* occurs after verbal roots *limpA* 'to coat, smear', *vindA* 'to acquire', *dhāri* 'to cause to hold; carry', *pāri* 'to cause to cross, go over', *vedi* 'to inform, proclaim', *udeji* 'to shake', *ceti* 'to cause to become aware, perceive' and *sāhi* 'to endure, support', when used without an *upasarga*.

EXAMPLES:

limpaḥ 'he who coats x with y'
vindaḥ 'he who acquires'
dhārayaḥ 'he who holds, bears'
pārayaḥ 'he who crosses over'
vedayaḥ 'he who informs, knows'
udejayaḥ 'he who shakes, disturbs'
cetayaḥ 'he who revives someone'
sātayaḥ 'he who makes one happy; supporter'
sāhayaḥ 'he who endures'

1. This rule introduces affix *Śa* after specified roots when they are used without preverbs. Pāṇini refers to *limp* and *vind* with *nUM*. The derivations must start with the augmented forms. The other roots are either *curādi*, or are here intended to end in *ṆiC*. The last two verbal roots are attested on the authority of the rules (*sautra*).

2. A *vārttika* proposes the introduction of *Śa* also after *limp* when it is used with the preverb *ni*. The intended derivate is *nilimpaḥ* 'name of a deity; cow'. There is yet another *vārttika* which proposes the introduction of *Śa* after *vind* when it is used with *go* to derive the proper noun *govinda* '*Kṛṣṇa*'.

3.1.139 ददातिदधात्योर्विभाषा

dadātidadhātyor vibhāṣā
/dadātidadhātyoḥ 5/2 *vibhāṣā 1/1/*
(*pratyayaḥ* # 1, *paraś ca* # 2, *dhātoḥ* # 91, *śaḥ* # 137, *anupasargāt* # 138)
dāño dhāñaś ca vibhāṣā śapratyayo bhavati
Affix *Śa* optionally occurs after verbal roots *ḌudāÑ* 'to give' and *ḌUdhāÑ* 'to hold', when used without an *upasarga*.

EXAMPLES:

dadaḥ 'he who gives'
dāyaḥ 'donor; inheritance'
dadhaḥ 'he who holds, bears'
dhāyaḥ 'he who supports'

1. This rule optionally introduces affix *Śa* after verbal roots *ḌUdāÑ* and *ḌUdhāÑ* when they are not used with any preverbs. Note that *Ṇa* was obligatorily available to these roots by rule 3.1.141 *śyādvyadhā...* at the strength of their final *-ā*. This rule makes that provision optional. When used with preverbs these roots will receive *Ka* by 3.1.136 *ātaś copasarge*.

3.1.140 ज्वलितिकसन्तेभ्यो णः

jvalitikasantebhyo' ṇaḥ
/jvalitikasantebhyaḥ 5/3 *aṇ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *anupasargāt* #138, *vibhāṣā* #139)
jvala dīptau ity evam ādibhyo dhātubhyaḥ kasa gatau ity evam antebhyo vibhāṣā ṇapratyayo bhavati
Affix *Ṇa* optionally occurs after verbal roots enumerated in the set which begins with *jvalA* 'to be aflame, to glow' and ends with *kasA* 'to go' when the roots are not used with an *upasarga*.

EXAMPLES:

jvalaḥ 'burning, glowing'
jvālaḥ 'id.'
calaḥ 'moving'
cālaḥ 'id.'

1. This rule introduces affix *Ṇa* after the set of verbal roots of the *bhvādi* which begins with *jval* and terminates with *kas*. The conditions of *anupasargāt* and *vibhāṣā* also carry. That is, when the option of *Ṇa* is not accepted, affic *aC* will apply (3.1.134 *nandigrahipacād...*).

3.1.141 **श्याऽऽद्व्यधास्रुसंस्रवतीणवसावहृलिहश्लिषश्वसश्च**

> *śyādvyadhāsrusaṃsravatīṇavasāvahṛlihaśliṣaśvasaś ca*
> */śyād...śvasaḥ 5/1 ca ∅/*
> (*pratyayaḥ* # 1, *paraś ca* # 2, *dhātoḥ* # 91, *ṇaḥ* # 141)
> *śyaiṅ ākārāntebhyaś ca dhātubhyaḥ, vyadha, āsru, saṃsru, atīṇ, avasā avahṛ, liha, śliṣa, śvasa ity etebhyaś ca ṇapratyayo bhavati*
> Affix *Ṇa* also occurs after the following:

(*a*) verbal root *śyaiṄ* 'to go, move',
(*b*) roots which end in *-ā*,
(*c*) verbal root *vyadhA* 'to pierce', used with the preverb *sam*,
(*d*) verbal root *iṆ* 'to go' used with the preverb *ati*,
(*e*) verbal root *ṣo* 'to finish' and *hṛ* 'to take, carry' used with the preverb *ava*, and
(*f*) verbal roots *lih* 'to lick', *śliṣ* 'to embrace', and *śvas* 'to breathe'.

EXAMPLES:

avaśyāyaḥ 'frost, dew'
pratiśyāyaḥ 'cold, flu'
dāyaḥ 'inheritance'
dhāyaḥ 'id.'
vyādhaḥ 'hunter'
āsrāvaḥ 'that which oozes; wound'
saṃsrāvaḥ 'that which flows; oozes'
atyāyaḥ 'transgression, cruelty'
avasāyaḥ 'completion'
avahāraḥ 'taking away; stealing'
lehaḥ 'licking'
śleṣaḥ 'embracing'
śvāsaḥ 'breathing'

1. This rule does not carry *anupasargāt* and *vibhāṣā*. Affix *Ṇa* is introduced here after verbal root *śyaiṄ*, or roots which end in *āT* (1.1.70

taparas tatkālasya), i.e., *dā* and *dhā*. It is also introduced after verbal roots *vyadh* and *sru* used with the preverb *āN̊*, *iṆ* used with the preverb *ati*, *ṣo* and *hṛ* used with the preverb *ava*, and *lih*, *śliṣ* and *śvas*. Note that restrictions relative to the use of the preverbs apply only where stated. Elsewhere, the affix can be introduced after verbal roots used with or without any other preverb.

2. A question is raised as to why *śyaiṄ*, which yields a form in *ā* (6.1.45 *ādeca upadeśe...*), is to be specified. The specification of *āT* 'after roots ending in *-ā*' is sufficient to handle it. *Kāśikā* states that this separate mention is made for the purpose of blocking a rule which may block this provision (*bādhakabādhanārtha*). That is, it is to block the particular (*viśeṣa*) provision of *Ka* made by 3.1.136 *ātaś copasarge* which otherwise would have blocked the general (*sāmānya*) affix *Ṇa*.

3.1.142 **दुन्योरनुपसर्गे**

dunyor anupasarge
/dunyoḥ 6/2 anupasarge 7/1/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, ṇaḥ #140)
dunoter nayateś cānupasarge ṇapratyayo bhavati
Affix *Ṇa* occurs after verbal roots *ṬUdu* 'to heat, burn' and *ṇīÑ* 'to lead' when not used with a preverb.

EXAMPLES:

dāvaḥ 'that which burns; forest fire'
nāyaḥ 'one who leads'

1. Note that verbal roots *du* and *ṇīÑ* yield the forms *pradavaḥ* 'burning' and *praṇayaḥ* 'love' with affix *aC* introduced after them under the provision of rule 3.1.134 *nandigrahi...* Of course, the roots will then be used with the preverb *pra*.

3.1.143 **विभाषा ग्रहः**

vibhāṣā grahaḥ
/vibhāṣā 1/1 grahaḥ 1/1/
(pratyayaḥ #1, paraś ca #2, dhātoḥ #91, ṇaḥ #140)
vibhāṣā graher dhātoḥ ṇaḥ pratyayo bhavati
Affix *Ṇa* occurs optionally after verbal root *grahI* 'to accept, take'.

EXAMPLE:

grāhaḥ 'he who grabs; crocodile'

1. This rule provides for optional *Ṇa* after verbal root *grah*. This option is made against the *aC* of 3.1.134 *nadigrahi...* Commentators inform

that this special type of option is *vyavasthita-vibhāṣā* 'fixed option'. Consequently, they explain the special meaning in which the option is available. For example, *grāhaḥ* is obligatorily derived when *jalacara* 'that which moves in water; crocodile, shark, etc.' is the denotatum. In the context of planets, the form must be: *grahaḥ*.

A *vārttika* suggests that *bhāvaḥ* 'state', as opposed to *bhavaḥ* 'existence', should be similarly derived.

3.1.144 **गेहे कः**

gehe kaḥ
/*gehe* 7/1 *kaḥ* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *grahaḥ* #143)
graher dhātoḥ kaḥ pratyayo bhavati gehe kartari
Affix *Ka* occurs after verbal root *grahI* 'to seize' when *geha* 'abode' is denoted as the agent.

EXAMPLES:

gṛham 'that which holds the grains, etc.; house'
gṛhāḥ 'wife'

1. This rule offers affix *Ka* to derive forms denoting *gṛha* 'home' as agent. Note that agent, in terms of meaning, becomes the qualifier to the meaning of the affix. It is not a cooccurring word (*upapada*). This gives us: *gṛham* 'home'; *gṛhāḥ* 'wife'; and *gṛhāṇi* 'homes' where the masculine plural form denotes wife.

3.1.145 **शिल्पिनि ष्वुन्**

śilpini ṣvun
/*śilpini* 7/1 *ṣvun* 1/1/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91)
dhātoḥ ṣvun pratyayo bhavati śilpini kartari
Affix *ṢvuN* occurs after verbal roots when *śilpin* 'artisan' is denoted as the agent.

EXAMPLES:

narttakaḥ 'dancer'
khanakaḥ 'digger'
rajakaḥ 'washerman; one who dyes clothes'

1. This rule introduces affix *ṢvuN* after roots when the derivate denotes an artist agent. Here again *śilpini* is a qualifier to the meaning of the affix. It does not denote cooccurrence as 3.1.92 *tatropapadam...* would have it.

The *Ṣ* is intended as an it so that these derivates can get *ṄīṢ* (4.1.41 *ṣidgaura...*) to denote their feminine counterparts.

A *vārttika* under this rule proposes that *ṢvuN* should be restricted to verbal roots *nṛtI* 'to dance', *khanI* 'to dig' and *rañjI* 'to color'. This will give: *narttakaḥ, khanakaḥ* and *rajakaḥ*. The corresponding feminine forms with *ṄīṢ* are: *narttakī, khanakī* and *rajakī*. A statement is also desired about the loss of the nasal of *rañj*.

3.1.146 गस्थकन्

gas thakan
/gaḥ 5/1 *thakan* 1/1/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #91, *śilpini* #145*)*
gāyateṣ ṭhakan pratyayo bhavati śilpini kartari
Affix *thakaN* occurs after verbal root *gai* 'to sing' when *śilpin* is denoted as the agent.

EXAMPLES:

gāthakaḥ 'singer'
gāthikā 'female singer'

1. Note that reference to verbal root *gā* is made after subjecting it through the deletion of *ā* by rule 6.4.64 *āto lopaḥ*.

3.1.147 ण्युट् च

ṇyuṭ ca
/ṇyuṭ 1/1 *ca* Ø/
(pratyayaḥ #1, *paraś ca* #2, *dhātoḥ* #91, *gaḥ* #146*)*
gāyater ṇyuṭ pratyayo bhavati śilpini kartari
Affix *ṆyuṬ* also occurs after *gai* when *śilpin* is denoted as the agent.

EXAMPLES:

gāyanaḥ 'singer'
gāyanī 'female singer'

1. Obviously, this rule introduces a parallel derivation in the form of *gāyanaḥ*. This, as compared with the results of the preceding rule, is an alternant to *gāyakdḥ*. The *ca* is used here to bring *gaḥ* from the preceding rule. Since affix *ṆyuṬ* is marked with *Ṭ* as an *it*, rule 4.1.5 *ṭiḍḍhāṇañ...* will rule *ṄīP* for deriving the corresponding faminine form *gāyanī* 'a female singer'.

The *ca* is used to assure the subsequent *anuvṛtti* of *ṆyuṬ*, though not of *thakaN*. If *thakaN* was meant to be carried, the preceding rule would have been formulated as: *go ṇyuṭthakanau*.

3.1.148 हश्च व्रीहिकालयोः

haś ca vrīhikālayoḥ
/*haḥ* 5/1 *ca* Ø *vrīhikālayoḥ* 7/2/
(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *ṇyuṭ*#147)
jahāter jihāteś ca dhāto ṇyuṭ pratyayo bhavati vrīhau kāle ca kartari
Affix *ṆyuT* occurs after verbal roots *OhāK* 'to abandon' and *OhāṄ* 'to go' when *vrīhi* 'rice' and *kāla* 'time', respectively, are denoted as agents.

EXAMPLES:

hāyanāḥ 'a variety of rice'
hāyanaḥ 'a year'

1. Affix *ṆyaṬ* is also introduced after specified verbal roots when the derivatives denote *vrīhi* 'rice' and *kāla* 'time' as agents. As is obvious from my translation, *haḥ* refers to the introduction of affix *ṆyaṬ* after both the verbal roots *OhāK* and *OhāṆ*. Of course, they both share the form *hā* after the deletion of their *it*. The *ca* is here used to bring *ṆyaṬ*. As usual, *vrīhikālayoḥ* is an adjective to the agent, and not the cooccurrence condition marked by the locative as per 3.1.92 *tatropapadam...*

3.1.149 प्रसृल्वः समभिहारे वुन्

prasṛlvaḥ samabhihāre vun
/*prasṛlvaḥ* 5/3 *samabhihāre* 7/1 *vun* 1/1/
(*pratyayaḥ* # 1, *paraś ca* # 2, *dhātoḥ* # 91)
Affix *vuN* occurs after verbal roots *pruṄ* 'to go', *sṛ* 'to crawl' and *lūÑ* 'to cut' when *samabhihāra* 'doing well' is denoted.

EXAMPLES:

sarakaḥ 'he who crawls well'
avakaḥ 'he who cuts well'

1. This rule introduces affix *vuN* after verbal roots *pruṄ*, *sṛ*, and *lūÑ* when the derivate denotes *samabhihāra* 'properly performed action'. Note that *samabhihāra* elsewhere may mean 'repetition'. *Kāśikā* clearly states that here the meaning is to be accepted as *sādhukāritva* 'doing something well'. Obviously, *sādhukāritva* is the inferential meaning based on repetition. After all, people develop skills to do things beautifully after repeatedly doing them.

3.1.150 आशिषि च

āśiṣi ca
/*āśiṣi* 7/1 *ca* Ø/

(*pratyayaḥ* #1, *paraś ca* #2, *dhātoḥ* #91, *vun* #149)
āśiṣi gamyamānāyāṃ dhātumātrād vun pratyayo bhavati
Affix *vuN* also occurs after verbal roots when *āśīḥ* is denoted.

EXAMPLES:

jīvatāt 'may he live long'
jīvakaḥ 'id.'
nandatāt 'may he be happy'
nandakaḥ 'id.'

1. This rule allows for the introduction of affix *vuN* after roots in general when 'benediction' (*āśīḥ*) is denoted. The *ca* is used here to bring *vuN*. The word *āśīḥ* itself denotes a prayer with an underlying action. The denotatum of the affix is an agent. It is for this reason that we interpret the action denoted by the verb as an object of prayer for the agent. Thus, we get *nandakaḥ* 'may he who rejoices rejoice' and *jīvakaḥ* 'may he who lives live for long'.

3.2.1 **कर्मण्यण्**

karmaṇyaṇ
/*karmaṇi* 7/1 *aṇ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* 3.1.2, *dhātoḥ* 3.1.91)
sarvatra karmaṇy upapade dhātor aṇ pratyayo bhavati
Affix *aṆ* occurs after a verbal root when the root cooccurs with a *pada* (1.4.14 *suptiṅantaṃ padam*) which denotes *karman* 'object'.

EXAMPLES:

kumbhakāraḥ 'maker of pots'
nagarakāraḥ 'architect'
kāṇḍalāvaḥ 'one who cuts a branch'
śaralāvaḥ 'one who cuts the weeds'
vedādhyāyaḥ 'one who studies the Vedas'
carcāpāraḥ 'one who studies the *carcāpāṭha* (Vedic recitation with repetition of words)'

1. Note that *karmaṇi*, in view of rule 3.1.92 *tatropapadaṃ saptamīstham*, must be interpreted as the conjoined word (*upapada*) which denotes *karman* 'object'. Since Pāṇini uses '*aśabdasaṃjñā*' in 1.1.68 *svaṃ rūpaṃ śabdasyāśabdasaṃjñā*, *karman* must be interpreted, here, as denoting object. Thus, for the introduction of affix *aṆ* after verbal root *ḌUkṛÑ*, we must have a conjoined word which denotes object. Let us say that the word which denotes the object contains *kumbha*, a nominal stem. In order for this to form a word and denote an object, we must introduce a nominal ending (*sUP*). Accusative (*dvitīyā*) is normally introduced after a

nominal stem to denote an object. In case of *kumbha*, it has to be a genitive (*ṣaṣṭhī*), since the derivate is anticipated to cooccur with an item ending in a *kṛt* affix. Rule 2.3.65 *katṛkarmaṇoḥ kṛti* thus rules genitive. This yields: *kumbha* + *ām*. Verbal root *ḌUkṛÑ* will now qualify to receive affix *aṆ* leading to the derivation of *kāra*.

There is an interdependency between the introduction of an affix after a verbal root, and the introduction of the nominal ending after a stem to derive the word which constitutes an *upapada*. Rule 3.2.1 cannot introduce affix *aṆ* unless there is a cooccurring word with the denotatum of object. Rule 2.3.65 *kartṛkarmaṇoḥ...*, which introduces genitive after a *prātipadika* 'nominal stem' to denote the object, requires the cooccurrence of a derivate ending in a *kṛt* affix. That is, *aṆ* cannot be introduced unless genitive is introduced; the genitive could not be introduced unless *aṆ* was introduced. What is the way out of this *itaretarāśrayadoṣa* 'fault stemming out of mutual dependency'?. The cooccurrence of the *kṛt*-derivate has to be at least mentally (*buddhyā*) accepted. This clears the way for introduction of the nominal ending to denote *karman*. Note that the locative of *karmaṇi* in 3.2.1, at the strength of 3.1.92 *tatropapadaṃ saptamīstham*, already approves the cooccurrence of the anticipated *kṛt*-derivate with another derivate which denotes an object. Thus, the co-occurrence of the *kṛt*-derivate has to be assumed prior to the introduction of a nominal ending denoting *karman*.

Note that such compounds are obligatory (*nitya*). Their analysed forms simply serve the heuristic purpose of making their meanings clear. Derivations can proceed even with the simple inference of *prātipadika* (+*karman*) *dhātu* (+*aṆ*). That is, the *karman* of rule 3.2.1 *karmaṇy aṇ* in the locative yields the following meaning when read with rule 3.1.92 *tatropapadam...*:

> 'the *kṛt* affix *aṆ* occurs after a verbal root (*dhātoḥ*) when it (the root) cooccurs with a word denoting *karman*'.

Whether that *karman* is denoted at some point with a genitive, or an accusative, is not crucial for the derivate in *kṛt* on hand. It is for this reason that Varadarāja assumes *kumbha* + *am* as the *upapada*. This assumption of an accusative of the *upapada* is made based on the express mention of *karmaṇi* in the wording of this rule. Besides, it is more directly relatable to the *karman* of 2.3.2 *karmaṇi dvitīyā*. The fact still remains though that a majority of scholars favor the genitive ending with the *upapada*.

The tradition also believes that given the derived string: *kumbha* + *ām* + *kāra*, where *kāra* is a *kṛt*-derivate in *aṆ*, rule 2.2.19 *upapadam atiṅ* allows the compound formation even before a *sUP* is introduced after *kāra* (cf. *PŚ*): *gatikārakopapadānāṃ kṛdbhiḥ saha samāsavacanaṃ prāk sub-utpatteḥ* 'an item denoting *gati* (1.4.60 *gatiś ca*), *kāraka* (1.4.23 *kārake*), and

upapada (3.1.92 *tatropapadam...*) is combined with a syntactically related item ending in a *kṛt* prior to the introduction of a *sUP*')).

2. Refer to my discussion of the types of *karman* discussed under 1.4.49 *kartur īpsitatamaṃ karma*. *Kāśikā* illustrates this rule with examples of *nirvartya*, *vikārya*, and *prāpya*, all the three types of *karman*. This is done simply to refute observations of some that *aṆ*-derivates entail only that object which is defined by rule 1.4.49. Still others say that only two *karman*, *nirvartya* and *vikārya*, are to be covered. That the *prāpya* is not covered is known by the statement of Kātyāyana where he makes a provision only for the two. For an instance of the *prāpya-karman* of *vedādhyāyaḥ* 'Vedic recital', he says that special mention must be made. There are no instances of *prāpyakarman* with *aṆ* parallel to *grāmaṃ gacchati* '...goes to the village', *ādityaṃ paśyati* '... sees the sun', and *himavantaṃ śṛṇoti* 'listens to the Himālaya', because of a lack of usage (*anabhidhānāt*). The nature of *prāpyakarman* itself is believed to be the reason of lack of usage. For, it is not brought into existence from some previous state of non-existence like the *nirvartyakarman* of *kumbhaṃ karoti* '...makes a pot'. Nor is it brought forth with some modification from some previous state of existence like the *vikāryakarman* of *kāṇḍaṃ lunāti* '...is cutting the log (into pieces).' It simply denotes its relationship with the action: 'the object of...'.

3. A *vārttika* proposes that in case of *śīlI*, *kāmI*, *bhakṣI* and *ācarI*, a provision should be made for affix *Ṇa*. Additionally, the derivates should have the original accent of their first constituent. This will enable the derivation of *māṃsaśīlaḥ* 'he whose nature is to eat meat', *māṃsakāmaḥ* 'he whose nature is to desire meat', and *kalyāṇācāraḥ* 'he whose nature is to do good'. These derivates are recommended with *Ṇa* in view of their feminine counterparts. A derivate in *aṆ* requires *ṄīP* in its corresponding feminine. The *Ṇa* requires *ṬāP* in its feminine. Thus, it is to facilitate the correct feminine *māṃsaśīlā*, etc., in addition to proper accent, that *māṃsaśīla*, etc., is to be derived with *Ṇa*.

The derivation of *sukhapratīkṣaḥ* 'he whose nature is to endure a great deal' also requires *Ṇa* for obtaining the correct feminine derivate *sukhapratīkṣā*.

3.2.2 ह्वावामश्च

hvavāmaś ca

/hvāvāmaḥ 5/1 *ca* ∅

(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91*)*

'hveñ sparddhāyāṃ śabde ca, veñ tantusantāne, māṅ māne' ity etebhyaś ca karmaṇy upapade' ṇ pratyayo bhavati

Affix *aṆ* also occurs after verbal roots *hveÑ* 'to call out', *veÑ* 'to weave' and *māṄ* 'to measure' when the roots cooccur with a *pada* which denotes *karman*.

EXAMPLES:

svargahvāyaḥ 'one who calls out to heaven'
tantuvāyaḥ 'a weaver'
dhānyamāyaḥ 'one who weighs grains'

1. It becomes clear from the *ā*-final (*hvā, vā, mā*) reference to *hveÑ* 'to call', *veÑ* 'to weave' and *māṄ* 'to measure' that this rule is a prior exception (*purastāpavāda*) to the following. That is, these roots take *aṆ* as opposed to the *Ka* of the following rule, which is required of roots that end in *ā*. Note that rule 7.3.33 *āto yuk ciṇkṛtoḥ* introduces augment *yUK* after a verbal root which ends in -*ā* before a following *kṛt* affix marked with *Ṇ* or *M*. The roots of this rule thus qualify for *yUK*, which is not possible under the provision of the next rule.

3.2.3 आतोऽनुपसर्गे कः

āto' nupasarge kaḥ
/*ātaḥ* 5/1 *anupasarge* 7/1 = *avidyamāna upasargo yasya asau (bv.), tasmin; kaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1)
ākārāntebhyo' nupasargebhyaḥ karmaṇy upapade kapratyayo bhavati
Affix *Ka* occurs after verbal roots ending in *ā* when they are used without preverbs, and cooccur with a *pada* which denotes *karman*.

EXAMPLES:

pārṣṇitram 'that which protects the back'
aṅgulitram 'that which protects fingers; gloves'

1. This constitutes an exception to *aṆ*, and concerns roots terminated in -*ā* used without preverbs (*upasarga*). Affix *aṆ* will be introduced instead when the roots are used with preverbs. Thus, *gosandāyaḥ* 'he who properly makes the gift of a cow' is a counter-example where *dā* is used with the preverb *sam*.

3.2.4 सुपि स्थः

supi sthaḥ
/*supi* 7/1 *sthaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *kaḥ* #3)
subanta upapade tiṣṭhateḥ kapratyayo bhavati
Affix *Ka* occurs after verbal root *sthā* 'to stand' when the root cooccurs with a *pada* which ends in *sUP*.

EXAMPLES:

samasthaḥ 'one who lives under normal conditions; happy'
viṣamasthaḥ 'one who lives under abnormal conditions; unhappy'

1. This rule introduces affix *Ka* after a verbal root when used in conjunction with a *pada* ending in *sUP*. The word *karmaṇi* is dropped since it cannot make any sense used with *sthā*, which is intransitive (*akarmaka*). Besides, *supi* 'when a *pada* ending in *sUP*' specifies a much more generalized cooccurrence condition.

2. There is a proposal to interpret this rule via *yogavibhāga* 'rule-splitting' as follows:

(*a*) *supi* where *ātaḥ* is carried to yield the interpretation, 'affix *Ka* is introduced after verbal roots which end in *ā* and occur in conjunction with a *pada* which ends in *sUP*';

(*b*) *sthaś ca* where *ātaḥ* is not carried since *sthā* ends in *ā*. This yields the interpretation, 'affix *Ka* is introduced after verbal root *sthā* when it is used in conjunction with a word ending in *sUP*'.

What is the purpose of this *yogavibhāga*? And why make a reference to *sthā* separately from roots which end in *-ā*? Isn't *sthā* contained in the class of these roots? Commentators explain that the first split rule accounts for *Ka* where agent (*kartṛ*) is denoted. The second accounts for instances where *bhāva* 'root-sence' is denoted. If special effort is not made, the affix could only be interpreted as denoting *bhāva*. For, an affix with no specification of its meaning denotes the sense of its base (cf. *PŚ* 123: *anirdiṣṭāḥ pratyayā bhāve bhavanti*).

The word *dvipaḥ* denotes an 'elephant' characterized as: *dvābhyām (aṅgābhyāṃ) pibati* 'he who drinks with two limbs'. Clearly, affix *Ka* here denotes the agent of drinking. As opposed to this, *ākhūtthaḥ* (*ākhūnām utthānam*) 'the swarming of rats' denotes *bhāva*.

3. *Kāśikā* states that, from here on, both *karmaṇi* and *supi* should be carried. Derivates which contain a transitive verbal root will be read with the cooccurrence condition of *karmaṇi*. Others, otherwise, would have the condition of *supi*.

3.2.5 **तुन्दशोकयोः परिमृजापनुदोः**

tundaśokayoḥ praimṛjāpanudoḥ
/tundaśokayoḥ 7/2 *parimṛjāpanudoḥ* 6/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *kaḥ* #3)
tundaśokayoḥ karmaṇor upapadayoḥ parimṛjāpanudoḥ dhātvoḥ kapratyayo bhavati

Affix *Ka* occurs after verbal roots *mṛjŪ* 'to cleanse', used with the preverb *pari*, as well as after *ṆUnudI* 'to move', used with the preverb *apa*, when the roots cooccur with a *pada* which contains *tunda* 'belly, navel' and *śoka* 'grief' as *karman* respectively.

EXAMPLES:

tundaparimṛja āste 'the lazy one is sitting here'
śokāpanudaḥ putro jātaḥ 'a son, the remover of grief, is born'

1. This rule allows for the introduction of affix *Ka* after verbal roots *mṛj* and *nud* used with *pari* and *apa* respectively. The cooccurrence condition is specified by *tunda* and *śoka* which constitute the *pada* which denotes object (*karmaṇi*). Thus we get the above examples.

A *vārttika* states that *tundaparimṛjaḥ* should be limited to denoting the meaning of 'lazy; he who sits idly doing nothing but cleaning his navel'. The word *śokāpanudaḥ* should similarly be limited to denoting 'someone who brings happiness'. This is to be stated in view of *śokāpanodaḥ*, a derivate of *aṆ*, meaning: 'one who (by explaining, for example, the impermanence (*anityatā*) of this world), removes grief by removing attachment, but who does not bring any joy'. In contrast, the 'son' (*putra*), not only removes the grief by removing the state of sonlessness but also brings joy.

An additional *vārttika* proposes that *mūlavibhuja* 'chariot', *nakhamuca* 'bow', *kākaguha* 'sesame' and *kumuda* 'white water lily' be derived with affix *Ka* by *nipātana*.

3.2.6 प्रे दाज्ञः

pre dājñaḥ
/*pre* 7/1 *dājñaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *karmaṇi* #1, *kaḥ* #3)
dadāter jānāteś ca dhātoḥ prenopasṛṣṭāt karmaṇy upapade kapratyayo bhavati
Affix *Ka* occurs after verbal roots *ḌUdāÑ* 'to give' and *jñā* 'to know' when they are used with the preverb *pra* and cooccur with a *pada* which denotes *karman*.

EXAMPLES:

sarvapradaḥ 'he who gives everything'
pathiprajñaḥ 'he who knows the roads very well'

1. This rule requires introduction of affix *Ka* after verbal roots *dā* 'to give' and *jñā* 'to know' used with the preverb *pra*. Note that roots terminated in -*ā*, and used without any preverbs, are already provided with affix *Ka* (2.3.3 *āto' nupasarge kaḥ*). This rule starts the introduction of affixes where roots could be used with preverbs. In the absence of this rule, the roots could have qualified for *aṆ*. In this sense, this rule is an exception to the rule which introduces *aṆ*. The cooccurrence condition is still constituted by a word denoting *karman*.

3.2.7 समि ख्यः

sami khyaḥ
/*sami* 7/1 *khyaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *kaḥ* #3)
sampurvāt khāy ity etasmād dhātoḥ karmaṇy upapade kapratyayo bhavati

Affix *Ka* occurs after verbal root *khyāÑ* 'to relate, tell', used with the preverb *sam*, when the root cooccurs with a *pada* which denotes *karman*.

EXAMPLES:

gosaṃkhyaḥ 'he who counts the cows'

1. This rule offers nothing new as compared with the preceding one. Note, however, that *khyā* here denotes the replacement *khyāÑ* of *cakṣiṄ* 'to relate' (2.4.54 *cakṣiṅaḥ khyāñ*).

3.2.8 गापोष्टक्

gāpoṣṭak
/*gāpoḥ* 6/2 *ṭak* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *anupasarge* #3)
gāyateḥ pibateś ca dhātoḥ karmaṇy upapade' nupasarge ṭak pratyayo bhavati
Affix *ṬaK* occurs after verbal roots *gai* 'to sing' and *pā* 'to drink' used without a preverb when the roots cooccur with a *pada* which denotes *karman*.

EXAMPLES:

śakragaḥ 'he who sings the praises of Indra'
sāmagaḥ 'he who recites the *Sāmaveda*'
surāpaḥ 'he who drinks liquor'

1. This rule carries both '*karmaṇi*' as well as '*anupasarge*'. The *K* as an *it* in the affix facilitates application of rule 6.4.64 *āto lopa...* The *Ṭ* conditions the feminine derivate to end in *ṄīP* (4.1.15 *ṭiḍḍhāṇañ...*).

2. A *vārttika* proposes for affix *ṬaK* to be introduced after *pā* 'to drink', and *surā* and *śīdhu* 'liquor' to constitute its cooccurring objects. Thus, we get *surāpaḥ* 'he who drinks liquor', *surāpī* 'she who drinks liquor'. Similarly, *śīdhupaḥ* and *śīdhupī*. Note that if *pā* means 'to protect' then *ṬaK* cannot be used. Thus, we get: *surāpā* 'one who protects the liquor'. Similarly, if the object is not constituted by *surā*, the form will be different. This is illustrated by the difference in the feminine form: *kṣīrapā brāhmaṇī* 'a *brāhmaṇa* (widow) woman subsisting on milk'. The feminine is *kṣīrapā* parallel to *surāpī*. Consider the following where feminine is formed variously:

yā brāhmaṇī (surāpī/surāpā) bhavati naināṃ devāḥ patilokaṃ nayanti 'gods do not reunite a *brāhmaṇa* woman with her husband after death if she drinks liquor'.

3.2.9 हरतेरनुद्यमनेऽच्

harater anudyamane' c
/*harateḥ* 5/1 *anudyamane* 7/1 *ac* 1/1/

(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1)
harater dhātor anudyamane varttamānāt karmaṇy upapade' c pratyayo bhavati
Affix *aC* occurs after verbal root *hṛÑ* 'to carry, fetch' when it cooccurs with a *pada* which denotes *karman* and *anudyamana* 'lack of effort' is signified.

EXAMPLES:

aṃśaharaḥ 'he who receives a share'
rikthaharaḥ 'he who inherits wealth'

1. This rule introduces affix *aC* after verbal root *hṛÑ* when it is used without a preverb, and cooccurs with a *pada* denoting an object, provided *udyamana* 'to lift or hurl' is not expressed. This affix constitutes an exception to *aṆ*. Thus, we get: *bhārahāraḥ* 'porter' in *aṆ* as opposed to *aṃśaharaḥ* in *aC*.

2. A *vārttika* enumerates some cooccurrence conditions under which *grah* 'to grab' should be allowed affix *aC*. Thus, we get: *śaktigrahaḥ* 'he who holds a spear', *lāṅgalagrahaḥ* 'plough-man', *aṅkuśagrahaḥ* 'the elephant trainer', *yaṣṭigrahaḥ* 'an ascetic with a shaft', and *dhanurgrahaḥ* 'an archer', etc. Another *vārttika* advocates the derivation of *sūtragrahaḥ* 'holder of the thread; one who wears the sacred thread', also from *aC* under the specific meaning condition of 'holding'. Elsewhere, we get the form: *sūtragrāhaḥ* 'he who brings or produces the thread'

3.2.10 वयसि च

vayasi ca
/vayasi 7/1 *ca* Ø/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, harateḥ, ac #9)
vayasi gamyamāne harateḥ karmaṇy upapade' c pratyayo bhavati
Affix *aC* also occurs after verbal root *hṛÑ*when the root cooccurs with a *pada* which denotes *karman* and the derivate signifies *vayas* 'age'.

EXAMPLES:

asthiharaḥ 'a dog old enough to chew on bones'
kavacaharaḥ 'a *kṣatriya* old enough to wear protective armor'

1. This rule introduces affix *aC* in the context of *udyamana* which the preceding rule denies. Note that *udyamana*, whether real or imagined, must be relatable to a stage in life, i.e., youth, etc., which, in turn, is brought about by passage of time (*Kāś. yad udyamanaṃ kriyamāṇaṃ sambhāvyamānaṃ vā vayo gamayati tatrāyaṃ vidhiḥ*).

3.2.11 आङि ताच्छील्ये

āṅi tācchīlye
/*āṅi* 7/1 *tācchīlye* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *harateḥ ac* #9)
āṅpūrvād harateḥ karmaṇy upapade' c pratyayo bhavati tācchīlye gamyamāne
Affix *aC* occurs after verbal root *hṛÑ* used with the preverb *āṄ* when the root cooccurs with a *pada* which denotes *karman* and the derivate denotes *tācchīlya* 'natural inclination; characteristic nature'.

EXAMPLES:

puṣpāharaḥ 'he whose nature is to bring flowers'
phalāharaḥ 'he whose nature is to bring fruits'

1. This rule requires the introduction of *aC* after *hṛÑ* when it is used with the preverb *āṄ*, cooccurs with a word denoting an object, and *tācchīlya* is denoted by the derivate. Thus, we get *puṣpāharaḥ* 'he whose nature is to bring flowers'. The sense of *tācchīlya* is, here, explained by *Kāśikā* as: *puṣpādyāharaṇe svābhāvikī phalānapekṣā pravṛttir asya* 'he whose involvement in fetching the flowers, etc., is natural; without any expectation of results'. Elsewhere, we get: *bhārahāraḥ* 'he who carries the load for wages'.

3.2.12 अर्हः

arhaḥ
/*arhaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *ac* #9)
'arha pūjāyām' asmād dhātoḥ karmaṇy upapade' c pratyayo bhavati
Affix *aC* occurs after verbal root *arhA* 'to deserve' when the root cooccurs with a *pada* which denotes *karman*.

EXAMPLES:

pūjārhā 'she who deserves respect'

1. This rule allows for *aC* after *arhA* cooccurring with a word which denotes *karman*. It is an exception to the *aṆ*, and the corresponding derivates differ in the feminine. Thus we get derivates such as *pūjārhā*. It is because of affix *aC* that feminine affix *ṬāP* is introduced by 4.1.4 *ajādyataṣ ṭāp*. The *aṆ* derivate will entail *ṄīP* by 4.1.15 *ṭiḍḍhāṇañ...*

Derivation of the masculine form does not offer anything special with reference to the selection of affixes.

3.2.13 स्तम्बकर्णयोः रमिजपोः

stambakarṇayoḥ ramijapoḥ
/stambakarṇayoḥ 7/2 *ramijapoḥ* 6/2/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *supi* #4, *ac* #9)
'stamba, karṇa' ity etayoḥ subantayor upapadayor yathāsaṃkhyaṃ ramijapor dhātvor ac pratyayo bhavati
Affix *aC* occurs after verbal roots *ramA* 'to sport' and *japA* 'to whisper, chant' when the roots cooccur with a nominal *pada* which contains *stamba* 'grass' and *karṇa* 'ear' respectively.

EXAMPLES:

stamberamaḥ 'one who finds joy in playing with the pile of grass; elephant'
karṇejapaḥ 'one who whispers in the ear; fault-finder'

1. Note that *stamba* and *karṇa* do not here constitute the *pada* which denotes *karman*. For, *ramI* 'to play' is intransitive (*akarmaka*) and *jap* 'to mutter, chant' has *śabda* 'noise' as its only object. This is why *supi* is selected, as opposed to *karmaṇi*, to refer to the cooccurring word. Both *stamba* and *karṇa* should end in the locative (*saptamī*). Thus we get *stamberamaḥ* 'one who finds joy in playing with the pile of grass; an eleplant' and *karṇejapaḥ* 'fault-finder, slanderer'.

3.2.14 शमि धातोः संज्ञायाम्

śami dhātoḥ saṃjñāyām
/śami 7/1 *dhātoḥ* 5/1 *saṃjñāyām* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *ac* #9)
śamy upapade dhātumātrāt saṃjñāyāṃ viṣaye' c pratyayo bhavati
Affix *aC* occurs after a verbal root used in conjunction with a nominal *pada* which contains *śam* 'to be tranquil, beneficial' and the derivate signifies a *saṃjñā* 'name'.

EXAMPLES:

śaṃkarā nāma privrājikā 'a wandering female ascetic named *Śaṃkarā*'
śaṃkarā nāma śakunikā 'a bird named *śaṃkarā*'

1. This rule introduces affix *aC* after verbal roots in general when *śam* constitutes the cooccurring word, and the derivate is to denote a name (*saṃjñā*). Thus we get: *śaṃkaraḥ* 'Lord Śiva'. Why did Pāṇini use the word

dhātoḥ again? This is to indicate that whenever there is a rule which may block introduction of *aC*, that rule should be blocked by *aC* instead (*bādhakabādhanārtha*). For example, consider rule 3.2.20 *kṛño hetutācchīlyānulomyeṣu* which introduces affix *Ṭa* after verbal root *kṛÑ* when the cooccurring object denotes *hetu* 'cause', *tācchīlya* 'characteristic nature', and *ānulomya* 'amiability'. Now, if one wants to derive *śaṃkara* 'he whose nature it is to do good', rule 3.2.20 would become applicable. The purpose of restating *dhātoḥ* in our present rule is to block affix *Ṭa* in favor of *aC*. Thus, *Śaṃkara* will invariably be derived by *aC*. That is, all other things being equal, the consequence of blocking *Ṭa* by *aC* can be seen in the feminine derivate parallel to *śaṃkara*, the *aC*-derivate. The feminine form is derived by the introduction of affix *ṬāP* (4.1.14 *ajādy*...). That is, the form will be *śaṃkarā*, and not *śaṃkarī*, a derivate in *ṄīP* (4.1.15 *ṭiḍḍhāṇañ*...) parallel to the masculine derivate in *Ṭa* derived by 3.2.20 *kṛño hetu*...

3.2.15 अधिकरणे शेतेः

adhikaraṇe śeteḥ
/*adhikaraṇe* 7/1 *śeteḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *ac* #9)
śeter dhātor adhikaraṇe subanta upapade' c pratyayo bhavati
Affix *aC* occurs after verbal root *śīṄ* 'to recline' when the root cooccurs with a nominal *pada* which denotes *adhikaraṇa* 'locus'.

EXAMPLES:

khaśayaḥ 'one who reclines in the sky; bird'
garttaśayaḥ 'one who reclines in a hollow'

1. The *pada* which satisfies the cooccurrence condition must, here, be inferred as *supi*, since *karman* cannot make sense on account of the intransitive (*akarmaka*) *śī* 'to recline, sleep'. The meaning condition of *adhikaraṇe* further makes it possible to infer that the cooccurring word ends in the locative (*saptamī*). Thus we get *khe* = *ākāśe śete* = *khaśayaḥ*.

2. There are four *vārttika* under this rule which, in one way or the other, propose the introduction of affix *aC* when the cooccurrence condition of *adhikaraṇa* is not met. Consequently, we get *pārśva* 'side' in the derivation of *pārśvaśayaḥ* 'one who sleeps on his sides'. Similarly, we get *udaraśayaḥ* 'he who sleeps on his belly' and *pṛṣṭhaśayaḥ* 'he who sleeps on his back'. Yet another *vārttika* proposes the derivation of *uttānaśayaḥ* 'he who sleeps facing up' and *avamūrddhaśayaḥ* 'he who sleeps face-down'. The first *vārttika* implies that the cooccurring word ends in the instrumental. The second implies that it ended in the nominative. Refer to the *Mahābhāṣya* for further details.

3.2.16 चरेष्टः

careṣṭaḥ
/careḥ 5/1 *ṭaḥ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *adhikaraṇe* #15)
carater dhātor adhikaraṇe subanta upapade ṭapratyayo bhavati
Affix *Ṭa* occurs after verbal root *car* 'to wander' when the root cooccurs with a *pada* which ends in *sUP* and denotes locus (*adhikaraṇa*).

EXAMPLES:

kurucaraḥ 'he who wanders in the country of the Kurus'
kurucarī 'she who wanders in the country of the Kurus'

1. This rule carries *adhikaraṇe* from the preceding rule. Consequently, affix *Ṭa* is introduced after *car*. Of course, the cooccurring word which ends in the locative (*saptamī*) will denote *adhikaraṇa*. Thus we get *kurucarī* = *kuruṣu carati yā sā* 'she who wanders in the country of the Kurus'. The new affix *Ṭa*, as opposed to *aC*, is intended for the feminine derivate in *ṄīP* (4.1.15 *ṭiḍḍhāṇañ...*). The masculine in both cases would be *kurucaraḥ*. However, the feminine in the absence of *Ṭa* would have been *kurucarā*, a derivate in *ṬāP* by 4.1.4 *ajādyataṣ...*

3.2.17 भिक्षासेनादायेषु च

bhikṣāsenādāyeṣu ca
/bhikṣāsenādāyeṣu 7/3 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91,
supi # 4, *careṣ ṭaḥ* # 16)
'bhikṣā, senā, ādāya' ity eteṣūpapadeṣu carer dhātoṣ ṭapratyayo bhavati
Affix *Ṭa* occurs after verbal root *car* when the root cooccurs with a nominal *pada* which contains *bhikṣā* 'alms', *senā* 'army' and *ādāya* 'having obtained, brought'.

EXAMPLES:

bhikṣācaraḥ 'one who begs for alms'
senācaraḥ 'one who joins the army; soldier'
ādāyacaraḥ 'one who, after having obtained something, eats, or departs'

1. This rule again introduces affix *Ṭa*, but not in the sense of *adhikaraṇa*. Furthermore, it enumerates items such as *bhikṣā* 'alms', *senā* 'army' and *ādāya* 'having brought' which must constitute the cooccurring words

ending in *sUP*. For example, we get *bhiksāṃ carati* = *bhikṣācaraḥ* 'a beggar; he who earns alms' and *senāṃ carati* = *senācaraḥ* 'a soldier; he who joins or visits the army'. Obviously, these two are in consonance with *karmaṇi*, which forms the cooccurrence condition. The third *ādāyacaraḥ* has *ādāya* constituting the cooccurring word. It is a derivate in *LyaP* (7.1.37 *samāse' nañpūrve ktro lyap*) that denotes prior time (*pūrvakāla*). That is, it does not meet the condition of denoting an object. It is stated that *ādāya* would, here, denote the object at the strength of the Pāṇinian citation (*uccāraṇa-sāmarthya*). Consequently, *ādayācaraḥ* is explained as: 'one who, after having obtained something, eats, or departs'.

3.2.18 पुरोऽग्रतोऽग्रेषु सर्त्तेः

puro' grato' greṣu sartteḥ
/puro' grato' greṣu 7/3 *sartteḥ* 5/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṭa* #16*)*
'puras, agratas, agra' ity eteṣūpapadeṣu sartter dhātoṣ ṭa pratyayo bhavati
Affix *Ṭa* occurs after verbal root *sṛ* 'to crawl, move' when the root cooccurs with a nominal *pada* which contains *puras, agratas* or *agre* 'front'.

EXAMPLES:

puraḥsaraḥ 'he who goes ahead; messenger'
agratahsaraḥ 'id.; leader'
agresaraḥ 'id.'

1. This rule introduces affix *Ṭa* after verbal root *sṛ* when it is used with a cooccurring word constituted by *puraḥ*, *agrataḥ* and *agre*. The form *agre* is given, by way of *nipātana*, to ensure the derivation of *agresaraḥ*.

3.2.19 पूर्वे कर्त्तरि

pūrve kartari
/pūrve 7/1 *kartari* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *ṭaḥ* #16, *sartteḥ* #18*)*
pūrvaśabde kartṛvāciny upapade sartter dhātoṣ ṭapratyayo bhavati
Affix *Ṭa* occurs after verbal root *sṛ* when the root cooccurs with a nominal *pada* which contains *pūrva* as *kartṛ* 'agent'.

EXAMPLES:

pūrvasaraḥ 'one who goes first'

1. This rule introduces affix *Ṭa* after verbal root *sṛ* used in conjunction with *pūrva* as the agent. An example in point is: *pūrvasaraḥ*. This derivate should be contrasted with *pūrvasāraḥ* 'he who moves to the Eastern country', parallel to *pūrvadeśaṃ sarati*, a derivate in *aṆ* where the cooccurring word denotes an object.

3.2.20 ख्याजङ्घाबाह्वहर्यत्तद्धनुररुष्षु

kṛño hetutācchīlyānulomyeṣu
/kṛñaḥ 5/1 *hetutācchīlyānulomyeṣu* 7/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *karmaṇi* #1, *ṭa* #16)
karmaṇy upapade karoter dhātoṣ ṭapratyayo bhavati hetau tācchīlye ānulomye ca gamyamāne
Affix *Ṭa* occurs after verbal root *ḌUkṛÑ* when the root cooccurs with a *pada* which denotes *karman*, and the derivates denote *hetu* 'cause', *tācchilya* or *ānulomya* 'amiability, favorableness'.

EXAMPLES:

śokakarī 'that which causes grief'
yaśaskarī 'that which brings fame'
śrāddhakaraḥ 'one who performs the *śrāddha* (ritual offering for the dead)'
arthakaraḥ 'that which brings riches'
praiṣakaraḥ 'one who does as ordered'
vacanakaraḥ 'he who does as is told'

1. This rule introduces affix *Ṭa* after verbal root *ḌUkṛÑ*; under the condition of a conjoined *karman*, when the derivate denotes *hetu* 'cause', *tācchīlya* 'characteristic nature', and *ānulomya* 'amiability'. Thus we get: *yaśkarī vidyā* 'knowledge which is *hetu* (the cause) behind fame', *arthakaraḥ* 'he whose nature is to earn money', and *vacanakaraḥ putraḥ* 'a son who does what is asked of him' respectively. Note that affix *aṆ* (2.3.1 *karmaṇy aṇ*) must be introduced outside these meanings.

3.2.21 दिवाविभानिशाप्रभाभास्करान्तानन्तादिबहुनान्दीकिंलिपिलिबिबलिभक्तिकर्तृचित्रक्षेत्रसं-ख्याजङ्घाबाह्वहर्यत्तद्धनुररुष्षु

divāvibhāniśāprabhābhāskarāntānantādibahunāndīkiṃlipilibibalibhaktikartṛcitrakṣetrasaṃkhyājaṅghābāhvaharyattaddhanuraruṣṣu
/divā...aruṣṣu 7/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *karmaṇi* #1, *supi* #4, *ṭaḥ* #16, *kṛñaḥ* #20)
divādiṣūpapadeṣu karoter dhātoṣ ṭapratyayo bhavati
Affix *Ṭa* occurs after verbal root *ḌUkṛÑ* when the root cooccurs with a nominal *pada* which contains one of the following:

divā 'day', *vibhā* 'illumination, *niśā* 'night', *prabhā* 'light', *bhāsa* 'illumination', *anta* 'end', *ananta* 'endless', *ādi* 'beginning', *bahu* 'many, much', *nāndī* 'benediction', *kim* 'what', *lipi* 'script', *libi* 'script', *bali* 'ritual oblation', *bhakti* 'devotion', *kartṛ* 'doer', *citra* 'colorful, picture', *kṣetra* 'field', *saṃkhyā* 'numerals', *jaṅghā* 'thigh', *bāhu* 'arm', *ahan* 'day', *yad* 'that which (relative pronoun)', *tad* 'that which', *dhanus* 'bow' or *arus* 'wound'.

EXAMPLES:

divākaraḥ 'sun'
vibhākaraḥ 'id.'
niśākaraḥ 'moon'
bhāskaraḥ 'sun'
antakaraḥ '...one who brings something to an end; death'
anantakaraḥ 'he who does endless things'
ādikaraḥ 'one who begins; creator; founder'
bahukaraḥ 'one who does so many things'
nāndīkaraḥ 'he who recites the invocation'
kiṃkaraḥ 'servant'
lipikaraḥ 'copier'
libikaraḥ 'id.'
balikaraḥ 'one who offers ritual oblation'
bhaktikaraḥ 'devotee'
kartṛkaraḥ 'agent of doing'
citrakaraḥ 'maker of colorful objects; painter'
kṣetrakaraḥ 'farmer'
ekakaraḥ 'one who does only one thing at a time'
jaṅghākaraḥ 'runner; courier'
bāhukaraḥ 'laborer; brave'
ahaskaraḥ 'sun'
yatkaraḥ 'he who does what is needed'
tatkaraḥ 'he who does only what he is told'
dhanuṣkaraḥ 'bow-maker; archer'
aruṣkaraḥ 'wound'

1. Note that this rule introduces affix *Ṭa* after verbal root *ḌUkṛÑ* outside contexts covered by the preceding rule. Furthermore, the cooccurring words of this rule may or may not denote an object. This necessitates that both *karmaṇi* as well as *supi* be carried here. Which one is to be associated with a given derivate depends on whether or not the item cited in this rule can constitute an object. For example, since the word *divā* 'during the day' primarily denotes *adhikaraṇa* 'locus', its use in the derivation is to be made relative to the cooccurrence denoted by *supi*. Note, however, that the denotation of object by *divā*, in connection with *ḌUkṛÑ*, is not

impossible to comprehend. The remaining items can constitute the object. Thus, *prabhāṃ karoti* = *prabhākaraḥ* 'that which brings out light; Sun', etc.

2. Commentators inform that the word *bhāskara* is indicated, here, as having *-s* by *nipātana*. That is, the *-s* does not change to *visarga* via *r* (*rutva-visarga*). See the appendix for other derivational details.

3. A *vārttika* under this rule states that affix *aC* is to be introduced after *ḌUkṛÑ* when the root cooccurs with *kim* 'what', *yad* 'that which', *tad* 'that' and *bahu* 'many'. This statement is necessary so that feminine derivates, parallel to the masculine in *aC*, can be formed with affix *ṬāP* (4.1.4 *ajādyataṣ ṭāp*). Note that a derivate which terminates in *Ṭa* is required to take the feminine affix *ṄīP* in view of 4.1.15 *ṭiḍḍhāṇañ...*

3.2.22 कर्मणि भृतौ

karmaṇi bhṛtau
/*karmaṇi* 7/1 *bhṛtau* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *ṭa* #16, *kṛñaḥ* #20)
karmavācini karmaśabda upapade karoteṣ ṭa pratyayo bhavati bhṛtau gamyamānāyām
Affix *Ṭa* occurs after verbal root *ḌUkṛÑ* when the root cooccurs with a nominal *pada* which contains *karman* 'action; thing to be done' as object and the derivate signifies *bhṛti* 'wages'.

EXAMPLES:

karmakaraḥ 'one who works for wages; servant'

1. This rule allows for the introduction of affix *Ṭa* when *ḌUkṛÑ* is used with a cooccurring word which not only denotes *karman* 'object', but is also constituted by *karman* 'action'. The derivate must additionally denote *bhṛti* 'wages; substistence'. Note that *karman* of this rule is interpreted as denoting its word-form only (*svarūpa*). If the derivate does not denote wage-earning, affix *aṆ* will be applied to derive *karmakāraḥ* 'one who does something without any wages'. Obviously, in the context of wages (*bhṛti*), *karman* 'work' becomes the price (*nirveśa*) paid for the work accomplished.

3.2.23 न शब्दश्लोककलहगाथावैरचाटुसूत्रमन्त्रपदेषु

na śabdaślokakalahagāthāvairacāṭusūtramantrapadeṣu
/*na* 0 *śabda...padeṣu* 7/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2 *dhātoḥ* #3.1.91, *karmaṇi* #1, *ṭa* #16, *kṛñaḥ* #20)
śabdādiṣūpapadeṣu karoteṣ ṭapratyayo na bhavati

Affix *Ṭa* does not occur after verbal root *ḌUkṛÑ* when the root co-occurs with a nominal *pada* with *śabda* 'word', *śloka* 'verse of praise', *kalaha* 'quarrel', *gāthā* 'story', *vaira* 'enmity', *cāṭu* 'sycophant', *sūtra* 'a rule', *mantra* 'a *mantra*' or *pada* 'word' as *karman*.

EXAMPLES:

śabdakāraḥ 'grammarian'
ślokakāraḥ 'he who writes verses of praise; poet'
kalahakāraḥ 'he who quarrels'
gāthākāraḥ 'writer of a story'
vairakāraḥ 'enemy'
cāṭukāraḥ 'sycophant'
sūtrakāraḥ 'he who formulates rules'
mantrakāraḥ 'he to whom a *mantra* is revealed; sage'
padakāraḥ 'he who divides the *saṃhitā* text into the *pada* text'

1. Note that the negation of this rule is aimed against the positive provision of affix *Ṭa* made available after verbal root *ḌUkṛÑ* by rule 3.2.20 *kṛño hetu...* Rule 3.2.1 *karmaṇy aṇ* will now introduce the general (*autsargika*) affix *aṆ* in these contexts where *Ṭa* is negated.

3.2.24 स्तम्बशकृतोरिन्

stambaśakṛtor in
|stambaśakṛtoḥ 7/2 in 1/1|
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, kṛñaḥ #20)
'stamba, śakṛt' ity etayoḥ karmaṇor upapadayor in pratyayo bhavati
Affix *iN* occurs after verbal root *ḌUkṛÑ* when the root cooccurs with a nominal *pada* which contains *stamba* 'bundle of grass' and *śakṛt* 'excrement' as *karman*.

EXAMPLES:

stambakariḥ 'bundle of grass; paddy'
śakṛtkariḥ 'one which excretes all the time; a calf'

1. This rule introduces affix *iN* after verbal root *ḌUkṛÑ* when *stamba* and *śakṛt* constitute the cooccurring objects. A *vārttika* under this rule proposes that such derivates should be limited to denoting the sense of paddy (*vrīhi*) and calf (*vatsa*). For, elsewhere, the derivates will entail *aṆ* with forms such as *stambakāraḥ* 'sheaf-maker' and *śakṛtkāraḥ* 'he who excretes'.

3.2.25 हरतेर्दृतिनाथयोः पशौ

harater dṛtināthayoḥ paśau

/harateḥ 5/ dṛtināthayoḥ 7/3 paśau 7/ /
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, in #24)
dṛti, nātha ity etayoḥ karmaṇor upapadáyoḥ harater dhātau paśau kartari in pratyayo bhavati
Affix *iN* occurs after verbal root *hṛ* 'to carry' when the root coöccurs with a nominal *pada* which contains *dṛti* 'leather bag' or *nātha* 'lord, master' as *karman* and the derivate denotes an animal (*paśu*) agent.

EXAMPLES:

dṛtihariḥ paśuḥ 'an animal carrying a big leather bag full of water'
nāthahariḥ paśuḥ 'an animal carrying its master'

1. Affix *iN* is also introduced after verbal root *hṛ* when the cooccurring object is constituted by *dṛti* and *nātha*, and the derivate denotes an animal agent. Thus, *nāthahariḥ* denotes an animal which carries its master. Outside the meaning condition of an animal, the derivates have to be derived with affix *aṆ* as in *nāthahāraḥ* 'he who carries his master'.

3.2.26 **फलेग्रहिरात्मम्भरिश्च**

phalegrahir ātmaṃbhariś ca
/phalegrahiḥ 1/1 ātmaṃbhariḥ 1/1 ca Ø/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, in #24)
phalegrahiḥ ātmaṃbhariḥ ity etau śabdau nipātyete
Affix *iN* also occurs by *nipātana* in the derivation of *phalegrahiḥ* and *ātmaṃbhariḥ*.

EXAMPLES:

phalegrahiḥ 'that which bears fruit; tree'
ātmaṃbhariḥ 'he who provides for his own self; self-centered'

1. This rule introduces affix *iN* after *grah* and *bhṛÑ* by means of *nipātana* to derive *phalegrahiḥ* 'that which holds (bears) fruit; tree' and *ātmaṃbhariḥ* 'he who provides for himself'. The first example entails the cooccurrence of *phala* 'fruit' with its termination in *e* both by *nipātana*. Similarly, the cooccurrence of *ātman* with the augment *mUM* is also accomplished via *nipātana* in the second example.
2. Commentators state that *ca* is used here to bring something which may have remained unstated (*anuktasamuccayārtha*). Thus, we also get: *kukṣimbhariḥ* and *udarambhariḥ* meaning 'he whose preoccupation is always to fill his belly'

3.2.27 छन्दसि वनसनरक्षिमथाम्

chandasi vanasanarakṣimathām
/chandasi 7/1 *vanasanarakṣimathām* 6/3/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *in* #24)
'vana ṣaṇa sambhaktau, rakṣa pālane, matha vilodane' ity etebhyaḥ karmaṇy upapade chandasi viṣaye in pratyayo bhavati
Affix *iN* occurs, in the Vedic, after verbal roots *vanĀ* and *ṣaṇĀ* 'to respect, win', *raksA* 'to protect' and *manthA* 'to churn' when the roots cooccur with a nominal *pada* which denotes *karman.*

EXAMPLES:

brāhmaṇavaním... '...honoring a *brāhmaṇa...*'
gosaním... '...winning a cow...'
páthirakṣi... '... protector of the road...'
hávirmathīnām... '...the ritual oblation of food churned out...'

3.2.28 एजेः खश्

ejeḥ khaś
/ejeḥ 5/1 *khaś* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* # 1)
'ejṛ kampane' ity asmād ṇyantāt karmaṇy upapade khaś pratyayo bhavati
Affix *KHaŚ* occurs after verbal root *ejṚ* 'to tremble', used with *ṆiC* 'causative', when the root cooccurs with a nominal *pada* which denotes *karman.*

EXAMPLES:

aṅgamejayaḥ 'he who causes limbs to tremble with fear'
janamejayaḥ 'he who causes people to tremble with fear'

1. Note that affix *KHaŚ* is marked with two elements of *it*: *KH* and *Ś*. The first is intended for the introduction of augment *mUM* by rule 6.3.66 *arurdviṣad...*; the second is needed to facilitate the assignment of the term *sārvadhātuka* by 3.4.113 *tiṅśit....* The verbal root is specified as *eji* which refers to the causal form (*ṇyanta*) of *ejṚ* 'to tremble'.

2. A *vārttika* under this rule proposes the introduction of affix *KHaŚ* after verbal roots *ajA* 'to go', *dheṬ* 'to suck', *tud* 'to torment' and *OhāK* 'to abandon' when they are used with cooccurring words constituted by *vāta* 'wind', *śunī* 'female dog', *tila* 'sesame' and *śarddha* 'flatus' respectively. Thus we get: *vātamajāḥ* 'the deer which move with the swiftness of wind', *śunindhayaḥ'* 'those which suckle at the breast of a female dog; puppies', *tilantudaḥ* 'those who crush the sesame for oil; oilmen' and *śarddhañjahāḥ* (*māṣāḥ*) 'the Mung beans which cause excessive gas'.

3.2.29 नासिकास्तनयोर्ध्माधेटोः

nāsikāstanayor dhmādheṭoḥ
/nāsikāstanayoḥ 7/2 dhmādheṭoḥ 6/2/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, khaś #28)
nāsikāstanayoḥ karmaṇy upapadayor dhmādheṭor dhātvoḥ khaś pratyayo bhavati
Affix *KHaŚ* occurs after verbal roots *dhmā* 'to blow, beat' and *dheṬ* 'to suckle, drink' when the roots cooccur with a nominal *pada* which contains *nāsikā* 'nose' and *stana* 'breast' as *karman*.

EXAMPLES:

nāsikandhamaḥ 'he who blows through his nose'
nāsikandhayaḥ 'he who drinks through his nose'
stanandhayaḥ 'one who suckles at the breast...; an infant'

1. This rule allows for the introduction of affix *KHaŚ* after verbal roots *dhmā* and *dheṬ* when they cooccur with objects constituted by *nāsikā* and *stana*.

Note that *nāsikāstana* of *nāsikāstanayoḥ* does not follow the rule of constituent ordering specified for such compounds. That is, it does not prepose *stana* as rule 2.2.34 *alpāc taram* would demand on the basis of comparatively fewer vowels in *stana*. This transposition in order consequently indicates that the principle of *yathāsaṃkhya* (1.3.10 *yathāsaṃkhyam...*) is not desired in connection with the assignment of equivalency of cooccurring words and the verbs of this rule. That is, the rule should not be interpreted as meaning that '*KHaŚ*' is introduced after *dhmā* and *dheṬ* when *nasikā* and *stana* constitute the cooccurring words'. In fact, *stana* constitutes a cooccurring word only in the context of *dheṬ* On the other hand, *nāsikā* appears in the context of both the verbs.

2. The feminine derivate parallel to *stanandhayaḥ* is derived as *stanandhayī* with affix *ṄīP* as per rule 4.1.15 *ṭiḍḍhāṇañ...* at the strength of *Ṭ* as an *it* in the verb.

3.2.30 नाडीमुष्ट्योश्च

nāḍīmuṣṭyoś ca
/nāḍīmuṣṭyoḥ 7/2 ca 0 /
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, khaś #28, dhmādheṭoḥ #29)
Affix *KHaŚ* occurs after verbal roots *dhmā* and *dheṭ* when the roots also cooccur with a nominal *pada* which contains *nāḍī* 'tube, vein' and *muṣṭi* 'fist' as *karman*.

EXAMPLES:

nāḍindhamaḥ 'he who blows through a tube'
muṣṭindhamaḥ 'he who blows through his fist'
nāḍindhayaḥ 'he who drinks through a tube'
muṣṭindhayaḥ 'he who suckles at the breast through his fist; an infant'

1. Here again the assignment of equivalency of cooccurring words and verbal roots *dhmā* and *dheṬ* is not made according to the order of enumeration (*saṃkhyātānudeśa*) for reasons similar to those discussed in connection with the preceding rule.

2. Particle *ca* is again used to facilitate the derivation of forms for which no statement is made (*anuktasamuccayārtha*). This way, we can account for the derivates of *KHaŚ* such as *ghaṭindhamaḥ* 'he who blows through a pitcher', *ghaṭindhayaḥ* 'he who drinks from a pitcher', *khārindhamaḥ* 'kettle drummer', *khārindhayaḥ* 'he who drinks from a kettle', *vātandhamaḥ* and *vātandhayaḥ* 'mountain'.

3.2.31 उदि कूले रुजिवहोः

udi kūle rujivahoḥ
/*udi* 7/1 *kūle* 7/1 *rujivahoḥ* 6/2/
(*pratyayoḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *khaś* #28)
'rujo bhaṅge, vaha prāpaṇe' ity etābhyām utpūrvābhyāṃ kūle karmaṇy upapade khaś pratyayo bhavati
Affix *KHaŚ* occurs after verbal roots *ruj* 'to break, shatter' and *vahA* 'to carry', used with the preverb *ud*, when the roots cooccur with a nominal *pada* which contains *kūla* 'bank' as *karman*.

EXAMPLES:

kūlamudrujaḥ 'that which breaks the embankment; a chariot, or river'
kūlamudvahaḥ 'the river which washes away the embankment'

1. This rule introduces affix *KHaŚ* after verbal roots *ruj* and *vah* used with the preverb *ud* when they cooccur with a word constituted by *kūla* 'edge' denoting *karman* 'object'. Thus we get *kūlamudrujaḥ*. Note that *udi*, when interpreted as locative, cannot qualify for cooccurrence condition. It must therefore serve the function of indicating the use of the preverb *ud* with the verb.

3.2.32 वहाभ्रे लिहः

vahābre lihaḥ
/*vahābhre* 7/1 *lihaḥ* 5/1/

(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, khaś #28)
'vaha, abhra' ity etayoḥ karmaṇor upapadayoḥ liher dhātoḥ khaś pratyayo bhavati
Affix *KHaŚ* occurs after verbal root *lihA* 'to lick' when the root cooccurs with a nominal *pada* which contains *vaha* 'shoulder' and *abhra* 'cloud' as *karman.*

EXAMPLES:

vahaṃlihaḥ gauḥ 'that which licks its yoke-hurt shoulders; an ox'
abhraṃlihaḥ 'that which reaches the clouds; a palace, or winds that carry the clouds'

1. This rule introduces affix *KHaŚ* after verbal root *lih* when *vaha* and *abhra* constitute the cooccurring objects. Thus, we get: *vahaṃlihaḥ* and *abhraṃlihaḥ*.

3.2.33 परिमाणे पचः

parimāṇe pacaḥ
/parimāṇe 7/1 *pacaḥ* 5/1/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, khaś #28)
parimāṇe karmaṇy upapade paceḥ khaś pratyayo bhavati
Affix *KHaŚ* occurs after verbal root *ḌUpacAṢ* 'to cook' when the root cooccurs with a nominal *pada* which denotes *parimāṇa* 'a measure' as *karman.*

EXAMPLES:

prasthampacā sthālī 'a pot big enough for cooking food equal in weight to a *prastha*'
droṇampacaḥ 'a pot big enough for cooking food equal in weight to a *droṇa*'
khārimpacaḥ kaṭāhaḥ 'a kettle which is big enough for cooking food equal in weight to a *khārī*'

1. This rule introduces affix *KHaŚ* when what constitutes the cooccurring object denotes *parimāṇa* 'measure'. Thus, *prasthampacā* (*sthālī*) denotes a pot which is big enough for cooking something equal in weight to a *prastha.* Note that a *prastha* equals one-fourth of the weight of a *droṇa* which itself is one-sixteenth of a *khāri.* A *khāri* could be close to 150 kilograms in weight.

3.2.34 **मितनखे च**

mitanakhe ca
/mitanakhe 7/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *khaś* #28, *pacaḥ* #33)
'mita, nakha' ity etayoḥ karmaṇor upapadayoḥ paceḥ khaś pratyayo bhavati
Affix *KHaŚ* also occurs after verbal root *ḌUpacAṢ* when the root cooccurs with a nominal *pada* which contains *mita* 'measured, limited' and *nakha* 'nails' as *karman*.

EXAMPLES:

mitampacā brāhmaṇī 'a *brāhmaṇa* woman who cooks very limited amount of food'
nakhampacā yavāgūḥ 'barley gruel so hot that could burn the nails'

1. This rule carries the *anuvṛtti* of *pac*, and introduces affix *KHaŚ* to derive the stated examples when *mita* and *nakha* constitute the cooccurring objects.

3.2.35 **विध्वरुषोस्तुदः**

vidhvaruṣos tudaḥ
/vidhvaruṣoḥ 7/2 *tudaḥ* 5/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *khaś* #28)
'vidhu, arus' ity etayoḥ karmaṇor upapadayoḥ tuder dhātoḥ khaś pratyayo bhavati
Affix *KHaŚ* occurs after verbal root *tud* 'to torment' when the root cooccurs with a nominal *pada* which contains *vidhu* 'moon' and *arus* 'wound' as *karman*.

EXAMPLES:

vidhuntudaḥ rāhuḥ 'Rāhu (one of the moon's nodes) which, according to mythology, torments (eclipses) the moon'
aruntudaḥ 'an acutely painful wound'

3.2.36 **असूर्यललाटयोर्दृशितपोः**

asūryalalāṭayor dṛśitapoḥ
/asūryalalāṭayoḥ 7/2 *dṛśitapoḥ* 6/2/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *khaś* #28)
'asūrya, lalāṭa' ity etayoḥ karmaṇor upapadayoḥ dṛśitapor dhātoḥ khaś pratyayo bhavati

Affix *KHaŚ* occurs after verbal roots *dṛśIR* 'to see' and *tapA* 'to heat, be hot' when the roots cooccur with a nominal *pada* which contains *asūrya* 'not... sun' and *lalāṭa* 'forehead' respectively as *karman*.

EXAMPLES:

asūryampaśyā rājadārāḥ 'women of the royalty who do not even see the sun let alone any other man'
lalāṭantapaḥ sūryaḥ 'that which burns the forehead; blazing sun'

1. This rule introduces affix *KHaŚ* after verbal roots *dṛśIR* and *tapA* when they cooccur with an object constituted by forms such as *asūrya* and *lalāṭa* 'forehead' respectively. Thus *asūryampaśyā rājadārāḥ*. Note that *asūrya* entails *naÑ* 'negation' of *darśana* 'seeing' denoted by *dṛśIR* which gets replaced with *paśya* (7.3.78 *pāghrā...*). Affix *KHaŚ* cannot be introduced if the negation related to Sun (*sūrya*). Thus, *naÑ* negates the verb and not the noun Sun. The compound lacks *sāmarthya* 'fitness' based on syntactico-semantic relation, and hence, its formation is allowed only at the strength of this rule.

3.2.37 **उग्रम्पश्येरम्मदपाणिन्धमाश्च**

ugrampaśyerammadapāṇindhamāś ca
/ugram...dhamāḥ 1/3 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *khaś* #28)
'ugrampaśya, irammada, pāṇindhama' ity ete śabdā nipātyante
Affix *KHaŚ* also occurs after verbal roots in the derivation of *ugrampaśya, irammada* and *pāṇindhama* by *nipātana*.

EXAMPLES:

ugrampaśyaḥ 'he who is fierce looking'
irammadaḥ 'one who takes delight in drinking; Agni; lightning in the clouds'
pāṇindhamaḥ 'a road which is traversed while clapping to ward off animals, snakes, etc.; a lonely, dark road'

1. This rule derives *ugrampaśya, irammada,* and *pāṇindhama*. This last has been explained by Haradatta (*PM* ad *Kāś* II:566) as: *yeṣu gacchadbhiḥ sarpādyapanodāya pāṇayo dhmāyante* 'a road while traversing which one claps hands to ward off snakes, etc.'

3.2.38 **प्रियवशे वदः खच्**

priyavaśe vadaḥ khac
/priyavaśe 7/1 *vadaḥ* 5/1 *khac* 1/1/

(pratyayaḥ #3.1., paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1)
'priya, vaśa' ity etayoḥ karmaṇor upapadayor vader dhātoḥ khac pratyayo bhavati
Affix *KHaC* occurs after verbal root *vadA* when the root cooccurs with a *pada* which contains *priya* 'dear' and *vaśa* 'obedient, submissive' as *karman*.

EXAMPLES:

priyaṃvadaḥ 'he who speaks dear'
vaśaṃvadaḥ 'obedient, submissive'

1. This rule introduces affix *KHaC* after verbal root *vad* 'to speak' when it cooccurs with an object constituted by *priya* and *vaśa*. The *KH* of this affix as an *it* is intended for the augment *mUM* (6.3.67 *arurdviṣad...*). Its *C* is used as an *it* to distinguish it from any other affix (*viśeṣaṇārtha*). Thus, consider 6.4.94 *khaci hrasvaḥ*, where affix *KHaC* qualified with *C* distinguishes itself from *KHaŚ*.

2. A question is raised as to why examples covered by this rule cannot be derived by *KHaŚ* instead. This will save the trouble of having an additional affix. It is stated that a different affix, i.e., *KHaC*, is intended more for the derivates of subsequent rules (*pratyayāntarakaraṇam uttarārtham*). For example, in the derivates of the next rule, *KHaC* facilitates the shortening of the long vowel (6.4.94 *khaci hrasvaḥ*) and the deletion of *ṆiC*. If the affix is formulated more for the purpose of the subsequent rules then why formulate it here (*iha karaṇe kiṃ prayojanam*)? For purposes of indicating (*jñāpanārtham*) that it can be applicable elsewhere also. This way, one does not have to make a statement that *KHaC* obtains also when a nominal *pada* cooccurs with *gam* in the derivation of *mitaṅgamo hastī* 'slow-moving; elephant'.

3. Note that *vihaṅgaḥ* / *vihaṅgamaḥ* 'bird' and *bhujaṅgaḥ* / *bhujaṅgamaḥ* that which moves crookedly; snake' are also stated as derived by *nipātana* (see *vārttikas* under this rule).

3.2.39 **द्विषत्परयोस्तापेः**

dviṣatparayoḥ tāpeḥ
/dviṣatparoyoḥ 7/2 *tāpeḥ* 7/1/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, karmaṇi #1, khac #38)
dviṣatparayoḥ karmaṇor upapadayos tapor dhātoḥ khac pratyayo bhavati
Affix *KHaC* occurs after verbal root *tāpi* when the root cooccurs with a *pada* which contains *dviṣat* 'enemy' and *para* 'others' as *karman*.

EXAMPLES:

dviṣantapaḥ 'he who torments the enemies'
parantapaḥ 'he who torments others (enemies)'

1. Verbal root *tāpi* is interpreted here as ending in *ṆiC*. That is, affix *KHaC* is introduced only after the causal form of *tapA* 'be hot'. Thus, we get *dviṣantapaḥ* and *parantapaḥ*. Note that *tāpeḥ* thus could be interpreted as referring to the causal (*ṆiC*) form of the *bhvādi* root *tapA* as well as the *curādi*, which is causal anyway.

Note that affix *aṆ*, and not *KHaC*, is to be introduced when *dviṣat* ends in the feminine and constitutes the cooccurring word denoting object. Thus, *dviṣatīṃ tāpayati* = *dviṣatītāpaḥ* 'he who tortures women'.

3.2.40 **वाचि यमो व्रते**

vāci yamo vrate
/*vāci* 7/1 *yamaḥ* 5/1 *vrate* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *khac* #38)
vākśabde karmaṇy upapade yamer dhātoḥ khac pratyayo bavati vrate gamyamāne
Affix *KHaC* occurs after verbal root *yamA* 'to curb, suppress' when the root cooccurs with a *pada* which contains *vāk* as *karman* and the derivate denotes *vrata* 'ritual vow'.

EXAMPLES:

vācaṃyama āste 'here he is, having taken a ritual vow of not speaking'

1. This rule introduces affix *KHaC* after verbal root *yam* when it is used with *vāk* 'speech' as *karman* and the derivate is to denote *vrata*. The word *vrata* is explained as *śāstre vihitaḥ niyamaḥ* 'conduct in consonance with the prescriptions of religious treatises'. Thus, *vācaṃyama āste*. Note that if the meaning is not '*vrata*' the derivate will entail *aṆ*. That is, it will be *vāgyāmaḥ* 'he whose voice is restrained for some reason or the other'.

3.2.41 **पूःसर्वयोर्दारिसहोः**

pūḥsarvayor dārisahoḥ
/*pūḥsarvayoḥ* 7/2 *dārisahoḥ* 6/2/
(*pratyayaḥ* # 3.1.1, *paraś ca* # 3.1.2, *dhātoḥ* # 3.1.91, *karmaṇi* # 1, *khac* # 38)
'pur, sarva' ity etayoḥ karmaṇor upapadayor yathāsaṃkhyaṃ dārisahor dhātvoḥ khac pratyayo bhavati
Affix *KHaC* occurs after verbal roots *dāri* 'to split' and *ṣahA* 'to

endure' when the roots cooccur with a *pada* which contains *pur* or *sarva* 'all' as *karman,* respectively.

EXAMPLES:

purandaraḥ 'he who rips the cities apart; Indra'
sarvaṃsahaḥ 'he who endures everything; a king'

1. This rule introduces affix *KHaC* after verbal roots *dāri* and *ṣah* 'to endure' when they are used with cooccurring objects *pur* and *sarva* respectively. Thus we get: *purandaraḥ* and *sarvaṃsaho rājā*. *Kāśikā* suggests that *bhagandaraḥ* 'fistula in the anus' should also be derived by introduction of *KHaC* with *bhaga* as the cooccurring object of *dāri*.

3.2.42 सर्वकूलाभ्रकरीषेषु कषः

sarvakūlābhrakarīṣeṣu kaṣaḥ
/sarvakūlābhrakarīṣeṣu 7/3 *kaṣaḥ* 5/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *khac* #38)
'sarva, kūla, abhra, karīṣa' ity eteṣūpapadeṣu kaṣer dhātoḥ khac pratyayo bhavati
Affix *KHaC* occurs after verbal root *kaṣA* 'to scratch, scrape, injure' when the root cooccurs with a *pada* which contains *sarva, kūla, abhra* or *karīṣa* 'cowdung' as *karman.*

EXAMPLES:

sarvaṃkaṣaḥ khalaḥ 'a wicked person who destroys everything'
kūlaṃkaṣā nadī 'a river which scrapes its banks'
abhraṃkaṣo giriḥ 'a mountain which is so high that it reaches the clouds'
karīṣaṃkaṣā vātyā 'a whirlwind strong enough to blow away the cowdung'.

3.2.43 मेघर्त्तिभयेषु कृञः

megharttibhayeṣu kṛñaḥ
/megharttibhayeṣu 7/3 *kṛñaḥ* 5/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi*#1, *khac* #38)
'megha, ṛti, bhaya' ity eteṣu karmasūpapadeṣu kṛñaḥ khac pratyayo bhavati
Affix *KHaC* occurs after verbal root *ḌUkṛÑ* when it cooccurs with a *pada* which contains *megha* 'cloud', *ṛti* 'misfortune' or *bhaya* 'fear' as *karman.*

EXAMPLES:

meghaṃkaraḥ 'that which causes clouds to form'
ṛtiṃkaraḥ 'that which is unfortunate'
bhayaṃkaraḥ 'that which causes fear'

1. Note that *abhayaṅkaraḥ* 'he who removes fear' is also derived with *KHaC* when *ḌUkṛÑ* cooccurs with *abhaya*, which denotes object.

3.2.44 क्षेमप्रियमद्रेऽण् च

kṣemapriyamadre' ṇ ca
/kṣemapriyamadre 7/1 *aṇ* 1/1 *ca* Ø/
(*pratyayaḥ* # 3.1.1, *paraś ca* # 3.1.2, *dhātoḥ* # 3.1.91, *khac* # 38, *kṛñaḥ* #43)
'kṣema, priya, madra' ity eteṣu karmasūpapadeṣu karoter aṇ pratyayo bhavati cakārāt khac ca
Affix *aṆ*, as well as *KHaC*, occurs after verbal root *ḌUkṛÑ* when it coocurs with a *pada* which contains *kṣema* 'well-being', *priya*, or *madra* 'joy', as *karman*.

EXAMPLES:

kṣemakāraḥ 'that which is beneficent; propitious'
kṣemaṃkaraḥ 'id.'
priyakāraḥ 'he who does things which are dear'
priyaṃkaraḥ 'id.'
madrakāraḥ 'he who does what brings joy'
madraṃkaraḥ 'id.'

1. Note that Pāṇini could have formulated the rule as: *kṣemapriyamadre vā* 'affix *KHaC* is introduced optionally...'. But note that he, instead, used *aṆ* to indicate that the option is available for *aṆ* against *KHaC*, and no other affix. This would, then, rule out the *Ṭa* of rule 3.2.20 *kṛño tācchīlya...* Blocking affix *Ṭa* would automatically lead to blocking the introduction of *ṄīP* (4.1.15 *ṭiḍḍhāṇañ...*) in the case of corresponding feminine derivates. For, the choice of the feminine affix is conditioned by *Ṭ* as an *it* in the affix. Thus we get a derivate such as: *alpārambhāḥ kṣemakarāḥ* 'small beginnings bring prosperity' as opposed to **kṣemakarī*.

3.2.45 आशिते भुवः करणभावयोः

āśite bhuvaḥ karaṇabhāvayoḥ
/āśite 7/1 *bhuvaḥ* 5/1 *karaṇabhāvayoḥ* 7/2/
(*pratyayaḥ* # 3.1.1, *paraś ca* # 3.1.2, *dhātoḥ* # 3.1.91, *supi* # 4, *khac* # 38)
āśitaśabde subante upapade bhavater dhātoḥ karaṇe bhāve cārthe khac pratyayo bhavati

Affix *KHaC* occurs to denote *karaṇa* 'instrument', or *bhāva* 'root-sense', after verbal root *bhū* when the root cooccurs with a *pada* which ends in *sUP* and contains *āśita* 'he who has eaten to his satisfaction'.

EXAMPLES:

āśitaṃbhavaḥ odanaḥ 'a variety of rice which pleases the appetite'
āśitaṃbhavaṃ varttate 'it is the state of eating to one's satisfaction'

1. This rule would require *supi* to constitute the cooccurrence condition, since verbal root *bhū* 'to be' is intransitive (*akarmaka*).

3.2.46 **संज्ञायां भृतॄवृजिधारिसहितपिदमः**

saṃjñāyāṃ bhṛtṛvṛjidhārisahitapidamaḥ
/*saṃjñāyāṃ* 7/1 *bhṛtṛvṛjidhārisahitapidamaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *khac* #38)
'bhṛ, tṛ, vṛ, ji, dhāri sahi, tapi, dama' ity etebhyo dhātubhyaḥ saṃjñāyāṃ viṣaye khac pratyayo bhavati
Affix *KHaC* occurs after verbal roots *bhṛÑ* 'to provide', *tṛÑ* 'to float', *vṛÑ* 'to choose', *ji* 'to win', *dhāri* 'to hold', *ṣahA* 'to endure', *tapA* 'to be hot' or *damA* 'to control' when the roots cooccur with a *pada* which ends in a *sUP* and the derivate denotes a *saṃjñā* 'name'.

EXAMPLES:

viśvambharā vasundharā 'the earth which provides for everyone'
rathantaraṃ sāma 'a particular recital of the *Sāmaveda*'
patiṃvarā kanyā 'a girl who is about to chose her husband'
śatruñjayo hastī 'an elephant who conquers the enemy'
yugandharaḥ parvataḥ 'a mountain'
śatruṃsahaḥ 'a person who can face his enemies'
śatruṃtapaḥ 'a person who torments his enemies'
arindamaḥ 'a person who crushes his enemies'

1. Note that both '*karmaṇi*', as well as '*supi*', constitute the cooccurrence condition, depending on the derivate on hand. *Nyāsa* (ad *Kāś* III:571) explains it as follows:

saṃjñāśabdā hi dvividhā bhavanti kecid avayavārthānugatāḥ, yathā saptaparṇa iti; kecit tu viparītāḥ tailapāyikā iti. tad iha yatrāvayavārthānugamo' sti viśvambharaḥ, śatruntapa ityādiṣu, tatra karmaṇīti sambadhyate; yatra tv avayavārthānugamo nāsti, yathā rathantaraṃ sāma, tatra vyutpatyarthaṃ supīti sambadhyate: rathena taratīti rathe taratīti vā 'names

indeed are of two types: some follow the meaning of their constituents as in *saptaparṇa* 'that which has seven leaves'; some such as *tailapāyikaḥ* do just the opposite. Consequently here, where the meaning of the derivate such as *viśvambharaḥ* follows the constituency, '*karmaṇi*' is related to the derivational context as the cooccurring *pada*; in examples such as *rathantaraṃ sāma* where the derivate does not follow the constituent meaning, '*supi*' is related...'.

2. Note, that outside the meaning of *saṃjñā*, affix *aṆ* should apply to derive examples such as *kuṭumbabhāraḥ* (*kuṭumbaṃ bibhartti*) 'he who provides for his family'.

3.2.47 **गमश्च**

gamaśca
/*gamaś* 5/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *khac* #38, *saṃjñāyām* #46)
gamer dhātoḥ supy upapade saṃjñāyāṃ viṣaye khac pratyayo bhavati
Affix *KHaC* also occurs after verbal root *gam* when the root cooccurs with a *pada* which ends in *sUP* and the derivate denotes a *saṃjñā*.

EXAMPLE:

sutaṃgamaḥ 'name of a sage'

3.2.48 **अन्तात्यन्ताध्वदूरपारसर्वानन्तेषु डः**

antātyantādhvadūrapārasarvānteṣu ḍaḥ
/*antā...sarvānteṣu* 7/3 *ḍaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *gamaḥ* #47)
'*anta, atyanta, adhvan, dūra, pāra, sarva, ananta*' *ity eteṣu karmasūpapadeṣu gamer ḍapratyayo bhavati*
Affix *Ḍa* occurs after verbal root *gam* when the root cooccurs with a *pada* which contains *anta* 'end', *atyanta* 'excessive', *adhvan* 'path, road', *dūra* 'far', *pāra*, 'across, the other side', *sarva* or *ananta* 'endless' as *karman*.

EXAMPLES:

antagaḥ 'he who keeps going until the end'
atyantagaḥ 'he who goes very fast'
adhvagaḥ 'he who traverses the road; a traveller'
dūragaḥ 'he who goes very far'
pāragaḥ 'he who has crossed over'
sarvagaḥ 'he who goes everywhere'
anantagaḥ 'he who goes to infinity'

1. Note that '*saṃjñāyām*' is not carried here. The *Ṭ*, as an *it*, is intended to facilitate the deletion of *ṭi* (6.4.143 *ṭeḥ*; 1.1.62 *aco' ntyādi ṭi*). There is a problem here. The *ṭi*-deletion applies to an item which has been assigned the term *bha*. These derivates should not entail this term-assignment. That is, the application of *ṭi*-deletion becomes questionable. It, however, still applies at the very strength of the *Ḍ* of the affix as an *it*. The *Ḍ* conditions *ṭi*-deletion in rule 6.4.143 *ṭeḥ*. If *ṭi*-deletion does not apply to these examples, making *Ḍ* as an *it* would become vacuous (*vyartha*). Also see the *Mahābhāṣya* (ad 6.4.143 *ṭeḥ; dity abhasyāpi anubandhakaraṇasāmarthyāt*).

2. Note that the *Mbh.* (III: 236–37) also considers some *vārttikas* under this rule for deriving *pannagaḥ* 'that which goes while creeping'; *sarvatragaḥ* 'he who goes everywhere; omnipresent', *uragaḥ* 'snake; that which moves by means of its chest'; *sugaḥ* 'that which is easily accessible'; *durgaḥ* 'that which is not easily accessible; fort'; and *nirgaḥ* 'country'.

3.2.49 **आशिषि हनः**

āśiṣi hanaḥ
/*āśiṣi* 7/1 *hanaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *ḍaḥ* #48)
āśiṣi gamyamānāyāṃ hanter dhātoḥ karmaṇy upapade ḍapratyayo bhavati
Affix *Ḍa* occurs after verbal root *han* 'to kill' when it cooccurs with a *pada* which denotes *karman* and *āśīḥ* 'blessing' is signified.

EXAMPLE:

śatruhaḥ 'may he be the killer of his enemies'

1. Affix *aṆ* applies to derive forms such as *śatrughātaḥ* 'he who kills the enemy' when, contrary to the context of this rule, *āṣīḥ* 'benediction' is not denoted. There are some *vārttika* proposals under this rule to provide for forms as follows:

(*a*) *dārvāghāṭaḥ* 'wood-pecker': derived by introducing affix *aṆ* after *han* used with the preverb *āN* provided *dāru* 'wood' constitutes the object and the derivate denotes a name;

(*b*) *aṆ* is introduced also when *cāru* cooccurs with *han*, used with the preverb *āṄ* to derive *cārvāghāṭaḥ* 'he who plays well on a musical instrument', optionally with *cārvāghātaḥ* '*id.*';

(*c*) affix *aṆ* is also introduced after verbal root *han* to derive *varṇasaṃghāṭaḥ*/*varṇasaṃghātaḥ* 'inventory of sounds, or letters' when the root is used with the preverb *sam*, and the cooccurring word denotes object.

Note that all these derivates entail a replacement in *ṭ* for their final.

This replacement is obligatory in case of the derivates of (*a*), though optional in cases of (*b*) and (*c*).

3.2.50 **अपे क्लेशतमसोः**

ape kleśatamasoḥ
/*ape* 7/1 *kleśatamasoḥ* 7/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *ḍaḥ* #48, *hanaḥ* #49)
apapūrvād hanteḥ kleśatamasoḥ karmaṇor upapadayor ḍapratyayo bhavati
Affix *Ḍa* occurs after verbal root *han* used with the preverb *apa* when the root cooccurs with a *pada* which contains *kleśa* 'suffering' or *tamas* 'darkness' as *karman*.

EXAMPLES:

kleśāpahaḥ puttraḥ 'a son who removes suffering'
tamopahaḥ sūryaḥ 'the sun which removes darkness'

1. The derivates of this rule relate to 'non-benedictive' meanings. Verbal root *han* is required here to be used with the preverb *apa*. The benedictive meaning is available from the preceding rule, itself.

3.2.51 **कुमारशीर्षयोर्णिनिः**

kumāraśīrṣayor ṇiniḥ
/*kumāraśīrṣayoḥ* 7/2 *ṇiniḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *hanaḥ* #49)
'kumāra, śīrṣa' ity etayor upapadayoḥ hanter ṇiniḥ pratyayo bhavati
Affix *ṆinI* occurs after verbal root *han* when the root cooccurs with a *pada* which contains *kumāra* 'boy, prince', *śīrṣa* 'head' as *karman*.

EXAMPLES:

kumāraghātī 'a child-killer; killer of a prince'
śīrṣaghātī 'a killer who kills by beheading'

1. Note that *śīrṣa*, from *śiras*, is derived by *nipātana*. It should not be confused relative to rule 6.1.60 *śīrṣañ chandasi*, which is limited to the Vedic. Besides, the latter reference is made with *śīrṣan* ending in *-n*. What we find here is a form ending in *-a* (*śīrṣa*).

The final *I* as an *it* in *ṆinI* is intended to protect its *n* from being deleted by 1.3.3 *halantyam*-1.3.9 *tasya lopaḥ*. The *Ṇ*, of course, is intended to facilitate *vṛddhi*. Refer to the appendix for derivational details.

Note that rule 3.2.78 *supy ajātau ṇinis tācchīlye* would account for examples of this rule if it was not for the condition of *tācchīlya*. This rule, then, must apply to examples where the context does not include *tācchīlya*.

3.2.52 **लक्षणे जायापत्योष्टक्**

lakṣaṇe jāyāpatyoṣ ṭak
/*lakṣaṇe* 7/1 *jāyāpatyoḥ* 7/2 *ṭak* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *hanaḥ* #49)
hanter jāyāpatyoḥ karmaṇor upapadayor lakṣaṇavati kartari ṭak pratyayo bhavati
Affix *Ṭak* occurs after verbal root *han* when the root cooccurs with a *pada* which contains *jāyā* 'wife' or *pati* 'husband' as *karman* and the derivate denotes a *kartṛ* thus characterized.

EXAMPLES:

jāyāghno brāhmaṇaḥ 'a *brāhmaṇa* who kills his wife'
patighnī vṛṣalī 'a *vṛṣalī* (low-caste woman) who killed her husband'

1. This rule introduces affix *ṬaK* when *han* cooccurs with an object constituted by *jāyā* and *pati* provided the derivate characterized an agent. Thus, we get the example: *jāyāghnaḥ* as in *jāyāghno brāhmaṇaḥ* where *jāyāghnaḥ* 'killer of the wife' characterizes a *brāhmaṇa*. The *K* as an *it* facilitates the penultimate deletion (*upadhālopa*) of *a* by rule 6.4.98 *gamahana...* The *Ṭ* as an *it* facilitates the introduction of affix *ṄīP* in feminine derivates (4.1.15 *ṭiḍḍhāṇañ...*), such as *patighnī* of *patighnī vṛṣalī*.

3.2.53 **अमनुष्यकर्तृके च**

amanuṣyakartṛke ca
/*amanuṣyakartṛke* 7/1 *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *hanaḥ* #49, *ṭak* #52)
amanuṣyakartṛke vartamānād hanter dhātoḥ karmaṇy upapade ṭak pratyayo bhavati
Affix *ṬaK* also occurs after verbal root *han* when the root cooccurs with a *pada* which denotes *karman* and the derivate denotes a non-human *kartṛ* thus characterized.

EXAMPLES:

jāyāghnas tilakālakaḥ 'a mole on the husband characterizing the death of his wife'
patighnī pāṇirekhā 'a line on the wife's palm characterizing the death of her husband'

śleṣmaghnaṃ madhu 'honey, the cough-killer'
pittaghnaṃ ghṛtam 'ghee, the killer of bile'

1. This rule conditions the introduction of affix *ṬaK* after *han* by requiring its agent to be *amanuṣya* 'non-human'. Thus, we get *patighnī* of *patighnī pāṇirekhā*, where the agent of *han* is 'the line in the palm'. One can similarly see *madhu* 'honey', a non-human agent, the killer of cough in *śleṣmaghnaṃ madhu*.

Note that *karmaṇi* still constitutes the cooccurrence condition. The word *amanuṣyakartṛka* can not be treated as a qualifier to the cooccurring *karman* because to do so would not make any sense.

3.2.54 **शक्तौ हस्तिकपाटयोः**

śaktau hastikapāṭayoḥ
|śaktau 7/1 *hastikapāṭayoḥ* 7/2|
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1, *hanaḥ* #49, *ṭak* #52)
śaktau gamyamānāyāṃ hastikapāṭayoḥ karmaṇor upapadayor hanteṣ ṭak pratyayo bhavati
Affix *ṬaK* occurs after verbal root *han* when the root cooccurs with a *pada* which denotes *hastī* 'elephant' or *kapāṭa* 'door' as *karman* and the derivate denotes *śakti* 'strength'.

EXAMPLES:

hastighnaḥ manuṣyaḥ 'a man strong enough to kill an elephant'
kapāṭaghnaś cauraḥ 'a thief strong enough to break the door open'

1. This rule allows for the introduction of *ṬaK* after *han* even when it has a human agent. Thus, we get *kapāṭaghnaḥ* as in *kapāṭaghnaś cauraḥ* 'one who is capable of breaking doors; a thief'.

3.2.55 **पाणिघताडघौ शिल्पिनि**

pāṇighatāḍaghau śilpini
|pāṇighatāḍaghau 1/2 *śilpini* 7/1|
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #1)
pāṇigha, tāḍagha' ity etau śabdau nipātyete śilpini kartari
Forms such as *pāṇigha* and *tāḍagha* are derived by *nipātana* when *śilpī* 'artisan' is denoted as *kartṛ*.

EXAMPLES:

pāṇighaḥ 'a drummer; he who plays by using his hand'
tāḍaghaḥ 'a blacksmith who makes things by pounding'

1. This rule allows for the *ad hoc* (*nipātana*) derivation of *pāṇighaḥ* and *tāḍaghaḥ* with the introduction of affix *Ka* after *han* cooccurring with the object *pāṇi* 'hand' and *tāḍa* 'beating'. The deletion of the penultimate *a* of *han*, as well as the replacement of *h* with *gh*, is accomplished via *nipātana*. Note that when the derivates do not denote an artisan (*śilpī*), they take the forms: *pāṇighātaḥ* 'hitting with fists; boxing', *tāḍaghātaḥ* 'hammering'.
A *vārttika* also proposes the listing of *rājaghaḥ* 'killer of a king' under this rule.

3.2.56 **आढ्यसुभगस्थूलपलितनग्नान्धप्रियेषु च्व्यर्थेष्वच्वौ कृञः करणे ख्युन्**

āḍhyasubhagasthūlapalitanaghāndhapriyeṣu cvyartheṣv acvau kṛñaḥ karaṇe khyun
/āḍhyasubhagasthūlapalitanagnāndhapriyeṣu 7/3 *cvyartheṣu* 7/3 *acvau* 7/1 *kṛñaḥ* 5/1 *karaṇe* 7/1 *khyun* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.2.91, *karmaṇi* #1)
āḍhyādiṣu karmasūpapadeṣu cvyartheṣv acvyanteṣu karoter dhātoḥ karaṇe kārake khyun pratyayo bhavati
Affix *KHyuN* occurs to denote *karaṇa* (1.4.42 *sādhakatamaṃ karaṇam*) after verbal root *ḌUkṛÑ* when the root cooccurs with a *pada* which denotes *karman* and contains *āḍhya* 'rich', *subhaga* 'charming, beneficent', *sthūla* 'big, huge', *palita* 'old', *nagna* 'naked', *andha* 'blind' or *priya* 'dear', provided these preceding denote the sense of, but do not end in, affix *CvI*.

EXAMPLES:

āḍhyaṃkaraṇam 'that which makes one rich'
subhagaṃkaraṇam 'that which makes one charming'
sthūlaṃkaraṇam 'that which makes one huge'
palitaṃkaraṇam 'that which makes one old'
nagnaṃkaraṇam 'that which makes one naked'
andhaṃkaraṇam 'that which makes one blind'
priyaṃkaraṇam 'that which makes one dear to someone'

1. This rule introduces affix *KHyuN* after verbal root *ḌUkṛÑ* when it cooccurs with an object which is constituted by *āḍhya*, etc., and denotes the sense of, but does not end in, *CvI* (5.4.50 *abhūtatadbhāve*...). Additionally, the derivate has to denote *karaṇa* 1.4.42 *sādhakatamaṃ karaṇam*). Thus we get:

āḍhyaṃkaraṇam 'that by means of which one becomes prosperous which he was previously not', etc.

1. Note that rule 5.4.50 *abhūtatadbhāve* introduces *CvI* in the sense of *abhūtatadbhāva*. But this sense can be expressed even without the introduction of affix *CvI*. This is what is intended by the negation of *acvau*

'when not ending in affix *CvI*'. Consequently; *āḍhyīkurvanty anena* 'that by means of which one is made prosperous' cannot qualify for *KHyuN*. That is, *āḍhyī* ends in affix *CvI*. A counter example for where *āḍhya* is neither used in *CvI*, nor denotes the sense of *CvI*, is *āḍhyaṃ tailena kurvanti* 'they anoint (him) with oil'. Here again *KHyuN* is not permitted.

3.2.57 कर्त्तरि भुवः खिष्णुच्खुकञौ

kartari bhuvaḥ khiṣṇuckhukañau
kartari 7/1 *bhuvaḥ* 5/1 *khiṣṇuckhukañau* 1/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *āḍhya... priyeṣu cvyartheṣv acvau* #56)
āḍhyādiṣu subanteṣūpapadeṣu cvyartheṣv acvyanteṣu bhavater dhātoḥ kartari kārake 'khiṣṇuc, khukañ' ity etau pratyayau bhavataḥ
Affixes *KHiṣṇuC* and *KHukaÑ* occur to denote *kartṛ* after verbal root *bhū* when the root cooccurs with a *pada* which ends in *sUP* and contains *āḍhya* 'rich', *subhaga* 'charming', *sthūla* 'huge', *palita* 'old', *nagna* 'naked', *andha* 'blind' or *priya* 'dear' provided these preceding denote the sense of, but do not end in, affix *CvI*.

EXAMPLES:

āḍhyambhaviṣṇuḥ 'one who becomes rich'
āḍhyambhāvukaḥ 'id.'
subhagambhaviṣṇuḥ 'one who becomes charming'
subhagambhāvukaḥ 'id.'
sthūlambhaviṣṇuḥ 'one who becomes huge'
sthūlambhāvukaḥ 'id.'
palitambhaviṣṇuḥ 'one who becomes old'
palitambhāvukaḥ 'id.'
nagnambhaviṣṇuḥ 'one who becomes naked'
nagnambhāvukaḥ 'id.'
andhambhaviṣṇuḥ 'one who becomes blind'
andhambhāvukaḥ 'id.'
priyambhaviṣṇuḥ 'one who becomes dear'
priyambhāvukaḥ 'id.'

1. This rule introduces affixes *KHiṣṇuC* and *KHukaÑ* after verbal root *bhū* 'to be' under circumstances similar to the preceding rule except that, here, the derivate denotes *kartṛ*. Obviously, the use of *kartari* in this rule cancels the *karaṇe* of the earlier rule. Why did Pāṇini have to use *kartari* to cancel *karaṇa* when he could have accomplished this just by leaving *karaṇa* without *svarita* accent. That way, the *anuvṛtti* of *karaṇa* would have been dropped. Commentators explain that dropping *karaṇa* without dropping *āḍhya*, etc., which are also

associated with it, may create confusion. Normally, one would expect the cancellation of both *karaṇa* and *āḍhya*, etc. Besides, *kartari* is required for subsequent rules.

Note that *KH*, as an *it* in both affixes, is intended for the augment *mUM* (6.3.67 *arurdviṣad...*). The *C* of *KHiṣṇuC* is intended for accent (6.1.163 *citaḥ*). The *Ñ* of *KHukaÑ* is intended for *vṛddhi* (7.2.115 *aco' ñṇiti*).

3.2.58 स्पृशोऽनुदके क्विन्

spṛśo' nudake kvin
/spṛśaḥ 5/1 *anudake* 7/1 *kvin* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4)
spṛśer dhātor anudake subanta upapade kvin pratyayo bhavati
Affix *KvIN* occurs after verbal root *spṛś* 'to touch' when the root cooccurs with a *pada* which ends in *sUP* but does not contain *udaka* 'water'.

EXAMPLES:

ghṛtaspṛk 'he who touches *ghee*'
mantraspṛk 'he who touches by means of a *mantra*'
jalaspṛk 'he who touches by means of water'

1. It is stated that *supi* should, here, be accepted as constituting the cooccurring word. But this goes against the normal practice of accepting *karmaṇi* as the cooccurring word when the verbal root is transitive. The *karmaṇi* condition is not accepted since *kartari* is carried from the preceding rule, and also since the cooccurring words are diverse in nature. Thus, we can get the *kartṛ* meaning of the derivate via either a cooccurring word denoting an object, or via a word denoting instrument. Consider *ghṛtaspṛk* = *ghṛtaṃ spṛśati* as an example of the first in contrast with *mantraspṛk* =*mantreṇa spṛśati*, an example for the second. It is thus better to accept *supi*. Besides, the *kartṛ*-denotatum of the derivates is easily established on the basis of 3.4.67 *kartari kṛt*.

The *N* of *KvIN* is used to distinguish it from *KvIP*, etc., as in rules 8.2.62 *kvin pratyayasya...* The *K* of *KvIN* is intended for blocking *guṇa* and *vṛddhi*. The *I* of the affix, along with its *v*, is intended to qualify 6.1.67 *ver apṛktasya* whereby a more general reference can be made.

3.2.59 ऋत्विग्दधृक्स्रग्दिगुष्णिगञ्चुयुजिक्रुञ्चां च

ṛtvigdadhṛksragdiguṣṇigañcuyujikruñcāṃ ca
/ṛtvig...kruñcām-6/3 *(itar. dv.)*; *ca* 0/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, supi #4, *kvin* #58)

ṛtvigādayaḥ pañca śabdāḥ kvinpratyayāntā nipātyante, apare trayo dhātavo nirdiśyante

Affix *KvIN* occurs by *nipātana* in the derivation of *ṛtvik, dadhṛk, srak, dik,* and *uṣṇik*; in addition, it occurs after verbal roots *añcU* 'to bend', *yujI* 'to join, yoke' and *kruñcA* 'to be crooked', when the roots cooccur with a *pada* which ends in a *sUP*.

EXAMPLES:

ṛtvik 'a priest; he who performs ritual sacrifices regularly'
dadhṛk 'brave'
srak 'garland'
dik 'direction'
uṣṇik 'a meter with seven syllables in a quarter'
prāṅ 'east'
pratyaṅ 'west'
udaṅ 'north'
yuṅ 'one who joins x with y'
aśvayuk 'he who yokes the horse (to a cart)'
kruṅ 'one who is crooked; a crane'

1. The first five words beginning with *ṛtvik* are derived via *nipātana* with *KvIN*. The next three derivates are given specific to their roots. For an example of what is ad hoc in the first five examples, and how the derivates relative to the three roots derive, see the appendix.

3.2.60 त्यदादिषु दृशोऽनालोचने कञ्च

tyadādiṣu dṛśo' nālocane kañ ca
/*tyadādiṣu* 7/3 *dṛśaḥ* 5/1 *anālocane* 7/1 *kañ* 1/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *kvin* #58)
tyadādīṣūpapadeṣu dṛśer dhātor anālocane' rthe vartamānāt kañ pratyayo bhavati, cakārāt kvin ca

Affix *KaÑ*, as well as *KvIN*, occurs after verbal root *dṛśIR* 'to see' when the root cooccurs with a nominal *pada* which contains *tyad* 'that', etc., and *ālocana* 'seeing' is not denoted.

EXAMPLES:

tyādṛk 'like that'
tyādṛśaḥ 'id.'
tādṛk 'id.'
tādṛśaḥ 'id.'
yādṛk 'like the one which...'
yādṛśaḥ 'id.'

vedavit 'he who knows the Veda'
pravit 'he who knows things well'
brahmavit 'he who knows about the Brahman'
kāṣṭhabhit 'he who splits the wood'
prabhit 'he who splits (wood) very well'
rajjucchid 'he who cuts the ropes'
pracchid 'he who cuts (the ropes) very well'
śatrujit 'he who conquers the enemy'
prajit 'he who wins well'
senānīḥ 'commander of the army'
praṇīḥ 'he who leads well'
grāmaṇīḥ 'the leader of the village'
agraṇīḥ 'he who leads'
rāṭ 'he who is full of splendor'
samrāṭ 'emperor'

1. This rule allows for both affixes *KaÑ* and *KvIN* after verbal root *dṛśIR* when it occurs with *tyad* 'that', etc., and the derivate does not denote 'to see'. The derivates of this rule are semantically treated as *rūḍha* 'conventional'. Consequently, there is no 'action of seeing' entailed albeit the presence of *dṛśIR*. A *vārttika* under this rule proposes to expand the scope of this rule to account for examples such as: *sadṛk* / *sadṛśaḥ* 'similar'; and *anyādṛk* / *anyādṛśaḥ* 'like something else'. A further proposal states that affix *Ksa* is also introduced after *dṛśIR*. This will account for *yādṛkṣaḥ* / *tādṛkṣaḥ* / *anyādṛkṣaḥ* / *kīdṛkṣaḥ*. Obviously, the examples covered by the two *vārttika* proposals entail *samāna* 'similar' and *anya* 'other' as *upapada*.

2. The *Ñ* of *KaÑ* is used as an *it* to distinguish it from affixes, such as *ṬHaK* and *ṬHaÑ*, especially relative to the formation of the feminine. Consider for example rule 4.1.15 *ṭiḍḍhāṇañ...*

3. Note that *ālocana* of *anālocane* is explained as 'perception by means of eyes'. The word *anālocana* should then refer to 'lack of perception by means of eyes'. However, this rule implies the negation of 'perception in general' no matter what means is employed in the process (cf. *PM* ad *Kāś.* II:884: *ālocanaṃ cakṣussādhanaṃ vijñānam iti, iha tu jñānamātraṃ pratiṣedhaṃ manyate*). Indeed in the contextual meaning of *darśana* 'seeing (and thereby perceiving)', affix *aṆ* will apply to derive examples such as *taddarśaḥ* parallel to the analysis *taṃ paśyati* 'he who sees him'.

3.2.61 **सत्सूद्विषद्रुहदुहयुजविदभिदच्छिदजिनीराजामुपसर्गेऽपि क्विप्**

satsūdviṣadruhaduhayujavidabhidacchidajinīrājām upasarge' pi kvip
/*satsūdviṣa...rājām* 6/3 *upasarge* 7/1 *api* Ø *kvip* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4)
sadādibhyo dhātubhyaḥ subante upapade upasarge' pi, anupasarge' pi kvip pratyayo bhavati

Affix *KvIP* occurs after verbal roots *ṣadL̥* 'to sit', *sŪÑ* 'to give birth to', *dviṣA* 'to hate', *druhA* 'to be hostile', *duhA* 'to milk', *yujIR* 'to join, yoke' *vidA* 'to know, become, to consider', *bhidIR* 'to split', *chidIR* 'to cut', *ji* 'to win', *ṇīÑ* 'to lead' and *rājR̥* 'to shine' when the roots are used with or without preverbs, and cooccur with a *pada* which ends in a *sUP*.

EXAMPLES:

śúciṣat 'he who resides in purity; Brahman'
antarikṣasat 'he who resides in the sky'
úpasat 'he who sits near'
aṇḍasūḥ 'that which lays eggs'
śatasūḥ 'that which gives birth to a hundred...'
prasūḥ 'one who brings about; parents'
mitradviṭ 'one who is hostile to a friend'
mitradhrūk 'id.'
pradviṭ 'enemy'
pradhruk 'id.'
godhuk 'he who milks cows'
pradhuk 'he who milks (cows) very well'
aśvayuk 'he who yokes the horse'
prayuk 'he who yokes (the horse) very well'

1. The word *supi* constitutes the cooccurrence condition for reasons similar to rule 3.3.58 *spr̥śo' nudake*... Consequently, *karmaṇi* is not associated as the cooccurring word. The word *upasarge' pi*, because of the locative in *upasarge*, requires care in interpretation. If it was given in the ablative (*pañcamī*), it could have been interpreted as a qualifier to the verbal roots. The interpretation then would have been: 'affix...occurs after verbal roots...when used with (or without) a preverb'.

2. The locative ending considers *upasarga*, or its absence, as forming, in addition to *supi*, the cooccurrence condition. But the additional specification of *upasarge' pi*, for purposes of the cooccurrence condition, is not necessary since *supi*, itself, would account for this. After all, the preverbs will be treated as ending in *sUP* for purposes of forming the cooccurring word. Why should we have *upasarge' pi* in addition to *supi*? Commentators state that the explicit use of *upasarga* is made for indicating (*jñāpakārtha*) that elsewhere in the preceding sections, whenever *supi* forms the cooccurrence condition, it does not include *upasarga*. Consider for example 3.1.106 *vadaḥ supi kyap ca*, where *supi* constitutes the cooccurrence condition. This *supi*, as indicated by the explicit use of *upasarge* in our present rule, will not include *upasarga* as a cooccurring word which ends in *sUP*. But this is hardly acceptable as the purpose, since *anupasarge* is carried

from rule 3.1.100 *gadamadacarayamaś cānupasarge....* If the purpose of *upasarge*, in this rule, is to block the inclusion of *upasarge* elsewhere, then one does not need *anupasarge* from *anuvṛtti* in 3.1.106. Thus, the indicatory function (*jñāpakārtha*) of *upasarge* as stated is not acceptable. What, then, is *upasarge' pi* used for? Simply for clarification (*vispaṣṭārtham*). If this were not acceptable, then *anupasarge* would be dropped from the *anuvṛtti* in rules where *supi* constitutes the cooccurrence condition. Still others say the indicatory function of *upasarge' pi* is intended to block *upasarge* from inclusion in rule 3.2.58 *spṛśo' nudake*. This way, *upaspṛśati* and *saṃspṛśati* are blocked from yielding parallel derivates in *KvIN*.

2. Note that *sū*, here, refers to *adādi* root *ṣūṄ* 'to give birth to', and not to verbal root *tṣū* 'to inspire' of *tudādi*. The association (*sāhacarya*) in the listing of *bhaj* with *dviṣa* determins it. However, *yuja* of the rule must include reference to both *yujIR* 'to join' and *yujA* 'to concentrate'. A reference with *vida* must include the three verbal roots: *vidA* 'to know', *vidA* 'to be, exist' and *vidA* 'to consider, think'. It cannot, however, include reference to *vidḶ* 'to gain', since *vid* of this rule is cited as ending in *-a* (*akārānta*). Consequently, it can only refer to roots which are specified as ending in *-a*.

3.2.62 भजो ण्विः

bhajo ṇviḥ
/bhajaḥ 5/1 *ṇviḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *upasarge' pi* #61)
bhajer dhātoḥ subanta upapade upasarge' pi anupasarge' pi ṇvipratyayo bhavati
Affix *ṆvI* occurs after verbal root *bhajA* used with or without a preverb, when the root cooccurs with a *pada* which ends in a *sUP*.

EXAMPLES:

ardhabhāk 'he who has one half of a share'
prabhāk 'a division, fraction'

1. Note that *upasarge* and *supi* are both carried here. The *Ṇ* of *ṆvI* is intended as an *it* for *vṛddhi*. The *I*, used with the *v*, is intended as an *it* for facilitating a general reference to 6.1.67 *ver apṛktasya*.

3.2.63 छन्दसि सहः

chandasi sahaḥ
/chandasi 7/1 *sahaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *upasarge* #61, *ṇviḥ* #62)
chandasi viṣaye saher dhātoḥ subanta upapade ṇvipratyayo bhavati

Affix *ṆvI* occurs, in the Vedic, after verbal root *ṣahA* 'to endure' when the root cooccurs with a *pada* which ends in a *sUP*.

EXAMPLES:

jalāṣāṭ 'one who conqueres waters'
turāṣāṭ 'one who overpowers the mighty; Indra'

1. Haradatta (*PM* ad *Kāś.* II:588) informs that an example such as *pṛtanāṣāṭ* 'victorious', in the classical language, is questionable (*cintya*).

3.2.64 **वहश्च**

vahaś ca
/*vahaḥ* 5/1 *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *ṇviḥ* #62, *chandasi* #63)
vaher dhātoś chandasi viṣaye subanta upapade ṇvipratyayo bhavati
Affix *ṆvI* also occurs, in the Vedic, after verbal root *vahA* when the root cooccurs with a *pada* which ends in a *sUP*.

EXAMPLES:

praṣṭhavāṭ 'one who carries the heaviest of weights'
dityavāṭ 'one who carried two years; a two year old steer'

1. Note that a separate listing of *vahaś ca* is necessary to block *sahaḥ* from carrying to subsequent rules. If reference to both *sah* and *vah* was made together in the preceding rule, then both roots would have qualified for *anuvṛtti*. The split listing of rule (*yogavibhāga*) enables only *vah* to be carried subsequently (*uttarārtha*).

3.2.65 **कव्यपुरीषपुरीष्येषु ञ्युट्**

kavyapurīṣapurīṣyeṣu ñyuṭ
/*kavyapurīṣapurīṣyeṣu* 7/3 *ñyuṭ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *chandasi* #63, *vahaḥ* #64)
'kavya, purīṣa, purīṣya' ity eteṣūpapadeṣu chandasi viṣaye vaher dhātor ñyuṭ pratyayo bhavati
Affix *ÑyuṬ* occurs, in the Vedic, after verbal root *vahA* when the root cooccurs with a nominal *pada* which contains *kavya* 'ritual oblation of food for the dead', *purīṣa* 'human waste' or *purīṣya* 'id.'

EXAMPLES:

kavyavāhánaḥ pitṝṇām 'he who carries ritual oblation of food to the ancestors'

púrīṣavāhánaḥ 'one who removes ordure'
purīṣyavāhánaḥ 'id.'

1. This rule provides for affix *ÑyuT* against *Ṇvl*, which was already available. The *Ñ*, as an *it*, is intended for accent as well as *vṛddhi* (6.1.197 *ñnityādir nityam*; 7.2.115 *aco' ñṇ iti*). The *Ṭ*, as an *it*, is intended to secure the feminine affix *ṄīP* (4.1.15 *ṭiḍḍhāṇa...*). The *yu* of this affix is replaced with *aka* of rule 7.1.1 *yuvor anākau*.

3.2.66 हव्येऽनन्तः पादम्

havye' nantaḥpādam
/*havye* 7/1 *anantaḥpādam* 1/1/
(*pratyayaḥ* # 3.1.1, *paraś ca* # 3.1.2, *dhātoḥ* # 3.1.91, *supi* # 4, *chandasi* #63, *vahaḥ* #64, *ñyuṭ* #65)
havyaśabde upapade chandasi viṣaye vaher dhātor ñyuṭ pratyayo bhavati, anantaḥpādaṃ ced vahir vartate
Affix *ÑyuṬ* occurs, in the Vedic, after verbal root *vahA* when the root cooccurs with a nominal *pada* which contains *havya* 'ritual oblation of food' and the derivate does not occur in the middle of a *pāda* 'quarter'.

EXAMPLE:

agniś ca havyavā hanaḥ 'Agni, the one who carries ritual oblation of food to the gods'

1. Note that *antaḥpādam* is interpreted as a qualifier (*viśeṣaṇa*) to the derivate with *vah*. The word *antaḥ* is similar to *madhyaḥ* 'in the middle' semantically. The word *pādaḥ* is interpreted as a quarter of a hymn, because of the *anuvṛtti* of *chandasi*. The compound *antaḥpādam* could be viewed as an indeclinable (*avyayībhāva*) allowed by 2.1.6 *avyayaṃ*...in the sense of *vibhakti* (locus within). Thus, *anantaḥpādam* is interpreted as 'not located in the middle of the quarter (of a hymn)'. If *vah* is (included in a derivate) used in the middle of a quarter, then affix *Ṇvl* is used as is clear from the counter-example: *havyavāḍagnirajaráḥ pitā náḥ*.

3.2.67 जनसनखनक्रमगमो विट्

janasanakhanakramagamo viṭ
/*jana...gamaḥ* 5/1 *viṭ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *chandasi* #63, *vahaḥ* #64, *ñyuṭ* #65)
janādibhyo dhātubhyaḥ subanta upapade chandasi viṣaye viṭ pratyayo bhavati

Affix *vIṬ* occurs, in the Vedic, after verbal roots *janA* 'to be born', *saN* 'to give', *khanA* 'to dig', *kramU* 'to step' and *gam* 'to go' when the roots cooccur with a *pada* which ends in a *sUP*.

EXAMPLES:

abjāḥ 'born in water'
gojāḥ 'born in earth'
goṣā 'winner of cows'
vilakhāḥ 'a burrower'
kūpakhāḥ 'well-digger'
dádhikrāḥ '(Agni) who receives milk'
agregā unnētṛṇām 'the leader...'

1. Note that this rule carries the *anuvṛtti* of *chandasi*, *upasarge*, and *supi*. Verbal roots *janA* and *sanA* make references to the sets of two verbs each: *janA* 'to give birth to'; *janĪ* 'to be born'; and *sanA* 'to give' or *ṣaṇA* 'to worship'.

The *Ṭ* of the affix is intended as an *it* to block a general reference to any affix with *vI* (cf. 6.1.67 *ver apṛktasya*). Note that in the absence of *Ṭ*, *vI*, in view of 6.1.67 *ver apṛktasya*, would not refer to just one affix. Further, *vI* is also intended to function as a qualifier in rules such as 6.4.41 *viḍvanor*....

3.2.68 अदोऽनन्ने

ado' nanne
/*adaḥ* 5/1 *ananne* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *viṭ* #67)
ader dhātor ananne supy upapade viṭ pratyayo bhavati
Affix *vIṬ* occurs after verbal root *ad* 'to consume' when the root cooccurs with a *pada* which ends in a *sUP* and does not contain *anna* 'food'.

EXAMPLES:

āmāt 'one who eats raw food'
sasyāt 'one who eats vegetables'

1. Note that *chandasi* no longer carries; *supi* constitutes the cooccurring word, and the affix is still *vIṬ*.

3.2.69 क्रव्ये च

kravye ca
/*kravye* 7/1 *ca* Ø/

(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *viṭ* #67, *adaḥ* #68)
kravyaśabde upapade ader dhātor viṭ pratyayo bhavati
Affix *vIṬ* also occurs after verbal root *ad* when the root cooccurs with a *pada* which ends in a *sUP* and contains *kravya* 'meat'.

EXAMPLE:

kravyāt 'one who eats raw meat'

1. It is stated in the *Mahābhāṣya* that this rule is separately formed to indicate that *vā' sarūpavidhi* does not apply here. That is, affix *aṆ* is not applicable. But if it were the case, how would ***kravyādaḥ*** 'eater of cooked meat' be derived? It is noted that ***kravyādaḥ*** does not involve ***kravyāt*** of this rule. Instead, ***kravyāda*** is derived by introducing affix *aṆ* under the cooccurrence condition of *kṛtavikṛta*, a listing in the *pṛṣodarādi* class (6.3.109 *pṛṣodarādīni yathopadiṣṭam*), which gets the form of ***kravya*** (*Kāś.*: *kṛtavikṛtaśabde upapade aṇ, tasya ca pṛṣodarādipāṭhāt kravyabhāvaḥ*). Our present derivate means 'the eater of raw flesh; carnivorous'. The derivate which ends in *aṆ*, i.e., ***kravyādaḥ***, signifies 'the eater of cooked meat'.

3.2.70 **दुहः कब्घश्च**

duhaḥ kab ghaśca
/*duhaḥ* 6/1 ***kap*** 1/1 *ghaḥ* 1/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4)
duher dhātoḥ supy upapade kap pratyayo bhavati, ghakāraś cāntādeśaḥ
Affix *vIṬ* occurs after verbal root ***duh*** 'to milk' when the root cooccurs with a ***pada*** which ends in a *sUP*; in addition, the final *h* of the root is replaced by ***gh***.

EXAMPLES:

kāmadughā dhenuḥ 'a cow which grants all desires; a cow which yields as much milk as one desires'
dharmadughā 'a cow which is milked only for religious purposes'

3.2.71 **मन्त्रे श्वेतवहोक्थशस्पुरोडाशो ण्विन्**

mantre śvetavahokthaśaspuroḍāśo ṇvin
/*mantre* 7/1 *śveta...puroḍāśaḥ* 5/1 *ṇvin* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4)
'śvetavaha, ukthaśas, puroḍāśa' ity etebhyo ṇvin pratyayo bhavati mantre viṣaye
Affix *ṆvIN* occurs, in the Mantra by *nipātana*, after verbal roots *vah* 'to carry', *śaṃs* 'to praise', and *dāś* 'to give' when they cooccur

with a nominal *pada* which contains *śveta* 'white', *uktha* 'hymns', and *puras* 'in front of' to derive *śvetavaḥ*, *ukthaśas* and *puroḍāś* respectively.

EXAMPLES:

śvetavā indraḥ 'Indra; the one whom white horses carry'
ukthaśā yajamānaḥ 'a ritual sacrificer who chants praises with the hymns of the *Sāmaveda*'
puroḍāḥ 'ritual oblation of food'

1. The word *mantra* refers to the *mantra* literature only. It does not, for example, refer to the *brāhmaṇas*, which constitute expositions of the *mantra* (cf. *Nyāsa* ad *Kāśikā* III:593: *na hi mantragrahaṇena brāhmaṇaṃ gṛhyate; tasya granthāntaratvāt; mantravyākhyāne granthaviśeṣe brāhmaṇa-śabdo varttate, na tu mantre*). Also refer to *amantre* in rule 3.1.35 *kāsprat-yayād....*

Although it is enough to say that the examples of this rule are derived with affix *ṆvIN* via *nipātana*, see some additional details in the appendix.

3.2.72 **अवे यजः**

ave yajaḥ
/*ave* 7/1 *yajaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *mantre*, *ṇvin* #71)
ave upapade yajer dhātor ṇvin pratyayo bhavati mantre viṣaye
Affix *ṆvIN* occurs in the *Mantra* after verbal root *yajA* 'to perform a ritual sacrifice' when the root cooccurs with a nominal *pada* constituted by *ava*.

EXAMPLE:

tvám yájñe váruṇasyāvayā asi
'you are the priest of Varuṇa at the sacrifice'

1. This rule, seemingly, should have been made part of the preceding rule. A separate rule (*yogavibhāga*) became necessary so that the *anuvṛtti* of '*śvetavaha*, etc.' could be blocked. For, they would have to be carried to the subsequent rule if '*ave yajaḥ*' were made part of the preceding rule. Besides, that could have only allowed the *anuvṛtti* of *yaj* used with the preverb *ava*. The *anuvṛtti* of *yaj* alone is required in the rule which follows. *Kāśikā* rightly remarks that a split formulation (*yogavibhāga*) of this rule is intended for the subsequent rule (*uttarārtha*).

3.2.73 **विजुपे छन्दसि**

vij upe chandasi
/*vic* 1/1 *upe* 7/1 *chandasi* 7/1/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *yajaḥ* #72)
'upa upapade yajeś chandasi viṣaye vic pratyayo bhavati
Affix *vIC* occurs in the Vedic after verbal root *yajA* when the root cooccurs with a nominal *pada* which contains *upa*.

EXAMPLES:

upayaḍbhīr ūrdhvaṃ vahanti 'they carry it up by means of chanting of *upayaṭ* (eleven small sections of the *mantras* of the *Yajurveda*)'

1. Note that carrying *mantre* could not have accounted for the forms which *chandasi* does. A reference with *chandasi* includes *mantra* as well as '*brāhmaṇa*'.

But why to formulate this rule when rule 3.2.75 *anyebhyo*...could account for what this rule does. That rule already includes '*vij*', '*chandasi*', and the reference to '*yaj*'. Commentators explain that this rule is 'restrictive' (*niyama*) in purpose. What is the restriction? The derivates of this rule are limited to the Vedic. Classical Sanskrit usages are, thus, ruled out.

The *C* is made an *it* to facilitate reference with 6.1.67 *ver apṛktasya*. Absence of *C* as an *it* will leave the affix with only one *it*. Consequently, 6.1.67 *ver apṛktasya* will refer to only one affix *vI*, and not also to *KvIP*, etc.

3.2.74 आतो मनिन्क्वनिब्वनिपश्च

āto maninkvanibvanipaś ca
/*ātaḥ* 5/1 *maninkvanibvanipaḥ* 1/3 *ca* Ø /
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *vic chandasi* #73)
ākārāntebhyo dhātubhyaḥ supy upapade chandasi viṣaye manin, kvanip, vanip ity ete pratyayā bhavanti
Affixes *manIN*, *KvanIP* and *vanIP*, in addition to *vIC*, occur in the Vedic, after verbal roots which end in *ā*, used with or without any preverb, and cooccur with a *pada* ending in a *sUP*

EXAMPLES:

sudāmā 'he who gives generously'
aśvatthāmā 'one who stands like a horse'
sudhīvā 'he who dresses well'
supīvā 'he who drinks well'
bhūridāvā 'he who gives generously'
ghṛtapāvā 'he who drinks ghee (clarified butter)'
kīlālapāḥ 'he who drinks Kīlāla (sweet beverage)'
śubhaṃyāḥ 'he who walks gracefully'

1. Note that *chandasi*, *supi* and *upasarge' pi* are carried via *anuvṛtti*. The *ca* is used in this rule to facilitate the *anuvṛtti* of *vIC*. Thus, *vIC* can also be

introduced. The *N* as an *it* in *manIN* is for initial high-pitch (*ādyudātta*). The *P* of *KvanIP* and *vanIP* is used as an *it* for *anudātta* accent (3.1.4 *anudāttau suppitau*). The *I* as an *it* is *uccāraṇārtha* 'for ease of articulation'.

3.2.75 **अन्येभ्योऽपि दृश्यन्ते**

anyebhyo' pi dṛśyante
/*anyebhyaḥ* 5/1 *api* Ø *dṛśyante* (a *pada* ending in *tiṄ*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *vic* #73, *maninkvanibvanipaḥ* #74)
anyebhyo' pi dhātubhyo' anākārāntebhyo 'manin, kvanip, vanip' ity ete pratyayā dṛśyante, vic ca
Affixes *manIN*, *KvanIP* and *vanIP*, along with *vIC*, are seen to occur also after roots other than those which end in *ā*.

EXAMPLES:

suśarmā 'great destroyer (of sins)'
prātaritvā 'he who goes in the morning'
vijāvā 'he who brings into being'
agregāvā 'he who goes first'
rēḍasī 'one who injures...'

1. Note that *chandasi* is discontinued. Commentators explain that *api* is used to indicate diverse violations of operational rules (*sarvopādhivyabhicārārtha*). It here refers particularly to the status of roots used with or without any preverb.

The word *dṛśyante* 'are seen' keeps open the list of derivates. That is, one ought to search what other usages can be found. When found they should be treated as correct. Note that the use of *api* as well as *anyebhyaḥ* does not mean that the said affixes occur after any verb. This leaves no control, since earlier specifications would then not make any sense. It would be illogical to say that affixes *X*, *Y*, *Z* occur after verbal roots ending in *ā*, and then to add subsequently that they can occur after any verbal root. It is, therefore, suggested by *Kāśikā* that *anyebhyaḥ* means *anākārāntebhyaḥ* 'those which do not end in -*ā*'. Our earlier rule relates to the Vedic but this one deals also with the classical language (*bhāṣā*).

3.2.76 **क्विप् च**

kvip ca
/*kvip* 1/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *upasarge' pi* #61)
sarvadhātubhyaḥ sopapadebhyo nirupapadebhyaś ca chandasi bhāṣāyāṃ ca kvip pratyayo bhavati

Affix *KvIP* also occurs after a verbal root, used with or without a preverb, when the root cooccurs with a *pada* which ends in a *sUP*.

EXAMPLES:

ukhāsrat 'that which falls off a pot'
parṇadhavat 'that which causes leaves to fall'
vāhābhraṭ 'that which falls off a vehicle'

1. This rule introduces affix *KvIP* after verbal roots in general whether they are used: with or without a preverb, and in the Vedic, or in the Classical language.

3.2.77 **स्थः क च**

sthaḥ ka ca
/*sthaḥ* 5/1 *ka* (1/1 deleted) *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *upasarge' pi* #61)
'sthā' ity etasmād dhātoḥ supy upapade kaḥ pratyayo bhavati, kvip ca
Affix *Ka*, and *KvIP* as well, occurs after verbal root *sthā* 'to stand' used with or without a preverb, when this root cooccurs with a *pada* which ends in a *sUP*.

EXAMPLES:

śaṃsthaḥ 'one who is living happily'
śaṃsthāḥ 'those who are living happily'

1. Note that '*supi*' and '*upasarge' pi*' are both relevant here. Affix *Ka* is introduced by this rule in addition to *KvIP*. This of course is understood from the use of *ca* 'and'. Affix *Ka* is used, in this rule, without a nominal ending (*avibhaktikanirdeśa*). Otherwise, the rule should have been: ...*kaś ca*.

It is stated that this rule should not have been formed, because affixes *Ka* and *KvIP* could have been made available by rules 3.2.4 *supi sthaḥ*, and 3.2.75 *anyebhyo' pi*... respectively. It is argued that rule 3.2.14 *śami dhātoḥ saṃjñāyām* will become applicable because of the inclusion of the word '*dhātoḥ*'. Thus, affix *aC* may also qualify to block affixes *Ka* and *KvIP* via 3.1.94 *vā' sarūpo' striyām*. Our present rule is thus stated separately to block a rule which may, in turn, qualify to block it (*bādhakabādhanārtha*). Affixes *Ka* and *KvIP* block *aC* in such instances of conflict.

3.2.78 **सुप्यजातौ णिनिस्ताच्छील्ये**

supy ajātau ṇinis tācchīlye
/*supi* 7/1 *ajātau* 7/1 *ṇiniḥ* 1/1 *tācchīlye* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)

ajātivācini subanta upapade tācchīlye gamyamāne dhātor ṇiniḥ pratyayo bhavati
Affix *ṆinI* occurs to denote *tācchīlya* 'one's nature' after verbal roots used in conjunction with a *pada* which ends in a *sUP* and does not denote *jāti* 'class'.

EXAMPLES:

uṣṇabhojī 'he whose nature is to eat warm food'
śītabhojī 'he whose nature is to eat cold food'

1. Note that '*supi*' of this rule could have been easily obtained via *anuvṛtti* from the preceding rule. However, explicit mention of it becomes necessary because '*supi*' of the preceding rule is also associated with '*upasarge*'. If one is carried, the other must also be carried. This rule does not require the *anuvṛtti* of *upasarge*. Therefore, dropping '*upasarge*' requires explicit use of '*supi*'. Bhaṭṭoji (*SK IV:* 75) observes as follows:

> *iha vṛttikāreṇopasargabhinna eva supi ṇinir iti vyākhyāya 'utpratibhyām āṇi sartter upasaṃkhyānam' iti paṭhitam. Haradattamādhavādibhiś ca tad evānusṛtam. etac ca bhāṣyavirodhād upekṣyam. prasiddhaś copasarge' pi ṇiniḥ...*
>
> 'here, the author of the *Kāśikāvṛtti*, explained '*ṇini*' without '*upasarga*', and subsequently stated *utpratibhyām*'... This same interpretation is followed by Haradatta and Mādhava, etc. However, because this interpretation is contrary to the *Mahābhāṣya*, it should be neglected. Indeed, *ṇini* is common in the context of *upasarga*'.

Kāśikā, since it does not accept the *anuvṛtti* of *upasarge*, lists an *iṣṭi* which provides for *ṆinI* after verbal root *sṛ*, used with the preverb *āṄ* and preceded by *ud* and *prati*. The examples are: *udāsāriṇyaḥ* and *pratyāsāriṇyah*. The purpose of stating *supi* when it is already available from the *anuvṛtti*, in view of the *Mahābhāṣya* and *SK*, seems to provide for *ṆinI*, also, when the root is used with preverbs.

3.1.79 कर्त्तर्य्युपमाने

kartaryupamāne
/*kartari* 7/1 *upamāne* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇiniḥ* #78)
kartṛvācini upamāna upapade dhātor ṇiniḥ pratyayo bhavati
Affix *ṆinI* occurs after verbal roots when they occur in conjunction with a *pada* which denotes *upamāna* 'object of comparison' as *kartṛ* 'agent'.

EXAMPLES:

uṣṭrakrośī 'one who makes noise like a camel'
dvāṅkṣarāvī 'one who makes noise like a crow'

1. This rule introduces affix *ṆinI* after a verbal root cooccurring with a *pada* which denotes *kartṛ* constituted by an *upamāna* 'standard of comparison'. That is, the cooccurring agent becomes the standard of comparison for the agent denoted by the derivate. Consider *dhvāṅkṣarāvī* 'the person who (agent of the derivate) makes the shrill cry like a crow (the cooccurring agent).

This, along with the subsequent rule, makes a provision for *ṆinI* outside the meaning conditions of the preceding rule.

3.2.80 **व्रते**

vrate
/vrate 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *ṇiniḥ* #78)
vrate gamyamāne subanta upapade dhātor ṇiniḥ pratyayo bhavati
Affix *ṆinI* occurs after a verbal root when the root cooccurs with a *pada* which ends in a *sUP* and the derivate denotes *vrata* 'ritual vow'.

EXAMPLE:

sthaṇḍilaśāyī 'he who has taken a vow to sleep on the bare ground'
aśrāddhabhojī 'he who has taken a vow not to eat at the *śrāddha* (ritual oblation of food offered to the dead)'

3.2.81 **बहुलमाभीक्ष्ण्ये**

bahulamābhīkṣṇye
/bahulam 1/1 *ābhīkṣṇye* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *ṇiniḥ* #78)
abhīkṣṇye gamyamāne dhātor bahulam ṇiniḥ pratyayo bhavati
Affix *ṆinI* occurs variously after verbal roots when they cooccur with a *pada* which ends in a *sUP* and, when *ābhīkṣṇya* 'to do something over and over again' is denoted.

EXAMPLES:

kaṣāyapāyiṇo gāndhārāḥ 'the residents of *Gāndhāra* who repeatedly drink *kaṣāya* (herbal juice) in order to stay healthy'
kṣīrapāyiṇa uśīnarāḥ 'the residents of *Uśīnara* who repeatedly drink milk'

1. The word *ābhīkṣṇya* is explained as *paunaḥpunya* 'to do something over and over again', and thus, constitutes an exception to the semantic condition of rule 3.2.78 *supy ajātau...* The use of '*bahulam*' makes it clear that elsewhere, for example in *kulmāṣakhādaḥ* 'he who eats only boiled food', *ṆinI* does not apply.

3.2.82 **मनः**

> *manaḥ*
> /*manaḥ* 5/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *ṇiniḥ* #78)
> *manyateḥ subanta upapade ṇiniḥ pratyayo bhavati,*
> Affix *ṆinI* occurs after verbal root *manA* 'to think' when the root cooccurs with a *pada* which ends in a *sUP*.

EXAMPLES:

> *darśanīyamānī* 'he who considers something worth seeing'
> *śobhanamānī* 'he who considers something beautiful'

1. Commentators explain that *man*, here, refers to the verbal root *manĀ* 'to think', a *divādi* root, as opposed to the *manŪ* 'to know, understand' of the *tanādi* group. The derivates of this rule do not create any problem because of this distinction in roots. However, problems could arise because of a difference in the *vikaraṇa*.

Note that the object of *man* which constitutes the cooccurrence condition should not be the same as the agent of the derivate. Thus, *surūpamānī* means 'he who considers someone else as handsome'. The next rule accounts for examples where the object as well as the agent are the same.

3.2.83 **आत्ममाने खश्च**

> *ātmamāne khaśca*
> /*ātmamāne* 7/1 *khaś* 1/1 *ca* Ø/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *supi* #4, *ṇiniḥ* #78, *manaḥ* #82)
> *ātmamāne varttamānān manyateḥ supy upapade khaś pratyayo bhavati*
> Affix *KHaŚ*, as well as *ṆinI*, occurs after verbal root *manA* when the root cooccurs with a *pada* which ends in a *sUP* and the derivate denotes *ātmamāna* 'thinking about one's own self'

EXAMPLES:

> *darśanīyammanyaḥ* 'he who thinks about himself as (handsome and hence,) worth seeing'
> *darśanīyamānī* 'id.'

paṇḍitammanyaḥ 'he who thinks about himself as a scholar'
paṇḍitamānī 'id.'

3.2.84 भूते

bhūte
/bhūte 7/1/
(pratyayaḥ #3.1.1 *paraś ca* #3.1.2 *dhātoḥ* #3.1.91*)*
'bhūte' ity adhikāraḥ 'varttamāne laṭ' iti yāvad yad ita ūrddham anukramiṣyāmaḥ 'bhūte' ity evaṃ veditavyam
An affix, hereafter, occurs after a verbal root when the action is denoted in the past (*bhūta*).

EXAMPLES:

agniṣṭomayājī 'he who has performed the ritual sacrifice of *agniṣṭoma* as a means for going to heaven'

1. This is a governing rule extending prior to rule 3.2.123 *vartamāne laṭ*. The denotatum of the affixes to be introduced hereafter will be 'past'. But this past must relate to the sense of the root after which a given affix is introduced.

3.2.85 करणे यजः

karaṇe yajaḥ
/karaṇe 7/1 *yajaḥ* 5/1/
(pratyayaḥ#3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇiniḥ* #78, *bhūte* #84*)*
yajater dhātoḥ karaṇa upapade ṇiniḥ pratyayo bhavati bhūte
Affix *ṆinI* occurs after verbal root *yajA* used in conjunction with a *pada* which ends in a *sUP* and signifies *karaṇa* 'instrument', provided action is denoted in the past.

EXAMPLE:

agniṣṭomayājī

1. This rule carries the *anuvṛtti* of *ṆinI*. It is stated that *KHaŚ* is not carried, since it is not marked with *svarita*. The rule, therefore, introduces *ṆinI* after verbal root *yajA* 'to perform ritual sacrifice' when the cooccurring word denotes *karaṇa*, and the action is located in the past. Thus we get: *agniṣṭomayājī* 'he who performed the ritual sacrifice by means of *agniṣṭoma*'. But *agniṣṭoma*, being the ritual itself, cannot be accepted as *karaṇa*. How could one perform the *agniṣṭoma*, the object of *yaj*, by means of (*karaṇa*), again the *agniṣṭoma*?. Besides, how could the denotation of both be made concurrently. Commentators offer lengthy

explanations for the sacrificer's feeling (*bhāvanā*) of reaching heaven by means of the merits of *agniṣṭoma*. That is, when a person performs the ritual sacrifice of *agniṣṭoma*, he is motivated by *svargakāmo agniṣṭomena yajeta* 'one wishing for heaven should sacrifice by means of *agniṣṭoma*'. This way, the general action of bringing about the goal of reaching heaven becomes the *karaṇa* to the particular action of performing the *agniṣṭoma*, the object of *yaj*.

3.2.86 **कर्मणि हनः**

karmaṇi hanaḥ
/*karmaṇi* 7/1 *hanaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇiniḥ* #78, *bhūte* #84)
karmaṇy upapade hanter dhātor ṇiniḥ pratyayo bhavati bhūte kāle
Affix *ṆinI* occurs after verbal root *han* 'to kill' when the root cooccurs with a *pada* which ends in a *sUP* to denote *karman* 'object' and the action is denoted in the past.

EXAMPLES:

pitṛvyaghātī 'he who killed his paternal uncle'
mātulaghātī 'he who killed his maternal uncle'

1. *Kāśikā* states that the derivates should also involve the meaning of *kutsā* 'censure'. The *Mahābhāṣya* does not say anything about this though such a meaning is not difficult to comprehend based on the denotational power of words (*śabdaśaktisvābhāvya*). Thus, we get *pitṛvyaghātī* 'he who killed his paternal uncle' parallel to the analyzed form *pitṛvyaṃ hatavān* 'he killed his paternal uncle'. *Kāśikā's* intent to make the meaning of censure as a condition is not against the denotational power of the derivate. One would comprehend *kutsā* 'censure' even if it is not stated. It is for this reason that we do not get a derivate parallel to the analyzed form: *cauraṃ hatavān* 'he killed the thief'. For, killing a thief may not deserve censure.

3.2.87 **ब्रह्मभ्रूणवृत्रेषु क्विप्**

brahmabhrūṇavṛtreṣu kvip
/*brahmabhūṇavṛtreṣu* 7/3 *kvip* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *karmaṇi hanaḥ* #86)
brahmādiṣu karmasūpapadeṣu hanter dhātoḥ kvip pratyayo bhavati bhūte
Affix *KvIP* occurs after verbal root *han* when the root cooccurs

with a *pada* which contains *brahma* 'brāhmaṇa', *bhrūṇa* 'foetus' and *vṛtra* 'a demon' as *karman* and the action is denoted in the past.

EXAMPLES:

brahmahā 'he who killed a *brāhmaṇa*'
bhrūṇahā 'he who killed a foetus'
vṛtrahā 'Indra, who killed the demon Vṛtra'

1. Why should we have this rule since rule 3.2.76 *kvip ca* can already accomplish what this rule is intended to do? *Kāśikā* states that this rule is needed to underline some restrictions (*niyamārtham*). That is, this rule restricts the conjoined words (*upapada*), verbal root (*dhātu*), tense (*kāla*) and the scope of the affix (*pratyayaviṣaya*). The *Mahābhāṣya* (III: 254–55) speaks about two restrictions. First that affix *KvIP* should be introduced after verbal root *han*, only when the conjoined words are constituted by *brahma*, *bhrūṇa* and *vṛtra*. This will block examples such as *puruṣaṃ hatavān* = *puruṣahā* with *KvIP*. Secondly, this *KvIP*, introduced after *han* together with the restriction of conjoined words, only applies with reference to past action. The *Mahābhāṣya* does not accept the other two restrictions stated by *Kāśikā*. Nāgeśa (*Udyota* ad *Pradīpa*) states that: *brahmādiṣu hanter eva bhūte kvib bhavati, brahmādiṣu hanteḥ kvib bhūta eva... niyamadvayaṃ nābhyupagatam* 'affix *KvIP* occurs only after verbal root *han*...; only when the action is located in the past... these two restrictions were not accepted'. Obviously, there must be usages refuting the claims of other restrictions.

3.2.88 बहुलं छन्दसि

bahulaṃ chandasi
/*bahulam* 1/1 *chandasi* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *karmaṇi, hanaḥ* #86, *kvip* #87)
chandasi viṣaye upapadāntare' pi hanter bahulaṃ kvip pratyayo bhavati
Affix *KvIP* occurs variously in the Vedic after verbal root *han* when the action is denoted in the past.

EXAMPLE:

mātṛhā saptamaṃ narkaṃ praviśet 'may the one who killed his mother lay in the seventh hell'

1. It is stated that *bahulam* 'variously' is used in view of restrictions of the preceding rule. *Kāśikā* states that the restriction of *upapada* has been

compromised with the use of *mātṛ* in *mātṛhā* of *mātṛhā saptamaṃ narakaṃ praviśet*. The use of *mātṛ* as the conjoined *karman* can be justified only at the strength of *bahulam*.

3.2.89 सुकर्मपापमन्त्रपुण्येषु कृञः

sukarmapāpamantrapuṇyeṣu kṛñaḥ
/*sukarma...puṇyeṣu* 7/3 *kṛñaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *karmaṇi* #86, *kvip* #87)
svādiṣu karmasūpapadeṣu karoter dhātoḥ kvip pratyayo bhavati
Affix *KvIP* occurs after verbal root *ḌUkṛÑ* when the root cooccurs with a nominal *pada* which contains *su* 'good', *karma* 'act, deed', *pāpa* 'sin', *mantra* 'a *mantra*' or *puṇya* 'merit' as *karman* and the action is denoted in the past.

EXAMPLES:

sukṛt 'he who has done something well'
karmakṛt 'he who has done the work'
pāpakṛt 'he who has done a sinful deed'
mantrakṛt 'he to whom a *mantra* has been revealed'
puṇyakṛt 'he who has earned merit'

1. *Kāśikā* states that the three restrictions of *kāla* 'time', *upapada* 'cooccurring word', and *pratyaya* 'affix' also apply in the context of this rule. The restriction of *dhātu* is not valid since other roots can form part of the derivates.

Note that because the restriction of *kāla* demands the introduction of affix *KvIP*, *karma kṛtavān* 'he did the work' cannot qualify for *aṆ* to derive *karmakāraḥ*. That is, affix *aṆ* cannot be introduced when the action is denoted in the past. Because of the restriction of *upapada* as outlined by specific nominal bases, *mantram adhītavān* = *mantrādhyāyaḥ* 'he who studied the Mantra' gets *aṆ* alone. That is, *KvIP* can only be introduced after verbal root *kṛ* used in conjunction with *su*, etc. Similarly, because of the restriction of *pratyaya*, *KvIP* is valid in the context of the past (*bhūta*). That is, *mantraṃ karoti kariṣyati vā* will be qualified only for *aṆ*. The derivate ending in *KvIP*, i.e., *mantrakṛt*, cannot be used when the action is denoted at the current or the future time

3.2.90 सोमे सुञः

some suñaḥ
/*some* 7/1 *suñaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *karmaṇi* #86, *kvip* #87)

some karmaṇy upapade sunoter dhātoḥ kvip pratyayo bhavati
Affix *KvIP* occurs after verbal root *ṣUÑ* when the root cooccurs with a *pada* which contains *soma* as *karman* and the action is denoted in the past.

EXAMPLE:

somasut 'he who pressed out *Soma*'

1. *Kāśikā* claims that all four restrictions of *kāla*, *upapada*, *pratyaya* and *dhātu* are operative here as well as in the subsequent rule. Thus, consider (*PM* ad *Kāś*):

(*a*) *bhūtakālasya kvipi niyatatvāt somaṃ sutavān somasāva ity aṇ na bhavati* 'because affix *KvIP* is to occur when the action is denoted in the past, *aṆ* cannot be introduced to derive *somasāvaḥ* parallel to the analyzed form: *somaṃ sutavān* 'he pressed out the Soma';

(*b*) *dhātoḥ soma evopapade niyatatvāt surāṃ sutavān surāsāva ity aṇ eva bhavati* 'because *soma* alone forms the *upapada*, affix *aṆ* alone occurs in *surāsāvaḥ* parallel to the analyzed form: *surāṃ sutavān* 'he distilled the liquor';

(*c*) *...dhātau niyatatvāt somaṃ krītavān somakrīr iti kvib na bhavati* 'because of the restriction on verbal root *ṣuÑ*, *somakrīḥ* does not qualify for affix *KvIP*, against *aṆ*, to derive it parallel to the analyzed form *somaṃ krītavān* 'he purchased Soma';

(*d*) *kvipo bhūte niyatatvāt somaṃ sunoti soṣyati veti vivakṣāyāṃ kvib na bhavati* 'because *KvIP* is restricted to past alone, one's desire to say, 'he presses out the Soma; ... will press it out' does not entail *KvIP* against *aṆ*'.

3.2.91 अग्नौ चेः

agnau ceḥ
/*agnau* 7/2 *ceḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *karmaṇi* #86, *kvip* #87)
agnau karmaṇy upapade cinoter dhātoḥ kvip pratyayo bhavati
Affix *KvIP* occurs after verbal root *ciÑ* when the root cooccurs with *agni* 'fire' as *karman* and the action is denoted in the past.

EXAMPLE:

agnicit 'he who heaped the ritual fire'

3.2.92 कर्मण्याग्न्याख्यायाम्

karmaṇy agnyākhyāyām

/karmaṇy 7/1 *agnyākhyāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi* #86, *kvip* #87, *ceḥ* #91)
karmaṇy upapade cinoteḥ karmaṇy eva kārake kvip pratyayo bhavati agnyākhyāyām
Affix *KvIP* occurs to denote *karman* after verbal root *ciÑ* when the root cooccurs with a *pada* which denotes *karman*.

EXAMPLES:

śyenacit 'a ritual fire (place) arranged in the shape of a falcon'
kaṅkacit 'a ritual fire (place) arranged in the shape of a heron'

1. Note that '*ceḥ*' and '*karmaṇi*' are carried from the preceding rule. The second *karmaṇi*, which is explicitly stated in the rule, is intended to regulate the meaning of the affix. Thus, affix *KvIP* of this rule should be introduced only when *karman* is the denotation of the derivate. Thus, we get *śyenacit* parallel to the analysed form *syena iva cīyate* 'that which is arranged like (the form of) a falcon' as opposed to *syena iva citavān* 'he arranged like a falcon'.

2. The word '*ākhyā*' is used to specify the particular traditional meaning (*rūḍhi*) of the derivate. Thus, it is not the general traditional meaning of 'fire' but the special conventional meaning of 'arranging bricks (*iṣṭakācayaḥ*) to prepare the special receptacle for one of the three ritual fires, *āvahanīya*, in the shape of a falcon'. Commentators hasten to add here that this meaning is denoted only by the form which results by the combination (*samudāya*) of *dhātu* 'root', *upapada* 'cooccurring word' and *pratyaya* 'affix'.

3.2.93 कर्मणीनिर्विक्रियः

karmaṇīnir vikriyaḥ
/karmaṇi 7/1 *iniḥ* 1/1 *vikriyaḥ* 5/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84)
vipūrvāt krīṇāter dhātor 'ini' pratyayao bhavati
Affix *inI* occurs after verbal root *krīÑ* 'to barter, buy', used with the preverb *vi*, when the root cooccurs with a *pada* which denotes *karman* and the action is denoted in the past.

EXAMPLES:

somavikrayī 'he who sold Soma'
rasavikrayī 'he who sold liquor'

1. The explicit use of the word *karmaṇi* is intended again for special meaning. *Nyāsa* characterizes it as follows: *yat karma kriyāsambandham*

anubhavati karttuḥ kutsām āvahati tat kutsānimittaṃ karma yathā syād... 'a *karman* which, while being associated with the action, brings *kutsā* to the agent; that object, the cause of *kutsā*, is (intended to be denoted here)'. Thus, we get *rasavikrayī* 'the one who sells liquor' where liquor, the object, when associated with the action of selling, brings *kutsā* to the agent, the person who sells'. But why not carry *karmaṇi* by *anuvṛtti* from the preceding rule where it also denotes a special meaning? To do so would bring a special meaning which is not desired here. Explicitly stating '*karmaṇi*', thus, blocks the undesired meaning of '*karman*' of the preceding rule.

3.2.94 दृशेः क्वनिप्

dṛśeḥ kvanip
/*dṛśeḥ* 5/1 *kvanip* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *karmaṇi* #86)
dṛśer dhātoḥ karmaṇy upapade kvanip pratyayo bhavati
Affix *KvanIP* occurs after verbal root *dṛśIR* when the root cooccurs with a *pada* which denotes *karman* and the action is denoted in the past.

EXAMPLES:

merudṛśvā 'he who has seen Meru'
paralokadṛśvā 'he who has seen the world beyond'

1. Note that *KvanIP* is already available to *dṛśIR* from 3.2.75 *anyebhyo' pi*... What, then, is the purpose of this rule? The purpose is to block the occurrence of other affixes (*pratyayāntaranivṛtyartham*) such as *manIN* and *aṆ*.

3.2.95 राजनि युधिकृञः

rājani yudhikṛñaḥ
/*rājani* 7/1 *yudhikṛñaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *bhūte* #84, *karmaṇi* #86, *kvanip* #94)
rājanśabde karmaṇy upapade yudhyateḥ karoteś ca kvanip pratyayo bhavati
Affix *KvanIP* occurs after verbal roots *yudh* 'to fight' and *ḌukṛÑ* 'to do, make' when the roots cooccur with a *pada* which denotes *karman* and the action is denoted in the past.

EXAMPLES:

rājayudhvā 'he who had the king fight'
rājakṛtvā 'he who made someone the king'

1. Note that *yudh* is generally treated as intransitive (*akarmaka*). This goes against the requirement that it be conjoined with an object (*karman*). Commentators explain that *yudh* is used here with *antarbhāvitaṇyartha*, inhered causal meaning. Thus, it is a transitive (*sakarmaka*) verbal root.

3.2.96 **सहे च**

sahe ca
/*sahe* 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *kvanip* #94, *yudhikṛñaḥ* #95)
sahe śabde copapade yudhikṛñor dhātvoḥ kvanip pratyayo bhavati
Affix *KvanIP* also occurs after verbal roots *yudh* and *ḌUkṛÑ* when the roots cooccur with a nominal *pada* which contains *saha* 'with' and the action is denoted in the past.

EXAMPLES:

sahayudhvā 'he who fought along with someone else'
sahakṛtvā 'he who did something along with someone else'

1. Note that *saha*, as an *upapada*, is not modified here with *karman* 'object', since it denotes 'non-thing' (*astvavacana*). That is, *saha* cannot denote an object.

3.2.97 **सप्तम्यां जनेर्डः**

saptamyāṃ janer ḍaḥ
/*saptamyāṃ* 7/1 *janeḥ* 5/1 *ḍaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84)
saptamyante upapade janer dhātor ḍaḥ pratyayo bhavati
Affix *Ḍa* occurs after verbal root *janA* 'to be born' when the root cooccurs with a *pada* which ends in *saptamī* 'seventh triplet of nominal endings' and when the action is denoted in the past.

EXAMPLES:

upasarajaḥ 'he who was born by first impregnation'
mandurajaḥ 'he who was born in a stable'

1. Note that *saptamī* of *saptamyām* denotes the locative nominal ending. This makes the *pratyayagrahaṇa-paribhāṣā* (*Pbh.* 24) apply to yield the interpretation 'that which ends in a locative nominal ending'. This explanation is necessary in view of 1.1.68 *svaṃ rūpaṃ śabdasya*..., and 3.1.92 *tatropapadaṃ*....

2. Note that the deletion of a *ṭi* (1.1.64 *aco' ntyādi ṭi*), even when it is part of a non-*bha* (1.4.18 *yaci bham*), is made possible at the strength of *Ḍ* as an *it* in the affix (cf. *Mbh.* ad 6.4.143 *ṭeḥ*: *ḍity abhasyāpy anubandhakaraṇasāmarthyāt*).

3.2.98 **पञ्चम्यामजातौ**

pañcamyām ajātau
/*pañcamyām* 7/1 *ajātau* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *janer ḍaḥ* #97)
pañcamyanta upapade jātivarjite janer ḍaḥ pratyayo bhavati
Affix *Ḍa* occurs after verbal root *janA* when the root cooccurs with a *pada* which ends in *pañcamī* 'fifth triplet of nominal endings' and signifies something other than a *jāti* 'class' provided the action is denoted in the past.

EXAMPLES:

buddhijaḥ 'that which had its source in intelligence'
saṃskārajaḥ 'that which had its source in the *saṃskāra* (habits)'
duḥkhajaḥ 'that which had its source in grief'

3.2.99 **उपसर्गे च संज्ञायाम्**

upasarge ca saṃjñāyām
/*upasarge* 7/1 *ca* Ø *saṃjñāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *janer ḍaḥ* #97)
upasarge copapade janer ḍaḥ pratyayo bhavati
Affix *Ḍa* also occurs after verbal root *janA* when the root cooccurs with a nominal *pada* which contains a preverb and the derivate denotes a *saṃjñā* 'name'.

EXAMPLE:

athemā mānavī prajāḥ 'this, thus, is the progeny of Manu'

1. Note that the denotation of name (*saṃjñā*) should be made by the form which results out of the combination of *dhātu*, *upapada* and *pratyaya*. That is, *saṃjñā* cannot be accepted as the meaning of any one of these elements individually.

3.2.100 **अनौ कर्मणि**

anau karmaṇi
/*anau* 7/1 *karmaṇi* 7/1/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *janer ḍaḥ* #87)
anu pūrvād janeḥ karmaṇy upapade ḍaḥ pratyayo bhavati
Affix *Ḍa* occurs after verbal root *janA* when the root is used with the preverb *anu*, and cooccurs with a *pada* which denotes *karman*, provided the action is denoted in the past.

EXAMPLES:

pumanujaḥ 'he who was born after a brother'
stryanujaḥ 'he who was born after a sister'

1. Note that verbal root *janI* will become transitive when used with the preverb *anu*. We also find that *anu* is used in the locative. This raises the question why *anu*, based on its specification in the locative, cannot be treated as an *upapada*? See the explanation given under 2.3.31 *udi kūle rujivahoḥ*.

3.2.101 अन्येष्वपि दृश्यते

anyeṣv api dṛśyate
/*anyeṣu* 7/3 *api* 0 *dṛśyate* (verbal *pada*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *janer ḍaḥ* #97)
anyeṣu apy upapadeṣu kārakeṣu janer ḍaḥ pratyayo dṛśyate
Affix *Ḍa* is also seen to occur after verbal root *janA* when the root cooccurs with items other than those specified, and the action is denoted in the past.

EXAMPLES:

ajaḥ 'unborn'
dvijāḥ '*brāhmaṇas*; twice-born'
brāhmaṇajo dharmaḥ 'a *dharma* which originated with a *brāhmaṇa*'
kṣatriyajaṃ yuddham 'a fight which originated with a *kṣatriya*'
abhijāḥ 'he who was born'
parijāḥ keśāḥ 'hairs which grow all over'
anujaḥ 'born after; younger brother'
parikhā 'that which has been dug all around'; a moat'
ākhā 'pond'

1. This rule recalls the introduction of affix *Ḍa* after verbal root *janI* used with conjoined words of varying denotata. Thus, it has been stated that when the conjoined word is constituted by *pañcamī* (2.3.98), *Ḍa* comes after *janI* provided the *upapada* does not denote *jāti*. But this rule offers *brāhmaṇaja* and *kṣatriyaja* in *brāhmaṇajo dharmaḥ*, etc. It has been

additionally stated that *Ḍa* is introduced after *janI* when a preverb constitutes an *upapada* and a name is denoted by the derivate (3.2.99). Our present rule offers examples where the derivates denote something other than a name (*saṃjñā*). Thus, we get *abhijāḥ* and *parijāḥ*. Similarly, it has been stated (3.2.99 *anau karmaṇi*) that when *janI* is used with the preverb *anu*, *karman* must be denoted by the *upapada*. This rule offers examples such as *anujaḥ* where the *upapada* is not a *karman*.

2. The word *api* has already been explained (3.2.75 *anyebhyo' pi...*) to be responsible for many violations of operational rules (*sarvopādhivyabhicārārtham*). This allows *Ḍa* to also occur after other roots (*dhātvantara*), as well as under the condition of other *kāraka* (*kārakāntare' pi*). Thus, we get examples such as *parikhā* and *ākhā* from *khanU* 'to dig'.

3.2.102 निष्ठा

niṣṭhā
/*niṣṭhā* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84)
niṣṭhāsaṃjñakaḥ pratyayo bhūte bhavati
An affix termed *niṣṭhā* (1.1.26 *ktaktavatū niṣṭhā*) occurs after a verbal root when the action is denoted in the past.

EXAMPLES:

kṛtam 'that which has already been done'
kṛtavān 'he did...'
bhuktam 'that which has already been consumed'
bhuktavān 'he ate...'

1. Commentators note, here, the problem of *itaretarāśraya* 'mutual dependency'. They note that this rule introduces affixes which have been termed *niṣṭhā*. But there is a problem in understanding how those affixes could be termed *niṣṭhā*, since they have not yet been introduced? To remove such a conflict, commentators note that assignment of the term *niṣṭhā* would be comprehended as taking place later (*bhāvinīsaṃjñā vijñāyate*). That is: that which is subsequently termed *niṣṭhā* is introduced when the action is located in the past (*bhūta*). Note that the term *niṣṭhā* (1.1.26 *ktaktavatū niṣṭhā*) is assigned to affixes *Kta* and *KtavatU*. Affix *Kta* is used to denote *bhāva* 'root-sense' and *karman* 'object' (3.4.70 *tayor eva kṛtyaktakhalarthāḥ*) as opposed to *KtavatU*, which is used to denote *kartṛ* 'agent' (3.4.67 *kartari kṛt*).

2. A *vārttika* under this rule proposes that a *niṣṭhā* affix should also be stated when the onset of an action (*ādikarman*) is denoted. It is stated that the initial stages of actions could not entail their own past. This makes

introduction of *niṣṭhā* impossible. The *vārttika*, by using *ādikarmaṇi* 'when the onset of an action is denoted', refers to rule 3.2.187 *ñītaḥ ktaḥ* whereby *niṣṭhā* affix *Kta* is introduced when the action is located within current time. Thus, we get *prakṛtaḥ kaṭaṃ devadattaḥ* 'Devādatta started making the mat', etc. Refer also to rule 3.4.71 *ādikarmaṇi...*

3.2.103 सुयजोर्ङ्वनिप्

suyajor ṅvanip
/*suyajoḥ* 6/2 *ṅvanip* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84)
sunoter yajateś ca ṅvanip pratyayo bhavati
Affix *ṄvanIP* occurs after verbal roots *ṣuÑ* and *yaj* when the action is denoted in the past.

EXAMPLES:

sutvā '... pressed out the Soma'
yajvā '... performed the ritual sacrifice'

3.2.104 जीर्यतेरतृन्

jīryater atṛn
/*jīryateḥ* 5/1 *atṛn* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84)
jīryater atṛn pratyayo bhavati bhūte
Affix *atṚN* occurs after verbal root *jṝṣ* 'to grow old, decay' when the action is denoted in the past.

EXAMPLE:

jaran 'old, aged'

1. Note that affix *atṚN* obviously forms an exception to affixes termed *niṣṭhā*. As such they can be blocked only optionally, as has been provided for by rule 3.1.94 *vā' sarūpo' striyām*. That is, forms such as *jīrṇaḥ* and *jīrṇavān* which are derivates of affixes assigned the term *niṣṭhā*, can still be used optionally with *jaran*. The *Ṛ* as an *it* in *atṚN* facilitates the introduction of augment *nUM* (7.1.70 *ugid acām...*). The *N* as an *it* is intended for initial high-pitch (*ādyudātta*) accent.

3.2.105 छन्दसि लिट्

chandasi liṭ
/*chandasi* 7/1 *liṭ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84)
chandasi viṣaye dhātor liṭ pratyayo bhavati bhūte

Affix *LIṬ* occurs after a verbal root in the Vedic when the action is denoted in the past.

EXAMPLES:

ahaṃ sūryam ubhayató dadarśa 'I saw the sun from both sides of it'
ahaṃ dyāvā́pṛthivī ātátāna 'I encompassed both heaven and earth'

1. A question is raised about the formulation of this rule. It is argued that this rule is redundant; what it accomplishes can be accomplished by rule 3.4.61 *chandasi luṅlaṅliṭaḥ*. However, 3.4.61 introduces *LIṬ* under the conditions of related actions (*dhātusambandha*) and *anyatarasyām* 'optionally'. Our present rule introduces affix *LIṬ* after verbal roots in general with no strings of *dhātusambandha* and *anyatarasyām* attached. Thus we get: *ahaṃ sūryám ubhayató dadarśa* and *ahaṃ dyāvā-pṛthivī ātátāna.*

3.2.106 लिटः कानज्वा

liṭaḥ kānaj vā
/*liṭaḥ* 6/1 *kānac* 1/1 *vā* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *chandasi* #105)
chandasi viṣaye liṭaḥ kānaj ādeśo bhavati
KānaC optionally comes in place of affix *LIṬ* in the Vedic when the action is denoted in the past.

EXAMPLES:

agniṃ cikyānaḥ 'he heaped the ritual fire'
somaṃ suṣuvāṇaḥ 'he presssed out the Soma'
varuṇaṃ suṣuvāṇaḥ 'he distilled the liquor'

1. This rule introduces affix *KānaC* as a replacement for *LIṬ* in the Vedic. The *K* of the affix is intended as an *it* to facilitate operations specific to an item assigned the status of *Kit* (1.2.1 *gāṅkuṭādibhyo...*). The *C* is intended for the final high-pitch (*antodātta*) of 6.1.160 *citaḥ*. This, as well as affix *KyasU* of the next rule, denotes *kartṛ* via *sthānivadbhāva* (1.1.56 *sthānivad...*; 3.4.67 *kartari kṛt*; 3.1.91 *kṛd atiṅ*). Affix *KānaC* is termed *ātmanepada* by rule 1.4.99 *taṅānāv. . . .* This adds another dimension to the use of *KānaC*. That is, it should be restricted to the replacement of *LIṬ* only when the root after which *LIṬ* is introduced qualifies for *ātmanepada.*

Note that *liṭaḥ* is used in this rule in the genitive (*ṣaṣṭhī*) to indicate that it is the *sthānī* 'item to be replaced' (1.1.49 *ṣaṣṭhī sthāneyogā*). Why did Pāṇini not bring *liṭ* via *anuvṛtti* from the preceding rule? The fact that we want *liṭ* here in the genitive, as opposed to the nominative (*prathamā*)

which the *anuvṛtti* provides, should not pose any problem. For, we have ample instances of transposition of nominal endings (*vibhaktivipariṇāma*) to suit the context. Thus, the nominative of *liṭ* can be changed to read as genitive in the context of rule 3.2.106. This will also be economical, since *liṭ* in the genitive does not have to be explicitly stated in this rule. *Kāśikā* states that an explicit mention of *LIṬ* is intended to inform that *KānaC* and *KvasU* are also replacements of *LIṬ* of 3.2.115 *parokṣe liṭ*. Haradatta does not agree with this position. He states that *LIṬ* is explicitly mentioned in this rule so that there is no confusion about the status of *KānaC* and *KvasU*. That is, he, following the *Mahābhāṣya*, believes that, in the absence of *liṭaḥ*, *KānaC* and *KvasU* will be treated as independent affixes. They will be treated as replacements of *LIṬ* in view of the present formulation. Haradatta also takes recourse to the *paribhāṣā* (*PŚ*. 62): *anantarasya vidhir bhavati pratiṣedho vā* 'an operation, or corresponding negation, is limited to the most immediate'. This prohibits *KānaC* and *KvasU* from being replacements for the *LIṬ* of rule 3.2.115 *parokṣe liṭ*. Refer also to my notes under rule 3.2.108 *bhāṣāyam*....

3.2.107 क्वसुश्च

kvasuś ca
/kvasuḥ 1/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *chandasi liṭaḥ, vā* #105–6*)*
chandasi liṭaḥ kvasur ādeśo bhavati
KvasU comes optionally in place of *LIṬ* in the Vedic when the action is denoted in the past.

EXAMPLES:

jakṣivān '...ate'
papivān '...drank'

1. Note that *KvasU* is termed *parasmaipada* by 1.4.98 *laḥ parasmaipadam*. Consequently, it should be introduced as a replacement of *LIṬ* only after a verbal root which qualifies to receive *parasmaipada* endings.

2. A question is raised as to why *KvasU* is introduced as a replacement separately from *KānaC*. Why did Pāṇini not combine the provision of this rule with that of the preceding? Commentators say that a separate rule-formulation was necessary to block the *anuvṛtti* of *KānaC* in the subsequent rule. If both were given as part of a single rule, then when one was carried the other would also have carried.

3.2.108 भाषायां सदवसश्रुवः

bhāṣāyāṃ sadavasaśruvaḥ

/bhāṣāyām 7/1 *sadavasaśruvaḥ* 5/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṭaḥ, vā* #106, *kvasu* #107)
'sada, vasa, śru' ity etebhyaḥ parasya liṭo bhāṣāyāṃ viṣaye (vā) kvasur ādeśo bhavati
Affix *LIṬ* is optionally replaced with *KvasU* in the Classical language when *LIṬ* occurs after verbal roots *sadA* 'to sit', *vasA* 'to dwell' and *śru* 'to hear' and the action is denoted in the past.

EXAMPLES:

upasedivān kautsaḥ pāṇinīm 'Kautsa was subservient to Pāṇini'
upāsadat... 'id.'
anūṣivān kautsaḥ pāṇinīm
'Kautsa lived subsequently to Pāṇini'
anvavātsīt... 'id.'
upaśuśruvān kautsaḥ pāṇinīm
'Kautsa heard about Pāṇini...'
upāśrouṣīt... 'id.'

1. Note that the *Kāśikāvṛtti* interprets this rule differently from others as follows:

'sada, vasa, śru' ity etebhaḥ parasya liṭo bhāṣāyāṃ viṣaye vā kvasur ādeśo bhavati 'KvasU optionally comes in place of *LIṬ*, in the Classical language, when *LIṬ* occurs after verbal roots *'sada, vasa* and *śru* to denote the action in the past'

Note that affix *LIṬ*, in this section, is introduced only in the Vedic to denote the sense of general past (*bhūta*). That is, *LIṬ* is not introduced after verbal roots to denote general past in the Classical language. *Kāśikā* therefore states that since Pāṇini introduces the replacement, and since the replacement would become vacuous if there were no *sthānī*, an item to be replaced, we must assume that *LIṬ* is given as the *sthānī* by way of the specification of its replacement. *Kāśikā* thus treats the introduction of *LIṬ* as understood. This now clears the way for *KvasU* to optionally replace *LIṬ*.

Bhaṭṭoji Dīkṣita (*SK*: IV:114) interprets this rule differently:

sadādibhyo bhūtasāmānye bhāṣāyāṃ liḍ vā syāt, tasya ca nityaṃ kvasuḥ 'affix *LIṬ* optionally is introduced to denote 'past in general' after verbal root *sada*, etc., when the usage is classical; and *KvasU* obligatorily comes in place of *LIṬ*'

Vāsudeva Dīkṣita (ad *SK* IV:114) explains Bhaṭṭoji's position as follows:

'vā grahaṇaṃ liṭaiva saṃbaddhyate; tasya kvasus tu nitya iti bhāṣye spaṣṭam. pakṣe luṅ, tasya bhūtasāmānye vihitatvāt. 'the use of *vā* must be associated with *LIṬ* only; that *KvasU* is its obligatory replacement has already been made clear in the *Mahābhāṣya*. In the absence of this optional *LIṬ*, *LUṄ* (3.2.110 *luṅ*) will be the choice, since it has been introduced in the sense of general past'.

It is clear from the preceding discussion that the *Kāśikā* differs with the *Mahābhāṣya*. Commentators such as Haradatta and Nāgeśa accept that affix *LIṬ* is introduced here optionally in the sense of general past after three particular verbs of the classical language. Elsewhere, in the classical language, then, we will get affix *LUṄ*, which has been introduced to denote past in general. Rule 3.2.108 introduces *KvasU* as a replacement for *LIṬ* which denotes general past and is optionally introduced after the three verbal roots of the classical language. Since the word *vā* 'optionally', in this interpretation, is to be related to *LIṬ*, *KvasU* will become the obligatory replacement of *LIṬ*. This position of Haradatta was also accepted by Bhaṭṭoji. Haradatta advises that '*Kāśikā*'s interpretation of this rule should be restructured to reflect this correct interpretation (*vṛttigrantho' pi asminn evārthe yojanīyaḥ*). To sum up, *Kāśikā* makes a logical deduction that *LIṬ* is introduced in the Classical language after the cited verbs with the signification of general past. Affix *KvasU* then optionally replaces it. Others accept that both *LIṬ* and *KvasU* are introduced by this rule. Affix *LIṬ* is introduced optionally but is replaced obligatorily by *KvasU*. I omit details of how the *Mahābhāṣya*, Haradatta, and Nāgeśa offer interpretations which make *Kāśikā's* interpretation unacceptable. Although I chose to translate the rule in view of the *Kāśikā*, I put the *vā* of the *vṛtti* in parenthesis to indicate the difference of interpretation.

3.2.109 **उपेयिवाननाश्वाननूचानश्च**

upeyivāśvānanūcānaś ca
/upeyivān-anāśvān-anūcānaḥ 1/3 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *liṭaḥ*, *vā* #106)
'upeyivān, anāśvān, anūcān' ity ete śabdā nipātyante
Forms such as *upeyivān*, *anāśvān* and *anūcān* are derived by *nipātana*.

EXAMPLES:

upeyivān 'he reached there'
anāśvān 'he did not eat'
anūcān 'he did not speak'

1. Note that the examples under this rule are given as derived by

nipātana. It is not, therefore, relevant to explain their derivational processes. However, check the appendix for some ad hoc applications.

The word *vā* is carried here. Consequently, in the opinion of the *Kāśikā*, *KvasU* will be optional. In the opinion of others, *LIṬ*, ruled in the sense of general past, will become optional. See notes under the preceding rule.

3.2.110 लुङ्

luṅ
lluṅ 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84)
bhūte' rthe varttamānād dhātor luṅ pratyayo bhavati
Affix *LUṄ* occurs after a verbal root when the action is denoted in the past.

EXAMPLES:

akārṣīt 'he made..,'
ahārṣīt 'he carried something away'

1. This rule introduces affix *LUṄ* after a verbal root when the action is denoted in the past (*bhūta*). The *Ṅ* as an *it* is intended for qualification in rules such as 3.4.99 *nityaṃ ṅitaḥ*. The *U* is also used for qualification (*viśeṣaṇārthaḥ*), though in rules such as 6.4.71 *luṅlaṅlṛṅkṣv aḍ udāttaḥ*, whereby *aṬ*, an augment marked with *udātta*, is introduced to an *aṅga* (1.4.13 *yasmāt...*) before *LUṄ*, etc.

3.2.111 अनद्यतने लङ्

anadyatane laṅ
lanadyatane 7/1 *laṅ* 1/1/
(pratayayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84)
avidyamānādyatane bhūte' rthe varttamānād dhātor laṅ pratyayo bhavati
Affix *LAṄ* occurs after a verbal root when the action is denoted in a past which is non-current (*anadyatanabhūta*).

EXAMPLES:

akarot 'he made...'
aharat 'he took away'

1. The word *anadyatana*, used here as qualifier to *bhūta*, is a *bahuvrīhi* compound with the analyzed form: *avidyamāno' dyatano yasmin* 'that (a past) within which no current time is present'. Commentators show how a *tatpuruṣa* interpretation causes problems. For example, the affix would become applicable in *adya hyo vā abhukṣmahi* 'we ate today or yesterday?'.

This sentence obviously involves a combination of opposites: current and non-current. This meaning is gotten by the *paryudāsa* interpretation of *anadyatana*: *adyatanād anyaḥ* 'something other than the current'. A *prasajya* interpretation of *anadyatana* with the analysis, *adyatane na bhavati* 'not when the current' will also be problematic. For, this interpretation will allow *LUṄ* when the action is denoted in past in general. Our rule requires *LUṄ* here with the exception of the current past (*anadyatanabhūta*). Note that *LAṄ* cannot apply where even a trace of 'today' is found. The *tatpuruṣa* interpretation based on the *paryudāsa* or *prasajya* interpretation of *anadyatana* = *adyatanād yo anyaḥ* or *adyatane na bhavati* is thus rejected.

Nyāsa (ad *Kāśikā* II: 624) explains *adyatana* as follows:

> *divasaḥ sakalo' tikrāntāyā rātreś caturtho yāma āgāminyāś ca prathamo yāmaḥ* 'the time constituted by the entire day, the fourth quarter of the night before, and the first quarter of the night to come'.

If a person, in reply to the question 'where did you stay', answers 'I stayed right here', then he should use his reply either in *LUṄ* or in *LAṄ*. If he stayed, and slept, during the first three quarters of the previous night and woke up in its last quarter, he should use *LAṄ* as: *aham atrāvātsam*. For, the three quarters of the last night will constitute *anadyatana* for him. If the man asked did not have even a wink of sleep in all the four quarters of the past night then to denote the sense of 'continuous non-sleeping' (*jāgaraṇasantatau*) one should use *LUṄ* as: *aham atrāvasam* 'I stayed right here'. This is a *vārttika* proposal in the *Mahābhāṣya* under the preceding rule.

A *vārttika* proposes the use of *LAṄ* when some popular episode of the past, which has not been witnessed by any living person, is presented as witnessed by the relator (*parokṣe ca lokavijñāte prayoktur darśanaviṣaye laṅ vaktavyaḥ*). Thus, we get: *aruṇad yavanaḥ sāketam* 'the Yavana enforced a siege on the Sāketa'.

3.2.112 अभिज्ञावचने लृट्

> *abhijñāvacane lṛṭ*
> /*abhijñāvacane* 7/1 *lṛṭ* 1/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *anadyatane* #111)
> *abhijñāvacane upapade bhūtānadyatane lṛṭ pratyayo bhavati*
> Affix *LṚṬ* occurs after a verbal root when the root cooccurs with a nominal *pada* which denotes *abhijñā* 'recollection', and when the action is denoted in a non-current past.

EXAMPLE:

> *abhijānāsi devadatta kaśmīreṣu vatsyāmaḥ* 'remember Devadatta, when we lived in *Kaśmīra*'

1. This constitutes an exception to *LAṄ*. The word *abhijñā* has been explained as 'recollection' (*smṛti*). The *saptamī* in *abhijñāvacane* indicates that a statement of recollection should constitute the cooccurring word (*upapada*). Thus, we get a sentence such as *abhijānāsi devadatta kaśmīreṣu vatsyāmaḥ* where *LṚṬ* has been introduced to denote a past which is non-current (*anadyatana*).

2. The word *vacana* in *abhijñāvacana* has been used to facilitate the synonyms (*paryāya*) of *abhijñā* to qualify as the cooccurring word. Thus, *abhijānāsi* of the example sentence could be replaced with *smarasi, buddhyase, cetayase*, etc., with no effect on the use of *LṚṬ*. A rule which uses *abhijñā* without *vacana* would be interpreted to specify the condition as: 'when *abhijñā* itself constitutes the cooccurring word'.

3.2.113 न यदि

na yadi
/*na* Ø *yadi* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *anadyatane* #111, *abhijñāvacane lṛṭ* #112)
yac chabdasahite' bhijñāvacana upapade lṛṭ pratyayo na bhavati
Affix *LṚṬ* does not occur after a verbal root when the root cooccurs with a nominal *pada* which denotes *abhijñā* relative to some non-current action in the past, and is used in conjunction with *yad* 'that which'.

EXAMPLES:

abhijānāsi devadatta yat kaśmīreṣv avasāmaḥ
'remember, Devadatta, that we lived in Kaśmīra'

3.2.114 विभाषा साकांक्षे

vibhāṣā sākāṅkṣe
/*vibhāṣā* 1/1 *sākāṅkṣe* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *anadyatane* #111, *abhijñāvacane lṛṭ* #112)
abhijñāvacane upapade yac chabdasahite kevale ca vibhāṣā liṭ pratyayo bhavati, sākāṅkṣaś cet prayoktā
Affix *LṚṬ* occurs after a verbal root, used with or without *yad*, when the root cooccurs with a *pada* which denotes *abhijñā* relative to some non-current action in the past, provided the speaker wishes to add some additional information.

EXAMPLES:

abhijānāsi devadatta kaśmīreṣu vatsyāmas tatraudanaṃ bhokṣyāmahe

'remember, Devadatta, when we lived in Kaśmīra and ate rice there'
abhijānāsi devadatta yat kaśmīreṣu vatsyāmaḥ, yat tatraudanaṃ bhokṣyāmahe
'remember, Devadatta, that we lived in Kaśmīra and ate rice there'

1. Commentators interpret this rule to be an instance of *ubhayatra-vibhāṣā*. That is, this rule provides for something which was available (*prāpta*); at the same time it also provides for something which was unavailable (*aprāpta*). Affix *LṚṬ* is available by rule 3.2.114 *abhijñāvacane*... It is made unavailable by the negation of rule 3.2.115 *na yadi*. Our present rule provides *LṚṬ*, optionally, with or without the use of *yad* in the co-occurring word, provided the speaker expects to add more information. Thus, *LṚṬ* is used in *vatsyāmaḥ* of *abhijānāsi devadatta (yat) kaśmīreṣu vatsyāmas tatraudanaṃ bhokṣyāmahe* 'remember Devadatta, we lived in Kaśmīra and ate rice there'. Note that *bhokṣyāmahe* takes *LAṄ*, since the provision of *LṚṬ* is optional. Conversely, we can get *abhijānāsi devadatta, kaśmīreṣv avasāma, yat tatraudanaṃ abhuñjamahi* where *yad* is used and the first verb is used in *LAṄ*.

Kāśikā explains *sākāṅkṣe* as *lakṣyalakṣaṇayoḥ sambandhe prayoktur ākāṅkṣā* 'expectancy on part of the speaker about the relationship between the action forming the goal and that which marks that goal'. In the sentences cited, *vāsa* 'stay' marks the goal of *bhojana* 'eating'. The speaker in these sentences expects to inform about this relationship.

3.2.115 परोक्षे लिट्

parokṣe liṭ
/*parokṣe* 7/1 *liṭ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *anadyatane* #111)
bhūtānadyatanaparokṣe' rthe varttamānād dhātor liṭ pratyayo bhavati
Affix *LIṬ* occurs after a verbal root when an unwitnessed (*parokṣa*) action which is not current (*anadyatana*) is denoted in the past (*bhūta*).

EXAMPLES:

cakāra 'he made...'
jahāra 'he took away...'

1. Note that both *anadyatane* and *bhūte* are carried. They are further modified by *parokṣe* of this rule to mean: 'in the sense of an action located in a past which is not related with today, nor has been witnessed by the

speaker'. The *Mahābhāṣya* raises the question of defining this past in terms of a time-frame though leaves the reader to decide for himself. Two things become clear in the discussion: (*a*) the past of this rule has nothing to do with (the elapsed time of) today, and (*b*) *parokṣa* could simply be understood as 'that which remains beyond the power of sensory perception of the speaker'. Thus, *parokṣabhūta* of the *anadyatana* type could refer to a time-frame encompassing time-immemorial to the last minute of the third quarter of the last night.

2. A *vārttika* proposes that *LIṬ* is to be used irrespective of *parokṣa* and *anadyatana* when an action is located in the past and *apahnava* 'denial' is denoted. Thus, someone asked: *kaliṅgeṣu sthito' si* 'have you been to the country of Kaliṅga?' An answer such as: *nāhaṃ dakṣiṇāpathaṃ praviveśa* 'I did not venture into the South of the country' with *LIṬ* is justified at the strength of the denial of past action.

3.2.116 **हशश्वतोर्लङ् च**

haśaśvator laṅ ca
/haśaśvatoḥ 7/2 *laṅ* 1/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *anadyatane* #111, *parokṣe liṭ* #115*)*
haśaśvatayor upapadayor laṅ pratyayo bhavati cakārāl liṭ ca
Affix *LAṄ*, and *LIṬ* as well, occurs after a verbal root when the root cooccurs with *ha* and *śaśvat* and an unwitnessed action which is not current is denoted in the past.

EXAMPLES:

iti hākarot 'thus he did with resolve'
iti ha cakāra 'id.'
śaśvad akarot 'he always did it'
śaśvac cakāra 'id.'

1. This rule introduces affix *LAṄ*, additionally to *LIṬ*, to denote the sense of an unwitnessed non-current past when the root cooccurs with *ha* and *śaśvat*. Thus, we get *akarot* with *LAṄ* parallel to *cakāra* with *LIṬ*.

3.2.117 **प्रश्ने चासन्नकाले**

praśne cāsannakāle
/praśne 7/1 *ca* Ø *āsannakāle* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *anadyatane* #111, *parokṣe, liṭ* #115, *laṅ* #116)
āsannakāle pṛcchyamāne bhūtādyatanaparokṣe' rthe varttamānād dhātoḥ laṅliṭau bhavataḥ

Affixes *LAṄ* and *LIṬ* occur after a verbal root when a question is asked about an action of the recent past which is not current, and which was not witnessed by anyone.

EXAMPLES:

agacchad devadattaḥ 'did Devadatta leave?'
jagāma devadattaḥ 'id.'
ayajad devadattaḥ 'did Devadatta perform the ritual sacrifice?'
iyāja devadattaḥ 'id.'

1. This rule introduces both *LAṄ* and *LIṬ* after a verbal root when a question is asked about some unwitnessed action of a non-current past of relatively recent time. Thus, consider *agacchad devadattaḥ* / *jagāma devadattaḥ* 'did Devadatta leave?'. Note that *jagāma devadattaḥ* 'Devadatta left', with *jagāma*, a form of *LIṬ*, cannot be used optionally with *LAṄ* in the answer. But what is *āsanna* 'proximate, recent, or immediate'? How proximate or immediate to the current day must it be? There is no specification to be exact though normally a time-frame of five years is acceptable to the logicians (*naiyāyika*).

Why must the derivate involve a question relative to recent times? So that *bhavantaṃ pṛcchāmi* 'I ask you sir!', *jaghāna kaṃsaṃ kila vāsudevaḥ* 'did Vāsudeva indeed kill Kaṃsa' could not come under the purview of this rule. Note that the question is being asked about the killing of Kaṃsa (*kaṃsavadha*) which cannot be accepted as recent (*āsannakālika*).

3.2.118 लट् स्मे

laṭ sme
/*laṭ* 1/1 *sme* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *anadyatane* #111, *parokṣe* #115)
smaśabda upapade bhūtānadyatanaparokṣe laṭ pratyayo bhavati
Affix *LAṬ* occurs after a verbal root when the root cooccurs with *sma*, and when an action which is not current, and which was not witnessed by anyone, is denoted in the past.

EXAMPLE:

naḍena sma purādhīyate 'they studied holding the (burning) reed in their hands (for light)'

1. This is an exception to the *LIṬ* of 3.2.115 *parokṣe liṭ*. Some, according to Haradatta, explain the example sentence as:

purā kalpe naḍākhyaṃ tṛṇaviśeṣaṃ haste gṛhītvā adhīyānā adhīyate sma 'the students studied in the ancient times with *naḍa*, a particular reed, in their hands'.

3.2.119 अपरोक्षे च

aparokṣe ca
/aparokṣe 7/1 *ca* 0/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *anadyatane* #111, *laṭ, sme* #118)
aparokṣe ca bhūtānadyatane' rthe varttamānād dhātoḥ sma upapade laṭ pratyayo bhavati
Affix *LAṬ* also occurs after a verbal root when the root cooccurs with *sma*, and when an action which is not current, but which may have been witnessed by someone, is denoted in the past.

EXAMPLES:

evaṃ sma pitā bravīti 'thus my father used to speak'
iti smopādhyāyaḥ kathayati 'thus my teacher used to say'

1. The preceding rule allows for *LAṬ* when the root cooccurs with *sma*, and when the action, which may have been witnessed, is located in the non-current past. This rule allows for *LAṬ* even when the action is not of the unwitnessed type.

2. A question is raised against the formulation of this rule. It is argued that dropping the *anuvṛtti* of *parokṣe* in the preceding rule would have made the derivation of both the *parokṣa* and *aparokṣa* derivates possible. This would have saved the formulation of this rule. Commentators explain that dropping the *anuvṛtti* of *parokṣe* in the preceding rule would have also resulted in the suspension of the *anuvṛtti* of *anadyatane*. This, in turn, is not desired.

3.2.120 ननौ पृष्टप्रतिवचने

nanau pṛṣṭaprativacane
/nanau 7/1 *pṛṣṭaprativacane* 7/1/
(pratyayaḥ #3.1.1 *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *laṭ* #118)
nanuśabda upapade praśnapūrvake prativacane bhūte' rthe laṭ pratyayo bhavati
Affix *LAṬ* occurs after a verbal root when the root cooccurs with *nanu* and response to a question about an action in the past is denoted.

EXAMPLES:

akārṣīḥ kaṭaṃ devadatta 'Devadatta, did you make the mat?'

nanu karomi bhoḥ 'indeed I made (it)'
avocas tatra kiṃcid devadatta 'Devadatta, did you say something there?'
nanu bravīmi bhoḥ 'indeed I did'

1. Note that '*anadyatana*' and '*parokṣa*' are not carried. That is, this rule allows affix *LAṬ* in the sense of past in general. The conditions are: that '*nanu*' should cooccur with the verbal root, and that what the derivate denotes constitutes the answer to a question. Thus, someone asked: *akārṣīḥ kaṭam*? 'did you make the mat'. The answer will include *LAṬ*: *nanu karomi bhoḥ* 'yes, I did'.

3.2.121 **नन्वोर्विभाषा**

nanvor vibhāṣā
/nanvoḥ 7/2 *vibhāṣā* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhūte* #84, *laṭ* #118, *pṛṣṭaprativacane* #120)
naśabde nuśabde copapade pṛṣṭaprativacane vibhāṣā laṭ pratyayo bhavati bhūte
Affix *LAṬ* optionally occurs after a verbal root which cooccurs with *na* and *nu* and response to a question about an action in the past is denoted.

EXAMPLES:

akārṣīḥ kaṭaṃ devadatta 'Devadatta, did you make the mat?'
na karomi bhoḥ 'I did not make (it)'
nākārṣam 'id.'
ahaṃ nu karomi 'indeed I made (it)'
ahaṃ nvakārṣam 'id.'

1. This rule makes the provision of the preceding rule optional in the context of *na* and *nu* when they constitute the conjoined word. Both '*bhūte*' and '*pṛṣṭaprativacane*' are carried. Thus, we get the following:

Question : *akārṣīḥ kaṭaṃ devadatta* 'did you make the mat Devadatta?'
Answer : *na karomi bhoḥ* 'I did not make it'; *nākārṣam* 'id.'; *ahaṃ nu karomi* 'indeed I made it'

3.2.122 **पुरि लुङ् चास्मे**

puri luṅ cāsme
/puri 7/1 *luṅ* 1/1/ *ca* Ø *asme* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2 *dhātoḥ* #3.1.91, *bhūte*,

anadyatane #111, *laṭ* #118, *vibhāṣā* #121)
'purā' śabda upapade smaśabdavarjite bhūtānadyatane' rthe vibhāṣā luṅ pratyayo bhavati laṭ ca
Affix *LUṄ* occurs, optionally with *LAṬ*, after a verbal root which cooccurs with *purā*, and is not used in conjunction with *sma*, provided the action is denoted in a past which is not current.

EXAMPLES:

vasantīha purā chātrāḥ 'students lived here earlier'
avātsuḥ purā chātrāḥ 'students lived (here) earlier'
avasann iha purā chātrāḥ 'students lived here earlier'
ūṣur iha purā chātrāḥ 'I hear that students lived here earlier'

1. Note that the word *anadyatane* is carried via *maṇḍūkapluti*. This rule offers *LUṄ* after a verbal root when *purā* 'once upon a time; previously' forms the cooccurring word and *sma* is not used. Of course, the action has to be located in the past of the non-current time. The derivate is again optional to *LAṬ*. If, however, the option of *LUṄ* and *LAṬ* are not accepted, *LIṬ* and *LAṄ* can be introduced. Note that *LIṬ* will be introduced by 3.2.115 *parokṣe liṭ*. Thus we get the following four sentences:

(*a*) *vasantīha purā chātrāḥ* (*LAṬ*) 'students lived here earlier'
(*b*) *avātsuḥ purā chātrāḥ* (*LUṄ*) 'id.'
(*c*) *avasann iha purā chātrāḥ* (*LAṄ*) 'id.'
(*d*) *ūṣur iha purā chātrāḥ* (*LIṬ*) 'I hear that students lived here earlier'

The first three sentences mean the same thing. The fourth implies that the speaker has not witnessed the action by himself. This is explained by the requirement of 3.4.115 *parokṣe liṭ*.

3.2.123 वर्त्तमाने लट्

varttamāne laṭ
/*varttamāne* 7/1 *laṭ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
varttamāne' rthe varttamānād dhātor laṭ pratyayo bhavati
Affix *LAṬ* occurs after a verbal root when the action is denoted at the current time (*varttamāna*).

EXAMPLES:

bhavati '...becomes'
pacati '...cooks'
paṭhati 'reads, recites'

3.2.124 लटः शतृशानचावप्रथमासमानाधिकरणे

laṭaḥ śatṛśānacāv aprathamāsamānādhikaraṇe
/*laṭaḥ* 6/1 *śatṛśānacau* 1/2 *aprathamāsamānādhikaraṇe* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123)
laṭaḥ śatṛśānacāv ity etāv ādeśau bhavataḥ aprathamāntena cet tasya sāmānādhikaraṇyaṃ bhavati
Affixes *ŚatṚ* and *ŚānaC* occur after a verbal root in place of *LAṬ* when the action is denoted at the current time, and when *LAṬ* is not coreferential with a *pada* which ends in the nominative (*prathamā*).

EXAMPLES:

pacantaṃ devadattaṃ paśya 'see Devadatta cooking'
pacamānaṃ devadattaṃ paśya 'id.'
pacatā kṛtam '(it was) done by one who was cooking'

1. The word *aprathamā* equates with *na prathamā*. It is a *naÑ-tatpuruṣa* compound where the negative particle *naÑ* interpreted as *paryudāsa* = *tadbhinna-tatsadṛśa* 'that which is different from *X* but is also similar to it'. Thus, *aprathamā* is interpreted as 'that which is different from *prathamā* but is also similar to it'. The compound *aprathamā* thus denotes the nominal endings *dvitīyā* 'accusative', etc., which are different from the nominative (*prathamā*) but also share similarities because of their membership in the same class of nominal endings. The denotatum of *aprathamā* as 'that which is different from but is also similar to the *prathamā*' is modified in view of the interpretive maxim (cf. *Paribhāṣā*. 24) *pratyayagrahaṇe tadantasya grahaṇam* 'specification by means of an affix refers to that which ends in that affix'. Consequently, *aprathamā* is interpreted as: 'that which does not end in *prathamā* but ends in something similar to it'.

2. The word *samānādhikaraṇaḥ* is explained as a *bahuvrīhi* compound meaning: *samānam* = *abhinnam adhikaraṇaṃ vācyaṃ yasya* 'that whose denotatum is identical to the denotatum of...'. When *samānādhikaraṇaḥ* is modified by *aprathamā* and is put in the locative as a compound-base forming the syntactico-semantic condition for the replacement operation of this rule, it is interpreted as: 'when the denotatum of *LAṬ* is identical with the denotatum of a form which ends in a nominal ending other than the nominative'. The entire expression thus outlines the syntactico-semantic condition required of the form which ends in *LAṬ*. If the condition is met, *LAṬ* can be replaced with *ŚatṚ* or *ŚānaC*, where *Ś* is used as an *it* to facilitate the introduction of affixes *ŚaP*, etc. This operation is

consequent upon assignment of the term *sārvadhātuka* (3.4.113 *tiṅśit sārvadhātuka*). Let us examine the following sentences:

(1) *devadatta odanaṃ pacati* 'Devadatta is cooking rice'
(2) *ahaṃ devadattaṃ paśyāmi* 'I see Devadatta'
(3) *ahaṃ odanaṃ pacantaṃ devadattaṃ paśyāmi* 'I see Devadatta cooking rice'

Note that the first two sentences do not entail any coreferentiality of the type on hand. The third entails a coreferential relationship between *Devadattam* and *pacantam*. Given the string *pac* + *LAṬ* + *devadatta* + *am*, *LAṬ* can be replaced with *ŚatṚ* or *ŚānaC* if the denotatum of this *LAṬ* is similar to the denotatum of a word which ends in a nominal ending other than the nominative. If *devadatta* + *am*, which ends in *dvitīyā*, has the same denotatum as the *LAṬ*, then *LAṬ* can be replaced with *ŚatṚ* or *ŚānaC*. What is the denotatum of *LAṬ*? Rule 3.4.69 *laḥ karmaṇi ca bhāve cākarmakebhyaḥ* explains that *LA* denotes agent (*kartṛ*) and object (*karman*) after a transitive root (*sakarmaka*); it denotes the agent and root-sense (*bhāva*) after an intransitive (*akarmaka*) root. The *am* after *devadatta* + *am* is understandably introduced to denote the *karman*. If the *LAṬ* denotes *karman*, then it can be replaced with *ŚatṚ* or *ŚānaC*.

Note that the coreferentiality between the denotata of words such as *devadattam* and the *LAṬ* in *pac* + *LAṬ* must be determined in view of the action. For example, the *karman* denoted by *am* of *devadatta* + *am* could be coreferential with the *karman* denoted by the *LAṬ* of *pac* + *LAṬ*, if and only if, they are *karman* in relation to the same action. Thus, sentence (3) has Devadatta as the object of seeing; *pacantam* denotes the same object. However, *pacantam* does not denote *odanam* which constitutes the object of *pac*, a different action.

Note, in addition, that a *LAṬ* denotes *kartṛ*, *bhāva*, or *karman* not by itself, but by its replacements (*ādeśa*). Thus, to say that *pac* + *LAṬ* in sentence (3) denotes *karman* is technically incorrect. Actually, this *karman* could be denoted by affixes *ŚatṚ* and *ŚānaC*, or by a verbal ending which comes as a replacement. How, then, should the coreferentiality of *LAṬ* with a word which ends in a nominal ending other than *prathamā* be understood? Commentators state that the property (*dharma*) of denoting coreferentiality is to be transferred to the replacement of *LAṬ* for purposes of its replacements with *ŚatṚ* and *ŚānaC*. That is, it has to be imagined. For additional details relative to the replacement, see the appendix.

Note that sometimes we also find a replacement in affixes *ŚatṚ* or *ŚānaC* when the denotatum of *LAṬ* is coreferential with the denotatum of a *pada* which ends in the nominative. *Kāśikā* states that *LAṬ* is again used in the rule just to indicate this. This purpose is aptly called: *adhikavidhāna*

'that which is more than what a rule in question could provide for'. Thus we get the sentence: *san brāhmaṇaḥ* '... is a *brāhmaṇa*'.

3. *Kāśikā* further informs that some interpret the rule with the *anuvṛtti* of *vibhāṣa* from 3.2.121 *nanvor vibhāṣā* in order to explain the coreferentiality of *LAṬ* with a word which ends in *prathamā*. The rule thus becomes *vyavasthitavibhāṣā* in the sense that (*a*) *ŚatṚ* and *ŚānaC* obligatorily replace *LAṬ* when it is coreferential with a word which ends in a nominal ending other than *prathamā*, and (*b*) *ŚatṚ* and *ŚānaC* replace *LAṬ* optionally when the coreferentiality obtains between *LAṬ* and a word which ends in *prathamā*. This all is to somehow account for usages entailing coreferentiality with nominative which goes against the rule.

Note additionally that *ŚatṚ* and *ŚānaC*, for reasons of being constituted by more than one sound segment, and also for being marked with *Ś*, replace *LAṬ* in its entirety (*sarvādeśa*).

3.2.125 **सम्बोधने च**

sambodhane ca
/*sambodhane* 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *laṭaḥ śatṛśānacau* #124)
sambodhane ca viṣaye laṭaḥ śatṛśānacau pratyayau bhavataḥ
Affixes *ŚatṚ* and *ŚānaC* occur after a verbal root in place of *LAṬ* also when *sambodhana* 'address' is denoted in relation to an action located at the current time.

EXAMPLES:

he pacan 'o, you, the cooking one'
he pacamāna 'id.'

1. This rule orders the replacement by *ŚatṚ* and *ŚānaC* under the constraint of coreferentiality with *prathamā* though this *prathamā* should be introduced to denote *sambodhana* (2.3.47 *sambodhane ca*).

3.2.126 **लक्षणहेत्वोः क्रियायाः**

lakṣaṇahetvoḥ kriyāyāḥ
/*lakṣaṇahetvoḥ* 7/2 *kriyāyāḥ* 6/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *laṭaḥ śatṛśānacau* #124)
lakṣaṇe hetau cārthe varttamānād dhātoḥ parasya laṭaḥ śatṛśānacāv ādeśau bhavataḥ, tau cel lakṣaṇahetukriyāviṣayau bhavataḥ
Affixes *ŚatṚ* and *ŚānaC* occur after a verbal root in place of *LAṬ* when the action denoted by the root constitutes a *lakṣana* 'characteristic mark', or *hetu* 'cause', of some other action.

EXAMPLES:

śayānā bhuñjate yavanāḥ 'the Ionians eat while reclining'
arjayan vasati 'he is living here in order to earn money'
adhīyāno vasati 'he is living here in order to study'

1. This rule introduces *ŚatṚ* and *ŚānaC* in place of *LAṬ* when the action denoted by the root marks or characterizes another action, or serves as the *hetu* 'cause of the same. Thus, consider:

(*a*) *śayānā bhuñjate yavanāḥ* 'the Ionians eat while reclining'
(*b*) *tiṣṭhan mūtrayati yavanaḥ* 'the Ionian urinates while standing
(*c*) *adhīyāno vasati vārāṇasyām* 'he stays in Vārāṇasī for the purpose of studying'

Affix *ŚatṚ* replaces *LAṬ* after *sthā* 'to stand' in sentence (*b*) since the action denoted by this root characterizes the way the Ionians 'urinate'. The first sentence introduces *ŚānaC* as a replacement for *LAṬ*.after verbal root *śīṄ* 'to recline' since the action denoted by this root characterizes the way the Ionians eat. Sentence (*c*) explains how *adhīyānaḥ*, a derivate of *adhi* + *i* + *LAṬ* where *LAṬ* is replaced with *ŚānaC*, constitutes the *hetu* 'cause, reason' for the action of 'staying' denoted by verbal root *vas* 'to dwell'.

3.2.127 तौ सत्

tau sat
/*tau* 1/2 *sat* 1/1/
tau śatṛśānacau satsaṃjñau bhavataḥ
Affixes *ŚatṚ* and *ŚānaC* are termed *sat*.

EXAMPLES:

brāhmaṇasya kurvan 'while doing the work of a *brāhmaṇa*...'
brāhmaṇasya kariṣyan 'id.'
brāhmaṇasya kariṣyamāṇaḥ 'id.'

1. This rule assigns the term *sat* to affixes *ŚatṚ* and *ŚānaC* both. The word *tau* thus refers to *ŚatṚ* and *ŚānaC*. But such a reference requires that *Śatṛ* and *ŚānaC* be given in the dual as *śatṛśānacau*. Since such a dual form cannot be gotten via *anuvṛtti* from the preceding rule, reference to these two affixes by means of *tau* becomes problematic. Commentators explain that *tau* is used here to make a direct reference to the dual form of these affixes found in rule 3.2.124 *laṭaḥ śatṛśānacāv*... For, we get the most generalized reference to the two affixes in that rule. Our term *sat* could be assigned only to the *ŚatṚ* and *ŚānaC* replacements of *LAṬ* with reference to the current (*varttamāna*) action if the dual form *śatṛśānacau* of the earlier rule is not treated as the focus of reference for *tau*. It could not be applicable, for example, to the replacements of *LṚṬ* (3.3.14 *lṛṭaḥ*

sad vā). The idea is to indicate *ŚatṚ* and *ŚānaC* by *tau* in their unqualified forms.

The purpose of assigning the term *sat* is to facilitate the application of rules such as 2.2.11 *pūraṇaguṇasuhitārtha...* whereby a *pada* which ends in genitive is blocked from forming a compound. Consider also rule 3.3.14 *lṛṭaḥ sad vā* whereby *ŚatṚ* and *ŚānaC* are introduced as replacements for *LṚṬ*.

3.2.128 **पूङ्यजोः शानन्**

> *pūṅyajoḥ śānan* 1/1/
> /*pūṅyajoḥ* 6/2 *śānan* 1/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123)
> *pūṅoḥ yajeś ca dhātoḥ śānan pratyayo bhavati*
> Affix *ŚānaN* occurs after verbal roots *pūṄ* 'to cleanse' and *yajA* 'to sacrifice' when the action is denoted at the current time.

EXAMPLES:

> *pavamānaḥ* 'that which purifies; Agni'
> *yajamānaḥ* 'he who performs the ritual sacrifice'

1. Note that *ŚānaN* is not a replacement of *LA*. Instead, it is an independent affix like *ṆvuL* and *tṛC*, etc. Commentators explain that treating this affix as a replacement of *LAṬ* will be problematic. For example, introduction of this affix as a replacement of *LAṬ* will become optional in view of the provisions of *vā"sarūpavidhi* (3.1.94 *vā"sarūpo...*). Thus, *yajate* and *pavate* will also become optional to *yajamānaḥ* and *pavamānaḥ*. This, at least to some, may not create any problem since it is stated that the provisions of *vā"sarūpavidhi* are not applicable to the replacements of *LA*. The optional *yajate* and *pavate* can thus be blocked. But if one still treats the affix as a replacement of *LAṬ* then the affix will also have to denote a 'means' (*sādhana*) as is provided for by rule 3.4.69 *laḥ karmaṇi ca bhāve cākarmakebhyaḥ*. This may lead further to the problems of assignment of the terms *parasmaipada* and *ātmanepada*, and accentuation. It is to remove these difficulties that this affix is not treated as a replacement. It is, instead, used as a *kṛt* affix to denote the agent in accordance with the provision of 3.4.67 *kartari kṛt*. The formulation of rule 3.2.127 *tau sat* to intervene between this rule and those dealing with *ŚatṚ* and *ŚānaC* as replacements of *LA* constitutes the evidence for *ŚānaN* to be accepted as an independent affix.

3.2.129 **ताच्छील्यवयोवचनशक्तिषु चानश्**

> *tācchīlyavayovacanaśaktiṣu cānaś*
> /*tācchīlya...śaktiṣu* 7/3 *cānaś* 1/1/

(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
tācchīlyādiṣu dhātoś cānaś pratyayo bhavati
Affix *CānaŚ* occurs after a verbal root to denote *tācchīlya* 'one's nature', *vaya* 'age' or *śakti* 'capability' when the action is denoted at the current time

EXAMPLES:

katīha muṇḍayamānāḥ 'how many are here with shaven heads'
katīha bhūṣayamāṇāḥ 'how many here are well-dressed'
katīha kavacaṃ paryasyamānāḥ 'how many here are wearing protective armor'
katīha śikhaṇḍaṃ vahamānāḥ 'how many here have a topknot'
katīha nighnānāḥ 'how many here are killers'
katīha pacamānāḥ 'how many here are cooks'

1. Note that the word '*vacana*' is not required in the rule. For, the affix can be introduced to denote age (*vaya*) even without '*vacana*' as in 3.2.10 *vayasi ca*. Haradatta (*Kāśikā* II: 646) explains that the word *vacana* is used for clarity (*vispaṣṭārtham*). *Nyāsa* treats it as a variation (*vaicitrya*) in style.

Note that *CānaŚ* again is an independent affix. The fact that *CānaŚ* is not a replacement of *LAṬ* also removes the restriction of *ātmanepada* imposed upon the affix by 1.4.100 *taṅānāv ātmanepadam*. Thus, *CānaŚ* can also be used after roots where *parasmaipada* is allowed.

3.2.130 **इङ्धार्योः शत्रकृच्छ्रिणि**

iṅdhāryoḥ śatrakṛcchriṇi
Iiṅdhāryoḥ 5/2 *śatṛ* 1/1 (deleted) *akṛcchriṇi* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *vartamāne* #123)
iṅo dhāreś ca dhātvoḥ śatṛpratyayo bhavati akṛcchriṇi kartari
Affix *ŚatṚ* occurs after verbal roots *iṄ* 'to go' and *dhāri* 'to hold' when the agent accomplishes the action at the current time with no difficulty.

EXAMPLES:

adhīyan pārāyaṇam 'someone studying the *Pārāyaṇa* with no difficulty at all'
dhārayan upaniṣadam 'someone comprehending the *Upaniṣad* with no difficulty at all'

1. The word *akṛcchra* is explained as *sukhasādhyaḥ* 'that which is accomplished with ease'. The word *adṛcchriṇi* modified with *kartari* yields the

following meaning: 'when the sense of the root denoted is easy to accomplish by the agent' (*sukhasādhyo yasya kartrur dhātvarthaḥ*).

Verbal root *dhāri*, a causal form of *dhṛ* 'to hold', means 'to hold' in the sense of comprehending something with the facility to explain and recall. Thus, *dhārayan upaniṣadam* equates with *akṛcchreṇa upaniṣadaṃ dhārayati* 'he (the agent) is able to comprehend the *Upaniṣad* with the facility of explaining and recalling it'. As opposed to this, consider the sentence: *kṛcchreṇa vyākaraṇaṃ dhārayati* 'he is able to comprehend grammar with difficulty'.

Note that *ŚatṚ* was not available to verbal roots *iṄ* 'to go' and *dhāri* 'to hold', in causitive. The first verb is required to receive an *ātmanepada* affix on account of its *Ṅ* as an *it*. The second can also receive the same if the fruit of its action accrues to its agent (1.3.72 *svaritañitaḥ kartrabhiprāye*...). This rule, instead, makes *ŚatṚ* available after both the verbal roots.

3.2.131 द्विषोऽमित्रे

dviṣo' mitre
/*dviṣaḥ* 5/1 *amitre* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123)
amitre kartari dviṣer dhātoḥ śatṛpratyayo bhavati
Affix *ŚatṚ* occurs after verbal root *dviṣ* 'to hate' when the agent of a current action is denoted as 'enemy'.

EXAMPLES:

dviṣan '...the one who is hating'
dviṣantau '...the two who are...'
dviṣantaḥ '...the many who...'

1. Note that the word *amitra* 'non-friend' is traditionally used in the sense of an enemy (*śatru*). Otherwise, the affix may also become applicable in: *dveṣṭi bhāryā patim* 'the wife is jealous of her husband'.

3.2.132 सुञो यज्ञसंयोगे

suño yajñasaṃyoge
/*suñaḥ* 5/1 *yajñasaṃyoge* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123)
yajñasaṃyukte' bhiṣave varttamānāt sunoter dhātoḥ śatṛpratyayo bhavati
Affix *ŚatṚ* occurs after verbal root *ṣuÑ* 'to press out' when a current action is denoted in relation to a *yajña* 'ritual sacrifice'.

EXAMPLE:

sarve sunvantaḥ 'everyone participates at the ritual of pressing out the Soma...'

1. The word *yajñasaṃyoga* denotes the object associated with the ritual sacrifice. The intended object of association is the agent or the sacrificer. There are two types of sacrificers: *yājaka* 'the priest who performs the ritual' and *yajaka* 'he for whose welfare the ritual is performed'. The rule should have been simply formed as '*suño yajñe*'. The word *saṃyoge* restricts the association of the ritual to the principal agent (*yajaka*) only. *Kāśikā* thus states that the word *saṃyoga* is used to restrict the usage to the *yajaka*'s association alone.

3.2.133 अर्हः प्रशंसायाम्

arhaḥ praśaṃsāyām
/*arhaḥ* 5/1 *praśaṃsāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123)
arhater dhātoḥ praśaṃsāyāṃ śatṛpratyayo bhavati
Affix *ŚatṚ* occurs after verbal root *arhA* 'to deserve' when praise is denoted at the current time.

EXAMPLES:

arhann iha bhavān vidyām 'you, sir, deserve knowledge here'
arhann iha bhavān pūjām 'you, sir, deserve praise here'

3.2.134 आ क्वेस्तच्छीलतद्धर्मतत्साधुकारिषु

ā kves tacchīlataddharmatatsādhukāriṣu
/*āṄ* Ø *kveḥ* 5/1 *tacchīlataddharmatatsādhukāriṣu* 7/3/
ā etasmāt kvip saṃśabdād yānita ūrddhvam anukramiṣyāmas tacchīlādiṣu kartṛṣu te veditavyāḥ
Affixes introduced as far as *kveḥ* (3.2.77 *bhrājabhās*...) occur after a verbal root to denote a *kartṛ* 'agent' who performs an action because of his nature (*śīla*), sense of duty (*dharma*), or skill (*sādhukārī*).

EXAMPLE:

To be given under appropriate rules

1. This rule enumerates three semantic conditions under which affixes prior to rule 3.2.177 *bhrājabhāsadhurvidyut*... are to be used. The *āṄ* of *ā* indicates *abhividhi* 'inclusive limit'. As a consequence, *KvIP* should also be treated as denoting these meanings.

Pāṇini uses *tad* 'that' as a variable in all three semantic conditions. What could be the antecedent of this variable? It must refer to *dhātu* because this is the domain of *dhātu*. But given the word *śīla* 'the characteristic habit, conduct' read with *tad*, reference to the *śīla* of a verbal root

does not make any sense. However, *śīla* refers to the *śīla* of the agent (*kartṛ*) since derivates denote agent (3.4.67 *kartari kṛt*). Commentators explain that the word-form *dhātu* cannot be associated with items such as *śīla*, etc. Consequently, *dhātu* refers to its denotatum, the action, which is to be associated with *śīla*, etc., of the agent which the derivates denote. Thus, *tacchīlaḥ* would be interpreted as a *bahuvrīhi* compound parallel to the analyzed form: *tad (dhātvarthaḥ) śīlo yasya* 'he whose characteristic nature is what the verbal root denotes'. Similarly, *taddharma* and *tatsādhu-kārī* will be interpreted as: 'he whose conduct is what the root denotes' and 'he who does well what the root denotes' respectively.

3.2.135 तृन्

tṛn
/*tṛn* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2 *dhātoḥ* #3.1.91, *vartta-māne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
sarvadhātubhyas tṛn pratyayo bhavati tacchīlādiṣu kartṛṣu
Affix *tṛN* occurs after verbal roots to denote a *kartṛ* who performs an action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

karttā kaṭān 'he whose nature it is to make mats'
vaditā janāpavādān 'he whose nature is to spread malicious gossip'
muṇḍayitāraḥ śrāviṣṭhāyanā bhavanti vadhūm ūḍhām 'the *śrāviṣṭhāyanās* have the heads of their brides shaven'
annam apaharttāra āhvarakā bhavanti śrāddhe siddhe 'the *āvharaka* (outcasts) steal the ritual oblation of food as soon as the ritual is completed'

3.2.136 अलंकृञ्निराकृञ्प्रजनोत्पचोत्पतोन्मदरुच्यपत्रपवृतुवृधुसहचर इष्णुच्

alaṃkṛñnirākṛñprajanotpacotpatonmadarucyapatrapavṛtuvṛdhusahacara iṣṇuc
/*alaṃkṛñ...sahacaraḥ* 5/1 *iṣṇuc* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādukāriṣu* 7/3)
alaṃkṛñādhibhyo dhātubhyas tacchīlādiṣu kartṛṣu iṣṇuc pratyayo bhavati
Affix *iṣṇuC* occurs after the following verbal roots when the *kartṛ* performs an action at the current time because of his nature, sense of duty, or skill:

a) *ḌUkṛÑ* when used with *alam*, or the preverbs *nir* and *āṄ*

(*b*) *janA* 'to be born' used with the preverb *pra*
(*c*) *ḌUpacaṢ* 'to cook'
(*d*) *pat* 'to fall'
(*e*) *madI* 'to be joyous' used with the preverb *ud*
(*f*) *rucA* 'to shine'
(*g*) *trapŪṢ* 'to be abashed' used with the preverbs *apa*
(*h*) *vṛtU* 'to turn'
(*i*) *vṛdhU* 'to grow'
(*j*) *rahA* 'to endure'

EXAMPLES:

alaṃkariṣṇuḥ 'he whose nature is to decorate (things)'
nirākariṣṇuḥ 'he whose nature is to repudiate'
prajaniṣṇuḥ 'he who is good at producing'
utpaciṣṇuḥ 'he who is good at cooking'
utpatiṣṇuḥ 'he whose nature is to go higher up'
unmadiṣṇuḥ 'he whose nature is to be mad'
rociṣṇuḥ 'shining'
apatrapiṣṇuḥ 'he whose nature is not to be abashed'
varttiṣṇuḥ 'revolving'
vardhiṣṇuḥ 'growing'
sahiṣṇuḥ 'enduring, brave'
cariṣṇuḥ 'he whose nature is to wander about'

See the appendix for derivational details.

3.2.137 णेश्छन्दसि

ṇeś chandasi
/*ṇeḥ* 5/1 *chandasi* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *iṣṇuc* #136)
ṇyantād dhātoś chandasi viṣaye tacchīlādiṣu kartṛṣu iṣṇuc pratyayo bhavati
Affix *iṣṇuC* occurs in the Vedic to denote *kartṛ* after a verbal root which ends in *ṆiC* when the agent brings about an action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

dṛṣadaṃ dhārayīṣṇavaḥ 'those who carry the stones...'
vīrudháḥ pārayiṣṇaváḥ 'those who nurture the plants'

3.2.138 भुवश्च

bhuvaś ca
/bhuvaḥ 5/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *iṣṇuc* #136, *chandasi* #137)
bhavater dhātoś chandasi viṣaye tacchīlādiṣv iṣṇuc pratyayao bhavati
Affix *iṣṇuC* also occurs in the Vedic to denote *kartṛ* after verbal root *bhū* when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLE:

bhaviṣṇúḥ 'that which is to come into existence'

1. Why did Pāṇini not formulate the preceding rule, to include the provision of the present rule, as: '*ṇibhūbhyāṃ ca*'? A separate rule is formulated so that only *bhū* is carried in the subsequent rule. A joint formulation would also have required the *anuvṛtti* of *ṆiC*.

Kāśikā states that the use of *ca* is made to account for roots not covered thus far (*anuktasamuccaya*). Thus, we get *bhrājiṣṇuḥ* of *bhrājiṣṇunā lohitacandanena*. Note that this root gets *KvIP* (3.2.177 *bhrājabhās...*) in the classical language. The derivate *bhrājiṣṇuḥ* could thus be accounted for by *ca*. Note that the *Mahābhāṣya* does not state this form.

3.2.139 ग्लाजिस्थश्च क्स्नुः

glājisthaś ca ksnuḥ
/glājisthaḥ 5/1 *ca* Ø *ksnuḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *bhuvaḥ* #138)
'glā, ji, sthā' ity etebhyo dhātubhyaś cakārād bhuvaś ca tacchīlādiṣu ksnuḥ pratyayo bhavati
Affix *Ksnu* occurs to denote *kartṛ* after verbal roots *glai* 'to be weary', *ji* 'to win', *sthā* 'to stand', and *bhū* 'to be' when the agent performs the action at the current time because of his nature, sense of duty or skill.

EXAMPLES:

glāsnuḥ 'he whose nature is to be weary'
jiṣṇuḥ 'he whose nature is to win'
sthāsnuḥ 'he whose nature is to be firm'
bhūṣṇuḥ 'that which is to be'

1. Note that '*chandasi*' no longer continues. The *k* of the affix is actually *g* changed to *k* because of *sandhi*. Here is how the *Mahābhāṣya* illustrates it:

> *ksor gitvān na sthā īkāraḥ kṅitor ītvaśāsanāt/*
> *guṇābhāvas triṣu smāryaḥ śryuko' niṭtvaṃ gakor itoḥ//*
> 'because of the *G* as an *it* in *Gsnu*, no -*ī* replaces the *ā* of *sthā* (6.4.66 *ghumāsthā...*);
> for that replacement is allowed only before an affix marked with *K* and *Ṅ* as an *it*;
> the *G* is also included in *kṅiti ca* (1.1.5) so that *guṇa* is blocked; the *G* is also included in 7.2.11 *śruyakaḥ kiti* consequent upon which the *iṬ* is blocked before an affix marked with *G* and *K*'

Also see the discussion under rule 1.1.5 *kṅiti ca.*

3.2.140 त्रसिगृधिधृषिक्षिपेः क्नुः

> *trasigṛdhidhṛṣikṣipeḥ knuḥ*
> */trasigṛdhidhṛṣikṣipeḥ 5/ knuḥ //*
> *(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, varttamāne #123, tacchīlataddharmatatsādhukāriṣu #134)*
> *trasādibhyo dhātubhyas tacchīlādiṣu knuḥ pratyayo bhavati*
> Affix *Knu* occurs to denote *kartṛ* after verbal roots *trasA* 'to be terrified', *gṛdhU* 'to be greedy', *ÑIdhṛṣA* 'to dare' and *kṣipA* 'to hurl' when the agent brings about the action at the current time because of his nature, sense of duty or skill.

EXAMPLES:

> *trasnuḥ* 'terrified'
> *gṛdhnuḥ* 'greedy'
> *dhṛṣṇuḥ* 'daring'
> *kṣipnuḥ* 'he who throws'

3.2.141 शमित्यष्टाभ्यो घिनुण्

> *śam ity aṣṭābhyo ghinuṇ*
> */śam 5/1 (deleted); iti Ø aṣṭābhyaḥ 5/3 ghinuṇ 1/1/*
> *(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, varttamāne #123, tacchīlataddharmatatsādhukāriṣu #134)*
> *śamādibhyo dhātubhyo' ṣṭābhyas tacchīlādiṣu ghinuṇ pratyayo bhavati*
> Affix *GHinUṆ* occurs to denote *kartṛ* after the eight verbal roots which begin with *śamA* 'to be calm' when the agent perfoms the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

śamī 'calm'
tamī 'desirous'
damī 'taming, controlling'
śramī 'hard-working'
bhramī 'roaming, whirling'
klamī 'tired'
kṣamī 'forgiving'
pramādī 'careless'
unmādī 'crazy'

1. The word *iti*, as is clear from the enumeration of the eight roots, is used here in the sense of *ādi* 'beginning'. The *GH* of *GHinUṆ* is used as an *it* so that the final *c, j* of a root can be replaced with *k, g* before an affix marked with *GH* (7.3.52 *cajoḥ ku ghiṇyatoḥ*). *Kāśikā* states that the *U* is used for ease of articulation (*uccāraṇārtha*). The *Mahābhāṣya* does not accept that it is introduced for ease of articulation. Instead, it treats it as an *it*. This is valid in view of forms *śaminītarā* and *śaminitarā* where the shortening of *ī* is optionally conditioned by *U* as an *it*. *Kāśikā* accepts the shortening as obligatory (*nitya*). For details, see PM and *Nyāsa* ad *Kāśikā* on this rule. The *Ṇ* is an *it* for *vṛddhi*.

3.2.142 सम्पृचानुरुधाङ्यमाङ्यसपरिसृसंसृजपरिदेविसंज्वरपरिक्षिपपरिरटपरिवदपरिदहपरिमुहदुषद्विषद्रुहदुहयुजाक्रीडविविचत्यजरजभजातिचरापचरामुषाभ्याहनश्च

sampṛcānurudhāṅyamāṅyasaparisṛsaṃsṛjaparidevisaṃjvaraparikṣipapariraṭaparivadaparidahaparimuhaduṣadviṣadruhaduhayujākrīḍavivicatyajarajabhajāticarāpacarāmuṣābhyāhanaś ca
/*saṃpṛcā...hanaḥ* 5/1 = (*sam. dv.*); *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *ghinuṇ* #141)
saṃpṛcādibhyc dhātubhyo ghinuṇ bhavati tacchīlādiṣu
Affix *GHinUṆ* occurs after the following verbal roots to denote a *kartṛ* who performs the action at the current time because of his nature, sense of duty, or skill:

(*a*) '*pṛcĪ*' 'to contact' used with the preverb *sam* (a *rudhādi parasmaipada* root,)
(*b*) '*rudhIR*' 'to cover' used with the preverb *anu* (a *rudhādi* root qualified to take both *ātmanepada* as well as *parasmaipada* endings),
(*c*) '*yamA*' to be weary, desist' used with *āṄ* (a *bhvādi parasmaipada* root),
(*d*) '*yasU*' 'to strive' used with *āṄ* (a *divādi parasmaipada* root),
(*e*) '*sṛ*' 'to go' used with the preverb *pari* (a *bhvādi parasmaipada* root),
(*f*) '*sṛjĀ*' 'to release', used with the preverb *sam* (a *divādi ātmanepada* root),

(*g*) '*devṚ*' 'lament' used with the proverb *pari* (a *bhvādi ātmanepada* root),

(*h*) '*jvarA*' 'to be sick' used with the preverb *sam* (a *bhvādi parasmaipada* root),

(*i*) '*kṣipA*' 'to hurl, inspire'. used with the preverb (a *tudādi parasmaipadaātmanepada*), or (*divādi parasmaipada* root),

(*j*) '*raṭA*' 'to cram' used with the preverb *pari* (a *bhvādi parasmaipada* root),

(*k*) '*vadĀ*' 'to speak' used with the preverb *pari* (a *bhvādi parasmaipada* root),

(*l*) '*dahĀ*' 'to burn' used with the preverb *pari* (a *bhvādi parasmaipada* root),

(*m*) '*muhĀ*' 'to be confused' used with the preverb *pari* (a *divādi parasmaipada* root),

(*n*) '*duṣĀ*' 'to modify, spoil' used with the preverb *pari* (a *divādi parasmaipada* root),

(*o*) '*dviṣA*' 'to dislike' (an *adādi* root used in both *ātmanepadaparasmaipada*),

(*p*) '*druhĀ*' 'to hurt' (a *divādi parasmaipada* root),

(*q*) '*duhA*' 'to fill, milk' (an *adādi* both *ātmanepada-parasmaipada* root),

(*r*) '*yūjIR*' 'to join' or '*yujA*' 'to concentrate' (*rudhādi ātmanepada-parasmaipada*, or *divādi ātmanepada*),

(*s*) '*krīḍṚ*' 'to play' used with the preverb *āṄ* (a *bhvādi parasmaipada* root),

(*t*) '*vijIR*' 'to separate' used with the preverb *vi* (a *rudhādi ātmanepada-parasmaipada* root),

(*u*) '*tyajĀ*' 'to deteriorate, be old' (a *bhvādi parasmaipada* root),

(*v*) '*rañjA*' 'to color, be in love' (a *divādi ātmanepada-parasmaipada* root),

(*w*) '*bhajĀ*' 'to serve' (a *bhvādi* root in both *ātmanepada-parasmaipada*),

(*x*) '*carA*' 'to wander' used with the preverb *ati* (a *bhvādi parasmaipada* root),

(*y*) '*carA*' and '*muṣA*' 'to steal' used with the preverb *apa* (both *kryādi parasmaipada* roots),

(*z*) '*hanA*' 'to kill' used with the preverb *abhi* and *āṄ* (an *adādi parasmaipada* root).

EXAMPLES:

samparkī 'he who makes contact; is related'
anurodhī 'he who requests, insists, or complains'
āyāmī 'one who expands, or restraints'
āyāsī 'one who strives'
parisārī 'one who moves around, or is present everywhere'
saṃsargī 'one who is joined, or is in contact, with...'
paridevī 'he who laments, or grieves'

saṃjvārī 'one who is afflicted with very high fever'
parikṣepī 'one who scatters things around'
parirāṭī 'one who rotes outloud,
parivādī 'one who is skilled at speaking; talkative'
paridāhī 'that which burns'
parimohi 'one who is infatuated'
doṣī 'guilty'
dveṣī 'one who wishes harm to'
drohī 'one who wishes to injure'
dohī 'one who milks the cows'
yogī 'a *yogī*; one who is in union with...'
ākrīḍī 'one who is playful'
vivekī 'one who is capable of telling the right from the wrong'
tyāgī 'one who abandons; a renunciate'
rāgī 'one who is attached'
bhāgī 'he who has a share'
aticārī 'one who transgresses; a wanderer'
apacārī 'he whose conduct is immoral'
āmoṣī 'he who steals'
abhyāghātī 'he who attacks to kill'

3.2.143 **वौ कषलसकत्थस्रम्भः**

vau kaṣalasakatthasrambhaḥ
/*vau* 7/1 *kaṣalasakatthasrambhaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *ghinuṇ* #141)
'kaṣa hiṃsārthāḥ lasa śleṣakrīḍanayoḥ, kattha ślāghāyām, srambhu viśvāse' ity etebhyo dhātubhyo viśabda upapade ghinuṇ pratyayo bhavati
Affix *GHinUṆ* occurs to denote *kartṛ* after verbal roots *kaṣA* 'to hurt', *lasA* 'to embrace, sport', *katthA* 'to praise, boast' and *srambhU* 'to trust', used in conjunction with *vi*, when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

vikāṣī 'one who hurts someone'
vilāsī 'one who pursues sensuous pleasures'
vikatthī 'one who brags about himself'
visrambhī 'one who is trustful'

3.2.144 **अपे च लषः**

ape ca laṣaḥ
/*ape* 7/1 *ca* Ø *laṣaḥ* 5/1/

(pratyayaḥ #3.1.1 *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *ghinuṇ* #141, *vau* #143*)*
'laṣa' kāntau asmād dhātor apa upapade cakārād vau ca ghinuṇ bhavati
Affix *GHinUṆ* occurs to denote *kartṛ* after verbal root *laṣA* 'to wish, shine', used in conjunction with *api* and *vi*, when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

apalāṣī 'greedy, thirsty'
vilāsı 'id.'

3.2.145 **प्रे लपसृद्रुमथवदवसः**

pre lapasṛdrumathavadavasaḥ
/pre 7/1 *lapasṛdrumathavadavasaḥ* 5/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlatatdharmatatsādhurkāriṣu* #134, *ghinuṇ* #141*)*
'pra' upapade lapādibhyo ghinuṇ bhavati
Affix *GHinUṆ* occurs to denote *kartṛ* after verbal roots *lapA* 'to speak aloud', *sṛ*, *dru* 'to move', *mathA* 'to churn', *vadA* 'to speak' and *vasA* 'to dwell', used in conjunction with *pra*, when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

pralāpī 'one who shoots off his mouth'
prasārī 'one that expands or flows'
pradrāvī 'one who runs away; fugitive'
pramāthī 'tormenting'
pravādī 'one who reports'
pravāsī 'one who lives away from his native place'

1. Note that '*vasA*' in this rule refers to one which means 'to dwell', not to the '*vasA*' 'to cover'.

3.2.146 **निन्दहिंसक्लिशखादविनाशपरिक्षिपपरिरटपरिवादिव्याभाषासूयो वुञ्**

nindahiṃsakliśakhādavināśaparikṣipaparirataparivādivyābhāṣāsūyo vuñ
/ninda...sūñaḥ 1/1 (*sam. dv.*); *vuñ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134*)*
nindādibhyo dhātubhyas tacchīlādiṣu kartṛṣu vuñ pratyayo bhavati
Affix *vuÑ* occurs to denote *kartṛ* after verbal roots *nindA* 'to reproach', *hiṃsA* 'to injure', *kliśA* 'to suffer' and *khādṚ* 'to consume,

eat'; *ṇaśA* 'to be lost' used with the causal suffix *ṆiC* and the preverb *vi*; *kṣipA* and *raṭA* used with the preverb *pari*; *bhāṣA* 'to speak' used with the preverbs *vi* and *āṄ*; and *asūyA* 'to find fault'; when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

nindakaḥ 'he who reproaches'
hiṃsakaḥ 'he who causes injury'
khādakaḥ 'he who eats'
vināśakaḥ 'he who destroys'
parikṣepakaḥ 'he who hurls things all around'
parirāṭakaḥ 'he who cries out loud; one who shouts'
parivādakaḥ 'he who reproaches'
asūyakaḥ 'he whose nature is to find fault in the qualities of others'

1. Note that *ninda...āsūyaḥ* enumerates the bases after which affix *vuÑ* is to be introduced. This enumeration, however, is given in the nominative as opposed to ablative (*pañcamī*) which is a common practice to mark the left context in relation to which something is to be introduced. Commentators explain that this nominative is to be read as used in the sense of ablative.

It is stated that affix *ṆvuL* (3.1.133 *ṇvultṛcau*) alone could have accounted for the derivates of this rule. The derivates of *ṆvuL* do not differ in form with those of *vuÑ*. There is also no difference in accentuation except in case of *asūyakaḥ* which, because of its *Ñ* as an *it*, requires that the initial syllable of its base be marked with *udātta* (6.1.197 *ñnityādir nityam*). A derivate of *ṆvuL*, because of its *L* as an *it*, requires the syllable which preceded the affix to be marked with *udātta* (6.1.193 *liti*). Pāṇini then should have formulated this rule just for *asūyakaḥ*. He would have left the other examples within the scope of *ṆvuL*. But there is still a problem. Pāṇini introduces affix *tṛN* in the sense of *tacchīla*, etc. (3.2.135 *tṛn*). This, as well as *ṆvuL* and *tṛC*, would also become available in addition to *vuÑ* in view of 3.1.94 *vā" sarūpo' striyām*. This further suggests that Pāṇini should not have introduced affix *vuÑ* after *ninda*, etc. But he still did it. Commentators state that this was done to indicate that '*tṛC*, etc., do not apply via *vā" sarūpa* in the context of *tacchīla*, etc.' (cf. *Kāś. tacchīlikeṣu vā' sarūpanyāyena tṛjādayo na bhavanti*).

3.2.147 **देविक्रुशोश्चोपसर्गे**

devikruśoś copasarge
/devikruśoḥ 6/2 ca 0 upasarge 7/1/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, varttamāne #123, tacchīlataddharmatatsādhukāriṣu #134, vuñ #146)

devayateḥ kruśeś copasarge upapade vuñ pratyayo bhavati
Affix *vuÑ* also occurs to denote *kartṛ* after verbal roots *divA* 'to play' and *kruśA* 'to cry out', when they are used in conjunction with a preverb and when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

ādevakaḥ 'he who plays; mourns; gambles'
paridevakaḥ 'id.'
ākrośakaḥ 'he who cries out loud; one who approaches in anger'
parikrośakaḥ 'id.'

1. Note that verbal root *div*, here, denotes both the *divādi 'divU'* 'to play' and the *curādi 'divU'* 'to coo'. The *curādi* root will receive *ṆiC* from 3.1.26 *hetumati ca.*

3.2.148 चलनशब्दार्थादकर्मकाद्युच्

calanaśabdārthād akarmakād yuc
/*calanśabdārthāt* 5/1 *akarmakāt* 5/1 *yuc* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2 *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
calanārthebhyaḥ śabdārthebhyaś cākarmakebhyo dhātubhyas tacchīlādiṣu kartṛṣu yuc pratyayo bhavati
Affix *yuC* occurs to denote *kartṛ* after intransitive verbal roots signifying *calana* 'movement' and *śabda* 'noise' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

calanaḥ 'he who goes'
copanaḥ 'he who crawls, creeps'
śabdanaḥ 'he who makes noise'
ravaṇaḥ 'he who roars; cries'

3.2.149 अनुदात्तेतश्च हलादेः

anudāttetaś ca haladeḥ
/*anudāttetaḥ* 5/1 *ca* Ø *halādeḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *akarmakāt yuc* #148)
anudātted yo dhātuḥ halādir akarmakaḥ tataś ca yuc pratyayo bhavati
Affix *yuC* also occurs to denote *kartṛ* after an intransitive verbal root which begins with a consonant, is marked with *anudātta* 'low-pitch' as an *it*, and whose agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

varttanaḥ 'that which exists'
varddhanaḥ 'he who is growing'

1. Note that *ādi* in *halādi* is used to block *tadantavidhi* (1.1.73 *yena-vidhis...*) whereby, in the absence of *ādi*, the verbal roots would have been interpreted as ending in a consonant. The use of *ādi* gives the desired interpretation: 'beginning with a consonant'.

3.2.150 जुचङ्क्रम्यदन्द्रम्यसृगृधिज्वलशुचलषपतपदः

jucaṅkramyadandramyasṛgṛdhijvalaśucalaṣapatapadaḥ
/*juca...padaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *yuc* #148)
juprabhṛtibhyo dhātubhyo yuc pratyayo bhavati tacchīlādiṣu kartṛṣu
Affix *yuC* occurs to denote *kartṛ* after verbal roots *jucA* 'to go, move', *caṅkram* 'to walk; move crookedly', *dandram* 'to walk', *sṛ* 'to crawl, move', *gṛdhU* 'to be greedy', *jvalA* 'to burn brightly, shine', *śucA* 'to be sad, worry', *laṣA* 'to wish', *patA* 'to fall' and *padA* 'to step', when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

javanaḥ 'fast-moving; a horse'
caṅkramaṇaḥ 'one who wanders around; one who walks crookedly'
dandramaṇaḥ 'id'.
saraṇaḥ 'flowing, moving'
garddhanaḥ 'greedy'
jvalanaḥ 'shining, glowing'
śocanaḥ 'sad, worrying'
laṣaṇaḥ 'greedy'
patanaḥ 'falling'
padanaḥ 'moving, walking'

1. Note that *ju* is a *sautra* root 'attested by the *sūtra*'. Some say it denotes 'movement' though others claim that it denotes 'moving with speed'. The next two roots, *caṅkramya* and *dandramya*, have been derived with affix *yaṄ* (3.1.23 *nityam kauṭilye gatau*).

Note that verbal roots *ju*, *caṅkramya*, *dandramya*, etc., all denote 'movement' (*calana*). Verbal root *padA* is marked with *anudātta* as an *it* and also begins with a consonant. Consequently, these roots would have qualified for *yuC* automatically under the provisions of the preceding two rules. Why did Pāṇini have to formulate this separate rule? *Kāśikā* states

that a separate mention is made because the derivates of this rule derive with the introduction of affix after transitive (*sakarmaka*) roots. The use of *padĀ* makes this known. *Kāśikā* further states that others (this also includes the author of the *Mahābhāṣya*) consider the use of *padA* as indicating the validity of *paribhāṣa:* (68) *tacchilikeṣu vā' sarūpa vidhir nāsti*. Thus, in deriving *alaṃkariṣṇuḥ*, affix *iṣṇuC* is introduced after *alaṃkṛÑ*. If the said *paribhāṣā* was valid in case of *tacchīliku* derivates then affix *trN* could have been introduced to derive **alaṃkarttā*, a wrong derivate. Thus, the general (*utsarga*) *tṛN* is blocked by the particular *iṣṇUC*. But since Pāṇini has already made known the inapplicability of the provisions of 3.1.94 *vā' sarūpo' striyām* in rule 3.2.146 *nindahiṃsaklisà*...by introduction of *vūÑ* when *ṆvuL* could have accomplished the derivates, why does he repeat the same inapplicability here by use of *padA*. It is stated that the inapplicability shown earlier covers the situation where a '*tacchīlika*' and a 'non-*tacchīlika*' rule-interaction may be involved. This indication is made here to show that '*vā*' *sarūpavidhi*' does not apply even when two interacting rules are both '*tacchīlika*'. The two rules in focus are 3.2.149 and 3.2.154 *laṣapatapadasthā*.... There are additional details of this *jñāpaka* which I omit for lack of interest. *Kāśikā* calls the *jñāpaka* as *prāyika*, not universally valid. That is, one can find forms such as *gantā* where *tṛN* finds its scope as against the *ukaÑ* of rule 3.2.154 *laṣapatapada*...

3.2.151 क्रुधमण्डार्थेभ्यश्च

> *krudhamaṇḍārthebhyaś ca*
> /*krudhamaṇḍārthebhyaḥ* 5/3 *ca* Ø/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *yuc* #148)
> '*krudha kope, maḍi bhūṣāyām*' *ity etad arthebhyaś ca dhātubhyo yuc pratyayo bhavati*
> Affix *yuC* also occurs to denote *kartṛ* after verbal roots *krudhA* 'to be angry' and *maḍI* 'to adorn' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

> *krodhanaḥ* 'irascible'
> *roṣaṇaḥ* 'id.'
> *maṇḍanaḥ* 'decorating'
> *bhūṣaṇaḥ* 'decorating'

1. Here again, in the absence of the mention of some specific affix, *tṛN* is supposed to be blocked. That is, *yuC* blocks *tṛN*. Note that this *yuC* cannot be introduced after *alaṃkṛÑ* against the provision of 3.2.136 *alaṃkṛñ*...

3.2.152 न यः

na yaḥ
/*na* Ø *yaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *varttamāne* #123, *tatcchīlataddharmatatsādhukāriṣu* #134, *yuc* #148)
yakārāntād dhātor yuc pratyayo na bhavati
Affix *yuC* does not occur after a verbal root which terminates in *y*.

EXAMPLES:

knūyitā 'one who makes noise'
kṣmāyitā 'one who shakes'

1. The negation of *yuC* makes it possible for the introduction of affix *tṛN* after the roots concerned.

3.2.153 सूददीपदीक्षश्च

sūdadīpadīkṣaś ca
/*sūdadīpadīkṣaḥ* 5/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *yuc* #148, *na* #152)
'*sūda, dīpa, dīkṣa, ity etebhyaś ca yuc pratyayo na bhavati*
Affix *yuC* also does not occur after verbal roots *ṣūdA* 'to drip', *dipA* 'to shine' and *dīkṣA* 'to initiate'.

EXAMPLES:

suditā 'dripping'
dīpitā 'shining'
dīkṣitā 'an initiate'

1. This rule negates affix *yuC* in case of three roots '*ṣūdA*', '*dīpA*' and '*dīkṣA*'. That is, affix *yuC* will be blocked by this negation in favor of *tṛN*. However, in case of *dīpA*, this could have been accomplished by rule 3.2.167 *namikampi*... Thus, the inclusion of *dīpA* for negating *yuC* is vacuous. If it is said that *dīpA* is included to indicate the inapplicability of '*vā*' *sarūpavidhi*' relative to *tacchīlika* provisions, then that, too, has been indicated by earlier rules (3.2.146 *nindahiṃsa*... and 3.2.150 *jucaṅkramya*...). Besides, the 'inapplicability' provision is not universally valid. If it were universally valid, then affix *ra* (of 3.2.167 *namikampi*...) would have already blocked *yúC*. So what is the purpose of this negation here? Examples under 3.2.149 *anudāttet*.. and 3.2.167 *namikampi*... as contrasted by *kamanā*/*kamrā yuvatiḥ* 'beautiful maiden' show the *prāyika* nature of the '*vā sarūpa*' inapplicability. That is, even in case of *tacchilika* affixes, 3.1.94 *vā sarūpa*... may find its scope. Consequently, an affix which is given as an exception (*apavāda*) and is not similar in form with its corresponding general

(*utsarga*) affix blocks the general affix optionally. Thus, we get *kamrā* as opposed to *kamanā*.

2. If affix *yuC* is blocked by this negation after *ṣūdA*, how could one derive *madhusūdana* 'the killer of the demon Madhu; Kṛṣṇna' and *ripusūdana* 'the killer of the enemies'? One possible way would be to accept that the provisions of this negation are not obligatory (*nitya*). That is, one can find *yuC* after *ṣūdA* in some instances. How do we know this? From the fact that this rule negates *yuC* separately from the preceding rule. It would have been easier to collapse the negations of both the rules together. The split negation thus indicates that the negation is not obligatory. Another possible way to derive *madhusūdana*, etc., is to treat them as forming part of the *nandyādi* group of rule 3.1.134 *nandigrahi....* They could thus be derived with the introduction of affix *Lyu*. There is yet another way: derive it by *LyuṬ* of 3.3.113 *kṛtyallyuṭo bahulam*.

3.2.154 **लषपतपदस्थाभूवृषहनकमगमशॄभ्य उकञ्**

laṣapatapadasthābhūvṛṣahanakamagamaśṝbhya ukañ
/laṣa...śṝbhyaḥ 5/1 *ukañ* 1/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
laṣādibhyo dhātubhyas tacchīlādiṣu kartṛṣu ukañ pratyayo bhavati
Affix *ukaÑ* occurs to denote *kartṛ* after verbal roots *laṣA* 'to shine', *patA* 'to fall', *padA* 'to step', *sthā* 'to stand', *bhū* 'to be, become', *vṛṣU* 'to rain', *hanA* 'to kill', *kamU* 'to desire', *gamḶ* 'to go' and *śṝ* 'to hurt' when the agent performs the action at the current time because of his nature, sense of duty or skill.

EXAMPLES:

apalāṣukaṃ vṛṣalasaṅgatam 'it is not desirable to be friends with a Vṛṣala'
prapātukā garbhā bhavanti 'fetuses have a tendency to abort'.
upapādukaṃ sattvam '... substance comes into existence'
upasthāyutā enaṃ paśavo bhavanti
'...animals approach him...'
prabhāvukam annam bhavati 'food is effective (for health)'
pravarṣukāḥ parjanyāḥ 'clouds are the ones who rain'
āghātukaṃ pākalikasya mūtram 'the urine of an elephant (when touched or smelled) has a tendency to kill'
kāmukā enaṃ striyo bhavanti 'women become desirous of him'
āgāmukaṃ vārāṇasīṃ rakṣa āhūḥ 'even a demon is said to be desirous of coming to Vārāṇasī (for release)'
kiṃśārukaṃ tīkṣṇam āhuḥ 'an arrow is said to be piercing'

1. Note that rule 3.2.144 *ape ca laṣaḥ* introduces affix *GHinUṆ*, and this rule introduces affix *ukaÑ*. This rule is applicable via '*vā*' *sarūpavidhi*', the negation of which in case of the *tacchīlika* affixes has to be treated as not universal. Thus, we get a derivate such as *apalāṣī*, parallel to *apalāṣuka*, of this rule.

3.2.155 **जल्पभिक्षकुट्टलुण्टवृङः षाकन्**

jalpabhikṣakuṭṭaluṇṭavṛṅaḥ ṣākan
/*jalpabhikṣakuṭṭaluṇṭavṛṅaḥ* 5/1 *ṣākan* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2 *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
jalpādibhyo dhātubhyas tacchīlādiṣu kartṛṣu ṣākan pratyayo bhavati
Affix *ṢākaN* occurs to denote *kartṛ* after verbal roots *jalpA* 'to speak', *bhikṣA* 'to beg', *kuṭṭA* 'to cut, censure', *luṇṭA* 'to steal' and *vṛṄ* 'to be shattered' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

jalpākaḥ 'talkative'
bhikṣākaḥ 'beggar'
kuṭṭākaḥ 'one who cuts'
luṇṭākaḥ 'one who robs'
varākaḥ 'miserable'

1. Note that verbal root *jalpA* 'to talk' is intransitive, and as such, rule 3.2.148 *calana...* applies to introduce affix *yuC*. Verbal root *bhikṣĀ* is also subject to the introduction of *yuC* by 3.2.149 *anudātteta...* Affix *iṣṇuC* is similarly available to verbal roots *kuṭṭA* and *luṇṭA* by rule 3.2.137 *ṇeś chandasi*. Verbal root *vṛṄ* has affix *KikiN* available to it by rule 3.2.171 *ādṛgamahajanaḥ...* Affix *ṢākaN* constitutes an exception to all these affixes. Its *Ṣ* as an *it* is intended to facilitate the feminine derivates in *ṄīṢ* by rule 4.1.41 *ṣigaurādibhyaś ca*.

3.2.156 **प्रजोरिनिः**

prajoriniḥ
/*prajoḥ* 5/1 *iniḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhāotḥ* #3.1.91. *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
prapūrvāj javateḥ tacchīlādiṣu kartṛṣu iniḥ pratyayo bhavati
Affix *inI* occurs to denote *kartṛ* after verbal root *ju* 'to ruṇ' used with the preverb *pra*, when the agent perfoms the action at the current time because of his nature, sense of duty or skill.

EXAMPLES:

prajavī 'runner, courier'
prajavinau 'id.' (nom. dual)

1. It is stated that the *n* of *inI* is saved from deletion by 1.3.3 *halantyam* read with 1.3.9 *tasya lopaḥ* because of *I* as an *it*. Note that affix *yuC* is already available to *ju* by 3.2.150 *jucaṅkramya....* This rule, however, makes *inI* available when the root is used with the preverb *pra*.

3.2.157 **जिदृक्षिविश्रीण्वमाव्यथाभ्यमपरिभूप्रसूभ्यश्च**

jidṛkṣiviśrīṇvamāvyathābhyamaparibhūprasūbhyaś ca
/jidṛkṣi...prasūbhyaḥ 5/3 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhāotḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *iniḥ* #156)
jiprabhṛtibhyo dhātubhya iniḥ pratyayo bhavati tacchīlādiṣu kartṛṣu
Affix *inI* also occurs to denote *kartṛ* after verbal roots *ji*, *dṛÑ* 'to respect', *kṣi* 'to destroy, be wasted', *śṛÑ* 'to serve' used with the preverb *vi*, *iṆ* 'to go' used with the preverb *ati*; *ṬUvam* 'to vomit', *vyathA* 'to torment' used with *naÑ* 'not', *amA̤* 'to be sick' used with the preverb *abhi*, *bhū* used with the preverb *pari*, and *sū* 'to inspire' used with the preverb *pra*, when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

jayī 'one who wins'
darī 'one who respects'
kṣayī 'one who is destroyed'
viśrayī 'one who serves'
atyayī 'one who transgresses'
vamī 'one who throws up'
avyathī 'one who does not become tormented'
abhyamī 'one who is sick'
paribhavī 'one who humiliates someone'
prasavī 'one who inspires'

1. Note that a reference with *kṣi* denotes both '*kṣi*' 'to deteriorate' and '*kṣi*' 'to dwell'. At the same time, *prasū* refers to the verbal root *ṣū* 'to inspire', and not to *ṣūṄ* 'to give birth to'.

3.2.158 **स्पृहिगृहिपतिदयिनिद्रातन्द्राश्रद्धाभ्य आलुच्**

spṛhigṛhipatidayinidrātandrāśraddhābhya āluc
/spṛhi...śraddhābhyaḥ 5/3 *āluc* /
(*pratyayaḥ* #3.1.1., *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #23, *tacchīlataddharmatatsādhukāriṣu* #134)

'spṛha īpsāyām, gṛha grahaṇe, pata gatau, daya dānagatirakṣaṇeṣu, drā kutsāyāṃ gatau nipūrvas tatpūrvas' ca, tado nakārāntatā ca nipātyate; ḍudhāñ śratpūrvaḥ' ity etebhyaś tacchīlādiṣu kartṛṣu āluc pratyayo bhavati

Affix *āluC* occurs to denote *kartṛ* after verbal roots *spṛhI* 'to desire', *gṛhI* 'to take', *patI* 'to move', *dayI* 'to give, move, protect, and *drā* 'to despise; go' used with the preverbs *ni* and *tad,* as well as, *ḌUdhāÑ* 'to hold, place' used with *śrat,* when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

spṛhayāluḥ 'one who desires'
gṛhayāluḥ 'one whose nature is to receive or take'
patayāluḥ 'one who has a tendencey to fall'
dayāluḥ 'compassionate'
nidrāluḥ 'one who sleeps too much'
tandrāluḥ 'one who is lazy'
śraddhāluḥ 'respectful'

1. Note that the first three of these seven roots are read in the *curādi* group with *-a* at the end. This *-a* is deleted by 6.4.48 *ato lopaḥ* consequent upon which there is no *guṇa* and *vṛddhi.* Note that the *d* of *tad* in *tad-drā* is changed into *-n* by *nipātana.*

A *vārttika* under this rule advocates that *śīṄ* should also be enumerated here so that *śayāluḥ* 'sleepy' can, also, be derived.

3.2.159 दाधेट्सिशदसदो रुः

dādheṭsiśadasado ruḥ
/dā...sadaḥ 5/1 *ruḥ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *āluc* #158)
'dā, dheṭ si, śada, sada' ity etebhyo ruḥ pratyayo bhavati
Affix *āluC* occurs to denote *kartṛ* after verbal roots *ḌUdāÑ*, *dheṬ*, *siÑ* 'to tie, bind', *śadḶ* 'to sharpen, fall' and *ṣadḶ* 'to sit' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

dāruḥ 'one who gives; generous'
dhārur vatso mātaram 'a child who suckles at the breasts of his mother'
seruḥ 'one who ties'
śadruḥ 'one who sharpens, falls'
sadruḥ 'one who sits or rests'

1. Note that '*dā*' here refers to all the three roots which yield a form in *dā*. Thus, we have *ḌudāÑ* 'to give', *do* 'to split' and *deṄ* 'to preserve, protect'. Note that *dāṆ* and *dāP* are excluded from this reference.

3.2.160 सृघस्यदः क्मरच्

sṛghasyadaḥ kmarac
lsṛghasyadaḥ 5/1 *kmarac* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
'*sṛ, ghasi, ad*' *ity etebhyo dhātubhyaḥ tacchīlādiṣu karttṛṣu varttamāne kāle kmarac pratyayo bhavati*
Affix *KmaraC* occurs to denote *kartṛ* after verbal roots *sṛ* 'to flow', *ghasI* and *adA* 'to eat' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

sṛmaraḥ 'one who moves well; a kind of deer'
ghasmaraḥ 'one whose nature is to eat; gluttonous'
admaraḥ 'id.'

1. Note that *ghasI* is a separate base from *ad* though they are both used in the same sense of 'consuming'. The *K* of *KmaraC* blocks *guṇa*.

3.2.161 भञ्जभासमिदो घुरच्

bhañjabhāsamidaḥ ghurac
lbhañjabhāsamidaḥ 5/1 *ghurac* 1/1/
(*pratyayaḥ* #3.1.1., *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
'*bhañja, bhāsa mida*' *ity etebhyo ghurac pratyayo bhavati tacchīlādiṣu kartṛṣu*
Affix *GHuraC* occurs to denote *kartṛ* after verbal roots *bhañjA* 'to crush, break', *bhāsṚ* 'to shine' and *ÑImidĀ* 'to be oily, fat' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

bhaṅguraṃ kāṣṭham 'wood which has the natural tendency to split, fragile'
bhāsuraṃ jyotiḥ 'flame which is naturally shining; luminous'
meduraḥ paśuḥ 'a fat animal'

1. Note that rule 7.3.52 *cajoḥ ku...* brings about a replacement in *k/g* for the *c/j* of a root before an affix marked with *GH*. Obviously, *GHuraC* is one of those affixes. Commentators inform that because of the natural denotational power of words (*śabdaśaktisvābhāvyāt*), we find derivates of *bhañjA* which denote *karmakartṛ* 'object termed agent' (cf. 3.1.87 *karmavat...*).

3.2.162 विदिभिदिच्छिदेः कुरच्

vidibhidicchideḥ kurac
/*vidibhidicchideḥ* 5/1 *kurac* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1., *dhāotḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
vidādibhyo dhātubhyaḥ tacchīlādiṣu kartṛṣu kurac pratyayo bhavati
Affix *KuraC* occurs to denote *kartṛ* after verbal roots *vidA* 'to know', *bhidIR* 'to split' and *chidIR* 'to cut' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

viduraḥ paṇḍitaḥ 'a scholar is one who knows'
bhiduraṃ kāṣṭham 'wood which has the natural tendency to split'
chidurā rajjuḥ 'rope which has the natural tendency to break'

1. Commentators explain that *vid* here does not denote *lābha* 'gain'. It is here used in the sense 'to know'. We also get the denotatum of *karmakartṛ* in connection with *bhid* and *chid*. Note that Jñānendra Sarasvatī in his *Tattvabodhini* ad *SK* (IV : 129) states, in the context of at least *chid*, that *Kāśikā*'s claim of *karmakartṛ* denotation is not correct. Jñānendra informs that *naitad bhāṣye dṛṣṭam* 'this has not been seen in the *bhāṣya*'. Some interpret this to mean that *Kāśikā*'s interpretation contradicts Patañjali's. Note, however, that this rule has not been discussed in the *Mahābhāṣya*.
2. *Kāśikā* proposes the introduction of affix *KuraC* after verbal root *vyadhA*, along with *samprasāraṇa*, to derive *vidhuraḥ* 'widower'.

3.2.163 इण्नश्जिसर्त्तिभ्यः क्वरप्

iṇnaśjisarttibhyaḥ kvarap
/*iṇnaśjisarttibhyaḥ* 5/3 *kvarap* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
'iṇ, naś, ji, sartti' ity etebhyo dhātubhyas tacchīlādiṣu kartṛṣu kvarap pratyayo bhavati
Affix *KvaraP* occurs to denote *kartṛ* after verbal roots *iṆ* 'to go', *naś* 'to be lost, destroyed', *ji* 'to win' and *sṛ* 'to move, crawl' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

itvaraḥ 'one whose nature is to wander'
itvarī 'id.' (feminine)
naśvaraḥ 'perishable'
naśvarī 'id.' (feminine)

jitvaraḥ 'he whose nature is to win'
jitvarī 'id.'
sṛtvaraḥ 'one whose nature is to wander'
sṛtvarī 'id.' (feminine)

1. Note that *P* as an *it* in *KvaraP* is intended for the introduction of augment *tUK* (*tugāgama*) by 6.1.71 *hrasvasya...* The *K*, again, is to block *guṇa*.

3.2.164 **गत्वरश्च**

gatvaraś ca
/gavaraḥ 1/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
'gatvara' iti nipātyate, gamer anunāsikalopaḥ kvarap pratyayaś ca
Affix *KvaraP* also occurs to denote *kartṛ* after verbal root *gam* 'to go' in the derivation of *gatvara* by *nipātana*.

EXAMPLES:

gatvaraḥ 'one whose nature is to wander'
gatvarī 'id.' (feminine)

1. Note that the *-m* of *gam* in *gatvaraḥ/gatvarī* is deleted by *nipātana*. The feminine is formed with *ṄīP* in view of rule 4.1.15 *ṭiḍḍhāṇañ...*

3.2.165 **जागरूकः**

jāgarūkaḥ
/jāgarūkaḥ 1/1/
(*pratyayaḥ* #3.1.1., *paraś ca* #3.1.2, *dhāotḥ* #3.1.91, *vrttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
jāgartter ūkaḥ pratyayo bhavati tacchīlādiṣu kartṛṣu
Affix *ūka* occurs to denote *kartṛ* after verbal root *jāgṛ* 'to be awake' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLE:

jāgarūkaḥ 'awake, alert'

3.2.166 **यजजपदशां यङः**

yajajapadaśāṃ yaṅaḥ
/yajajapadaśāṃ 6/3 *yaṅaḥ*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)

yajādīnāṃ yaṅantānām ūkaḥ pratyayo bhavati tacchīlādiṣu kartṛṣu
Affix *ūka* occurs to denote *kartṛ* after verbal roots *yajA* 'to sacrifice', *japA* 'to whisper' and *daśA* 'to bite' when the agent performs the action because of his nature, sense of duty, or skill.

EXAMPLES:

yāyajūkaḥ 'he whose nature is to perform ritual sacrifices'
jañjapūkaḥ 'he whose nature is to chant inaudibly'
dandaśūkaḥ 'he whose nature is to bite; a snake'

3.2.167 **नमिकम्पिस्म्यजसकमहिंसदीपो रः**

namikampismyajasakamahiṃsadīpo raḥ
/*nami...dīpaḥ* 5/1 *raḥ* 1/1/
(*pratyayaḥ* #3.1., *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
namyādibhyo dhātubhyas tacchīlādiṣu kartṛṣu raḥ pratyayo bhavati
Affix *ra* occurs to denote *kartṛ* after verbal roots *namI* 'to bend', *kapI* 'to shake, move', *ṣmiṄ* 'to smile', *jasU* 'to set free; be exhausted' used with *naÑ* 'not', *kamU* 'to shine' and *hisI* 'to injure, hurt' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

namraṃ kāṣṭham 'a wood which is soft'
kamprā śākhā 'the branch of a tree which naturally shakes in the wind'
smeraṃ mukham 'a face which smiles'
ajasraṃ juhoti 'one who performs ritual sacrifices incessantly'
kamrā yuvatiḥ 'a young woman who is beautiful'
hiṃsro dasyuḥ 'a bandit who is fierce by nature'
dīpraṃ kāṣṭham 'a wood which is burning'

1. Refer to my notes on 3.2.153 *sūdadīpadīkṣaś ca*. The derivate of *jasU*, *ajasram*, should denote *kriyāsātatya* 'continuous action'.

3.2.168 **सनाशंसभिक्ष उः**

sanāśaṃsabhikṣa uḥ
/*sanāśaṃsabhikṣaḥ* 5/1 *uḥ* 1/1/
(*pratyayaḥ* #3.1., *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
sannantebhyo dhātubhya āśaṃseś ca tacchīlādiṣu kartṛṣu uḥ pratyayo bhavati
Affix *u* occurs to denote *kartṛ* either after verbal roots which end in affix *saN*, or after *śaṃs* 'to desire' used with the preverb *āṄ*, and

bhikṣa 'to beg', when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

cikīrṣuḥ 'one who wishes to make something'
jihīrṣuḥ 'one who wishes to take something away'
āśaṃsuḥ 'he whose nature is to wish well'
bhikṣuḥ 'one whose nature is to beg; beggar'

1. Note that *saN* here does not refer to a verbal root such as *ṣaṆU* 'to give'. It refers, instead, to the form which ends in affix *saN*. Besides, a reference to *ṣaṆU* would not make any sense. Verbal root *śaṃs* used with the preverb *āṄ* refers to *śaṃs* which denotes 'wish'. This interpretation is possible because the reference is made, here, with *āṄ*. Thus, *śaṃs* does not denote *stuti* 'praise'.

3.2.169 **विन्दुरिच्छुः**

vindur icchuḥ
/*vinduḥ* 1/1 *icchuḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *uḥ* #168)
vider numāgama iṣeś chatvam ukāraś ca nipātyate tacchīlādiṣu kartṛṣu
Affix *u* occurs to denote *kartṛ* after verbal roots *vidA* 'to know' and *iṣ* 'to wish' in the derivation of *vindu* and *icchu* by *nipātana*.

EXAMPLES:

vinduḥ 'one who knows'
icchuḥ 'desirous'

1. Note that these two derivates are given as derived by the ad hoc process of *nipātana*. The introduction of affix *u*; the augment *nUM* (in *vinduḥ*); and the change of *ṣ* to *ch* in *icchuḥ* is accomplished by *nipātana*.

3.2.170 **क्याच्छन्दसि**

kyāc chandasi
/*kyāt* 5/1 *chandasi* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *uḥ* #168)
kyapratyayāntād dhātoś chandasi viṣaye tacchīlādiṣu kartṛṣu ukārapratyayo bhavati
Affix *u* occurs to denote *kartṛ* in the Vedic after verbal roots which end in affix *Kya* (3.1.8 *supa ātmanaḥ kyac*) when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

mitrayuḥ 'one who wishes for a friend'
saṃsvedayuḥ 'one who perspires'
sumnayuḥ 'one who wishes for comfort'

1. Note that the reference with '*Kya*' in '*kyāt*' is made to refer to affixes *KyaC, KyaṢ* and *KyaṄ* in general. Haradatta (*PM* ad *Kāśikā* II: 670) informs that affix *u* should also be introduced after forms which end in affix *yaK*. Such an inference can be made on the basis of the reference by *Kya* itself. After all, *Kya* refers to affixes which all have *K* as their *it*, and which condition the assignment of the term *dhātu* by rule 3.1.32 *Sanādyantā....* Affix *yaK* is no different from them in this respect. An example for a derivate in *u* with a base which ends in affix *yaK* could be: *bhuraṇyuḥ* (in dual) 'an epithet of the Aśvins'.

3.2.171 **आदृगमहनजनः किकिनौ लिट् च**

ādṛgamahanajanaḥ kikinau liṭ ca
/*ādṛgamahanajanaḥ* 5/1 *kikinau* 1/2 *liṭ* 1/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* # 134, *chandasi* # 170)
ākārāntebhya ṛvarṇāntebhyaś ca 'gama, hana, jana' ity etebhyaś chandasi viṣaye tacchīlādiṣu kikinau pratyayau bhavataḥ, liḍvac ca tau bhavataḥ

Affixes *Ki* and *Kin* occur to denote *kartṛ* in the Vedic after verbal roots which end in *āT* (1.1.70 *taparas...*) or *ṛ*, and after *gamA, hanA* and *janA* as well, when the agent performs the action at the current time because of his nature, sense of duty, or skill; in addition, *Ki* and *Kin* are treated as if they were *LIṬ*.

EXAMPLES:

papiḥ somam 'one who drinks the *Soma*'
dadiragāḥ 'one who gives a cow'
jagmir yuvā 'the young man who leaves'
jaghnir vṛtram 'the killer of *Vṛtra*'
jajñir bījam 'one who makes the seed sprout'

1. The *LIṬ* of this rule is interpreted as denoting the sense of *liḍvat* 'as if ending in *LIṬ*'. This is clearly an *atideśa* 'extension' interpretation. *Nyāsa* (ad *Kāśikā* II: 671) explains that 'words used in the sense of some other words denote the sense of affix *vatI* even without its use'. Thus, given *siṃho māṇavakaḥ* 'the boy is like a lion', one understands the sense of *tulya* 'like' without the use of *vatI*. Similarly to this, we can interpret *LIṬ* to denote the sense of 'like an item which ends in affix *LIṬ*'. This is clearly intended to allow operations similar to *LIṬ* in case of items which

end in affixes *Ki* and *KiN*. This obviously is an extension of the operational type (*kāryātideśa*). Consequently, operations such as doubling (*dvitva*), etc., will apply. See the derivations in the appendix. There is practically no formal difference in the two types of derivates except for accent.

2. A proposal is made to make the application of affixes *Ki* and *KiN* after all the verbal roots. This proposal is based on usages which entail other verbs. Separate proposals are also made to account for forms such as *dadhiḥ* 'he who holds', *cakriḥ* 'he who makes', etc., by introducing these affixes in the classical usage. Some forms are also proposed to be derived by introduction of these affixes after bases which end in affix *yaṄ*. See the *Mahābhāṣya* under this rule for details.

3.2.172 **स्वपितृषोर्नजिङ्**

svapitṛṣor najiṅ
/*svapitṛṣoḥ* 6/2 *najiṅ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
svapes tṛṣeś ca tacchīlādiṣu kartṛṣu najiṅ pratyayo bhavati
Affix *najIṄ* occurs to denote *kartṛ* after verbal roots *ÑIṣvap* 'to sleep' and *ÑItṛṣĀ* 'to be thirsty' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

svapnak 'he whose nature is to sleep a lot'
tṛṣṇak 'he who is always thirsty'

3.2.173 **शॄवन्द्योरारुः**

śṛvandyor āruḥ
/*śṛvandyoḥ* 6/2 *āruḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
'*śṛ, vadi' ity elābhyāṃ dhātubhyāṃ tacchīlādiṣu kartṛṣv āruḥ pratyayo bhavati*
Affix *āru* occurs to denote *kartṛ* after verbal roots *śṛ* 'to hurt' and *vadI* 'to pay obeisance, praise' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

śarāruḥ 'one who hurts; wicked'
vandāruḥ 'one whose nature is to praise; a bard'

1. Note that *śṛ* has *ukaÑ* available to it from 3.2.154 *laṣapatapada*... Similar provision of *yuC* is also available to *vand* by rule 3.2.149 *anudāttetaś ca*... This rule simply provides for *āru*.

3.2.174 भियः क्रुक्लुकनौ

bhiyaḥ kruklukanau
/*bhiyaḥ* 5/1 *kruklukanau* 1/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
'ñibhī bhaye' asmād dhātoḥ tacchīlādiṣu kartṛṣu kruklukanau pratyayau bhavataḥ
Affixes *Kru* and *KLukaN* occur to denote *kartṛ* after verbal root *ÑIbhī* 'to fear' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

bhīruḥ 'a coward; a bear'
bhīlukaḥ 'id.'

1. A proposal is also made by a *vārttika* to derive *bhīrukaḥ* by introducing affix *KrukaN* after verbal root *ÑIbhī*.

3.2.175 स्थेशभासपिसकसो वरच्

stheśabhāsapisakaso varac
/*stheśabhāsapisakasaḥ* 5/1 *varac* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
'sthā gatinivṛttau, īśa aiśvarye, bhāsṛ dīptau, pisṛ, pesṛ gatau, kasa gatau' ity etebhyas tacchīlādiṣu kartṛṣu varac pratyayo bhavati
Affix *varaC* occurs to denote *kartṛ* after verbal roots *sthā*, *īśA* 'to govern', *bhāsṚ*, *pisṚ* 'to move, crawl' and *kasA* 'to move' when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

sthāvaraḥ 'that which is stationary by nature'
īśvaraḥ 'lord'
bhāsvaraḥ 'that which is shining by nature; sun'
pesvaraḥ 'that which moves or destroys'
vikasvaraḥ 'that which opens, expands; blossoming

3.2.176 यश्च यङः

yaś ca yaṅaḥ
/*yaḥ* 1/1 *ca* 0 *yaṅaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *varac* #175)
'yā prāpaṇe' asmād yaṅantāt tacchīlādiṣu kartṛṣu varac pratyayo bhavati

Affix *varaC* also occurs to denote *kartṛ* after verbal roots *yā* 'to go' terminated in affix *yaṄ* when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLE:

yāyāvaraḥ 'a gypsy'

3.2.177 **भ्राजभासधुर्विद्युतोर्जिपॄजुग्रावस्तुवः क्विप्**

bhrājabhāsadhurvidyutorjipṛjugrāvastuvaḥ kvip
/bhrāja...stuvaḥ 5/1 *kvip* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134)
bhrājādibhyo dhātubhyas tacchīlādiṣu kartṛṣu kvip pratyayo bhavati
Affix *KvIP* occurs to denote *kartṛ* after verbal roots *bhrājṚ* and *bhāsṚ* 'to shine', *turVĪ*, *thurVĪ*, and *durVĪ* 'to hurt, injure', *dyuT* 'to shine', *ūrjA* 'to be strong', *pṛ* 'to fill', *ju* 'to move' and *ṣṭuÑ* 'to praise', used with *grāva*, when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

vibhrāṭ 'shining'
bhāḥ 'shine; light'
dhūḥ 'hurting; yoke, weight'
vidyut 'lightning'
ūrk 'power, energy'
pūḥ 'that which fills'
grāvastut 'stone-worshipper'

1. Note that *KvIP* could be made available to these roots by 3.2.76 *kvip ca* read with 3.2.75 *anyebhyo' pi dṛśyate*. This reintroduction of *KvIP* is nothing but the expatiation (*prapañca*) of the interpretation that '*vā' sarūpavidhi*' does not apply in case of *tacchīlika* affixes, and that this interpretation is not universally valid (*prāyika*).

3.2.178 **अन्येभ्योऽपि दृश्यते**

anyebhyo' pi dṛśyate
/anyebhyaḥ 5/3 *api* Ø *dṛśyate* (verbal *pada*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *tacchīlataddharmatatsādhukāriṣu* #134, *kvip* #177)
anyebhyo' pi dhātubhyas tacchīlikeṣu kvip pratyayo bhavati
Affix *KvIp* also occurs to denote *kartṛ* after other verbal roots when the agent performs the action at the current time because of his nature, sense of duty, or skill.

EXAMPLES:

yuk 'that which binds'
chit 'that which cuts or pierces'
bhid 'that which splits'

1. Commentators state that *'dṛśyate'* is not required. For, *'anyebhyo' pi'* itself can account for everything. They add, however, that *'dṛśyate'* is used to facilitate or block certain operations generally not available to these derivates. Lengthening (*dīrgha*), doubling (*dvirvacana*), *samprasāraṇa*, or lack of it, can be cited as some examples. Refer to derivational details in the appendix..

3.2.179 **भुवः संज्ञान्तरयोः**

bhuvaḥ saṃjñāntarayoḥ
/*bhuvaḥ* 5/1 *saṃjñāntarayoḥ* 7/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *kvip* #177)
bhavater dhātoḥ saṃjñāyām antare ca gamyamāne kvip pratyayo bhavati
Affix *KvIP* occurs after verbal root *bhū* when *saṃjñā* 'name' or *antara* 'intermediary' is denoted.'

EXAMPLES:

vibhūḥ 'a name'
pratibhūḥ 'a guarantor'

3.2.180 **विप्रसंभ्यो ड्वसंज्ञायाम्**

viprasaṃbhyo ḍvasaṃjñāyām
/*viprasaṃbhyaḥ* 5/3 *ḍu* 1/1 *asaṃjñāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *bhuvaḥ* #179)
'vi, pra, sam' ity evam pūrvād bhavater dhātoḥ ḍupratyayo bhavati, na cet saṃjñā gamyate
Affix *Ḍu* occurs after verbal root *bhū* used with the preverbs *vi*, *pra* and *sam*, when the action is located in the present and *saṃjñā* is not denoted.

EXAMPLES:

vibhuḥ 'all-pervading'
prabhuḥ 'lord'
sambhuḥ 'one who comes into existence'

1. A *vārttika* also proposes to derive *mitadruḥ* 'he who has the least compassion', etc., with affix *ḌU*. The word *śambhuḥ* is to be similarly

derived though in this case the root is treated as causal with a built in sense of *ṆiC*. Thus, we get *śaṃ* = *sukhaṃ bhāvayati* = *śambhuḥ* 'he who brings about the experience of joy'.

3.2.181 धः कर्मणि ष्ट्रन्

dhaḥ karmaṇi ṣṭran
/dhaḥ 5/1 *karmaṇi* 7/1 *ṣṭran* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123)
dhayater dadhāteś ca karmaṇi kārake ṣṭran pratyayo bhavati
Affix *ṢṭraN* occurs to denote *karman* 'object' after verbal root *dhā* when the action is denoted at the current time.

EXAMPLE:

dhātrī 'a wet-nurse; nurse'

1. Note that *karmaṇi* does not here refer to a conjoined word (*upapada*) which denotes *karman*. For, if that was the desired interpretation, Pāṇini would have put this rule in the section of 3.2.1 *karmaṇy aṇ*. This would have saved him the use of '*karmaṇi*'. But this would have still entailed the explicit use of *ṣṭran* in the next rule. What is so good about this economy (*lāghava*)? Well, using *ṣṭran* is certainly more economical than *karmaṇi*. To sum up, *karmaṇi* outlines *karman* as the meaning of the affix.

Note that the *Ṣ* of *ṢṭraN* is used as an *it* to facilitate the introduction of the feminine affix *ṄīṢ* by rule 4.1.41 *ṣidgaurādibhyaś ca.*

3.2.182 दाम्नीशसयुयुजस्तुतुदसिसिचमिहपतदशनहः करणे

dāmnīśasayuyujastutudasisicamihapatadaśanahaḥ karaṇe
/dāmnī...nahaḥ 5/1 *karaṇe* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *ṣṭran* #181)
'dāp, ṇīñ śasu, yu, yujir, ṣṭuñ, tuda, ṣiñ, ṣicir, miha, patḷ, danś, ṇaḥ' ity etebhyo dhātubhyaḥ karaṇe kārake ṣṭran pratyayo bhavati
Affix *ṢṭraN* occurs to denote *karaṇa* 'instrument' after verbal roots *dāp* 'to cut', *ṇīÑ* 'to lead', *śasU* 'to hurt', *yu* 'to join', *yujIR* 'to bind, yoke', *ṣṭuÑ* 'to praise', *tudA* 'to torment', *ṣiÑ* 'to tie, bind', *ṣicIR* 'to sprinkle', *mihA* 'to water', *patḶ* 'to fall', *daṃś* 'to bite' and *ṇahA* 'to tie' when the action is denoted at the current time.

EXAMPLES:

dātram 'that by which one cuts; a sickle'
netram 'eye'
śastram 'weapon'
yotram 'a rope by which one fastens the yoke'
yokram 'id.'

stotram 'that by means of which one praises; a verse of praise'
totram 'a cattle-prod'
setram 'that which binds the bones; a ligament'
sektram 'sprinkler'
meḍhram 'cloud; organ of urination'
patram 'a vehicle'
daṃṣṭrā 'a big tooth
naddhram 'thong'

1. Note that *dāP* here refers only to the verbal root *dāP* 'to cut', and not to all verbal roots which yield a form in '*dā*', as discussed in connection with rule 1.1.20 *dādhāghv adāp*. The reason is simply lack of usage (*anabhidhāna*). The word *karaṇe*, again, refers to the meaning of the affix, and not to any cooccurrence condition.

2. Note that rule 3.2.142 *samprcānurudhā...* makes the reference to verbal root *rañjA* with deleted nasal. This, in turn, was treated as an indication that the derivate, for example *rāgī*, would lose the *ñ*. How come the same does not apply in case of verbal root *daṃś* in deriving *daṃṣṭrā*? Well, the derivate is listed in the *ajādi* group of nominals (cf. 4.1.4 *ajādyataṣ ṭāp*) which, in turn, attests to the non-deletion of the nasal.

The *Ṣ* is, again, intended for the feminine. Note, however, that after its deletion by 1.3.9 *tasya lopaḥ*, read with 1.3.6 *ṣaḥ pratyayasya*, the *-ṭ* of affix ṢṭraN is replaced with *-t*. This happens in view of the *paribhāṣā nimittāpāye naimittikasyāpy apāyaḥ* 'the effect must also be removed when the cause is removed' (cf. *Pbh.* 87: *Sanniyogaśiṣṭānām...*). The *Ṣ* was responsible for the *t* to change into *-ṭ*; the *ṭ* must also be removed in favor of *-t* when *Ṣ* is gone.

3.2.183 हलसूकरयोः पुवः

halasūkarayoḥ puvaḥ
/*halasūkarayoḥ* 7/2 *puvaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *ṣṭran* #181, *karaṇe* #182)
'*pū*' *iti pūṅpuños sāmānyena grahaṇaṃ asmād dhātoḥ karaṇe kārake ṣṭran pratyayo bhavati*
Affix *ṢṭraN* occurs to denote *karaṇa* after verbal root *pū* when the *karaṇa* is part of a *hala* 'plough' or *sūkara* 'pig' and the action is denoted at the current time.

EXAMPLES:

halasya potram 'the front end of a plough'
sūkarasya potram 'the front end of a pig's face'

1. Note that *'pū'* in this rule refers to verbal roots *'pūÑ'* and *'puÑ'* both. The genitive in *'halasūkarayoḥ'* is interpreted to denote 'part' (*avayava*). The word *karaṇe*, again, does not set any cooccurrence condition.

3.2.184 **अर्तिलूधूसूखनसहचर इत्रः**

arttilūdhūsūkhanasahacara itraḥ
/*artti...caraḥ* 5/1 *itraḥ* 1/1/
(*pratyayah* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *karaṇe* #182)
'ṛ, lūñ, dhū, ṣū, khanu, ṣaha, cara gatibhakṣaṇoyoḥ' ity etebhyo dhātubhyaḥ karaṇe kārake itra pratyayo bhavati
Affix *itra* occurs to denote *karaṇa* after verbal roots *ṛ* 'to go', *lūÑ* 'to cut', *dhū* 'to shake', *sū* 'to inspire', *khanU* 'to dig', *ṣahA* 'to endure' and *carA* 'to wander, consume' when the action is denoted at the current time.

EXAMPLES:

aritram 'an oar'
lavitram 'a knife'
dhavitram 'a fan'
savitram 'inspirer'
khanitram 'an instrument for digging; a spade'
sahitram 'endurance'
caritram 'conduct'

1. Note that *dhū* and *sū* refer only to *dhū* and *ṣū* 'to inspire', since they have been cited without any *it*. They, thus, do not refer to *'dhūÑ'*, *'ṣuÑ'* and *'ṣūÑ'*, etc. (cf. *Paribhāṣā* (82) *niranubandhakagrahaṇe na sānubandhakasya*).

3.2.185 **पुवः संज्ञायाम्**

puvaḥ saṃjñāyām
/*puvaḥ* 5/1 *saṃjñāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *karaṇe* #182, *itraḥ* #184)
pavater dhātoḥ karaṇe kārake itrapratyayo bhavati, samudāyena cet saṃjñā gamyate
Affix *itra* occurs to denote *kartṛ* after verbal root *pū* when *saṃjñā* 'a name' is signified and the action is denoted at the current time.

EXAMPLES:

darbhaḥ pavitram '*darbha*, a kind of grass which serves as a means of ritual purification'
barhiṣ pavitram '(a ring of) *darbha* which serves as a means of ritual purification'

1. The referents of '*pū*' here are similar to that of rule 3.2.183 *hala-sukarayoḥ...*

3.2.186 कर्तरि चर्षिदेवतयोः

kartari carṣidevatayoḥ
/kartari 7/1 *ca* Ø *ṛṣidevatayoḥ* 7/2/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123, *karaṇe* #182, *itraḥ* #184, *puvaḥ* #185)
puvaḥ karaṇe kartari ca itrapratyayo bhavati ṛṣidevatayor yathā-saṃkhyaṃ sambandhaḥ, ṛṣau karaṇe devatāyām kartari
Affix *itra* occurs after verbal root *pū* to denote *karaṇa* when the signification is *ṛṣi* 'a Vedic hymn'; and to denote *kartṛ* when the signification is *devatā* 'god', provided the action is expressed at the current time.

EXAMPLES:

pavitro yam ṛṣiḥ 'a Vedic hymn which serves as a means of ritual purification'
agniḥ pavitraṃ sa mā punātu 'Agni is sacred, may he purify me'
vāyuḥ somaḥ sūrya indraḥ pavitraṃ te mā punantu 'Vāyu, Soma, and Indra are sacred, may they purify me'

1. Note that *ca* is used, here, to bring both '*pū*' as well as '*karaṇe*'. Additionally, '*karaṇa*' and '*kartṛ*' share the equivalency relationship with '*ṛṣi*' and '*devatā*' in the order of their enumeration (1.3.10 *yathā-saṃkhyam...*). That is, affix *itra* denotes *karaṇa* when the derivate denotes a *ṛṣi*. It denotes *kartṛ* when the derivate denotes *devatā*. Thus, we get *pavitra* 'the sage who is most instrumental in ritually purifying something'. The same affix in *pavitra* can denote *kartṛ* when the derivate is *pavitram* as in *agniḥ pavitraṃ sa mā punātu* 'Agni is sacred; may Agni purify me'.

3.2.187 ञीतः क्तः

ñītaḥ ktaḥ
/ñītaḥ 5/1 *ktaḥ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #123)
ñīto dhātor varttamāne' rthe ktapratyayo bhavati
Affix *Kta* occurs after a verbal root with *Ñ* as an *it* when current action is expressed.

EXAMPLES:

minnaḥ 'oily, fat'
kṣviṇṇaḥ 'a word said while sneezing'
dhṛṣṭaḥ 'daring'

1. Note that *Kta* is an affix termed *niṣṭhā* (1.1.26 *ktaktavatū niṣṭhā*). As such, rule 3.2.102 *niṣṭhā* introduces it when the action denoted by the roots is to be located in the past (3.2.84 *bhūte*). This rule allows the introduction of affix *Kta* after verbal roots marked with *Ñ* as an *it* even though the action signified by their roots is denoted at the current time. Thus, what was not available, relative to a current action, is made available to some select roots.

3.2.188 मतिबुद्धिपूजार्थेभ्यश्च

matibuddhipūjārthebhyaś ca
/matibuddhipūjārthebhyaḥ 5/3 *ca* Ø/
(*pratyayaḥ* # 3.1.1, *paraś ca* # 3.1.2, *dhātoḥ* # 3.1.91, *varttamāne* # 123, *kta* # 18
'matiḥ icchā, buddhiḥ jñānam, pūjā satkāraḥ' ity etad arthebhyaś ca dhātubhyo varttamāne' rthe kta pratyayo bhavati
Affix *Kta* occurs after verbal roots which have the signification of *mati* 'wish, intent', *buddhi* 'knowledge, perception' and *pūjā* 'reverence' when the action is denoted at the current time.

EXAMPLES:

rājñāṃ mataḥ 'the king's intent'
rājñām iṣṭaḥ 'the king's wish'
rājñāṃ buddhaḥ 'the king's knowledge'
rājñāṃ jñātaḥ 'id.'
rājñāṃ pūjitaḥ 'revered by the king'
rājñām arcitaḥ 'id.'

1. Obviously, the scope of the preceding rule is extended in connection with roots which have the signification of *mati*, *buddhi*, and *pūjā*. The *ca*, as commentators claim, is used for inclusion of derivates unaccounted for. The following verse enumerates quite a few of them:

śīlito rakṣitaḥ kṣānta ākruṣṭo juṣṭa ity api
ruṣṭaś ca ruṣitaś cobhāv abhivyāhṛta ity api/
hṛṣṭatuṣṭau tathā kāntas tathobhau saṃyatodyatau
kaṣṭaṃ bhaviṣyatīty āhur amṛtaḥ pūrvavat smṛtaḥ//

The verse includes these derivates: *śīlita* 'practiced', *rakṣita* 'protected', *kṣānta* 'forbearing', *ākruṣṭa* 'censured', *juṣṭa* 'pleased', *ruṣṭa* 'angry', *ruṣita* 'id.', *abhivyāhṛta* 'uttered', *hṛṣṭa* 'happy', *tuṣṭa* 'satisfied', *kānta* 'favorite', *saṃyata* 'restrained', *udyata* 'ready', *kaṣṭa* 'misery in the offing', *amṛta* 'immortal', *supta* 'asleep', *śayita* 'reclining', *āśita* 'consumed', *lipta* 'smeared', and *tṛpta* 'satisfied'. They are all in the context of *varttamāna*. The last five are also attested but are not included in the verse.

3.3.1 उणादयो बहुलम्

uṇādayo bahulam
/uṇādayaḥ 1/3 *bahulam* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *varttamāne* #3.2.123)
uṇādayaḥ pratyayā varttamāne' rthe saṃjñāyāṃ viṣaye bahulaṃ bhavanti
Affixes *uṆ*, etc., occur variously after verbal roots when the action is denoted at the current time.

EXAMPLES:

kāruḥ 'doer; artisan'
vāyuḥ 'wind'
pāyuḥ 'anus'
jāyuḥ 'an effective medicine; victorious'
māyuḥ 'choler (one of the cardinal humors of the body); sun'
svāduḥ 'tasty food'
sādhuḥ 'a well-disposed person'
āśuḥ 'one who moves fast'

1. This rule introduces affixes generally known as *uṆ*, etc. (*uṇādi*). It is believed in the Pāṇinian tradition that there were two versions of the *uṇādisūtra* listing: a larger one with ten quarters (*daśapādī*) and a shorter one (*pañcapādī*) with five quarters. The first rule of the *pañcapādī* version introduces affix *uṆ*. A claim is made that the *uṇādi* affixes number well over three hundred. The tradition recognizes items derived by the use of the *uṇādi* affixes as nominal stems.

The adherents of Pāṇini do not believe in the theory that all nominals are derived from verbal roots through affixation. Pāṇini presents some aspects of derivation simply to show that an effort can still be made. Or else, it is his way of showing respect to grammarians, such as Yāska and Śākaṭāyana, who believed that all nominals are derived from verbal roots via affixal processes.

2. The word *bahulam* is explained in four ways: (*a*) it implies the application (*pravṛtti*) of a given rule in some cases, (*b*) it also implies the non-application of the same rule in other cases, (*c*) in still other cases, it indicates the same rule applies only optionally (*vibhāṣā*) and (*d*) there may be additional aspects of diverse application. The following summarizes these four interpretations of the notion of *bāhulaka*:

kvacit pravṛttiḥ kvacid apravṛttiḥ
kvacid vibhāṣā kvacid anyad eva/
vidher vidhānaṃ bahudhā samīkṣya,
caturvidhaṃ bāhulakaṃ vadanti//

'sometimes application; at times the lack of the same; sometimes the application is only optional; yet on occasions still differently indeed; after having properly analyzed its multifarious application they speak of these four types of *bāhulaka*'

The *Mahābhāṣya* states the nature of *bāhulaka*, especially in case of the *uṇādi* affixes as follows:

bāhulakaṃ prakṛtes tanudṛṣṭeḥ,
prāyasamuccayanād api teṣām/
kāryasaśeṣavidheś ca tad uktaṃ,
naigamarūḍhibhavaṃ hi susādhu//
nāma ca dhātujam āha nirukte,
vyākaraṇe śakaṭasya ca tokam/
yan na padārthaviśeṣasamutthaṃ,
pratyayataḥ prakṛteś ca tad ūhyam//
'the *bāhulaka* is stated with reference to a limited number of bases: the affixes have similarly been cited non-universally; it is for this reason that *bāhulaka* is stated with operations still unaccounted for; *bāhulaka* also accounts for the correctness of the many Vedic and colloquial names. A nominal in the *Nirukta*, as well as in the grammar of *Śākaṭāyana*, is stated to have been derived from the verb; that which is not stated as derived by means of verbal bases and affixes must be researched for its derivation.'

The *Mahābhāṣya* offers some further insights into these derivates:

saṃjñāsu dhāturūpāṇi pratyayāś ca tataḥ pare/
kāryād vidyād anūbandham etac chāstram uṇādiṣu//
'the verbal forms when deriving names; affixes introduced after verbal roots; an *it* to be determined by lack of an operation such as *guṇa*; these which have not been stated elsewhere should form as the standard when inferring the derivation of *uṇādi*'

Kāśikā, in the paraphrase (*vṛtti*) of rule 3.3.1 *uṇādayo...*, states that '*varttamāne*' and '*saṃjñāyām*' are both carried here. They yield the understanding, when read with ***bahulam***, that the ***uṇādi*** affixes occur after verbal roots to derive names when the action is denoted at the current time. They can also be seen where they may not be provided for. Some affixes which are not stated at all may have to be ascertained from usage.

3.3.2 **भूतेऽपि दृश्यन्ते**

bhūte' pi dṛśyante
/bhūte 7/1 *api* Ø *dṛśyante* (verbal *pada*)/

(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, uṇādayaḥ #1)
bhūte kāle' py uṇādayaḥ pratyayā dṛśyante
Affixes *uṆ*, etc., also are seen to occur after verbal roots when the action is located in the past.

EXAMPLES:

vartma 'that which has been traversed; a road'
carma 'that which has been lived in; skin'
bhasma 'that which remained after burning; ash'

1. This rule informs that *uṇādi* affixes are also seen when the action is located in the past. The word *dṛśyante* attests to the usage (*prayoga*) as evidence. Obviously, *bhūta* is contrasted, here, with *vartamāna* 'current time' of the preceding rule.

3.3.3 भविष्यति गम्यादयः

bhaviṣyati gamyādayaḥ
/bhaviṣyati (verbal *pada) gamyādayaḥ* 1/3/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, uṇādayaḥ #1)
bhaviṣyati kāle gamyādayaḥ śabdāḥ sādhavo bhavanti
Affixes *uṆ*, etc., occur in the derivation of *gamī* 'one who will go', etc. when the action is denoted in the future (*bhaviṣyati*).

EXAMPLES:

gamī grāmam 'one who will go to the village'
āgāmī 'that which will come'
prasthāyī 'one who will depart'
pratirodhī 'one who will oppose'
pratibodhī 'one who will be awake'
pratiyodhī 'one who will fight against'
pratiyogī 'one who will compete; an adversary'
āyāyī 'one which will come'
bhāvī 'that which will happen'

1. This rule provides for *uṇādi* affixes to be used when the action may be located at a future time. The provision is made in connection with a group of derivates such as *gamī* 'he who will go'. Note that 'future' is to be regarded as signification for the affix only. That is, the base does not have any future meaning. Additionally, this future must be abstracted from usages as encountered; it should not be treated as given in a generalized manner. That is, the scope of *uṇādi* in the past and future is very limited.

2. A *vārttika* in the *Mahābhāṣya* states that, the way this rule stands, usages which entail *anadyatana-bhaviṣyat* 'future not pertaining to the current day' cannot be accounted for. That is, it can only account for general future (*LṚṬ*), without any qualification at all. Hence, to accommodate usages of *gamī*, etc., where the denotata entails *anadyatana* aspect of future (*LUṬ*), the *vārttika* should be stated. Thus, *śvo gamī grāmam* 'he will go to the village tomorrow'. If no *vārttika* provision is made, the rule can only account for general future.

3.3.4 **यावत्पुरानिपातयोर्लट्**

yāvatpurānipātayor laṭ
/yāvatpurānipātayoḥ 7/2 *laṭ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3)
yāvatpurāśabdayor nipātayor upapadayor bhaviṣyati kāle dhātor laṭ pratyayo bhavati
Affix *LAṬ* occurs after a verbal root when the root cooccurs with the particles (*nipāta*) *yāvat* and *purā* and the action is denoted in the future.

EXAMPLES:

yāvad bhuṅkte 'he surely will eat'
purā bhuṅkte 'id.'

1. This rule allows for the introduction of *LAṬ* after verbal roots which occur with the particles *yāvat* 'definitely' and *purā* 'id.'. Note that *yāvat* and *purā* not only have to be interpreted as particles, but they must also be restricted to the meanings outlined. The word *nipāta* is used in the rule to exclude, for example, *yāvat* 'as long as', the relative which corresponds to its correlative *tāvat* '...that long' and *purā*, 'the instrumental singular of *pur* 'village''

3.3.5 **विभाषा कदाकर्ह्योः**

vibhāṣā kadākarhyoḥ
/vibhāṣā 1/1 *kadākarhyoḥ* 7/2/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3, *laṭ* #4)
'kadā, karhi' ity etayor upapadayor vibhāsā bhaviṣyati kāle dhātor laṭ pratyayo bhavati
Affix *LAṬ* optionally occurs after a verbal root when the root cooccurs with *kadā* and *karhi* and the action is located in the future.

EXAMPLES:

kadā bhuṅkte 'when will he eat'

kadā bhokṣyate 'id.'
kadā bhoktā 'id.'
karhi bhuṅkte 'id.'
karhi bhokṣyate 'id.'
karhi bhoktā 'id.'

1. Commentators explain that the option of *LAṬ* is made available against both *LṚṬ* 'general future' as well as *LUṬ* 'first future'. Such a statement is necessary since *bhaviṣyati*, which is carried here, denotes the sense of future in general, excluding that which relates to the current day (*adyatana*). It is for this reason that *Kāśikā* outlines two forms parallel to one of *LAṬ* made available by this rule. That is, *bhuṅkte* of *LAṬ* against *bhokṣyase* of *LṚṬ* and *bhoktā* of *LUṬ*. The option, of course, enables *LAT* to denote future.

3.3.6 **किंवृत्ते लिप्सायाम्**

kiṃvṛtte lipsāyām
/*kiṃvṛtte* 7/1 *lipsāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3, *laṭ* #4, *vibhāṣā* #5)
kiṃvṛtta upapade lipsāyāṃ bhaviṣyati kāle dhātor vibhāṣā laṭ pratyayo bhavati
Affix *LAṬ* optionally occurs after a verbal root used in conjunction with *kiṃvṛtta* 'a form of *kim*; what', *katara* 'which one of the two' and *katama* 'which one of the many' when the derivate signifies *lipsā* 'desire to obtain, solicitation' and the action is denoted in the future.

EXAMPLES:

kaṃ bhavanto bhojayanti 'who will you feed, sir?'
kaṃ bhavanto bhojayitāraḥ 'id.'
kataro bhikṣāṃ dāsyati 'who among these two will give the alms?'
kataro bhikṣāṃ dadāti 'id.'
kataro bhikṣāṃ dātā 'id.'
katamo bhikṣāṃ dāsyati 'who among these many will give the alms?'
katamo bhikṣāṃ dadāti 'id.'
katamo bhikṣāṃ dātā 'id.'

1. The word *kim* used with *vṛtta* refers to the inflectional possibilities of the nominal base *kim* 'what, which'. Thus, *kiṃvṛttam* refers to '*kim* ending in a *sUP*'. *Kāśikā* informs that forms of *kim* which end in affixes *Ḍatara* and *Ḍatama* are, also, to be treated as applicable in this context.

The word *lipsā* denotes *labdhum icchā* 'desire to obtain'. Thus, affix *LAṬ* can be optionally introduced against *LṚṬ* and *LUṬ* when *kim*, or a form of it, is used with the verbal root provided *lipsā* is denoted in relation to a future action. Note also that the *Mahābhāṣya* (cf. *Śabdenduśekhara* of Nāgeśa ad 8.1.66 *yadvṛttān nityam*) implies the *anuvṛtti* of *kadā* and *karhi* in this rule from the preceding. *Kāśikā* does not do so.

3.3.7 लिप्स्यमानसिद्धौ च

lipsyamānasiddhau ca
/lipsyamānasiddhau 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3, *laṭ* #4, *vibhāṣā* #5)
lipsyamānasiddhau gamyamānāyām bhaviṣyati kāle dhātor vibhāṣā laṭ pratyayo bhavati
Affix *LAṬ*, also, optionally occurs to denote a future action after a verbal root when an accomplishment is conditioned by a wish fulfilled.

EXAMPLES:

yo bhaktaṃ dadāti sa svargaṃ gacchati 'he who gives rice goes to heaven'
yo bhaktaṃ dāsyati sa svargaṃ gamiṣyati 'he who will give rice will go to heaven'
yo bhaktaṃ dātā sa svargaṃ gantā 'id.'

1. This rule allows for the introduction of *LAṬ*, optionally to *LṚṬ* and *LUṬ* when accomplishment of something is indicated by what is desired to be obtained. For example, someone wishing for a bowl of rice may say: *yo bhaktaṃ dadāti sa svargaṃ gacchati* 'he who gives rice will go to heaven'. This sentence will use *LAṬ* as an option to *LṚṬ* and *LUṬ*, since the speaker indicates the accomplishment of going to heaven by the fulfillment of his desire for rice. But why is this rule formulated when *lipsā* of the preceding rule could still accommodate the derivates of this rule? This rule is stated separately because *kimvṛtta* is not required here as the cooccurrence condition. But as this optional rule, in the absence of specification of *kiṃvṛtta*, could apply to the situation of both *kiṃvṛtta* as well as non-*kiṃvṛtta*, mention of *kiṃvṛtta* in the earlier rule would similarly account for situations of non-*kiṃvṛtta*. This rule, thus, should not be stated, since it seemingly is redundant. Its purpose, nevertheless, becomes apparent when one notes that the earlier rule allows for the option only when *kiṃvṛtta* cooccurs.

3.3.8 लोडर्थलक्षणे च

loḍarthalakṣaṇe ca

/loḍarthatlakṣaṇe 7/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3, *laṭ* #4, *vibhāṣā* #5)
loḍarthaḥ praiṣādir lakṣyate yena sa loḍarthatlakṣaṇo dhātvarthaḥ, tatra varttamānād dhātor bhaviṣyati kāle vibhāṣā laṭ pratyayo bhavati
Affix *LAṬ* also occurs optionally after a verbal root when the action denoted by the root characterizes some other action with the signification of *LOṬ* 'imperative' (3.3.162 *loṭ ca*).

EXAMPLES:

upādhyāyaś ced āgacchati atha tvaṃ vyākaraṇam adhīṣva 'if the teacher comes, you should study grammar'
upādhyāyaś ced āgamiṣyati atha tvaṃ vyākaraṇam adhīṣva 'id.'
upādhyāyaś ced āgantā atha tvaṃ vyākaraṇam adhīśva 'id.'

1. The word *loḍarthalakṣaṇe* 'when used with a signification characterized by the meaning of *LOṬ*' becomes the qualifier to the verbal root. The 'meaning of *LOṬ*' is explained as *praiṣādi* 'command, etc.', where *ādi* 'etc.' refers to meanings such as *vidhi* 'that which is to be done', *nimantraṇa* 'invitation', etc. (3.3.161 *vidhinimantraṇāmantraṇa...*).

Note that the derivates of the present rule occur in conditional sentences as is marked by *cet* 'if'. The action of 'going', denoted by *āgacchati*, anticipates the signification of *LOṬ* by the action denoted by *adhīṣva*. This *LAṬ* is optional to *LṚṬ* and *LUṬ* as is known by the next two sentences of the examples.

3.3.9 **लिङ् चोर्ध्वमौहूर्त्तिके**

liṅ cordhvamauhūrttike
/liṅ 1/1 *ca* Ø *ūrdhvamauhūrttike* 7/1 = *muhūrttād ūrddhvam* = *ūrddhvamuhūrttam (pañc, tat.); ūrddhvamuhūrtte bhavam* = *ūrddhvamauhūrttikam, tasmin/*
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3, *laṭ* #4, *vibhāṣā* #5, *loḍarthalakṣaṇe* #8)
ūrdhvamauhūrttike bhaviṣyati kāle loḍarthalakṣaṇārthe varttamānād dhātor vibhāṣā liṅ pratyayao bhavati
Affix *LIṄ* 'optative', as well as *LOṬ*, optionally occurs to denote a future action after a verbal root when the action denoted by the root characterizes another action with the signification of *LOṬ* and future time exceeds by a *muhūrtta* 'fortyeight minutes'.

EXAMPLES:

upari muhūrttasya upādhyāyaś ced āgacched atha tvaṃ vyākaraṇam

adhīṣva 'if the teacher comes after a *muhūrtta*, you should study grammar'
upari muhūrttasya upādhyāyaś ced āgacchati atha tvaṃ vyākaraṇam adhīṣva 'id.'
upari muhūrttasya upādhyāyaś ced āgamiṣyati atha tvaṃ vyākaraṇam adhīṣva 'id.'
upari muhūrttasya upādhyāyaś ced āgantā atha tvaṃ vyākaraṇam adhīṣva 'id'.

1. Note that '*bhaviṣyati*', '*vibhāṣā*', and '*loḍarthalakṣaṇe*' are all carried here. The word *bhaviṣyati* is further modified by *ūrdhvamauhūrttike* 'when the future beyond a period slightly over three quarters of an hour (*muhūrtta*) is denoted'. But 'slightly over three quarters of an hour' of what time? *Nyāsa* explains that *ūrddhvamauhūrttike* is used to denote a time proximate to the present (*ūrddhvamauhūrttikaś cāyaṃ vartamānasya pratyāsanne varttate*). The word *ūrddhvamauhūrttika* in itself is an ad hoc (*nipātana*) compound, attested at the strength of the Pāṇinian usage of this rule. The *ca* of this rule also brings the *anuvṛtti* of *LAṬ*. Consequently, we will get four forms: one of *LIṄ* and one each of *LṚṬ*, *LUṬ* and *LAṬ*.

3.3.10 तुमुन्ण्वुलौ क्रियायां क्रियार्थायाम्

tumunṇvulau kriyāyāṃ kriyārthāyām
/*tumunṇvulau* 1/2 *kriyāyām* 7/1 *kriyārthāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3)
kriyārthāyāṃ kriyāyām upapade dhātor bhaviṣyati kāle tumunṇvulau pratyayau bhavataḥ
Affixes *tunUN* and *ṆvuL* occur to denote future after a verbal root which is used in conjunction with an action intended for the future action.

EXAMPLES:

bhoktuṃ vrajati 'he is going for the purpose of eating'
bhojako vrajati 'id.'

1. Note that '*bhaviṣyati*' is still carried. The word *kriyāyāṃ kriyārthāyām* 'action intended for the sake of another action' forms the cooccurrence condition. Thus, *bhoktum* of *bhoktuṃ vrajati* involves the introduction of affix *tumUN* after verbal root *bhuj* 'to consume' under the condition of its cooccurrence with the action denoted by verbal root *vraj* 'to go'. Verbal root *vraj* can be recognized here as denoting 'an action undertaken for the sake of the action denoted by *bhuj*'. Obviously, the action denoted by *bhuj* will take place in the future. The *artha* in *kriyārthāyām* denotes *prayojana* 'purpose'.

The conditions of *kriyāyām* and *kriyārthāyām* must both be met. Thus, *bhikṣiṣya ity asya jaṭāḥ* 'he has matted hair so that he can receive alms' will not qualify. The word *jaṭā* does not denote any action. It is simply a cooccurring word intended for the sake of the action of receiving alms (*bhikṣikriyā*). Similarly, *dhāvatas te patiṣyati daṇḍaḥ* 'as soon as you run, your stick will fall' will also not qualify for *tumUN*. What we get in *dhāvataḥ*, here, is an *upapada* denoting action, and not an action for the sake of another action. After all, the man is not running so that the fall of the stick could take place.

2. A question is raised as to why *ṆvuL* is to be restated in this rule when rule 3.1.133 *ṇvultṛcau* already provides for it. Pāṇini lists *ṆvuL* separately from *tṛC* to indicate that this *ṆvuL* cannot be used optionally with *tṛC, Lyu, ṆinI*, or *aC*, etc., as may be the case under the provision of rule 3.1.94 *vā' sarūpo' striyām*. Note that the use of this *ṆvuL*, as opposed to that of 3.1.133 *ṇvultṛcau*, is also different in other ways. For example, consider the following sentences which employ both the *ṆvuL* affixes:

(*a*) *odanasya bhojako yāti* 'he who will eat rice is going'

(*b*) *odanaṃ bhojako yāti* 'he is going for eating rice'

The first sentence has *bhojaka* derived by rule 3.1.133 *ṇvultṛcau* as opposed to the second which derives under the provision of this rule. Affix *ṆvuL* in both (*a-b*) denotes the agent (*kartṛ*); the genitive and accusative of *odana* similarly denote the object. Rule 2.3.65 *kartṛkarmaṇoḥ kṛti* would have required genetive to denote the *karman* in (*b*). But that is blocked by 2.3.70 *akenor bhaviṣyad ādhamarṇyayoḥ* in favor of 2.3.2 *karmaṇi dvitīyā*. Sentence (*a*) still gets genitive to denote the object. This constitutes one basic difference between the two *ṆvuL* rules. Of course, this *ṆvuL* also has *kriyārthakriyā* and *bhaviṣyati* as attending situations. Note that affix *ṆvuL* denotes *kartṛ* in view of rule 3.4.67 *kartari kṛt* read with 3.1.93 *kṛd atiṅ*. Affix *tumUN* is responsible for assignment of the term *avyaya* to its derivates in view of rule 1.1.39 *kṛn mejantaḥ*. A derivate of *tumUN* will still be called an item ending in *kṛt*. But can this derivate still denote *kartṛ*? No. A *kṛdanta* termed *avyaya* denotes *bhāva* 'root-sense'. The *Mahābhāṣya* (ad 3.4.9 *tumarthesesena...*) states that *avyayakṛto bhāve bhavanti* 'a form which ends in a *kṛt* (*kṛdanta*) affix, and is termed indeclinable (*avyaya*), denotes 'root-sense' (*bhāva*)'.

Note that this introduction of *tumUN* does not require the condition of *samānakartṛkatva* 'identical agent'. That is, the agent denoted by the action of the root after which this rule introduces *tumUN* does not have to be identical with the agent of action denoted by the root which underlies the conjoined word. The agent of *bhoktum* does not have to be identical with the agent of *vrajati* in the sentence *bhoktum vrajati* 'he is going for eating'. Bhaṭṭoji and other grammarians state that *samānakartṛkatva*, though not explicitly stated, still should form a valid condition. That is

they rule out the introduction of *tumUN* in the absence of the identical agent condition. Consequently, the condition of identical agent becomes the norm for these examples. This may be the reason why Pāṇini did not state it here explicitly. But why did he then state it in 3.3.158 *samāna-kartṛkeṣu...* May be he should have stated it here too. For an example of the violation of identical agent condition, see the following from Kālidāsa (*Abhijñāna*:VI:22):

> *vāṣpaś ca na dadāty enāṃ draṣṭuṃ citragatām api* 'and the vapor (caused by tears rolling down my eyes) would not even let me see her in the picture'

The agent of *dṛś* 'to see' underlying *draṣṭum*, a form ending in *tumUN*, is different from the agent of *dā* 'to give' in *dadāti*. Scholars have gathered many other exceptions, for which see Bhimasena Shastri (*Laghuśiddhānta-kaumudī* III:180).

3.3.11 भाववचनाश्च

> *bhāvavacanāś ca*
> */bhāvavacanāḥ* 1/3 *ca* Ø/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3, *kriyā-yāṃ kriyārthāyām* #10)
> *bhāvavacanāḥ pratyayā bhaviṣyatikāle kriyāyām upapade kriyārthāyāṃ bhavanti*
> Affixes which have the signification of *bhāva* 'root-sense' (3.3.8 *bhāve*) also occur after a verbal root used in conjunction with an action intended for some future action.

EXAMPLES:

> *pākāya vrajati* 'he is going for the purpose of cooking'
> *bhūtaye vrajati* 'he is going for the purpose of acquiring wealth'
> *puṣṭaye vrajati* 'he is going for the purpose of nourishment'

1. This rule introduces an affix with the denotatum of *bhāva* after a verbal root when the action is denoted in the future, and the root is conjoined with another root which denotes an action intended for the future action. Commentators explain *bhāvavacanāt* as referring to affixes which denote *bhāva*, and are given in the domain of 3.3.18 *bhāve*. If this were correct then we would not need this rule. For, 3.3.18 *bhāve*, itself, can account for what this rule does. Commentators explain that the provisions of 3.1.94 *vā' sarūpo' striyām* do not become applicable in case of *tumUN* (see my note under 3.1.94). Consequently, *tumUN* would have obligatorily blocked any other affix with the denotatum of *bhāva*. It is for this reason that we must have this rule. Also see note (2) under the next rule.

But why do we have to use *vacanāt*? Why can we not simply have *bhāve*? It is stated that by using '*vacanāt*' we get this special meaning: affixes which have been introduced in the sense of *bhāva* occur in the manner of those which denote *bhāva* (*Nyāsa* ad *Kāśikā* III:15: *bhāve ye vihitāḥ pratyayās te tathā bhavanti yathā bhāvasya vācakā bhavanti*). What does it mean? It means that they occur following the manner in which they are specified. That is, *vacanāt* of *bhāvavacanāt* drastically restricts the bases after which affixes, in view of rule 3.3.10 *bhāvavacanāś ca*, will be introduced under the cooccurrence condition of an action intended for another action. They could be only those bases which have been enumerated in the context of the introduction of affixes in the domain of 3.3.18 *bhāve* with their specific conditions. This clearly rules out any mixing (*vyatikara*) of specifications with regard to bases and their qualifications.

For example, 3.3.56 *er ac* specifies that affix *aC* be introduced only after a verbal root which ends in *i* (short/long). Similarly, affix *GHaÑ* is introduced after verbal root *ciÑ* with the semantic qualification of *hastādāna* 'obtaining by hand', further restricted by *asteye* 'when not related to stealing'. This is what is meant by the denotation of *bhāva*, in accordance with specific qualifications, as invoked by the use of *vacanāt* in this rule.

3.3.12 **अण् कर्मणि च**

aṇ karmaṇi ca
/*aṇ* 1/1 *karmaṇi* 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3, *kriyāyāṃ kriyārthāyām* #10)
dhātor aṇ pratyayo bhavati bhaviṣyati kāle karmaṇy upapade kriyāyāṃ ca kriyārhtāyām
Affix *aṆ* occurs after a verbal root used in conjunction with a *pada* which denotes *karman* when the root also cooccurs with an action intended for some future action.

EXAMPLES:

kāṇḍalāvo vrajati 'he is going for the purpose of cutting a branch'
aśvadāyo vrajati 'he is going for making the gift a horse'
godāyo vrajati 'he is going for making the gift a cow'
kambaladāyo vrajati 'he is going for the purpose of giving away blankets'

1. The *ca* of this rule is used to indicate *sanniyoga* 'concurrent application' of the conditions of *kriyāyāṃ kriyārthāyām* and *karmaṇi*. If this *ca* were not used, application in turn (*paryāya*) would obtain. Consequently, *aṆ* could be introduced when the condition of *kriyārthakriyā* was met. Similarly, *aṆ* could also be introduced when the condition of *karman*,

but not of *kriyārthakriyā*, was met. The force of *ca* is to make both conditions apply concurrently. Consider for example *aśvadāyo vrajati* 'he is going in order to make the gift of a horse', where *aśvadāyaḥ* is derived by introducing affix *aṆ* after verbal root *dā* under the cooccurrence condition of *aśva* + *Ṅas* which, in turn, denotes the *karman* of 'giving'. At the same time, the action of going, denoted by verbal root *vraj*, is taking place for the sake of the action of 'giving the horse' denoted by *dā* used with *aśva* + *Ṅas*, its object.

2. Note that rule 3.2.1 *karmaṇy aṇ* introduces *aṆ* in general (*utsarga*). The same is blocked by *ṆvuL* of 3.3.10 *tumunṇvulau...*, an exception (*apavāda*), at the strength of the indication (*jñāpaka*) that '*vā*' *sarūpavidhi*' does not apply there. Our present rule reintroduces *aṆ* which, because it constitutes an exception (*apavāda*), blocks *ṆvuL* which, in turn, blocked the earlier *aṆ*. This second *aṆ* also blocks affixes such as *Ka*, etc. (*kādi*; 3.2.3 *āto' nupasarge kaḥ*, 3.2.8 *gāpoṣ ṭak*, etc.), for reasons of its placement subsequently (*paratva*; 1.4.2 *vipratiṣedhe...*; see *Nyāsa* ad *Kāś.* on interaction of rules in relation to *paratva*). Note that, in the context of the introduction of *ṆvuL* by rule 3.3.10 *tumunṇvulau...*, affixes *tṛC*, etc., did not become applicable because the provision of '*vā*' *sarūpavidhi*' does not extend to their application. This rule comes within the scope of '*vā*' *sarūpavidhi*', hence, in situations where this *aṆ* obtains, *ṆvuL* of 3.3.10 *tumunṇvulau...* also obtains by way of exception. Thus we get: *edhān āhārako vrajati* 'he is going to bring the firewood'.

3.3.13 लृट् शेषे च

lṛṭ śeṣe ca
/*lṛṭ* 1/1 *śeṣe* 7/1 *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.91, *bhaviṣyati* #3,
kriyāyāṃ kiryārthāyām #10)
śeṣe śuddhe bhaviṣyati kāle cakārāt kriyāyāṃ copapade kriyārthāyāṃ dhātor lṛṭ pratyayo bhavati
Affix *LṚṬ* occurs after a verbal root when a future action, or a concurrent action intended for the future action, is denoted.

EXAMPLES:

kariṣyati 'he will do'
kariṣyāmīti vrajati
'I will do it' thus he goes'

1. Note that '*bhaviṣyati*' is still carried. The word *śeṣa* 'remainder' is used so that affix *LṚṬ* can also be introduced in a context other than that which has *kriyārthakriyā* as an *upapada*. This context has been identified simply as '*bhaviṣyati*' 'future'. Thus, this rule will introduce *LṚṬ* where

future alone is denoted. Additionally, it will introduce *LṚṬ* after a verbal root also when the root cooccurs with an action intended for the future action. Consider *kariṣyati* where 'future' is denoted under the provision of *śeṣe* as opposed to *kariṣyāmīti vrajati* where *LṚṬ* is introduced under the cooccurrence condition of *vraj* which, in turn, denotes an action intended for the action of doing something in the future.

3.3.14 लृटः सद्वा

lṛṭaḥ sad vā
/*lṛṭaḥ* 6/1 *sat* 1/1 *vā* ∅/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3, *kriyāyāṃ kriyārthāyām* #10 *śeṣe* #13)
lṛṭaḥ sthāne satsaṃjñau śatṛśānacau vā bhavataḥ
An affix which is termed *sat* (3.2.127 *tau sat; ŚatṚ* and *ŚānaC*) optionally comes after a verbal root in place of *LṚṬ* when a future action, or a concurrent action intended for the future action, is denoted.

EXAMPLES:

kariṣyantaṃ devadattaṃ paśya 'see Devadatta who will do it'
kariṣyamāṇaṃ devadattaṃ paśya 'id.'
he kariṣyan 'O you, who will do (it)'
he kariṣyamāṇa 'id.'
arjayiṣyamāṇo vasati 'he lives (here) in order that he will earn'

1. This rule optionally introduces affixes termed *sat* (3.2.127 *tau sat*) as replacements for *LṚṬ*. Rule 3.2.124 *laṭaḥ śatṛśānacāv aprathamāsamānādhikaraṇe* introduces the two affixes, *ŚatṚ* and *ŚānaC*, under the condition of coreferentiality (*sāmānādhikaraṇya*) with a word which terminates in a nominal ending other than the nominative (*aprathamā*). The option of this present rule is interpreted as *vyavasthitavibhāṣa* 'fixed option' ascertained based upon available usage. This kind of an option sometimes applies obligatorily (*nitya*), sometimes optionally, and yet on still other occasions both ways. Consequently, the replacement with *ŚatṚ* and *ŚānaC* is obligatory when coreferentiality with a word which ends in the nominative is not involved. The replacement will become optional when coreferentiality with a word which ends in the nominative obtains.
Consider the following examples:

(*a*) *kariṣyantaṃ devadattaṃ paśya* (*ŚatṚ*) 'see Devadatta who will...'
(*b*) *kariṣyamāṇaṃ devadattaṃ paśya* (*ŚānaC*) 'id.'
(*c*) *he kariṣyan* 'O! you! who will do'
(*d*) *he kariṣyamāṇa* 'id.'
(*e*) *arjayiṣyan vasati* 'he lives here so that he will make a living'

(*f*) *arjayiṣyamāṇo vasati* 'id.'
(*g*) *śayiṣyanto bhokṣyante yavanāḥ* 'the Ionians will be eating while reclining'
(*h*) *śayiṣyamāṇā bhokṣyante yavanāḥ* 'id.'

The above sentences, in sets of two, show instances of the replacement of *LṚṬ* with *ŚatṚ* and *ŚānaC* respectively. These above options are obligatory. Thus, the first two sentences illustrate the use of *ŚatṚ* and *ŚānaC* to replace *LṚṬ*, where the derivate is not coreferential with any word in *prathamā*. The second set (*c-d*) offers examples in *sambodhana* 'address' (3.2.125 *sambodhane ca*). The third (*e-f*) set offers examples where *hetu* 'cause, purpose' conditions the replacement (3.2.126 *lakṣaṇahetvoḥ kriyāyāḥ*). The last two sentences (*g-h*) illustrate replacements under the condition of an action which characterizes another action (*lakṣaṇa*). These are all instances where Pāṇini intended *ŚatṚ* and *ŚānaC* obligatorily. For optional replacements, where coreferentiality with a word ending in the nominative obtains, consider *kariṣyati* / *kariṣyate devadattaḥ* 'Devadatta will do' parallel to *kariṣyan* or *kariṣyamāṇo devadattaḥ*.

These replacements also become available obligatorily, relative to an affix (*pratyaya*) or a following word (*uttarapada*). Thus we get: *kāriṣyataḥ* and *kariṣyamāṇiḥ* 'the male offspring of he who will do' parallel to *kariṣyato' apatyam*; and *kariṣyad bhaktiḥ* and *kariṣyamāṇabhaktiḥ* 'this is the devotion of one who will do' parallel to *kariṣyato bhaktiḥ*.

2. Explicit mention of *lṛṭaḥ* 'in place of *LṚṬ*' is made to specify that affixes termed *sat* come as replacements, and not independently, after a root. Thus, *lṛṭaḥ* specifies the item to be replaced (*sthāninirdeśa*).

3.3.15 अनद्यतने लुट्

anadyatane luṭ
/*anadyatane* 7/1 *luṭ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhaviṣyati* #3)
bhaviṣyadanadyatane' rthe varttamānād dhātor luṭ pratyayo bhavati
Affix *LUṬ* occurs after a verbal root when a future action which is not current is denoted.

EXAMPLES:

śvaḥ karttā 'he will do (it) tomorrow'
śvo bhoktā 'he will eat tomorrow'

1. This rule is an exception to *LṚṬ* since '*bhaviṣyati*' is also carried. The word *anadyatana* is interpreted as a *bahuvrīhi* compound with the paraphrase: *adya bhāvo nāsty asminn iti* 'that in which there is no sense of today'. Consequently, *anadyatane* read with *bhaviṣyati* will yield the interpretation:

when the action is denoted in the future with no sense of today'. The word '*bhaviṣyati*' refers to future in general and thus relates to the context of affix *LṚṬ*. Affix *LUṬ* will now denote 'future' but without any reference to the futurity of the current day. This is the force of *anadyatane*. A *bahuvrīhi* interpretation of *anadyatane* will rule out the introduction of *LUṬ* in a context where mixing of 'today with tomorrow' may be involved. Thus, *adya śva vā bhaviṣyati* 'it will happen today, or tomorrow' will obligatorily have *LṚṬ*.

2. A *vārttika* in the *Mahābhāṣya* proposes that *LUṬ* (*śastanī*) should be used in the sense of *LṚṬ* (*bhaviṣyatyarthe*) when *paridevana* 'complaint, lamentation' is denoted. Thus, *iyaṃ nu kadā gantā, yaivam pādo nidadhāti* 'when will she, the one who sets her foot this way (very slowly), reach there'; *ayaṃ kadā' dhyetā, ya evam anabhiyuktaḥ* 'when will he, the one who is so inattentive, be able to study anything'.

3.3.16 **पदरुजविशस्पृशो घञ्**

padarujaviśaspṛśo ghañ
/*padarujaviśaspṛśaḥ* 5/1 *ghañ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
padādibhyo dhātubhyo ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal roots *padA* 'to step', *rujA* 'to be sick', *viśA* 'to enter', and *spṛśA* 'to touch'.

EXAMPLES:

pādaḥ 'foot'
rogaḥ 'disease'
veśaḥ 'one who enters'

1. Note that '*bhaviṣyati*' is no longer carried in this rule. Thus, affixes introduced hereafter could refer to all tenses. A derivate which terminates in *GHaÑ* will denote *kartṛ* by 3.4.67 *kartari kṛt*. In the example *pādaḥ* 'foot' which is analysed as: *padyate' sau* 'that which goes', the feet serve as means (*karaṇa*) more than anything else. It is for this reason that commentators add: *karaṇa* is denoted here by way of *kartṛ* based upon the speaker's desire to speak about it as the agent (*karaṇasya kartṛtvena vivakṣā*).

A *vārttika* approves the derivation of *sparśaḥ* 'that which afflicts' with *GHaÑ* when the meaning is illness (*upatāpa*). The word *sparśaḥ*, in the sense of 'touch', is derived through the introduction of affix *aC* by 3.1.134 *nandigrahipacādibhyo...* The *aC*-derivate *sparśaḥ* receives the high-pitch accent at the end (*antodātta*). The accent with *GHaÑ* will be high-pitch initially (*ādyudātta*). The *GH*, as an *it* in *GHaÑ*, is used to facilitate *kutva* 'replacement with *k*, etc.' by rule 7.3.52 *cajoḥ ku ghiṇyatoḥ*. The *Ñ* as

as an *it* is used to facilitate *vṛddhi*, as well as, initial high-pitch (*ādyudātta*; 6.1.197 *ñnityādir...*) accent.

3.3.17 सृ स्थिरे

sṛ sthire
/*sṛ (deleted* 5/1) *sthire* 7/1)
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16)
sartter dhātoḥ sthire kartari ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *sṛ* to denote a stable agent.

EXAMPLES:

candanasāraḥ 'essence of sandalwood'
khadirasāraḥ 'essence of catechu'

1. Note that *sṛ* is referenced, here, without the ablative (*pañcamī*), and thereby makes the specification (*nirdeśa*) without a nominal ending (*avibhaktika*). The word *sthira*, which outlines the semantic condition, is treated as a qualifier to the agent. That is, affix *GHaÑ* will denote the agent modified by *sthira* 'fixed, stable'. It is thus not a cooccurrence condition marked by locative of 3.1.92 *tatropapadam...* The word *sthira*, itself, is explained as *kālāntarasthāyī* 'that which remains static through intervals of time; longlasting'. The word *sṛ* makes reference to both verbal roots *sṛ* and *ṛ*, which are synonymous in the sense 'to go'.

3.3.18 भावे

bhāve
/*bhāve* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16)
bhāve vācye dhātor ghañ pratyayo bhavati
Affix *GHaÑ* occurs after a verbal root when *bhāva* 'root-sense' is denoted.

EXAMPLES:

paktiḥ 'cooking'
pakvam 'id.'
pacanam 'id.'
pākaḥ 'id.; nom. singular'
pākau 'nom. dual'
pākāḥ 'nom. plural'

1. The word '*bhāve*' specifies the scope of affix *GHaÑ*, and is, itself, derived by introduction of this affix after verbal root *bhū* 'to be'. Can this

limit the introduction of affix *GHaN* only to the action denoted by *bhū?* Obviously not, since the idea is to make the affix available after roots in general.

2. The specification of this rule anticipates affix *GHaN* to denote *bhāva* 'root sense, action'. But 'action' is characteristically the denotatum of verbal roots. How could an affix denote the same? Commentators explain that it is the property of the action denoted by the root that becomes the denotatum of affix *GHaÑ*. Actions may be spoken of as having two properties: that of being yet to be accomplished (*sādhyatā*) and that of having been accomplished (*siddhatā*). Affix *GHaÑ* denotes *bhāva* in the sense of denoting the property of the root-sense termed *siddhatā*. This also enables the 'root-sense' (*dhātvartha*) to now relate to number and gender. For, it is more like a thing (*dravya*). Remember, however, in this context that Pāṇini's use of '*bhāve*' in masculine singular is not *tantra* 'principal'. That is, it is not technically restrictive of derivates to be used only in masculine singular. Thus, derivates which denote *bhāva* can be also related with genders other than masculine, and numbers other than singular. Consider for example the derivation of *paktiḥ, pacanam*, on the one hand, and of *pākau* and *pākāḥ*, on the other.

3.3.19 अकर्त्तरि च कारके संज्ञायाम्

> *akartari ca kārake saṃjñāyām*
> /*akartari* 7/1 *ca* Ø *kārake* 7/1 *saṃjñāyām* 7/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.01, *ghañ* #16)
> *kartṛvarjite kārake saṃjñāyāṃ viṣaye dhātor ghañ pratyayo bhavati*
> Affix *GHaÑ* occurs after a verbal root to denote a *kāraka* other than *kartṛ* when the derivate denotes a *saṃjñā* 'name'.

EXAMPLES:

> *prāsaḥ* 'that which people hurl; a spear'
> *prasevaḥ* 'that which people stitch; a sack'
> *āhāraḥ* 'that from which one receives nourishment; food'

1. This rule introduces affix *GHaÑ* to denote a *kāraka* other than *kartṛ* provided the derivate denotes a name (*saṃjñā*). Thus we get:

(*a*) *prāsaḥ* = *prāsyanti taṃ prāsaḥ* 'that which people hurl; spear'
(*b*) *prasevaḥ* = *prasīvyanti tam* 'that which people stitch up; a sack'
(*c*) *āhāraḥ* = *āharanti rasam yasmāt* 'that from which people derive nourishment; food'

1. The word *akartari* is interpreted as the negative *tatpuruṣa* compound of the *paryudāsa* type. Given this, the negative of *akartari* will be interpreted as negating something different from, though still similar to (*tadbhinnatatsadṛśa*), a *kartṛ*. That is, *naÑ* will negate *kartṛ* and yet, together with

kartṛ, will still specify the *kāraka* condition. This meaning cannot be derived, under the *prasajya* interpretation, without special efforts. It is argued that the use of '*kārake*' of this rule is unnecessary, since a *paryudāsa* interpretation will automatically account for it. That is, *akartari*, itself, enables the affix to be introduced in the sense of something similar to, though not, exactly the *kartṛ*. The referent of 'something other than, but similar to a *kartṛ*' is clearly a *kāraka* other than a *kartṛ*. The word '*kārake*' of this rule is thus used for clarity.

Commentators accept 'rule-splitting' (*yogavibhāga*) as the special effort by which one gets the *prasajya* meaning of negation in *akartari* thereby leading to the desired interpretation of the rule. Thus, we get two sentences: *saṃjñāyām ghañ bhavati* 'affix *GHaÑ* occurs when the derivate denotes *saṃjña*'; *kartari tu na bhavati* 'affix *GHaÑ*, however, does not occur when *kartṛ* is denoted'. But an objection is raised against the first sentence. Since the sense of the affix is not specified by the first sentence, the affix will denote the 'sense of its base, the root'. How could it then denote a *kāraka* other than an agent? It is to remove this difficulty in the *prasajya* interpretation that '*kārake*' is used here. For further details of the two types of negation, see my notes under rule 1.4.17 *svādiṣu*...

The *ca* of this rule is displaced, as regards its order, relative to *saṃjñāyām*. Commentators explain that this may leave some possibility for usage where *saṃjñā* is not denoted by the derivate. Thus, we get *lābhaḥ* 'gain' in *ko bhavatā lābho labdhaḥ* 'what gain was made by you sir?'

3.3.20 परिमाणाख्यायां सर्वेभ्यः

parimāṇākhyāyāṃ sarvebhyaḥ
/*parimāṇākhyāyām* 7/1 *sarvebhyaḥ* 5/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
parimāṇākhyāyāṃ gamyamānāyāṃ sarvebhyo dhātubhyo ghañ pratyayo bhavati

Affix *GHaÑ* occurs after verbal roots in general to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the derivate denotes a measure of weight.

EXAMPLES:

taṇḍulanicāyaḥ 'one heaped measure of rice'
śūrpaniṣpāvaḥ 'two winnowing basketfuls of...'

1. This rule allows for the introduction of affix *GHaÑ* after verbal roots in general when the derivate denotes some measure of weight other than conventional. The word *ākhyā* is used, here, to reject the

conventional measures of weight such as *prastha, droṇa,* etc. Clearly then, the word *parimāṇa* is used more in its derivational sense of 'distinguishing one measure of anything from another'. What accomplishes this distinction becomes the means by which those measures are distinguished. Thus, we get *nicāyaḥ* in *taṇḍulanicāyaḥ* parallel to *ekas taṇḍulānāṃ nichāyaḥ* 'one heap of rice of some measure'. My use of 'of some measure' shows how *one (eka),* the numeral, measures the 'heap', as opposed to the *prastha* or *droṇa.* For, in the latter case, we must use 'one heap of rice equal to the measure of a *prastha* or *droṇa*'. Thus, the use of *ākhyā* rules out any conventional measure of weight. Similarly, one can get *niṣpāvau* as in *dvau śūrpaniṣpāvau* where two, the number of winnowing baskets measures the grain.

2. Note that *nicāyaḥ* could have become the derivational subject of 3.3.56 *er ac* whereby affix *aC* is introduced after a verbal root terminated in *i.* The rest of the conditions of '*akartari ca kārake, bhāve,* etc.' are the same. Our present rule thus forms an exception to 3.3.56 *er ac.* It also forms an exception to rule 3.3.57 *ṛdor ap,* whereby affix *aP* is introduced after verbal roots which ends in *ṛ* and *u.* Our second example, *niṣpāvaḥ / niṣpāvau,* could have qualified for 3.3.57 which is blocked. Obviously, the *paribhāṣā* of 'prior exceptions block the most immediately available operational provisions, and not those available subsequently (*purastāpavādān*) does not apply here. For, this rule blocks *aC* as well as *aP.* This, again, may be the dictate of '*sarvebhyaḥ*' of this rule. However, one must understand that this affix cannot block the affixes which are to be introduced to denote *bhāva* in the domain of 3.3.94 *striyām ktin* (*ghañanukramaṇam ajapor viṣaye, strīpratyayās tu na bādhyante*). *Kāśikā* states clearly that *GHaÑ* is provided where *aC* and *aP* would otherwise find their scope. But how do we know this? It is understood from the *pañcamī* 'ablative' of *sarvebhyaḥ* which becomes coreferential with *dhātoḥ,* and thus indicates the exception (*apavāda*) relative to the formal-base (*prakṛtyāśraya*). The exception denoted by *sarvebhyaḥ* is thus not relative to meaning (*arthāśraya*). Hence, feminine affixes are not blocked. If, however, Pāṇini intended this rule to be an exception relative to the meaning, he would have used *sarva* 'all' in the locative plural as *sarvasmin.* Obviously, 3.3.94 *striyāṃ ktin* entails specifications relative to meaning. Thus we get *KtiN* in *ekā tilocchittiḥ* 'one heap of sesame', etc.

3. A *vārttika* also provides for the introduction of affix *GHaÑ* in the sense of agent after verbal roots *dṛ* 'to split' and *jṝ* 'to be old' when they are used in *ṆiC.* This *vārttika* additionally provides for the *LUK*-deletion of *ṆiC.* Thus we get: *dārāḥ* = *dārayanti te* 'wife; she who causes the split among brothers', and *jārāḥ* = *jarayanti te* 'lovers of married women; those who cause a woman to become old'. Note that *dārāḥ* obligatorily is plural

masculine. The word *jāra* has been explained as *praśchannapatiḥ* 'secret husband' or *upapatiḥ* 'other husband'.

3.3.21 इङश्च

iṅaś ca
/*iṅaḥ* 5/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
iṅo dhātor ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *iṄ* 'to study' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the derivate denotes a name.

EXAMPLES:

adhyāyaḥ 'a lesson; chapter of a treatise'
upādhyāyaḥ 'he from whom one studies; a teacher'

1. This rule introduces affix *GHaÑ* after verbal root *iṄ* 'to study' as an exception to affix *aC* of rule 3.3.56 *er ac*. Note that *aC* would have become available to *iṄ* for reason that it ends in *-i*. Thus we get *GHaÑ* after *iṄ* used with the preverb *adhi* to yield *upādhyāyaḥ*, 'he from whom one studies'. Affix *GHaÑ*, obviously, denotes *apādāna* 'ablative', which is in consonance with 1.4.29 *ākhyātopayoge*. One can similarly derive *adhyāyaḥ*, though *GHaÑ* would then denote the *karman* 'object' of studying.

A feminine counterpart of the derivate in *GHaÑ*, according to a *vārttika*, is formed in this case with *ṄīṢ* optionally with *ṬāP*. This yields two forms: *upādhyāyī* and *upādhyāyā* 'a female teacher'. Note that the word which signifies 'the wife of the teacher' is to be obligatorily derived by introduction of affix *ṄīṢ* by rule 4.1.48 *puṃyogād ākhyāyām*. This same rule will introduce *ṄīṢ* in case of *upādhyāyī*, meaning 'the female teacher'. Obviously, *upādhyāyī* thus may mean two things: 'the female teacher' and 'the wife of the teacher'. Perhaps it is to disambiguate this that augment *ānUK* is optionally introduced to derive *upādhyāya* (*ānUK*) + *ṄīṢ* = *upādhyāyānī*. This provision of *ānUK* is made by a *vārttika* :

upādhyāyamātulābhyāṃ vā 'optionally after *upādhyāya* and *mātula* 'mother's brother'. Now one, preferably, can use *upādhyāyānī*, rather than *upādhyāyī*, if one wishes to make sure that the listener will not interpret *upādhyāyī* to mean 'the female teacher'.

A *vārttika* also provides for *GHaÑ* after verbal root *śṛ* 'to injure' and *vṛÑ* 'to select' to derive *śāraḥ* meaning *vāyuḥ* 'wind', *varṇaḥ* 'color', and *nivṛtam* 'that by means of which one covers the body; covering'. The

denotatum of *GHaÑ* in these instances is *karaṇa*. Thus, *vāyuḥ* 'wind; that by means of which something (like a leaf) falls; *varṇa* 'color; that by means of which something is made colorful (*citrīkaraṇa*); and *nivṛtam* 'covering; that by means of which one covers one's body to protect from cold, etc.'. The *Mahābhāṣya* uses the following to illustrate the meaning of *nivṛtam* in *nīśāraḥ*:

> *gaur ivākṛtanīśāraḥ prāyeṇa śiśire kṛśaḥ* 'he who remains with his body uncovered like that of a cow in winter is usually feeble'.

3.3.22 उपसर्गे रुवः

> *upasarge ruvaḥ*
> /*upasarge* 7/1 *ruvaḥ* 5/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *akartari ca kārake saṃjñāyām* #19)
> *upasarge upapade rauter dhātor ghañ pratyayo bhavati*
> Affix *GHaÑ* occurs after verbal root *ru* 'to make noise' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains a preverb and the derivate denotes a name.

EXAMPLES:

> *saṃrāvaḥ* 'noise'
> *uparāvaḥ* 'id.'
> *virāvaḥ* 'id.'

1. This again is an exception to affix *aP* available from 3.3.57 *ṛdor ap*. The same is true about the subsequent rule where *aP* is already available to specified roots because they end in *-u*. Both of these rules have cooccurrence conditions constituted by a preverb. Note that *saṃyāvaḥ* of the next rule is explained by Haradatta (*PM* ad *Kāśikā*) as a deepfried bread stuffed with a lentil paste mixed with jaggery and cumin seed, etc.

3.3.23 समि युद्रुदुवः

> *samy yudruduvaḥ*
> /*sami* 7/1 *yudruduvaḥ* 5/1/
> (*pratyayaḥ* #3.1.1. *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
> *samy upapade 'yu, dru, du' ity etebhyo dhātubhyo ghañ pratyayo bhavati*
> Affix *GHaÑ* occurs after verbal roots *yu* 'to mix', *dru* 'to move; drip' and *du* 'to burn; be afflicted' to denote *bhāva* and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *sam* and the derivate denotes a name.

EXAMPLES:

saṃyāvaḥ 'a kind of pudding'
sandrāvaḥ 'running'
sandāvaḥ 'id.'

3.3.24 श्रिणीभुवोऽनुपसर्गे

śriṇībhuvo' nupasarge
/*śriṇībhuvaḥ* 5/1 *anupasarge* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
'śri, ṇī, bhū' ity etebhyo dhātubhyo' nupasargebhyo ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal roots *śri* 'to go', *ṇīÑ* 'to lead' and *bhū* 'to be, become' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root is not used with a preverb and the derivate denotes a name.

EXAMPLES:

śrāyaḥ 'shelter'
nāyaḥ '(that by) means (of which one leads)'
bhāvaḥ 'existence; condition'

1. This rule constitutes an exception to both affixes *aC* and *aP*. *Kāśikā* paraphrases '*anupasarge*' in the locative as '*anupasargebhyaḥ*' in the ablative just to show that the *saptamī* of '*anupasarge*' is used in the sense of *pañcamī*. A question is raised as to why we get *prabhāvaḥ* 'splendour, power' as opposed to *prabhavaḥ* in *prabhāvo rājñaḥ* 'the power of the king'. It is explained that *prabhāvaḥ* is derived by combining *pra* and *bhāvaḥ*, a *GHaÑ*-derivate, to yield a *prādi* compound. Thus, in *prabhāvaḥ, GHaÑ* is not used after verbal root *bhū* conjoined with the preverb *pra*. The word *anupasarga* of *anupasargebhyaḥ* is interpreted as a *bahuvrīhi* with the analyzed form: *avidyamāna upasarga eṣām* 'those whose preverb does not appear'. Why do we get *nayaḥ* as opposed to *nāyaḥ* in *rājño nayaḥ* 'the rule of the king'? Affix *GHaÑ* should have been chosen over *aC* because verbal root *ṇīÑ* is used without a preverb. Affix *aC*, however, has been chosen because of the *bāhulaka* 'variously' provision of 3.3.113 *kṛtyalyuṭo bahulam*.

3.3.25 वौ क्षुश्रुवः

vau kṣuśruvaḥ
/*vau* 7/1 *kṣuśruvaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)

vau upapade 'kṣu śru' ity etābhyāṃ dhātubhyāṃ ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal roots *ṬUkṣu* 'to sneeze; make noise' and *śru* 'to move' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the roots cooccur with a nominal *pada* which contains *vi* and the derivate denotes a name.

EXAMPLES:

vikṣāvaḥ 'noise'
viśrāvaḥ 'flow; fame'

1. This rule is again an exception to *aP* (3.3.57 *ṛdor ap*). For, the roots end in *u*. Note that *vi* forms the cooccurrence condition. Elsewhere, the derivates will be *kṣavaḥ* 'sneezing' and *śravaḥ* 'ear'.

3.3.26 अवोदोर्नियः

avodor niyaḥ
/*avodoḥ* 7/2 *niyaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
'ava, ut' ity etayor upapadayor nayater dhātor ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *ṇīÑ* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a *pada* which contains *ava* and *ud* and the derivate denotes a name.

EXAMPLES:

avanāyaḥ 'the act of falling down; downfall'
unnāyaḥ 'elevation; prosperity'

1. How come affix *GHaÑ* is not used to derive *unnayaḥ* of *unnayaḥ-padārthānām* 'abundance of things' when *ṇīÑ* is used with the preverb *ud*. This is again because of affix *aC* introduced under the provision of *bāhulaka* of 3.3.113 *kṛtyalyuṭo bahulam*.

3.3.27 प्रे द्रुस्तुस्रुवः

pre drustusruvaḥ
/*pre* 7/1 *drustusruvaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
praśabda upapade 'dru, stu, sru' ity etebhyo dhātubhyo ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal roots *dru* 'to run', *stu* 'to praise', and *sru* 'to move' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the roots cooccur with a nominal *pada* which contains *pra* and the derivate denotes a name.

EXAMPLES:

pradrāvaḥ 'running; flight'
prastāvaḥ 'occasion; proposal of praise'
prasrāvaḥ 'flow; dripping; urination'

1. Forms such as *dravaḥ* 'fluid', *stavaḥ* 'praise' and *sravaḥ* 'flow' will be derived by introducing affix *aP* when *pra* is not the cooccurring condition.

3.3.28 **निरभ्योः पूल्वोः**

nirabhyoḥ pūlvoḥ
/*nirabhyaḥ* 7/2 *pūlvoḥ* 6/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
nirabhipūrvayoḥ pūlvor dhātor ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal roots *pū* 'to cleanse' and *lūÑ* 'to cut' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the roots cooccur with a nominal *pada* which contains *nis* and *abhi* respectively and the derivate denotes a name.

EXAMPLES:

niṣpāvaḥ 'cleaning; particular kind of lentil; winnowed grain'
abhilāvaḥ 'cutting; harvesting'

1. A reference with *pū* is made, here, to both verbal roots *pūṄ* 'cleanse, purify' and *pūÑ* 'id'. Commentators explain that the preverb should be associated with the cited roots in accordance with the order of enumeration (*yathāsaṃkhya*; 1.3.10 *yathāsaṃkhyam anudeśaḥ*...). That is, *nis* should be used with *pūṄ* and *pūÑ*, as opposed to *abhi*, which is to be used with *lūÑ*. We will get *pavaḥ* 'cleansing, winnowing' and *lavaḥ* 'harvesting, mowing' by introduction of affix *aP* (3.3.57 *ṛdor ap*) when *nis* and *abhi* are not used.

3.3.29 **उन्न्योर्ग्रः**

unnyor grah
/*unnyoḥ* 7/2 *graḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
unnyor upapadayoḥ 'gṛ' ity etasamād dhātor ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *gṝ* 'to make noise; to swallow' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *ud* and *ni* and the derivate denotes a name.

EXAMPLES:

> *udgāraḥ samudrasya* 'the roaring of the sea'
> *nigāro devadattasya* 'Devadatta's eating'

1. Note that *grah* makes reference to both verbal roots *gṝ* 'to utter' and *gṝ* 'to swallow'. Thus, we get *udgṝaḥ samudrasya* 'the roaring of the sea' and *nigāro devadattasya* 'eating of Devadatta'. Elsewhere, we will get *garaḥ* to denote 'swallowing' by introduction of affix *aP*.

3.3.30 कॄ धान्ये

kṝ dhānye
/*kṝ*(deleted 5/1) *dhānye* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *unnyoḥ* #29)
'kṝ' ity etasmād dhātor unnyor upapadayor ghañ pratyayo bhavati dhānyaviṣayaś ced dhātvartho bhavati
Affix *GHaÑ* occurs after verbal root *kṝ* 'to scatter' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *ud* and *ni* and the derivate denotes the name of a grain.

EXAMPLES:

> *utkāro dhānyasya* 'winnowing of grains'
> *nikāro dhānyasya* 'id.'

1. Note that '*unnyoḥ*' is carried here so that *utkāraḥ* and *nikāraḥ* can be derived with *ud* and *ni*. The word *dhānya* is used to qualify the meaning of the derivate. It should not be treated as denoting the sense of the base (*prakṛtyartha*), or affix (*pratyayārtha*). Since the scope of the derivate is recognized with *dhānya*, *kṝ* is interpreted as denoting *vikṣepa* 'to scatter', and not *hiṃsā* 'to harm'. Besides, a *GHaÑ*-derivate with *kṝ* denoting *hiṃsā* is not available in usage. Thus we get *utkāraḥ* 'winnowing' and *nikāraḥ* 'id.'. Elsewhere, we get *utkaraḥ* and *nikaraḥ* as in *bhaikṣyotkaraḥ* 'heap of alms' and *puṣpanikaraḥ* 'heap of flowers'.

3.3.31 यज्ञे समि स्तुवः

yajñe sami stuvaḥ
/*yajñe* 7/1 *sami* 7/1 *stuvaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *akartari ca kārake saṃjñāyām* #19)
yajñaviṣaye prayoge sampūrvāt stauter ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *ṣṭuÑ* 'to praise' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root is used with

the preverb *sam* and the derivate denotes a name relative to some ritual.

EXAMPLE:

saṃstāvaś chandogānām 'a place where, having been assembled, the chanters (*chandogāḥ*) chant the hymns of praise'

1. Note that *saṃstāvaḥ* denotes a place at a ritual where the *brāhmaṇa* jointly sit and chant the hymns (*sametya stuvanti yasmin deśe chandogāḥ sa deśaḥ 'saṃstāvaḥ'*...). Obviously, the place becomes a means by serving as the locus of chanting at the ritual (*adhikaraṇa-sādhanatva*). Elsewhere, in a non-ritual context, we will get *saṃstavah* as in *saṃstavaś chātrayoḥ* 'mutual praises of two students'.

3.3.32 प्रे स्त्रोऽयज्ञे

pre stro' yajñe
/*pre* 7/1 *straḥ* 5/1 *ayajñe* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akarttri ca kārake saṃjñāyām* #19)
'stṝñ ācchādane' asmād dhātoḥ praśabde upapade ghañ prtyayo bhavati, na ced yajñaviṣayaḥ prayogo bhavati
Affix *GHaÑ* occurs after verbal root *stṝÑ* 'to shade; cover' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *pra* and the derivate denotes a name not related to a ritual.

EXAMPLE:

śaṅkhaprastāraḥ 'a spread of conch shells'

1. Note that, in the context of *yajña*, the derivate will be *prastaraḥ* as in *barhiṣprastaraḥ* 'a bed of Kuśa grass'.

3.3.33 प्रथने वावशब्दे

prathane vāv aśabde
/*prathane* 7/1 *vau* 7/1 *aśabde* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akarttri ca kārake saṃjñāyām* #19, *straḥ* #32)
'stṝñ ācchādane' asmād dhātor viśabda upapade ghañ pratyayo bhavati prathane gamyamāne, tac cet prathanaṃ śabdaviṣayaṃ na bhavati
Affix *GHaÑ* occurs after verbal root *stṝÑ* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a *pada* which contains *vi* and the derivate denotes *prathana* 'spreading out, expanse' not related to *śabda* 'speech'.

EXAMPLE:

paṭasya vistāraḥ 'spreading of clothes'

1. This rule introduces *GHaÑ* under the meaning condition of 'expanse (length or width)' provided this meaning is not related to *śabda* 'speech'. Thus we get: *vistāraḥ* in *paṭasya vistāraḥ* 'the length of the cloth'. Consider *tṛṇavistaraḥ* 'a bundle of grass' and *vistaro vacasām* 'prolixity of words', where the first lacks the meaning of 'expanse', and the second relates to the 'expanse' of words.

3.3.34 छन्दोनाम्नि च

chandonāmni ca
/*chandonāmni* 7/1 *ca* Ø/
(*pratyayaḥ* #3.3.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *straḥ* #32, *vau* #33)
vipūrvāt stṛṇāteś chandonāmni ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *stṝÑ* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root is used with the preverb *vi* and the derivate denotes the name of a meter.

EXAMPLES:

viṣṭārapaṅktiḥ 'that in which the syllables are spread out; name of a Vedic meter'
viṣṭārabṛhatī 'id.'

1. This rule again introduces *GHaÑ* after verbal root *stṝÑ* used with the preverb *vi*, though under a different meaning condition. The word *chandonāmni* 'in denoting the name of a meter' forms this condition. The word *chandas* does not refer, here, to the *mantra* or *brāhmaṇa* literature. We understand this from the explicit use of the word *nāman* 'name'. Note, additionally, that the locative (*saptamī*) in *chandonāmni* denotes *adhikaraṇa* 'locus'. That is, the name of the meter is not the word which terminates in affix *GHaÑ*. Instead, the derivate in *GHaÑ* forms part of a larger unit which denotes the name of a meter. Thus, the larger structure becomes the locus (*avayavin* 'whole') for the part (*avayava*), as is *viṣṭārabṛhatī*, a compound, for *viṣṭāra*, a constituent terminated in *GHaÑ*.

3.3.35 उदि ग्रहः

udi grahaḥ
/*udi* 7/1 *grahaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)

udy upapade graher dhātor ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *grahA* 'to seize' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *ud*.

EXAMPLE:

udgrāhaḥ 'lifting up'

1. This, again, is an exception to affix *aP* of rule 3.3.58 *grahavṛdṛ.....*

3.3.36 **समि मुष्टौ**

sami muṣṭau
/sami 7/1 *muṣṭau* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *grahaḥ* #35)
samy upapade graher dhātor ghañ bhavati muṣṭiviṣayaś ced dhātvartho bhavati
Affix *GHaÑ* occurs after verbal root *grahA* 'to seize' used in conjunction with *sam* when the derivate denotes *bhāva* and a *kāraka* other than *kartṛ* relative to *muṣṭi* 'fist'.

EXAMPLES:

aho, mallasya saṃgrāhaḥ 'Wow! the look at the firmness of the grip of the wrestler'
aho, muṣṭikasya saṃgrāhaḥ 'id.'

1. Note that *muṣṭau* 'in the context of fist' refers to the action. The word 'fist' could refer to 'fistful of something' where the meaning will be *parimāṇa* 'measure'. It can also refer to a particular formation of fingers (*aṅgulīnāṃ racanāviśeṣaḥ*) as in *muṣṭinā hanti* '. . . killing him by punching'. We cannot accept 'measure' as the reference here because we already have its provision made under rule 3.3.20 *parimāṇākhyāyāṃ sarvebhyaḥ*. This rule, therefore, derives forms in the context of the second meaning: *aho mallasya saṃgrāhyaḥ*. Elsewhere, we will get: *saṃgraho dhānyasya* 'the collection of grains'.

3.3.37 **परिन्योर्नीणोर्द्यूताभ्रेषयोः**

parinyor nīṇor dyūtābhreṣayoḥ
/parinyoḥ 7/2 *nīṇoḥ* 6/2 *dyūtābhreṣayoḥ* 7/2/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
pariśabde niśabde copapade yathāsaṃkhyaṃ niya iṇaś ca dhātor ghañ pratyayo bhavati

Affix *GHaÑ* occurs after verbal roots *ṇīÑ* 'to lead' and *iṆ* 'to go' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the roots cooccur with a nominal *pada* which contains *pari* and *ni* respectively and their derivates denote *dyūta* 'gambling' and *abhreṣa* 'propriety' respectively.

EXAMPLES:

pariṇāyena śārān hanti 'he throws the dice after moving about'
eṣo' tra nyāyaḥ 'this is what is proper here'

1. This rule allows for *nī* used with *pari* to receive *GHaÑ* in the context of gambling, and for *iṆ* used with *ni* to receive *GHaÑ* in the context of conduct not contrary to the norm. Our rule thus assigns the conditions of cooccurrence and context in accordance with the order of enumeration (1.3.10 *yathāsaṃkhyam...*). Elsewhere, we find *pariṇayaḥ* 'wedding' and *nyayaḥ* 'destruction', both derivates of *aC*.

3.3.38 परावनुपात्यय इणः

parāv anupātyaya iṇaḥ
/*parau* 7/1 *anupātyaye* 7/1 *iṇaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
pariśabda upapade iṇo dhātor ghañ pratyayo bhavati, anupātyaye gamyamāne
Affix *GHaÑ* occurs after verbal root *iṆ* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *pari* and the derivate denotes *anupātyaya* 'succession, turn, order'.

EXAMPLES:

tava paryāyaḥ 'your turn'
mama paryāyaḥ 'my turn'

1. This rule introduces *GHaÑ* after verbal root *iṆ* when used in conjunction with *pari* provided the context is *anupātyaya* 'not transgressing order or succession'. In the absence of this context, the derivate will be *paryayaḥ* as in *kālasya paryayaḥ* 'lapse of time', again a derivate in *aC*.

3.3.39 व्युपयोः शेतेः पर्याये

vyupayoḥ śeteḥ paryāye
/*vyupayoḥ* 7/2 *śeteḥ* 5/1 *paryāye* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)

*'vi upa' ity etayor upapadayoḥ śeter dhātor ghañ bhavati, **paryāye** gamyamāne*

Affix *GHaÑ* occurs after verbal root *śīṄ* 'to recline' to denote ***bhāva***, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *vi* and *upa* and the derivate denotes *paryāya* 'order, turn'.

EXAMPLES:

tava viśāyaḥ 'your turn to sleep'
mama viśāyaḥ 'my turn to sleep'
tava rājopaśāyaḥ 'your turn to sleep near the king'

1. This rule introduces *GHaÑ* after verbal root *śīṄ* 'to recline, sleep' when it cooccurs with *vi* and *upa*, and the context is that of *paryāya* 'turn'. Why is *paryāya* to be stated explicitly when the previous rule uses *anupātyaya* in the same sense? That is, why not bring *anupātyaya* from the preceding rule via *anuvṛtti* instead of using *paryāye*? Commentators explain that the use of an additional form brings additional meaning to the application of the rule. It gives the rule the strength to block a rule which otherwise might block it (*bādhakabādhanārtha*). For example, when the context of *paryāya* entails *abhividhi* 'inclusive extent', this rule can be blocked by rule 3.3.44 *abhividhau bhāve inuṇ*. The use of *paryāye* indicates that *inuṆ* of 3.3.44 is blocked by the *GHaÑ* of this rule.

3.3.40 हस्तादाने चेरस्तेये

hastādāne cer asteye
/*hastādāne* 7/1 *ceḥ* 5/1 *asteye* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
hastādāne gamyamāne cinoter dhātor ghañ pratyayo bhavati, na cet steyaṃ bhavati

Affix *GHaÑ* occurs after verbal root *ciÑ* 'to heap' to denote ***bhāva***, and a *kāraka* other than *kartṛ* when the action involves use of hands, but does not entail stealing.

EXAMPLES:

puṣpapracāyaḥ 'picking the flowers (by hand)'
phalapracāyaḥ 'picking fruits (by hand)'

1. This rule introduces *GHaÑ* in the context of 'bringing something by means of hands; picking up, plucking' provided 'stealing' (*steya*) is not denoted. The word *hastādāna* denotes proximity with the object (*hastādānagrahaṇena pratyāsattir ādeyasya lakṣyate*). That is, where hands are enough to accomplish the action of bringing, and no other means are

expected to be employed. It is for this reason that *Kāśikā* offers a counter-example in *vṛkṣaśikhare phalapracayaṃ karoti* 'he is picking fruits from top of the tree (by means of a pole, etc.)'. Obviously, the fruits are not within easy reach of the hands of the person picking them.

3.3.41 **निवासचितिशरीरोपसमाधानेष्वादेश्च कः**

nivāsacitiśarīropasamādhāneṣv ādeś ca kaḥ
/nivāsa...dhāneṣu 7/3 *ādeḥ* 6/1 *ca* ∅ *kaḥ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ceḥ* #40)
'nivasanty asminn iti nivāsaḥ, cīyate' sau citiḥ, pāṇyādi samudāyaḥ śarīraṃ, rāśīkaraṇam upasamādhānam' eteṣv artheṣu cinoter ghañ pratyayo bhavati, dhātor ādeś ca kakāra ādeśaḥ
Affix *GHaÑ* occurs after verbal root *ciÑ* to denote *bhāva,* and a *kāraka* other than *kartṛ*, when the derivate denotes *nivāsa* 'dwelling', *citi* 'that which is gathered', *śarīra* 'body' or *upasamādhānā* 'heap, pile'; in addition, the initial *c* of the root is replaced by *k*.

EXAMPLES:

cikhallinikāyaḥ 'the dwellings of Cikhallis'
ākāyam agniṃ cinvīta 'one should arrange the funeral pyre the size of the body'
anityakāyaḥ 'the body which is impermanent'
mahāgomayanikāyaḥ 'a big pile of cow dung'

1. This rule allows for two operations: the introduction of affix *GHaÑ* when the derivate denotes *nivāsa, citi* , *śarīra* and *upasamādhāna*; and the replacement of the initial *c* of the root by *k*. Note that *upasamādhāna* denotes the action of piling up things which may be scattered around. Thus we get *mahāgomayanikāyaḥ* 'a big pile of cow dung made by picking it up from around the place'. It is for this reason that we get *cayaḥ* 'collection' as in *mahān kāṣṭhanicayaḥ* 'a huge bundle of firewood', where the meaning is *bahutva* 'multiplicity' as opposed to *upasamādhāna*.

3.3.42 **संघे चानौत्तराधर्ये**

saṃghe cānauttarādharye
/saṃghe 7/1 *ca* ∅ *anauttarādharye* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #19, *akartari ca kārake saṃjñāyām* #19, *ceḥ* #40, *ādeś ca kaḥ* #41)
saṃghe vācye cinoter dhātor ghañ pratyayo bhavati ādeś ca kaḥ
Affix *GHaÑ* occurs after verbal root *ciÑ* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the derivate denotes a *saṃgha*

'assembly of people', with no hierarchical arrangement; in addition, the initial *c* of the root is replaced by *k*.

EXAMPLES:

bhikṣukanikāyaḥ 'the assembly of beggars'
brāhmaṇinikāyaḥ 'the assembly of *brāhmaṇas*'
vaiyākaraṇanikāyaḥ 'the assembly of grammarians'

1. The word *saṃgha* has been explained as *prāṇinām samudāyaḥ* 'group of living beings'. As the *Kāśikā* states, people can be grouped on the basis of two things: either by subscribing to a common religious faith, or by being part of a relative hierarchy (*auttarādharya*). The *paryudāsa* negation in *anauttarādharye* limits the scope of this rule to the first kind of *saṃgha*. Thus, we get *vaiyākaraṇanikāyaḥ* 'association, school, or assembly of grammarians'. *Kāśikā* also offers two counter-examples: *sūkaranicayaḥ* 'drove of hogs' and *pramāṇasamuccayaḥ* 'the collection of proofs'. The first, however, could only qualify as a counter-example when the hogs are lying on their backs suckling at their mother's breasts. Elsewhere, in the state of being seated together, they could also qualify as a *saṃgha*. The second counter-example simply shows an assembly of non-living entities.

3.3.43 कर्मव्यतिहारे णच् स्त्रियाम्

karmavyatihāre ṇac striyām
/*karmavyatihāre* 7/1 *ṇac* 1/1 *striyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
karmavyatihāre gamyamāne dhātor ṇac pratyayo bhavati strīliṅge vācaye, tac ca bhāve
Affix *ṆaC* occurs after a verbal root to denote *bhāva* when the derivate ends in the feminine and denotes *karmavyatihāra* 'reciprocity of action'.

EXAMPLES:

vyāvakrośī 'reciprocal cursing or joking'
vyāvalekhī 'reciprocal writing'
vyāvahāsi varttate 'there is shared laughter...'

1. The word *karmavyatihāra* has been explained as 'reciprocity or exchange' of an action (*karman*). Obviously, the word *karman* does not refer to the *kāraka* termed *karman* (cf. 1.3.14 *kartari karmavyatihāre...* for additional details). The affix denotes *bhāva* and the derivate is to be feminine. Note that because of the dominance of action in 'reciprocity or exchange' that the denotatum of a *kāraka* other than *kartṛ* is simply not possible. It is

for this reason that '*akartari ca kārake*' is not read with the rule. The *C* as an *it*, in this affix, is intended to distinguish this affix from the others. Refer to rule 5.4.14 *ṇacaḥ striyām añ*, where affix *ṆaC* is used to qualify the base after which affix *aÑ* is introduced. The *C*, thus, is not intended for the final high-pitch (*antodātta*).

A question is raised as to why this rule should be formulated separately from the domain of 3.3.94 *striyāṃ ktin*. For it would seem to be more logical to place this rule there. It is stated that this rule is placed outside the domain of 3.3.94 *striyāṃ ktin* in order to block what otherwise might have blocked (*bādhakabādhanārtha*) this rule. Thus, in the domain of rule 3.3.94 *striyāṃ ktin*, an exception obligatorily blocks its related general rule. If our present rule were placed in the domain of 3.3.94, rules which could block 3.3.94 could also block it. Pāṇini, by placing this rule outside of the domain of 3.3.94, takes it outside the reach of blocking by those rules.

Consider for example *vyāvacorī* and *vyāvacarcā* where the first contains verbal root *cur* 'to steal' and the second contains *carc* 'to study'. The first would have qualified for affix *vuC* of rule 3.3.107 *ṇyāsaśrantho yuc* on account of its treatment as ending in *ṆiC*. The second would have similarly qualified for affix *aṄ* by rule 3.3.105 *cintipūjikathi...* The resultant forms would have been: *coraṇā* 'stealing' and *carcā* or *carcanā* 'studying'. This would have blocked the derivation of *vyāvacorī* and *vyāvacarcā* by yielding **vyāvacoraṇā* and **vyāvacarcanā* as parallel forms. Placing rule 3.3.43 *karmavyatihāre...* outside of 3.3.94 *striyāṃ ktin* makes the derivation of desired forms possible. Note that there are instances where affix *ṆaC*, though technically given, does not apply. Consider *vyatīkṣā* and *vyatīhā* 'reciprocal wish; and reciprocal effort', where affix *a* (3.3.103 *gusoś ca halaḥ*), and not *ṆaC*, is employed. But now consider *vyātyukṣī* 'throwing water at each other' where, even though the scope approves affix *a*, *ṆaC* applies. How do we get these mutually opposite applications? Consider rule 3.3.113 *kṛtyaluṭo bahulam*, especially the ramification of the term '*bahulam*'.

3.3.44 अभिविधौ भाव इनुण्

abhividhau bhāva inuṇ
/abhividhau 7/1 *bhāve* 7/1 *inuṇ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
abhividhau gamyamāne dhātor bhāve inuṇ pratyayo bhavati
Affix *inUṆ* occurs after a verbal root to denote *bhāva* when the derivate denotes *abhividhi* 'extent, limit'.

EXAMPLES:

sāṅkūṭinam 'burning all around'

sāmrāviṇam 'noise all around'
sāndrāviṇaṃ varttate 'water is flowing all around'

1. This rule introduces affix *inUṆ* to denote *bhāva* 'root-sense' when the derivate denotes *abhividhi* 'all pervasiveness'. The word *abhividhi* has been aptly explained by *Kāśikā* as 'total connection with action and quality' (*kriyāguṇābhyām kārtsyena sambandhaḥ*). Thus, we get *sāṃkūṭinam* 'burning all-around' and *sāṃrāviṇam* 'noise all-around' implying that the action of 'burning' and 'sounding' are all pervasive. The *u* of *inUṆ* is used to facilitate pronunciation (*uccāraṇārtha*).

Note that derivates which end in *inUṆ* further receive affix *aṆ* by rule 5.1.15 *aṇ inuṇaḥ* to denote the sense of their bases (*svārtha*). The introduction of *aṆ* takes place under the condition of the base qualified (*viśiṣṭa*) with *sam*, where *sam* is termed *gati* (1.4.60 *gatiś ca*).

A question is raised in the *Mahābhāṣya* against the explicit use of *bhāve*, especially when it could have been understood from 3.3.18 *bhāve*. Besides, the derivates, here, can only denote *bhāva*. The context would not permit the denotation of a *kāraka*. So why explicitly state *bhāve* when it is obvious? The explicit use of *bhāve* is made to block the application of *va' sarūpavidhi*, i.e., optional blocking of a general rule by its formally dissimilar exception. For example, rule 3.3.18 *bhāve* introduces affix *GHaÑ* in relation to which *inuṆ*, of our present rule, is a formally dissimilar exception. If *vā' sarūpa* finds its scope here, *inuṆ* can only optionally block the application of *GHaÑ*. The explicit mention of *bhāve* indicates that the blocking is obligatory. Similarly, affix *Kta* of 3.3.114 *napuṃsake bhāve ktaḥ*, used with affix *inUṆ*, is also ruled out based upon the explicit mention of *bhāve* in this rule.

The derivates of *inUṆ* are neuter by nature (*svabhāvataḥ*). A non-inclusion of *GHaÑ* or *Kta* amounts to the general non-inclusion of any other affix in this context of *inUṆ*. This position is correct, though the inclusion of affix *LyuṬ* in the context of *inUṆ* is desired, since we find examples such as *saṃkūṭanam*. How would one account for this? Recourse must now be taken to the '*bahulam*' of 3.3.113 *kṛtyalyuṭo bahulam*.

3.3.45 **आक्रोशेऽवन्योर्ग्रहः**

ākrośe' vanyor grahaḥ
/ākrośe 7/1 *avanyoḥ* 7/2 *grahaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
'ava, ni' ity etayor upapadayor graher dhātor ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *grahA* 'to seize' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *ava* and *ni* and the derivate denotes *ākrośa* 'scolding, cursing'.

EXAMPLES:

> *avagrāho hanta te vṛṣala bhūyāt* 'may you land in misery, oh, *vṛṣala*'
> *nigrāho hanta te vṛṣala bhūyāt* 'may you land in jail, oh, *vṛṣala*'

1. This rule introduces affix *GHaÑ* after verbal root *grah* 'to hold, grab' when the rule cooccurs with '*ava*' and '*ni*' and the derivate denotes *ākrośa* 'anger, cursing'. A question is raised as to why *inUṆ*, which is most immediately associated with this context, cannot be accepted as carried in place of *GHaÑ*. Commentators explain that affix *GHaÑ* is treated as carried, here, since it can be more logically related to the context. Some say that what is carried is normally marked with the *svarita* accent. Affix *GHaÑ* is carried, since it is marked with *svarita*, for purposes of *anuvṛtti*. Affix *inUṆ* cannot be accepted as carried because of the lack of its *svarita* mark.

The word *ākrośaḥ* has been explained as *śapanam* 'cursing'. Haradatta (*PM*:III:45) explains *śapanam* as *aniṣṭāśaṃsanam* 'hoping for something undesired to happen'. Consequently, our two examples, *avagrāhaḥ* and *nigrāhaḥ*, are explained as *abhibhavaḥ* 'downfall' and *nirodhaḥ* 'incarceration'. Elsewhere, we will find derivates such as *avagrahaḥ* 'splitting' and *nigrahaḥ* 'restraint', both derived with affix *aP*(cf. 3.3.58 *grāhavṛdṛ*...).

3.3.46 प्रे लिप्सायाम्

> *pre lipsāyām*
> /*pre* 7/1 *lipsāyām* 7/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *grahaḥ* #45)
> *praśabda upapade graher dhātor ghañ pratyayo bhavati*
> Affix *GHaÑ* occurs after verbal root *grahA* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *pra* and the derivate denotes *lipsā* 'desire to obtain; greed'.

EXAMPLES:

> *pātrapragrāheṇa carati bhikṣuḥ piṇḍārthī* 'the beggar desirous of rice-balls wanders about carrying a bowl'
> *sruvapragrāheṇa carati dvijo dakṣiṇārthī* 'a *brāhmaṇa* desirous of receiving a monetary gift at the ritual wanders about carrying a ritual ladle'

1. This rule is an exception to rule 3.3.58 *grahavidṛ*... which assigns affix *aP*. The *pātra* in *pātragrāha* as well as the *sruvā* 'ritual ladle' in *sruva-pragrāha*, serve as characteristic marks for the *bhikṣu* and the *dvija*. Thus, *pātrapragrāheṇa carati bhikṣuḥ piṇḍārthī* and *sruvapragrāheṇa carati dvijo*

dakṣiṇārthī. We get *pragrahaḥ*, as in *pragraho devadattasya* 'the arrogance of Devadatta', if the condition of *lipsā* is not met.

3.3.47 **परौ यज्ञे**

parau yajñe
/*parau* 7/1 *yajñe* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *grahaḥ* #45)
pariśabda upapade graher ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *grahA* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *pari* and the derivate is related to ritual sacrifice (*yajña*).

EXAMPLES:

uttaraparigrāhaḥ 'northern side of the fire altar at the ritual sacrifice named *darśapaurṇamāsa*'
adharaparigrāhaḥ 'southern side of the fire altar at the ritual sacrifice named *darśapaurṇamāsa*'

1. Note that *parigrāhaḥ* refers to *svīkaraṇa* 'determination' of the sacrificial altar (*vedideśa*) by means of *sphya* 'a sword-shaped piece of wood'. This rule forms an exception to *aP* in the context of *yajña* 'ritual sacrifice'. Elsewhere, the derivate will be *parigrahaḥ* as in *parigraho devadattasya* 'Devadatta's firm resolve'.

3.3.48 **नौ वृ धान्ये**

nau vṛ dhānye
/*nau* 7/1 *vṛ* (deleted 5/1) *dhānye* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akarttri ca kārake saṃjñāyām* #19)
niśabde upapade 'vṛ' ity etasmād dhātor dhānyaviśeṣe' bhidheye ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal root *vṛ* (*vṛṄ* 'to cover'; *vṛÑ* 'to chose, select') to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *ni* and the derivate denotes *dhānya* 'grains'.

EXAMPLE:

nīvārā nāma vrīhayo bhavanti '*nīvāra* are, wild rice'

1. This rule introduces *GHaÑ* in the context of *dhānya* 'grains'. This again is an exception to *aP* (cf. 3.3.57 *ṛdor ap*). The reference by *vṛ* is intended to be made to both *vṛṄ* and *vṛÑ* 'to cover'. Note that this rule specifies

the semantic scope of its derivates as *dhānya* 'grain' in general. But the example illustrates '*dhānya*' in particular. Thus, *nīvāra* refers to a particular kind of rice. *Kāśikā* states that the semantic context is indeed grains in particular (*dhānyaviśeṣa*)

A derivate outside the semantic scope of *dhānya* will be *nivarā* as in *nivarā kanyā* 'a girl of distinction; an unmarried girl'.

3.3.49 **उदि श्रयतियौतिपूद्रुवः**

udi śrayatiyautipūdruvaḥ
/*udi* 7/1 *śrayatiyautipūdruvaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
ucchabda upapade śrayatyādibhyo ghañ pratyayo bhavati
Affix *GHaÑ* occurs after verbal roots *śri* 'to go, resort to', *yu* 'to mix', *pū* 'to cleanse' and *dru* 'to go, melt' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the roots cooccur with a nominal *pada* which contains *ud*.

EXAMPLES:

ucchrāyaḥ 'flight'
udyāvaḥ 'mixing'
utpāvaḥ 'purification (of sacrificial utensils)'
uddrāvaḥ 'flight'

1. This rule is an exception to *aP* of 3.3.57 *ṛdor ap*, and to *aC* of 3.3.56 *er ac* in the case of *śri*.

2. How would one explain the derivation of *samucchrayaḥ* as used in the *Vālmīkīya-rāmāyaṇam*: *patanāntā samucchrayāḥ* 'the rise (of evil) to the top ends in the downfall'. This can be treated as optionally derived with *aC* in view of '*vibhāṣā*' carried from the following rule. How can '*vibhāṣā*' be brought in this reverse fashion of *anuvṛtti*? It will be in consonance with the maxim (*nyāya*) known as *siṃhāvalokita* 'the glancing back of the lion'. This option (*vibhāṣā*) has then to be interpreted as *vyavasthita-vibhāṣā* 'fixed-option' so that it does not become applicable in other cases. If this 'lion-like glancing back of *vibhāṣā*' of the fixed type is not acceptable, one can always invoke 3.3.113 *kṛtyalyuṭo bahulam*.

3.3.50 **विभाषाऽऽङि रुप्लुवोः**

vibhāṣā" ṅi rupluvoḥ
/*vibhāṣā* 1/1 *āṅi* 7/1 *rupluvoḥ* 6/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
āṅy upapade rauteḥ plavateś ca vibhāṣā ghañ pratyayo bhavati

Affix *GHaÑ* optionally occurs after verbal roots *ru* 'to cry' and *plu* 'to float' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the roots cooccur with a nominal *pada* which contains *āṄ*.

EXAMPLES:

ārāvaḥ 'noise; howling'
āravaḥ 'id.'
āplāvaḥ 'bathing; flooding'
āplavaḥ 'id.'

1. This rule introduces affix *GHaÑ* optionally to affix *aP* of 3.3.57 *ṛdor ap* when verbal roots *ru* 'to roar' and *plu* 'to float' cooccur with *āṄ*, and when the derivate denotes *bhāva* and a *kāraka* other than *kartṛ*. Thus we get *ārāvaḥ* 'roaring noise' and *āplāvaḥ* 'big splash; bathing' parallel to *āravaḥ* and *āplavaḥ*. Note that *GHaÑ* is made optional in contrast to the obligatory *GHaÑ* made available by rule 3.3.22 *upasarge ruvaḥ*.

3.3.51 **अवे ग्रहो वर्षप्रतिबन्धे**

ave graho varṣapratibandhe
/*ave* 7/1 *grahaḥ* 5/1 *varṣapratibandhe* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *vibhāṣā* #50)
'ava' upapade graher dhātor ghañ pratyayo bhavati vibhāṣā varṣapratibandhe' bhidheye
Affix *GHaÑ* optionally occurs after verbal root *grahA* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *ava* and the derivate denotes *varṣapratibandha* 'lack of rain in season'.

EXAMPLES:

avagrāho devasya 'absence of rain; drought'
avagraho devasya 'id.'

1. Note that *varṣapratibandha* is explained as 'absence of rain, for some reason or the other, even when the time for it has approached' (*prāptakālasya varṣasya kutaścin nimittād abhāvaḥ*). Thus we get: *avagrāho devasya*/*avagraho devasya* 'god's holding back of the rains'. Note that 'for some reason or the other' may refer to 'sinful deeds of the people of the area'.

3.3.52 **प्रे वणिजाम्**

pre vaṇijām
/*pre* 7/ *vaṇijām* 6/3/

(*pratyayaḥ* # 3.1.1, *paraś ca* # 3.1.2, *dhātoḥ* # 3.1.91, *ghañ* # 16, *bhāve* # 18, *akartari ca kārake saṃjñāyām* #19, *vibhāṣā* #50, *grahaḥ* #51)
praśabda upapade graher dhātor vibhāsā ghañ pratyayo bhavati
Affix *GHaÑ* optionally occurs after verbal root *grahA* to denote *bhāva,* and a *kāraka* other than *kartṛ,* when the root cooccurs with a nominal *pada* which contains *pra* and the derivate signifies relation to a *vaṇik* 'merchant, trader'.

EXAMPLES:

tulāpragrāheṇa carati vaṇik 'the merchant travelling about with a scale'
tulāpragraheṇa carati vaṇik 'id.'

1. This rule introduces affix *GHaÑ* optionally to *aP* of 3.3.58 *grahavṛdṛ...* when verbal root *grah* cooccurs with *pra* and the derivate denotes something relative to *vaṇik.* Of course, the affix will be introduced with the denotatum of *bhāva* and a *kāraka* other than *kartṛ.* Thus we get, *tulāpragrāheṇa carati* or *tulāpragraheṇa carati* 'the trader is wandering holding the strings of the scale'. Note that the trader is not central to the meaning of the derivate. It is the 'holding of the weighing scale by its insert strings' which is in focus. The meaning, though, is characterized by the association of the trader. If this association is lacking, one would find examples such as *pragrahaḥ* as in *pragraho devadattasya* 'Devadatta's grip..'.

3.3.53 रश्मौ च

raśmau ca
/*raśmau* 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *vibhāṣā* #50, *grahaḥ* #51, *pre* #52)
praśabda upapade graher dhātor vibhāṣā ghañ pratyayo bhavati raśmiś cet pratyayāntenābhidhīyate
Affix *GHaÑ*, also, optionally occurs after verbal root *grahA* to denote *bhāva,* and a *kāraka* other than *kartṛ,* when the root cooccurs with a nominal *pada* which contains *pra* and the derivate denotes *raśmi* 'rein'.

EXAMPLES:

pragrahaḥ 'that by means of which animals are tethered; rein'
pragrāhaḥ 'id.'

1. Note that although the word *raśmi* has a rather general scope of meaning, given the nature of the derivates, it is interpreted in the sense of *rajju* 'rope, string', used for restraining purposes.

3.3.54 वृणोतेराच्छादने

vṛṇoter ācchādane
/*vṛṇoteḥ* 5/1 *ācchādane* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *vibhāṣā* #50, *pre* #52)
praśabda upapade vṛṇoter dhātor vibhāṣā ghañ pratyayo bhavati pratyayāntena ced ācchādanaviśeṣa ucyate
Affix *GHaÑ* optionally occurs after verbal root *vṛÑ* 'to cover' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *pra* and the derivate denotes *ācchādana* 'covering; attire'.

EXAMPLES:

prāvāraḥ 'cloak; shawl'
pravaraḥ 'id.'

1. This rule extends the option to verbal root *vṛÑ* 'to cover' in the context of the derivational meaning of *ācchādana* 'covering'. Here again the scope of 'covering' is wider, though the usage is restricted to a particular kind of covering, such as a 'cloak'. This rule is optional to 3.3.58 *grahavṛdṛ...* which introduces affix *aP*. Note that *vṛ*, unlike rule 3.3.48 *nau vṛ dhānye*, excludes any reference to *vṛṄ*. In fact, Pāṇini refers to this root, here, with the augment *Śnu* simply to cancel the reference to *vṛṄ*. Outside the meaning of 'covering', we get *pravarā* as in *pravarā gauḥ* 'an excellent cow'.

3.3.55 परौ भुवोऽवज्ञाने

parau bhuvo' vajñāne
/*parau* 7/1 *bhuvaḥ* 5/1 *avajñāne* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *vibhāṣā* #50)
pariśabda upapade bhavater dhātor ghañ pratyayo bhavati avajñāne gamyamāne
Affix *GHaÑ* optionally occurs after verbal root *bhū* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *pari* and the derivate denotes *avajñāna* 'disrespect, insult'.

EXAMPLES:

paribhāvaḥ 'disrespect'
paribhavaḥ 'id.'

1. Note that '*vibhāṣā*' is carried, and the derivate meaning is characterized with *avajñāna* glossed as *asatkāra* 'insult, neglect'. Elsewhere, *paribhava* would mean *sarvato bhavanam* 'existing all around; surrounding'.

3.3.56 एरच्

er ac
leḥ 5/1 *ac* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
ivarṇāntād dhātor bhāve akartari ca kārake saṃjñāyām ac pratyayo bhavati
Affix *aC* occurs after a verbal root which ends in *i* when the derivate denotes *bhāva* and a *kāraka* other than *kartṛ*.

EXAMPLES:

cayaḥ 'arranging, picking; heap'
ayaḥ 'going, knowledge'
jayaḥ 'winning; victory'
kṣayaḥ 'wasting away; waste'

1. This rule introduces affix *aC* after a verbal root which ends in *i*, and when *bhāva* and a *kāraka* other than *kartṛ* is denoted. This is an exception to *GHaÑ*. The *C* as an it is intended to distinguish affix *aC* (*viśeṣaṇārtha*) from, for example, affix *aP* in rule 6.2.144 *thāthaghañ...*

2. A *vārttika* proposes that *bhaya* 'fear', etc., should be enumerated as derived from verbal root *bhī* 'to fear', etc., by introduction of affix *aC*. This accounts for examples such as *bhayam* and *varṣam* 'rain'. The *vārttika* is necessary so that affix *Kta*, etc., can be blocked in the context of these neuter forms.

Yet another *vārttika* proposes that, in the Vedic, *javaḥ* and *savaḥ* are to be derived by affix *aC* introduced after verbal root *ju*, a root attested by the *Aṣṭādhyāyī* (*sautra*) though unavailable elsewhere, and verbal root *ṣuÑ* 'to press out'. This *vārttika* proposal is made against affix *aP* of the following rule which would otherwise be applicable. Note, in connection with this, that derivates of *aC* or *aP* would not differ in form. They would, however, differ in accent. Thus, the derivate of *aP* will get the initial high-pitch (*ādyudātta*) as against the final high-pitch (*antodātta*) of the derivate of *aC*.

3.3.57 ऋदोरप्

ṝdor ap
ṝdoḥ 5/1 *ap* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghañ* #16, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
ṝkārāntebhya uvarṇāntebhyaś ca ap pratyayo bhavati
Affix *aP* occurs after verbal roots which end in *ṝ* or *u* when the derivate denotes *bhāva*, and a *kāraka* other than *kartṛ*.

EXAMPLES:

karaḥ 'scattering'
garaḥ 'poison'
śaraḥ 'arrow'
yavaḥ 'barley'
stavaḥ 'praise'
lavaḥ 'harvesting'
pavaḥ 'winnowing'

1. This again is an exception to *GHaÑ*. The *P* as an *it* in *aP* is intended to secure the low-pitch (*anudātta*) as per rule 3.1.4 *anudāttau supptitau.* Note that the form *ṝd* followed by *uḥ* to yield the constituent word *ṝduḥ,* which occurs in the ablative as *ṝdoḥ,* has some interesting perspectives. First of all, its *-d* is actually *t,* thereby making the reference by *ṝt* of *ṝduḥ* subject to interpretation of rule 1.1.70 *taparas tatkālasya.* Thus, *ṝ,* here, refers only to roots which end in long *-ṝ.* Secondly, since *u* refers to roots which end in *u* both short or long, and is not constrained, we understand that *taparakaraṇa* (see my note under 1.1.70) does not carry the interpretation: *tād api paras taparaḥ* '*tapara* is also that which occurs after '*t*'. Thirdly, the *-t* of *taparakaraṇa* is given as *-d* for ease of articulation (*mukhasukhārtha*). Fourthly, the *dvandva* compound of the *samāhāra* type in *ṝduḥ* is given in the masculine at the authority of this *sūtra* itself. Finally, *ṝdoḥ* is genitive, and not the *pañcamī* 'ablative', which is what would be required of an item that constitutes the left context for the introduction of an affix. Here, the genitive is used in the sense of ablative (*pañcamyarthe ṣaṣṭhī*).

3.3.58 ग्रहवृदृनिश्चिगमश्च

grahavṛdṛniścigamaś ca
/*grah...gamaḥ* 5/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
grahādibhyo dhātubhyo' p pratyayo bhavati
Affix *aP* occurs after verbal roots *grahA*, *vṛ* 'to choose, cover', *dṛ* 'to respect', *ciÑ* used with the preverb *nis,* and *gam,* when the derivate denotes *bhāva,* and a *kāraka* other than *kartṛ.*

EXAMPLES:

grahaḥ 'a planet',
daraḥ 'splitting, caving in; fear'
varaḥ 'bopn, blessing'
niścayaḥ 'resolve'
gamaḥ 'trip, march'

1. This rule introduces affix *aP*, as an exception to *GHaÑ*, after verbal roots *grah*, *vṛ* (*vṛṄ* as well *vṛÑ*), *dṛ* 'to respect' and *gam*. Affix *aP* is introduced as an exception to *aC* in case of verbal root *ci* used with *nir* or *nis*. Of course, in this case, the forms will be similar though the accent will differ. Note that verbal root *vṛ* refers to both *vṛṄ* and *vṛÑ* as preverb *nis* could be interpreted as referring to both *nir* and *nis*. The *nir* reference may create problems. It is therefore safer to accept *nis*. The derivate of *niści* with *aP* constitutes an exception to the accentuation of 6.2.144 *thāthaghañaktāj...* The accent in *niścayaḥ* is, thus, high-pitch in the middle (*madhyodātta*) as opposed to the *antodātta* 'final high-pitch' in case of *aC*. A middle high-pitch has the designation *kṛt* as its basis.

2. A *vārttika* proposes the inclusion, also, of *vaśaḥ* 'obedient' and *raṇaḥ* 'battle' in the list of *aC*-derivates. Yet another *vārttika* proposes the introduction of affix *Ka* in the sense of the denotatum of *GHaÑ* after verbal roots *sthā* 'to stand', *snā* 'to bathe', *pā* 'to drink', *vyadh* 'to torment' and *han* 'to kill'. This is to account for examples such as: *prasthaḥ* 'mountain top', *prasnaḥ* 'a kettledrum to store water for bathing', *prapā* 'roadside stalls where travellers are offered drinking water', *āvidhaḥ* 'an instrument for piercing', *vighnaḥ* 'obstacle' and *āyudham* 'weapon; instrument for fighting'.

3.3.59 उपसर्गेऽदः

upasarge' daḥ
/*upasrge* 7/1 *adaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
upasarga upapade ader dhātor ap pratyayo bhavati
Affix *aP* occurs after verbal root *adA* 'to consume' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains a preverb.

EXAMPLES:

vighasaḥ 'half-chewed morsel'
praghasaḥ 'a glutton'

1. Affix *aP* is also to be treated as an exception to *GHaÑ* in this as well as the subsequent rule. Note that *ad* is replaced with *ghasḶ* by rule 2.4.38 *ghañapoś ca*. A question is asked as to why Pāṇini did not introduce the affix after *ghasḶ*? That way, he could have eliminated one (replacement) operation. True. But it would create problems elsewhere. For example, rule 3.3.60 *nau ṇa ca* would then also introduce *Ṇa* after *ghasḶ*. Refer to *ṇyādaḥ* under the following rule. The word *ghāsaḥ* 'grass; that which is consumed' is given as a counter-example, where *ad* is used without a preverb.

3.3.60 नौ ण च

nau ṇa ca
/*nau* 7/1 *ṇa* (deleted 1/1) *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *adaḥ*)
niśabda upapade ader dhātor ṇaḥ pratyayo bhavati, cakārād ap ca
Affix *Ṇa*, as well as *aP*, occurs after verbal root *adA* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *ni*.

EXAMPLES:

nyādaḥ 'eating'
nighasaḥ 'id.'

1. This rule allows the introduction of both affixes *Ṇa* and *aP* when *ad* cooccurs with *ni*. Verbal root *ad* could not be replaced with *ghasḶ* in the first example.

3.3.61 व्यधजपोरनुपसर्गे

vyadhajapor anupasarge
/*vyadhajapoḥ* 6/2 *anupasarge* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
'vyadha, japa' ity etayor anupasargayor ap pratyayo bhavati
Affix *aP* occurs after verbal roots *vyadhA* 'to pierce' and *japA* 'to mutter' when the roots are not used with a preverb, and when the derivate denotes *bhāva* and a *kāraka* other than *kartṛ*.

EXAMPLES:

vyadhaḥ 'wound'
japaḥ 'muttering'

1. This rule introduces affix *aP* as an exception to *GHaÑ* when verbal roots *vyadh* and *jap* are not used with a preverb. For, with preverbs we would get derivates such as *āvyādhā* 'piercing' and *upajāpā* 'revealing a secret', derivates of *GHaÑ* ending in the feminine affix *ṬāP*. Note that the *ṣaṣṭhī* 'genitive' in *vyajapoḥ* is used in the sense of *pañcamī* 'ablative'. The negation in *anupasarge* is *prasajya* whereby we get the interpretation that the affix is introduced only when the verbal roots are used alone (*kevalābhyāṃ bhavati*). Haradatta (*PM* ad *Kāś.* III: 53) advises that the *vṛtti* of this rule is to be similarly interpreted. That is, what is negated is the use of the verbs with preverbs. The cooccurring words are also ruled out since they are not specified.

3.3.62 स्वनहसोर्वा

svanahasor vā
/*svanahasoḥ* 6/2 *vā* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *anupasarge* #61)
svanahasor anupasargayor vā ap pratyayo bhavati
Affix *aP* optionally occurs after verbal roots *svanA* 'to sound' and *has* 'to laugh' when the roots are not used with a preverb and the derivate denotes *bhāva*, and a *kāraka* other than *kartṛ*.

EXAMPLES:

svanaḥ 'sound, noise'
svānaḥ 'id.'
hasaḥ 'laughter'
hāsaḥ 'id.'

1. Note that *anupasarge* is still carried. Here, again, we find *ṣaṣṭhī* in the sense of *pañcamī*. Thus, *svanaḥ ca hasaḥ ca, tayoḥ = svanahasoḥ*. The rule makes an optional provision for *aP* against *GHaÑ* (3.3.18 *bhāve*). In connection with the preverbs, affix *GHaÑ* alone is to be introduced. Thus, we get: *prahāsaḥ* 'wild laughter'. Rule 7.2.116 *ata upadhāyāḥ* orders *vṛddhi* in case of derivates of *GHaÑ*.

3.3.63 यमः समुपनिविषु च

yamaḥ samupaniviṣu ca
/*yamaḥ* 5/1 *samupaniviṣu* 7/3 *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *anupasarge* #61, *vā* #62)
'sam, up, ni, vi' ity eteṣūpapadeṣu anupasarge' pi yamer vā ap pratyayo bhavati
Affix *aP* optionally occurs after verbal root *yamA* 'to reach, give' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root is used with or without a preverb, or cooccurs with or without a nominal *pada* which contains *sam*, *up*, *ni* and *vi*.

EXAMPLES:

saṃyamaḥ 'restraint'
saṃyāmaḥ 'id.'
upayamaḥ 'marriage'
upayāmaḥ 'id.'
niyamaḥ 'restrictive rule'
niyāmaḥ 'id.'
viyamaḥ 'curb; distress'

viyāmaḥ 'id.'
yamaḥ 'restraint, discipline'
yāmaḥ 'id.'

1. Note that *anupasarge* and *vā* are still carried. This means there will be two derivational possibilities in case of *aP*: one when verbal root *yam* cooccurs with *sam, up, ni, vi,* and the other when it is used alone. Thus we get five forms: *saṃyamaḥ, upayamaḥ, niyamaḥ, viyamaḥ,* and *yamaḥ*. Since affix *aP* is optionally introduced with *GHaÑ*, we will also get five parallel derivates in *GHaÑ*. Thus, *saṃyāmah, upayāmaḥ, niyāmaḥ, viyāmaḥ,* and *yāmaḥ*. The derivation of *yamaḥ* and *yāmaḥ*, without any preverb, is made possible because of the particle *ca* which brings *'anupasarge'* close to the context of this rule.

3.3.64 **नौ गदनदपठस्वनः**

nau gadanadapaṭhasvanaḥ
/*nau* 7/1 *gadanadapaṭhasvanaḥ* 5/1 *(sam. dv.)*/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, bhāve #18, akartari ca kārake saṃjñāyām #19, ap #57, vā #62)
niśabda upapade 'gada, nada, paṭha, svana' ity etebhyo dhātubhyo vā ap pratyayo bhavati
Affix *aP* optionally occurs after verbal roots *gadA* 'to speak', *nadA* 'to sound', *paṭhA* 'to read, recite' and *svanA* 'to sound', to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the roots cooccur with or without a nominal *pada* which contains *ni*.

EXAMPLES:

nigadaḥ 'a lecture'
nigādaḥ 'id.'
ninadaḥ 'noise'
ninādaḥ 'id.'
nipaṭhaḥ 'reading, reciting'
nipāṭhaḥ 'id.'
nisvanaḥ 'noise'
nisvānaḥ 'id.'

1. The use of *ni* cancels the use of any other preverb in this context. Consequently, we get eight forms in two sets of four each for *aP* and *GHaÑ*.

3.3.65 **क्वणो वीणायां च**

kvaṇo vīṇāyāṃ ca
/*kvaṇoḥ* 5/1 *vīṇāyām* 7/1 *ca* Ø/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *anupasarge* #61, *vā* #62, *nau* #64)
kvaṇater dhātor nipūrvād anupasrgāc ca vīṇāyāṃ vā ap pratyayo bhavati
Affix *aP* optionally occurs after verbal root *kvaṇA* 'to jingle', whether it is used with *ni*, or no preverb at all, when *bhāva*, and a *kāraka* other than *kartṛ*, is denoted; or when the derivate relates to *vīṇā* 'a stringed musical instrument'.

EXAMPLES:

nikvaṇaḥ 'sound; tone'
nikvāṇaḥ 'id.'
kvaṇaḥ 'id.'
kvāṇaḥ 'id.'
kalyāṇakvaṇā vīṇā 'the sound of a *vīṇā* which is soothing'

1. Note that *nau*, *vā*, and *anupasarge* are carried here. This means that verbal root *kvaṇ* will receive the affix when it cooccurs with *ni*. It will also receive the affix when it is used without a preverb. Of course, the affix will be *aP* optionally introduced with *GHaÑ*. Thus we get *kvaṇaḥ*, *nikvaṇaḥ* as a derivate for *aP* as opposed to *kvāṇaḥ* and *nikvāṇaḥ* which are examples of *GHaÑ*. The *Amarakośa* considers these all synonymous.

2. This rule also makes an optional provision for affixes *aP* and *GHaÑ* in the context of *vīṇā*. Since a general provision for such affixation is already made in the context of *ni*, the additional provision made with '*vīṇāyām*' must relate to contexts other than *ni*. This, then, accounts for examples such as: *kālyaṇaprakvaṇā vīṇā* / *kalyāṇaprakvāṇā vīṇā* 'a beautiful sounding Vīṇā'.

3.3.66 **नित्यं पणः परिमाणे**

nityaṃ paṇaḥ parimāṇe
/*nityam* 0 *paṇaḥ* 5/1 *parimāṇe* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
'*paṇa vyavahāre stutau ca*' *asmād dhātor nityam ap pratyayo bhavati parimāṇe gamyamāne*
Affix *aP* obligatorily occurs after verbal root *paṇA* 'to barter; praise' when *bhāva*, and a *kāraka* other than *kartṛ* is denoted, and the derivate signifies *parimāṇa* 'a measure of weight'.

EXAMPLES:

mūlakapaṇaḥ 'a specific measure of radish for sale'
śākapaṇaḥ 'a specific measure of leafy vegetables for sale'

1. This rule provides for the obligatory introduction of affix *aP* after verbal root *paṇA* 'to barter, praise' when a measured quantity (*parimāṇa*) is denoted. Thus we get: *mūlakapaṇaḥ* and *śākapaṇaḥ*. A counter-example in *pāṇaḥ* 'barter' is offered in case the meaning of 'measured quantity' (*parimāṇa*) is not denoted.

Needless to say, the word *nitya* 'obligatorily' is used, here, to cancel *vā* 'optionally'

3.3.67 मदोऽनुपसर्गे

mado' nupasarge
/*madaḥ* 5/1 *anupasarge* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
mader dhātor anupasargād ap pratyayo bhavati
Affix *aP* occurs after verbal root *madA* 'to be excited; intoxicated' when it is used without a preverb and the derivate denotes *bhāva* and a *kāraka* other than *kartṛ*.

EXAMPLES:

vidyāmadaḥ 'arrogant pride of knowledge'
dhanamadaḥ 'pride of money'

1. This *aP* is an exception to *GHaÑ* in the context of verbal root *mad* when used without a preverb. Thus we get *vidyāmadaḥ*, where the compound is allowed by rule 2.1.32 *kartṛkaraṇe kṛtā bahulam*. A proposal is discussed with reference to the order and formulation of rules 3.3.66, 3.3.67 and 3.3.68. That is: why not formulate the next rule as *nityaṃ madaḥ pramadasammadau harṣe paṇaḥ parimāṇe* and place it after 3.3.65 *kvaṇo....* This way, *anupasarge* in rule 3.3.67 would not have to be stated and the new formulation would also be more economical. Haradatta (*PM* ad *Kāśikā* III: 55) states that the new formulation cannot rule out the association of '*anupasarge*' within the context of '*paṇaḥ parimāṇe*'. The present formulation of rule 3.3.67 with the explicit use of '*anupasarge*' clearly rules out such an association. For, if this association were intended, Pāṇini would not have explicitly stated '*anupasarge*' in this rule. Consequently, in the context of '*parimāṇa*', affix *aP* could also be made possible after verbal root *paṇA*, coocurring with a preverb. Haradatta also criticizes (ad *Kāśikā* III: 55) the view (see *Nyāsa*) that rule 3.3.67 *mado' nupasarge* is formulated and placed as such to indicate the irregularity (*anityatva*) of its provision. The *anityatva* proposal makes possible the derivation of *mādaḥ*. Haradatta finds this opinion (*apara āha*; see *Nyāsa* on this rule) as untrustworthy (*nāptabhāṣitam*).

3.3.68 प्रमदसंमदौ हर्षे

pramadasammadau harṣe
/pramadasammadau 7/2 *harṣe* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ, bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
'pramada, sammada' ity etau śabdau nipātyete harṣe' bhidheye
Affix *aP* occurs in the derivation of *pramada* and *sammada* by *nipātana* when the derivates denote *harṣa* 'joy'.

EXAMPLES:

kanyānāṃ pramadaḥ 'the joy of the girls'
kokilānāṃ sammadaḥ 'the joyful cooing of the cuckoo'

1. This rule proposes the ad hoc (*nipātana*) derivation of *pramada* and *sammada* in the context of joy (*harṣa*). Pāṇini chose not to derive these forms because the derivates involve a meaning which is more conventional (*rūḍhi*) than derivational. The condition of 'joy' is given in view of counter-examples such as *pramādaḥ* 'carelessness, error' and *sammādaḥ* 'frenzy'.

3.3.69 समुदोरजः पशुषु

samudor ajaḥ paśuṣu
/samudoḥ 7/2 *ajaḥ* 5/1 *paśuṣu* 7/3/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
samudor uapadayor ajater dhātoḥ paśuviṣaye dhātvarthe ap pratyayo bhavati
Affix *aP* occurs after verbal root *ajA* 'to go' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *sam* and *ud* and the derivate refers to a group of animals.

EXAMPLES:

samajaḥ paśūnām 'a herd of animals'
udajaḥ paśūnām 'the herding'

1. This rule introduces affix *aP*, an exception to *GHaÑ*, to signify root-sense (*bhāva*) after verbal root *ajA* 'to go, wander' when it cooccurs with *sam* and *ud*; and the context relates to *paśu* 'animal'. No further specification of the sense of the root is necessary, since *ajA* used with *sam* in the context of animals means *samudāya* 'herd'. It similarly denotes *preraṇa* 'directing, driving' when used with *ud*. Thus we get: *samajaḥ* and *udajaḥ paśūnām* in the meanings stated. We also get the derivates of

GHaÑ, such as, *samājo brāhmaṇānām* 'the assembly of *brāhmaṇas*' and *udājaḥ kṣatriyānām* 'the drive of the *kṣatriyas*'.

3.3.70 अक्षेषु ग्लहः

akṣeṣu glahaḥ
/*akṣeṣu* 7/3 *glahaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
'glahaḥ' iti nipātyate akṣaviṣayaś ced dhātvartho bhavati
Affix *aP* occurs after verbal root *grahA* to derive *glahaḥ*, by *nipātana*, when the action relates to *akṣa* 'die'.

EXAMPLE:

akṣasya glahaḥ 'a throw of dice'

1. Our example *glahaḥ* as in *akṣasya glahaḥ* is a *nipātana*. This ad hoc derivation is needed because *grah* with *aP* can only derive *grahaḥ*. Since the affix is still *aP*, this rule contributes by *nipātana* the change of *r* into *l* of *grah*. Of course, this occurs within the context of (gambling with) dice.

Still others propose that the root here is *glahI*. The derivate *glahaḥ* of *aP* is, thus, contrasted with the *GHaÑ* derivate *glāhaḥ*. Haradatta (*PM* ad *Kāśikā* III: 56) explains that others accept *akṣeṣu* as referring to 'the stake at the game of dice'.

3.3.71 प्रजने सर्त्तेः

prajane sartteḥ
/*prajane* 7/1 *sartteḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
sartter dhātor prajane viṣaye ap pratyayo bhavati
Affix *aP* occurs after verbal root *sṛ* 'to move' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the derivate refers to *prajana* 'first impregnation'.

EXAMPLES:

gavām upasaraḥ 'first servicing of the cows'
paśūnām upasaraḥ 'first servicing of the animals'

1. *Kāśikā* explains the example *gavām upasaraḥ* as *strīgavīṣu puṃgavānāṃ garbhādhānāya prathamam upasaraṇam* 'the first move of a male cow toward impregnating a female cow'. Refer also to 3.1.104 *upasaryāḥ kālyā prajane*.

3.3.72 ह्वः सम्प्रसारणं च न्यभ्युपविषु

hvaḥ samprasāraṇaṃ ca nyabhyupaviṣu

/hvaḥ 5/1 *samprasāraṇam* 1/1 *ca* Ø *nyabhyupaviṣu* 7/3/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57)
'ni, abhi, up, vi' ity etesūpapadeṣu hvayater dhātoḥ samprasāraṇam ap pratyayaś ca bhavati
Affix *aP* occurs after verbal root *hveÑ* 'to call out' to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *ni*, *abhi*, *upa* and *vi*. In addition, *hveÑ* undergoes *samprasāraṇa* (1.1.45 *ig yaṇaḥ samprasāraṇam*).

EXAMPLES:

nihavaḥ 'invocation, praying'
abhihavaḥ 'id.'
upahavaḥ 'invitation'
vihavaḥ 'calling'

1. This, again, is an exception to *GHaÑ*. The condition of cooccurence is restricted to these four preverbs especially in view of *prahvāyaḥ*, a derivate in *GHaÑ*, meaning 'a summons'.

3.3.73 **आङि युद्धे**

āṅi yuddhe
/āṅi 7/1 *yuddhe* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hvaḥ samprasāraṇaṁ* #72)
āṅi upapade hvayater dhātoḥ samprasāraṇam, ap pratyayaś ca bhavati yuddhe' bhidheye
Affix *aP* occurs after verbal root *hveÑ* to denote *bhāva*, and a *kāraka* other than *kartṛ*, when the root cooccurs with a nominal *pada* which contains *āṄ* and the derivate relates to *yuddha* 'battle'.

EXAMPLE:

āhavaḥ 'the place where challenges are made; battlefields'

1. Note that, outside the context of *yuddha*, we will get *āhvāyaḥ* 'calling, inviting', a *GHaÑ* form.

3.3.74 **निपानमाहावः**

nipānam āhāvaḥ
/nipānam 1/1 *āhāvaḥ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.9, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hvaḥ samprasāraṇam* #72)
āṅpūrvasya hvayater dhātoḥ samprasāraṇam, ap pratyayaḥ vṛddhiś ca nipātyate, nipānaṃ ced abhidheyaṃ bhavati

Affix *aP* occurs after verbal root *hveÑ* to derive *āhāvaḥ* by *nipātana* when the root is used with the preverb *āṄ* and the derivate denotes *nipānam* 'trough'. In addition, *hveÑ* undergoes *samprasāraṇa.*

EXAMPLE:

āhāvaḥ paśūnām 'the place where animals are brought for water; a trough'

1. Note that the cooccurring *āṄ*, along with the *samprasāraṇa* and *vṛddhi*, is provided via *nipātana*. Since the derivation is presented via *nipātana*, there is no need to even suggest any derivational steps.

3.3.75 भावेऽनुपसर्गस्य

bhāve' nupasargasya
/bhāve 7/1 *anupasargasya* 6/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ap* #57, *hvaḥ samprasāraṇam* #72)
anupasargasya hvayateḥ samprasāraṇam, ap pratyayaś ca bhavati bhāve' bhidheye
Affix *aP* occurs after verbal root *hveÑ* to denote *bhāva* when the root is not used with any preverb. In addition, *hveÑ* goes through *samprasāraṇa*.

EXAMPLE:

havaḥ 'calling'

1. Note that *bhāve* is used here to get rid of the *anuvṛtti* of '*akartari ca kārake saṃjñāyām*' (*bhāvagrahaṇam 'akartari ca kārake saṃjñāyām' ity asya nirāsārtham*). Why is the explicit mention of *bhāve* not interpreted here as intended for blocking '*vā*' *sarūpavidhi*' similar to the situation of rule 3.3.44 *abhividhau bhāve inuṇ*. It is not interpreted as such, because there is no formally dissimilar (*asarūpa*) affix to be blocked.

Nyāsa (ad *Kāśikā* III: 58) brings to our attention yet another objection to *bhāve*. It argues that *bhāve* should not be stated at all. Of the two meaning conditions of '*bhāve*' and '*akartari ca kārake saṃjñāyām*', the second can be easily ruled out on the basis of a lack of relevant examples. This will clearly leave '*bhāve*' to constitute the meaning condition. There is, thus, no point stating that '*bhāve*' is included in order to get rid of *akartari ca kārake saṃjñāyām*. *Nyāsa* agrees that Pāṇini, nevertheless, states '*bhāve*' out of compassion for the slow-witted (*mandabuddhīnām anugrahāya*).

3.3.76 हनश्च वधः

hanaś ca vadhaḥ
/hanaḥ 5/1 *ca* Ø *vadhaḥ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ap* #57, *bhāve' nupasargasya* #75*)*
hanter dhātor anupsarge bhāve ap pratyayo bhavati, tatsanniyogena ca vadhādeśaḥ, sa cāntodāttaḥ
Affix *aP* also occurs after verbal root *hanA* 'to kill', not used with a preverb, when the derivate denotes *bhāva*. In addition, *han* is replaced by *vadha*.

EXAMPLES:

vadhaś corāṇām 'the killing of thieves'
vadho dasyūnām 'the killing of bandits'

1. Note that both '*bhāve*' and '*anupasargasya*' are carried. Although verbal root *han* is given in the ablative (*pañcamī*), '*anupasargasya*' will still have to be read with it as a modifier. The replacement in *vadha* for *han* is also intented on account of contextual proximity. The replacement is intended as *antodātta* 'high pitched at the end'. Thus, with an *anudātta* (3.1.4 *anudāttau suppitau*) *aP* in the following position, the final *-a* of *vadha* is deleted, by rule 6.4.68 *ato lopaḥ*, with practically no change in meaning with *ghātaḥ*.

Commentators explain that the *ca* in this rule is intentionally put in the middle to indicate that *GHaÑ* can also be introduced parallel to *aP* in the sense of *bhāva*. This would account for *ghātaḥ* 'killing', a *GHaÑ* derivate signifying *bhāva*.

3.3.77 मूर्त्तौ घनः

mūrttau ghanaḥ
/mūrttau 7/1 *ghanaḥ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hanaḥ* #76*)*
mūrttāv abhidheyāyāṃ hanter ap pratyayo bhavati ghanaṅś cādeśaḥ
Affix *aP* occurs after verbal root *hanA* to be replaced concurrently with *ghana* when the derivate denotes *mūrti* 'hardness, solidity'.

EXAMPLES:

abhraghanaḥ 'the thickness of clouds'
dadhighanaḥ 'the thickness of yogurt'

1. This rule introduces affix *aP* after *han* when the derivate denotes *mūrti* 'solidity, thickness'. Thus we get *abhraghanaḥ*, a genitive *tatpuruṣa* compound which denotes *abhrasya kāṭhinyam* 'the thickness of clouds'.

One would similarly find *dadhighanaḥ* 'the thickness of yoghurt' where the qualified element (*dharmin*; *dadhi*) is denoted by the quality (*dharma*; *ghanam*), just as *śuklaḥ* 'white' may denote *paṭaḥ* 'cloth' containing the quality. The root at the same time gets replaced with *ghana*.

3.3.78 अन्तर्घनो देशे

antarghano deśe
/*antarghanaḥ* 1/1 *deśe* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *ghanaḥ* #77)
antaḥpūrvād hanter ap pratyayo bhavati, ghanādeśaś ca bhavati deśe' bhidheye
Affix *aP* occurs after verbal root *hanA*, to be concurrently replaced with *ghana*, when the root is used with the preverb *antar* and the derivate signifies *deśa* 'country; a particular area'.

EXAMPLE:

antarghanaḥ 'name of region in the Vāhīka country'

1. This rule introduces affix *aP* after verbal root *han* when the root is used with *antar*, and the derivate denotes the name of a country (*deśa*). This clearly brings '*akartari ca kārake...*' close to the context of this rule. Our rule additionally provides *ghana* as a replacement, via *nipātana*, for *han*. Thus, we get *antarghanaḥ*, the name of a region...(*saṃjñībhūto vāhīkeṣu deśaviśeṣaḥ*). Some read the name with *ṇ* as *antarghaṇaḥ*, which is also acceptable (*tad api grāhyam*). In the absence of the signification of the name of a country, the derivate will be: *antarghātaḥ* 'slaughter house'.

3.3.79 अगारैकदेशे प्रघणः प्रघाणश्च

agāraikadeśe praghaṇaḥ praghāṇaś ca
/*agāraikadeśe* 7/1 *praghaṇaḥ* 1/1 *praghāṇaḥ* 1/1 *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hanaḥ* #76, *ghanaḥ* #78)
prapūrvasya hanteḥ 'praghaṇa, praghāṇa' ity etau śabdau nipātyete agāraikadeśe vācye
Affix *aP*, and *GHaÑ* as well, occurs after verbal root *hanA*, to be concurrently replaced with *ghana*, when the root is used with the preverb *pra* to derive *praghaṇa* and *praghāṇa* respectively, via *nipātana*, to designate 'part of the house'.

EXAMPLES:

praghaṇaḥ 'porch, portico'
praghāṇaḥ 'id.'

1. The words *praghaṇaḥ* and *praghāṇaḥ* are derived by means of *nipātana* by introducing affix *aP* after *han* used with *pra,* where *han* also gets replaced with *ghana.* For reasons similar to the preceding rule, '*akartari ca kārake saṃjñāyām*' is also brought close to the context of this rule. For, the derivates denote *agāraikadeśa* 'a part of the house'. Thus, we get: *praghaṇaḥ* and *praghāṇaḥ* generally explained as: *dvāraprakoṣṭho vāhyaḥ* 'the outer area to the entrance of the house'. Elsewhere, we will get *praghātaḥ* 'killing'.

3.3.80 **उद्घनोऽत्याधानम्**

udghano' tyādhānam
/udghanaḥ 1/1 *atyādhānam* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hanaḥ* #76, *ghanaḥ* #77)
utpūrvasya hanter udghana iti nipātyate, atyādhānaṃ ced bhavati
Affix *aP* occurs after verbal root *hanA,* to be concurrently replaced with *ghana,* when the root is used with the preverb *ud* to derive *udghana,* by *nipātana,* and the derivate designates *atyādhāna* 'workbench, support'.

EXAMPLE:

udghanaḥ 'a carpenter's workbench; a chopping block'

1. This rule offers an additional ad hoc form: *udghanaḥ,* obviously with *aP* introduced after *han* used with *ud.* The *ghana* replacement is also given. Since the derivate denotes a name, '*akartari ca kārake...*' is also understood. *Kāśikā* explains *udghanaḥ* as: *yasmin kāṣṭhe sthāpayitvā anyāni kāṣṭhāni takṣyante* 'that piece of wood on which other woods are plained'. The condition of *atyādhāna* can thus be explained as constituting the supporting base on which something is placed. The derivate outside of this meaning will be *udghātaḥ* 'beginning'.

3.3.81 **अपघनोऽङ्गम्**

apaghano' ṅgam
/apaghanaḥ 1/1 *aṅgam* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hanaḥ* #76, *ghanaḥ* #77)
apapūrvasya hanter apaghana iti nipātyate aṅgaṃ ced bhavati
Affix *aP* occurs after verbal root *hanA,* to be further replaced with *ghana* to derive *apaghana* by *nipātana,* when the root is used with the preverb *apa* and the derivate denotes *aṅga* 'limb'.

EXAMPLE:

apaghanaḥ 'a limb'

1. *Kāśikā* states that *aṅga* here means either a hand or foot. Elsewhere, the derivate will be *apaghātaḥ* 'killing'.

3.3.82 करणेऽयोविद्रुषु

karaṇe' yovidruṣu
/*karaṇe* 7/1 *ayovidruṣu* 7/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ap* #57, *hanaḥ* #76, *ghanaḥ* #77)
'ayas, vi, dru' ity eteṣūpapadeṣu hanter dhātoḥ karaṇe kārake' p pratyayo bhavati, ghanādeśaś ca
Affix *aP* occurs after verbal root *hanA*, to be further replaced with *ghana*, when the root cooccurs with a nominal *pada* which contains *ayas*, *vi* and *dru*, and the derivate denotes *karaṇa* 'instrument'.

EXAMPLES:

ayoghanaḥ 'a steel hammer'
vighanaḥ 'id.'
drughanaḥ 'an axe'

1. Note that *drughanaḥ* is also found as *drughaṇaḥ*.

3.3.83 स्तम्बे क च

stambe ka ca
/*stambe* 7/1 *ka* (deleted 1/1) *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ap* #57, *hanaḥ* #76, *ghanaḥ* #77, *karaṇe* #82)
stambaśabda upapade karaṇe kārake hanteḥ kaḥ pratyayo bhavati cakārād ap, tatra ghanādeśaḥ
Affix *Ka*, as well as *aP*, occurs after verbal root *hanA*, to be further replaced with *ghana*, when the root cooccurs with a nominal *pada* which contains *stamba* and the derivate denotes *karaṇa*.

EXAMPLES:

stambaghnaḥ 'a sickle'
stambaghanaḥ 'id.'

1. Elsewhere, in the context of a non-*karaṇa* denotatum, we get *stambaghātaḥ* 'the cutting of grass', a derivate in *GHaÑ* which denotes *bhāva*.

3.3.84 **परौ घः**

parau ghaḥ
/*parau* 7/1 *ghaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ap* #57, *hanaḥ* #76, *karaṇe* #82)
pariśabda upapade hanter dhātor ap pratyayo bhavati karaṇe kārake gha-śabdaś cādeśaḥ
Affix *aP* occurs after verbal root *hanA*, to be further replaced with *gha*, when the root cooccurs with a nominal *pada* which contains *pari* and the derivate denotes *karaṇa*.

EXAMPLES:

parighaḥ 'that by means of which one strikes; a club'
palighaḥ 'id.'

1. Note that the *r* of *parighaḥ* is optionally replaced with *l* by 8.2.22 *pareś ca....*

3.3.85 **उपघ्न आश्रये**

upaghna āśraye
/*upaghnaḥ* 1/1 *āśraye* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hanaḥ* #76, *ghanaḥ* #77, *karaṇe* #82)
upapūrvasya hanter ap pratyaya upadhālopaś ca nipātyate, āśrayaśabdaḥ sāmīpyaṃ pratyāsattiṃ lakṣyati
Affix *ap* occurs by *nipātana* after verbal root *hanA*, with further replacement by *gha* and deletion of its *upadhā* (1.1.65 *alo' ntyāt pūrva upadhā*), when it is used with the preverb *upa* and the derivate denotes *āśraya* 'vicinity, proximity'.

EXAMPLES:

parvatopaghnaḥ 'in the vicinity of the mountain; foothills'
grāmopaghnaḥ 'in the vicinity of the village'

1. The word *āśraya* denotes 'shelter' by way of *sāmīpya* 'proximity'. Thus we get *parvatopaghnaḥ* 'that which is near the mountain'. Affix *aP*, along with the cooccurring condition of *upa*, and the deletion of the penultimate *a* of *han*, are all given by *nipātana*.

3.3.86 **सङ्घोद्घौ गणप्रशंसयोः**

saṃghodghau gaṇapraśaṃsayoḥ
/*saṃghodghau gaṇapraśaṃsayoḥ* 7/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hanaḥ* #76)

samudor upapadayor hanter dhātor ap pratyayo bhavati, ṭilopa ghatvaṃ ca nipātyate, yathāsaṃkhyaṃ gaṇe' bhidheye
praśaṃsāyāṃ gamyamānāyām
Affix *aP* occurs after verbal root *hanA* when the root cooccurs with a nominal *pada* which contains *sam* and *ud* to derive *saṃgha* and *udgha* by *nipātana*, provided the derivates denote *gaṇa* 'group' and *praśaṃsā* 'praise', respectively.

EXAMPLES:

saṃghaḥ paśūnām 'herd of animals'
udgho manuṣyāṇām 'praiseworthy among men'

1. Note that the deletion of *ṭi*, i.e., *an*, of *han* (1.1.63 *aco' ntyādi ṭi*), and the *gh* replacement for *h*, is accomplished via *nipātana*. Elsewhere, we will get a derivate in *GHaÑ* such as *saṃghātaḥ* 'union'. The *sam* and *upa* derivates denote *gaṇa* and *praśaṃsā*, respectively, in view of rule 1.3.10 *yathāsaṃkhyam...*

3.3.87 निघो निमितम्

nigho nimitam
/*nighaḥ* 1/1 *nimitam* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19, *ap* #57, *hanaḥ* #76)
'nigha' iti nipūrvād hanter ap pratyayaṣ ṭilopaghatvaṃ ca nipātyate, nimitaṃ ced abhidheyaṃ bhavati
Affix *aP* occurs after verbal root *hanA* when the root is used with the preverb *ni* to derive *nigha* by *nipātana*, provided the derivate denotes *nimita* 'having equal dimension all around'.

EXAMPLES:

nighā vṛkṣāḥ 'trees of equal dimension'
nighāḥ śālayaḥ 'a paddy equal in height'

1. The provision of this rule, again by *nipātana*, is similar to the preceding. The deletion of *ṭi* (*ṭilopa*) and replacement in *gh* (*ghatva*), is also valid here. The verb is to be used with the preverb *ni*, and the derivate meaning has to be *nimita*. It is explained as *sarvataḥ ārohataḥ pariṇāhataś ca tulyaḥ* 'that which is equal on all sides in height and breadth'. Thus the examples: *nighā vṛkṣāḥ* 'trees equally tall and wide' and *nighāḥ śālayaḥ* 'rice paddies of equal height'. Elsewhere, we get *nighātaḥ* 'striking a blow', a derivate in *GHaÑ*.

3.3.88 ड्वितः क्त्रिः

ḍvitaḥ ktriḥ

/ḍvitaḥ 5/1 *krtiḥ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18)
ḍvito dhātoḥ ktriḥ pratyayo bhavati
Affix *Ktri* occurs to denote *bhāva* after a verbal root marked with *ḌU* as an *it.*

EXAMPLES:

paktriman 'cooked; ripened'
uptrimam 'sown'
kṛtrimam 'artificial'

1. This rule allows for the introduction of affix *Ktri* after a root which has *ḌU* as an *it* and when *bhāva* is denoted. Affix *Ktri,* because of its own derivational nature, is used to denote *bhāva,* and cannot be construed alone. For, rule 4.4.20 *kter man nityam* obligatorily (*nityam*) introduces affix *maP* after a word which ends in affix *Ktri.* The sense of affix *maP* is *nivṛtta* 'completed'. Thus *paktrimam* denotes 'fully cooked'. It is in this sense that a derivate in *Ktri* can not be interpreted separately from a derivate in *maP* (*kevalo na prayujyate*).

2. The roots with *ḌU* as an *it* are illustrated here as *ḌUpacAṢ* 'to cook', *ḌUvap* 'to sow' and *ḌUkṛÑ* 'to do, make'. The *K* of *Ktri* is used to block *guṇa* or *vṛddhi.* The derivates go through *samprasāraṇa* via rule 6.1.15 *vacisvapiyajādīnām...*

3.3.89 **ट्वितोऽथुच्**

ṭvitho' thuc
/ṭvitaḥ 5/1 *athuc* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
ṭvitor dhātor athuc pratyayo bhavati bhāvādau
Affix *athuC* occurs after a verbal root marked with *ṬU* as an *it* when *bhāva,* and a *kāraka* other than a *kartṛ,* is denoted.

EXAMPLES:

vepathuḥ 'trembling'
svayathuḥ 'swelling'
kṣavathuḥ 'coughing, sneezing'

1. This rule refers to roots which have *ṬU* as their *it.* Affix *athuC* is again introduced to denote *bhāva,* etc. One can treat this as an exception to *GHaÑ.* Affix *GHaÑ* cannot obtain via *vā' sarūpavidhi,* since the usages simply do not exist. This observation of *Nyāsa* is contrary to Haradatta's claim in the *PM* according to which a *GHaÑ* derivate parallel to *athuC* via *vā' sarūpavidhi* is found. The *ca* of affix *athuC* is intended as an *it* for accent (*svarārtha*).

3.3.90 यजयाचयतविच्छप्रच्छरक्षो नङ्

yajayācayatavicchapracchārakṣo naṅ
/*yaj...rakṣaḥ* 5/1 *(sam. dv.)*; *naṅ* 1/1/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, bhāve #18, akartari ca kārake saṃjñāyām #19)
yajādibhyo dhātubhyo naṅ pratyayo bhavati
Affix *naṄ* occurs after verbal roots *yajA*, *yācA* 'to ask for', *yatA* 'to strive, exert', *vicchA* 'to go; shine', *pracchA* 'to ask' and *rakṣA* 'to protect, preserve' when *bhāva* or a *kāraka* other than *kartṛ* is denoted.

EXAMPLES:

yajñaḥ 'ritual sacrifice'
yācñā 'solicitation'
yatnaḥ 'effort'
viśnaḥ 'questioning'
rakṣṇaḥ 'protection; preservation'

1. This rule accepts '*bhāve*' and '*akartari ca kārake...*' as the denotatum of affix *naṄ*. The *Ṅ* as an *it* is intended to block *guṇa* or *vṛddhi*, as the case may be (1.1.5 *kṅiti ca*). Note that, except for the derivate of *yāc*, all the others are masculine. Affix *GHaÑ* also finds its scope at the strength of the *vā' sarūpavidhi*, depending on usages such as *yāgaḥ* parallel to *yajñaḥ*. The derivate of *yāc*, i.e., *yācñā*, is feminine where its *naṄ* is an exception to affix *a* of 3.3.103 *guroś ca halaḥ*. The *vā' sarūpavidhi* is blocked here at the strength of 3.3.113 *kṛtyalyuṭo bahulam*. The lack of *samprasāraṇa* (1.1.45 *ig yaṇaḥ*), in the case of *praśna* (cf. 6.1.16 *grahijyāvayi...*), even when there is a following affix marked with *Ṅ*, can be only explained by citing the precedent of rule 3.3.177 *praśne cāsanna....*

3.3.91 स्वपो नन्

svapo nan
/*svapaḥ* 5/1 *nan* 1/1/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, bhāve #18)
Affix *naN* occurs after verbal root *ÑIṣvaP* 'to sleep' when the derivate denotes *bhāva*.

EXAMPLE:

svapnaḥ 'dreaming; a dream'

1. This rule offers *svapna* as a derivate with the signification of *bhāva*. It is, thus, an exception to *GHaÑ*. The *N* as an *it* in *naN* is intended to secure initial high-pitch (*ādyudātta*) by rule 6.1.197 *ñnityādir nityam*.

3.3.92 उपसर्गे घोः किः

upasarge ghoḥ kiḥ
/*upasarge* 7/1 *ghoḥ* 5/1 *kiḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
upasarge upapade ghusaṃjñakebhyo dhātubhyo kiḥ pratyayo bhavati
Affix *Ki* occurs after verbal roots termed *ghu* (1.1.20 *dādhāghv adap*) when the roots cooccur with a nominal *pada* which contains a preverb and the derivate denotes *bhāva*, and a *kāraka* other than *kartṛ*.

EXAMPLES:

pradiḥ 'giving; a gift'
pradhiḥ 'outer edge of a wheel, rim'
antarddhiḥ 'hiding, disappearing'

1. Note that the ablative *ghoḥ* qualifies *dhātoḥ*, thereby yielding the interpretation 'after verbal roots termed *ghu*',.

The rule still carries '*bhāve*' and '*akartari ca kārake saṃjñāyām*'. Consequently, affix *Ki* will be introduced to denote *bhāva*, and a *kāraka* other than a *kartṛ*. The roots, of course, have to be those termed *ghu* (1.1.20 *dādhā ghv adāp*). The *K*, as an *it* in *Ki*, is intended to facilitate the deletion of *ā* by 6.4.64 *āto lopa iṭi ca*. Thus we get: *antarddhiḥ* 'hiding' from *antardhā* + *Ki*, for which see the appendix.

3.3.93 कर्मण्यधिकरणे च

karmaṇy adhikaraṇe ca
/*karmaṇi* 7/1 *adhikaraṇe* 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ghoḥ*, *kiḥ* #92)
karmaṇy upapade ghusaṃjñakebhyo dhātubhyaḥ kiḥ pratyayo bhavati adhikaraṇe kārake
Affix *Ki* also occurs after verbal roots termed *ghu* when the roots cooccur with a nominal *pada* which denotes *karman* and the derivate denotes *adhikaraṇa*.

EXAMPLES:

jaladhiḥ 'that where water is held; ocean'
śaradhiḥ 'that where arrows are placed; quiver'

1. The word '*ghoḥ*' still carries to qualify '*dhātoḥ*'. Note that both *karmaṇi* and *adhikaraṇe* are given in *saptamī* 'seventh triad of *sUP*'. We understand from Pāṇinian practice, that the denotata of affixes is provided by the use of *saptamī*. We also know, from rule 3.1.92 *tatropapadaṃ*

saptamīstham, that an item placed in *saptamī*, within the domain of 3.1.91 *dhātoḥ*, characterizes an *upapada* 'conjoined word'. Obviously, both *karman* and *adhikaraṇa* cannot constitute an *upapada*; nor can they constitute the denotatum of affix *Ki* (*pratyayārtha*). We must take recourse to *vyākhyāna* 'interpretation of the learned' in order to find which one of the two denotes *upapada*. Commentators agree that *karman* constitutes an *upapada*. This leaves *adhikaraṇa* to characterize the denotatum of *Ki*. The word *adhikaraṇa* is explicitly stated to rule out the introduction of this affix in the sense of *bhāva*, or *karaṇa*, etc. The *ca* of the rule is used to attract (*anukarṣanārtha*) *Ki* from the preceding rule.

3.3.94 **स्त्रियां क्तिन्**

> *striyāṃ ktin*
> /*striyām* 7/1 *ktin* 1/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *bhāve* #18, *akartari ca kārake saṃjñāyām* #19)
> *strīliṅge bhāvādau dhātoḥ ktin pratyayo bhavati*
> Affix *KtiN* occurs after a verbal root when *bhāva*, and a *kāraka* other than *kartṛ*, is denoted in the feminine.

EXAMPLES:

> *kṛtiḥ* 'action, creation'
> *citiḥ* 'gathering, heaping'
> *matiḥ* 'comprehension, thinking'

1. This rule introduces affix *KtiN* to denote *bhāva* and a *kāraka* other than *kartṛ*. Obviously, *bhāve* and *akartari ca kārake saṃjñāyām* become valid in this context. Affix *KtiN* is an exception to affixes *aC*, *aP* and *GhaÑ*. It is an exception to *aC* (3.3.56 *er ac*) when introduced after a verbal root ending in *i*. It is an exception to *aP* when introduced after a verbal root which ends in *u* or *ṛ* (3.3.57 *ṛdor ap*). Elsewhere, affix *KtiN* constitutes an exception to *GHaÑ* (3.3.18 *bhāve*). Also note, in connection with this, that *vā' sarūpavidhi* (3.1.94 *vā' sarūpo' striyām*) is not valid here.

2. A *vārttika* proposes that *KtiN* should also be introduced to derive forms such as *āptiḥ* 'gain', etc., from verbal roots *āp* 'to gain', etc. This list of roots, referred to here by *āp*, etc., is not enumerated. That is, one has to determine the membership in this list of *āp*, etc., by following the usages (*Kāś: ābādayaḥ prayogato' nusarttavyāḥ*). Thus we get forms such as: *āptiḥ* 'gain', *rāddhiḥ* 'accomplishment', *labdhiḥ* 'gain', *dīptiḥ* 'glow' from *āp* 'to gain', *radh* 'to accomplish', *labh* 'to obtain', and *dip* 'to glow'.

An additional *vārttika* manipulates *KtiN* to accommodate usages such as *śrutiḥ* 'that by means of which one hears; ear', *iṣṭiḥ* 'that by means of which one performs rituals; a ritual sacrifice', and *stutiḥ* 'that by means of

which one pleases someone; praise, prayer'. These derivates all denote *karaṇa*.

A *vārttika* also proposes that forms such as *glāniḥ* 'exhaustion', *mlāniḥ* 'weariness', *jyāniḥ* 'aging' and *hāniḥ* 'loss' should be derived with affix *Ni*, introduced after verbal roots *glai* 'to be weary', *mlai* 'id.', *jyā* 'to be old' and *hā* 'to abandon' respectively.

Yet another *vārttika* states that affix *KtiN* also occurs after roots which end in *ṝ*, or those such as *lūÑ* 'to cut', etc., to derive forms such as *kīrṇiḥ* 'scattering', *gīrṇiḥ* 'praise', and *lūniḥ* 'cutting', etc. In addition, the *vārttika* extends to affix *KtiN* the treatment of *niṣṭhā* in order to enable its derivates to avail the change of their *t* into *n*. Thus, given the string (*kṝ*→*kir* →*kīr*) + (*K*→∅)*ti* = *kīr* + *ti*, rule 8.2.42 *radābhyām*... will replace the *t* with *n* to yield *kīrṇīh*, which results in *kīrṇiḥ*. See further details relative to the examples in the appendix. There are two more *vārttika* which deal with *sampat* 'prosperity', *vipat* 'distress' and *pratipat* 'access', etc. The first proposes the introduction, and subsequent deletion, of *KvIP* to derive these forms. The second proposes that affix *KtiN* be introduced after them to derive *sampatti*, *vipatti*, and *pratipatti*.

3.3.95 स्थागापापचो भावे

> *sthāgāpāpaco bhāve*
> /*sthāgāpāpacaḥ* 5/1 *bhāve* 7/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyām ktin* #94)
> *sthādibhyo dhātubhyaḥ strīliṅge bhāve ktin pratyayo bhavati*
> Affix *KtiN* occurs after verbal roots *sthā* 'to stand', *gā* 'to sing', *pā* 'to drink' and *pac* 'to cook' when the derivate denotes *bhāva* 'action' in the feminine.

EXAMPLES:

> *prasthitiḥ* 'a trip, journey'
> *udgītiḥ* 'singing of the hymns of the *Sāmaveda*; loud singing'
> *saṃgītiḥ* 'singing'
> *prapītiḥ* 'drinking; receptacle for water'
> *saṃpītiḥ* 'drinking together'
> *paktiḥ* 'cooking'

1. This rule introduces affix *KtiN* to denote *bhāva* in the feminine after verbal roots *sthā* 'to stand', *gā* 'to sing', *pā* 'to drink' and *pac* 'to cook'. The *pā* here should not be interpreted as referring to *pā* 'to protect'. Of course, *gā* can also refer to verbal root *gāN* 'to go'.

Note that *bhāve* is restated to counter any other meaning conditions, such as '*akartari ca kārake*'. Commentators explain that affix *KtiN* in this

rule serves the function of blocking an exception (*apavādasya bādhakaḥ*). That is, it blocks the application of affix *aṄ* which happens to be an exception to the general affix *GHaÑ*. Affix *aṄ* is available to verbal roots *sthā*, etc., by rule 3.3.106 *ātaś copasarge*. It is available to verbal root *pac*, based on its status as *ṣit*, by rule 3.3.104 *ṣidbhidādibhyo*.... Why does it not block the application of 3.3.110 *vibhāṣā*..., which makes the optional provision of affix *iÑ* parallel to *ṆvuL* of rule 3.3.109 *saṃjñāyām*?. It is stated that *KtiN* cannot block *iÑ*, since *KtiN* happens to be a prior exception (*purastāpavāda*). Consequently, it can only block the most immediately available provision, and not the one which is subsequent (cf. *pbh*.: *purastāpavādā anantarān vidhīn bādhante nottarān*). Thus, *KtiN* cannot be made available to block the application of *iÑ*.

3.3.96 मन्त्रे वृषेषपचमनविदभूवीरा उदात्तः

mantre vṛṣeṣapacamanavidabhūvīrā udāttaḥ
/*mantre* 7/1 *vṛṣe*...*vīrāḥ* 1/3 (*itar. dv.*); *udāttaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyām ktin* #94, *bhāve* #95)
mantre viṣaye vṛṣādibhyo dhātubhyaḥ ktin pratyayo bhavati, udāttaḥ
Affix *KtiN*, marked with *udātta* 'high-pitch', occurs in the *mantra* literature after verbal roots *vṛṣU* 'to rain', *iṣU* 'to wish', *ḌUpacAṢ* 'to cook', *manA* 'to think', *vidA* 'to know', *bhū* 'to be, become', *vī* 'to go' and *rā* 'to give, bring' when the derivates denote the action (*bhāva*) in the feminine.

EXAMPLES:

vṛṣṭiḥ 'rain'
iṣṭiḥ 'wish; sacrifice'
paktiḥ 'cooking'
matiḥ 'thinking'
vittiḥ 'knowing'
bhūtiḥ 'being, becoming'
vītiḥ 'going; enjoying'
rātiḥ 'giving'

1. The provisions of this rule are limited to the *mantra* section of the Vedic literature. Our rule, additionally, provides for affix *KtiN* to be marked with *udātta* 'high pitch'. Note, in connection with this, that rule 6.1.197 *ñnityādir*... provides *udātta* accent initially for a derivate which ends in affix *KtiN*. Obviously, that derivate, in accordance with the provision of the *udātta* of this rule, will become *antodātta*.

3.3.97 ऊतियूतिजूतिसातिहेतिकीर्त्तयश्च

ūtiyūtijūtisātihetikīrttayaś ca

/ūti...kīrttayaḥ 1/5 *(itar. dv.); ca* 0/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *akartari ca kārake saṃjñāyām* #19, *striyāṃ ktin* #94, *bhāve* #95, *udāttaḥ* #96).
ūtyādayaḥ śabdāḥ nipātyante
Forms such as *ūti, yūti, jūti, sāti, heti* and *kīrtti* are derived to denote action in the feminine by *nipātana* with their final vowel marked *udātta*.

EXAMPLES:

ūtiḥ 'preserving; sport'
yūtiḥ 'joining, yoking, partaking'
jūtiḥ 'running; speeding'
sātiḥ 'destruction'
hetiḥ 'weapon'
kīrttiḥ 'fame'

1. This rule provides for the ad hoc derivation (*nipātana*) of the forms *ūti*, etc. Note, however, that it is not much the derivation by affix *KtiN*, that the route of *nipātana* is followed. Instead, it is the *antodatta* 'final high-pitch' accent for which one must take recourse to *nipātana*. There are some additional applications for which one also resorts to *nipātana*. Thus, we get the lengthening of the root-vowel in *yūti* and *jūti*. Other derivational problems in which *nipātana* must be invoked are not hard to comprehend. Besides, one is not obligated to provide for such details anyway.

3.3.98 **व्रजयजोर्भावे क्यप्**

vrajayajor bhāve kyap
/vrajayajoḥ 6/2 *bhāve* 7/1 *kyap* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *udāttaḥ* #96)
vrajayajor dhātvoḥ strīliṅge bhāve kyap pratyayo bhavati
Affix *KyaP*, marked with *udātta*, occurs after verbal roots *vrajA* 'to go, wander' and *yajA* 'to sacrifice' when the derivates denote action in the feminine.

EXAMPLES:

vrajyā 'wandering about'
ijyā 'worshipping, sacrificing'

1. Note that the word *udātta* is carried here. Does this cancel the *anudātta* accent available to affix *KyaP* by rule 3.1.4 *anudāttau suppitau*? Yes, but not at the strength of its availability, which in turn is due to the *pit* status

of *KyaP*. The *K* of *KyaP*, thus, does not bring the *anudātta* accent simply for *udātta* to cancel it. The express mention of *udātta* will rule out any other accentual provision. It is for this reason that commentators regard the *pit* status of *KyaP* as intended for subsequent rule (*uttarārtha*). The *P* of *KyaP* there enables rule 6.1.71 *hrasvasya piti kṛti tuk* to introduce the augment *tUK* (*Kāś*: *pitkaraṇam uttaratra tugartham*). Note that *ijyā* of this rule has to go through *samprasāraṇa* by rule 6.1.15 *vacisvapiyajādīnām...* The *KyaP* of this rule is an exception to *KtiN*.

3.3.99 **संज्ञायां समजनिषदनिपतमनविदषुञ्शीङ्भृञिणः**

> *saṃjñāyām samajaniṣadanipatamanavidaṣuñśīṅbhṛñiṇaḥ*
> /*saṃjñāyām* 7/1 *sama...ñiṇaḥ* 5/1 (*sam. dv.*)/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *akartari ca kārake saṃjñāyām* #19, *striyāṃ ktin* #94, *bhāve* #95, *udāttaḥ* #96 *kyap* #97)
> *samajādibhyo dhātubhyaḥ kyap pratyayo bhavti udāttaḥ, saṃjñāyāṃ viṣaye*
> Affix *KyaP*, marked with *ūdatta*, occurs after verbal roots *ajA* 'to go' used with the preverb *sam*, *ṣad* 'to sit, rest' and *pat* 'to fall' used with the preverb *ni*, and *manA* 'to think', *vidA* 'to know', *ṣuÑ* 'to press out', *śīṄ* 'to recline' and *bhṛÑ* 'to provide' when *bhāva* and a *kāraka* other than *kartṛ* is denoted in the feminine and the derivate denotes a name.

EXAMPLES:

> *samajyā* 'assembly, gathering'
> *niṣadyā* 'a seat; marketplace'
> *nipatyā* 'slippery place; battlefield'
> *manyā* (*matyā*) 'thinking; the veins of the neck'
> *vidyā* 'knowing; knowledge'
> *sutyā* 'the time when Soma is pressed out'
> *śayyā* 'bed'
> *bhṛtyā* 'wages; female servant'
> *ityā* 'means of transportation; palanquin; guiding light'

1. Note that *bhāva* of 3.3.95 *sthāgāpāpaco bhāve* is not carried. The rule thus introduces affix *KyaP* after *samaj*, *niṣad*, *nipat*, *man*, *vid*, *ṣuÑ*, *śīṄ* and *bhṛÑ* to denote *bhāva*, when the name of a *kāraka* other than *kartṛ* is denoted in the feminine. The fact that *bhāve* is not carried, even though derivates denote 'action', does not create a problem, since this denotation of *bhāva* 'action' is not technical by way of the *adhikāra*. Instead, it is the denotation via the meaning of the derivates and attested by usage. The word *udātta* is still carried for purposes of accentuation. Thus we get *samajyā* 'that where people assemble; an assembly', *niṣadyā* 'that in which one

reclines; a bed', *nipatyā* 'the ground where people fall; slippery ground', etc. Note that these examples denote names as well as *adhikaraṇa*, a *kāraka* other than *kartṛ*. Additionally, by way of the derivates, they also denote the action of gathering, reclining or falling. Examples such as *manyā*, *vidyā* and *ityā*, etc. denote *karaṇa* 'instrument'.

A question is raised as to why this rule must use *saṃjñāyām* when the same could be available by the *anuvṛtti* of *akartari ca kārake saṃjñāyām*'? It is stated that the *saṃjñāyām* of the *anuvṛtti* is associated with '*akartari ca kārake*'. Consequently, affix *KyaP* would be available to *samaj*, etc., only when the name of a *kāraka* other than *kartṛ* was denoted. It would not be available to the name of a *kāraka* other than *kartṛ* which also denotes *bhāva*. It is for this reason that *saṃjñāyām* is restated (see *Nyāsa* ad *Kāś* III: 73: *tasmād bhāve' pi saṃjñām eva yathā syād ity evam arthaṃ punaḥ saṃjñāgrahaṇam*).

3.3.100 कृञः श च

kṛñaḥ śa ca
/*kṛñaḥ* 5/1 *śa* (deleted 1/1) *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *akartari ca kārake saṃjñāyām* #19, *striyāṃ ktin* #94, *bhāve* #95, *udāttaḥ* #96 *kyap* #97)
karoter dhātoḥ striyāṃ ktin pratyayo bhavati
Affix *Śa*, and *KyaP* marked with *udātta* as well, occurs after verbal root *ḌUkṛÑ* 'to do, make' when the action is denoted in the feminine.

EXAMPLES:

kriyā 'action, creation'
kṛtyā 'id.'
kṛtiḥ 'id.'

1. The function of *ca* is to optionally enable the application of affix *KyaP*. Thus, we optionally get affix *Śa* with *KyaP*. Commentators state that affix *KtiN* should also be made optionally available with *KyaP* and *Śa*. In order to facilitate this, recourse is taken to *yogavibhāga* whereby a two-way split of this rule is made:
(i) *kṛñaḥ kyab bhavati* 'affix *KyaP* occurs after verbal root *kṛÑ*...'
(ii) *kṛñaḥ śa ca* 'affix *Śa*, additionally with *KtiN* (on account of *ca*), also occurs after *kṛÑ*'
This yields three forms: one each with affixes *KyaP*, *Śa* and *KtiN* as in *krityā*, *kriyā* and *kṛtiḥ* respectively. Note that in the absence of *yogavibhāga*, *ca* could be relatable to *KyaP* only. This will leave out *KtiN* forms.

2. Note that when affix *Śa* is introduced to denote *bhāva*, rules 3.1.67 *sārvadhātuke yak* and 7.4.28 *riṅ śyagliṅkṣu* will apply. The first will introduce

yaK, whereas the second will replace the final short *ṛ* of the root with *riN*. The *Ś* is given as *it* in *Śa* to block *guṇa* via its status as marked with *Ṅ* by 1.2.4 *sārvadhātukam apit*. Obviously, *Ś* as an *it* is also responsible for the assignment of the term *sārvadhātuka* to *Śa* by 3.4.113 *tiṅśit sārvadhātukam*. Affix *yaK* will be blocked in cases where *Śa* is introduced to denote the name of a *kāraka* other than *kartṛ* (*akartari ca kārake saṃjñāyām*). However, *riṄ* must still be introduced to replace *ṛ*, though under the condition of affix *Śa*, itself. That is, under the condition that *Śa* followed *kṛ*. Now rule 6.4.77 *aci śnudhātubhruvām...* will replace the *i* of *ri* by *iyAṄ*. Refer to the appendix for additional details.

3.3.101 इच्छा

icchā

/icchā 1/1/

(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, striyāṃ ktin #94, bhāve #95, śaḥ #101)

Affix *Śa* occurs after verbal root *iṣU* in the derivation of *icchā* by *nipātana* when the derivate denotes the action in the feminine.

EXAMPLE:

icchā 'wishing'

1. This rule derives *icchā* to denote *bhāva* in the feminine by *nipātana* with affix *Śa*. The non-introduction of *yaK* is provided for by *nipātana*. See additional details for deriving *icchā* from *iṣ* + *Śa* with no *yaK* in the appendix.

2. A *vārttika* under this rule states that *parisaryā* 'wandering about', *paricaryā* 'service', *mṛgayā* 'hunting' and *aṭāṭyā* 'roaming about' should also be derived with *Śa* via *nipātana*. The words *parisaryā* and *paricaryā* are derived from *parisṛ* and *paricar* with affix *Śa* and *yaK*. The first example also entails *guṇa* (as opposed to the lack of it), all by *nipātana*. I have already stated that because of the *Śit* status of *Śa*, which makes it *Ṅit* in view of 1.3.4 *sārvadhātukam...*, *guṇa* should not apply. Of course, with *nipātana* anything can happen. For, if it was not for *nipātana*, *a* of *mṛga* would have been deleted by 6.4.48 *ato lopaḥ*. Our last example, *aṭāṭyā*, is derived from *aṭ* + *Śa* → *aṭ* + *yaK* + *Śa* = *aṭ* + *ya* + *a* where *ṭ* of *aṭ* goes through doubling (*dvirvacana*) with *y* of *yaK*. Given *aṭy* + *aṭy* + *a* + *a*, the first *y* is deleted, and the second *a* will be lengthened to yield: *aṭ (y* → *Ø/) (a* → *ā)* + *aṭy* + *a* = *aṭāṭya*. Finally, *aṭāṭyā* will be derived with affix *ṬāP*. Of course, everything happens by *nipātana*. There is yet another *vārttika* under this rule which proposes the ad hoc derivation of *jāgarām* 'to remain awake' and *jāgaryām* where the first will be derived with affix *a* and the second with *Śa* along with *yaK*.

3.3.102 अ प्रत्ययात्

a pratyayāt
/*a* (deleted 1/1) *pratyayāt* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *bhāve* #95)
pratyayāntebhyo dhātubhyaḥ striyām akāraḥ pratyayo bhavati
Affix *a* occurs after roots which end in an affix when derivates denote action in the feminine.

EXAMPLES:

cikīrṣā 'desire to do'
jihīrṣā 'desire to take away'
puttrīyā 'desire for having a son of one's own'
putrakāmyā 'id.'
lolūyā 'desire to cut over and over again'
kaṇḍūyā 'itching'

1. This rule introduces affix *a* after roots terminated in affixes provided action is denoted in the feminine. Obviously, the input for this rule would be constituted by roots defined by rule 3.1.32 *sanādyantā dhātavaḥ*. This rule forms an exception to *KtiN*. Additionally, affix *a* enables derivates such as *cikīrṣā* 'desire to do', etc., to be termed *prātipadika* by rule 1.2.46 *kṛttaddhitasamāsāś ca*. This, in turn, enables them to receive feminine affix *ṬāP* and nominal endings.

2. Note that the *a* of this rule (*a pratyayāt*) is used without a nominal ending. Technically speaking, the form should have been *aḥ*, ending in the nominative singular as per the Pāṇinian practice. Some still consider the wording of the rule to be: *aḥ pratyayāt*.

3.3.103 गुरोश्च हलः

guroś ca halaḥ
/*guroḥ* 5/1 *ca* 0 *halaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *bhāve* #95, *a* #102)
halanto yo dhātur gurumān tataḥ striyām akāraḥ pratyayo bhavati
Affix *a* occurs after a verbal root which ends in a consonant and contains a long vowel termed *guru* (1.4.11 *saṃyoge guru*) when the derivate signifies action in the feminine.

EXAMPLES:

kuṇḍā 'burning; an adultress'
huṇḍā 'attacking; a tigress'

īhā 'effort, wishing'
ūhā 'argumentation'

1. Note that this is the domain of *dhātu*, and as such, *guru* and *hal* are to be treated as qualifiers (*viśeṣaṇa*) to *dhātu* 'verbal root'. It is for this reason that *Kāśikā* paraphrases the rule as: *halanto yo dhātur gurumān tataḥ...* 'after that root which is *halanta* 'ends in a consonant' and is *gurumān* 'contains a *guru* vowel'. But how does the *Kāśikā* get the meaning of *gurumān* when the rule simply states *guru*? It is possible to interpret *guru* as *gurumān*, because there is no root which ends in a consonant (*halanta*) termed *guru*. The term *guru* always applies to a vowel which is part of something. That something, in this context, has to be the *dhātu* 'verbal root' terminated in a consonant. Thus, it is via *abhedopacāra* 'assumed non-difference' of that which is *guru*, and that which contains it (*gurumān*), that *Kāśikā* interprets *guru* as *gurumān*.

There is still another question. Why is the paraphrase not worded by switching around the two qualifiers *gurumān* and *halanta*? That is, why is the paraphrase not given as: *gurvanto yo dhātur halvān* 'after a verbal root which ends in a *guru* vowel and contains a consonant'. This transposition (*viparyaya*) of qualifiers is not desired as is indicated by the use of *ceṣṭā* 'strife' and *āśaṃsā* 'expectation' in rules 2.3.12 *gatyarthakarmaṇi dvitīyācaturthyau...* and 3.3.134 *āśaṃsāyāṃ bhūtavac ca*. Note that both of these words are derived with affix *a*, and their roots do not end in a *guru* vowel.

3.3.104 षिद्भिदादिभ्योऽङ्

ṣidbhidādibhyo' ṅ
|ṣidbhidādibhyaḥ 5/3 *aṅ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *bhāve* #95)
ṣidbhyo bhidādibhyaś ca striyām aṅ pratyayo bhavati
Affix *aṄ* occurs after verbal roots either marked with *Ṣ* as an *it*, or enumerated in the list headed by *bhidIR* 'to split', when the derivate denotes the action in the feminine.

EXAMPLES:

jarā 'old age'
trapā 'shame, shyness'
bhidā 'splitting'
chidā 'cutting'

1. Note that *bhidā*, etc., refer to the *gaṇapāṭha* (*GP*) listing containing nominal stems which end in affix *aṄ*. This raises a problem. Should affix *aṄ* of this rule be introduced after items referenced here as *bhidā*, etc.,

which already end in *aṄ*? The answer must be in the negative. For, *bhidā*, etc., are nominal stems which already end in affix *aṄ*. Our present rule requires the introduction of affix *aṄ* after verbal roots. What then is the problem? If we interpret that *aṄ* is to be introduced after verbal roots *bhid* 'to split', etc., to derive *bhidā*, etc., then the listing of fully derived forms in the *GP*, becomes vacuous (*vyartha*). If, on the other hand, one refers to the *GP*, as Pāṇini does here, the introduction of the affix for derivation becomes vacuous. It is therefore suggested that neither of these is vacuous. They both, especially the introduction of the affix, are given so that there is no doubt (*asandeha*) about the derivational process or correctness of the forms. Thus, the *GP* listing is given so that one understands that only listed items are correct. The introduction of affix *aṄ* is specified so that one does not consider the derivation of *bhidā*, etc., to have taken place, for example, with the introduction of affix *Ka* of rule 3.1.135 *igupadhajñāprīkiraḥ kaḥ*.

3.3.105 **चिन्तिपूजिकथिकुम्बिचर्चश्च**

cintipūjikathikumbicarcaś ca
/cintipūjikathikumbicarcaḥ 5/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *bhāve* #95, *aṅ* #104)
'citi, pūji, kathi, kumbi, carca' ebhyo dhātubhyo yuci
prāpte striyām aṅ pratyayo bhavati
Affix *aṄ* also occurs after verbal roots *citi* 'to think', *pūji* 'to worship, respect', *kathi* 'to relate, tell', *kumbI* 'to cover' and *carcA* 'to learn, discuss' when the derivates denote the action in the feminine.

EXAMPLES:

cintā 'thinking, worrying'
pūjā 'worship'
kathā 'story'
kumbā 'a slip made of heavy material; periphery of a sacrificial place'
carcā 'recitation, reading'

1. Note that this rule contains verbal roots which belong to the *curādi* group. Since they are all treated as ending in the causal affix *ṆiC*, they qualify for the introduction of affix *yuC*. This rule, for reasons of introducing affix *aṄ* instead, may be treated as a prior exception to rule 3.3.107 *ṇyāsaśrantho yuc*. But since this rule also contains *ca*, *aṄ* is to be optionally introduced with *yuC*. Thus we get the *aṄ*-derivate *cintā* parallel to the *yuC*-derivate *cintanā*.

3.3.106 आतश्चोपसर्गे

ātaś copasarge
/*ātaḥ* 5/1 *ca* Ø *upasarge* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *bhāve* #95, *aṅ* #104)
ākārāntebhyo dhātubhya upasarge upapade striyām aṅ pratyayo bhavati
Affix *aṄ* occurs after verbal roots which end in *ā* when the roots cooccur with a nominal *pada* which contains a preverb and the derivates denote the action in the feminine.

EXAMPLES:

pradā 'a gift'
upadā 'id.'
pradhā 'placing, establishing'
upadhā 'id.'

1. This rule introduces affix *aṄ* after roots which terminate in *ā*, and are used in conjunction with an *upasarga* 'preverb'. Of course, action in the feminine has to be the denotatum. Consequently, affix *aṄ* becomes an exception to *KtiN*. Thus we get *pradā* 'gift', *upadā* 'id.' etc.

A *vārttika* proposes the derivation of *śraddhā* 'respect' and *antarddhā* 'hiding', with *śrat* and *antar* treated as an *upasarga* 'preverb' forming an *upapada*. Note that *śrat* and *antar* are indeclinables (*avyaya*) which, for purposes of the derivation of the two forms, have to be treated as preverbs. The word *antarddhā*, used with affix *Ki*, can also have an alternate form, *antarddhi*.

3.3.107 ण्यासश्रन्थो युच्

ṇyāsaśrantho yuc
/*ṇyāsaśranthaḥ* 5/1 *yuc* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *saṃjñāyām* #19, *striyāṃ ktin* #94, *bhāve* #98)
ṇyantebhyo dhātubhyaḥ 'āsa, srantha' ity etābhyām ca striyāṃ yuc pratyayo bhavati
Affix *yuC* occurs after verbal roots which end in *ṆiC* (3.1.26 *hetumati ca*), and after *āsA* 'to sit' and *śranthA* 'to loosen, relax', when the derivate denotes the action in the feminine.

EXAMPLES:

kāraṇā 'to have something done'
hāraṇā 'to have something taken away'
āsanā 'to have someone sit'
śranthanā 'to loosen; be relaxed'

1. Note that the *ṆiC*-derivates of this rule will form an exception to affix *a* of 3.3.102 *a pratyayāt*. The derivates of *ās* 'to sit' and *śranth* 'to loosen, release, be happy' will derive without *ṆiC*, and hence, not treated as entailing *yuC* as an exception to *a*.

There are the following *vārttika* proposals under this rule:

(*a*) affix *yuC* is to be introduced after verbal roots *ghaṭṭA* 'to move', *vandA* 'to praise' and *vidA* 'to perceive' to derive *ghaṭṭanā* 'shaking', *vandanā* 'praise' and *vedanā* 'perception, information';

(*b*) affix *yuC* is to be introduced to derive *adhyeṣaṇā* 'entreating, soliciting' and *anveṣaṇā* 'inquiry, search' from *iṣ* when the derivate does not denote 'desire';

(*c*) *yuC* can optionally be used with *KtiN* after *iṣ* used with the preverb *pari* to derive *paryeṣaṇā* 'thorough search'. The optional *KtiN* derivate will be: *parīṣṭiḥ* where, because of the *K* of the affix, no *guṇa* will apply.

3.3.108 **रोगाख्यायां ण्वुल् बहुलम्**

rogākhyāyāṃ ṇvul bahulam

/*rogākhyāyām* 7/1 *ṇvul* 1/1 *bahulam* 1/1/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *bhāve* #98)

rogākhyāyāṃ gamyamānāyāṃ dhātor bhahulam ṇvul pratyayo bhavati

Affix *ṆvuL* occurs variously after a verbal root to denote action in the feminine when the derivate denotes the name of a disease.

EXAMPLES:

pracchardikā 'vomiting'
pravāhikā 'diarrhea'
vicarcikā 'itching'

1. This rule, for reasons of *bahulam*, can be accepted as an exception to all rules. Affix *ṆvuL* thus is introduced variously when the denotatum is a 'disease' (*roga*). Thus we get *pracchardikā* 'vomiting', etc. However, *ṆvuL*, at the strength of *bahulam*, may not apply in some other examples. Consider *śiro'rttiḥ* 'headache' which derives from *KtiN*.

There are a series of *vārttika* under this rule which provide for diverse derivates as follows:

(*a*) introduction of affix *ṆvuL* to indicate the meaning of a root as in *āśikā* 'eating' and *śāyikā* 'reclining';

(*b*) introduction of affixes *iK*, *ŚaP* and *tiP* to specify verbal roots as in *śtipaḥ*;

(*c*) introduction of affix *kāra* to merely indicate a sound-segment (*varṇa*) as in *akāraḥ* 'the sound-segment *a*' and *ikāraḥ* 'the sound-segment *i*';

(*d*) introduction of affix *ipha* when the denotatum of *r* as a sound-segment is intended as in *repha* 'the sound-segment *r*';
(*e*) introduction of affix *cha* after *matvartha* with the deletion of its final *-a* to form *matvarthīya* 'relative to that which has the sense of *matUP*';
(*f*) introduction of affix *iÑ* after verbal roots *aj*, etc., to derive *ājiḥ* 'fighting', etc.;
(*g*) introduction of affix *iK* after *kṛṣ* 'to draw', etc., to derive *kṛṣiḥ* 'ploughing, farming', etc.

3.3.109 **संज्ञायाम्**

saṃjñāyām
/*saṃjñāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *bhāve* #98, *ṇvul* #108)
saṃjñāyāṃ viṣaye dhātor ṇvul pratyayo bhavati
Affix *ṆvuL* occurs after a verbal root when the action is denoted as a *saṃjñā* 'name' in the feminine.

EXAMPLES:

uddālakapuṣpabhañjika 'a sport in which the *uddālaka* flowers are crushed'
varaṇapuṣpapracāyikā 'a sport in which the *varaṇa* flowers are gathered'
abhyūṣakhādikā 'a game in which one competes by eating deep-fried breads'
ācoṣakhādikā 'a game in which one competes by eating while suckling'
śālabhañjikā 'a game in which one competes by plucking the flowers of the *śāla* tree'
tālabhañjikā 'a game in which one competes by plucking palm flowers'

1. This rule introduces affix *ṆvuL* also after a verbal root when *saṃjñā* 'name' is denoted. Thus we get the examples: *uddālakapuṣpabhañjikā*, *varaṇapuṣpapracāyikā*, *abhyūṣakhādikā*, etc. All examples entail a genitive *tatpuruṣa* compound obligatorily allowed by 2.2.17 *nityaṃ krīḍājīvikayoḥ*. Note further that the genitive itself is ruled by 2.3.65 *kartṛkarmaṇoḥ kṛti*.

3.3.110 **विभाषाख्यानपरिप्रश्नयोरिञ् च**

vibhāṣā' khyānaparipraśnayor iñ ca
/*vibhāṣā* 1/1 *ākhyānaparipraśnayoḥ* 7/2 *iñ* 1/1 *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyāṃ ktin* #94, *bhāve* #98, *ṇvul* #108)

pariprasne ākhyāne ca gamyamāne dhātor iñ pratyayo bhavati
Affix *iÑ* optionally occurs after a verbal root to denote the action in the feminine when the derivate relates to *ākhyāna* 'answer' or *pariprasna* 'question'.

EXAMPLES:

kā tvaṃ kārim akārṣīḥ 'what work did you do?'
kāṃ kriyām akārṣīḥ 'id.'
kāṃ kṛtyām akārṣīḥ 'id.'
kāṃ kṛtim akārṣīḥ 'id.'
sarvāṃ kārim akārṣam 'I did all the work'
sarvāṃ kārim akārṣam 'id.'
sarvāṃ kriyām akārṣam 'id.'
sarvāṃ kṛtyām akārṣam 'id.'
sarvāṃ kṛtim akārṣam 'id.'

1. This rule optionally introduces affix *iÑ* with other relevant affixes after a verbal root when question (*pariprasna*) and answer (*ākhyāna*) is denoted. The use of *ca* also brings affix *ṆvuL* to the context of this rule. Thus, there will be two examples: one with *iÑ* and the other with *Ṇvul*. Additionally, there may be more. Thus consider the following sentences:

(*i*) *kāṃ tvaṃ kārim akārṣīḥ* 'what work did you do?'
(*ii*) *kāṃ kārikāṃ akārṣīh* 'id.'
(*iii*) *kāṃ kriyām akārṣīḥ* 'id.'
(*iv*) *kāṃ kṛtyām akārṣīḥ* 'id.'
(*v*) *kāṃ kṛtim akārṣīḥ* 'id.'

The above sentences entail affixes *iÑ*, *ṆvuL*, *Śa*, *KyaP*, and *KtiN* respectively. The same can be stated for the other set of sentences. As far as this rule is concerned, *iÑ* is introduced, additionally, and is used with *ṆvuL* which, in turn, becomes optional to other affixes. The word *vibhāṣā* thus refers to the other affixes which may become applicable. Affix *Śa*, additionally, used with *KyaP*, in the above examples, is provided by rule 3.3.100 *kṛñaḥ śa ca*. The *KtiN* is obtained by a split interpretation (*yogavibhāga*) of the same.

Why does Pāṇini place *ākhyāna* 'answer' before *pariprasna* 'question' in the rule? One would normally expect question to come first. The ordering of these two words is given for technical reason in view of rule 2.2.34 *alpāc taram*. This rule requires preplacement of a compound constituent with fewer vowels.

3.3.111 पर्यायार्हर्णोत्पत्तिषु ण्वुच्

paryāyārharṇotpattiṣu ṇvuc
/*paryāyārharṇotpattiṣu* 7/3 *ṇvuc* 1/1/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *striyām ktin* #94, *bhāve* #98, *vibhāṣā* #110)

paryāyārhaṇotpattiṣv artheṣu dhātor ṇvuc pratyayo bhavati

Affix *ṆvuC* optionally occurs to denote the action in the feminine when the derivate signifies *paryāya* 'turn', *arha* 'deserving', *ṛṇa* 'debt' or *utpatti* 'production'.

EXAMPLES:

bhavataḥ śāyikā 'your (polite) turn to sleep'
bhavato' gragrāsikā 'your (polite) turn to eat first'
arhati bhavān ikṣubhakṣikām 'you (polite) deserve to eat the sugarcane'
ikṣubhakṣikāṃ me dhārayasi you owe me the opportunity to eat the sugarcane'
odanabhojikāṃ me dhārayasi 'you owe me a meal of rice'
payaḥpāyikāṃ me dhārayasi 'you owe me a drink of milk'
ikṣubhakṣikāṃ me udapādi 'an opportunity for me to eat the sugarcane is produced...'
odanabhojikāṃ me udapādi 'an opportunity for me to eat a meal of rice is produced...'
payaḥpāyikāṃ me udapādi 'an opportunity for me to have a drink of milk is produced...'

1. This rule optionally introduces affix *ṆyuC* to *ṆvuL* when the derivate denotes a feminine action relative to *paryāya, arha, ṛṇa,* and *utpatti.* Note that there is no formal difference between the derivates of *ṆvuL* and *ṆvuC*. However, there is a difference in their accent (*svara*). A *ṆvuL* derivate will have an *udātta* accent on the syllable which precedes the affix in view of the *L* as an *it* in the affix (6.1.193 *liti*). The *ṆvuC* derivate will, on account of its *C* as an *it*, get *udātta* accent at its final syllable (*antodātta*).

2. Note further, that the derivates of this rule, because of their special meaning constraints, form an exception to affixes *KtiN* and *a*, etc.

3.3.112 आक्रोशे नञ्यनिः

ākrośe nañi aniḥ
/*ākrośe* 7/1 *nañi* 7/1 *aniḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *akartari ca kārake saṃjñāyām* #19, *stiyām* #94, *bhāve* #98)

Affix *ani* occurs after a verbal root used in conjunction with *naÑ* 'not' to denote the action in the feminine when *ākrośa* 'cursing' is denoted.

EXAMPLE:

akaraṇis te vṛṣala bhūyat 'may misfortune befall you, oh, *vṛṣala*'

1. This rule introduces affix *ani* as an exception to *KtiN*, etc., under the semantic condition of *ākrośa* provided also that the root is used in conjunction with the negative particle *naÑ*.

3.3.113 कृत्यल्युटो बहुलम्

kṛtyalyuṭaḥ bahulam
/*kṛtyalyuṭaḥ* 1/3 *bahulam* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
kṛtyasaṃjñakāḥ pratyayā lyuṭ ca bahulam artheṣu bhavanti
Affixes termed *kṛtya* (3.1.95 *kṛtyāḥ*) and *LyuṬ* occur after verbal roots to denote diverse meanings.

EXAMPLES:

snānīyaṃ cūrṇam 'sandal paste fit to be used when bathing'
dānīyo brāhmaṇaḥ 'a *brāhmaṇa* fit to be given a gift'
rājabhojanāḥ śālayaḥ 'rice fit for the dinner of the king'
rājācchādanāni vāsāṃsi 'clothing fit to be worn by the king'

1. Note that *bhāve* and *akartari ca kārake* are no longer carried. The *bahulam* of this rule qualifies its affixes termed *kṛtya* and *LyuṬ* to be used with diverse denotata. That is, they can also be used outside the meaning conditions where they have been introduced (*yatra vihitād tato' nyatrāpi bhavanti*). Thus, affixes termed *kṛtya* (3.1.95 *kṛtyāh*) have been introduced to denote *bhāva* 'root-sense' or *karman* 'object' (3.4.70 *tayor eva kṛtyakhalarthāḥ*). Additionally, they can be used to denote other *kāraka*, in view of the provisions of this rule. Consider, for example, the following:

(*i*) *snānīyaṃ cūrṇam*
(*ii*) *dānīyo vipraḥ*

where the *kṛtya* affix *anīyaR* is used to denote *karaṇa* 'instrument' and *sampradāna* 'dative' respectively. Rules 3.3.115 *lyuṭ ca* and 3.3.117 *karaṇādhikaraṇayoś ca* introduce *lyuṬ* to denote *bhāva* and *karaṇa* and *adhikaraṇa* respectively. However, in view of this rule, one can also get *LyuṬ* when the denotatum is *karman* and *apādāna* as in *apasecanam* 'that which is watered badly' and *prapatanam* 'the point from whence something falls'. Other violations, which result out of *bahulam*, can also be cited. For example, affix *ṆvuL* is introduced to denote *kartṛ* 'agent'. But it can be found to denote *karman* in *pādahārakaḥ* 'that which is carried by feet'. This is a violation of 3.4.67 *kartari kṛt*.

3.3.114 नपुंसके भावे क्तः

napuṃsake bhāve ktaḥ
/*napuṃsake* 7/1 *bhāve* 7/1 *ktaḥ* 1/1/

(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91)
napuṃsakaliṅge bhāve dhātoḥ ktaḥ pratyayo bhavati
Affix *Kta* occurs after a verbal root when the action is denoted in the neuter (*napuṃsaka*).

EXAMPLES:

hasitam 'laughter'
sahitam 'endurance'
jalpitam 'talking'

1. A question is raised against the explicit use of *bhāve* especially since *Kta* can denote *bhāva* in view of 3.4.70 *tayor eva kṛtya....*? But that rule makes its provision only in the context of *bhūta* 'past'. This rule introduces affix *Kta* in a general frame of time, and in the neuter (*napuṃsaka*). Some say that this rule is needed so that affix *Kta* can also be introduced to denote *bhāva* after the intransitive verbal root, in a manner similar to the derivation of *odanasya bhojanam* and *odanasya pākaḥ* with affix *GHaÑ* after verbal root *pac*. Note that this interpretation is based on the understanding that 3.4.70 *tayor eva...* will not allow a derivate which denotes *bhāva* after a transitive root. Furthermore, if affix *Kta*, in this analysis, were introduced after a transitive verbal root to denote *bhāva*, then what nominal ending should be introduced to denote *karman* 'object'? The answer has to be: the genitive marked by a conjoined word which ends in a *kṛt* affix (*kṛdyogalakṣaṇā*). But this is problematic. Rule 2.3.69 *na lokāvyayaniṣṭhā...*blocks the introduction of such a genitive provided by rule 2.3.65 *kartṛkarmaṇoḥ kṛti*. For, affix *Kta* brings assignment of the term *niṣṭhā* (1.1.28 *ktaktavatū niṣṭhā*). This difficulty can be removed by accepting the view that such a blocking cannot be applicable to the domain of rule 3.3.114 *napuṃsake....* For, Paṇini would not, then, have formulated this rule. In summary, this rule introduces *Kta* to denote *bhāva* in neuter after intransitive verbal roots.

3.3.115 ल्युट् च

lyuṭ ca
/*lyuṭ* 1/1 *ca* Ø/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, napuṃsake bhāve #114)
napuṃsakaliṅge bhāve dhātor lyuṭ pratyayo bhavati
Affix *LyuṬ* also occurs after a verbal root when the action is denoted in the neuter.

EXAMPLES:

hasanaṃ chātrasya 'the laughter of the student'
śobhanam 'beautiful'

japanam 'talking'
śayanam 'sleeping'
āsanam 'seat'

1. This rule, additionally, introduces affix *LyuṬ* to *Kta* with the denotatum as stated in the earlier rule. Why were the two rules not read as one? The split-rule presentation is necessary because of the subsequent rule. The next rule requires only the *anuvṛtti* of *LyuṬ*. If the two rules were presented as one then *Kta* would also carry to the next rule.

3.3.116 कर्मणि च येन संस्पर्शात् कर्तुः शरीरसुखम्

karmaṇi ca yena saṃsparśāt karttuḥ śarīrasukham
/*karmaṇi* 7/1 *ca* Ø *yena* 3/1 *saṃsparśāt* 5/1 *karttuḥ* 6/1 *śarīrasukham* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *napuṃsake bhāve* #114, *lyuṭ* #115)
yena karmaṇā saṃspṛśyamānasya kartuḥ śarīrasukham utpadyate tasmin karmaṇy upapade dhātor napuṃsakaliṅge bhāve lyuṭ pratyayo bhavati
Affix *LyuṬ* occurs after a verbal root to denote an action in the neuter when the root cooccurs with a nominal *pada* which denotes *karman* and the agent derives physical pleasure from contacting the object.

EXAMPLES:

payaḥpānaṃ sukham 'drinking of milk is comforting'
odanabhojanaṃ sukham 'eating of rice is comforting'

1. This rule introduces affix *LyuṬ* after a verbal root to denote an action in the neuter when it is used in conjunction with a *pada* which denotes an object, and when the agent of the sentence finds physical (as opposed to mental) happiness by means of touching the object. A question is raised as to why this rule should be stated when its provisions could easily be covered by the preceding rule. Commentators explain that a separate rule is necessary so that, by specifying the condition of the conjoined word which denotes an object, an obligatory *upapada* compound can be formed. Thus, *odanabhojanaṃ* of *odanabhojanaṃ sukham* is an *upapada* compound where *odana* + *Ṅas* constitutes the conjoined *pada* which denotes object. The preceding rule cannot derive this kind of compound to denote action in the neuter. The same is true about the next example *payaḥpānam*. It is argued that these examples, with their actions of 'consuming' and 'drinking', cannot satisfy the condition of *saṃsparśa* 'touch'. The word *saṃsparśa* is here used to underline the fact that such formations are to be blocked in the context where the agent does not have any physical contact with the object. Consider the following counter-examples:

(*a*) *agnikuṇḍasyopāsanaṃ sukham* 'it is a joy to sit by the fireside'

(*b*) *tūlikāyā utthānaṃ sukham* 'it is a joy to wake up in a bed with a mattress filled with cotton'

(*c*) *guroḥ snāpanaṃ sukham* 'it is a joy to assist the teacher in bathing'

(*d*) *putrasya pariṣvañjanaṃ sukham* 'embracing the son brings joy'

Sentence (*a*) illustrates that the condition of *saṃsparśa* (physical contact) is not met there. Of course, proximity does not entail any contact. Sentence (*b*) does not meet the condition of the object which forms the conjoined word. It is clear that the word *tūlikāyāḥ* in the ablative denotes *apādāna*. The next sentence entails *guru* as the object, and not the agent, of the action denoted by *snāpanam*. Finally, the last example illustrates that the embrace offers mental joy (*mānasī prītiḥ*) rather than the physical.

3.3.117 करणाधिकरणयोश्च

karaṇādhikaraṇayoś ca
/*karaṇādhikaraṇayoḥ* 7/2 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *lyuṭ* #115)
karaṇe adhikaraṇe ca kārake dhātor lyuṭ pratyayo bhavati
Affix *LyuṬ* also occurs after a verbal root when the derivate denotes *karaṇa*, or *adhikaraṇa*.

EXAMPLES:

idhmapravaścanaḥ 'that by means of which one cuts; an axe'
palāśaśātanaḥ 'that by means of which one cuts the *palāśa* tree'
godohanī '(pot) used for milking the cow'
saktudhānī '(pot) in which *saktu* is stored'

3.3.118 पुंसि संज्ञायां घः प्रायेण

puṃsi saṃjñāyāṃ ghaḥ prāyeṇa
/*puṃsi* 7/1 *saṃjñāyām* 7/1 *ghaḥ* 1/1 *prāyeṇa* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karaṇādhikaraṇayoḥ* #117)
pulliṅgayoḥ karaṇādhikaraṇayor abhidheyayor dhātor ghaḥ pratyayo bhavati samudāyena cet saṃjñā gamyate
Affix *GHa* generally occurs after a verbal root when the derivate names a *karaṇa* or *adhikaraṇa* in the masculine.

EXAMPLES:

dantacchadaḥ 'that which covers the teeth; lips'
uraśchadaḥ paṭaḥ 'that which covers the chest; a garment'
ākaraḥ 'the place where they arrive to work; a mine'
ālayaḥ 'the place where one settles down; home'

1. This rule introduces affix *GHa* after a verbal root to denote *karaṇa*, or *adhikaraṇa*, when the derivate is to denote a name in the masculine.

The *karaṇa* and *adhikaraṇa* thus become the denotata of the affix. The word *prāyeṇa* is used so that application of this rule does not become absolute (*Kāś.*: *prāyagrahaṇam akārtsnyārtham*). The three conditions: *puṃsi*, *saṃjñāyām* and *prāyeṇa* distinguish this rule from the preceding.

3.3.119 **गोचरसंचरवहव्रजव्यजापणनिगमाश्च**

> *gocarasaṃcaravahavrajavyajāpaṇanigamāś ca*
> */gocara...nigamāḥ* 1/3 (*itar. dv.*); *ca* Ø/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karaṇādhikaraṇayoḥ* #117, *puṃsi saṃjñāyām ghaḥ* #119)
> *gocarādayaḥ śabdā ghapratyayāntā nipātyante pūrvasmin evārthe*
> Affix *GHa* occurs in the derivation, by *nipātana*, of *gocara, saṃcara, vaha, vraja, vyaja, āpaṇa* and *nigama*, when the derivate names a *karaṇa*, or *adhikaraṇa*, in the masculine.

EXAMPLES:

> *gocaraḥ* 'grazing field for cows'
> *saṃcaraḥ* 'that by which one goes; road, path'
> *vahaḥ* 'that by means of which one goes; a vehicle, conveyance'
> *vrajaḥ* 'that by means of which one moves'
> *vyajaḥ* 'that by means of which one moves the air; a fan'
> *āpaṇaḥ* 'the place where they come to barter; marketplace'
> *nigamaḥ* 'the place which one enters; marketplace; the *Vedas*'

1. This rule provides for *gocara*, etc., in the sense of *karaṇa* and *adhikaraṇa*, as is the case with the previous rule. The derivates of this rule are given as ad hoc (*nipātana*) so that they can be kept out of the scope of rule 3.3.121 *halaś ca*. For, all these derivates entail a verbal root which ends in a consonant. This rule can also be treated as a prior exception (*purastāpavāda*) to the *GHaÑ* of rule 3.3.121 *halaś ca*. A derivate such as *vyajaḥ* is able to block the application of rule 2.4.56 *ajer vyaja...*, essentially because of *nipātana*. Rule 2.4.56 provides *vī* as a replacement for verbal root *aj* before an *ārdhadhātuka* affix other than *GHaÑ* and *aP*.

The *ca* of the rule is used to bring something not stated (*anuktasamuccayārtha*) within the scope of this rule. This may cover examples, such as, *kaṣaḥ* and *nikaṣaḥ* 'touchstone' which otherwise would have involved *GhaÑ*. But these examples could easily be covered by the previous rule. Why do we have to have this rule? This rule is stated because its examples are given as ad hoc. This is not the case with either the previous, or the following rule, which assigns *GHaÑ*. These rules both involve examples with fairly straightforward derivational meanings: *karaṇa* and *adhikaraṇa*.

3.3.120 अवे तॄस्त्रोर्घञ्

ave tṛstror ghañ
/*ave* 7/1 *tṛstroḥ* 6/2 *ghañ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karaṇādhikaraṇayoḥ* #117, *puṃsi saṃjñāyām prāyeṇa ghaḥ* #119)
'ava' upapade tarates tṛṇāteś ca dhātoḥ karaṇādhikaraṇayoḥ saṃjñāyāṃ ghañ pratyayo bhavati
Affix *GHaÑ* occurs generally after verbal roots *tṝ* 'to float' and *stṛÑ* 'to spread' when the roots cooccur with a nominal *pada* which contains *ava* and the derivate denotes the name of a *karaṇa*, or an *adhikaraṇa* in the masculine.

EXAMPLES:

avatāraḥ 'that by means of which one comes down; incarnation; steps of a pond'
avastāraḥ 'that by means of which one covers; tent; curtain'

This is an exception to *GHa* of the preceding rule. The word *prāyeṇa* is also carried here. Consequently, some derivates may denote a *karaṇa* or *adhikaraṇa*, but not a name (*saṃjñā*). This also attests to the observation of *Kāśika* that *prāyeṇa* 'generally' could be applicable to 'all' conditions (*kārtsyena*) of a rule which includes it. The *Ñ* of *GHaÑ* is intended for *vṛddhi* (cf. 7.2.114 *mṛjer vṛddhiḥ*) as well as for accent (*svarārtha*). A replacement in *kU* (*kutva*) by rule 7.3.52 *cajoḥ kughiṇyatoḥ*, under the condition of affixal *GH* is applicable only subsequently (*uttaratra*; see *Kāś.* ad this rule).

3.3.121 हलश्च

halaś ca
/*halaḥ* 5/1 *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karaṇādhikaraṇayoḥ* #117, *puṃsi saṃjñāyām prāyeṇa* #118, *ghañ* #120)
halantād dhātoḥ karaṇādhikaraṇayor ghañ pratyayo bhavati
Affix *GHaÑ* generally occurs after a verbal root also when the root ends in a *hL* (consonant; *Śs. 5-14*) and the derivate names a *karaṇa* or *adhikaraṇa* in the masculine.

EXAMPLES:

lekhaḥ 'that in which one inscribes; writing'
vedaḥ 'that by which one knows; the *vedas*'
veṣṭaḥ 'that which is entered into; tent; garment'
bandhaḥ 'that which obstructs; obstruction'
mārgaḥ 'that on which one seeks; road'

apamārgaḥ 'that by which something is removed; a particular plant used for curing diseases'
vīmārgaḥ 'a particular tree; broom'

1. This rule can be treated as an exception to the preceding *GHa* rules. For, it carries all three conditions of *karaṇdhikaraṇayoḥ, puṃsi* and *saṃjñyāyām prāyeṇa*. The derivates of this rule entail *vṛddhi* and *kutva*.

3.3.122 **अध्यायन्यायोद्यावसंहाराधारावायाश्च**

adhyāyanyāyodyāvasaṃhārādhārāvāyāś ca
/*adhyāya...vāyāḥ* 1/3 (*itar. dv.*) *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karaṇādhikaraṇayoḥ* #117, *puṃsi saṃjñāyām prāyeṇa* #118, *ghañ* #120)
adhyāyādayaḥ śabdāḥ ghañantā nipātyante
Affix *GHaÑ* occurs, by *nipātana*, in the derivation of *adhyāya, nyāya, udyāva, saṃhāra, ādhāra*, and *āvāya* when the derivate names a *karaṇa*, or *adhikaraṇa* in the masculine.

EXAMPLES:

adhyāyaḥ 'that in which one studies; a chapter, book'
nyāyaḥ 'that by which one is guided; rule, law; precept'
udyāvaḥ 'that with which something else is mixed; mixture'
saṃhāraḥ 'that by which something is destroyed'
ādhāraḥ 'that in which something is held; locus'
āvāyaḥ 'that where weaving is done'

1. This ad hoc provision is in consonance with a derivation in *GHaÑ*. The problem that *GHaÑ* is made available to roots which terminated in a consonant is no problem at all. The ad hoc provision is made so that roots not terminated in a consonant (*ahalatha*) can also qualify for the introduction of the affix. Our ad hoc derivates underlie roots which do not terminate in a consonant.

The *ca* of this rule can, again, be treated as used to account for something not stated (*anuktasamuccaya*). Consider for example *avahāraḥ* 'removal'. Haradatta (*PM* ad *Kāś.*) states that the author of the *vṛtti* has, indeed, found an ingenious way to account for *avahāraḥ*, which, otherwise, is accounted for by *vārttika*.

3.3.123 **उदङ्कोऽनुदके**

udaṅko' nudake
/*udaṅkaḥ* 1/1 *anudake* 7/1/
(*pratyayaḥ* #3.1.1 *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karaṇādhikaraṇayoḥ* #117, *puṃsi saṃjñāyām prāyeṇa* #118, *ghañ* #120)
'*udaṅka*' *iti nipātyate, anudakaviṣayaś ced dhātvartho bhavati*

Affix *GHaÑ* occurs in the derivation of *udaṅka* by *nipātana* provided the action does not relate to water and the derivate names a *karaṇa*, or *adhikaraṇa*, in the masculine.

EXAMPLE:

tailodaṅkaḥ 'oil-can made of hide'

1. This rule, again, provides for a derivate via *nipātana*. A separate rule to account for what could have been accounted for by rule 3.3.121 is made necessary in view of the condition of *anudake* 'when the denotatum is not water'.

3.3.124 **जालमानायः**

jālamānāyaḥ
/*jālam* 1/1 *ānāyaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karaṇādhikaraṇayoḥ* #117, *puṃsi saṃjñāyām prāyeṇa* #118, *ghañ* #120)
'ānāyaḥ' iti nipātyate, jālaṃ cet tad bhavati
Affix *GHaÑ* occurs, by *nipātana*, in the derivation of *ānāyaḥ* when the derivate denotes 'snare, fishing net'.

EXAMPLES:

ānāyo matsyānām 'fishing net'
ānāyo mṛgāṇām 'snare for catching deer'

3.3.125 **खनो घ च**

khano gha ca
/*khanaḥ* 5/1 *gha* (deleted 1/1) *ca* Ø /
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karaṇādhikaraṇayoḥ* #117, *puṃsi saṃjñāyām prāyeṇa* #118, *ghañ* #120)
khanater dhātoḥ karaṇādhikaraṇayor ghaḥ pratyayo bhavati, cakārād ghañ ca
Affix *GHa*, as well as *GHaÑ*, occurs after verbal root *khanA* when the derivate names a *karaṇa*, or *adhikaraṇa* in the masculine.

EXAMPLES:

akhanaḥ 'that by means of which, or where, one digs; a spade; mine'
ākhānaḥ 'id.'

1. The inclusion of *ca* in the rule is made so that *GHaÑ* can also be optionally introduced to *GHa*. Derivates of *GHaÑ*, as usual, will involve *vṛddhi* by rule 7.2.116 *ata upadhāyāḥ*.

3.3.126 **ईषद्दुःसुषु कृच्छ्राकृच्छ्रार्थेषु खल्**

īṣadduḥsuṣu kṛcchrākṛcchrārtheṣu khal

/*īṣadduḥsuṣu* 7/3 (*itar. dv.*); *kṛcchrārtheṣu* 7/3 (*bv.* with *int. dv.*); *khal* 1/1/ (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)

'īṣad, dus, su' ity eteṣūpapadeṣu kṛcchrākṛcchrārtheṣu dhātoḥ khal pratyayo bhavati

Affix *KHaL* occurs after a verbal root when the root cooccurs with a nominal *pada* which contains *īṣat*, *dus*, or *su* when the derivate meaning is qualified with *kṛcchra* 'difficult' and *akṛcchra* 'easy'.

EXAMPLES:

īṣatkaro bhavatā kaṭaḥ 'the mat is easy for you to make'
duṣkaraḥ 'difficult to make or do'
sukaraḥ 'easy to make or do'
īṣadbhojaḥ 'easy (pleasant) to eat'
durbhojaḥ 'difficult to eat'
subhojaḥ 'easy (pleasant) to eat'

1. Note that this rule lists the three cooccurring elements with two generalized meanings of *kṛcchra* and *akṛcchra*. How do we know which meaning is related to what *upapada*? We know from usage that *īṣat* and *su* do not occur in the sense of *kṛcchra*. Similarly, *duḥ* does not occur when the context is related to *akṛcchra*. This will restrict *īṣat* and *su* to the meaning condition of *akṛcchra*, as opposed to *dus*, which will be restricted to the condition of *kṛcchra*.

Note that affix *KHaL* has been provided by rule 3.4.70 *tayor eva*...in the sense of *bhāva* and *karman*. The *KH* as an *it* in the affix is not intended, here, for *khitkārya* 'operations relative to an item marked with *KH* as an *it*', as per rule 6.3.66 *khity anavyayasya*. For, *khitkārya* is given there in the context of items other than indeclinables (*anavyaya*). Of course, *dus*, etc., are indeclinables. Why is this affix then marked with *KH* as an *it*? To facilitate the introduction of augment *mUM* in subsequent cases. Thus, affix *KHaL* is subsequently introduced even when a non- indeclinable forms an *upapada*. Augment *mUM* is facilitated there via the application of rule 6.3.67 *arurdviṣadajantasya*.... The *L* as an *it* is, of course, intended to assure the *udātta* accent on what precedes the affix (cf. 6.1.193 *liti*).

3.3.127 कर्तृकर्मणोश्च भूकृञोः

kartṛkarmaṇoś ca bhūkṛñoḥ

/*kartṛkarmaṇoḥ* 7/2 *ca* Ø *bhūkṛñoḥ* 6/2/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *īṣadduḥsuṣu kṛcchrākṛcchrārtheṣu khal* #126)

bhavateḥ karoteś ca dhātor yathāsaṃkhyaṃ kartari karmaṇi copapade cakārād īṣadādiṣu ca khal pratyayo bhavati

Affix *KHaL* also occurs after verbal roots *bhū* and *DUkṛÑ* when the roots, in addition to *īṣat*, *dus*, and *su*, cooccur with a nominal *pada* which denotes *kartṛ* and *karman* respectively and the derivate meaning is qualified with *kṛcchra* and *akṛcchra*.

EXAMPLES:

īṣadāḍhyambhavaṃ bhavatā 'you (polite) are to be rich with ease'
durāḍhyambhavam 'difficult to be rich'
īṣadāḍhyaṅkaraḥ 'easy to be made rich'
svāḍhyaṅkaro devadatto bhavatā 'it is easy for you to make Devadatta rich'

1. This rule provides for the introduction of affix *KHaL* after verbal roots *bhū* and *kṛ* when they cooccur with a *pada* which denotes *kartṛ* and *karman* respectively. Thus, *kartṛ* and *karman* are not given here as the denotata of the affix. They are given as *upapada*. The *ca* is used so that *īṣat, dus* and *su* can also be part of the cooccurrence condition.

A *vārttika* under this rule suggests that *kartṛ* and *karman*, used here as part of the cooccurrence condition, should be treated as if they ended in *CvI*. This will bring the sense of 'that which became something it previously was not' (*abhūtatadbhāva*) close to the meaning of the derivates.

3.3.128 **आतो युच्**

āto yuc
/*āt*ḥ 5/1 *yuc* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *īṣadduḥsuṣu kṛcchrākṛcchrārtheṣu* # 126)
kṛcchrākṛcchrārtheṣu īṣadādiṣūpapadeṣu ākārāntebhyo dhātubhyo yuc pratyayo bhavati
Affix *yuC* occurs after verbal roots when they end in *ā*, and cooccur with a nominal *pada* which contains *īṣat, dus,* and *su,* provided the derivate meaning is qualified with *kṛcchra* and *akṛcchra.*

EXAMPLES:

īṣatpānaḥ somo bhavatā 'it is easy for you to drink Soma'
duṣpānaḥ 'difficult to drink'
supānaḥ 'easy to drink'
īṣaddāno gaur bhavatā 'it is easy for you to make the gift of a cow'
durdānaḥ 'difficult to give'
sudānaḥ 'easy to give'

1. This rule introduces affix *yuC*, an affix with its denotatum similar to *KHaL* (*khalartha*), when *īṣat, dus* and *su* occur with the verbal roots terminated in *a*. Affix *yuC* is, thus, an exception to *KHaL*. Note that rule 7.1.1 *yuvor anākau* orders the *yu* to be replaced with *ana*. Given the example, *īṣatpānaḥ somo bhavatā* 'Soma is easy for you to drink', *bhavat* 'you' must be put in the instrumental to denote the agent, because affix *yuC* in *īṣatpānaḥ* denotes *karman*. Affix *yuC*, thus, forms an exception to *KHaL*, though shares similar denotata.

3.3.129 छन्दसि गत्यर्थेभ्यः

chandasi gatyarthebhyaḥ
/*chandasi* 7/1 *gatyarthebhyaḥ* 5/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *īṣadduḥsuṣu kṛcchrākṛcchrārtheṣu* #126, *yuc* #128)
īṣadādiṣu kṛcchrākṛcchrārtheṣūpapadeṣu gatyarthebhyo dhātubhyaś chandasi viṣaye yuc pratyayo bhavati
Affix *yuC* occurs, in the Vedic, after verbal roots with the signification of *gati* 'motion' when the roots cooccur with a nominal *pada* which contains *īṣat, dus*, and *su* and the derivate meaning is qualified with *kṛcchra* and *akṛcchra*.

EXAMPLES:

sūpasadano' gniḥ 'Agni, the one who is easy to reach'
sūpasadanam antarikṣam 'the world. in between (the earth and the heaven) is easy to reach'

3.3.130 अन्येभ्योऽपि दृश्यते

anyebhyo' pi dṛśyate
/*anyebhyaḥ* 5/3 *api* Ø *dṛśyate* (verbal *pada*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *īṣadduḥsuṣu kṛcchrākṛcchrārtheṣu* #126, *yuc* #128, *chandasi* #129)
anyebhyo' pi dhātubhyo gatyarthebhyaś chandasi viṣaye yuc pratyayo bhavati
Affix *yuC* also is seen to occur, in the Vedic, after verbal roots signifying something other than *gati* when the roots cooccur with a nominal *pada* which contains *īṣat, dus* and *su* and the derivate meaning is qualified with *kṛcchra* or *akṛcchra*.

EXAMPLES:

sudohanām akṛṇod... gām '... made it easy to milk...'
suvedanām akṛṇod... gām '... made it easy to find...'

3.3.131 वर्तमानसामीप्ये वर्तमानवद्वा

vartamānasāmīpye vartamānavad vā
/*vartamānasāmīpye* 7/1 *vartamānavat* Ø *vā* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
vartamānasamīpe bhūte bhaviṣyati ca vartamānād dhātor vartamānavat pratyayā bhavanti
Affixes which denote the action at the current time optionally occur after a verbal root when the action is denoted at a time proximate to the current.

EXAMPLES:

kadā devadatta āgato' si 'when did you come, Devadatta!'
ayam āgacchāmi 'I am coming now'
āgacchantam eva māṃ viddhi 'consider me just arriving'
ayam āgamam 'I just arrived'
eṣo' smy āgataḥ 'here I have arrived'
kadā devadatta gamiṣyasi 'when will you go Devadatta!'
eṣa gacchāmi 'here I go'
gacchantam eva māṃ viddhi 'consider me gone'
eṣa gamiṣyāmi 'here I go'
gantāsmi 'id.'

1. This rule optionally allows for a verbal root whose action is located at a time proximate to *vartamāna* 'current time' to receive affixes similar to those whose action is located at the current time. The phrase *vartamāna-sāmīpye* 'in the proximity of the current time' is interpreted as referring to 'past' or 'future' proximate to the current time. The *vatI* of *vartamāna-vat* clearly marks the rule as an extension (*atideśa*). Pāṇini uses *vatI* to ensure that all instances of *vartamāna* do not come under the scope of this rule. What then should be accepted as the scope of this extension? Commentators note, that only those instances where the action is conditioned by *vartamāne* should come under the scope of this rule. The reference, here, is to the specification of rule 3.2.123 *vartamāne laṭ*. This clearly establishes the scope of the extension up to, and including, rule 3.3.1 *uṇādayo bahulam*. But still caution must be used. Consider 3.2.128 *pūṅyajoḥ...* which introduces *ŚānaN*, parallel to *LAṬ* when the action is located at the current time. This affix cannot optionally be used when the relative action is located in the past or future. It is for this reason that *vatI* is used in the rule.

Consider now the following sentences:

(*a*) *devadatta kadā' gato' si* 'when did you arrive Devadatta?'
(*b*) *ayam āgacchāmi* 'I arrived just now'
(*c*) *āgacchantam eva māṃ viddhi* 'consider me arrived'
(*d*) *ayam āgamam* 'I have just arrived'
(*e*) *eṣo' smi āgataḥ* 'here I am'
(*f*) *eṣa āgatavān* 'id.'
(*g*) *kadā gamiṣyasi* 'when will you go?'
(*h*) *eṣa gacchāmi* 'I (will) go now'
(*i*) *gacchantam eva māṃ viddhi* 'consider me gone'
(*j*) *eṣa gamiṣyāmi* 'I (will) go right now'
(*k*) *eṣa gantāsmi* 'consider me gone'

Sentences (*b–e*) and (*h–i*) constitute answers to the questions posed by sentences (*a*) and (*g*) respectively. Sentences (*b*) and (*h*) manipulate the

replacements of *LAṬ* to locate answers for an action in the past and future. The *ŚatṚ* of (*c*) and (*i*) in *āgacchantam* and *gacchantam* do the same. Similar observations can be made about other affixal usages. Sentences (*d*), (*f*), and (*i*) manipulate the past. Similarly, one can find the future also employed to answer the questions.

3.3.132 आशंसायां भूतवच्च

> *āśaṃsāyāṃ bhūtavac ca*
> */āśaṃsāyām 7/1 bhūtavat Ø ca Ø/*
> *(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, vartamānavad vā #131)*
> *bhaviṣyati kāle āśaṃsāyām gamyamānāyāṃ dhātor vā bhūtavat pratyayā bhavanti*
> Affixes which denote past action also optionally occur after a verbal root when *āśaṃsā* 'expectation' is expressed.

EXAMPLES:

> *upādhyāyaś ced āgamat vyākaraṇam adhyagīṣmahi* 'if the teacher came, we will study grammar'
> *upādhyāyaś ced āgataḥ vyākaraṇam adhītavantaḥ* 'id.'
> *upādhyāyaś ced āgacchati vyākaraṇam adhīmahe* 'id.'
> *upādhāyaś ced āgamiṣyati vyākaraṇam adhyeṣyāmahe* 'id.'

1. Note that *vā* 'optionally' still carries. The condition of *vartamāna-sāmīpye*, however, is dropped. The condition of *āśaṃsā*, in the context of this rule, has been explained as: *aprāptasya priyārthasya prāptum icchā* 'desire to obtain something dear'. Obviously, future becomes the scope of the action denoted by *aśaṃsā*. Note that, the wish may be expressed at the current time but its attainment falls within the scope of future. This rule provides for the introduction of affixes similar to the past and present in the context of an action located in the future. The *ca* of the rule brings *vartamāna* close to the context of this rule. Let us examine the following:

(*a*) *upādhyāyaś ced (āgamat) (āgataḥ), (āgacchati), (āgamiṣyati); ete vyākaraṇam (adhyagīṣmahi), (adhītavantaḥ), (adhīmahe), adhyeṣyāmahe* 'if the teacher comes we will study grammar'

Note that *āgamat* and *adhyagīṣmahi* are forms of *LUṄ* which locate the action in the past in general. Forms such as *āgataḥ* and *adhītavantaḥ* similarly employ the *niṣṭhā* (1.1.25 *ktaktavatū niṣṭhā*). The present affixes will yield forms such as *āgacchati* and *adhīmahe* with *LAṬ*. The option of future provides forms, such as, *āgamiṣyati* and *adhyeṣyāmahe*.

Commentators explain that since the rule uses *bhūtavat*, with its denotatum as *bhūtasāmānya* 'general past', *LUṄ* alone should come under

the scope of this rule. Thus, proposals for locating particular past actions via affixes *LAṄ* (3.2.111 *anadyatane laṅ*) and *LIṬ* (3.2.115 *parokṣe liṭ*) must fall outside the scope of this rule. *Kāśikā* states that affixes *LAṄ* and *LIṬ* cannot be allowed because they denote a particular past (*bhūtaviśeṣa*), as against the general past (*bhūtasāmānya*), which forms the basis for the extension in this rule (*sāmānyātideśe viśeṣānatideśāl laṅliṭau na bhavataḥ*).

3.3.133 क्षिप्रवचने लृट्

kṣipravacane lṛṭ
/*kṣipravacane* 7/1 *lṛṭ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *āśaṃsāyām* #132)
kṣipravacana upapade āśaṃsāyāṃ gamyamānāyāṃ dhātor lṛṭ pratyayo bhavati
Affix *LṚṬ* occurs after a verbal root used in conjunction with a nominal *pada* which signifies *kṣipram* 'quickly' provided *āśaṃsā* is expressed.

EXAMPLES:

upādhyāyaś cet kṣipram āgamiṣyati, kṣipraṃ vyākaraṇam adhyeṣyāmahe 'if the teacher comes quickly, we will quickly study the grammar'

1. Derivates of this rule form an exception to the condition of *bhūtavac ca* of the preceding rule. The word *vacana* in *kṣipravacana* is used so that synonyms of *kṣipra* can also be included in the cooccurrence condition. That is, *kṣipra* is not limited here to denoting its form only (*svarūpa* 1.1.68 *svaṃ rūpaṃ...*).

If this rule were to form an exception to the preceding, then Pāṇini should have formulated this rule simply as: *na kṣipravacane* 'but not when *kṣipra*, or its synonyms, occur in conjunction with the verbal root'. Once the provision of the preceding rule was negated *āśaṃsā* could have automatically made the introduction of *LṚṬ* 'general future'. For, *āśaṃsā* necessarily entails future. Commentators explain that a negative formulation of this rule would not be able to block the introduction of *LUṬ*, which also denotes future. It is to keep *LUṬ* out of the scope of this rule that Pāṇini formulates our present rule with the explicit mention of *LṚṬ*.

3.3.134 आशंसावचने लिङ्

āśaṃsāvacane liṅ
/*aśaṃsāvacane* 7/2 *liṅ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.3.91)
āśaṃsā yenocyate tad āśaṃsāvacanaṃ tasminn upapade dhātor liṅ pratyayo bhavati

Affix *LIṄ* occurs after a verbal root used in conjunction with a *pada* which denotes *āśaṃsā*.

EXAMPLE:

upādhyāyaś ced āgacchet āśaṃse yukto' dhīyīya 'if the teacher comes, I hope you will study diligently'

1. This rule introduces affix *LIṄ* after roots which cooccur with a word which denotes *āśaṃsā*. Note that, *āśaṃsā* necessarily entails future, and as such, the provisions of this rule could have been covered by rule 3.3.132 *āśaṃsāyāṃ bhūtavac ca*. A separate rule is formulated, however, to block the introdcution of affixes introduced in consonance with *bhūtavac ca* of 3.3.132. Note that, affixes similar to the past (*bhūta*) are optionally introduced to the future under the *āśaṃsā* provisions of rule 3.3.132. This rule simply introduces *LIṄ*. Besides, this rule requires the denotation of *āśaṃsā* via its cooccurrence condition.

Kāśikā brings out an interesting aspect of rule formulation with the example; *āśaṃse kṣipram adhīyīya* 'I hope you will learn fast'. It is stated that this example entails *vipratiṣedha* 'conflict among two rules of equal strength'. That is, in addition to this present, the preceding rule also becomes applicable to this example. Consider the following examples which illustrate equal strength (*tulyabalatā*):

(*a*) *kṣipram vyākaraṇam adhyeṣyāmahe* 'we will quickly study grammar'
(*b*) *āśaṃse yukto' adhīyīya* 'I hope you will study diligently'
(*c*) *āśaṃse kṣipram adhīyīya* 'I hope you will learn fast'

It is stated that sentence (*a*) falls within the scope of rule 3.3.133, at the strength of the condition of *kṣipra*. Consequently, affix *LṚṬ* is introduced after verbal root *adhi-i*. Sentence (*b*) illustrates that affix *LIṄ* must be used because of the cooccurrence condition of *āśaṃsā*. Since rules 3.3.133 and 3.3.134 both have their separate scope of application elsewhere, they are *sāvakāśa*. They both become applicable in case of sentence (*c*) since both the conditions of *kṣipra* and *āśaṃsā* are met. The example is derived with the introduction of affix *LIṄ*, based upon resolution of the conflict in favor of the subsequent rule (*paratva*; 1.4.2 *vipratiṣedhe paraṃ kāryam*).

3.3.135 **नाऽनद्यतनवत् क्रियाप्रबन्धसामीप्ययोः**

nānadyatanavat kriyāprabandhasāmīpyayoḥ
/nānadyatanavat Ø kriyāprabandhasāmīpyayoḥ 7/2 (itar. dv.)/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91)
anadyatanavat pratyayavidhir na bhavati kriyāprabandhe sāmīpye ca gamyamāne

Affixes which occur to denote the action at a non-current time

do not occur after a verbal root when *kriyāprabandha* 'uninterrupted action' and *sāmīpya* 'immediate time' is denoted.

EXAMPLES:

yāvajjīvam bhṛśaṃ annaṃ adāt 'as long as he lived he gave food'
...bhṛśaṃ annaṃ dāsyati '...he will always give food'
yāvajjīvaṃ putro' dhyāpipat 'as long as he lived he taught his son'
yāvajjīvam adhyāpayiṣyati 'he will teach as long as he lives'
ye' yaṃ paruṇamāsy atikrāntā etasyām upādhyāyo' gnīn ādhita 'on the full moon that has just passed, the teacher consecrated the ritual fires'
ye' yaṃ paruṇamāsy atikrāntā etasyām upādhyāyo somenāyaṣṭa 'on the full moon that has just passed, the teacher performed the Soma sacrifice'
ye' yaṃ paurṇamāsy atikrāntā etasyām upādhyāyo gām adita 'on the full moon that has just passed, the teacher made the gift of a cow'
ye' yam amāvāsyā āgāminī, etasyām upādhyāyo' agnīn ādhāsyate 'on this coming night of the (lunar) new moon, the teacher will consecrate the ritual fires'
ye' yaṃ paruṇamāsy atikrāntā, etasyām upādhyāyo somena yakṣyate 'on this coming night of the (lunar) new moon, the teacher will perform the Soma sacrifice'
ye' yam amāvāsyā" gāminī, etasyām upādhyāyo gāṃ dāsyate 'on this coming night of the (lunar) new moon, the teacher will make gift of a cow'

1. This rule negates affixal operations similar to those which obtain in the context of *anadyatana* 'not relative to the current day' when continuity (*prabandha*) and proximity (*sāmīpya*) are expressed. Consider the following examples for illustration:

(*a*) *yāvajjīvam bhṛśam annam adāt* 'he kept giving food generously as long as he lived'
(*b*) *yāvajjīvam bhṛśam annaṃ dāsyati* 'he will keep giving food generously as long as he lives'
(*c*) *yeyaṃ paurṇamāsy atikrāntā etasyām upādhyāyo agnīn ādhita somenāyaṣṭa gām adita* 'on the full-moon which just passed the teacher consecrated the ritual fire, performed the Soma sacrifice, and made the gift of a cow'
(*d*) *yeyam amāvāsyā" gāminī etasyām upādhyāyo' gnīn ādhāsyate somena yakṣyate* 'on the night of this coming new moon the teacher will consecrate the ritual fire and perform the Soma sacrifice'

The first two sentences illustrate the condition of continuity (*kriyāprabandha*), whereas the next two illustrate proximity (*sāmīpya*). The word *yāvajjīvam* in the first two examples denotes the continuity of the action of giving away food. Words such as *yeyam...atikrāntā...etasyām* and

yeyam amāvāsyā" gāminī...etasyām clearly indicate that the said sacrificial actions outlined in these sentences were performed, or will be performed, at a time not pertaining to today, but not very distant either. The negation of *anadyatanavat* demands that affixes introduced with reference to an action pertaining to today will be blocked. There are two affixes *LAṄ* 'past imperfect' and *LUṬ* 'first or immediate future' which have been introduced by 3.2.111 *anadyatane laṅ* and 3.3.15 *anadyatane luṭ* respectively when a past or future action is not located relative to the current day. Our present rule blocks the introduction of these affixes under the conditions of *kriyāprabandha* and *sāmīpya*. The rule instead requires the introduction of affixes *LUṄ* and *LṚṬ* which denote general past and future respectively, as per rules 3.2.110 *luṅ* and 3.3.13 *lṛṭ śeṣe ca*.

The *Mahābhāṣya* questions the propriety of using double negatives (*niṣedhadvaya*) in *nānadyatanavat* = *na* + *an* + *adyatanavat* 'not similar to that which is not pertaining to the current day'. It is argued that this rule blocks the application of *LAṬ*, *LAṄ* and *LUṬ*. A suggested formulation of the *sūtra* as *anadyatanavat* can be able to block only *LAṬ*. The desired blocking of *LAṄ* and *LUṬ* cannot be accomplished. Thus, the rule must negate *anadyatana*, as opposed to *adyatana*, in order to subsequently negate the introduction of *LAṄ* and *LUṬ*, in addition to *LAṬ*. Note, in connection with this, that rules 3.2.111 *anadyatane laṅ* and 3.3.15 *anadyatane lut* both explicitly state the condition of *anadyatana*. It is to negate *LAṄ* and *LUṬ* that *anadyatana* must also be negated.

3.3.136 **भविष्यति मर्यादावचनेऽवरस्मिन्**

bhaviṣyati maryādāvacane' varasmin
/bhaviṣyati (verbal *pada*) *maryādāvacane* 7/1 *avarasmin* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *nānadyatanavat* #135)
bhaviṣyati kāle mayādāvacane saty avarasmin pravibhāge anadyatanavat pratyayavidhir na bhavati
Affixes which occur after a verbal root to denote the action at a non-current time do not occur to denote a future action when the anterior side of a *maryādā* 'limit, extent' is expressed.

EXAMPLES:

yo' yam adhvā gantavya āpāṭaliputtrāt tasya yad avaraṃ kauśāmbyās tatra dvir odanaṃ bhokṣyāmahe 'this road which extends up to *Pāṭaliputra*, on its anterior side before *Kauśāmbī* we will eat rice twice'
yo' yam adhvā gantavya āpāṭaliputtrāt tasya yad avaraṃ kauśāmbyās tatra saktūn pāsyāmaḥ 'this road which extends up to *Pāṭaliputra*, on its anterior side before *Kauśāmbī* we will drink *saktu*'

1. This rule, again, blocks operations similar to those which obtain when the action is denoted at a time other than the current. This blocking occurs under the cooccurrence condition of a word which denotes *maryādā* 'extent', with reference to a prior segment (*avara*). Note that, *anadyatanavat* is, alone, carried from the preceding rule. The condition of *bhaviṣyati* is used to block the non-current past (*bhūtānadyatana*) affix *LAṄ*. The rule will now only block the *LUṬ* which pertains to the non-current future. The general future affix *LṚṬ* will find scope of application once affix *LUṬ* is blocked. The condition of *maryādā-vacana*, further qualified with *avarasmin*, is required to block the introduction of *LṚṬ* with reference to the extent relative to a succeeding segment. Consider for example the following sentence:

(*a*) *yo' yam adhvā gantavya āpāṭaliputrāt tasya yat paraṃ kauśāmbyās tatra dvirodanaṃ bhoktāsmahe* 'we will eat rice twice on our way to Pāṭaliputra in the segment of the road subsequent to Kauśāmbī'

Affix *LṚṬ* cannot be introduced, here, after verbal root *bhuj*, because the act of eating takes place with reference to a subsequent section of the road to Pāṭaliputra. Consider this next sentence, where *LṚṬ* is used with reference to an extent relative to the prior segment of the spatial unit:

(*b*) *yo' yam adhvā gantavya āpāṭaliputrāt tasya yad avaraṃ kauśāmbyās tatra dvirodanaṃ bhokṣyāmahe* 'we will eat rice twice on our way to Pāṭaliputra in the segment of the road prior to Kauśāmbī'

The specification of extent (*maryādā*) in this rule is given relative to a segment (*deśa*) of a larger spatial unit. Thus 'the road to Pāṭaliputra' is one complete spatial unit of which the subsequent segment is marked by Kauśāmbī in sentence (*a*). This cannot qualify for the use of *LṚṬ*. Sentence (*b*) illustrates the spatial unit marked by the city of Kauśāmbī as 'the prior segment of the spatial unit marked by Pāṭaliputra'. This sentence rightly uses affix *LṚṬ*.

3.3.137 कालविभागे चानहोरात्राणाम्

kālavibhāge cānahorātrāṇām
/*kālavibhāge* 7/1 *ca* Ø *anahorātrāṇām* 6/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91,
nānadyatanavat #135, *bhaviṣyati maryādāvacane' varasmin* #136)
kālamaryādavibhāge saty avarasmin pravibhāge bhaviṣyati kāle anadyatanapratyayavidhir na bhavati

Affixes which occur after a verbal root to denote the action at a non-current time do not occur to denote a future action when the anterior part of a temporal limit is denoted with no reference to day and night.

EXAMPLES:

yo' yaṃ saṃvatsara āgāmī tatra yad avaram āgrahāyaṇyās tatra yuktā adhyeṣyāmahe 'this coming year, during the time prior to the full moon of *agrahāyana* (the ninth lunar month) we will study diligently'

ye' yaṃ saṃvatsara āgāmī tatra yad avaram āgrahāyaṇyās tatraudanaṃ bhokṣyāmahe 'this coming year, during... we will eat rice'

1. This rule, again, blocks operations parallel to an action located in the future, though not pertaining to the future of the current day (*adyatana*). Since this rule defines the extent with reference to the prior segment of a unit of time (*kāla*), the determination of extent in the preceding rule must refer to a spatial unit. The condition of *anahorātrāṇām* is significant, because in its absence, the preceding rule easily have accounted for the negation. The use of *anahorātrāṇām* extends the scope of the negation to specification of the prior segment of an extent via units such as *ahorātra* 'day and night'. *Kāśikā* emphasizes that an extent marked by even the touch of *ahorātra* will become the subject of this negation. Consider the following sentences for illustration:

(*a*) *yo' yaṃ māsa āgāmī tasya yo' varaḥ pañcadaśarātras tatra yuktā adhyetāsmahe* 'we will study diligently during the first fifteen nights (fortnight) of the next month'

(*b*) *yo' yaṃ triṃśadrātra āgāmī tasya yo' varo' rddhamāsaḥ..* we will study diligently during the first half-month of the coming thirty nights

(*c*) *yo' yaṃ triṃśad ahorātra āgāmī tasya yo' varaḥ pañcadaśarātras tatra...*'we will study diligently during the first fifteen of the coming thirty nights'

Note that, because of the inclusion of *ahorātra*, the negation applies no matter how the extent of the first half of the month is defined.

Commentators note that the formulation of this rule separately from the preceding cannot be justified by the use of *anahorātrāṇām*. They state that the provision of this rule could still be made by the preceding rule if *anahorātrāṇām* was read in it: *bhaviṣyati maryādāvacane' varasminn ahorātrāṇām*. Pāṇini, nonetheless, formulates two rules (*yogavibhāga*) so that the subsequent rule can receive the negation only in the context of an extent defined with reference to time (*kāla*). An extent marked in relation to a unit of space would, thus, not qualify in the context of the subsequent rule.

3.3.138 परस्मिन् विभाषा

parasmin vibhāṣā
/*parasmin* 7/1 *vibhāṣā* 1/1/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *nānadyatanavat* #135, *bhaviṣyati maryādāvacane* #136, *kālavibhāge cānahorātrāṇām* #137)

kālamaryādāvibhāge sati bhaviṣyati kāle parasmin pravibhāge vibhāṣā anadyatanavat pratyayavidhir na bhavati, na ced ahorātrasambandhī pravibhāgaḥ

Affixes which occur after a verbal root to denote the action at a non-current time optionally do not occur to denote a future action when the posterior part of a temporal limit is denoted with no reference to day and night.

EXAMPLES:

yo' yaṃ saṃvatsara āgāmī tasya yat paramāgrahāyaṇyās tatra yuktā adhyeṣyāmahe 'this coming year, in the part posterior to the full moon of *agrahāyaṇa*, we will study diligently'

yo' yaṃ saṃvatsara āgāmī tasya yat paramāgrahāyaṇyās tatra yuktā adhyetāsmahe 'id.'

yo' yaṃ saṃvatsara āgāmī tasya yat paramāgrahāyaṇyās tatra saktūn pāsyāmaḥ 'this coming year, in the part posterior to the moon of *agrahāyaṇa*, we will drink *saktu*'

yo' yaṃ saṃvatsara āgāmī tasya yat paramāgrahāyaṇyās tatra saktūn pātāsmaḥ 'id.'

1. This rule makes the negative provision of the preceding rule optional in the context of a future action, relative to an extent determined by the subsequent (*parasmin*) segment of a unit of time. Of course, the condition of *anahorātrāṇām* is also valid. This will offer a set of two optional examples as follows:

(*a*) *yo' yaṃ samvatsara āgāmī tatra yat paramāgrahāyaṇyās tatra yuktā adhyeṣyāmahe* 'we will diligently study during that part of the coming year which will be subsequent to the full-moon of the month of *agrahāyaṇa*'

(*b*) *yo' yaṃ samvatsara...:tatra yuktā adhyetāsmahe* 'id.'

Note that, *adhyeṣyāmahe* of sentence (*a*) uses the general future affix *LṚṬ* as opposed to the *LUṬ* denoting the non-current (*anadyatana*) future, in *adhyetāsmahe* of sentence (*b*). Since this rule carries all except *avarasmin* of the preceding rule, restrictions relative to *bhaviṣyati maryādāvacane* and *kālavibhāge cānahorātrāṇām* still apply. Refer to *Kāśikā* for a detailed listing of specific counter-examples.

3.3.139 लिङ्निमित्ते लृङ् क्रियातिपत्तौ

liṅnimitte lṛṅ kriyātipattau

/*liṅnimitte* 7/1 *lṛṅ* 1/1 *kriyātipattau* 7/1/

(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, bhaviṣyati #136) liṅnimitte bhaviṣyatikāle lṛṅ pratyayo bhavati kriyātipattau satyām
Affix *LṚṄ* occurs after a verbal root to denote a future action provided conditions of *LIṄ* obtain and completion of the action is not denoted.

EXAMPLES:

dakṣiṇena ced āyāsyan na śakaṭam paryābhaviṣyat 'if he came by the southern road, the cart will not overturn'
abhokṣyata bhavān ghṛtena yadi matsamīpe āgamiṣyat 'if you came near me, you will have food with ghee'

1. This rule introduces affix *LṚṄ*, conditioned by *LIṄ*, when *kriyātipatti* 'non-completion' of a future action is denoted. Rule 3.3.156 *hetuhetumator liṅ* identifies the conditions of *LIṄ* as *hetu* 'cause' and *hetumat* 'effect'. Consider now the following sentence:

(*a*) *dakṣiṇena ced āyāsyan na śakaṭaṃ paryābhaviṣyat*

Notice that 'going by the right side of the road' forms the cause (*nimitta*) for the effect: 'no overturning of the cart'. But since the driver (for some reason or the other as we already know) will not go by the right side of the road, the cart cannot be saved from overturning. This is what *kriyātipatti* 'non-coming about, or non-completion' of an action means.

The 'cause-effect' relationship is recognized as *hetuhetumadbhāva*. *Kāśikā* states that the speaker uses sentences with a full understanding of the characteristic mark (*liṅga*; the *hetu*) along with that which is characterized (*liṅgī*; the *hetumat*). The non-completion of the action is comprehended from some other source (*liṅgaliṅge buddhyā tadatipattiṃ ca pramāṇāntarād avagamya vaktā vākyaṃ prayuṅkte*).

Consider thus this next sentence:

(*b*) *yadi kamalakam āhvāsyan na śakaṭaṃ paryābhaviṣyat* 'if he calls Kamalaka (for help), the cart will not overturn'

This sentence denotes the future scope of the non-completion of the action of 'calling out' (*āhvāna*), the cause (*hetu*), and 'overturning (*paryābhavana*)', the effect (*hetumat*; *hetuhetumator āhvānaparyābhavanayor bhaviṣyatkālaviṣayor atipattir ito vākyād avagamyate*).

2. A question is raised with regard to the explicit mention of the word *kriyā* in this rule. It is said that *atipatti* would itself denote the sense of *kriyātipatti* because this is the domain of *dhātoḥ*. Thus, the rule might well have been formulated simply as: *liṅnimitte lṛṅatipattau*. But this could have occasioned serious interpretational problems. That is, because of the presence of *liṅnimitta*, *attipatti* could be interpreted as that of *liṅnimitta*. It is for this reason that *kriyā* must be stated in this rule.

3.3.140 भूते च

bhūte ca
/bhūte 7/ ca 0/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, liṅnimitte lṛṅ kriyātipattau #139)
bhūte ca kāle liṅnimitte kriyātipattau satyāṃ lṛṅ pratyayo bhavati
Affix *LṚṄ* also occurs after a verbal root to denote the action in the past when conditions of *LIṄ* obtain and completion of action is not expressed.

EXAMPLES:

dṛṣṭo mayā bhavatputro' nnārthī caṅkramyamāṇaḥ, aparaś ca dvijo brāhmaṇārthī, yadi sa tena dṛṣṭo' bhaviṣyat tadā' bhokṣyata, na tu bhuktavān, anyena pathā sa gataḥ 'I saw your son wandering about for food; the other person I saw was a *brāhmaṇa* looking for a *brāhmaṇa* to feed; if your son would have been seen by the *brāhmaṇa* then he could have eaten, but he could not eat as he went the other way'

1. This rule, read in toto with the preceding rule, extends the introduction of *LṚṄ* when the action is located in the past (*bhūta*). Our example sentence above has *yadi sa tena dṛṣṭo' bhaviṣyat* 'if your son would have been seen by him' as the *hetu* and *tadā abhokṣyata* 'then your son would have been fed' as the *hetumat*. The non-completion of the action is: *na dṛṣṭaḥ* '(the son) was not seen', and *na tu bhuktavān* 'indeed, did not eat'. The sentence uses *dṛṣṭo mayā bhavatpuro' nnārthī...brāhmaṇārthī* to clearly establish the action in the past.

3.3.141 वोताप्योः

votāpyoḥ
/vā 0 utāpyoḥ 7/2/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, liṅnimitte lṛṅ kriyātipattau #139, bhūte #140)
'utāpyoḥ samarthayor liṅ' iti vakṣyati, prāg etasmāt sūtrāvadher yad ita ūrddhvam anukramiṣyāmas tatra bhūte liṅnimitte kriyātipattau lṛṅ vā bhavatīty etad adhikṛtaṃ bhavati
Affix *LṚṄ* optionally occurs after a verbal root, prior to 3.3.152 *utāpyoḥ...*, to denote the action in the past when conditions of *LIṄ* obtain and completion of action is not expressed.

EXAMPLES:

kathaṃ nāma tatra bhavān vṛṣalam ayājayiṣyat 'how come you, sir, have a *vṛṣala* perform the sacrifice'

1. Note that the wording of this rule underlies: *vā* + *āṄ* + *utāpyoḥ* = *votāpyoḥ*. The use of *ā* (*Ṅ*→*0*) is made to indicate the extent (*maryādā*) though not of the inclusive (*abhividhi*) type. Thus, what is stated up to, but not including, rule 3.3.152 *utāpyoḥ samarthayor liṅ* entails the optional introduction of affix *LṚṄ* under the condition of *LIṄ* when non-coming about of an action in the past is expressed. Obviously, this rule is an *adhikāra*. A rule which is not relatable to *LIṄ* cannot come under the scope of this rule, since the provision of *LṚṄ* is made optional, here, with *LIṄ*.

3.3.142 **गर्हायां लडपिजात्वोः**

> *garhāyāṃ laḍ apijātvoḥ*
> /*garhāyām* 7/1 *laṭ* 1/1 *apijātvoḥ* 7/2/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
> *garhāyāṃ gamyamānāyām apijātvor upapadayor dhātor laṭ pratyayo bhavati*
> Affix *LAṬ* occurs after a verbal root used in conjunction with a nominal *pada* which contains *api* and *jātu* when *garhā* 'censure' is denoted.

EXAMPLES:

> *api tatra bhavān vṛṣalaṃ yājayati* 'how come you, sir, have a *vṛṣala* perform the sacrifice'
> *jātu tatra bhavān vṛṣalaṃ yājayati garhāmahe, aho anyāyyam etat* 'you, sir, have a *vṛṣala* perform the sacrifice; I despise that, oh, it is improper'

1. Note that affix *LAṬ* is introduced by 3.2.123 *vartamāne laṭ* when the action is located at the current time. This rule is formulated so that *LAṬ* can also be used in the past and future. Of course, when the cooccurrence condition of *api* and *jātu* is met, along with the condition of *garhā*. We see in our examples that performing a sacrifice for a lowly untouchable (*vṛṣala*) is an act to be censured.

Kāśikā states that this rule comes into conflict with other rules which introduce affixes *LAṄ*/*LIṬ*, in the past, and *LUṬ*/*LṚṬ* in the future. This conflict is resolved in favor of the introduction of affix *LAṬ*, in view of the present rule, and based on *paratva* of 1.4.2 *vipratiṣedhe....* The *Mahābhāṣya* considers the introduction of *LAṬ* with reference to the condition of *garhā* as meaningless. For, the completion of the action for which someone is to be censured is still not stated. If one gets the meaning of censure in the sentence, one gets it from *tāccīlya* 'characteristic habit, or inclination'. Thus, a person may be inclined toward doing things which may be perceived as done for the sake of the ritual sacrifice for the *vṛṣala*. This action can be accepted as if the agent performed the sacrifice for the *vṛṣala*. This will rule out the past as well as the future. Affix *LAṬ*

can be introduced as usual in the temporal sense of the current action. The discussion in the *Mahābhāṣya* also implies that such an interpretation will allow the replacement of *LAṬ* with affixes *ŚatṚ* and *ŚānaC*. Patañjali concludes that the formulation of our present rule is defective.

Note that affix *LṚṄ* cannot be optionally introduced, here, with *LAṬ*, since the provisions of this rule do not entail *hetuhetumadbhāva*.

3.3.143 **विभाषा कथमि लिङ् च**

vibhāṣā kathami liṅ ca
/vibhāṣā 1/1 *kathami* 7/1 *liṅ* 1/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *garhāyāṃ laṭ* #142)
kathaṃ śabda upapade garhāyāṃ gamyamānāyāṃ dhātor liṅ pratyayo bhavati
Affix *LIṄ*, and *LAṬ* as well, optionally occurs after a verbal root when the root cooccurs with a nominal *pada* which contains *katham* and *garhā* is expressed.

EXAMPLES:

kathaṃ nāma tatra bhavān vṛṣalaṃ yājayet
kathaṃ nāma tatra bhavān vṛṣalaṃ yājayati
kathaṃ nāma tatra bhavān vṛṣalaṃ yājayiṣyati
kathaṃ nāma tatra bhavān vṛṣalaṃ yājayitā
kathaṃ nāma tatra bhavān vṛṣalaṃ ayājayat
kathaṃ nāma tatra bhavān vṛṣalaṃ yājayāñcakāra

1. This rule allows for introduction of affix *LIṄ*, and *LAṬ* as well, provided the verbal root occurs in conjunction with *katham* 'how come?', and *garhā* is denoted. Note that, the word *vibhāṣā* is not used, here, optionally to provide for affix *LAṬ*. For, that can be easily recieved from *ca* 'and'. Actually, *vibhaṣā* is used, here, to provide for *LIṄ*, as well as *LAṬ*, used with other *LA* affixes as the case may be. Consider the following sentences for illustration:

(*a*) *kathaṃ nāma tatra bhavān vṛṣalaṃ yājayet* 'how come sir, you perform the sacrifice for a *vṛṣala*?
(*b*) *kathaṃ...yājayati* 'how come... is performing...'
(*c*) *kathaṃ...yājayiṣyati* 'how come...will perform...'
(*d*) *kathaṃ...yājayitā* 'id.'
(*e*) *kathaṃ...ayājayat* 'how come...performed...'
(*f*) *kathaṃ...yājayāñcakāra* 'id.'

Note that sentences (*a*) and (*b*) illustrate the provisions of this rule, as per the use of *LIṄ* and *LAṬ* via *ca* 'and'. The remaining sentences involve affixes of the past and future as an option to *LIṄ* and *LAṬ*.

2. Usages which may entail *kriyātipatti* in the context of *hetuhetumadbhāva*, and with the scope of the action in the past (*bhūta*), will optionally use

LṚṄ together with *LAṄ*. Thus, compare sentence (*a*) with the following sentence (*g*):

(*g*) ***kathaṃ nāma tatra bhavān vṛṣalam ayājayiṣyat*** 'how come you performed the sacrifice for the *vṛṣala* sir!?'

Note, however, that when the action which involves *kriyātipatti* has the scope of future, then *LṚṄ* will have to be used obligatorily (*nityam*).

3.3.144 **किंवृत्ते लिङ्लृटौ**

kiṃvṛtte liṅlṛṭau
/*kiṃvṛtte* 7/1 *liṅlṛṭau* 7/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *garhāyām* #142)
kiṃvṛtta upapade garhāyāṃ gamyamānāyāṃ dhātor liṅlṛṭau pratyau bhavataḥ
Affixes *LIṄ* and *LṚṬ* occur after a verbal root used in conjunction with a nominal *pada* which contains *kim*, provided *garhā* is expressed.

EXAMPLES:

ko nāma vṛṣalo yaṃ tatra bhavān yājayet 'who, sir, is this *vṛṣala* for whom you have performed the sacrifice?'
ko nāma vṛṣalo yaṃ tatra bhavān vṛṣalaṃ yājayiṣyati 'who, sir, is this *vṛṣala* for whom you have performed the sacrifice'
kataro nāma vṛṣalo yaṃ tatra bhavān vṛṣalaṃ yājayet 'which indeed, sir, is this *vṛṣala* for whom you have performed the sacrifice'

1. Note that *garhāyām* still carries. The *anuvṛtti* of *vibhāṣā* is dropped. This rule, thus, provides for the introduction of affixes *LIṄ* or *LṚṬ* when the root cooccurs with a word constituted by *kim* 'who, what' (*kiṃvṛtta*). The word *vṛtta* of *kiṃvṛtta* refers to the paradigmatic form of *kim*, which also includes forms with affixes *Ḍatar* and *Ḍatam*. The explicit use of *LIṄ* in this rule is made so that the *anuvṛtti* of *LAṬ* from the preceding rule based on its association (*sāhacarya*) with *LIṄ* can be blocked. The use of *LṚṬ*, alone, in addition to *LIṄ*, is clearly made to exclude any other *LA* affix. This provision of *LIṄ* and *LṚṬ* consequently becomes an exception to all *LA* affixes.

The use of *LṚṄ*, however, becomes optional when 'non-completion' of a past action relative to *hetuhetumadbhāva* is expressed. The future of this type, of course, will use *LṚṄ* obligatorily. Also see notes under the preceding rule.

3.3.145 **अनवक्लृप्त्यमर्षयोरकिंवृत्तेऽपि**

anavakḷptyamarṣayor akiṃvṛtte' pi
/*anavakḷptyamarṣayoḥ* 7/2 *akiṃvṛtte* 7/1 *api* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṅlṛṭau* #144)

'kiṃvṛtte copapade' navaklṛptyamarṣayor dhātor liṅlṛṭau pratyayau bhavataḥ
Affixes *LIṄ* and *LṚṬ* occur after a verbal root even when the root does not cooccur with a nominal *pada* which contains *kim* provided *anavaklṛpti* 'incredibility' or *amarṣa* 'intolerance' is expressed.

EXAMPLES:

nāvakalpayāmi, na saṃbhāvāyāmi, na śraddhe, tatra bhavān nāma vṛṣalaṃ yājayet 'I do not believe, imagine, nor respect that you, sir, may have a *vṛṣala* perform the sacrifice'
nāvakalpayāmi, na saṃbhāvayāmi, na śraddhe, tatra bhavān nāma vṛṣalaṃ yājayiṣyati 'I do not believe, imagine, nor respect that you, sir, will have a *vṛṣala* perform the sacrifice'
na marṣayāmi tatra bhavān vṛṣalaṃ yājayet 'I do not tolerate that you, sir, may have a *vṛṣala* perform the sacrifice'
na marṣayāmi tatra bhavān vṛṣalaṃ yājayiṣyati 'I do not tolerate that you, sir, will have a *vṛṣala* perform the sacrifice'

1. This rule provides for introduction of affixes *LṚṄ* and *LṚT* after both verbal roots which cooccur with a form of *kim*, or those which do not, provided, of course, *anavaklṛpti* 'incredibility' *(asambhāvanā)* and *amarṣa* 'intolerance' (*akṣamā*) are denoted.

The order of constituents in *anavaklṛptyamarṣa* is not in consonance with rules. That is, *amarṣa* should have been placed first because it contains fewer vowels than the other constituent *anavaklṛpti* (2.2.34 *alpāctaram*). By not following the technical provision, Pāṇini makes it known that, in the context of this rule, assignment of an equal number of elements to two sets does not follow *saṃkhyātānudeśa* (1.3.10 *yathāsaṃkhyam...*), order of enumeration. That is, given the introduction of two affixes *LIṄ* and *LṚṬ* under the condition of *anavaklṛpti* and *amarṣa*, one should not, following the provision of rule 1.3.10 *yathāsaṃkhyam...*, think that: 'affix *LIṄ* is to be introduced when *anavaklṛpti* is denoted'; and 'affix *LṚṬ* is to be introduced when *amarṣa* is denoted'.

Note that, the non-completion of a past action under the condition of *hetuhetumadbhāva* will be optionally denoted by *LṚṄ*. That provision will become obligatory in case of the non-completion of a future action:

nāvakalpayāmi tatra bhavān nāma vṛṣalam ayājayiṣyat.

3.3.146 **किंकिलास्त्यर्थेषु लृट्**

kiṃkilāstyartheṣu lṛṭ
/*kiṃkilāstyartheṣu* 7/3 *lṛṭ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *anavaklṛptyamarṣayoḥ* #145)
kiṃkilāstyartheṣūpapadeṣu anavaklṛptyamarṣayor dhātor lṛṭ pratyayo bhavati

Affix *LṚṬ* occurs after a verbal root used in conjunction with *kiṃkila*, or a *pada* which may have the signification of *asti*, when *anavakḷpti* or *amarṣa* is expressed.

EXAMPLES:

kiṃkil nāma tatra bhavān vṛṣalaṃ yājayiṣyati na śraddhe na marṣayāmi 'I do not respect or tolerate that you, sir, may have a *vṛṣala* perform the sacrifice'
asti nāma tatra bhavān vṛṣalaṃ yājayiṣyati na śraddhe na marṣayāmi 'id.'
bhavati nāma tatra bhavān vṛṣalaṃ yājayiṣyati na śraddhe na marṣayāmi 'id.'
vidyate nāma tatra bhavān vṛṣalaṃ yājayiṣyati na śraddhe na marṣayāmi 'id.'

1. This rule introduces affix *LṚṬ* under the cooccurrence condition of *kiṃkila* 'a particle which denotes anger', or a word with the signification of *asti* 'existence', i.e., *asti, bhavati*, or *vidyate*, provided *anavakḷpti* and *amarṣa* are expressed. Thus, we get: (*kiṃkila*), *asti, bhavati*, or *vidyate bhavān vṛṣalaṃ yājayiṣyati* 'Oh, how shameful, indeed, is your performing the sacrifice for the lowly untouchable'. The provision of this rule forms an exception to affix *LIṄ* of the earlier rule.

Affix *LṚṄ* cannot be used, here, since there is no condition of *hetuhetumadbhāva*.

3.3.147 जातुयदोर्लिङ्

jātuyador liṅ
/*jātuyadoḥ* 7/2 *liṅ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *anavakḷptyamarṣayoḥ* #145)
'jātu, yad' ity etayor upapadayor anavakḷptyamarṣayor gamyamānayor dhātor liṅ pratyayo bhavati
Affix *LIṄ* occurs after a verbal root which cooccurs with *jātu* and *yad* when *anavakḷpti* or *amarṣa* is expressed.

EXAMPLES:

jātu tatra bhavān vṛṣalaṃ yājayet na śraddhe, na marṣayāmi
yan nāma tatra bhavān vṛṣalaṃ yājayet

1. This is an exception to *LṚṬ*, outlined under the cooccurrence condition formed by *jātu* 'perhaps' and *yad* 'that which...'. A *vārttika* recommends that *yadā*, and *yadi* should also be included under items which form the cooccurrence condition. The rule, itself, introduces *LIṄ* as an exception to the *LṚṬ* of rule 3.4.145 *anavaklṛptyamarṣayor....*

3.3.148 यच्चयत्रयोः

yaccayatrayoḥ

/*yaccayatrayoḥ* 7/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *anavakḷptyamarṣayoḥ* #145, *liṅ* #147)
'yacca, yatra' ity etayor upapadayor anavakḷptyamarṣayor gamyamānayor dhātor liṅ pratyayo bhavati
Affix *LIṄ* occurs after a verbal root used in conjunction with *yacca* and *yatra* when *anavakḷpti* or *amarṣa* is expressed.

EXAMPLES:

yacca tatra bhavān vṛṣalaṃ yājayet na śraddhe, na marṣayāmi 'I do not respect, and can not tolerate, that you sir, may have a *vṛṣala* perform the sacrifice.'
yatra tatra bhavān vṛṣalaṃ yājayet na śraddhe, na marṣayāmi 'id.'

1. This rule introduces affix *LIṄ* similar to the preceding rule, though under the cooccurrence condition constituted by *yacca* 'and that which', and *yatra* 'and the place where'. Why did Pāṇini not state the cooccurrence condition of this rule as part of the preceding rule? This would have saved him a rule. Commentators observe that a separate rule (*yogavibhāga*) is needed so that only *yacca* and *yatra* can be carried to the subsequent rule. A joint listing of rules would have required carrying the entire listing of cooccurrence conditions.

2. Note that in the context of general past with 'non-completion' (*kriyātipatti*), affix *LṚṄ* can also be introduced. In the case of future, *LṚṄ* is introduced obligatorily.

3. Note that *yacca* and *yatra*, the two cooccurring words, cannot be associated with the two conditions of *anavakḷpti* and *amarṣa*, as per the principle of *saṃkhyātānudeśa* (1.3.10 *yathāsaṃkhyam*....)

3.3.149 **गर्हायां च**

garhāyāṃ ca
/*garhāyām* 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṅ* #147, *yaccayatrayoḥ* #148)
'yacca, yatra' ity etayor upapadayor dhātor liṅ pratyayo bhavati garhāyāṃ gamyamānāyām
Affix *LIṄ* also occurs after a verbal root used in conjunction with *yacca* and *yatra* when *garhā* is expressed.

EXAMPLES:

yacca tatra bhavān vṛṣalaṃ yājayet ṛddho vṛddhaḥ san brāhmaṇaḥ, garhāmahe, aho, anyāyyam etat 'I despise that you, sir, a wealthy old *brāhmaṇa*, will have a *vṛṣala* perform the sacrifice; this, indeed, is improper'

yatra tatra bhavān vṛṣalaṃ yājayet ṛddho vṛddhaḥ san brāhmaṇaḥ, garhāmahe, aho, anyāyyam etat 'id.'

1. Note that *anavakḷptyamarṣayoḥ* is not carried here. The cooccurrence condition of *yacca* and *yatra*, in addition to *LIṄ*, is still valid. The *LIṄ* provision of this rule, under the cooccurrence condition of *yacca* and *yatra*, and coupled with the denotatum of *garhā*, constitutes an exception to the other *LA* affixes. The optional and obligatory provisions of *LṚṄ*, under the condition of *kriyātipatti* in the past and future, will obtain as usual.

3.3.150 **चित्रीकरणे च**

citrīkaraṇe ca
/*citrīkaraṇe* 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṅ* #147, *yaccayatrayoḥ* #148)
yaccayatrayor upapadayoś citrīkaraṇe gamyamāne dhātor liṅ pratyayo bhavati
Affix *LIṄ* also occurs after a verbal root used in conjunction with *yacca* and *yatra* when *citrīkaraṇa* 'astonishment' is expressed.

EXAMPLES:

yacca tatra bhavān vṛṣalaṃ yājayet, āścaryam etat 'it is astonishing that you, sir, will have a *vṛṣala* perform the sacrifice'
yatra tatra bhavān vṛṣalaṃ yājayet, āścaryam etat 'id.'

1. The provision of this rule is similar to the preceding, except that *citrīkaraṇa* 'astonishment' replaces *garhā* as the meaning condition. Under the condition of *kriyātipatti*, *LṚṄ* is applicable to past and future actions as indicated earlier.

3.3.151 **शेषे लृडयदौ**

śeṣe lṛḍ ayadau
/*śeṣe* 7/1 *lṛṭ* 1/1 *ayadau* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *citrīkaraṇe* #150)
śeṣe upapade citrīkaraṇe gamyamāne dhātor lṛṭ pratyayo bhavati
Affix *LṚṬ* occurs after a verbal root used in conjunction with an item other than *yacca* and *yatra*. with additional exception of *yadi*, when *citrīkaraṇa* is denoted.

EXAMPLES:

āścaryaṃ citram adbhutam andho nāma parvatam ārokśyati, badhiro nāma vyākaraṇam adhyeṣyate 'it is astonishing, indeed, that a blind one will climb the mountain, a deaf one will study the grammar'

1. Commentators state that the word *śeṣa* 'remainder' is used here in relation to *yacca* and *yatra*. Thus, *LṚṬ* is used when *yacca* and *yatra* are not used as *upapada* provided 'astonishment' is denoted. Of course, *yadi* is also excluded. Why can we not accept the residual scope of this rule in relation to *citrīkaraṇe*. This will then permit *yacca* and *yatra* to form the cooccurrence condition, but rule out the denotatum of 'astonishment'. Commentators state that *citrīkaraṇe* is marked with *svarita*, and hence must be carried to our present rule. Conversely, *yacca* and *yatra* should not be carried to this rule, since they are not marked with *svarita*. This introduction of *LṚṬ* is also explained as an exception to all other *LA* affixes. Affix *LIṄ* cannot be introduced either, because of an absence of *hetuhetumadbhāva*.

3.3.152 **उताप्योः समर्थयोर्लिङ्**

utāpyoḥ samarthayor liṅ
/utāpyoḥ 7/2 *samarthayoḥ* 7/2 *liṅ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91*)*
'uta, api' ity etayoḥ samarthayor upapadayor dhātor liṅ pratyayo bhavati
Affix *LIṄ* occurs after a verbal root used in conjunction with *uta* and *api*, provided they mean the same thing.

EXAMPLES:

uta kuryāt 'yes, he may do'
api kuryāt 'id.'
utādhīyīta 'yes, he may read'
apyadhīyīta 'id.'

1. Note that *uta* and *api* are synonymous when denoting the sense 'yes indeed (*bāḍham*).' The following sentences illustrate how *LIṄ* cannot be introduced because of lack of synonymity between *uta* and *api*:

(*a*) *uta daṇḍaḥ patiṣyati* 'is the stick going to fall?'
(*b*) *api dvāraṃ dhāsyati* 'he is closing the door, I hope'

The first sentence uses *uta* as an interrogative function word. The second uses *api* in association with *dhā* in the sense 'to close'.

The provision of this rule, again, constitutes an exception to all other *LA* affixes. Furthermore, the *anuvṛtti* of 3.3.114 *votāpyoḥ* is no longer valid. Consequently, the optional introduction of *LṚṄ*, relative to 'non-completion' of a past action under the condition of *hetuhetumadbhāva*, no longer remains optional. From here on, it will become obligatory (*nitya*), as has been the case with a future action.

3.3.153 **कामप्रवेदनेऽकच्चिति**

kāmapravedane' kacciti

/kāmapravedane 7/1 *akacciti* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṅ* #152)
kāmapravedane gamyamāne' kaccity upapade dhātor liṅ pratyayo bhavati
Affix *LIṄ* occurs after a verbal root used in conjunction with an item other than *kaccit* when *kāmapravedana* 'expression of desire' is denoted.

EXAMPLES:

kāmo me bhuñjīta bhavān 'it is my wish that you eat'
abhilāṣo me bhuñjīta bhavān 'id.'

1. *Kāśikā* glosses *kāmapravedana* as *svābhiprāyāviṣkaraṇam* 'revealing one's intent'. The exclusion of *kaccit* as an *upapada* is necessary, since it expresses hope. Consider *kaccid jīvati te mātā kaccid jīvati te pitā* '(I hope) your mother, and your father as well, are alive' which is offered as a counter-example. Obviously, it may create problems of interpretation.

3.3.154 **सम्भावनेऽलमिति चेत् सिद्धाप्रयोगे**

sambhāvane' alam iti cet siddhāprayoge
/saṃbhāvane 7/1 *alam* ∅ *iti* ∅ *cet* ∅ *siddhāprayoge* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṅ* #152)
sambhāvane' rthe vartamānād dhātor liṅ pratyayo bhavati siddhaś ced alamo' prayogaḥ
Affix *LIṄ* occurs after a verbal root denoting an action that entails *sambhāvana* 'possibility' provided the sense of *alam* 'capability' is expressed implicitly.

EXAMPLES:

api śirasā parvataṃ bhindyāt 'he can break a mountain with his head'
api droṇapākaṃ bhuñjīta 'he can eat a *droṇa* of food'

1. Note that the condition of *siddhāprayoge* requires that a given meaning be expressed without use of the word explicitly. The word *siddhāprayoge* is used, here, as the qualifier to *alam* to thus yield the meaning: 'when the sense of *alam* is denoted without its explicit use'. Consider the following sentences:

(*a*) *api parvataṃ śirasā bhindyāt* 'it is fully expected that he will break the mountain with his head'
(*b*) *videśasthāyī devadatta prāyeṇa gamiṣyati grāmam* 'I expect that Devadatta, who is living away, will some day return to the village'
(*c*) *alaṃ devadatto hastinaṃ haniṣyati* 'Devadatta is capable of killing the elephant'

The first sentence expresses the expectation that someone is capable (*alam*) of breaking the mountain with his head. The capability of bringing

about the expected action, though, is expressed here without the explicit use of the word *alam*. Affix *LIṄ* is thus rightly used after verbal root *bhid* 'to split'. The expectation of sentence (*b*) lacks the expression of Devadatta's capability to return to the village. This is why *LIṄ* is not introduced with *gam*. Sentence (*c*) does not qualify for the introduction of *LIṄ* because of the explicit use of *alam*.

3.3.155 **विभाषा धातौ सम्भावनवचनेऽयदि**

vibhāṣā dhātau saṃbhāvanavacane' yadi
/*vibhāṣā* 1/1 *dhātau* 7/1 *sambhāvanavacane* 7/1 *ayadi* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṅ* #152, *sambhāvane' lam iti cet siddhāprayoge* #154)
sambhāvanavacane dhātāv upapade yacchabdavarjite dhātor vibhāṣā liṅ pratyayo bhavati
Affix *LIṄ* optionally occurs after a verbal root used in conjunction with a root which signifies *sambhāvana* when *yad* 'that which...' is not used and the sense of *alam* is implicit.

EXAMPLES:

sambhāvayāmi bhuñjīta bhavān 'I expect that you will eat'
sambhāvayāmi bhokṣyate bhavān 'id.'
avakalpayāmi bhuñjīta bhavān 'I presume that you will eat'
avakalpayāmi bhokṣyate bhavān 'id.'

1. This rule makes the obligatory provision of the preceding rule optional in connection with a verbal root cooccurring with some other root which signifies *sambhāvana* provided *yad* is not used, and capability is denoted without the explicit use of *alam*. Thus, the examples: (*sambhāvayami*) / (*avakalpayāmi*) (*bhokṣyate*) / (*bhuñjīta*) *bhavān* 'I expect sir! that you are capable of eating', where *bhokṣyate* and *bhuñjīta* are optional forms in the context of *sambhavāvayāmi* and *avakalpayāmi* and denote 'expectation'. Of course, the sense of *alam* is understood.

3.3.156 **हेतुहेतुमतोर्लिङ्**

hetuhetumator liṅ
/*hetuhetumatoḥ* 7/2 = *hetuś ca hetumac ca* = *hetumatī, tayoḥ (itar. dv.); liṅ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *vibhāṣā* #155)
hetubhūte hetumati cārthe vartamānād dhātor liṅ pratyayo bhavati
Affix *LIṄ* optionally occurs after a verbal root when *hetu* 'cause' and *hetumat* 'effect' are denoted.

EXAMPLES:

dakṣiṇena ced yāyāt na śakaṭaṃ paryābhavet 'the cart will not overturn

if he goes by the right side of the road'
dakṣiṇena cet yāsyati na śakaṭaṃ paryābhaviṣyati 'id.'

1. Since the provision of this rule is optional, one can also find the use of *LṚṬ* parallel to *LIṄ*:

(*a*) *dakṣiṇena ced yāyān na śakaṭaṃ paryābhavet*
(*b*) *dakṣiṇena ced yāsyati na śakaṭaṃ paryābhaviṣyati*

A sentence such as *hantīti palāyate* '...runs away because he is killing' cannot qualify for *LIṄ* since both *hanti* and *palāyate* are given in the present. Note that *iti* is used in the sense of *hetu*, recognized here as *hanana*. The action of 'running away' is the effect (*hetumat*).

A restatement of *LIṄ* when it is already available from the *anuvṛtti* is made so that the context of this usage can be limited to the future only.

3.3.157 **इच्छार्थेषु लिङ्लोटौ**

icchārtheṣu liṅloṭau
/*icchārtheṣu* 7/1 *liṅloṭau* 1/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
icchārtheṣu dhātuṣūpapadeṣu dhātor liṅloṭau pratyau bhavataḥ
Affixes *LIṄ* and *LOṬ* occur after a verbal root used in conjunction with the other which has the signification of *iṣ* 'to wish'.

EXAMPLES:

icchāmi bhuñjīta bhavān 'it is my wish that you please eat'
icchāmi bhuṅktāṃ bhavān 'id.'
kāmaye bhuñjīta bhavān 'id.'
kāmaye bhuṅktāṃ bhavān 'id.'

1. The specific use of *LIṄ*, along with *LUṬ*, is made so that this optional provision can be treated as an exception to all other *LA* affixes (*sarvalakārāṇām apavādaḥ*).

3.3.158 **समानकर्तृकेषु तुमुन्**

samānakartṛkeṣu tumun
/*samānakartṛkeṣu* 7/3 *tumun* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *icchārtheṣu* #157)
icchārtheṣu dhātuṣu samānakartṛkeṣūpapadeṣu dhātos tumun pratyayo bhavati
Affix *tumUN* occurs after a verbal root used in conjunction with the other which has the signification of *iṣ*, provided both actions share the same *kartṛ* 'agent'.

EXAMPLES:

icchati bhoktum 'he wishes to eat'

kāmayate bhoktum 'id.'
vāñchati bhoktum 'id.'
vaṣṭi bhoktum 'id.'

1. Note that the identical agent condition is given in relation to the base after which affix *tumUN* is introduced. Thus, *tumUN* cannot be introduced after verbal root *bhuj* 'to consume' in **devadattaṃ bhoktum icchati yajnadattaḥ* 'Yajñadatta wishes Devadatta to eat' because *iṣ* does not have Devadatta as its agent. The correct sentence should be: *devadattaṃ bhuñjānam icchati yajñadattaḥ*.

A question is raised as to why *icchan karoti* cannot avail *tumUN* to yield *icchan kartum*? After all, the cooccurrence condition is met along with the condition of identical agents. However, sentences, such as, *icchan kartum* do not occur in usage at all. The grammar does not have to account for something which does not exist.

3.3.159 **लिङ् च**

liṅ ca
/*liṅ* 1/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *icchārtheṣu* #157, *samānakartṛkeṣu* #158)
icchārtheṣu samānakartṛkeṣu dhātuṣūpapadeṣu dhātor liṅ pratyayo bhavati
Affix *LIṄ* also occurs after a verbal root used in conjunction with the other which has the signification of *iṣ* provided both actions share the same *kartṛ*.

EXAMPLES:

bhuñjīyetīcchati 'he wishes that you eat'
adhīyīyetīcchati 'id.'

1. This rule is stated separately from the preceding so that, in the subsequent rule, only *LIṄ* (and no *tumUN*) can be carried. Thus, split-formulation (*yogavibhāga*) is intended for what follows (*yogavibhāga uttarārtham*).

3.3.160 **इच्छार्थेभ्यो विभाषा वर्त्तमाने**

icchārthebhyo vibhāṣā vartamāne
/*icchārthebhyaḥ* 5/3 *vibhāṣā* 1/1 *vartamāne* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṅ* #159)
icchārthebhyo dhātubhyo vartamāne kāle vibhāṣā liṅ pratyayo bhavati
Affix *LIṄ* optionally occurs after verbal roots with the signification of *iṣ* when the action is denoted at the current time.

EXAMPLES:

icchet 'he wishes...'
icchati 'id.'
kāmayate 'id.'
kāmayeta 'id.'

1. This optional provision of *LIṄ* is made in view of 3.2.123 *vartamāne laṭ*. That is, we will get two forms: *icchet*, as well as, *icchati*.

3.3.161 **विधिनिमन्त्रणामन्त्रणाधीष्टसम्प्रश्नप्रार्थनेषु लिङ्**

vidhinimantraṇāmantraṇādhīṣṭasampraśnaprārthaneṣu liṅ
/*vidhi...prārthaneṣu* 7/3 (*itar. dv.*); *liṅ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
vidhyādyartheṣu dhātor liṅ pratyayo bhavati
Affix *LIṄ* occurs after a verbal root when *vidhi* 'command, injunction', *nimantraṇa* 'invitation', *āmantraṇa* 'polite address, pro forma invitation,' *adhīṣṭa* 'polite wish, solicitation', *sampraśna* 'proper question', and *prārthanā* 'request, prayer' is denoted.

EXAMPLES:

kaṭaṃ kuryāt 'he should make the mat'
grāmaṃ bhavān āgacchet 'you, sir, should come to the village'
iha bhavān bhuñjīta 'you, sir, please eat here'
iha bhavān āsīta 'you, sir, please sit here'
adhīcchāmo bhavantaṃ māṇavakaṃ bhavān upanayet 'it is my earnest wish that you please perform the initiation of my son'
kiṃ nu khalu bho vyākaraṇam adhīyīya 'should I study grammar'
bhavati me prārthanā vyākaraṇam adhīyīya 'it is my request that I should study grammar'

1. This rule introduces affix *LIṄ* after a verbal root when *vidhi*, *nimantraṇa*, *āmantraṇa*, *adhīṣṭa*, *sampraśna* and *prārthanā* are denoted. Note that the first four meanings all entail instigation of some sort or the other. Separate mention of particular words is simply an expatiation (*prapañca*) of the same. There have been some efforts to differentiate these meanings. Thus, *vidhi* is to be used in the context of a command issued to someone younger, or someone who is an employee. Conversely, *adhīṣṭa* may entail a situation where one entreats an elder, or respectable person, to do something. Commentators explain this with *satkārapūrvako vyāpāraḥ* which is mostly approaching one's elders, for example, a teacher, in order to request them to do something. A difference between *nimantraṇa* and *āmantraṇa* is made on the basis of *kāmacāra* 'doing as one pleases'. That is, *āmantraṇa* can be seen as an invitation which a person

can decline without any (ritual) consequences. A *nimantraṇa* is glossed as *niyogakaraṇa*, something one is delegated (and may be obligated) to do. This clearly rules out 'doing as one pleases' (*kāmacāra-karaṇam*). The scope of these meanings can be summarized as command, request, and deliberation. Commentators have also discussed the following four questions in connection with these meanings:

(*a*) Are *vidhi*, etc., the meanings of the base (*prakṛtyartha*) after which affix *LIṄ* is to be introduced?

(*b*) Are these meanings to be accepted as the meaning of the affix (*pratyayārtha*)?

(*c*) Are these meanings to be accepted as modifiers to the meaning of the base (*prakṛtyarthaviśeṣaṇaṇa*)?

(*d*) Are these meanings to be accepted as modifiers to the meaning of the affix (*pratyayārthaviśeṣaṇa*)?

The second view is unacceptable, since *LIṄ* could, then, only be introduced when the bases which denote these meanings are used. Thus, we will only get *vidadhyāt, nimantrayet, āmantrayet, adhīcchet, sampracchet*, and *prārthayet*. The (*c*) above is also not acceptable, since there is no additional meaning that one gets by modifying the base-meanings with *vidhi*, etc. The first view must also be unacceptable. For, *vidhi*, etc., could then become the denotators of the affixal meanings of *bhāva* 'action', *kartṛ* 'agent', and *karman* 'object'. Commentators accept the fourth view whereby *vidhi*, etc., are accepted as the modifiers of the affixal meanings.

This rule, again, is treated as an exception to the introduction of all *LA* affixes.

3.3.162 लोट् च

loṭ ca

/*loṭ* 1/1 *ca* Ø/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *vidhinimantraṇa... prārthaneṣu* #161)

loṭ pratyayo bhavati dhātor vidhyādiṣv artheṣu

Affix *LOṬ* also occurs after a verbal root when *vidhi, nimantraṇa, āmantraṇa, sampraśna* and *prārthanā* are denoted.

EXAMPLES:

kaṭaṃ tāvad bhavān karotu 'in the meantime, you please make the mat'

grāmaṃ bhavān āgacchatu 'you please come to the village'

amutra bhavān āstām 'you please sit there'

amutra bhavān bhuṅktām 'you please eat there'

iha bhavān bhuṅktām 'id'

adhīcchāmo bhavantaṃ māṇavakaṃ bhavān adhyāpayatu 'it is my wish that you please teach my son'

adhīcchāmo bhavantaṃ māṇavakaṃ bhavān upanayatām 'id.'
kiṃ nu khalu bho vyākaraṇam adhyayai 'it is my wish to study grammar, sir'
bhavati me prārthanā vyākaraṇam adhyayai 'id.'

1. This split-rule (*yogavibhāga*) is made so that in the subsequent rule only *LOṬ* can be carried. A joint formulation of this rule with the earlier one would make the *anuvṛtti* of *LIṄ* required.

3.3.163 **प्रैषातिसर्गप्राप्तकालेषु कृत्याश्च**

praiṣātisargaprāptakāleṣu kṛtyāś ca
/praiṣātisargaprāptakāleṣu 7/3 *kṛtyāḥ* 1/3 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *loṭ* #162)
praiṣādiṣv artheṣu dhātoḥ kṛtyasaṃjñakāḥ pratyayā bhavanti, cakārāl loṭ ca
Affixes termed *kṛtya*, and *LOṬ* as well, occur after a verbal root when *praiṣa* 'direction, ordering', *atisarga* 'granting permission' and *prāptakāla* 'proper time' are denoted.

EXAMPLES:

bhavatā kaṭaḥ karaṇīyaḥ 'the mat should be made by you'
bhavatā kaṭaḥ karttavyaḥ 'id.'
bhavatā kaṭaḥ kṛtyaḥ 'id.'
bhavatā kaṭaḥ kāryaḥ 'id.'
karotu kaṭaṃ bhavān iha preṣitaḥ 'I commission you to please make the mat'
karotu kaṭam bhavān atisṛṣṭaḥ 'I grant you permission to make the mat'
bhavataḥ prāptakālaḥ kaṭakaraṇe 'It is time for you to make the mat'

1. This rule introduces *kṛtya* affixes after a verbal root when *praiṣa*, *atisarga*, and *prāptakāla* are denoted. The *ca* of this rule is used so that *LOṬ* can be carried from the preceding rule. Thus, *LOṬ* becomes an option to the provision of this rule. Consider thus the following examples:

(*a*) *bhavatā kaṭaḥ* (*karaṇīyaḥ*, *kartavyaḥ*, *kṛtyaḥ*, or *kāryaḥ*) 'the mat should be made by you'
(*b*) *karotu kaṭaṃ bhavān iha preṣitaḥ* 'please make the mat here as commissioned'
(*c*) *karotu kaṭaṃ bhavān atisṛṣṭaḥ* 'please make the mat as you are asked'
(*d*) *bhavataḥ prāptakālaḥ kaṭakaraṇe* 'the time for you to make the mat has arrived'

The first sentence illustrates the option of four affixes: *anīyaR*, *tavyaT* (3.1.96 *tavyattavyānīyaraḥ*), *KyaP* (3.1.120 *vibhāṣa kivṛṣoḥ*), and *ṆyaT* (3.1.124 *ṛhalor ṇyat*) respectively. Sentences (*b*-*d*) illustrate the optional

LOṬ with reference to the meaning conditions of *praiṣa*, *atisarga*, and *prāptakāla*.

Why must we provide for the introduction of the *kṛtya*, here? Are they not covered already to denote *bhāva* and *karman* (3.4.70 *tayor eva...*)? Besides, introduction in the specific context of *praiṣa*, etc., is included within the general context of *bhāva* and *karman*. Thus, *kṛtyāḥ* should not be stated in the rule. The argument that *kṛtyāḥ* is used so that the specific provision of *LOṬ* will block the general provision of the *kṛtya* affixes will not hold. For, the provision of *vā' sarūpavidhi* (3.1.94 *va' sarūpo' striyām*) will not let that happen. Pāṇini still reads *kṛtyāḥ* in this *sūtra* to indicate that the provisions of *vā' sarūpavidhi* do not necessarily apply in each and every instance beyond the scope of rule 3.3.94 *striyāṃ ktin* (cf.: *stryadhikārāt pareṇa vā' sarūpavidhir nāvaśyaṃ bhavati*).

3.3.164 **लिङ् चोर्ध्वमौहूर्त्तिके**

liṅ corddhvamauhūrttike
/*liṅ* 1/1 *ca* Ø *ūrdhvamauhūrttike* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *praiṣātisargaprāptakāleṣu* #163)
praiṣādiṣu gamyamāneṣu ūrddhvamauhūrttike' rthe varttamānād dhātor liṅ pratyayo bhavati cakārād yathāprātaṃ ca
Affix *LIṄ*, and *kṛtya* and *LOṬ* as well, occurs after a verbal root when *praiṣa*, *atisarga* and *prāptakāla* are denoted with reference to a unit of future time exceeding a *muhūrtta*.

EXAMPLES:

upari muhūrttasya bhavatā khalu kaṭaḥ karttavyaḥ 'the mat should be made by you after a *muhūrtta*'
upari muhūrttasya bhavatā khalu kaṭaḥ karṇīyaḥ 'id.'
upari muhūrttasya bhavatā khalu kaṭaḥ kāryaḥ 'id.'
bhavān khalu kaṭaṃ kuryāt 'you should indeed make the mat'
bhavān khalu kaṭaṃ karotu 'id.'
bhavān iha preṣitaḥ 'you have been commissioned...'
bhavān atisṛṣṭaḥ 'id.'
bhavān prāptakālaḥ kaṭakaraṇe 'your time... has come'

1. This rule introduces affix *LIṄ*, in addition to the *kṛtya* affixes and *LOṬ*, provided *praiṣa*, *atisarga*, and *prāptakāla* are denoted relative to a period of time over a *muhūrtta* 'forty-eight minutes'.

3.3.165 **स्मे लोट्**

sme loṭ
/*sme* 7/1 *loṭ* 1/1/

(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *praiṣātisargaprāptakāleṣu* #163 *ūrddhvamauhūrttike* #164*)*
smaśabda upapade praiṣādiṣu gamyamāneṣūrddhvamauhūrttike' rthe vartta-mānād dhātor loṭ pratyayo bhavati
Affix *LOṬ* occurs after a verbal root used in conjunction with *sma* when *praiṣa, atisarga* and *prāptakāla* are denoted with reference to a unit of future time exceeding a *muhūrtta.*

EXAMPLES:

ūrdhvaṃ muhūrttād bhavān kaṭaṃ karotu sma 'you should please make the mat after a *muhūrtta*'
ūrdhvaṃ muhūrttād bhavān grāmaṃ gacchatu sma 'you should please go to the village after a *muhūrtta*'
ūrdhvaṃ muhūrttād bhavān māṇavakam adhyāpayatu sma 'you should please teach (my) son after a *muhūrtta*'

1. This rule introduces affix *LOṬ* under the cooccurrence condition of *sma* as an exception to *LIṄ* and the *kṛtya* affixes of rule 3.1.163 *praiṣātisarga....* The *anuvṛtti* of *praiṣāti...kāla* and *ūrddhvamauhūrttike* is still valid.

3.3.166 अधीष्टे च

adhīṣṭe ca
/*adhīṣṭe* 7/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *sme loṭ* #165*)*
smaśabda upapade' dhīṣṭe dhātor loṭ pratyayo bhavati
Affix *LOṬ* also occurs after a verbal root used in conjunction with *sma* when *adhīṣṭa* is denoted.

EXAMPLES:

aṅga sma rājan māṇavakam adhyāpaya 'O king, please teach (my) son'
aṅga sma rājann aganihotraṃ juhudhi 'O king, please perform the Agnihotra'

1. This rule introduces affix *LOṬ*, as an exception to *LIṄ* of rule 3.3.161 *vidhinimantraṇādhīṣṭa...* provided the root occurs in conjunction with *sma*, and *adhīṣṭa* 'request' is denoted. Thus we get: *aṅga sma rājan māṇavakam adhyāpaya* 'I most respectfully request you O king! to kindly teach my son'.

3.3.167 कालसमयवेलासु तुमुन्

kālasamayavelāsu tumun
/*kālasamayavelāsu* 7/3 *tumun* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91*)*
kālādiṣūpapadeṣu dhātos tumun pratyayo bhavati

Affix *tumUN* occurs after a verbal root used in conjunction with a nominal *pada* which contains *kāla, samaya* or *velā.*

EXAMPLES:

kālo bhoktum 'it is time to eat'
samayaḥ khalu snānabhojane sevitum 'it is time now to attend to bathing and eating'
velā bhoktum 'it is time to eat'

1. A question is raised as to why this rule was not formulated simply as *kālādiṣu tumun.* That is, why use *samayā* and *velā* when they are synonymous with *kāla* 'time'. Pāṇini uses all three instead to indicate that synonyms of *kāla* can also form an *upapada.* The inclusion of only three, rather than all, synonyms of *kāla* should be treated as illustrative only. That is, words such as *avasara,* etc., can also qualify to form an *upapada.*

3.3.168 लिङ् यदि

liṅ yadi
/liṅ 1/1 *yadi* 7/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *kālasamayavelāsu* #167*)*
yacchabde upapade kālādiṣu dhātor liṅ pratyayo bhavati
Affix *LIṄ* occurs after a verbal root when the root cooccurs with a nominal *pada* which contains *kāla, samaya,* or *velā* and *yad* is used.

EXAMPLES:

kālo yad bhuñjīta bhavān 'it is time for you to eat'
samayo yad bhuñjīta bhavān 'id.'
velā yad bhuñjīta bhavān 'id.'

1. This rule introduces affix *LIṄ* under the cooccurrence condition of *yad* 'that which...' in addition to *kāla,* etc. This clearly is an exception to the *tumUN* of the preceding rule.

3.3.169 अर्हे कृत्यतृचश्च

arhe kṛtyatṛcaś ca
/arhe 7/1 *kṛtyatṛcaḥ* 1/3 *ca* 0/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *liṅ* #168*)*
arhe kartari vācye gamyamāne vā dhātoḥ kṛtyatṛcaḥ pratyayā bhavanti cakārāl liṅ ca
Affixes *kṛtya* and *tṛC,* and *LIṄ* as well, occur after a verbal root when the agent is denoted as deserving.

EXAMPLES:

bhavatā khalu kanyā voḍhavyā 'you indeed deserve to marry the girl'
bhavatā khalu kanyā vāhyā 'id.'
bhavatā khalu kanyā vahanīyā 'id.'
bhavatā khalu kanyā voḍhā 'id.'
bhavān khalu kanyāṃ vahet 'id.'
bhavān khalu kanyām arhet 'id.'

1. The *ca* of the rule is used to further facilitate the introduction of *LIṄ*. Thus there will be three types of examples:

(*a*) *bhavatā khalu kanyā voḍhavyā*
(*b*) *bhavān khalu kanyāyā voḍhā*
(*c*) *bhavān khalu kanyāṃ vahet*

These sentences illustrate the usage of affixes *tavya* (*kṛtya*), *tṛC*, and *LIṄ* respectively.

A question is raised against the introduction of affixes *kṛtya* and *tṛC* by this rule. It is argued that these affixes could be made available in the specific context of *yogyatā* 'fitness' in the same manner as they are made available elsewhere in more generalized contexts. But what if affix *LIṄ*, which is also made available here, blocks the general provision of *kṛtya* and *tṛC* via *vā' sarūpa* of rule 3.1.94 *vā' sarūpo' striyāṃ*?. That is evenmore the reason why mention of *kṛtya* and *tṛC* becomes necessary. For, *vā' sarūpavidhi* does not regularly apply in the context of rules subsequent to the domain of rule 3.3.94 *striyāṃ ktin*.

3.3.170 आवश्यकाधमर्ण्ययोर्णिनिः

āvaśyakādhamarṇyayor ṇiniḥ
/*āvaśyakādhamarṇyayoḥ* 7/2 *ṇiniḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
avaśyambhāvaviśiṣṭe ādhamarṇyaviśiṣṭe ca kartari vācye dhātor ṇiniḥ pratyayo bhavati
Affix *ṆinI* occurs after a verbal root when the agent performs the action out of necessity (*āvaśyaka*), or indebtedness (*ādhamarṇya*).

EXAMPLES:

avaśyaṅkārī 'he who is sure to do'
śataṃdāyī 'he who owes someone a hundred'

1. Note that the conditions of 'necessity' and 'indebtedness' qualify the *kartṛ* which, in turn, becomes the denotatum of the affix (*pratyayārthaviśeṣaṇam*). They cannot be accepted here as specifying a cooccurrence (*upapada*) condition.

3.3.171 कृत्याश्च

kṛtyāś ca
/kṛtyāḥ 1/3 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *āvaśyakādhamarṇyayoḥ* #170)
kṛtyasaṃjñakāś ca pratyayā āvaśyakādhamarṇyayor upādhibhūtayor dhātor bhavanti
Affixes termed *kṛtya* also occur after a verbal root when the action is qualified by *āvaśyaka* or *ādhamarṇya*.

EXAMPLES:

bhavatā khalu avaśyaṃ kaṭaḥ karttavyaḥ 'the mat should be made by you'
bhavatā khalu avaśyaṃ kaṭaḥ karaṇīyaḥ 'id.'
bhavatā khalu avaśyaṃ kaṭaḥ kāryaḥ 'id.'
bhavatā khalu avaśyaṃ kaṭaḥ kṛtyaḥ 'id.'
bhavatā śataṃ dātavyam 'the debt of the hundred should be paid by you'
bhavatā sahasraṃ deyam 'the debt of the thousand should be paid by you'

1. This rule additionally provides for *kṛtya* affixes used with *ṆinI* under contexts similar to the preceding rule. An objection is made against the inclusion of the *kṛtya* affixes in this context by a separate rule. It is argued that rules already available for the introduction of *kṛtya* affixes can account for this instance also. But, in the absence of this rule, they could be blocked by the specific provision of *ṆinI* of the last rule. This cannot happen because *kṛtya* affixes are introduced to denote *bhāva* and *karman* (3.4.70 *tayor eva...*); affix *ṆinI* is employed to denote the agent. Counter arguments state that a *kṛtya* can also denote an agent as is the case (though optionallly via *nipātana*) in rule 3.4.68 *bhavyageyapravacan....* The rule thus must include *kṛtya* in the context of *ṆinI*.

3.3.172 शकि लिङ् च

śaki liṅ ca
/śaki 7/1 *liṅ* 1/1 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *kṛtyāḥ* #171)
śaknotyarthopādhike dhātvarthe liṅ pratyayo bhavati cakārāt kṛtyāś ca
Affix *LIṄ*, and those termed *kṛtya* as well, occur after a verbal root when the action is qualified with *śak* 'to be able'.

EXAMPLES:

bhavatā khalu bhāro voḍhavyaḥ 'you can indeed carry the load'
bhavatā khalu bhāro vahanīyaḥ 'id.'

bhavatā khalu bhāro vāhyaḥ 'id.'
bhavān khalu bhāraṃ vahet 'id.'
bhavān iha śaktaḥ 'you, sir, are able to do this'

1. This rule introduces affix *LIṄ*, in addition to the *kṛtya*, when the capability of the agent is expressed in relation to the action. The word *śaki* is thus a qualifier for the action denoted by the root. Commentators notice that the inclusion of *kṛtya* affixes in this context by *ca* is made in view of an otherwise impending blocking by *LIṄ* (*Kāś.*: *sāmānyavihitānāṃ punar vacanaṃ liṅā bādhā mā bhut* 'a restatement of the general *kṛtya* affixes is made so that they can not be blocked by *LIṄ*).

3.3.173 **आशिषि लिङ्लोटौ**

āśiṣi liṅloṭau
/*āśiṣi* 7/1 *liṅloṭau* 7/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
āśīrviśiṣṭe' rthe varttamānād dhātor liṅloṭau pratyayau bhavataḥ
Affixes *LIṄ* and *LOṬ* occur after a verbal root when the action is qualified with *āśīḥ* 'benediction, blessing'.

EXAMPLE:

ciraṃ jīvatu bhavān 'may you live long'

1. This rule introduces affixes *LIṄ* and *LOṬ* when benediction (*āśīḥ*) is denoted. The word *āśīḥ* is here used as a modifier to the base after which these affixes must be introduced (*prakṛtyarthaviśeṣaṇam*). That is, action denoted by the verbal root must be modified by benediction. Thus, consider the example sentences where *ciram* 'long' modifies the action denoted by *jīv* 'to live'.

A counter-example to it will be: *ciraṃ jīvati devadattaḥ* 'Devadatta is living a long life'. Why can *LIṄ* not be brought to the context of this rule by the use of *ca*? Explicit mention of *LIṄ* is necessary so that the *anuvṛtti* of *kṛtya*, as a result of its association (*sāhacarya*) with *LIṄ* in the earlier rule, can be blocked.

3.3.174 **क्तिच्क्तौ च संज्ञायाम्**

kticktau ca saṃjñāyām
/*kticktau* 1/2 *ca* Ø *saṃjñāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *āśiṣi* #173)
āśiṣi viṣaye dhātoḥ kticktau pratyayau bhavataḥ samudāyena cet saṃjñā gamyate
Affixes *KtiC* and *Kta* occur after a verbal root when the action is qualified with *āśīḥ* and the derivate denotes a name (*saṃjñā*).

EXAMPLES:

tañutāt tantiḥ 'may he weave; a weaver'
sanutāt sātiḥ 'may it happen; wealth or gift'
bhavatāt bhūtiḥ 'prosperity, success'
manutāt mantiḥ 'respect'
devā enaṃ deyāsur devadattaḥ 'Devadatta (may gods give him...)'

1. This rule introduces affixes *KtiC* and *Kta*, still within the scope of *āśīḥ* provided the derivate denotes a name (*saṃjñā*). Thus we have *Kta* used to derive *devadattaḥ* parallel to *devā enaṃ deyāsuḥ* 'may the gods give him, i.e., Devadatta'. An example for *KtiC* is *tantiḥ* 'weaver' parallel to *tanutāt* 'may he weave'.

Note that the *C* as an *it* in *KtiC* is to distinguish (*viśeṣaṇārtha*) it from *KtiN* in rules such as 6.4.39 *na ktici dīrghasya*. Furthermore, *Kta* is a general affix to which this *KtiC* could have formed an exception, had this rule not included *Kta* along with *KtiC*. It is, therefore, an effort to save *Kta* from being blocked by *KtiC* that this rule provides for *Kta*.

3.3.175 माङि लुङ्

māṅi luṅ
/*māṅi* 7/1 *luṅ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *āśiṣi* #173)
māṅy upapade dhator luṅ pratyayo bhavati
Affix *LUṄ* occurs after a verbal root which cooccurs with *māṄ*.

EXAMPLES:

mā kārṣīt 'let him not do (it)'.
mā hārṣīt 'let him not take (it) away'

1. This provision of *LUṄ* is treated as an exception to all *LA* affixes (*sarvalakārāṇām apavādaḥ*). That is, one must use affix *LUṄ*, and *LUṄ* alone, after a verbal root when it is used in conjunction with *māṄ*'.

3.3.176 स्मोत्तरे लङ् च

smottare laṅ ca
/*smottare* 7/1 *laṅ* 1/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *māṅi* #175)
smaśabdottare māṅy upapade dhātor laṅ pratyayo bhavati
cakārāl luṅ ca
Affix *LAṄ*, and *LUṄ* as well, occurs after a verbal root which cooccurs with *māṄ* and is followed by *sma*.

EXAMPLES:

mā sma karot 'let him not make...'
mā sma kārṣīt 'id.'
mā sma harat 'let him not take away...'
mā sma hārṣīt 'id.'

1. This rule introduces affix *LAṄ*, optionally to *LUṄ*, when *sma* follows a verbal root, and *māṄ* is used in conjunction with the same. Affix *LUṄ* is brought to the context of this rule by means of *ca*.

3.4.1 धातुसम्बन्धे प्रत्ययाः

dhātusambandhe pratyayāḥ
/dhātusambandhe 7/1 = *dhātvarthayoḥ sambandho dhātusambandhaḥ, tasmin (ṣaṣ. tat.); pratyayāḥ* 1/3/
dhātusambandhe sati ayathākāloktā api pratyayā sādhavo bhavanti
Affixes also occur when a relationship between actions is denoted.

EXAMPLES:

agniṣṭomayājy asya putro janitā 'he who will perform the Agniṣṭoma will have a son born'
kṛtaḥ kaṭaḥ śvo bhavitā '(we will talk) tomorrow about the making of the mat'

1. Commentators explain that the word *dhātusambandha* means *dhātvarthasambandha* 'relationship between the action denoted by verbal roots'. This implies, then, that *dhatū* is here interpreted to mean *dhātvartha* 'sense of root'. Such an interpretation is made possible via transference (*upacāra*) of meaning (*abhidheya*) to the form (*abhidhāna*). That is, the form *dhātu*, which ordinarily denotes verbal roots '*bhū*, etc.' (*bhvādi*), is here treated as secondary (*gauṇa*) to its meaning (*dhātvartha*). The word *dhātu* is further interpreted as plural (*bahuvacana*), to yield the interpretation 'relationship between the actions denoted by verbal roots', because 'relationship' (*sambandha*) is a concept with multiple loci (*anekādhiṣṭhāna*).

How can one characterize the relationship between the meaning of roots? Commentators identify the relationship as *viśeṣaṇaviśeṣya* 'qualifier-qualified'. They also note that, since the denotatum of the word which ends in a *tiṄ* is central to the meaning of a sentence, and also since a modified element (*viśeṣya*) is principal (*pradhāna*) in relation to the modifier (*viśeṣaṇa*), which is secondary (*gauṇa*), a relationship expressed by the word ending in a *sUP* is secondary. That is, a relation expressed by a *sUP* in terms of a *kāraka* is secondary to the relation expressed in terms of an action (*kriyā*). In view of this, the *Nyāsa* notes: *sarvatra tiṅarthavācyo' rtho viśeṣyaḥ subantavācyas tu viśeṣaṇam* 'the meaning denoted by a word which ends in a *tiṄ*

always refers to that which is 'modified', rather than to that which is 'modifier', which is denoted by the word which ends in a *sUP*. Consider *agniṣṭomayājī*, a word which ends in a *sUP*, where the denotatum of past (*bhūta*) which not only modifies the meaning of *janitā*, a modified word ending in *tiṄ*, but also abandons the 'past' for the 'future' of *janitā*, the principal word.

Kāśikā further elaborates with *ayathākāloktā api pratyayā sādhavo bhavanti* 'affixes introduced in the tenses other than those assigned to them are also treated as correct'. Consider again *agniṣṭomayājy asya putro janitā*, where *agniṣṭomayājin* is derived by introducing affix *ṆinI* by rule 3.2.85 *karaṇe yajaḥ* with the denotatum of past (*bhūta*). In contrast, *janitā* entails *LUṬ* with the denotatum of a future (*bhaviṣyati*) not pertaining to today (*anadyatana*). The past of *agniṣṭomayājin* when related with the future of *janitā* denotes future. For this reason, what was intended to have the sense of 'he who performed the *agniṣṭoma* sacrifice' will now take the sense of 'he who will perform the *agniṣṭoma* sacrifice in the future'. That is, the 'future' denotatum of *ṆinI*, in association with the future of *janitā*, can here be treated as correct. The second example also entails 'past' as the denotatum of *niṣṭhā* in *kṛtaḥ*; *bhavitā* of course entails 'future'. The 'past' of *Kta* thus denotes the 'future' in association with the 'future' of *bhavitā*. Note that if the 'past' of *ṆinI* in *agniṣṭomayājin* is rigidly interpreted as 'past', the futurity of the sacrifice cannot be comprehended.

A question is also raised as to why 'past' is required to denote 'future'. Why is 'future' not required to denote 'past'? That is, why is a transposition (*viparyaya*) of the tenses not comprehended? Such a transposition is not possible, because only the tense of the modifier can be changed to that of the modified. The modifier follows the modified, and not the other way around. Haradatta (*PM* ad *Kāśikā* III: 141) is thus correct: *pradhānānurodhena guṇasya kālaparityāgaḥ* 'the secondary element, the modifier, abandons its tense under the dictates of the modified, the primary element'. The principal element or the modified, i.e. *janitā*, thus can not abandon its tense in favor of *agniṣṭomayājin*, the modifier, or secondary element. That is, we can get only the following interpretation:

(*i*) *so' sya putro janitā yo' agniṣṭomena yaṣṭā* 'a son will be born to him who performs the sacrifice by means of *Agniṣṭoma*'

This sentence is synonymous with our first example, given the understanding that *ṆinI* abandons its 'past' for the 'future' of *janitā* as indicated by *yaṣṭā* of sentence (*i*).

2. A question is raised against the explicit use of the word *pratyaya* in the rule, especially when it can easily be received via *anuvṛtti*. Commentators state that the earlier *pratyaya* (carried from 3.1.1 *pratyayaḥ*) is associated with '*dhātu*'. As a consequence, only those affixes which are introduced after a verbal root come under the scope of this rule. The word '*pratyaya*' is explicitly stated so that an affix such as a *taddhita* (4.1.76

taddhitāḥ), which is not introduced after a verbal root, can also be treated as correct in instances where it denotes a tense other than the one for which it is specified. Consider the following examples:

(*ii*) *gomān āsīt* 'he is the one who owned cows'
(*iii*) *gomān bhavitā* 'he is the one who will own cows'

Note that *gomān* has affix *matUP*, a *taddhita*, introduced by rule 5.2.94 *tad asyāsty...* in the sense of present (*vartamāna*). Used with *āsīt* of the 'past' and *bhavitā* of the 'future' it will still be treated as correct in denoting 'past' and 'future'. It is to allow for diverse affixes, that the word '*pratyaya*' is explicitly stated in this rule.

3.4.2 क्रियासमभिहारे लोट् लोटो हिस्वौ वा च तध्वमोः

kriyāsamabhihāre loṭ loṭo hisvau vā ca tadhvamoḥ
/*kriyāsamabhihāre* 7/1 = *samabhiharaṇam samabhihāraḥ; kriyāyāḥ samabhihāraḥ (saṣ. tat.), tasmin; loṭ* 1/1 *loṭaḥ* 6/1 *hisvau* 1/2 = *hi ca sva ca (itar. dv.); vā* ∅ *ca* ∅ *tadhvamoḥ* 6/2 = *ta ca dhvam ca (itar. dv.), tayoḥ*/
(*dhātusambandhe* #1)
samabhihāraviśiṣṭakriyāvacanād dhātor loṭ pratyayo bhavati sarveṣu kāleṣu; tasya ca loṭo hi, sva ity etāv ādeśau bhavataḥ, tadhvambhāvinas tu vā bhavataḥ.

Affix *LOṬ* occurs after a verbal root when repeated or excessive action (*kriyāsamabhihāra*) is denoted; this *LOṬ* is replaced with *hi* and *sva* obligatorily, and with *ta* and *dhvam* optionally.

EXAMPLES:

lunīhi lunīhy ity ayaṃ lunāti 'you cut, you cut,' thus 'he cuts repeatedly'
lunīhi lunīhi ity eva ahaṃ lunāmi 'you cut, you cut,' thus 'I cut repeatedly'
lunīhi lunīhi ity eva ayam alāvīt 'you cut, you cut,' thus 'he cut repeatedly'
lunīhi lunīhi ity eva ayaṃ laviṣyati 'you cut, you cut,' thus 'he will cut repeatedly'

1. Commentators explain that this *LOṬ* is an exception to all *LA*-affixes. For example, it is introduced under the condition of *kriyāsamabhihāra*, an action which is performed either excessively, or over and over again. The root after which the *LOṬ* is to be introduced does not, by itself, denote *kriyāsamabhihāra*. For this reason, *Kāśikā* uses the expression: *samabhihāraviśiṣṭakriyāvacanāt...* '*LOṬ* occurs after a root which denotes an action qualified by repetition...'. The repetition of verbal forms, such as *lunīhi lunīhi* 'you cut and cut...', makes the denotatum of *kriyāsamabhihāra* possible. That is, someone commanded someone, "you cut (it)". Consequently, "he cuts it again and again". Furthermore, there is no temporal restriction to the use of *LOṬ*, which is why *Kāśikā* adds: *loṭ pratyayo bhavati sarveṣu kāleṣu* 'affix *LOṬ* occurs in all tenses'. Refer to the first two sentences

of the example. These are in the present tense as opposed to the third and fourth, which are used in past and future respectively.

2. Note that this *LOṬ*, unlike other *LA*-affixes, is not assigned its replacements from the eighteen *tiṄ*-affixes of the two sets of *parasmaipada* 'active' and *ātmanepada* 'middle'. Instead, Pāṇini orders *hi* and *sva* as two obligatory replacements. The first is a replacement for the second person singular *parasmaipada* 'active' ending *si*, by rule 3.4.87 *ser hy apic ca*. The second refers to the second person singular *ātmanepada* 'middle' ending *thās*, which gets replaced with *se*, by rule 3.4.80 *thāsas se*. This *se* ultimately yields the form *sva* by rule 3.4.91 *svābhyāṃ vāmau*. Note that both *hi* and *sva* are replacements relative to *LOṬ*. Since *hi* and *sva* are replacements for *parasmaipada* and *ātmanepada* endings respectively, we conclude that *hi* and *sva* are also *parasmaipada* and *ātmanepada* replacements. But we cannot accept that they are to be limited also to second person and singular usages. For this reason the *Mahābhāṣya* states: *hisvau sarveṣāṃ puruṣāṇāṃ sarveṣāṃ ca vacanānām iṣyate* '*hi* and *sva* are intended for any person, or number'. Consequently, *hi* is a replacement covering the three persons and three numbers of *parasmaipada LOṬ*. The same function is assigned for the representation of *ātmanepada* by *sva* in all three persons and numbers.

In which sense is affix *LOṬ* introduced? It could not be *kriyāsamabhihāra*, since that forms the condition for the introduction of *LOṬ*. The sense of *LOṬ*, in the absence of any explicit statement to the contrary, and in consonance with *anirdiṣṭārthāḥ pratyayā bhāve bhavanti* 'affixes enumerated with no specific meaning should be introduced to denote *bhāva*', must be accepted as *bhāva* 'root-sense'. The replacements of *LOṬ* in *hi* and *sva* thus also denote *bhāva*.

This rule also introduces *ta* and *dhvam* as two replacements for *LOṬ*, though only optionally (*vā*). The *ta*, here, refers to the replacement in *ta* for *thas*, the second person dual *parasmaipada* ending of rule 3.4.101 *tasthasthamipāṃ tāntantāmaḥ*. Thus, *ta* becomes a *parasmaipada* replacement as opposed to *dhvam*, which is clearly an *ātmanepada* second personal plural ending.

Note that in the above sentences *kriyāsamabhihāra* is denoted via doubling the verb form (cf. *Mbh. kriyāsamabhihāre dve bhavataḥ*). What follows these doubled up second personal forms that denote *kriyāsamabhihāra* is a tagged statement (*anuprayoga*), which is rendered in different persons and tenses. It is in this sense that the provisions of this rule go beyond imperative (*LOṬ*).

3. This rule is interpreted as split into several sentences (*yogavibhāga*) for interpretation. Vāsudeva Dīkṣita (*Bālamanoramā* ad *SK* III: 650) illustrates these following sentences:

(*a*) *kriyāsamabhihāra* (*viśiṣṭakriyāvṛtter*) *dhātor loṭ* 'affix *LOṬ* is introduced after a verbal root which denotes an action qualified by repetition'

(*b*) *loṭo hisvau* '*hi* and *sva* replace *LOṬ*'
(*c*) *loṭo loṭ hisvau* '*hi* and *sva*, which replace *LOṬ*, are treated as *LOṬ*'
(*d*) *vā ca tadhvamoḥ* '*ta* and *dhvam* optionally replace *LOṬ*'

The third sentence in this split interpretation is consequential. For, it implies the transfer of the characteristics of *LOṬ* to *hi* and *sva*. Commentators explain that this transfer is necessary to bring the *parasmaipada*, *ātmanepada*, and *tiṄ* designations to *hi* and *sva*. Note that replacements for *LA* affixes are termed *parasmaipada* (1.4.99 *laḥ parasmaipadam*). A subset of these replacements, i.e. *taṄ*, is termed *ātmanepada* (1.4. *taṅānāv*...). Note also that *sva* is not a member of the abbreviatory term *taṄ*. Consequently, it does not qualify for assignment of the term *ātmanepada*. A transfer of the characteristic properties of *LOṬ* to *hi* and *sva* makes the assignment of the said terms possible. For this one must have the *anuvṛtti* of *LOṬ* in the third sentence as a qualifier to *hisvau*. In view of 1.4.14 *suptiṅantaṃ padam*, such an extension of characteristic properties is necessary for assignment of the term *pada* to the derivates .

3.4.3 **समुच्चयेऽन्यतरस्याम्**

samuccaye' nyatarasyām
/*samuccaye* 7/1 *anyatarasyām* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *dhātusambandhe* #1, *loṭ loṭo hisvau vā ca tadhvamoḥ* #2)
samuccīyamānakriyāvacanād dhātor anyatarasyāṃ loṭ pratyayo bhavati
Affix *LOṬ* optionally occurs after verbal roots which signify an array of related actions; *hi* and *sva* obligatorily replace this *LOṬ* and *ta* and *dhvam* replace it optionally.

EXAMPLES:

bhrāṣṭram aṭa maṭham aṭa khadūram aṭa sthālyapidhānam aṭety eva ayam aṭati; ...*imāv aṭataḥ*; ...*ime aṭanti* 'go to the place where they roast grains; go to the place of the ascetics; go to the room and as far as to the cleaning place of the pots'; ...thus he goes; thus those two are going; thus they all are going'
chando' dhīṣva vyākaraṇam adhīṣva niruktam adhīṣvety eva aham adhīye; ...*āvām adhīvahe*; ...*vayam adhīmahe* 'study the Vedas, study grammar, study the Nirukta,' thus I study; ...thus we study; ...thus we all study'
chando' adhīṣe vyākaraṇam adhīṣe niruktam adhīṣe ity eva tvam adhīṣe; ...*yuvām adhīyāthe*; *yūyam adhīṣve* 'study the Vedas, study grammar, study the Nirukta,' thus you study; ...thus you two study; ...thus you all study'

1. The word *samuccaya* has been explained as an 'array' or 'multitude' of actions. *LOṬ* is thus to be introduced after each verbal root

which forms part of the signification that constitutes an array of actions. Therefore, it is not introduced after a single verbal root which signifies a multitude of actions. It is, instead, introduced after each root which forms a part of the many roots that signify an array of actions. Note that merely lining up verbal roots to signify an array of actions does not merit the introduction of *LOṬ*. Rather, it is the relationship that obtains among the actions denoted by the lined up roots that qualifies the introduction of *LOṬ*. What, then, makes the listing of roots related in actions? The actions are related via common participants (*sādhana*; or *kāraka*). Thus, a single *kāraka*, termed agent, performs all actions outlined in the above examples. The actions thus become related via their participant, the agent. Compare (*PM* ad *Kaś* III: 149): *ekasmin sādhane yā kriyāḥ samuccīyante tadvācibhyo dhātubhyaḥ pratyaya ity arthaḥ* 'thus the affix is introduced after roots which signify actions that are put together relative to a single participant...'.

Note that this rule illustrates the difference between *samabhihāra* and *samuccaya* in relation to action (*kriyā*). The first could mean: repetition of an action (*paunaḥpunya*), or excessive performance of an action (*bhṛśārtha*). In contrast, *samuccaya* necessarily entails more than one action. That is, *samabhihāra* is possible in case of even a single action, whereas *samuccaya* obligatorily entails more than one action.

2. Note that the consequence of an optional introduction of *LOṬ* results in the introduction of other *LA*-affixes. These are of course, optionally introduced with *LOṬ*. See the last example for illustration, where *LAṬ* has been introduced optionally with *LOṬ* of the second example. Like the earlier rule *LOṬ* is not limited to imperative only. It can be used in all three tenses. Of course, the tagged verbal root indicates the varying tenses. The optional *LA* affixes are introduced after roots forming part of the array of actions. Thus we get:

(*a*) *chando' dhīṣva vyākaraṇam adhīṣva...*
(*b*) *chando' adhīte vyākaraṇam adhīte...*

where the first optionally introduces *LOṬ* to *LAṬ*, for example, of the second. The tagged sentences can be used in all three tenses. This is what it means to accept *LOṬ* as ruled in all tenses.

One must also remember, here, that *LOṬ* of the lined up actions obligatorily can be replaced with *hi* and *sva*. Of course, *ta* and *dhvam* replace it only optionally.

3.4.4 **यथाविध्यनुप्रयोगः पूर्वस्मिन्**

yathāvidhy anuprayogaḥ pūrvasmin
/yathāvidhi Ø *anuprayogaḥ* 1/1/
(dhātoḥ #91)

pūrvasmin loḍvidhāne yathāvidhy anuprayogo bhavati
A tag, in case of the preceding provision, must be in line with that after which *LOṬ* occurs.

EXAMPLES:

lunīhi lunīhīty evāvaṃ lunāti 'you cut, you cut,' thus 'he cuts'
adhīṣvādhīṣvety evāyam adhīte 'you study, you study,' thus 'he studies'

1. Note that this rule is not formulated to state that a tag sentence is used. For, that is already available by the fact that *LOṬ* is introduced under the condition of a relationship between root meanings. A relation between root-meanings cannot be available unless more than one roots are used one after the other. Rather, this rule is formulated to emphasize that the tag sentence must also have the same root as the one after which *LOṬ* was introduced. This is what *yathāvidhi* means in this context. It also becomes clear that *anuprayoga* is not used in the sense of *paścādbhāvin* 'that which follows in a sequence'. It means 'in accordance with what precedes'. Thus, given the above two example sentences, where affix *LOṬ* is used after verbal roots *lū* 'to cut' and *adhi-i* 'to study' respectively, we get the tag sentences such as *evāyam lunāti* and *evāyam adhīte* or *evāyaṃ chinatti* 'thus he cuts' and *evāyaṃ paṭhati* 'thus he recites'. Note that verbal roots *chid* and *paṭh* may be used synonymously with *lū* and *adhi-i*.

The word *pūrvasmin* 'in case of the preceding provision' refers to the introduction of *LOṬ* by rule 3.1.2 *kriyāsamabhihāre...*, and hence is used for clarity (*vispaṣṭārtham*). Note that the following rule (3.4.5 *samuccaye' sāmānyavacanasya*) accounts for the nature of the tag sentence, relative to rule 3.4.3 *samuccaye' nyatarasyām*. Thus, even if *pūrvasmin* were not there, this rule would be interpreted relative to rule 3.4.2. That is, this rule would apply outside the scope of *samuccaya* anyway. The idea that a particular verbal root is to be used in the tag sentence is derived through exclusion of the general action required for the tag sentences of the *samuccaya*. A tag, in case of more than one action, must use a root of generalized nature. Elsewhere, as is the case relative to the provisions of rule 3.4.2 *kriyāsamabhihāre...*, only particular roots should be used. Obviously, such roots must be those after which *LOT* occurs.

If it is understood that the provision of rule 3.4.5 *samuccaye...* facilitates the understanding elsewhere that, in the case of *kriyāsamabhihāra*, the same root is used, then *pūrvasmin* and *yathāvidhi* should not be used in this rule. For, 3.4.5 can easily make the scope of 3.4.2 understood. May be rule 3.4.4 should not even be formulated. We already know, in connection with this, that *pūrvasmin* is used for clarity. Inclusion of *yathāvidhi* in the rule is also needed because sentences such as *lunīhi lunīhi ity evāyaṃ lunāti* can also be rendered as: *ayaṃ lunāti lunīhi iti*. That is,

a tag sentence can also precede. It thus becomes necessary to state that what is used as a tag must be in accord with the particular verb after which *LOṬ* is introduced.

3.4.5 समुच्चये सामान्यवचनस्य

samuccaye sāmānyavacanasya
/*samuccaye* 7/1 *sāmānyavacanasya* 6/1 = *ucyate anena iti vacanam; sāmānyasya vacanam* (*ṣaṣ. tat.*)/
(*dhātoḥ* #3.1.91, *anuprayoge* #4)
dvitīye loḍvidhāne samuccaye sāmānyavacanasya dhātor anuprayogaḥ kartavyaḥ
A tag relative to verbal roots after which *Loṭ* occurs under the condition of *smuccaya* must denote a common action.

EXAMPLES:

odanaṃ bhuṅkṣva saktūn piba dhānā khādety evāyam abhyavaharati 'eat rice, drink the powdered parched gram diluted in water, eat the parched rice', thus he consumes'.

1. This rule provides for a common verbal root in case of a tag used in sentences where the introduction of *LOṬ* is provided for by rule 3.4.3 *samuccaye' nyatarasyām*. Our example thus provides for *abhyavahāra* as the action which is synonymous with *bhuj* 'to consume', *pā* 'to drink', and *khād* 'to eat'. The use of a single common verbal root is also economical (*lāghava*), as opposed to the repetition of each one of the preceding verbs. Note however that, this notion of economy is not much respected in the Classical language (see *Kāś* : *lāghavaṃ ca laukike śabdavyavahāre nādriyate*).

3.4.6 छन्दसि लुङ्लङ्लिटः

chandasi luṅlaṅliṭaḥ
/*chandasi* 7/1 *luṅlaṅliṭaḥ* 1/3 = *luṅ ca laṅ ca liṭ ca* (*itar.dv.*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *dhātusambandhe* #1, *anyatarasyām* #3)
chandasi viṣaye dhātusambandhe sarveṣu luṅlaṅliṭaḥ pratyayā bhavanti
Affixes *LUṄ*, *LAṄ* and *LIṬ* optionally occur in the Vedic to denote any time when the sense of roots is related.

EXAMPLES:

śakalāṅguṣṭhako 'karat 'he divides (it) in parts to the size of the thumb'
ahaṃ tebhyó' karaṃ namáḥ 'I pay my obeisance to them'
agnimadya hotāramavṛṇītāyaṃ yajamānaḥ 'this sacrificer chooses Agni as his priest today'

ạdyā mạmārạ '...dies today'
adya mriyate 'id.'

1. Note that *LUṄ* 'aorist', *LAṄ* 'imperfect' and *LIṬ* perfect' are, here, introduced in diverse tenses. This introduction is interpreted as optional on the basis that *anyatarasyām* is carried from rule 3.4.3 via *maṇḍūkapluti* 'frog's leap'. That is, these affixes are optionally allowed with other *LA*-affixes. Consequently, their scope of application becomes much more generalized. For example, *akarat* and *akaram* of the first two sentences are *LUṄ*- derivates used in the sense of *LAṬ*. That is, past is used in the sense of the present. The third sentence uses *LAṄ*, denoting past imperfect, in place of *LAṬ*. The next sentence uses *LIṬ* instead of *LAṬ* as is shown by *mriyate*.

2. Recall that such widening of the scope of these *LA*-affixes is given in the context of related actions. Haradatta (*PM* ad *Kaś* III:153) perhaps rightly remarks that: *udāharaṇeṣu dhātusambandho mṛgyaḥ* 'the connection between actions denoted by roots of these examples should be investigated'. Obviously, it is a difficult situation. To what is the sense of the root *kṛ* in *akaram* relatable ?

3.4.7 **लिङर्थे लेट्**

liṅarthe leṭ
/liṅarthe 7/1 = *liṅo' rthaḥ liṅarthaḥ (ṣaṣ. tat.), tasmin; leṭ* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *anyatarasyām* #3, *chandasi* #6)
yatra liṅ vidhīyate tatra chandasi viṣaye' nyatarasyāṃ leṭ pratyayo bhavati
Affix *LEṬ* optionally occurs in the sense of *LIṄ* in the Vedic.

EXAMPLES:

joṣiṣāt 'let him enjoy...'
tāriṣat 'let him stretch out'
patāti vidyut 'let the lightning strike'

1. Note that affix *LIṄ* 'optative' is generally used in the sense of *vidhi* 'prompting', etc., (3.3.161 *vidhinimantraṇa...*). The forms of *LEṬ* 'subjunctive' refer exclusively to the Vedic language.

3.4.8 **उपसम्वादाशङ्कयोश्च**

upasaṃvādāśaṅkayoś ca
/upasaṃvādāśaṅkayoḥ 7/2 *ca* Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *chandasi* #6, *leṭ* #7)
upasaṃvāde āśaṅkāyāṃ ca gamyamānāyāṃ chandasi viṣaye leṭ pratyayo bhavati

Affix *LEṬ* also occurs after a root in the Vedic when *upasaṃvāda* 'contractual agreement' and *āśaṃkā* 'apprehension' are denoted.

EXAMPLES:

ahameva paśūnāmīśai 'indeed, I am the lord of the cattles'
madagrā eva vo gráhā gṛhyāntai '...should accept the pot with Soma'
nejjihmāyantyo narakaṃ patām '...may fall into hell because of wicked deeds'

1. Note that this provision of *LEṬ* is made in the sense of *LIṄ*. It could not have been made available through the previous *sūtra* as *anyatarasyām* made that provision optional. This provision, hence, is obligatory (*nitya*).

Kāśikā explains *upasaṃvāda* as *paribhāṣaṇam; kartavye paṇabandhaḥ* 'a verbal agreement regulating certain transactions'. The word *āśaṅkā* has been explained as a logical deduction of apprehension in view of certain actions (*kāraṇataḥ kāryānusaraṇaṃ tarka utprekṣā*). *Kāśikā* further illustrates *upasaṃvāda* by the following:

yadi me bhavān idaṃ kuryād aham api bhavate idaṃ dāsyāmi 'should you do this for me sir! I shall also give you this'

The last sentence of the examples illustrates *āśaṅkā*, where it is feared that committing some bad deed will logically lead to a fall into hell.

3.4.9 **तुमर्थे सेसेनसेअसेन्क्सेकसेनध्यैअध्यैन्कध्यैकध्यैन्शध्यैशध्यैन्तवैतवेङ्तवेनः**

tumarthe sesenaseasenksekasenadhyaiadhyainkadhyaikadhyainśadhyai-śadhyaintavaitaveṅtavenaḥ
/tumarthe 7/1 = tumuno' rthaḥ = tumarthaḥ (ṣaṣ. tat.), tasmin; sesenasea... tavaitaveṅtavenaḥ 1/3 (itar. dv.)/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, chandasi #6)
tumarthe chandasi viṣaye dhātoḥ sayādayaḥ pratyayā bhavanti
Affixes *se, seN, ase, aseN, Kse, KaseN, adhyai, adhyaiN, Kadhyai, KadhyaiN, Śadhyai, ŚadhyaiN, tavai, taveṄ*, and *taveN* occur after a verbal root in the Vedic to denote the sense of affix *tumUN*.

EXAMPLES:

vakṣe rāyaḥ '...naming the wealth'
tā vām eṣe '...for going...'
jīvasé '...for living...'
preṣe '...for sending...'
śriyasé '...for beauty...'
kāmamupacāradhyai '...for approaching...
āhuvadhyai '...for invoking...'
śriyadhyai '...for prosperity...'

vāyave pibádhyai '...for swallowing the wind...'
rādhāsaḥ saha mādáyadhyai '... for exhilaration by ritual oblation of food...'
pātavai '... for drinking...'
sūtáve '...for birthing...'
gantáve '...for going...'
kartave '...for doing...'
hartave '...for fetching...'

1. Note that affix *tumUN* is introduced after verbal roots under diverse conditions of *kriyārthakriyā* 'an action intended for another' (3.3.11 *tumunṇvulau...*), *samānakartṛkatva* 'same agent' (3.3.158 *samānakartṛkeṣu...*), *upapada* 'conjoined words' (3.3.167 *kāla...*; 3.4.65 *śakadhṛṣa...*; 3.4.66 *paryāpti...*). What does *tumUN* denote in these rules? There is no clear specification available. One can argue, here, that since affix *tumUN* is introduced after verbal roots (3.1.91 *dhātoḥ*), and also since it is not an affix denoted by the abbreviatory term *tiṄ*, it should be treated as a *kṛt* (3.1.93 *kṛd atiṅ*). This, in turn, would qualify *tumUN* to denote agent (*kartṛ*) as per rule 3.4.67 *kartari kṛt*. Commentators oppose this line of reasoning about the denotatum of affix *tumUN*. They claim that if *tumUN* were to denote agent, then Pāṇini need not have explicitly used the expression *tumarthe* 'in the sense of affix *tumUN*'. For, again, why state the obvious? Since Pāṇini does state the obvious, then doing so must have some special purpose. That special purpose is to bring *tumUN* within the sphere of affixes whose denotata is not specifically stated (*anirdiṣṭārtha*). Once this is accepted, the denotatum of *tumUN* no longer remains doubtful. For, affixes introduced with no specification of meaning (*anirdiṣṭārtha*) denote the sense of the bases (*bhāve*) after which they occur. Since *tumUN* is introduced after a verbal root, its denotatum must be accepted as 'sense of the root (*dhātvartha* / *bhāva*)'.

2. Note that the formal difference between these fifteen affixes can be explained in terms of their *its*: *N*, *K*, *Ś*, and *Ṅ*. These *it* cause a difference of accentuation (*svara*) in their respective derivates. Additionally, the *Ṅ* causes lack of *guṇa*. The following illustrates the distribution, based on their difference in *it*, of these affixes in five sets:

(*i*) *se, seN, Kse*
(*ii*) *ase, aseN, KaseN*
(*iii*) *adhyai, adhyaiN, Kadhyai, KadhyaiN, Śadhyai, ŚadhyaiN*
(*iv*) *tavai*
(*v*) *tave, taveṄ*

The *N* as an *it* is intended for the obligatory initial high-pitch (*ādyudatta*) of 6.1.191 *ñnityādir nityam*. Elsewhere, rule 3.1.3 *ādyudāttaś ca* will control the affixal accent. The *Ṅ* will also block *guṇa*.

3.4.10 प्रयै रोहिष्यै अव्यथिष्यै

prayai rohiṣyai avyathiṣyai
/prayai Ø rohiṣyai Ø avyathiṣyai Ø/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, chandasi #6, tumarthe #9)
prayai rohiṣyai avyathiṣyai ity ete śabdā nipātyante chandasi viṣaye
The words: *prayai* 'to proceed', *rohiṣyai* 'to climb', and *avyathiṣyai* 'for not being weary' are derived by *nipātana* in the Vedic.

EXAMPLES:

prayai 'to proceed'
apām oṣádhīnāṃ rohiṣyai 'water for vegetation'
avyathiṣyai 'for not being weary'

3.4.11 दृशे विख्ये च

dṛśe vikhye ca
/dṛśe Ø vikhye Ø ca Ø/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, chandasi #6, tumarthe #9)
dṛśe vikhye ity etau chandasi viṣaye nipātyete
The words: *dṛśe* 'to see' and *vikhye* 'to see, behold' are derived in the Vedic by *nipātana* in the sense of *tumUN*.

EXAMPLES:

dṛśe viśvāya sūryam 'the sun is for us all to see'
vikhye tvā harāmi 'I fetch this for you to see

3.4.12 शकि णमुल्कमुलौ

śaki ṇamulkamulau
/śaki 7/1 *ṇamulkamulau* 1/2/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, chandasi #6, tumarthe #9)
śaknotau dhātāv upapade chandasi viṣaye tumarthe dhātos ṇamulkamul ity etau pratyayau bhavataḥ
Affixes *ṆamUL* and *KamUL* occur in the Vedic to denote the sense of *tumUN* after a verbal root used in conjunction with *śak* 'to be able to'.

EXAMPLES:

agniṃ vaí devā vibhājaṃ naśaknuvan 'the gods were not able to divide Agni'
apalupaṃ nāśaknuvan '...were not able to split'

1. Note that the *Ṇ* in *ṆamUL* is an *it* used to introduce *vṛddhi* (7.2.115 *aco'ñṇiti*); the purpose of *K* is to block *guṇa* or *vṛddhi* in *KamUL* (1.1.5 *kṅiti ca*). The *L* of both the affixes is an *it*, used for accentuation (6.1.193 *liti*).

3.4.13 ईश्वरे तोसुन्कसुनौ

īśvare tosunkasunau
/*īśvare* 7/1 *tosunkasunau* 1/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *chandasi* #6, *tumarthe* #9)
īśvaraśabda upapade chandasi viṣaye tumarthe dhātos tosunkasunpratyayau bhavataḥ
Affixes *tosUN* and *KasUN* occur to denote the sense of *tumUN* in the Vedic after a verbal root used in conjunction with the word *īśvara* 'lord, master'.

EXAMPLES:

īśvaro' bhicaritoḥ 'the lord is capable of enchanting'
īśvaro vilikhaḥ '...god is to write...'
īśvaro vitṛdaḥ '...god is to provide'

1. Note that assignment of the term *avyaya* to the derivates is by rule 1.1.39 *ktvāto*... The *K* as an *it* in *KasUN* is used to block any *guṇa*, or *vṛddhi*.

3.4.14 कृत्यार्थे तवैकेन्केन्यत्वनः

kṛtyārthe tavaikenkenyatvanaḥ
/*kṛtyārthe* 7/1 (*ṣaṣ. tat.*) *tavaikenkenyatvanaḥ* 1/3 (*itar. dv.*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *chandasi* #6)
Affixes *tavai*, *Ken*, *Kenya*, and *tvaN* occur after verbal roots in the Vedic to denote the sense of affixes termed *kṛtya* (3.1.95 *kṛtyāḥ*).

EXAMPLES:

anvétavai '...is to be pursued'
parídhātavai '...is to be worn'
nāvagāhe '...is not to be immersed into'
didṛkṣeṇyaḥ '...is wished to be seen'
kartvá haviḥ '...ritual oblation is to be prepared'

1. Note that the *kṛtya* affixes mentioned here are introduced in the sense of *bhāva* 'root-sense', and *karman* 'object', for which see 3.4.70 *tayor eva kṛtya*.... A *kṛtya* affix introduced after a transitive verbal root generally denotes *karman*; that which is introduced after an intransitive root denotes *bhāva*. The assignment of the term *avyaya* to the derivates is made by rule 1.1.39 *kṛn mejantaḥ*.

Note that affix *tavai* is also introduced under rule 3.4.9 *tumarthe*....

Obviously, that *tavai* was introduced in the sense of *tumUN*. This rule introduces *tavai* in the sense of a *kṛtya* affix. It is further stated that a *kṛtya* affix can also be found used in the sense of an agent (*kartṛ*) as in rule 3.4.68 *bhavyageya*... A *kṛtya* affix can also be found used in the sense of *karaṇa* (cf. 3.1.102 *vahyaṃ karaṇam*). Since Pāṇini explicitly uses *kṛtya* to indicate the denotata, we must here infer a reference to rule 3.4.70 *tayor*... For, the word *kṛtya* is also explicitly stated there.

3.4.15 **अवचक्षे च**

avacakṣe ca
/avacakṣe Ø ca Ø/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *chandasi* #6, *kṛty-ārthe* #14)
avapūrvāc cakṣiṅa eś pratyayo nipātyate
Affix *eŚ* occurs in the Vedic to denote the sense of a *kṛtya* affix after verbal root *cakṣIṄ*, used with the preverb *ava*, to derive *avacakṣe* by *nipātana*.

EXAMPLE:

nāvacakṣe '...is not to look down upon'

1. Note that the *Ś* of *eŚ* is intended here for the assignment of the term *sārvadhātuka* by 3.4.113 *tiṅśit sārvadhātukam*. This is necessary to block the introduction of *khyāÑ*, which is conditioned by an *ārdhadhātuka* affix as per rule 2.4.54 *cakṣiṅaḥ khyāñ*.

3.4.16 **भावलक्षणे स्थेण्कृञ्वदिचरिहुतमिजनिभ्यस्तोसुन्**

bhāvalakṣaṇe sthenkṛñvadicarihutamijanibhyas tosun
/bhāvalakṣaṇe 7/1 *sthen...bhyaḥ* 5/3 *(itar. dv.), tosun* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *chandasi* #6, *tumarthe* #9)
bhāvo lakṣyate yena tasminn arthe vartamānebhyaḥ sthādibhyo dhātubhyaś chandasi viṣaye tumarthe tosun pratyayo bhavati
Affix *tosUN* occurs in the Vedic to denote the sense of *tumUN* after verbal roots *sthā* 'to stay, stand', *iṆ* 'to go', *kṛ* 'to do', *vad* 'to speak', *car* 'to wander, move', *hu* 'to offer ritual oblation, call', *tam* 'to be weary' and *jan* 'to be born', provided these roots characterize some other action.

EXAMPLES:

āsáṃsthātór védyāṃ sīdanti (*KS* 11.6) 'they are sitting till the end'
purā sūryasyodetor ādheyaḥ (*KS* 8.3) 'the ritual fire should be arranged before the rise of Sun'

purā vatsānām apākartoḥ (*KS* 31.15) 'before the arrival of those who remove the calves away from the cows'
purā pravaditor agnau prahotavyam 'the ritual oblation should be offered to the fire before the finish of the chanting'
purā pracaritorāgnīdhrīye hotavyam 'the ritual oblation should be offered before the priest finishes the chanting'
ā hotor apramattas tiṣṭhati '...stays on till the end of the ritual oblation'
ā tamitor āsīta 'stayed on till he (wished, or) became weary'
kāmam ā vijánitoḥ... '...the wish for producing...'

1. Note that the roots after which affix *tosUN* is to be introduced must characterize an action. To interpret *bhāvalakṣaṇe* as a qualifier to the root, i.e., 'when action is expressed', can be misleading. The word *bhāvalakṣaṇa* can be explained as: 'that by which *bhāva* 'action' is characterized'. But the roots denote action anyway. The present rule finds its scope when a root which denotes an action characterizes another action denoted by another root.

3.4.17 **सृपितृदोः कसुन्**

sṛpitṛdoḥ kasun
/*sṛpitṛdoḥ* 5/2 *kasun* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *chandasi* #6, *tumarthe* #9, *bhāvalakṣaṇe* #16)
sṛpitṛdor dhātvor bhāvalakṣaṇe' rthe vartamānayoś chandasi viṣaye tumarthe kasun pratyayo bhavati
Affix *KasUN* occurs in the Vedic to denote the sense of *tumUN* after verbal roots *sṛp* 'to crawl' and *tṛd* 'to pierce, harm' when the roots characterize some other action.

EXAMPLES:

purā krurasyá visṛpo virapśin (*Tait Sam* 1.1.9.3) 'before the cruel one gets away'
purā jartṛbhyá ātṛdáḥ 'before the neck is pierced to bleeding'

1. Note that the provision of *KasUN*, with *K* as an *it*, is made as usual to block any *guṇa* or *vṛddhi*.

3.4.18 **अलंखल्वोः प्रतिषेधयोः प्राचां क्त्वा**

alaṃkhalvoḥ pratiṣedhayoḥ prācāṃ ktvā
/*alaṃkhalvoḥ* 7/2 *pratiṣedhayoḥ* 7/2 *prācāṃ* 6/3 *ktvā* 0/
(*pratyayah* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
'alaṃ, khalu' ity etayoḥ pratiṣedhavācinor upapadayor dhātor ktvā pratyayo bhavati prācām ācāryāṇāṃ matena

According to the Eastern grammarians, affix *Ktvā* occurs after verbal roots used in conjunction with *alam* and *khalu* when prohibition (*pratiṣeha*) is denoted.

EXAMPLES:

alam uktvā 'do not speak'
khalūktvā 'id.'

1. Note that a reference by *prācām* 'of the Easterners' marks the optional forms (*vibhāṣā*). Thus, in the opinion of others, *alam uktvā* will have a form such as *alaṃ vacanena* as an option . Obviously, others will not use *Ktvā*.

3.4.19 उदीचां माङो व्यतीहारे

udīcām māṅo vyatīhāre
/*unīcām* 6/3 *māṅaḥ* 5/1 *vyatīhāre* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ktvā* #18)
māṅo dhātor vyatīhāre vartamānād udīcām ācāryāṇām matena ktvā pratyayo bhavati
According to Northern grammarians, affix *Ktvā* occurs after verbal root *māṄ* 'to exchange, barter' when reciprocity is denoted.

EXAMPLE:

apamitya yācate 'first begs, then exchanges'

1. Note that rule 3.4.21 *samānakartṛkayoḥ...* introduces *Ktvā* after a verbal root which denotes a prior action. In the opinion of the Northerners, this rule, though optionally, provides for *Ktvā* without this condition. That is, *Ktvā* may be used here after a root which denotes a subsequent action. Thus, the beggar first begs, then exchanges the alms with another beggar. A form optional to the Northerners will be *yācitvā apamayate*, where *Ktvā* is introduced after *yāc*, a root which denotes a prior action subsequent to which the action of 'exchange' takes place. If one still wants to believe that *Ktvā* must always be used with a root which denotes prior action, the sentence *apamitya yācate* should be interpreted as: 'he first exchanges what he has begged and then goes begging again'. But this meaning could be accomplished through rule 3.4.21 *samāna-kartṛkayoḥ....* Thus, one questions the purpose of this rule.

2. Note also that the root referenced here is: *meṄ*. The cited form, *māṄ*, results as a replacement of the original *e* by *ā* before the *Ktvā* suffix under the provision of rule 6.1.45 *ādeca upadeśe' śiti*. Citation of the root, with its replacement in *ā*, indicates that a root does not lose its status as ending in *iC* (*e, ai, o, au*) provided it is used with an *it* (cf. *nānubandhakṛtam aneyantatvam*). See rule 1.1.20 *dādhāghv adāp* for further details.

3.4.20 परावरयोगे च

parāvarayoge ca
/*parāvarayoge* 7/1= *paraś ca avaraś ca parāvarau, tābhyāṃ yogaḥ* (*tr. tat* with int. *dv.*); *ca* 0/
(*pratyayaḥ* #3.1.1., *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ktvā* #18)
pareṇa pūrvasya yoge gamyamāne avareṇa ca parasya dhātoḥ ktvā pratyayo bhavati
Affix *Ktva* also occurs after a verbal root when location relative to *para* 'subsequent' and *avara* 'prior' is denoted.

EXAMPLES:

aprāpya nadīṃ parvataḥ sthitaḥ 'the mountain is located prior to the river'
atikramya tu parvataṃ nadī sthitā 'the river is located beyond the mountain'

1. Note that *avara* 'prior' and *para* 'subsequent' are relative terms. That is, one is used with the expectation of the other. Since the relative terms are very definite in their connotation, citation of *para* and *avara* can also bring back *para* and *pūrva*. Note that the *Kāśikā* glosses the rule with ...*gamyamāne*.... Consequently, the relative notion of *para* and *avara* does not have to be explicitly stated. This relationship between *para* and *avara* is understood. Thus the first sentence literally means 'the mountain is located at the place where the river has not yet been reached'. The second sentence literally means 'the river is located at the place one has reached by going beyond the mountain'. The first sentence has the mountain (*parvata*) qualified by its connection with the river, which is subsequently located (*paranadīyogena parvato viśeṣyate*). The second example has the river qualified by the mountain, which is located previously to it.

3.4.21 समानकर्त्तृकयोः पूर्वकाले

samānakartṛkayoḥ pūrvakāle
/*samānakartṛkayoḥ* 7/2 *pūrvakāle* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ktvā* #18)
samānaḥ kartā yayor dhātvarthayos tatra pūrvakāle dhātvarthe vartamānād dhātoḥ ktvā pratyayo bhavati
Affix *Ktvā* occurs after a verbal root which denotes a prior action relative to some subsequent action provided both actions share the same agent.

EXAMPLES:

bhuktvā vrajati 'he goes after having eaten'
pītvā vrajati 'he goes after having drunk'

1. This rule introduces affix *Ktvā* after a root which denotes a prior action and shares the same agent with some subsequent action. Note that the sharing of the same agent is specified with reference not to the verbal roots but to their denotata, the action. Consider thus the following sentence:

(*a*) *snātvā khādati* '...eats after having bathed'

where the actions denoted by *snā* 'bathe' and *khād* 'to eat' share the same third person singular agent. Note also that *Ktvā* is introduced after *snā* because the action denoted by *snā* happens to be prior to the action denoted by *khād*.

2. Commentators also relate this connection to the notion of *kāraka* as the power *(śakti)* of an action *(kriyā)*, which is considered to reside in a given locus *(ādhāra)*. Now consider the following sentence:

(*b*) *devadatto grāmād āgatya snānaṃ kṛtvā dugdhaṃ pītvā sukhena svapiti* 'Devadatta is sleeping happily after having come from the village, bathed and having drunk milk'

One can easily see that this complex sentence entails four actions denoted by *āgam 'to come'*, *snā* 'to bathe', *pā* 'to drink' and *svap* 'to sleep' respectively. These actions all have a third persons singular *kartṛ* as their power which, in turn, has *devadatta* as its locus *(śaktyādhāra)*.

It is generally believed that a set of two actions such that one is located prior in time *(pūrvakāla)* with reference to the other will have two different sets of powers. That is, the action located at a prior time with reference to one located subsequently will not share similar *kārakaśakti*. This being the case, the condition of *samānakartṛkatva* as laid down by this rule becomes impossible to meet. Therefore, it is impossible to introduce affix *Ktvā* after a verbal root which denotes a prior action in relation to a subsequent one. Commentators explain that this rule, while stating the condition of *samānakartṛkatva*, does not specify any distinction (*bheda*) between the power *(śakti)* of an action termed *kāraka*, i.e., *kartṛ*, and the locus of the power *(śaktyādhāra)*, for example, *devadatta*. Consequently, a single locus of power (such as *devadatta)* can be spoken of as being related to all the other actions. The condition of *samānakartṛkatva* as stated by this rule can still be treated as valid.

3. Some argue that the dual of *samānakartṛkayoḥ* is also consequential. That is, this dual is chosen to restrict the number of actions relative to the introduction of affix *Ktvā* to two: one to be located at a prior time relative to another located at a subsequent time. Commentators state that the dual of *samānakartṛkayoḥ* cannot be accepted, here, as *pradhāna* 'principal'. For, this rule makes its provision by treating action *(kriyā)* as principal. This action is only specified, here, as twofold in terms of time: *pūrvakāla* 'prior time'and *uttarakāla* 'subsequent time'. Our rule thus makes its provision with reference to two variables: coreferentiality

(samānakartṛkatva), and location of action in time *(pūrvāparakālatva)*. It does not limit the number of actions located at a prior time to one as far as the introduction of *Ktvā* is concerned. The question of limiting the number of actions located at some subsequent time falls outside the scope of this rule. It also does not have any control over the order of roots denoting prior action. That is, one can have either (*c*) or (*d*) as follows:

(*c*) *snātvā bhuktvā pītvā vrajati*, or

(*d*) *pītvā bhuktvā snātvā vrajati.*

One may sequence them differently as desired. However, given the denotational power of words and some culturally preferred sequence of actions, preference of order may be imposed. Thus,

(*e*) *snātvā bhuktvā pīvā svapiti* may be a preferred sequence of actions.

4. Note that a sentence such as:

(*f*) *bhuktavati brāhmaṇe gacchati devadattaḥ* would not qualify for *Ktvā* after *bhuj* 'to consume' because there is no identical agent.

A sentence such as:

(*g*) *vrajati jalpati ca* '....goes and mutters as well'

is similarly out of the scope of this rule, since the two actions entail *yaugapadya* 'simultaneity'. But what about sentence *(h)*:

(*h*) *āsyaṃ vyādāya svapiti* '... sleeps with mouth open', or,

(*i*) *cakṣuḥ sammīlya hasati* '... laughs with his eyes closed'?

These sentences do involve the introduction of *Ktvā*, though the actions denoted by the roots after which the affix is introduced do not denote prior location in time *(pūrvakālatā)*. Instead, the actions of 'sleeping' and 'opening' as well as those of 'closing' and 'laughing' occur at the same time. Or, when one occurs the other one also occurs. A *vārttika* is proposed to account for these usages.

3.4.22 **आभीक्ष्ण्ये णमुल् च**

ābhīkṣṇye ṇamul ca

|ābhīkṣṇye 7/1 *ṇamul* 1/1 *ca* Ø

(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ktvā* #18, *samānakartṛkayoḥ pūrvakāle* #21)

ābhīkṣṇyaviśiṣṭe' rthe vartamānād dhātor ṇamul pratyayo bhavati, cakārāt ktvā ca

Affix *ṆamUL*, as well as *Ktvā*, occurs after a verbal root which denotes a prior action and shares the same agent with a subsequent action provided *ābhīkṣ ṇya* 'repetition' is expressed.

EXAMPLES:

bhojaṃ bhojaṃ vrajati 'he goes having eaten and eaten'

bhuktvā bhuktvā vrajati 'id.'

pāyaṃ pāyaṃ vrajati 'he goes having drunk and drunk
pītvā pītvā vrajati 'id'.

1. Note that the preceding rule also carries here in full. That is, the provisions of this rule are applicable to an action located at a prior time, in relation to an action located at a subsequent time, provided both the actions share the same agent. The word *ābhīkṣṇya* is explained here as *paunaḥ paunya* 'over and over again', and is additionally treated as a qualifier (*viśeṣaṇa*) to the sense of the root after which affix *ṆamUL*, optionally with *Ktvā*, is to be introduced. The word *ābhīkṣṇya* is here used in the sense of 'repetition' (*vīpsā*) which, in turn, is expressed by doubling the derivates (cf. 8.1.4 *nityavīpsayoḥ*). Thus, *bhojaṃ bhojaṃ vrajati* '...: eats, eats, and goes', or *bhuktvā bhuktvā vrajati* 'id'.

3.4.23 न यद्यनाकांक्षे

na yady anākāṅkṣe
/na Ø yadi Ø anākāṅkṣe 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ktvā* #18, *samānakartṛkayoḥ pūrvakāle* #21, *ṇamul* #22)
yacchabda upapade dhātoḥ ktvāṇamulau pratyayau na bhavato' nākāṅkṣe vācye
Affixes *Ktvā* and *ṆamUL* do not occur after a verbal root which cooccurs with *yad* and denotes a prior action sharing the same agent with a subsequent action when *ābhīkṣṇya* is expressed and *ākāṅkṣā* 'expectancy' relative to some third action is not signified.

EXAMPLES:

yad ayaṃ bhuṅkte tataḥ pacati 'he repeatedly cooks and eats...'
yad ayam adhīte tataḥ śete' 'he repeatedly reads and sleeps'

1. This rule blocks the introduction of affixes *Ktvā* and *ṆamUL* after a verbal root whose action is located prior to some relatively subsequent action provided *yad* 'that' cooccurs with it, and the sentence with the central meaning of these prior and subsequent actions is not dependent upon any third action for completion of its sense. Consider for example the following sentence:

(*a*) *yad ayaṃ bhuktvā vrajati adhīta eva tataḥ param*

'he indeed studies when he goes after eating',
where *yad* is in conjunction with verbal root *bhuj* 'to consume' denoting a prior action in relation to the subsequent action denoted by *vraj* 'to go'. The structural unit containing the two sets of prior and subsequent actions is thus derived as: *yad ayam bhuktvā vrajati* 'that he goes after having eaten...' But this unit is not able to denote a complete meaning. Instead, it is dependent upon *adhīta eva tataḥ param* 'certainly studies afterwards'

for the expression of any complete meaning. It is in this sense that the first sentential unit is dependent (*sākāṅkṣa*) upon the second for completion of its sense. Consider now this following sentence:

(*b*) *yad ayaṃ bhuṅkte tataḥ pacati* 'he repeatedly eats then cooks'

where the sentential unit containing the prior and subsequent actions is not dependent upon any third action to express a complete meaning. But *Ktvā* and *ṆamUL* are still not allowed, since *bhuj* cooccurs with *yad*.

2. Note that the negation of this rule also extends to provisions made by the previous rule because of the context of *pūrvakālatva* and *Ktvā*. Jinendrabuddhi rightly remarks (*Nyāsa* ad *Kāś*. under this rule): *pūrvakālaprakaraṇāpekṣayā pratiṣedhaḥ kriyate tasmād yuktaḥ pūrvasūtravihitasyāpi pratiṣedhaḥ* 'since the negation is made in relation to the context of an action located at a prior time, it is, therefore, only appropriate that it extend also to the provision of the preceding rule'.

3.4.24 **विभाषाऽग्रेप्रथमपूर्वेषु**

vibhāṣā' gre prathamapūrveṣu
/*vibhāṣā* 1/1 *agreprathamapūrveṣu* 7/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ktvā* #18, *samānakartṛkayoḥ pūrvakāle* #21, *ṇamul* #22)
'agre, prathama, pūrva' ity eteṣūpapadeṣu samānakartṛkayoḥ pūrvakāle dhātoḥ ktvāṇamulau pratyayau vibhāṣā bhavataḥ
Affixes *Ktvā* and *ṆamUL* optionally occur after a verbal root which denotes a prior action, and shares the same agent with a subsequent action, provided the root which denotes prior action occurs with *agre* 'ahead of', *prathama* 'first' or *pūrva* 'prior to'.

EXAMPLES:

agre bhojaṃ vrajati 'having eaten ahead he goes'
agre bhuktvā vrajati 'id.'
prathamaṃ bhojaṃ vrajati 'having eaten first he goes'
prathamaṃ bhuktvā vrajati 'id.'
pūrvaṃ bhojaṃ vrajati 'id.'
pūrvaṃ bhuktvā vrajati 'id.'
agre bhuṅkte tato vrajati 'id.'

1. This rule optionally negates the provisions of the previous rule when a verbal root which denotes a prior action in relation to some subsequent action, with which it also shares the same agent, cooccurs with *agre*, *prathama*, and *pūrva*. Note that this optional negation is made available in view of a previously non-existent provision. This option is called *aprāptavibhāṣā*. This cannot be called *prāptavibhāṣā*, since *vibhāṣā* must be related to a rule which makes provisions relative to both affixes *Ktvā* and

ṆamUL at the same time. The provision made by rule 3.4.22 *ābhīkṣṇye ṇamul ca* is only partial.

The *anuvṛtti* of *ābhīkṣṇye* is dropped, here; because the option provided for by this rule would then have become related to the preceding rule. But *ābhīkṣṇya* is also related with rule 3.4.22 from whence it is carried to the preceding rule. Commentators explain that an explicit mention of *vibhāṣā* in this rule indicates that affixes *LAṬ*, etc., can also be optionally introduced to affixes *Ktvā* and *ṆamUL* of this rule. If *ābhīkṣṇye* were carried here, then *LAṬ*, etc., could not be introduced parallel to *Ktvā* and *ṆamUL*. For, sentences with *LAṬ*, etc., parallel to *Ktvā* and *ṆamUL*, do not obtain when *ābhīkṣṇya* is denoted. That is, *agre bhuṅkte bhuṅkte tato vrajati* 'first he eats and eats and then goes' cannot be used parallel to a sentence with *Ktvā*. What is intended is for *agre bhuktvā vrajati/ agre bhojaṃ vrajati*, optionally to occur with *agre bhuṅkte tato vrajati*, where no *ābhīkṣṇya* is involved.

3.4.25 कर्मण्याक्रोशे कृञः खमुञ्

karmaṇy ākrośe kṛñaḥ khamuñ
/karmaṇi 7/1 *ākrośe* 7/1 *kṛñaḥ* 5/1 *khamuñ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *samānakartṛkayoḥ pūvakāle* #21)
Affix *KHamUÑ* occurs after verbal root *kṛÑ* which denotes a prior action, and shares the same agent with a subsequent action, provided it cooccurs with a *pada* that signifies *karman* and *ākrośa* 'insult, abuse' is expressed.

EXAMPLES:

coraṃkāram ākrośati 'he is a thief, thus he shouts in anger'
coro' si, dasyur asi ity ākrośati 'you are a thief, you are a bandit, thus he shouts in anger'

1. Note that the condition of *pūrvakālatva*, and of *samānakartṛkatva* as well, is still valid. Thus, we get:

coraṃkāram ākrośati 'he angrily shouts that someone is a thief',

where calling someone a thief is simply for the purpose of expressing anger rather than to iterate that someone is really a thief.

The *KH* as an *it* in the affix facilitates the introduction of augment *mUM* by rule 6.3.65 *arurdviṣad....*

3.4.26 स्वादुमि णमुल्

svādumi ṇamul
/svādumi 7/1 *ṇamul* 1/1/

(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *samānakartṛkayoḥ pūrvakāle* #21, *kṛñaḥ* #2)

svādvartheṣūpapadeṣu kṛño ṇamul pratyayo bhavati

Affix *ṆamUL* occurs after verbal root *kṛÑ* when it denotes a prior action, and shares the same agent with a subsequent action, provided *KṛÑ* is also used with an item that signifies *svādu* 'delectable'.

EXAMPLES:

svāduṃkāraṃ bhuṅkte 'having made his food delectable, he eats'
sampannaṃkāraṃ bhuṅkte 'having made his food rich, he eats'
lavaṇaṃkāraṃ bhuṅkte 'having made his food salty, he eats'

1. Note that *samānakartṛkayoḥ pūrvakāle* and *kṛñaḥ* are both carried here. The word *svādumi*, though used in *saptamī* 'locative', does not restrict the conjoined word (*upapada*) to *svādu* 'palatable' alone. Instead, it refers to a conjoined form with the meaning of *svādu*. Thus, this rule introduces affix *ṆamUL* after verbal root *kṛÑ*, when it denotes a prior action relative to some subsequent action with which it also shares the same agent, provided that *kṛÑ* also cooccurs with a *pada* which has the signification of *svādu* 'palatable'. How do we know that *svādu* is to be interpreted here as denoting its meaning, and not its form (*śabda*; cf. 1.1.68 *svaṃ rūpaṃ* ...)? *Nyāsa* (ad *Kāś.*) explains this as follows:

> *arthaparatvaṃ tu nirdeśasyāvicchinnācāryaparamparayopadeśdād vijñāyate* 'that this specification is made in view of meaning is from teachers to students through the continued tradition'.

Acceptance of this view, entailing a specification of meaning, also makes it possible for the synonyms of *svādu* to constitute the conjoined *pada*. Thus we get examples such as *lavaṇaṃkāraṃ bhuṅkte* parallel to *svāduṃkāraṃ bhuṅkte*, where *lavaṇam* is used synonymously with *svādum*.

2. Note that *svādu* in the specification of this rule is given as *svādum*, a form which ends in *-m* (*mānta*). This *-m* is, indeed, ad hoc (*nipātana*). Why did Pāṇini not formulate the rule simply as *svādau ca*, thereby introducing *KHamUÑ* to enable the cooccurring word with *svādu* to end in *-m*? Given *svādu* + *kṛ* + *KHamUÑ*, rule 6.3.67 *arurdviṣad*... would bring the augment *mUM* to *svādu*. This, in turn, would enable *svādu* to end in *-m*. Besides, it would also have been more economical.

Commentators say that *KHamUÑ*, indeed, brings *mānta* 'ending in *-m*' status to *svādu*, but is not trouble free. For, rule 4.1.44 *voto guṇavacanāt* then occasions the introduction of affix *ṄīṢ*. This would, obviously, yield undesired results. A specification with built in ad hoc *-m*, as the existing rule provides, rules out the introduction of *ṄīṢ*, since the cause (*nimitta*) for such an introduction is then removed. Besides, it is not

necessarily true that an introduction of *KHamUÑ* always leads to the introduction of *m* via *mUM*. For rule 6.3.67 also has a built-in exception of *anavyayasya* '...not of that which is an indeclinable'. This blocks the *mānta* status of *svādu*, interpreted to end in affix *CvI*. For it is then an indeclinable (*avyaya*). Thus, introducing *KHamUÑ* would, in some cases, occasion the introduction of the feminine affix *ṄīṢ*. Yet, in still other cases, it cannot secure the *mānta* status. Introducing *KHamUÑ*, with the ad hoc *mānta* status, restricts this clearly for the purpose of indeclinables which end in affix *CvI*. This, in turn, occasions the application of rule 7.4.26 *cvau ca*, whereby a long vowel is introduced. Starting the application of this rule with affix *ṆamUL*, along with the ad hoc *-m*, saves the derivates from problematic operations. Additionally, in view of the principle of *vā' sarūpa*, one can also find examples such as *svāduṃ kṛtvā bhuṅkte* '...eats after having made something palatable', where *Ktvā* can be introduced parallel to *ṆamUL*.

3. *Kāśikā* states that these affixes are all introduced with the denotata of *bhāva* 'root-sense'. However, if this is the situation, then why is the instrumental ending (*tṛtīyā*) not introduced after *devadatta* in the sentence:

devadattaḥ svāduṃkāraṃ bhuṅkte?

For, affix *ṆamUL* denotes *bhāva*; *tṛtīyā* must be introduced to express the agent. *Kāśikā* states that, since no distinction in this section is maintained between the power, or *kāraka*, of an action and its locus, the *Ktvā* has already expressed the agent. If this were not the case, the condition of *samānakartṛkatva*, which forms the basis for the introduction of *Ktvā*, would be impaired (cf. my notes under rule 3.4.21 *samānakartṛkayoḥ*...). It thus becomes unnecessary to introduce *tṛtīyā* after *devadatta* to express the agent. The *Mahābhāṣya* discusses such questions in detail under this rule. The conclusion there is to view two types of actions in the case of the examples on hand: the main action (*pradhānakriyā*), and the secondary action (*guṇakriyā*). The action of making something palatable is a secondary action in relation to the action denoted by eating (*bhuj*). The distinction between actions also applies to the powers of these actions, i.e., the *kāraka*. The expression of a *kāraka* relationship by the main action enables the secondary action to have its own such *kāraka* automatically expressed. That is, the expression of *kartṛ* by *te* of *bhuṅkte*, the main action, renders the agent of the action denoted by *kṛ* of *svāduṃ kṛtvā* automatically expressed. This idea, of expression of the *kāraka* relative to the principal and the secondary actions of these examples, has been explained as follows:

anuprayujyamānād dhātor yasmin kārake lādayo vihitās tatraivāvyayakṛto' pi bhavanti 'the *kāraka* relations, which are expressed by the *LA*

affixes of roots which denote tagged actions, are the same as those of actions underlying indeclinables derived by affixes termed *kṛt*.'

Note that the *Kāśikā* takes recourse to *bhāva* as the expression of affixes in the *tumUN* domain (*tumarthādhikāra*), along with the idea to keep the coreferentiality condition of agents intact, to arrive at the same interpretation. The idea of the principal and subsequent actions, along with the idea of the denotation of their powers, is voiced very systematically by the following two verses of *Bhartṛhari*:

pradhānetarayor yatra dravyasya kriyayoḥ pṛthak
śaktir guṇāśrayā tatra pradhānam anuruddhyate ||
pradhānaviṣayā śaktiḥ pratyayenābhidhīyate
yadā guṇe tadā tadvad anuktāpi pratīyate ||

'the power of a secondary action follows the power of the primary action when a single thing has two such actions; when the power of the principle action is expressed by the (replacement of the *LA*) affix, the power of the secondary action is treated as also expressed'

3.4.27 अन्यथैवंकथमित्थंसु सिद्धाप्रयोगश्चेत्

anyathaivaṃkathamitthaṃsu siddhāprayogaś cet
/*anyathaivaṃkathamitthaṃsu* 7/3 *siddhāprayogaḥ* 1/1 *cet* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *kṛñaḥ* #25, *ṇamul* #26)
anyathādiṣūpapadesu kṛño ṇamul pratyayo bhavati, siddhāprayogaś cet karoter bhavati
Affix *ṆamUL* occurs after verbal root *kṛÑ* when it is used with ***anyathā*** 'otherwise', ***evam*** 'this way', ***katham*** 'how, like what', or ***ittham*** 'like this', provided a non-use (*aprayoga*) of *kṛÑ* is also valid (*siddha*).

EXAMPLES:

anyathākāraṃ bhuṅkte 'he eats his food improperly'
anyathā bhuṅkte 'id.'
evaṃkāraṃ bhuṅkte 'he eats his food like this'
kathaṃkāraṃ bhuṅkte 'he eats his food like what'
itthaṃkāraṃ bhuṅkte 'he eats his food like this'
itthaṃ bhuṅkte 'id.'

1. This rule allows for the introduction of affix *ṆamUL* after *kṛ* when it occurs in conjunction with items such as *anyathā*, *evam*, and *katham*, etc., provided.the non-use (*aprayoga*) of *kṛ* is established (*siddha*). Thus, examples such as *anyathā bhuṅkte* and *anyathākāraṃ bhuṅte* would mean the same thing. That is, *kāram* does not contribute anything different to the meaning than what *anyathā*, itself, can accomplish. Consider now the counter-example:

anyathā kṛtvā śiro bhuṅkte 'he eats having turned his face in the other direction',

where *ṆamUL* cannot be introduced because the non-use of *kṛ* is not established. That is, deletion of *kṛ* would impair the meaning.

3.4.28 **यथातथयोरसूयाप्रतिवचने**

yathātathayor asūyāprativacane
/*yathātathayoḥ* 7/2 *asūyāprativacane* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *kṛñaḥ* #25, *ṇamul* #26, *siddhāprayogaś cet* #27)
yathātathāśabdayor upapadayoḥ kṛño ṇamul pratyayo bhavati, asūyāprativacane gamyamāne
Affix *ṆamUL* occurs after verbal root *kṛÑ* when it is used with *yathā* 'the way in which' and *tathā* 'that way', provided non-use of *kṛÑ* is also valid and a response against *asūyā* 'fault-finding' is expressed.

EXAMPLES:

yathākāram ahaṃ bhokṣye tathākāram aham, kiṃ tavānena 'I eat the way I do, what does this have to do with you'
yathākṛtvā' haṃ śiro bhokṣye, kiṃ tavānena 'I eat by keeping my head the way I do, what does this have to do with you'

1. This rule introduces affix *ṆamUL* after verbal root *kṛ* when non-use of the root is valid provided, further, that the words *yathā* and *tathā* are used in conjunction, and the 'response against finding fault' (*asūyāprativacana*) is expressed. Thus, we get an example such as:

yathākāram ahaṃ bhokṣye tathākāram aham, kim tavānena 'I eat the way I do; what does this have to do with you'

Note that the person spoken to must have earlier tried to find fault with the eating manner of the speaker of this sentence, which constitutes a response. Now consider this:

yathā kṛtvā' haṃ bhokṣye tathā tvaṃ drakṣyasi 'you will see the way I eat',

where *ṆamUL* cannot be introduced because the sentence does not constitute a response to an expressed fault. The following sentence shows how *ṆamUL* can still not be introduced in the absence of the established meaning of *kṛ*:

yathā kṛtvā' haṃ śiro bhokṣye kiṃ tavānena 'what does how I turn my head and eat have to do with you'

Incidentally, the word *asūyā* is explained as finding faults with someone's qualities (*guṇeṣu doṣāviṣkaraṇam*).

3.4.29 कर्मणि दृशिविदोः साकल्ये

karmaṇi dṛśividoḥ sākalye
/karmaṇi 7/1 *dṛśividoḥ* 6/2 *sākalye* 7/1/
(pratyayaḥ #3.1.1, *paraś* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26)
karmaṇy upapade sākalyaviśiṣṭe' rthe dṛśividor dhātvor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal roots *dṛśIR* 'to see' and *vidA* 'to know' when they are used with a *pada* which denotes *karman* and is qualified by *sākalya* 'entirety'.

EXAMPLES:

kanyādarśaṃ varayati 'every girl he sees he chooses for a wife'
brāhmaṇavedaṃ bhojayati 'he feeds every *brāhmaṇa* he knows'

1. This rule introduces affix *ṆamUL* after verbal roots *dṛśIR* 'to see', and *vid* 'to know' when they are used in conjunction with a word which denotes *karman* and is qualified with *sākalya* 'entirety'. Consider, thus, the sentence:

brāhmaṇavedaṃ bhojayati

which can be paraphrased as:

yaṃ yaṃ brahmaṇaṃ jānāti labhate vicārayati vā tān sarvān bhojayati 'he feeds all the *brāhmaṇa* that he knows, could think of, or find'.

Note that the preceding sentences basically denote the *brāhmaṇa*, the object of feeding (*bhuji*), in their entirety (*sākalya*). It is in this sense that the commentators discuss the notion of *sākalyaviśiṣṭārtha* 'meaning qualified by entirety'. Affix *ṆamUL* is thus introduced under the meaning condition of a conjoined word which denotes an object in its entirety. That is, if the *brāhmaṇa*, the objects of feeding, were not to be fed in their entirety, the affix could not have been introduced. Now consider the counter-example:

brāhmaṇaṃ dṛṣṭvā bhojayati 'he feeds a *brāhmaṇa* when he sees one',

where feeding a single *brāhmaṇa* when seen, obviously, goes against the notion of 'entirety'. The affix, consequently, cannot be allowed here.

3.4.30 यावति विन्दजीवयोः

yāvati vindajīvayoḥ
/yāvati 7/1 *vinajīvayoḥ* 6/2/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26)
yāvacchabda upapade vindater jīvateś ca ṇamul pratyayo bhavati

Affix *ṆamUL* occurs after verbal roots *vidḶ* 'to gain, profit' and *jīvA* 'to be alive' when they are used in conjunction with *yāvat* 'as much as; as long as'.

EXAMPLES:

yāvad vedaṃ bhuṅkte 'he eats as long as he gets'
yāvaj jīvam adhīte 'he studies as long as he lives'

1. Note that what is specified here with *vinda* is verbal root *vidḶ*'. How do we know this? We know this because the *n* of *vinda* has its source in the introduction of augment *nUM* by rule 7.1.59 *śe mucādīnām*. No other similar root gets this augment.

3.4.31 चर्मोदरयोः पूरेः

carmodarayoḥ pūreḥ
/*carmodarayoḥ* 7/2 *pūreḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karmaṇi* #29)
carmodarayoḥ karmaṇor upapadayoḥ pūrayater ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *pūri* 'to cause to fill' when it is used in conjunction with a *pada* which denotes *karman* and contains *carman* 'skin, hide' or *udara* 'belly'.

EXAMPLES:

carmapūraṃ stṛṇāti 'he spreads the hide to the extent it can cover...'
udarapūraṃ bhuṅkte 'he eats until his belly is full'

1. This rule introduces affix *ṆamUL* after verbal root *pūri* 'to fill'. The specification by *pūreḥ* 'after verbal root *pūri* implies the causative root. For, a non-causal *pūri* 'be full' cannot be transitive, and hence will not qualify to be used in the context of this rule. The words *carman* and *udara* constitute the cooccurrence condition. Thus, we get: *udaraṃpūraṃ bhuṅkte* 'he eats until his belly is full'.

3.4.32 वर्षप्रमाण ऊलोपश्चास्यान्यतरस्याम्

varṣapramāṇa ūlopaś cāsyānyatarasyām
/*varṣapramāṇe* 7/1 *ūlopaḥ* 1/1 *ca* Ø *asya* 6/1 *anyatarasyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karmaṇi* #29, *pūreḥ* #31)
pūrayater dhātor ṇamul pratyayo bhavati, ūlopaś cāsya pūrayater anyatarasyāṃ bhavati, samudāyena ced varṣasya pramāṇaṃ gamyate
Affix *ṆamUL* occurs after verbal root *pūri* when it is used with a *pada* which denotes *karman* and when *varṣapramāṇa* 'measure of rain' is expressed; in addition, the *ū* of *pū*, is optionally deleted.

EXAMPLES:

> *goṣpadapūraṃ vṛṣṭo devaḥ* 'it rained enough to fill up the hoof-print of a cow'
> *goṣpadapraṃ vṛṣṭo devaḥ* 'id.'
> *sītāpūraṃ vṛṣṭo devaḥ* 'it rained enough to fill up a furrow'
> *sītapraṃ vṛṣṭo devaḥ* 'id.'

1. This rule not only introduces affix *ṆamUL*, but also orders an additional operation, though only optionally. The verbal root is still *pūri*. The cooccurrence condition of an object is still valid. The optional operation, in addition to the introduction of the affix, is the deletion of the long *ū* of the root. Of course, these operations both apply only when the derivate denotes 'the extent of rain' (*varṣapramāṇa*). Thus, we get the sentences such as:

> *goṣpadapūraṃ vṛṣṭo devaḥ* 'it rained as much as could fill up the foot-prints of cows'
> *goṣpadapraṃ vṛṣṭo devaḥ* 'id.
> where the second sentence shows the optional deletion of *ū*.

2. There is a very detailed proposal refuting the provision of the optional deletion of *ū* in the *Mahābhāṣya* . The discussion centers around the introduction of affix *Ka* by rule 3.2.3 *āto' nupasarge kaḥ*, to thereby derive a form which is identical in form, meaning, and accent with the derivate in *ṆamUL*. I skip, here, the details of this refutation, as well as that of the additional considerations for introduction of affix *GHaÑ*.

3.4.33 **चेले क्नोपेः**

> *cele knopeḥ*
> /*cele* 7/1 *knopeḥ* 5/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karmaṇi* #29, *varṣapramāṇe* #32)
> *'knūyī śabde undane ca' asmāṇ ṇyantād dhātoś celārtheṣu karmasu upapadeṣu ṇamul pratyayo bhavati, varṣapramāṇe gamyamāne*
> Affix *ṆamUL* occurs after verbal root *knopi* 'to cause to be wet' when it is used with a *pada* which signifies *cela* 'clothing' as *karman*, and when the derivate expresses a measure of rain.

EXAMPLES:

> *celaknopaṃ vṛṣṭo devaḥ* 'it rained enough to make the clothes wet'
> *vastraknopaṃ vṛṣṭo devaḥ* 'id.'
> *vasanaknopaṃ vṛṣṭo devaḥ* 'id.'

1. This rule introduces affix *ṆamUL* after verbal root *knūYĪ*, used with *ṆiC*, to denote the sense of 'making something wet' provided an

object which denotes *cela* 'clothes' is used in conjunction, and 'extent of rain' is also denoted. The specification of the verbal root is made with the inclusion of the augment *pUK*. This, in turn, becomes the basis for interpreting the use of the root in the causative with affix *ṆiC*. For, *pUK* can be introduced to *knūYĪ* by rule 7.3.36 *ar... rtihrīvlī...* only when it ends in *ṆiC*. Thus we get examples such as:

celaknopaṃ vṛṣṭo devaḥ 'it rained enough to cause the clothes to be wet'

3.4.34 निमूलसमूलयोः कषः

nimūlasamūlayoḥ kaṣaḥ
/*nimūlasamūlayoḥ* 7/2 (*itar. dv.*); *kaṣaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karmaṇi* #29)
nimūla-samūla-śabdayoḥ karmavāciny upapadayoḥ kaṣer dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *kaṣA* 'to scrape, rub' when it is used in conjunction with a ***pada*** which denotes a ***karman*** constituted by *nimūla* 'without roots' and *samūla* 'with roots'.

EXAMPLES:

nimūlakāṣaṃ kaṣati 'removes (a plant) without the roots'
samūlakāṣaṃ kaṣati 'removes (a plant) with the roots'

1. Note that our examples *nimūlakāṣam* and *samūlakāṣam*, which denote the object of *kaṣA* and both also include *kāsa*, a derivate of *kaṣA*, the same action. How come the action is stated twice? Is there a difference in these actions? Actually, these actions are both the same. The action denoted by *kaṣA* is repeated in view of the provision of rule 3.4.46 *kaṣādiṣu yathāvidhy anuprayogaḥ*. Commentators explain *samūlakāṣaṃ kaṣati* as *saha mūlena kaṣaṇaṃ karoti* 'accomplishes the action of cutting along with the roots'. This is how all examples are to be understood in this entire section. It is stated that these same actions can be viewed as used in a qualifier-qualified (*viśeṣaṇa-viśeṣya*) relationship where one action is general (*sāmānya*) as opposed to the other which is particular (*viśeṣa*). This way, the same action (*dhātvartha*) can also be viewed as different (*PM ad Kāś. III:178. ekasyaiva dhātvarthasya sāmānyaviśeṣabhāvena bhede sati viśeṣaṇaviśeṣyabhāvaḥ*). Note further that the condition of *samānakartṛkatva* 'single agentness' is still valid in this section.

3.4.35 शुष्कचूर्णरूक्षेषु पिषः

śuṣkacūrṇarūkṣeṣu piṣaḥ
/*śuṣkacūrṇarūkṣeṣu* 7/3 (*itar. dv.*); *piṣaḥ* 5/1/
(*pratyayaḥ* 3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karmaṇi* #29)

suṣkādiṣu karmavāciṣupadeṣu piṣer dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *piṣL* 'to grind to powder' when it is used in conjunction with a *pada* which denotes a *karman* with the signification of *śuṣka* 'dried', *cūrṇa* 'powdered', and *rūkṣa* 'coarse'.

EXAMPLES:

śuṣkapeṣaṃ pinaṣṭi '...grinds something dry to powder'
cūrṇapeṣaṃ pinaṣṭi '...grinds something (already split into small pieces) to powder'
rūkṣapeṣaṃ pinaṣṭi 'grinds something coarse to powder'

3.4.36 समूलाकृतजीवेषु हन्कृञ्ग्रहः

samulākṛtajīveṣu hankṛñgrahaḥ
/*samūlākṛtajīveṣu* 7/3 *hankṛñgrahaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karmaṇi* #29)
'*samūla, akṛta, jīva*' *ity eteṣu śabdeṣu karmasūpapadeṣu yathāsaṃkhyaṃ* '*han, dṛñ, graha*' *ity etebhyo dhātubhyo ṇamul pratyayo bhavati*
Affix *ṆamUL* occurs after verbal roots *han* 'to kill', *kṛÑ* 'to do' and *grahA* 'to hold' when they are used with a *pada* which denotes *karmaṇ* and correspondingly, is constituted by *samūla* 'including the root', *akṛta* 'not done' and *jīva* 'living being'.

EXAMPLES:

samūlaghātaṃ hanti 'he destroys completely, roots and all'
akṛtakāraṃ karoti 'he does something done never before'
jīvagrāhaṃ gṛhṇāti 'he seizes him alive'

3.4.37 करणे हनः

karaṇe hanaḥ
/*karaṇe* 7/1 *hanaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26)
karaṇe upapade hanter dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *han* when it is used with a *pada* which denotes *karaṇa*.

EXAMPLES:

pāṇighataṃ vediṃ hanti 'he strikes the sacrificial altar with his hand'
pādaghātaṃ bhūmiṃ hanti 'he stamps the earth'

1. This rule again introduces affix *ṆamUL* after the verbal root *han*, though this time under the cooccurrence condition of an instrument (*karaṇa*).

3.4.38 स्नेहने पिषः

snehane piṣaḥ
/*snehane* 7/1 *piṣaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karaṇe* #37)
snehanavācini karaṇe upapade piṣer dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *piṣL* when it is used in conjunction with a *pada* which denotes *karaṇa* with the signification of *snehana* 'lubricating, smoothing'.

EXAMPLES:

udapeṣaṃ pinaṣṭi 'grinds something with water'
tailapeṣaṃ pinaṣṭi 'grinds something with oil'

1. Note that affix *ṆamUL* is introduced here under the cooccurrence condition of *snehana*, that by means of which something is lubricated, or smoothed. Thus *snehana* here serves as the *karaṇa* for accomplishing the action of grinding something to powder. Haradatta (*PM* ad *Kāś* III:180) states *snehane* of this rule is interpreted as specifying meaning, and not the cooccurrence (*upapada*) condition. Thus, *snehane* means *snehanavācin* 'that which signifies lubricating, or smoothing'. If *snehana* specifies meaning then how do we know that *karaṇa* constitutes an *upapada*? By *vyākhyāna* 'explanations of the learned', and through the meaning of the word *snehana* = *snihyate yena tat snehanam* 'that by means of which something is lubricated, or smoothed'. This condition of *snehana* could not be included in 3.4.35 *śuṣkacūrṇa...* because affix *ṆamUL* is introduced there under the meaning condition of *karman*. Here, of course, it is being introduced under the meaning condition of *karaṇa*.

3.4.39 हस्ते वर्त्तिग्रहोः

haste vartigrahoḥ
/*haste* 7/1 *vartigrahoḥ* 6/2/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karaṇe* #37)
hastavācinini karaṇe upapade vartayater gṛhṇāteś ca ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal roots *varti* 'to cause to turn' and *grahA* 'to seize' when they are used with a *pada* which denotes *karaṇa* and is constituted by stems which signify *hasta* 'hand'.

EXAMPLES:

hastavartaṃ vartayati 'he turns something with his hand'
karavartaṃ vartayati 'id.'
pāṇivartaṃ vartayati 'id.'

hastagrāhaṃ gṛhṇāti 'he seizes or accepts with his hand'
karagrāhaṃ gṛhṇāti 'id.'

1. This rule introduces affix *ṆamUL* after the causal form of verbal roots *vṛt*, and also after verbal root *grah* provided a word which denotes 'hand' (*hasta*) as instrument (*karaṇa*) occurs in conjunction with them. This interpretation clearly accepts the word *hasta* as referring to stems having the signification of 'hand'. The specification is semantic (*arthanirdeśa*). Thus, we get examples such as:

(*a*) *hastavarttaṃ varttayati* and
(*b*) *pāṇivarttaṃ varttayati* parallel to:
(*c*) *hastena varttayati* 'rolls up something with hands into a ball', and
(*d*) *pāṇinā varttayati* 'id.'.

3.4.40 स्वे पुषः

sve puṣaḥ
/*sve* 7/1 *puṣaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *karaṇe* #37)
svavācini karaṇe upapade puṣer dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *puṣA* 'to nourish, thrive' when it is used with a *pada* which denotes *karaṇa* and is constituted by a stem which signifies *sva* 'one's own'.

EXAMPLES:

svapoṣaṃ puṣṇāti 'he thrives on his own'
ātmapoṣaṃ puṣṇāti 'id.'
pitṛpoṣaṃ puṣṇāti 'he thrives on account of his father'
mātṛpoṣaṃ puṣṇāti 'he thrives on account of his mother'

1. The word *sva* is used, here, in the sense of its meanings such as: *ātmīya* 'one's own', *jñāti* 'relation', and *dhana* 'property'.

3.4.41 अधिकरणे बन्धः

adhikaraṇe bandhaḥ
/*adhikaraṇe* 7/1 *bandhaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26)
adhikaraṇavāciny upapade badhnāter ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *bandh* 'to bind' when it cooccurs with a *pada* which denotes *adhikaraṇa* 'locus'.

EXAMPLES:

cakrabandhaṃ badhnāti 'he ties... to a wheel'
kūṭabandhaṃ badhnāti 'he ties... to a post'

3.4.42 संज्ञायाम्

saṃjñāyām
/saṃjñāyām 7/1/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, ṇamul #26, bandhaḥ #41)
saṃjñāyāṃ viṣaye badhnāter dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *bandh* when the derivate denotes a *saṃjñā* 'name'.

EXAMPLES:

krauñcabandhaṃ badhnāti 'he is tying the *krauñcabandha* (name of a knot shaped like a heron)'
mayūrikābandhaṃ badhnāti 'he is tying the *mayūrikābandha* (name of a knot shaped like a peahen)'
aṭṭālikābandhaṃ baddhaḥ 'he was tied by the *aṭṭālikābandha* (name of a knot shaped like a palace)'

1. This rule introduces affix *ṆamUL* under the meaning condition of a name (*saṃjñā*). Unlike the preceding rule, it is not conditioned by locus (*adhikaraṇa*). Thus, the example, *cakrabandhaṃ badhnāti* , of the previous rule would treat *cakra* 'wheel' as the locus to which something or someone will be tied. In contrast, our present rule provides for *mayūrikābandhaṃ badhnāti* 'he ties someone with a knot called Mayūrikā (Peahen)'. This rule is clearly formulated to accommodate non-locus (*anadhikaraṇa*) examples with name (*saṃjñā*) as denotata.

3.4.43 कर्त्रोर्जीवपुरुषयोर्नशिवहोः

kartror jīvapuruṣayor naśivahoḥ
/kartroḥ 7/2 jīvapuruṣayoḥ 7/2 naśivahoḥ 6/2/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, ṇamul #26)
jīvapuruṣayor kartṛvācinor upapadayor yathāsaṃkhyaṃ naśivahor dhātvor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal roots *naśA* 'to disappear' and *vahA* 'to carry' when they are used with a *pada* which denotes *kartṛ* and contais *jīva* and *puruṣa* 'man, person', respectively.

EXAMPLES:

jīvanāśaṃ naśyati 'that which lives dies'
puruṣavāhaṃ vahati 'the man is carrying a man'

1. This rule begins the introduction of affix *ṆamUL* under the co-occurrence condition of *kartṛ* when verbal roots *naś* and *vah* are conjoined with *jīva* and *puruṣa*, respectively. Thus we get:

(*a*) *jīvanāśaṃ naśyati* '...perishes with destruction of life'
(*b*) *puruṣavāhaṃ vahati* 'the man carries the load of a man'

The condition of a *kartṛ* as an *upapada* will rule out derivates parallel to *jīvena naṣṭaḥ* '... destroyed by life' and *puruṣeṇoḍhaḥ* '... carried by a man'.

3.4.44 **ऊर्ध्वे शुषिपूरोः**

ūrdhve śuṣipūroḥ
/*ūrdhve* 7/1 *suṣipūroḥ* 5/2 (*itar. dv.*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *kartroḥ* #43)
ūrdhvaśabde kartṛvāciny upapade śuṣipūror dhātvor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal roots *śuṣI* 'to be dry' and *pūrI* 'to fill up' when they cooccur with a *pada* which denotes *kartṛ* and contains *ūrdhva* 'upright'.

EXAMPLES:

ūrdhvaśoṣaṃ śuṣyati vṛkṣaḥ 'the tree dries up while standing upright'
ūrdhvapūraṃ pūryate '...is filled up to the brim'

3.4.45 **उपमाने कर्मणि च**

upamāne karmaṇi ca
/*upamāne* 7/1 *karmaṇi* 7/1 *ca* 0/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *kartroḥ* #43)
upamāne karmaṇy upapade cakārāt kartari dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after a verbal root used in conjunction with a *pada* which denotes a *karman*, and *kartṛ* as well, as an *upamāna* 'object of comparison'.

EXAMPLES:

ghṛtanidhāyaṃ nihitaṃ jalam
'the water is preserved as if it was clarified butter (*ghṛta*)'
ajakanāśaṃ naṣṭaḥ
'...was wasted away like a goat'

3.4.46 **कषादिषु यथाविध्यनुप्रयोगः**

kaṣādiṣu yathāvidhy anuprayogaḥ
/*kaṣādiṣu* 7/3 *yathāvidhi* 0 *anuprayogaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *kartroḥ* #43)
'nimūlasamūlayoḥ' ity etad ārabhya kaṣādayaḥ, eteṣu yathāvidhy anuprayogo bhavati

A tag in case of verbal roots enumerated beginning with *kaṣA* 'to scrape' (3.4.34 *nimūlasamūlayoḥ kaṣaḥ*) must be in line with the root which ends in *ṇamUL*.

EXAMPLE:

nimūlakāṣaṃ kaṣati 'he cuts down to the root'

1. This rule is restrictive (*niyama*) in nature. It requires that a tag (*anuprayoga*) in connection with roots headed by *kaṣ* must be in consonance with (*yathāvidhi*) that of a root which ends in *ṇamUL*. Consider for example the sentence:

ajakanāśaṃ naṣṭaḥ '...was wasted away like a goat',

where affix *ṆamUL* is introduced after verbal root *naś*. Our present rule requires that if affix *ṆamUL* is introduced after verbal roots such as *kaṣ*, etc., such verbs, alone, should also be used as a tag. The verb form *naśyati* represents the tag which under the dictates of the present rule is in accordance with the *naś* of *ajakanāśaṃ* after which affix *ṇamUL* is introduced.

3.4.47 उपदंशस्तृतीयायाम्

upadaṃśas tṛtīyāyām
/*upadaṃśaḥ* 5/1 *tṛtīyāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26)
'daṃśa daśane' asmād dhātor upapūrvāt tṛtīyānta upapade ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal root *daṃśA* 'to bite', used with the preverb *upa*, when it occurs with a *pada* which ends in *tṛtīyā* 'third triplet of *sUP*'.

EXAMPLES:

mūlakopadaṃśaṃ bhuṅkte 'he eats his food taking a bite of radish'
ārdrakopadaṃśaṃ bhuṅkte 'he eats his food taking a bite of ginger-root'

1. This rule introduces affix *ṆamUL* after verbal root *daṃś* 'to bite' used with the preverb *upa* provided a word which ends in the instrumental (*tṛtīyā*) forms the *upapada*. Thus, we get the example:

mūlakopadaṃśaṃ bhuṅkte

where the object of *bhuj* 'to eat' is the morsel of radish turned into such by means of the bites (*upadaṃśa*). Bites thus serve as the means whereby the object radish, now turned into morsels, is consumed.

The compound formation of derivates such as *upadaṃśa* with the co-occurring words which denote *karaṇa* is optional as provided for by rule 2.2.21 *tṛtīyāprabhṛtīny....*

Note also that, in this entire section of *ṆamUL*, rule 3.1.94 *vā' sarūpo' striyām* would also apply. That is, affix *Ktvā* would also apply to derive optional forms such as *mulakenopadaśya bhuṅkte*, parallel to the derivates of *ṆamUL*.

3.4.48 **हिंसार्थानां च समानकर्मकाणाम्**

hiṃsārthānāṃ ca samānakarmakāṇām
/*hiṃsārthānām* 6/3 *ca* Ø *samānakarmakāṇām* 6/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *tṛtīyāyām* #47)
hiṃsārthānāṃ dhātūnām anuprayogadhātunā samānakarmakāṇāṃ tṛtīyānta upapade ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after those verbal roots which signify *hiṃsā* 'injury, killing', and share the same object (*karman*) with roots subsequently used as a tag, provided they cooccur with a *pada* which ends in *tṛtīyā*.

EXAMPLES:

daṇḍopaghātaṃ gāḥ kālayati 'he wards off the cows by hitting with a stick'
daṇḍatāḍaṃ gāḥ kālayati 'id.'

1. This rule provides for the introduction of affix *ṆamUL*, still under the cooccurrence condition of a word which ends in *tṛtīyā*, though with some additional conditions. The root after which affix *ṆamUL* is to be introduced must meet the following three conditions:

(*a*) it must denote an action with the signification of *hiṃsā*,
(*b*) it must occur with a tagged root, and
(*c*) it must share an identical object with the tagged action.

Consider the following example:

(*d*) *daṇḍopaghātaṃ gāḥ kālayati* 'he wards off the cows with the blow of a stick',

where the action underlying *upaghāta* is synonymous with the action denoted by the tagged verbal form *kālayati*. Why should we have the condition of actions sharing identical objects? Observe the following:

(*e*) ***cauraṃ daṇḍenopahatya gopālako gāḥ kālayati*** **'having beaten up the thief with the stick the cowherd is now hitting the cows,'**

where the absence of an 'identical object' does not permit the introduction of *ṆamUL*.

3.4.49 **सप्तम्यां चोपपीडरुधकर्षः**

saptamyāṃ copapīḍarudhakarṣaḥ
/*saptamyām* 7/1 *ca* Ø *upapīḍarudhakarṣaḥ* 5/1/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *tṛtīyāyām* #47)
upapūrvebhyaḥ pīḍarudhakarṣebhyaḥ saptamyanta upapade cakārāt tṛtīyānta upapade ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal roots *pīḍA* 'to press', *rudhA* 'to obstruct, ward off' and *kṛṣA* 'to drag, plough' when used with the preverb *upa,* and in conjunction with a *pada* which ends in *saptamī* 'the seventh triplet of *sUP*' or *tṛtīyā.*

EXAMPLES:

pārśvopapīdaṃ śete 'he sleeps lying on his side'
vrajoparodhaṃ gāḥ sthāpayati 'he keeps the cows restrained in the cowpen'
pāṇyupakarṣaṃ dhānāḥ saṃgṛhṇāti 'he collects grains picking up by hand'

1. This rule introduces affix *ṆamUL* after three cited verbal roots, all used with the preverb *upa,* when cooccurring with a word which ends in the locative (*saptamī*) or *tṛtīyā.* Note that the use of *ca* enables *karaṇa* to also form the cooccurrence condition, parallel to *saptami,* thereby yielding two derivates for each verbal root. A compound such as *pārśvopapīḍam* is made optional by rule 2.2.21 *tṛtīyāprabhṛty anyatarasyām.* Consequently, there will be two optional forms parallel to *pārśvopapīḍam.* That is, we have two optional forms: *pārśvayor upapīḍam* and *pārśvābhyām upapīḍam,* where the first takes the option of *saptamī* as opposed to the *tṛtīyā* of the second.

The word *upa* of the rule must be associated with all three verbal roots. Commentators indicate that the three verbal roots first form a *dvandva* compound of the *samāhara* type with the form *pīḍarudhakarṣa.* This subsequently combines with *upapūrvaḥ* 'that which has a preceding *upa*', where *upapūrvaḥ* would further undergo the deletion (*lopa*) of its second component word (*uttarapada*), yielding *upapīḍarudhakarṣa.* Incidentally, verbal root *kṛṣ,* because of specification with the *a* of *Śap,* and along with the *guṇa* of *ṛ* in *karṣaḥ,* will be interpreted here to belong to the class of roots headed by *tud* 'to torment'.

3.4.50 **समासत्तौ**

samāsattau
/*samāsattau* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *tṛtīyāyām* #47, *saptamyām* #49)
samāsattau gamyamānāyāṃ tṛtīyāsaptamyor upapadayor dhātor ṇamul pratyayo bhavati

Affix *ṆamUL* occurs after a verbal root used in conjunction with a *pada* which ends in *saptamī* or *tṛtīyā*, provided the derivate denotes *samāsatti* 'proximity, contiguity'.

EXAMPLES:

keśagrāhaṃ yudhyante 'they are fighting by grabbing each other's hair'
hastagrāhaṃ yudhyante 'they are fighting by holding each other's hands'

1. This rule introduces affix *ṆamUL* after a verbal root which co-occurs with a *pada* which ends either in the 'instrumental', or in the 'locative' provided the derivate denotes *samāsatti* 'close proximity'. Thus we get:

hastairgrāhaṃ yuddhyante 'they are fighting by siezing one another with hands',

where the on-set of fight (*yuddhasaṃrambha*) brings the fighters in close proximity to one another.

3.4.51 **प्रमाणे च**

pramāṇe ca
/*pramāṇe* 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *tṛtīyāyām* #47, *saptamyām* #49)
pramāṇe gamyamāne tṛtīyāsaptamyor upapadayor dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* also occurs after a verbal root which cooccurs with a *pada* ending in *tṛtīya* or *saptamī*, provided *pramāṇa* 'measure of length' is expressed.

EXAMPLES:

dvyaṅgulotkarṣaṃ khaṇḍikāṃ chinatti 'he cuts a piece of wood into pieces equal in measure to the width of two fingers'
tryaṅgulotkarṣaṃ khaṇḍikāṃ chinatti 'he cuts a piece of wood into pieces equal in measure to the width of three fingers'

1. Our compound *dvyaṅgulotkarṣam* is explained with parallel strings such as: *dvyaṅgule utkarṣam* and *dvyaṅgulenotkarṣam*. The word *pramāṇa* is treated as a synonym of *dairghya* 'length'.

3.4.52 **अपादाने परीप्सायाम्**

apādāne parīpsāyām
/*apādāne* 7/1 *parīpsāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2. *dhātoḥ* #3.1.91, *ṇamul* #26)

parīpsāyāṃ gamyamānāyām apādāna upapade dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after a verbal root used in conjunction with a *pada* which denotes *apādāna* 'ablative', provided *parīpsā* 'haste' is signified.

EXAMPLES:

śayyotthāyaṃ dhāvati 'he rises from the bed and runs'
bhrāṣṭrāpakarṣam apūpān bhakṣayati 'he eats the cakes straight from the oven'

1. Note that the condition of *parīpsā* would rule out a *ṆamUL* formation corresponding to *āsanād utthāya gacchati* '...rises from his seat and goes'. Affix *Ktvā* is employed in *utthāya* because of lack of 'haste'. Our cited examples signify haste. The first indicates that the man is in such a hurry that he does not even care to wash his face, etc. The second indicates that someone is so hungry that he cannot wait for a plate to eat from; he cannot even wait for the cakes to cool off.

3.4.53 द्वितीयायां च

dvitīyāyāṃ ca
/*dvitīyāyām* 7/1 *ca* ∅/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *parīpsāyām* #52)
dvitīyānta upapade parīpsāyāṃ gamyamānāyāṃ dhātor ṇamul pratyayo bhavati
Affix *NamUL* also occurs after a verbal root used in conjunction with a *pada* which ends in *dvitīyā* 'accusative', provided *parīpsā* 'haste' is signified.

EXAMPLES:

yaṣṭigrāhaṃ yuddhyante 'they grab a stick and fight'
loṣṭagrāhaṃ yudhyante 'they pick up a lump of clay and fight'

1. Note that *dvitīyā* is here used as an option to both *saptamī* and *tṛtīyā*. The condition of 'haste' is still operative. Thus, the fighters of our example sentences are in such a haste to fight that they do not bother taking an appropriate weapon to fight.

3.4.54 स्वाङ्गेऽध्रुवे

svāṅge' dhruve
/*svāṅge* 7/1 *adhruve* 7/1 = *na dhruve (nañ. tat.)*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2 *dhātoḥ* #3.1.91, *ṇamul* #26, *dvitīyāyām* #53)
adhruve svāṅgavāciny dvitīyānta upapade dhātor ṇamul pratyayo bhavati

Affix *ṆamUL* occurs after a verbal root used in conjunction with a *pada* which ends in *dvitīyā* and denotes one's own (*sva*) non-vital (*adhruva*) body-part (*aṅga*).

EXAMPLES:

akṣinikāṇaṃ jalpati 'he mutters having closed his eyes'
bhrūvikṣepaṃ kathayati 'he speaks having raised his eyebrows'

1. Note that the compound is still optional. The condition of *adhruve* as a qualification to *svāṅge* is explained as 'that by losing which one does not die' (*Kāś. yasminn aṅge chinne' pi prāṇī na mriyate tad adhruvam*). A counter-example is offered in *utkṣipya śiraṃ kathayati* 'he narrates something having moved his head on sides' where *śiras* 'head' is a vital part of the body. This example thus has *Ktvā* as opposed to *ṆamUL*.

3.4.55 परिक्लिश्यमाने च

parikliśyamāne ca
/parikliśyamāne 7/1 *ca* Ø/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *dvitīyāyām* #53, *svāṅge* #54)
parikliśyamāne svāṅgavācini dvitīyānta upapade dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* also occurs after a verbal root used in conjunction with a *pada* which ends in *dvitīyā* and denotes one's body-part totally afflicted with the action.

EXAMPLES:

uraḥpeṣam yudhyante 'they fight crushing their rib cages'
śiraḥpeṣaṃ yudhyante 'they fight crushing their heads'

1. This rule accounts for usages which may involve a vital body-part (*dhruva*; see *Kāś.* III: 188: *dhruvārtho' yam ārambhaḥ*).

3.4.56 विशिपतिपदिस्कन्दां व्याप्यमानासेव्यमानयोः

viśipatipadiskandāṃ vyāpyamānāsevyamānayoḥ
/viśipatipadiskandām 6/3 *(itar. dv.)*; *vyāpyamānasevyamānayoḥ* 7/3 *(itar. dv.)*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *dvitīyāyām* #53)
dvitīyānte upapade viśyādibhyo dhātubhyo ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal roots *viśI* 'to enter', *patI* 'to fall', *padI* 'to move', and *skandI* 'to leap' when the roots are used in conjunction with a *pada* which ends in *dvitīyā*, provided *vyāpyamāna* 'that which totally pervades' and *āsevā* 'successive connection' are signified.

EXAMPLES:

gehānuprapātam āste 'he enters each and every house, and stays'; 'he enters a house time and again, and stays'
gehānuprapātam āste 'id.'
gehānuprapādam āste 'id'
gehāvaskandam āste 'jumping from house to house he stays'; 'jumping time and again to a house he stays'

1. The words *vyāpyamāna* and *āsevā* are explained as characteristics of *dravya* 'thing' and *kriyā* 'action' respectively. *Kāśikā* explains *vyāpti* as: *viśyādibhir kriyābhir anavayena padārthānāṃ sambandhaḥ* 'total connection of things with the action denoted by roots such as *viś*, etc.'. The word *āsevā* refers to *vīpsā* 'each and every; total absorption; repetition, etc.' of an action.

Note that in the absence of a compound, we will get two forms one each for *vyāpti* and *āsevā*. Thus, the first example will have two parallel sentences where either a nominal, or a verbal form, is repeated to denote *vīpsā* (8.1.4 *nityam vīpsayoḥ*):

(*i*) *gehaṃ geham anupraveśam āste*
(*ii*) *geham anupraveśam anupraveśam āste*

Similar sentences can be formed parallel to other examples. This repetition, i.e., *gehamgeham; anupraveśam anupraveśam,* is not allowed in case of the formation of a compound.

What is the purpose of formulating this rule? If one argues that this rule is formulated to include the condition of *āsevā* then that is not valid; since *āsevā* and *ābhīkṣṇya* are the same things, and affix *ṆamUL* is already introduced under the meaning condition of *ābhīkṣṇya* by rule 3.4.22 *ābhīkṣṇye ṇamul ca.* Is this rule formulated to block *Ktvā* by *ṆamUL*? No, since *Ktvā* is not desired to be blocked. The rule is formulated to facilitate the formation of an optional compound under the cooccurrence condition of a *pada* which ends in *dvitīyā* (cf. *Kāś.: nanu ābhīkṣṇye ṇamul vihita eva, āsevā cābhīkṣṇyam eva, kimarthaṃ punar āsevāyām ṇamul ucyate? ktvānivṛtyartham iti cet; na; iṣṭatvāt tasya. dvitīyopapadārthaṃ tarhi vacanam: upapadasamāsaḥ pakṣe yathā syāt*).

3.4.57 अस्यतितृषोः क्रियान्तरे कालेषु

asyatitṛṣoḥ kriyāntare kāleṣu
/*asyatitṛṣoḥ* 6/2 (*itar. dv.*); *kriyāntare* 7/1 *kāleṣu* 7/3/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *dvitīyāyām* #53)
kriyāntare dhātvarthe vartamānābhyām asyatitṛṣibhyāṃ dvitīyānteṣu kālavācīṣūpapadeṣu ṇamul pratyayo bhavati

Affix *ṆamUL* occurs after verbal roots *asU* 'to hurl' and *tṛṣA* 'to be thirsty' when the roots denote an interval between actions, and co-occur with a *pada* which ends in *dvitīyā* with the signification of *kāla* 'time'.

EXAMPLES:

dvyahātyāsaṃ gāḥ pāyayati '...has the cattles drink water at an interval of two days'
dvyaham atyāsaṃ gāḥ pāyayati 'id.'
dvyahatarṣaṃ gāḥ pāyayati 'id.'
dvyahaṃ tarṣaṃ gāḥ pāyayati 'id.'

1. *Kāśikā* explains the examples as meaning *adya pāyayitvā dvyaham atikramya punaḥ pāyayatīty arthaḥ* 'it means that someone has the cows drink water today; and then has them drink again after two days'. That is, the actions denoted by *aty-as* and *tṛṣ*, i.e., *atyasana* and *tarṣaṇa*, set, the action of drinking water by the cows, apart by two days. The word *antara* in *kriyāntare* thus denotes *vyavadhāna* 'hiatus'.

3.4.58 **नाम्न्यादिशिग्रहोः**

nāmny ādiśigrahoḥ
/*nāmni* 7/1 *ādiśigrahoḥ* 6/2 *(itar. dv.)*/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ṇamul* #26, *dvitīyāyām* #53)
nāmaśabde dvitīyānta upapade ādiśer graheś ca dhātor ṇamul pratyayo bhavati
Affix *ṆamUL* occurs after verbal roots *diś* 'to permit' used with the preverb *āṄ*, and *grah* 'to sieze', when the roots cooccur with a *pada* which ends in *dvitīyā* and denotes a name (*nāman*).

EXAMPLES:

nāmādeśam ācaṣṭe '...announces by calling out the name
nāmagrāham ācaṣṭe 'id.'

3.4.59 **अव्ययेऽयथाभिप्रेताख्याने कृञः क्त्वाणमुलौ**

avyaye' yathābhipretākhyāne kṛñaḥ ktvāṇamulau
/*avyaye* 7/1 *ayathābhipretākhyāne* 7/1 = *na yathābhipretam* = *ayathābhipretam; ayathābhipretasya ākhyānam* = *ayathābhipretākhyānam* (*ṣaṣ. tat.* with an internal *nañ*); *tasmin; kṛñaḥ* 5/1 *ktvāṇamulau* 1/2/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
avyaya upapade' yathābhipretākhyāne gamyamāne karoteḥ ktvāṇamulau pratyayau bhavataḥ
Affixes *Ktvā* and *ṆamUL* occur atter verbal root *krÑ* 'to do, make',

used in conjunction with a *pada* constituted by an *avyaya* 'indeclinable', provided *ayathābhipreta* 'not as one expects' is signified.

EXAMPLES:

brāhmaṇa putras te jātaḥ, kiṃ tarhi vṛṣala nīcaiḥkṛtyācakṣe; nīcaiḥ kṛtvā...; nīcaiḥkāram... 'a son of yours is born O Brāhmaṇa!; how come you are announcing it in such a low voice O Vṛṣala!'
brāhmaṇa kanyā te garbhiṇī, kiṃ tarhi vṛṣala uccaiḥkṛtyācakṣe; uccaiḥ kṛtvā...; uccaiḥkāram... 'your daughter has become pregnant O Brāhmaṇa!; how come you are announcing it in such a high voice O Vṛṣala!'

1. This rule allows for optional *Ktvā* and *ṆamUL* formations. Thus, we get four forms: *uccaiḥ kṛtvā*, *uccaiḥkṛtya*, and *nīcaiḥ kāram* and *nīcaiḥkāram*, where the second form in each set of *Ktvā* and *ṆamUL* is gotten from optional compound formation allowed by rules 2.2.22 *ktvā ca* and 2.2.21 *tṛtīyāprabhṛtīny...* respectively.

The word *ayathābhipretākhyāna* is explained as *na yad yad abhipretam iṣṭam tasya ākhyānam* 'statement of things (in a manner) which is not desired'. Thus, announcing the birth of a son in a low voice is highly undesired; announcing the pregnancy of the daughter in a loud voice is equally undesired.

2. Why do we have to have *Ktvā* mentioned in this rule when we already have it available through *vā' sarūpavidhi* in this entire section? Affix *Ktvā* is specifically mentioned here to facilitate the formation of compound by rule 2.2.22 *ktvā ca*. But why do we have to mention *ṆamUL* again in this section of *ṆamUL*? So that *ṆamUL* could be brought on a par with *Ktvā* since 2.2.22 *ktvā ca* also contains 2.2.21 *tṛtīyāprabhṛtīny....* This also enables the subsequent *anuvṛtti* of both *Ktvā* and *ṆamUL*.

3.4.60 तिर्यच्यपवर्गे

tiryacy apavarge
/tiryaci 7/1 apavarge 7/1/
(pratyayaḥ 3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *kṛñaḥ ktvāṇamulau* #59*)*
tiryak śabde upapade kṛñaḥ ktvāṇamulau pratyayau bhavataḥ apavarge gamyamāne
Affixes *Kivā* and *ṆamUL* occur after verbal root *kṛÑ* to do, make', junction with a *pada* constituted by *tiryac* 'oblique', when *apavarga* 'completion' is signified.

EXAMPLES:

tiryakkṛtya gataḥ '...went after having completed the work...'
tiryak kṛtvā gataḥ 'id.'

tiryakkāraṃ gataḥ 'id.'

1. The formation of compound is optional as has already been explained under the previous rule.

3.4.61 स्वाङ्गे तस्प्रत्यये कृभ्वोः

svāṅge taspratyaye kṛbhvoḥ
/svāṅge 7/1 taspratyaye 7/1 kṛbhvoḥ 5/2/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, ktvāṇamulau #59)
taspratyaye svāṅgavāciny upapade karoter bhavateś ca dhātvoḥ ktvāṇmulau pratyayau bhavataḥ
Affixes *Ktvā* and *ṆamUL* occur after verbal roots *kṛÑ* and *bhū* used in conjunction with a *pada* which contains a stem that ends in affix *tasI* (5.4.45 *apādāne cā...*) and denotes 'one's limb'.

EXAMPLES:

mukhataḥkṛtya gataḥ 'he left with his face toward...'.
mukhataḥkṛtvā gataḥ 'id.'
mukhataḥkāraṃ gataḥ 'id.'
pṛṣṭhatobhūya gataḥ 'he turned his back and left'
pṛṣṭhatobhūtvā gataḥ 'id.'
pṛṣṭhatobhāvaṃ gataḥ 'id.'

1. This rule introduces affixes *Ktvā* and *ṆamUL* after verbal roots *kṛ* and *bhū* occurring in conjunction with a *pada* which terminates in affix *tasI* (5.4.45 *apādāne...*) and denotes *svāṅga* 'one's own limb'. Note that the introduction of these affixes does not follow *yathāsaṃkhya* 'application in consonance with the number of elements in referenced sets'. That is, one should not understand *Ktvā* and *ṆamUL* to be introduced after verbal roots *kṛ* and *bhū* respectively. This is known from the interpretation of the learned (*vyākhyāna*).

Note that an example such as *mukhataḥkṛtya gataḥ* '...left with his face toward...' entails both conditions of *svāṅga* as well as termination in affix *tasI*. The following sentences illustrate counter-examples to these conditions:

(*a*) *sarvataḥ kṛtvā gataḥ* 'left having finished the work completely'
(*b*) *mukhīkṛtya gataḥ* 'that which was not facing, left...'
(*c*) *mukhataḥ kṛtvā gataḥ*

where the first example does not contain 'one's own limb'; the second entails affix *CvI*, as opposed to *tasI*; and the third has *tas* as the verb, as opposed to an affix.

The compound-formation in relevant examples of this rule is regulated similar to the provisions of rule 3.4.59 *avyaye' yathābhipretākhyāne....*

3.4.62 नाधार्थप्रत्यये च्व्यर्थे

nādhārthapratyaye cvyarthe
/*nādhārthapratyaye* 7/1 *cvyarthe* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *ktvāṇamulau* #59, *kṛbhvoḥ* #61)
nādhārthapratyaye śabde cvyartha upapade kṛbhvor dhātoḥ ktvāṇamulau pratyayau bhavataḥ
Affixes *Ktvā* and *ṆamUL* occur after verbal roots *kṛÑ* and *bhū* when they cooccur with a *pada* which ends in an affix with the signification of *nā*, or *dhā* and denote the sense of affix *CvI*.

EXAMPLES:

nānākṛtvā gataḥ 'after having made something manifold which it was previously not, he left'
nānākṛtya gataḥ 'id.'
nānākāraṃ gataḥ 'id.'
vinākṛtya gataḥ 'having abandoned it he left'
vinākṛtvā gataḥ 'id.'
vinākāraṃ gataḥ 'id.'
nānābhūya gataḥ 'it became many which it was previously not'
nānābhūtvā gataḥ 'id.'
nānābhāvaṃ gataḥ 'id.'
vinābhūya gataḥ 'it went without becoming what it was not; it went having remained the same'
vinābhūtvā gataḥ 'id.'
vinābhāvaṃ gataḥ 'id.'

1. This rule allows for the introduction of affixes *Ktvā* and *ṆamUL* after verbal roots *kṛ* and *bhū* when they occur in conjunction with words ending in affixes which have the signification of *nā* (5.2.27 *vinañbhyāṃ*...) and *dhā* (5.3.42 *saṃkhyyāyā*...), provided the same also denotes the sense of *CvI* (5.4.50 *abhūtatad*...).

The sense of *CvI* is explained as *abhūtatadbhāva* 'the sense of something becoming something which it previously was not'. Consider the following illustrations:

(*a*) *nānākṛtvā gataḥ* 'he left after making something manifold which it was previously not'
(*b*) *nānākṛtyagataḥ* 'id.'
(*c*) *nānākāraṃ gataḥ* 'id.'
(*d*) *anānā nānā kṛtvā gataḥ* 'id.'
(*e*) *dvidhā kṛtvā gataḥ* 'he left after splitting something in two'
(*f*) *dvidhākṛtya gataḥ* 'id.'
(*g*) *dvidhākāraṃ gataḥ* 'id.'

Note that the words *nānā* and *dvidhā* end in the affixes *nā* and *dhā*, which denote the sense of 'variety' and 'splitting in two', respectively. That is, they denote 'multiplicity' and 'splitting in two' which previously was not the case. The meaning of *CvI* can be better understood by example (*d*) which is a paraphrase of (*a-c*). The three examples in two sets (of *a-c*, and *e-g*) each give a non-compound form of *Ktvā* parallel to its compound counterpart and followed by the form in *ṆamUL*. Rule 2.2.22 *ktvā ca* again provides for the optional compound.

The condition that words such as *nānā* and *dvidhā* must end in affixes which have the sense of *nā*, or *dhā* is important, because it means that examples such as *hiruk kṛtvā gataḥ* '...left without making...', or '*pṛthak kṛtvā gataḥ* '...left having set aside...' can be kept out of the scope of this rule.

A question is raised as to why Pāṇini had to state 'when ending in affixes which have the signification of *nā* and *dhā*'. Why did he simply not say 'when ending in affixes *nā* and *dhā*? A formulation via 'affixal meaning' is favored to accommodate forms which denote the sense of *dhā*, but end in an affix other than *dhā*. Rules 5.4.42 *saṃkhyāyāḥ*... through 5.3.45 *dvitryoś ca* introduce affixes *dhā*, *dhyamUÑ*, and *dhamUÑ* with same signification. This specification of meaning is not crucial in case of *nā* since no other affix is used to denote its sense. Why do we then have the specification of *nā* made as '*nā-pratyayārtha*? Because of its association (*sāhacarya*) with *dhārtha*.

3.4.63 **तूष्णीमि भुवः**

tūṣṇīmi bhuvaḥ
/*tūṣṇīmi* 7/1 *bhuvaḥ* 5/1/
(*pratyayaḥ* #3.1.1 *paraś ca* #3.1.2 *dhātoḥ* #3.1.91 *ktvāṇamulau* #12)
tūṣṇīṃśabda upapade bhavater dhātoḥ ktvāṇamulau pratyayau bhavataḥ
Affixes *Ktvā* and *ṆamUL* occur after verbal root *bhū* when it co-occurs with an indeclinable *pada* constituted by *tūṣṇīm* 'silent'.

EXAMPLES:

tūṣṇīṃbhūya 'having become silent'
tūṣṇīṃbhūtvā 'id.'
tūṣṇīṃbhāvam 'id.'

1. A question is raised as to why *bhū* should be explicitly stated in this rule when it is already available via *anuvṛtti* from rule 3.1.61 *svāṅge tas-pratyaye kṛbhvoḥ*. It is said that *bhū* in that rule is associated with *kṛ*, hence, carrying *bhū* via *anuvṛtti* would have also meant carrying *kṛ*. It is to drop *kṛ* that *bhū* is explicitly stated in this rule.

The option of compounds is available from rules 2.2.21 *tṛtīyāprabhṛtīny anyatarasyām* and 2.2.22 *Ktvā ca.*

3.4.64 अन्वच्यानुलोम्ये

anvacy ānulomye
/anvaci 7/1 *ānulomye* 7/1/
(pratyayaḥ #3.1.1 *paraś ca* #3.1.2 *dhātoḥ* #3.1.91 *ktvāṇamulau* # 12*)*
anvakśabda upapade bhavater dhātor ānulomye ktvāṇamulau bhavataḥ
Affixes *Ktvā* and *ṆamUL* occur after verbal root *bhū* to be, become' when it cooccurs with an indeclinable *pada* constituted by *anvak* 'favorably' providing the derivate denotes *ānulomya* 'conduciveness'.

EXAMPLES:

anvagbhūtvā"ste 'he remains a servant'
anvagbhūyāste 'id.'
anvagbhāvam āste 'id.'

1. The word *ānulomya* is explained as *anulomatā* 'favorability', *anukūlatva* 'conduciveness' and *paracittanuvidhāna* 'acting in conformity with someone else's wishes'.

3.4.65 शकधृषज्ञाग्लाघटरभलभक्रमसहार्हास्त्यर्थेषु तुमुन्

śakadhṛṣajñāglāghaṭarabhalabhakramasahārhāstyartheṣu tumun
/śaka...artheṣu 7/3 *(itar. dv.); tumun* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91*)*
śakādiṣūpapadeṣu astyartheṣu vā dhātumātrāt tumun pratyayo bhavati
Affix *tumUN* occurs after a verbal root used in conjunction with *śakA* 'to be able', *dhṛṣA* 'to be bold, daring', *jñā* 'to know', *glai* 'to be weary', *ghaṭA* 'to strive', *rabhA* 'to begin', *labhA* 'to obtain', *kramA* 'to stride', *ṣahA* 'to endure', *arhA* 'to deserve', and with a root which has the signification of *asti* 'to be, become'.

EXAMPLES:

śaknoti bhoktum 'he is able to eat'
dhṛṣṇoti bhoktum 'he dares to eat'
jānāti bhoktum 'he knows how to eat'
glāyati bhoktum 'he becomes weary of eating'
ghaṭate bhoktum 'he strives to eat'
ārabhate bhoktum 'he begins to eat'
labhate bhoktum 'he obtains food for eating'
prakramate bhoktum 'he starts to eat'
sahate bhoktum 'he endures eating'
arhati bhoktum 'he deserves to eat'

asti bhoktum 'there is food here'
bhavati bhoktum 'id.'
vidyate bhoktum 'id.'

1. This rule introduces affix *tumUN* after a verbal root used in conjunction with *śak* 'to be able to', etc., or with a root with the signification of *as* 'to be'. One wonders why Pāṇini has to reintroduce *tumUN*when it is already available to verbal roots in general (3.3.10 *tumunṇvulau...*). Commentators say that this earlier provision is made under the cooccurrence condition of *kriyārthakriyā* 'an action intended for another action'. Our present Rule provides for the introduction of affix *tumUN* without this requirement. Thus, we get:

śaknoti bhoktum '...is able to eat',

where the action denoted by *bhuj* is not intended by the action denoted by *śaknoti*.

Note that the meanings of individual examples can be gerenalized as: competence, ability (*yogyatā*), incompetence, inability (*aśakti*), skill (*prāvīṇya*), or possibility (*sambhava*), depending on what kind of root is selected for the introduction of *tumUN*. These meanings, thus, can be determined by the context.

3.4.66 **पर्याप्तिवचनेष्वलमर्थेषु**

paryāptivacaneṣv alamartheṣu
/paryāptivacaneṣu 7/3 alamartheṣu 7/3/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91, tumun #65)
paryāptivacaneṣv alamartheṣūpapadeṣu dhātos tumun pratyayo bhavati
Affix *tumUN* occurs after a verbal root used in conjunction with a *pada* which has the signification of *alam* 'sufficient, enough' qualified with *paryāpti* 'abundance, competence'.

EXAMPLES:

paryāpto bhoktum 'he is capable of eating...'
alaṃ bhoktum 'id.'
bhoktuṃ pārayati 'id.'

1. This rule introduces affix *tumUN* after a verbal root used in conjunction with a word which has the sense of *alam* and denotes *paryāpti* 'abundance, capability'. Thus consider:

alaṃ kṛtvā 'enough with doing it, or do not do it',

where affix *Ktvā* is introduced by rule 3.4.18 *alaṃkhalvoḥ....* The sentence obviously does not satisfy the additional qualification of *paryāpti*. The sense of *paryāpti* can be recognized either as 'abundance' or as 'capability'.

A sentence such as *alaṃ bhoktum* satisfies the requirement, and can thus be interpreted either in the sense of 'abundance of food', or in the sense of 'the capability of the person who is eating'.

3.4.67 **कर्त्तरि कृत्**

kartari kṛt
/kartari 7/1 *kṛt* 1/1/
(pratyayaḥ #3.1.1; *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
kṛtsaṃjñakāḥ pratyayāḥ kartari kārake bhavanti
Affixes termed *kṛt* (3.1.93 *kṛd atiṅ*) occur to denote *kartṛ* 'agent'.

EXAMPLES:

kārakaḥ 'he who does'
nandanaḥ 'he who pleases'
grāhī 'he who seizes'
pacaḥ 'he who cooks'

1. This rule specifies the denotatum of affixes termed *kṛt* (3.1.93 *kṛd atiṅ*). The nature of this rule is explained as residual (*śeṣa*). That is, an affix termed *kṛt* will denote an agent (*kartṛ*) unless otherwise provided for by some other rule. Consider for example rule 3.2.56 *āḍhyasubhaga...* which introduces affix *KHyuN* to denote the sense of *karaṇa* 'instrument'. A residual status of rule 3.1.67 *kartari kṛt* also assigns it the staus of a general rule (*sāmānya*) destined to be blocked by any particular rule (*viśeṣa*), such as rule 3.4.56 *āḍhyasubhaga....* This rule thus provides for an affix termed *kṛt* to denote *kartṛ*, unless already stated otherwise. Affixes introduced by rules such as 3.1.133 *ṇvultṛcau* will thus denote *kartṛ* as provided for by this rule.

3.4.68 **भव्यगेयप्रवचनीयोपस्थानीयजन्याप्लाव्यापात्या वा**

bhavyageyapravacanīyopasthānīyajanyāplāvyāpātyā vā
/bhavya...pātyāḥ 1/3 *(itar. dv.); vā* Ø/
(pratyayaḥ #3.1.1, *kṛt* #67)
bhavyādayaḥ śabdāḥ kartari vā nipātyante
Words such as *bhavya, geya, pravacanīya, upasthānīya, janyā, plāvyā,* and *pātyā* are derived by *nipātana* to optionally denote *kartṛ*.

EXAMPLES:

bhavyaḥ 'that which comes into existence; existence'
geyaḥ 'he who sings; that which is sung'
pravacanīyaḥ 'he who explicates; that which is explicated'
upasthānīyaḥ 'he who stays near; he nearby whom one stays'
janyaḥ 'he who comes into being'

janyam 'that which is brought into existence'
āplāvyaḥ 'he who immerses'
āplāvyam 'that which is immersed'
āpātyam 'one who assails'
āpātyam 'that which is assailed'

1. Note that affixes termed *kṛtya*, *Kta*, or those which may have the signification of *KHaL*, denote *bhāva* 'root-sense' when they occur after an intransitive root. They, however, denote *karman* 'object' when they occur after a transitive root as is provided for by rule 3.4.70 *tayor eva*.... Our present rule makes an optional provision of *kartṛ* available to all roots underlying *bhavya*, etc. That is, rule 3.4.70 will assign the signification of *karman*, or *bhāva* optionally to the denotatum of *kartṛ* of this rule. In the case of intransitive roots, the option of *kartṛ* will be made against the provision of *bhāva*. It will be made against the provision of *karman* in case of a transitive verbal root. Consider for example the following sentences for illustration:

(*a*) *pravacanīyo guruḥ svādhyāyasya* 'the teacher, the one who is to explain the Veda'
(*b*) *pravacanīyo guruṇā svādhyāyaḥ* 'the teacher by who the Veda is to be explained',

where sentence (*a*) expresses the agent (*guru*) by means of affix *anīyaR*. Consequently, the nominative (*prathamā*) of *guruḥ* expresses just the stem notion (*prātipadikārtha*). The object of the action denoted by *pravac*, i.e., *svādhyāya*, is expressed by the genitive (*ṣaṣṭhī*), as per rule 2.3.65 *kartṛkarmaṇoḥ*....

The word *guru* in the next example is in the instrumental to express the agent, as opposed to the object which is now expressed by *anīyaR* of *pravacanīyaḥ*.

3.4.69 लः कर्मणि च भावे चाकर्मकेभ्यः

laḥ karmaṇi ca bhāve cākarmakebhyaḥ
/laḥ 1/3 *karmaṇi* 7/1 *ca* 0 *bhāve* 7/1 *ca* 0 *akarmakebhyaḥ* 5/3/
(dhātoḥ #3.1.91, *kartari* #67*)*
lakāraḥ karmaṇi kārake bhavanti cakārāt kartari bhavanti; akarmakebhyo dhātubhyo bhāve bhavanti, cakārāt kartari ca
LA affixes occur after transitive verbal roots to denote *karman* or *kartṛ*; they also occur after intransitive verbal roots to denote *kartṛ* or *bhāva*.

EXAMPLES:

gamyate grāmo devadattena 'the village is gone to by Devadatta'
gacchati grāmaṃ devadattaḥ 'Devadatta is going to the village'

āsyate devadattena 'Devadatta is sitting'
āste devadattaḥ 'id.'

1. The word *laḥ* is, here, interpreted as the nominative plural of *l* which is used here to refer to *LA* affixes in general. An ablative, or genetive singular interpretation of *laḥ* would cause serious interpretational problems. Additionally, for *l* to be able to refer to such affixes in general, it must also be used here without any of the *it* elements.

Note that the word *ca* 'and' is used twice. This splits the rule into two as follows:

(*a*) *laḥ karmaṇi kartari ca* '*LA* affixes occur to denote *karman*, and *kartṛ* as well, after roots which are transitive (*sakarmaka*);

(*b*) *laḥ bhāve kartari cākarmakebhyaḥ* '*LA* affixes occur to denote *bhāva* 'root-sense, and *kartṛ* as well, after verbal roots which are intransitive (*akarmaka*).

The first *ca* brings *kartari* from the preceding rule close to the context of interpretation (*a*). The second *ca* brings the same *kartari* close to the context of interpretation (*b*). The use of *akarmaka* 'intransitive', in contradistinction with *sakarmaka*, automatically provides the context of *sakarmaka* to the preceding interpretation. Interpretation (*b*) for reasons of having *akarmakebhyaḥ* in the plural as a modifier (*viśeṣaṇa*) of *dhātoḥ* also requires transposition of number (*vacanavipariṇāma*) in the *anuvṛtti*. That is, the word *dhātoḥ* will be read, here, as *dhātubhyaḥ*. The preceding interpretation makes it impossible for the *LA* affixes to denote *bhāva* after transitive roots. This is made clear by the explicit use of *akarmakebhyaḥ*.

2. Note that rule 3.4.67 *kartari kṛt* introduces affixes termed *kṛt* to denote *kartṛ*. Rule 3.1.93 *kṛd atiṅ* assigns the term *kṛt* to affixes other than those denoted by the abbreviatory term *tiṄ*. The term *kṛt*, obviously, also becomes available to the ten abstract *LA* affixes. Consequently, and in consonance with the specification of rule 3.4.67 *kartari kṛt*, a *LA* affix can only be introduced with the denotatum of *kartṛ*. The formulation of rule 3.4.69 *laḥ karmaṇi*... thus becomes necessary. Assignment of the term *kṛt* to *LA* has further consequences. For instance, affixes termed *LA* can either be replaced with *tiṄ* (*tiṅbhāvī*; 3.4.77 *tiptasjhi*...), or by some other (non-*tiṄ*; *atiṅbhāvī*) affix. A *tiṄ* replacement of *LA*, for the reason of being a non-*kṛt*, only qualifies for denoting *bhāva* and *karman*. A non-*tiṄ* replacement of *LA*, on the other hand, qualifies for denoting the *kartṛ*. Rule 3.4.69 adds significantly towards the resolution of this difficulty.

Consider now the following sentences for illustration:

(*c*) *gamyate grāmo devadattena* 'the village is gone to by Devadatta'
(*d*) *gacchati grāmaṃ devadattaḥ* 'Devadatta is going to the village'
(*e*) *āsyate devadattena* 'Devadatta stays...'
(*f*) *āste devadattaḥ* 'id.'

(*g*) *devadattena odano bhujyate* 'the rice is eaten by Devadatta'

(*h*) *devadattena bhujyate* 'Devadatta is eating'

Sentences (*c*) and (*d*) express the object and agent by *tiṄ* replacements of affix *LAṬ*. Since the object is expressed by *ta* of *gamyate* in (*c*), the agent must be expressed with *tṛtīyā* (2.3.18 *kartṛkaraṇayos...*). Additionally, *grāma* must be used with the nominative (*prathamā*) just to express the nominal stem notion (*prātipadikārtha*) as the object is already expressed by the verbal form. Contrary to this, sentence (*d*) expresses the agent with *ti*. This causes *devadatta* to be used with the nominative to express merely its nominal stem-notion. The object, since it is not expressed by the verb, must now be expressed with the use of the accusative (*dvitīyā*; 2.3.2 *karmaṇi dvitīyā*). Sentence (*e*) expresses its agent with the instrumental ending (*tṛtīyā*); its verb, on account of being intransitive, expresses *bhāva* 'root-sense'. Sentence (*f*) expresses the agent by means of the verbal ending. Sentence (*g*) expresses its object and agent similar to sentence (*c*). However, note that in sentence (h), the verb still expresses the object. One cannot interpret, here, the expression of *bhāva* to be parallel to *āsyate* of sentence (*e*). This is precisely because of the explicit statement of *akarmakebhyaḥ* in the rule. This is also the basis for stating that *bhāva* cannot be expressed by *LA* which occurs after a transitive (*sakarmaka*) verbal root.

3. An action as the meaning of a verbal root has two aspects: its fruit or result (*phala*), and its process (*vyāparā*).

Let us consider the following sentence for illustration:

(*i*) *devadattaḥ sthālyāṃ pacaty odanam agninā* 'Devadatta is cooking rice in the pot by means of fire'

The action of cooking as a process entails procuring rice, firewood, fire, pot and water; washing the rice in the pot, adding water, and putting the pot on the stove follows. But this can only happen with the assumption that the fire is already made. All these actions are treated as inhered in the principal action which we understand as 'cooking', the denotatum of *pac*. But what happens when this process of cooking is completed? We find that the rice-grains have acquired the quality termed softening (*viklitti*). This is what the grammarians call the result of an action. The locus of the action in the preceding sentence is the pot; the locus of the softening is the rice, the object; the locus of the process (*vyāpāra*) is *devadatta*, the agent. A verbal root is treated as *sakarmaka* 'transitive' if its action entails different loci for its process and result. All other verbal roots will be treated as *akarmaka*. Obviously, verbal root *pac* is *sakarmaka*.

3.4.70 **तयोरेव कृत्यक्तखलर्थाः**

tayor eva kṛtyaktakhalarthāḥ

/tayoḥ 7/2 *eva* Ø *kṛtyaktakhalarthāḥ* 1/3/
(pratyayaḥ #3.1.1, *karmaṇi bhāve cākarmakebhyaḥ* #69)
tayor eva bhāvakarmaṇoḥ kṛtyasaṃjñakāḥ ktakhalarthāś ca pratyayā bhavanti
Affixes termed *kṛtya* (3.1.91 *kṛtyāḥ*), and those which have the signification of *Kta* (3.3.114 *napuṃsake...*) and *KHaL* (3.3.126 *īṣadduḥsuṣu...*), occur to denote only *bhāva* or *karman*.

EXAMPLES:

karttavyaḥ kaṭo bhavatā 'the mat should be made by you'
āsitavyaṃ bhavatā 'you should sit'
kṛtaḥ kaṭo bhavatā 'the mat was made by you'
āsitaṃ bhavatā 'you sat down'
īṣatkaro kaṭaṃ bhavatā 'the mat is easy for you to make'
īṣadāḍhyaṃbhavaṃ bhavatā 'you (polite) are to be rich with ease'

1. This rule assigns the denotata of *bhāva* and *karman* to *kṛtya* (3.1.95 *kṛtyāḥ*), *Kta* (1.1.26 *ktaktavatū niṣṭhā*), as well as to those affixes which have the signification of *KHaL*. The word *eva* 'alone' is used to exclude *kartari* of the preceding rules from being effective here. Thus, *bhāva* and *karman*, alone, are to be treated as the denotata of specified affixes. Let us consider some examples:

(*a*) *karttavyaḥ kaṭo bhavatā* 'a mat should be made by you'
(*b*) *śayitavyaṃ bhavatā* 'you must recline'
(*c*) *kṛtaḥ kaṭo bhavatā* 'a mat is made by you'
(*d*) *śayitaṃ bhavatā* 'you have reclined'
(*e*) *īṣatkaro kaṭo bhavatā* 'the mat is easy for you to make rightaway'
(*f*) *īṣad āḍhyaṃbhavo bhavatā* 'it is easy for you to be rich rightaway',

where the first two sentences express *karman* and *bhāva*, respectively by their *kṛtya* affix *tavyaT*. The next two sentences manipulate affix *Kta* to denote, again, the *karman* and *bhāva* notions. The last set of two sentences manipulates the affix *KHaL*, and again denotes *karman* and *bhāva* respectively.

Kāśikā states that, since *bhāve cākarmakebhyaḥ* is still carried, these affixes cannot denote *bhāva* in case of a transitive (*sakarmaka*) verbal root.

3.4.71 आदिकर्मणि क्तः कर्त्तरि च

ādikarmaṇi ktaḥ kartari ca
/ādikarmaṇi 7/1 *ktaḥ* 1/1 *kartari* 7/1 *ca* Ø/
(pratyayaḥ #3.1.1 *karmaṇi bhāve cākarmakebhyaḥ* #69)
ādikaramaṇi yaḥ kto vihitaḥ sa kartari bhavati
Affix *Kta* which occurs to denote the onset of an action denotes *kartṛ* as well.

EXAMPLES:

> *prakṛtaḥ kaṭaṃ devadattaḥ* 'Devadatta started to make the mat'
> *prakṛtaḥ kaṭo devadattena* 'id.'
> *prakṛtaṃ devadattena* 'id.'

1. Note that the word *karman* of *karmaṇi* is not used in the sense of the technical term *karman* 'object'. It is, instead, used in the more general sense of 'action' which when qualified with *ādi* means 'onset of an action'. The compound *ādikarma* is thus interpreted as a *karmadhāraya-tatpuruṣa* compound with the analysed form: *ādibhūtaḥ kriyākṣaṇaḥ* 'that which is the initial moment of an action'. Note that *Kta* is a *niṣṭhā* suffix introduced within the specification of *bhūte* (3.2.84) 'when the action denoted by the verb is located in the past'. This is the reason that the 'onset of an action' which forms part of the condition of this rule, is to be further specified as: 'the onset of an action located in the past'. Our rule can be explained as: affix *Kta* introduced after a verbal root, with reference to the onset of an action in the past, denotes agent; because of the *ca*, it additionally can denote *bhāva* and *karman*. Note that the preceding rule provides for *Kta* to denote *bhāva* and *karman* as explained. This rule extends the denotatum of *kartṛ* in the case of *Kta* used with the specification of *ādikarma*. Consider now the following sentences:

(*a*) *prakṛtaḥ kaṭaṃ devadattaḥ* 'Devadatta started making a mat'
(*b*) *prakṛtaḥ kaṭo devadattena* 'a mat was started being made by Devadatta'
(*c*) *prakṛtaṃ devadattena* 'it was begun by Devadatta',

where the first sentence has *devadatta* in the nominative to express the nominal stem-notion *(prātipadikārtha)* because the agent is already expressed by the *Kta* of *prakṛtaḥ*. Sentence (*b*) must use the instrumental ending (*tṛtīyā*) to express the agent because the *Kta* of *prakṛtaḥ* now expresses the object. This explains why *kaṭaḥ* must be used with the nominative to denote the nominal stem-notion. Sentence (*c*) denotes *bhāva* with the *Kta* of *prakṛtaḥ*. Consequently, *devadatta* must be used with the instrumental to denote the agent. Note that *pra* in all these sentences can be treated as denoting 'the onset of the action'. The denotatum of *bhāva*, as we have already seen, is not possible in the context of an action which is denoted by a transitive root. This raises a question against the status of the verbal root used in *prakṛtaḥ* of sentence (*c*). Commentators explain that *Kta* denotes *bhāva* with reference to the verbal root treated as intransitive because of an unexpressed object. Haradatta (*Padamañjarī* ad *Kāśikā* III: 208) states it as follows:

> *atra karmaṇo' vivakṣitatvena dhātor akarmakād bhāva eva ktaḥ* 'affix *Kta* is introduced here to denote *bhāva* alone because the verbal root becomes intransitive for lack of an intent to denote the object'

3.4.72 **गत्यर्थाकर्मकश्लिषशीङ्स्थासवसजनरुहजीर्यतिभ्यश्च**

gatyarthākarmakaśliṣaśīṅsthāsavasajanaruhajīryatibhyaś ca
/*gatyarthā...jīryatibhayaḥ* 5/3 *ca* ∅/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *karmaṇi bhāve cākarmakebhyaḥ* #69, *kartari* #71)
gatyarthebhyo'dhātubhyo' karmakebhyaḥ śliṣādibhyaś ca yaḥ ktaḥ sa kartari bhavati, cakārād yathāprāptaṃ ca bhāvakarmaṇoḥ
Affix *Kta* occurs to denote *kartṛ*, *bhāva* and *karman*, after intransitive verbal roots which have the signification of *gati* 'motion', and also after verbal roots *śliṣA* 'to embrace', *śīṄ* 'to recline', *sthā* 'to stand', *āsA* 'to sit', *vasA* 'to dwell', *janA* 'to be born', *ruhA* 'to grow', and *jṝ* 'to become old, be wasted away'.

EXAMPLES:

gato devadatto grāmam 'Devadatta went to the village'
gato devadattena grāmaḥ 'id.'
gataṃ devadattena 'Devadatta went'
glāno bhavān 'sir, you are sad'
glānaṃ bhavatā 'id.'
āsito bhavān 'sir, you are seated'
āsitaṃ bhavatā 'id.'
upaśliṣṭo guruṃ bhavān 'sir, you embraced the teacher'
upaśliṣṭo gurur bhavatā 'sir, the teacher was embraced by you'
upaśliṣṭaṃ bhavatā 'sir, you embraced...'
upaśayito guruṃ bhavān 'sir, you reclined near the teacher'
upaśayito gurur bhavatā 'id.'
upaśayitaṃ guruṃ bhavān 'sir, you reclined...'
upasthito guruṃ bhavān 'sir, you appeared before the teacher'
upasthito gurur bhavatā 'id.'
upasthitaṃ bhavatā 'sir, you appeared'
upāsito guruṃ bhavān 'sir, you worshipped your teacher'
upāsito gurur bhavatā 'sir, the teacher was worshipped by you'
upāsitaṃ bhavatā 'sir, you worshipped...'
anūṣito guruṃ bhavān 'sir, you lived near the teacher'
anūṣito gurur bhavatā 'id.'
anūṣitaṃ bhavatā 'sir, you lived...'
anujāto māṇavako māṇavikām 'the boy was born after the girl'
anujātā māṇavakena māṇavikā 'id.'
anujātaṃ māṇavakena 'the boy was born after...'
ārūḍho vṛkṣaṃ bhavān 'you climbed the tree sir!'
ārūḍhaṃ vṛkṣo bhavatā 'the tree was climbed by you sir'
ārūḍhaṃ bhavatā 'sir, you climbed...'

anujīrṇo vṛṣalīṃ devadattaḥ 'Devadatta made the *vṛṣalī*, the lowly *śūdra* woman battered'
anujīrṇā vṛṣalī devadattena 'id.'
anujīrṇaṃ devadattena 'Devadatta battered...'

1. Note that the rule also uses *ca* 'and', consequent upon which affix *Kta* can also be used to denote *bhāva* and *karman*. Consider the following set of examples for illustration:

(*a*) *gato devadatto grāmam* 'Devadatta went to the village'
(*b*) *gato devadattena grāmaḥ* 'the village was gone to by Devadatta'
(*c*) *gataṃ devadattena* 'Devadatta is gone'

Note that affix *Kta* in sentence (*c*) denotes *bhāva*, as opposed to the *karman* of sentence (*b*). This is the reason why *devadatta*, the agent, is expressed by *tṛtīyā* in both the sentences. Since the object in sentence (*b*) is already expressed by *Kta*, *grāma* must be used with the nominative to denote the nominal stem-notion. Sentence (*a*) must use *dvitīyā* with *grāma* to denote the object, since affix *Kta* there denotes the agent. It is for this reason that *devadatta* is used in the nominative to express the stem-notion. Note that the same verb is used in all these sentences. It is treated in the first two sentences as transitive (*sakarmaka*). It cannot be treated as such in sentence (*c*). For, in the absence of the desire to specify the object it will be treated as intransitive (see my notes under 3.4.70). Refer also to my earlier statement about the impossibility of the denotation of *bhāva* by an affix introduced after a transitive verbal root. Verbal roots such as *śliṣĀ*, etc., are specifically enumerated in this rule because, with the use of a preverb, they become transitive (cf. *Kāśikā* III: 209: *śliṣādayas sopasargakās sakarmakā bhavanti, tadartham eṣām upādānam*). Otherwise, they would have qualified for the provision of this rule on the basis of their intransitivity.

3.4.73 दाशगोघ्नौ सम्प्रदाने

dāśagoghnau sampradāne
/*dāśagoghnau* 1/2 *sampradāne* 7/1/
dāśagoghnau śabdau sampradāne kārake nipātyete
Forms such as *dāśa* and *goghna* are derived by *nipātana* when they are to denote *sampradāna* 'dative'.

EXAMPLES:

dāśaḥ 'he to whom something is given'
goghnaḥ 'a guest for whom one kills a cow'

1. This rule allows for affixes *aC* (3.1.134 *nandigrahi*...), or *ṬaK* (3.2.8 *gāpoṣṭak*) to denote *sampradāna* 'dative', by the process of *nipātana*, with

words such as *dāśaḥ* 'he to whom a gift is made', or *goghnaḥ* 'he for whom a cow is killed'. The word *dāśaḥ* is analysed as *dāśanti tasmai* 'he to whom a gift is made', and is derived by the introduction of affix *aC*. The word *goghnaḥ* is similarly derived by introducing affix *ṬaK* by *nipātana* with the analysed form: *āgatāya tasmai dātuṃ gāṃ ghnanti* 'a guest for whom they kill a cow in offering'. This word does not mean 'the killer of a cow' such as a *cāṇḍāla* 'the very lowly untouchable outcast', etc. The affixes employed here should denote *kartṛ* by 3.1.93 *kartari kṛt*. This rule makes an ad hoc provision for dative.

2. The word *goghnaḥ* means a guest deserving of *madhuparka* 'a ritual welcome with the offering of yogurt (*dadhi*), ghee (*sarpiṣ*), water (*jala*), honey (*kṣaudrā*), and sugar (*sitā*). The offering thus entails two cow products (*vikāra*). It is unacceptable to many, and at least debatable, whether they really killed a cow in honor of a special guest. Those not subscribing to the killing of a cow interpretation read the word *goghnaḥ* to mean 'a guest for whom cow products were made as welcoming offerings'. The root *han* in this interpretation must mean *gati* 'movement' as opposed to *hiṃsā* 'killing'. The *gati* meaning of *han* is further interpretable as *jñāna* 'knowing', *gamana* 'going', or *prāpti* 'attaining'. The *gati* meaning of *han* in *goghnaḥ* can thus be claimed to be *prāpti* 'attaining'. The word *go* 'cow', itself, on the authority of the *Nirukta* (II.5), can be interpreted as 'cow product' (*govikāra*). This, then, allows the meaning of *goghnaḥ* to be in line with the belief that cows were not killed.

3.4.74 भीमादयोऽपादाने

bhīmādayo' pādāne
/bhīmādayaḥ 1/3 *apādāne* 7/1/
bhīmādayaḥ śabdā apādāne nipātyante
The words *bhīma* 'frightening', etc., derive via *nipātana* when *apādāna* 'ablative' is denoted.

EXAMPLES:

bhīmaḥ 'he who people fear'
bhayānakaḥ 'id.'
bhīṣmaḥ 'id.'

1. The words listed as *bhīma* 'frightening', etc., are derivates of *uṇādi* '*uṆ* etc.' affixes. This ad hoc provision is against the provision of 3.1.93 *kartari kṛt*.

3.4.75 ताभ्यामन्यत्रोणादयः

tābhyām anyatroṇādayaḥ
/tābhyām 5/2 *anyatra* Ø *uṇālayaḥ* 1/1/

(pratyayaḥ #3.1.1)
uṇādayaḥ śabdāḥ tābhyām apādānasampradānābhyām anyatra kārake bhavanti
Affixes *uṆ*, etc., also occur outside of the denotata of dative (*sampradāna*) and ablative (*apādāna*).

EXAMPLES:

kṛṣiḥ 'farming; that which is tilled'
tantuḥ 'thread; that which is stretched'

1. This rule makes a provision for the *uṇādi* affixes to denote other *kāraka* in addition to *sampradāna* and *apādāna* for whom provisions have already been made. The words *tābhyām anyatra,* obviously, refer to the context 'other than the denotational context of dative and ablative'. The word *tābhyām* is basically used to bring close the context of *sampradāna.* The *apādāna* would have been available even without *tābhyām.*

3.4.76 क्तोऽधिकरणे च ध्रौव्यगतिप्रत्यवसानार्थेभ्यः

kto' dhikaraṇe ca dhrauvyagatipratyavaṣānārthebhyaḥ
/ktaḥ 1/1 *adhikaraṇe* 7/1 *ca* Ø/
drauvyagatipratyavasānārthebhyaḥ 5/3/
(pratyayaḥ #3.1.1, paraś ca #3.1.2, dhātoḥ #3.1.91)
dhrauvyagatipratyavasānārthebhyo yaḥ kto vihitaḥ so' dhikaraṇe bhavati cakārād yathāprāptaṃ ca
Affix *Kta* occurs after verbal roots which signify *dhrauvya* 'to remain fixed', *gati* 'motion' and *pratyavasāna* 'eating, consuming' to additionally denote *adhikaraṇa* 'locus'.

EXAMPLES:

āsito devadattaḥ 'Devadatta is seated'
āsitaṃ tena 'he is seated'
idam eṣām āsitam 'this is their place of sitting'
yāto devadatta grāmam 'Devadatta went to the village'
yātaṃ devadattena 'Devadatta went'
bhukta odano devadattena 'Devadatta ate rice'
devadattena bhuktam 'Devadatta ate'
idam eṣāṃ bhuktam 'this is their food'

1. This rule provides for affix *Kta* to occur after verbal roots which have the signification of *dhrauvya* 'intransitive (stative) action', *gati* 'movement', and *pratyavasāna* 'eating' to denote *adhikaraṇa* 'locus'. Note that because *ca* is stated in the rule, the denotata of *bhāva, karman,* or *kartṛ*, where applicable, will additionally still apply. The following outlines actions with possible denotata of *Kta*:

(*a*) intransitive (stative) actions: *adhikaraṇa, kartṛ,* and *bhāva;*
(*b*) actions with the signification of movement: *adhikaraṇa, kartṛ, karman,* and *bhāva;*
(*c*) actions with the signification of eating: *adhikaraṇa, karman,* and *bhāva*

That is, affix *Kta,* depending on the nature of an action, may denote *adhikaraṇa,* additionally with *bhāva, karman* and *kartṛ.*

The following examples illustrate the four denotata of affix *Kta* introduced after verbal roots which have the signification of *gati:*

(*d*) *yāto devadatto grāmam* (*kartṛ*) 'Devadatta went to the village'
(*e*) *yāto devadattena grāmaḥ* (*karman*) 'the village was gone to byDevadatta'
(*f*) *yātaṃ devadattena* (*bhāva*) 'Devadatta is gone'
(*g*) *idam eṣāṃ yātam* (*adhikaraṇa*) 'this is their place for sitting'

The denotata of *Kta* with other verbal roots can be similarly illustrated. Note that the genitive (*ṣaṣṭhī*) in *eṣām* is ruled by 2.3.68 *adhikaraṇavācinaś ca* under the cooccurrence condition of *Kta* which denotes *adhikaraṇa.*

3.4.77 लस्य

lasya
/*lasya* 6/1/
In place of *LA*...

1. Note that *l* is, here, used to denote the ten abstract affixes *LAṬ*, etc., in general. The expression *la* includes *a* for ease of articulation. The word *la*, used in the genitive, is interpreted as the *sthānin* 'an item to be replaced' (1.1.49 *ṣaṣṭhī sthāneyogā*). The rule is also an *adhikāra* 'heading', thereby implying that it will be carried to all rules contained within its domain. Pāṇini enumerates ten abstract *LA* affixes with distinguishing *it*-elements (*anubandhaviśiṣṭāḥ*), and specific temporal or other meanings (*arthaviśeṣe kālaviśeṣe ca*).

3.4.78 तिप्तस्झिसिप्थस्थमिब्वस्मस्तातांझथासाथांध्वमिड्वहिमहिङ्

tiptasjhisipthasthamibvasmastātāṃjhathāsāthāṃdhvamiḍvahimahiṅ
/*tip...mahiṅ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *lasya* #77)
lasya tibādaya ādeśā bhavanti
Affixes *tiP, tas, jhi, siP, thas, tha, miP, vas, mas, ta, ātām, jha, thās, āthām, dhvam, iT, vahi* and *mahiÑ* occur in place of *LA*

EXAMPLES:

pacati 'he cooks'

pacataḥ 'they two cook'
pacanti 'they (plural) cook', etc.

1. This rule introduces a set of eighteen verbal endings indicated by the abbreviatory term *tiṄ*. They are classed in two sets of *parasmaipada* 'active' and *ātmanepada* 'middle' with reference to three numbers and persons in each set as follows:

	singular	dual	plural
parasmaipada:			
IIIrd pers.	*tip*	*tas*	*jhi*
IInd Pers.	*siP*	*thas*	*tha*
Ist Pers.	*miP*	*vas*	*mas*
atmanepada:			
IIIrd Pers.	*ta*	*ātam*	*jha*
IInd Pers.	*thās*	*āthām*	*dhvam*
Ist Pers.	*iṬ*	*vahi*	*mahiṄ*

Note that these endings are also called *vibhakti* (1.4.104 *vibhaktiś ca*). The assignment of the terms *parasmaipada* and *ātmanepada* are made by rules 1.4.99 *laḥ parasmaipadam*, etc. A further classification on the basis of *prathama* 'third', *madhyama* 'second', and *uttama* 'first' persons in each set is ordered by rule 1.4.101 *trīṇi....* Finally, each set is classified into three numbers: *ekavacana* 'singular', *dvivacana* 'dual', and *bahuvacana* 'plural'.

The *P* in *tiP* is for accent, as per 3.1.4 *anudāttau suppitau*. The *Ṭ* of *iṬ* is used as an *it* for specification via rules such as 3.4.106 *iṭo' t*. It is not used, here, to indicate the place (*deśa*) with reference to an operation (*vidhi*), such as rule 1.1.46 *ādyantau ṭakitau* provides for. The question arises obviously because of two operational interpretations of genitive (*ṣaṣṭhī*) which are pertinent here, namely *sthānaṣaṣṭhī* 'genitive denoting the relation: in place of' and *avayavaṣaṣṭhī* 'genitive denoting some part of a whole'. All other *tiṄ* replacements of *LA* are brought via the first interpretation of genitive meaning 'in place of'. It is certainly odd to interpret the introduction of *iṬ* relative to the 'part of a whole' relationship. There is no reason for seventeen of the affixes to be introduced based on one meaning, and just one based on the other. The *Ṅ* of *mahiṄ* is simply to facilitate the formation of the abbreviatory term *tiṄ*. Why can this *Ṅ* not be interpreted as given to block *guṇa*, or *vṛddhi*, similar to the rules such as 1.1.5 *kṅiti ca*? Because that purpose could easily be served by rule 1.1.4 *sārvadhātukam apit*.

3.4.79 **टित आत्मनेपदानां टेरे**

ṭit ātmanepadānāṃ ṭer e
/*ṭitaḥ* 6/1 *ātmanepadāṇām* 6/3 *ṭeḥ* 6/1 *e* (deleted 1/1)
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *lasya* #77)

ṭito lakārasya sthāne yāny ātmanepadāni teṣāṃ ṭer ekārādeśo bhavati
The *ṭi* (1.1.64 *aco' ntyādi...*) of an *ātmanepada* (1.4.100 *taṅānāv...*) replacement of a *LA*, marked with *Ṭ*, is replaced by *e*.

EXAMPLES:

To be provided under appropriate rules.

1. This rule provides a replacement in *e* for the *ṭi* part of an *ātmanepada* ending which replaces the *LA* affixes marked with *Ṭ*. There are six *LA* affixes which have *Ṭ* as an *it*: *LAṬ*, *LIṬ*, *LUṬ*, *LṚṬ*, *LEṬ*, and *LOṬ*. The term *ṭi* is assigned by rule 1.1.63 *aco' ntyādi ṭi* to that part of an item which is constituted by the last of its vowels. Thus, *ta*, the third person singular *ātmanepada* replacement of a *LAṬ* affix, such as *LAṬ*, will be replaced with *te*. But rule 1.1.64 assigns the term *ṭi* with reference to the last among the vowels of a form. The *ātmanepada* ending has just one vowel. For purposes of this operation, as well as the assignment of the term *ṭi*, a form consisting of a single vowel will be treated as constituting itself as its last vowel.

3.4.80 **थासः से**

thāsaḥ se
/*thāsaḥ* 6/1 *se* (deleted 1/1)/
(*lasya* #77, *ṭitaḥ* #79)
ṭito lakārasya sthāne yaḥ thās tasya sthāne se ādeśo bhavati
The *thās*, a replacement for a *LA* affix marked with *Ṭ*, is replaced by *se*.

EXAMPLES:

pacase 'you are cooking'
pakṣyase 'you will cook'

1. This rule orders a replacement in *se* for affix *thās*, replacement which occurs in place of a *LA* marked with *Ṭ*. Why did Pāṇini not provide for this replacement with the formulation: *thaḥ sa* 'the *th* of an *ātmanepada*-replacement of a *LA* affix marked with *Ṭ* is replaced with *sa*'? The *sa* could later yield *se* via the application of the preceding rule. This formulation could have been economical. But this would also have applied in case of the *th* of *āthām*, which is not desired.

3.4.81 **लिटस्तझयोरेशिरेच्**

liṭas tajhayor eśirec
/*liṭaḥ* 6/1 *tajhayoḥ* 6/2 *eśirec* 1/1/
liḍādeśayos tajhayor yathāsaṃkhyam 'eś irec' ity etāv ādeśau bhavataḥ

The *ta* and *jha* which replace *LIṬ* are replaced by *eŚ* and *ireC* respectively.

EXAMPLES:

pece 'third person singular middle perfect'
pecāte 'third person dual middle perfect'
pecire 'third person plural middle perfect'

1. This rule provides for *eŚ* and *ireC* as replacements for affixes *ta* and *jha* respectively when they occur in place of *LIṬ*. The *Ś* of *eŚ* is used as an *it* for *sarvādeśa* 'total replacement' in view of 1.1.55 *anekālśit sarvasya*. The *C* of *ireC* is used as an *it* to provide for the *udātta* accent as per rule 6.1.163 *citaḥ*..

3.4.82 **परस्मैपदानां णलतुसुस्थलथुसणल्वमाः**

parasmaipadānāṃ ṇalatusthalathusaṇalvamāḥ
/parasmaipadānām 6/3 *ṇal...māḥ* 1/3 *(itar. dv.)/*
(liṭaḥ #81)
liḍādeśānāṃ parasmaipadasaṃjñakānāṃ yathāsaṃkhyam tibādīnāṃ ṇalādayo navādeśā bhavanti
ṆaL, atus, us, thaL, athus, a, ṆaL, va and *ma* come in place of the *parasmaipada* replacements of *LIṬ*.

EXAMPLES:

papāca 'third person singular active perfect'
pecatuḥ 'third person dual active perfect'
pechuḥ 'third person plural active perfect'

1. Note that this rule carries the *anuvṛtti* of *liṭaḥ*. Consequently, the nine affixes *ṆaL, atus, us*; *thaL, athus, a*; and *ṆaL, va, ma* come in place of the nine *parasmaipada* replacements of *LIṬ*, namely *tip, tas, jhi*; *siP, thas, tha*; and *miP, vas, mas*, respectively. Since these nine replacements are enumerated for an equal nine *parasmaipada* replacements of *LIṬ*, 1.3.10 *yathāsaṃkhyam...* will assign equivalency in the order of enumeration. Thus, *tip, tas, jhi*, will be replaced by *ṆaL, atus*, and *us*, respectively. Other equivalents can similarly be determined.

2. Commentators agree that these affixes replace the *parasmaipada* replacements of *LIṬ* in toto (*sarvādeśa*). The question of a total, or partial, replacement arises in view of rules 1.1.51 *alo' ntyasya* and 1.1.54 *anekalśit sarvasya*. The first rule requires that a replacement specified for an item given in the genitive should replace only the last sound segment of that item. The second rule states that if the replacement consists of more than one sound segments, and is marked with *ś* as an *it*, it should

replace the item in toto. Remember in connection with this, that treatment of an item consisting of more than one sound segment is determined irrespective of the *it* elements. The *Ṇ* and *L* of *ṆaL* are both *it*. Consequently, *a*, the real replacement, cannot be treated as consisting of more than one sound segment. Since the condition of *anekāltva* 'more than one sound segmentness' is not met, *tiP* cannot be replaced by *ṆaL* in toto. Instead, *ṆaL* should replace only the final sound segment of *tiP*, namely *-i*. This would produce wrong forms, as the desired form can only be derived by total replacement (*sarvādeśa*). Commentators explain that *ṆaL* should be treated as consisting of more than one *aL* based on its *it* elements. These elements should be treated as part of *ṆaL*, thereby giving it the status of containing more than one *aL* 'sound segment' till the time rule 1.3.7 *cuṭū* does not term them *it*, and 1.3.9 *tasya lopaḥ* does not delete them. Affix *ṆaL* can be treated as consisting of more than one *aL* at the time of replacement. For, rule 1.3.7 *cuṭū* can find *ṆaL* only after *ṆaL* has replaced *tiP*. The reason is simple. Rule 1.3.7 *cuṭū* assigns the term *it* to the denotata of *cU* and *ṭU* occurring at the beginning of an affix (*pratyaya*). The term *pratyaya* cannot be assigned to *ṆaL* unless it has replaced *tiP*. For, *ṆaL* will be called an affix via *sthānivadbhāva* 'treating the substitute as if it was like the substituendum'. Once *ṆaL* has replaced *tiP* in toto, there is no problem in 1.3.7 and 1.3.9 applying to delete the *it* elements.

A similar question is raised against the second personal plural ending *tha* getting a replacement in *a*. This replacement, again, does not consist of more than one sound segment. Consequently, it should come under the purview of rule 1.1.54 *alo' ntyasya*. Commentators again use their ingenuity, and explain that the *a* is not just a single sound segment *a*. Instead, it is a combination of a sequence of *a+a*, where rule 6.1.91 *ato guṇe* subsequently orders a single replacement in place of both. If one accepts that *tha* is replaced with a sequence of *a+a* then the condition *anekāltva* is met, and *a* can replace *tha* in toto. The moral is that: all these substitutes replace their substituenda in toto.

Note, incidentally, that *Ṇ* is an *it* so that 7.2.115 *aco' ñṇiti* can order operations such as the *vṛddhi*, and the like. The *L* of *ṆaL* is treated as an *it* to facilitate operations specific to accentuation as per rule 6.1.187 *liti*.

3.4.83 **विदो लटो वा**

vido laṭo vā
/*vidaḥ* 5/1 *laṭaḥ* 6/1 *vā* Ø/
(*dhātoḥ* #3.1.91, *parasmaipadānāṃ ṇalatususthalathusaṇalvamāḥ* #82)
'vida jñāne' asmād dhātoḥ pareṣāṃ laḍādeśānāṃ parasmaipadānāṃ ṇalādayo nava vikalpenādeśā bhavanti

ṆaL, etc., optionally and respectively occur in place of the *parasmaipada* replacements of *LAṬ* which occur after verbal root *vidA* 'to know'.

EXAMPLES:

veda 'third person singular present indicative active'
vetti 'id.'
vidatuḥ 'third person dual present indicative active'
vittaḥ 'id.'
viduḥ 'third person plural present indicative active'
vidanti 'id.'

1. This rule makes provisions of the preceding rule optional in case of *parasmaipada* replacements of *LAṬ* which occur after verbal root *vidĀ* 'to know'. How do we know that the specified root is not the one that means 'to exist' (*sattā*), 'to think' (*vicāra*), or 'to gain' (*lābha*)? We know this from the fact that roots with the first two meanings do not allow active (*parasmaipada*) endings. The root with the last meaning is also ruled out because *vidaḥ*, of the rule, is specified in *pañcamī* 'ablative'. As a result, and also in consonance with rule 1.1.66 *tasmād ity uttarasya*, the replacements of *LAṬ*, in order for this rule to apply, must occur directly after the verbal root. If we accept the root to be *vid* 'to gain', the root, and endings, will be intervened by the augment *nUM* ruled by 7.1.59 *śe mucādīnām*.

Obviously, because of the optional nature of this rule, there will be two sets of examples: one with replacements in *ṆaL*, etc., and the other in *tiP*, etc.

3.4.84 ब्रुवः पञ्चानामादित आहो ब्रुवः

bruvaḥ pañcānām āditaḥ āho bruvaḥ
/*bruvaḥ* 5/1 *pañcānām* 6/3 *āditaḥ* 0 *āhaḥ* 1/1 *bruvaḥ* 6/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91, *parasmaipadānāṃ ṇalatususthalathusaṇalvamāḥ* #82, *laṭo vā* #83)
bruvaḥ parasya laṭaḥ parasmaipadānāṃ pañcānām ādibhūtānāṃ ṇalādaya ādeśā bhavanti
Ṇal, etc., occur optionally and respectively, after verbal root *brū* 'to speak', in place of the first five replacements of *LAṬ*, with the additional provision that *āh* replaces *brū*.

EXAMPLES:

āha/*āhatuḥ* /*āhuḥ*
āttha /*āhathuḥ* 'he speaks, etc.'

1. This rule carries the *anuvṛtti* of both *parasmaipadānām* as well as of *laṭo vā*. It provides for a replacement in *ṆaL*, etc., for the *parasmaipada* replacements of *LAṬ*, though in a limited manner. It allows for only the first five *parasmaipada* replacements of *LAṬ*, i.e., *tiP*, *tas*, *jhi*, *siP*, and *thas*, to be replaced with the first five elements enumerated beginning with *ṆaL*, etc. Here again, the elements will replace items in accordance with the principle of *yathāsaṃkhya* 'assignment of equivalence in order of enumeration'. Note, also, that since verbal root *brū* also gets replaced with *āh*, this replacement must also be carried out, along with the replacement in *ṆaL*, etc. For, operations provided in conjunction must also be performed, or rejected, in conjunction (*sanniyogaśiṣṭānāṃ saha vā pravṛttiḥ saha vā nivṛttiḥ*).

2. Note that the word *āditaḥ* is used to clearly specify the referents of the five replacements. They should accordingly be counted, beginning with the first (*āditaḥ*). Why did Pāṇini have to repeat *bruvaḥ*? To make it clear that *brū* will constitute the *sthanī* 'item to be replaced' for *āh*, the substitute (*ādeśa*). The first *bruvaḥ* is in the ablative (*pañcamī*), and as such, it cannot serve as a *sthānī* since a *sthānī* is specified in the genitive (*ṣaṣṭhī*). The specification of the *sthānī* is also required to limit the replacement by *āh* to the context of *parasmaipada* affixes.

3.4.85 लोटो लङ्वत्

loṭo laṅvat
/*loṭaḥ* 6/1 *laṅvat* 0/
loṭo laṅvat kāryāṃ bhavati
Affix *LOṬ* is treated as if it were *LAṄ*.

EXAMPLES:

pacatām 'third person dual imperative active'
pacatam 'second person dual imperative active'
pacata 'second person plural imperative active'
pacāva 'first person dual imperative active'
pacāma 'first person plural imperative active'

1. Note that *laṅvat* 'similar to *LAṄ*' marks an extension (*atideśa*). That is, this rule extends the operations applicable to *LAṄ* to *LOṬ*. If it were not for this extension, replacements such as *tām*, *tam*, *ta*, and *am*, ordered respectively for *tas*, *thas*, *tha*, and *miP*, and replacement of a *LA* suffix marked with *Ṅ* as an *it* (3.4.101 *tasthasthamipām...*), would not be made available to replacements of *LOṬ*.

2. Note, also, that rule 3.4.99 *nityaṃ ṅitaḥ* requires an obligatory (*nitya*) deletion of the *s* of the first personal dual endings (*vas*, *mas*) which replaces a *LA* marked with *Ṅ*. This deletion of *-s* will also be available to the two replacements of *LOṬ* at the strength of the extensional (*ātideśika*) provision of this rule.

A question is raised as to why some other provisions made for a *LA* affix marked with *Ṅ* do not apply to replacements of *LOṬ* in consonance with this extension. For examples of what should, but does not, apply see rules 3.4.108 *jher jus,* and 3.4.111 *laṅaḥ śākaṭāyanasyaiva. Kaśikā* states that *vā* from rule 3.4.83 *vido laṭo vā* is carried to this rule to restrict its provision to *vyasthitavibhāṣā*. That is, the option will be available in a limited and specific manner. This, in turn, accounts for the non-application of the provisions of the two rules just cited.

3.4.86 एरुः

er uḥ
/*eḥ* 6/1 *uḥ* 1/1/
(*loṭaḥ* #85)
loḍādeśānām ikārasya ukārādeśo bhavati
The *i* of affixes which replace *LOṬ* is replaced by *u*.

EXAMPLES:

pacatu 'third person singular imperative active'
pacantu 'third person plural imperative active'

1. This rule provides for *u* to replace the *i* of a replacement of *LOṬ*. Consider thus affixes *ti* and *jhi* whose *i* is replaced with *u*, as in *bhavatu* and *bhavantu* 'may he,...they, become', when they replace *LOṬ*. How come the *i* of *siP* and *miP*, second and third person sigular replacements of *LOṬ*, does not get replaced with *u*? Rules 3.4.87 *ser hy apic ca,* and 3.4.89 *mer niḥ* make different provisions for them.

3.4.87 सेर्ह्यपिच्च

ser hy apic ca
/*seḥ* 6/1 *hi* (deleted 1/1) *apit* 1/1 *ca* Ø/
(*loṭaḥ* #85)
loḍādeśasya seḥ 'hi' ity ayayam ādeśo bhavati, apic ca bhavati
A *siP* replacement of *LOṬ* is replaced by *hi* and is treated as though not marked with *P*.

EXAMPLES:

lunīhi 'second person singular imperative active of *lū* (to cut)'
rādhnuhi 'id. of *rādh* (to achieve).'

1. This rule provides for two concurrent operations: a replacement in *hi* for the *si* of a replacement of *LOṬ*; and treatment of *hi* as if it was not marked with *P* as an *it*. This subsequent provision is made in view of the *pit* status of *hi* which is automatically available on the basis of *sthānivadbhāva*

'treatment of a replacement as if it were the item it replaced'. The second provision is, thus, restrictive.

2. This restrictive provision has some noteworthy consequences. For example, in the event of a negation of the *pit* status of *hi*, rule 1.2.4 *sārvadhātum apit* is now free to accord *hi* the status of being marked with *Ṅ*. This status of *Ṅ* blocks the application of *guṇa*. It similarly facilitates the application of rule 6.4.113 *ī haly aghoḥ*, whereby *ī* is ordered as replacement for the *ā* of *Śnā* followed by a *sārvadhātuka* affix marked with *K*, or *Ṅ*.

3.4.88 वाच्छन्दसि

vā chandasi
/*vā* 0 *chandasi* 7/1/
(*loṭaḥ* #85, *ser hy apit* #87)
lādeśaś chandasi viṣaye hiśabdo vā' pid bhavati
The *hi* replacement of a *siP* which occurs in place of *LOṬ*, in the Vedic, is optionally treated as though not marked with *P*.

EXAMPLES:

prīṇāhi '2nd person singular imperative active of *prīÑ* (to please)'
prīṇīhi 'id.'

1. This rule makes the otherwise obligatory provision of the preceding rule optional in the context of the Vedic.

3.4.89 मेर्निः

mer niḥ
/*meḥ* 6/1 *niḥ* 1/1/
(*loṭaḥ* #85)
loḍādeśasya mer nir ādeśo bhavati
A *miP* replacement of *LOṬ* is replaced by *ni*.

EXAMPLES:

pacāni '1st person singular imperative active of *pac*'
paṭhāni id. 'id. of *paṭh*'

1. This constitutes an exception to the provisions of rule 3.4.85 *loṭo laṅvat*, and 3.4.86 *eruḥ*. That is, the *mi* replacement of *LOṬ* does not have its *i* replaced with *u* as rule 3.4.86 would have it. Similarly, this *mi* cannot be replaced with *am* as rule 3.4.101 *tasthastha...* would have it. Finally, the *i* of *mi* is also immune from deletion by 3.4.101 *itaś ca* as rule 3.4.85 *loṭo laṅvat* would, otherwise, have it.

3.4.90 आमेतः

ām etaḥ

/*ām* 1/1 *etaḥ* 6/1/
(*loṭaḥ* #85)
loṭsambandhina ekārasya 'ām' ity ayam ādeśo bhavati
A replacement in *eT* (1.1.70 *taparas*...), relative to *LOṬ*, is replaced by *ām*.

EXAMPLES:

pacatām '3rd person singular imperative middle of *pac*'
pacetām '3rd person dual imperative middle of *pac*'
pacantām '3rd person plural imperative middle of *pac*'

1. Note that *loṭaḥ* is still carried. This rule provides for an *e* relative to a replacement of *LOṬ* to be replaced with *ām*. Recall that rule 3.4.79 *ṭit ātmanepadānām*... provides for a replacement in *e* specifically for the *ṭi* part of a replacement of a *LA* suffix marked with *ṭ*. This rule provides *ām* instead. Our present rule can thus be cited as an exception to rule 3.4.79.

2. A question is raised as to the relationship between the *e* and affix *LOṬ*. The relationship can be identified as that of a 'qualifier' (*viśeṣaṇa*) and a 'qualified' (*viśeṣya*). There can be two possibilities: (*a*) *e* is the qualifier to *LOṬ*, or (*b*) *LOṬ* is a qualifier to *e*. The first interpretation would entail *tadantavidhi* which, in turn, would provide only *ām* in place of a replacement of *LOṬ* which ended in *e*. It is for this reason that the second interpretation is accepted. This interpretation will not entail *tadantavidhi*, because *e* will now become principal (*pradhāna*), since it is now the qualified.

3.4.91 **सवाभ्यां वामौ**

savābhyāṃ vāmau
/*savābhyām* 5/2 *vāmau* 1/2/
(*loṭaḥ* #85, *etaḥ* #90)
sakāravakārābhyām uttarasya loṭsambandhina ekārasya yathā-saṃkhyaṃ 'va, am' ity etāv ādeśau bhavataḥ
A replacement in *eT*, relative to *LOṬ*, when it occurs after *s* or *v* is replaced by *va* and *am*, respectively.

EXAMPLES:

pacasva '2nd person singular imperative middle of *pac*'
pacadhvam '2nd person plural imperative middle'

1. This rule constitutes an exception to the preceding. For, it requires replacing the *e* of a replacement of *LOṬ* by *va* and *am* if *e* occurs after *s* and *v* respectively. Consider for example *pacasva*, where *e* happens to be the *e* of *se*, a replacement of *thās* (3.4.80 *thāsaḥ se*) ordered for *LOṬ*.

3.4.92 आडुत्तमस्य पिच्च

āḍ uttamasya pic ca
/*āṭ* 1/1 *uttamasya* 6/1 *pit* 1/1 *ca* Ø/
(*loṭaḥ* #85)
loṭasambandhina uttamapuruṣasyā' ḍāgamo bhavati, sa cottamapuruṣaḥ pid bhavati
A first person replacement, relative to *LOṬ*, receives the augment *āṬ* which also is treated as though marked with *P*.

EXAMPLES:

karavāṇi '1st person singular imperative active of *kṛÑ*'
karvāva '1st person dual imperative active of *kṛÑ*'
karavāma '1st person plural imperative active of *kṛÑ*'
karavai '1st person singular imperative middle of *kṛÑ*'
karavāvahai '1st person dual imperative middle of *kṛÑ*'
karvāmahai '1st person plural imperative middle of *kṛÑ*'

1. This rule introduces augment *āṬ* to first personal replacements relative to *LOṬ*. Additionally, the rule extends the status of *pit* 'that which has *P* as an it' to the first personal affixes. Why is the *pit* status not extended to the augment itself? That would not make any sense (*nirarthakatvāt*). For, the *pit* status can either bring the *anudātta* accent, or it can cause *guṇa* or *vṛddhi*. The *anudātta* accent is automatically applicable to *āṬ* since it is an augment. The *guṇa* or *vṛddhi* applications would not concern *āṬ* since, not being a *pratyaya*, it cannot condition them. The status of *pit* is thus not assigned to *āṬ*. It is assigned, instead, to the replacement of *LOṬ* basically to counter *ṅidvadbhāva* of 1.2.4 *sārvadhātukam apit*, and thereby, to facilitate the application of *guṇa* and *vṛddhi*. See other derivational details in the appendix.

3.4.93 एत ऐ

eta ai
/*etaḥ* 6/1 (deleted 1/1)/
(*loṭaḥ* #85, *uttamasya* #92)
loḍ uttamasambandhina ekārasya aikārādeśo bhavati
A replacement in *eT* relative to the first personal replacement of *LOṬ* is replaced by *ai*.

EXAMPLES:

karavai 'first person singular...'
karavāvahai 'first person dual...'
karavāmahai 'first person plural...'

1. This rule allows *ai* to replace *e* of a replacement of *LOṬ*. This is an exception to *ām*, ruled by 3.4.90 *ām etaḥ*.

3.4.94 लेटोऽडाटौ

leṭo' ḍāṭau
/*leṭaḥ* 6/1 *aḍāṭau* 1/2/
leṭo aḍāṭāgamau bhavataḥ paryāyeṇa
Augments *aṬ* and *āṬ* are introduced, in turn (*paryāyeṇa*), to affixes which replace *LEṬ*.

EXAMPLES:

joṣiṣat 'may he be happy'
tāriṣat 'may he go across...'
mandiṣat 'may be happy'
pátāti vidyut 'the lightning strikes...'

1. This rule introduces two augments (*āgama*), *aṬ* and *āṬ*, relative to a single replacement of affix *LEṬ*. Are these augments both to be introduced simultaneously (*yugapad*)? Absolutely not. For, as they are both marked with *Ṭ*, and as per rule 1.1.46 *ādyantau ṭakitau*, they will both have to be introduced at the beginning of the affix which replaces *LEṬ*. It is impossible to make both of them initial to the single element concurrently. Obviously, the augments have to be introduced in turn (*paryāya*).

3.4.95 आत ऐ

āta ai
/*ātaḥ* 6/1 *ai* (deleted 1/1)/
(*leṭaḥ* #94)
leṭsambandhina ākārasya aikārādeśo bhavati
A replacement in *āT* (1.1.70 *taparas...*), relative to *LEṬ*, is replaced by *ai*.

EXAMPLES:

mantrayaite '3rd person dual subjunctive middle of *mantri*'
mantrayaithe '2nd person dual subjunctive middle of *mantri*'

1. This rule orders *ai* as a replacement for *ā*, relative to a replacement of *LEṬ*. This replacement is applicable to the *ā* of the two affixes *ātām*, third person dual, and *āthām*, second person dual, of *ātmanepada*.

3.4.96 वैतोऽन्यत्र

vaito' nyatra

/vā Ø etaḥ 6/1 anyatra Ø/
(leṭaḥ #94, ai #95)
leṭsambandhina ekārasya vā aikārādeśo bhavati anyatra
A replacement in *āT*, relative to *LEṬ*, elsewhere, is optionally replaced by *ai*.

EXAMPLES:

aham eva paśūnām īśai
madágrā eva vo grahā́ gṛhyāntai

1. The word *anyatra* 'elsewhere' is used, here, relative to the preceding rule. That is, a replacement in *ai* for *ā* of a replacement of *LEṬ* should apply outside the scope of the preceding rule. This statement becomes necessary to exclude the application of this rule in the derivation of forms such as *mantrayaite*. See additional details in the appendix.

3.4.97 **इतश्च लोपः परस्मैपदेषु**

itaś ca lopaḥ parasmaipadeṣu
/itaḥ 6/1 ca Ø lopaḥ 1/1 parasmaipadeṣu 7/3/
(leṭaḥ #94, vā #96)
leṭsambandhina ikārasya parasmaipadaviṣayasya vā lopo bhavati
The *iT* (1.1.70 *taparas...*) of a *parasmaipada* replacement, relative to *LEṬ*, is optionally deleted by *LOPA* (1.1.60 *adarśanam...*).

EXAMPLES:

joṣiṣat
tāriṣat
mandiṣai

1. This rule orders for an optional deletion of the *i* of a *parasmaipada* replacement of *LEṬ*.

3.4.98 **स उत्तमस्य**

sa uttamasya
/leṭaḥ #94, vā #95, lopaḥ parasmaipadeṣu #97)
leṭsambandhina uttamapuruṣasya sakārasya vā lopo bhavati
The *s* of the first person replacement, relative to *LEṬ*, is optionally deleted by *LOPA*.

EXAMPLES:

karavāva/karavāvaḥ
karavāma/karavāmaḥ

1. This rule provides for optional deletion of the *s* of a replacement of

LEṬ in the first (*uttama*) person. The word *uttama* is, obviously, used so that this deletion does not become applicable in other persons.

3.4.99 **नित्यं ङितः**

nityaṃ ṅitaḥ
/nityam 1/1 *ṅitaḥ* 6/1/
(lasya #77, *lopaḥ* #97, *sa uttamasya* #98*)*
ṅito lakārasya ya uttamas tasya nityaṃ sakārasya lopo bhavati
The *s* of the first person replacement of a *LA* affix, marked with *Ṅ*, is obligatorily deleted by *LOPA*.

EXAMPLES:

apacāva 'first person dual imperfect active of *pac*'
apacāma 'first person plural imperfect active of *pac*'

1. This rule requires obligatory deletion of the *s* of first personal replacements for those *LA* affixes which may be marked with *Ṅ*. The word *nitya* is used so that the *anuvṛtti* of *vā* is suspended. Note that the *anuvṛtti* of *LEṬ* is also suspended.

3.4.100 **इतश्च**

itaś ca
/itaḥ 6/1 *ca* Ø/
(lasya #77, *lopaḥ parasmaipadeṣu* #97, *nityaṃ ṅitaḥ* #99*)*
ṅil lakārasambandhina ikārasya nityaṃ lopo bhavati
The *iT* (1.1.70 *taparas...*), relative to a replacement of *LA* marked with *Ṅ*, is also deleted obligatorily by *LOPA*.

EXAMPLES:

apacat '3rd singular active form of *pac* in *LAṄ*'
apākṣīt '3rd singular active form of *pac* in *LUṄ*'

1. This rule requires obligatory deletion of the *i* of a replacement of a *LA* affix marked with *Ṅ*. Thus, consider the derivation of *apacat* 'he cooked' from *pac* + *LAṄ*, where the *LA* affix gets replaced with the third person singular active ending *ti*. The final *i* of the affix gets deleted by this rule. Note that the deletion is not applicable to the *i* of a replacement affix termed *ātmanepada*. For, *parasmaipada* is carried here.

3.4.101 **तस्थस्थमिपां तांतंताम:**

tasthasthamipāṃ tāṃtaṃtāmaḥ
/tasthasthamipāṃ 6/3 *tāṃtaṃtāmaḥ*/
(lasya #77, *ṅitaḥ* #99*)*

ṅil lakārasambandhinām caturṇāṃ yathāsaṃkhyaṃ tāmādaya ādeśā bhavanti
The *tas, thas, tha* and *miP* replacements for *LA*, marked with *Ṅ*, are obligatorily replaced by *tām, tam, ta* and *am*, respectively.

EXAMPLES:

apacatām
apacatam
apacata
apacam

1. This rule enumerates four replacements for an equal number of earlier replacements of a *LA* affix marked with *Ṅ*. Thus, this rule offers *tām, tam, ta,* and *am* as replacements for *tas, thas, tha,* and *miP*, third person dual, second person dual and plural, and first person singular *parasmaipada* 'active' endings, respectively. The assignment of equivalency between the two sets of four forms are made on the basis of the order of enumeration in corresponding sets, as per rule 1.3.10 *yathāsaṃkhyam....* Thus, *tām* will replace *tas, tam* will replace *thas*, and so on. The examples of *pac*, listed above, all relate to *LAṄ*.

3.4.102 **लिङः सीयुट्**

liṅaḥ sīyuṭ
/*liṅaḥ* 6/1 *sīyuṭ* 1/1/
liṅādeśānāṃ sīyuḍ āgamo bhavati
A replacement of *LIṄ* receives the augment *sīyUṬ*.

EXAMPLES:

paceta
paceyātām
paceran

1. This rule introduces augment *sīyUṬ* to the replacements of affix *LIṄ*. Note that this is a general rule (*sāmānya*) to which the next rule is an exception. Since the next rule introduces *yāsUṬ* as the augment for the replacements of *LIṄ* in the *parasmaipada*, *sīyUṬ* must be introduced only to the *ātmanepada* replacements of *LIṄ*. The cited examples illustrate the forms of *pac*.

2. The *Ṭ*, as an *it* in both *sīyUṬ* and *yāsUṬ*, is intended to indicate the place where the augments will be introduced (*deśaviddhyartha*). The *U*, in both cases, is intended for pronunciation.

3.4.103 **यासुट् परस्मैपदेषूदात्तो ङिच्च**

yāsuṭ parasmaipadeṣūdātto ṅic ca

lyāsuṭ 1/1 *parasmaipadeṣu* 7/3 *udāttaḥ* 1/1 *ṅit* 1/1 *ca* Ø/
(*liṅaḥ* #102)
parasmaipadaviṣayasya liṅo yāsuḍ āgamo bhavati, sa codātto bhavati, ṅic ca
A *parasmaipada* replacement of *LIṄ* receives the augment *yāsUṬ*, which is treated as *udātta* 'high-pitched' and is marked with *Ṅ*.

EXAMPLES:

kuryāt
kuryātām
kuryuḥ

1. As stated in the preceding notes, *yāsUṬ* is an augment introduced to the *parasmaipada* replacements of *LIṄ*. This rule also makes two additional provisions: *yasUṬ* is treated as marked *udātta*, as opposed to the general *udātta* applicable to the augments (cf. *PM* and *Kāś*). Additionally, *yāsUṬ* is treated as marked with *Ṅ* as its *it*.

2. Note that an augment becomes part of item for which it is specified (*yadāgamā guṇībhūtās tadgrahaṇena gṛhyante*). That is, if *yāsUṬ* is to be introduced to a replacement of a *LA* affix, marked with *Ṅ* as its *it*, the replacement will also qualify for the status as *Ṅit*. Now, if an augment becomes part of the item for which it is specified, *yāsUṬ* will also become part of the replacement marked with *Ṅ*. That is, via the item to which it is introduced, *yāsUṬ* will also be treated as marked with *Ṅ*. What then is the purpose of restating the *Ṅit* status? The purpose is to indicate (*jñāpanārtham*) that replacements of *LA* affixes are not considered as marked with *N* at the strength of those affixes (see *Kāśikā* under this rule: *lakārāśrayaṅitvam ādeśānāṃ na bhavati* and the derivational details of *acinavam* and *akaravam* for details). They qualify for treatment as marked with *Ṅ*, rather at the strength of being replacements. Incidentally, examples cited under this rule here are IIIrd person singular, dual, and plural of *kṛÑ*.

3.4.104 किदाशिषि

kid āśiṣi
/*kit* 1/1 *āśiṣi* 7/1/
(*liṅaḥ* #102, *yasuṭ parasmaipadeṣūdāttaḥ* #103)
āśiṣi yo liṅ tasya yāsuḍ āgamo bhavati, sa codāttaḥ kidvad bhavati
A *parasmaipada* replacement of *LIṄ* which denotes *āśis* 'benediction' receives the augment *yāsUṬ* which is treated as *udātta*, and is marked with *K*.

EXAMPLES:

iṣyāt

iṣyātām
iṣyāsuḥ
jāgaryāt
jāgaryāstām
jāgaryāsuḥ

1. This rule extends the status of *kit* to the *parasmaipada* replacements of *LIṄ* introduced in the context of benediction (*āśis*). Note that the *kit* status is extended to the affix, and not to the augment. For, that will not serve any purpose (*prayojanābhāvāt*). This *kit* status facilitates *samprasāraṇa* by rule 6.1.15 *vacisvapiyajādīnām...* in case of verbal roots *vac* 'to speak', *svap* 'to sleep', and *yaj* 'to perform a ritual sacrifice' for which see the appendix. The *kit* status also facilitates the application of *guṇa* in examples, such as *jāgaryāt*, as shown in the appendix. Note that elsewhere in examples, such as *vācyāt*, which does not denote benediction, *vac* does not go through *samprasāraṇa*. Incidentally, cited examples illustrate IIIrd person singular, dual, and plural forms of verbal roots *iṣ* 'to wish' and *jāgṛ* 'to be awake'.

3.4.105 झस्य रन्

jhasya ran
/*jhasya* 6/1 *ran* 1/1/
(*liṅaḥ* #102)
jhasya liṅādeśasya ran ādeśo bhavati
The *jha* replacement of *LIṄ* is replaced by *ran*.

EXAMPLES:

paceran
yajeran
kṛṣīran

1. This rule introduces *ran* to replace the *jha* replacement of *LIṄ*. This may also be treated as an exception to 7.1.3 *jho' ntaḥ* which requires the *jh* of an affix to replaced with *ant*. Note that the *n* of *ran* is saved from the assignment of the term *it*, and consequent deletion by rule 1.3.9 *tasya lopaḥ*, by rule 1.3.3 *halantyam*, because of rule 1.3.4 *na vibhaktau....* Obviously, the *n* of *raṅ* is part of an inflectional ending (*vibhakti*).

3.4.106 इटोऽत्

iṭo' t
/*iṭaḥ* 6/1 *at* 1/1/
(*liṅaḥ* #102)

liṅādeśasya iṭaḥ 'at' ity ayam ādeśo bhavati
The *iṬ* replacement of *LIṄ* is replaced by *aT* (1.1.70 *taparas...*).

EXAMPLES:

paceya
yajeya
kṛṣīya
hṛṣīya

1. This rule introduces *aT* as a replacement for the *iṬ*, first person singular *(ātmanepada)* replacement of *LIṄ*. Commentators explain this *T* does not qualify for being saved from the assignment of the term *it* as per rule 1.3.4 *na vibhaktau....* For, this *T* is only used for ease of articulation (*mukhasukhārtham*).

2. Note that the *iṬ* of this rule cannot be interpreted to refer to the augment *iṬ*. For, when specifications are made by means of items with signification, those with no signification are ruled out (cf. *arthavad grahaṇe nānarthakasya*). The cited examples are forms of verbal roots *pac* and *kṛ*.

3.4.107 सुट् तिथोः

suṭ tithoḥ
/*suṭ* 1/1 *tithoḥ* 6/2/
(*liṅaḥ* #102)
liṅsambandhinos takārathakārayoḥ suḍ āgamo bhavati
The *t* and *th* of a replacement, relative to *LIṄ*, receive the augment *sUṬ*.

EXAMPLES:

kṛṣīṣṭa
kṛṣīyāstām
kṛṣīṣṭāḥ
kṛṣīyāsthām

1. This rule introduces augment *sUṬ* to the *ti* and *th* relative to a replacement of *LIṄ*. The *i* of *ti* is just for ease of articulation. Obviously *t* and *th* together, and without the intervening *i*, will be very difficult to pronounce. The introduction of this augment makes affixes *ta, ātām, thās* and *āthām* take the forms: *sta, āstām, sthās*, and *āsthās* respectively. Note that *sUṬ* cannot be accepted here as an exception to *sīyUṬ*. For, they both have different scopes. Augment *sīyUṬ* is specified for *LIṄ*, as opposed to the *sUṬ* which is specified for the *t* and *th* of *LIṄ*. These two augments can now both be accommodated in the context of *LIṄ*. The examples are all forms of verbal root *kṛ*.

3.4.108 झेर्जुस्

jher jus
/jheḥ 6/1 *jus* 1/1/
(liṅaḥ #102)
liṅādeśasya jher jus ādeśo bhavati
The *jhi* replacement of *LIṄ* is replaced by *Jus*.

EXAMPLES:

paceyuḥ
yajeyuḥ

1. This rule introduces *Jus* to replace the third personal plural *parasmaipada* replacement of *LIṄ*. Again, this can be treated as an exception to 7.1.3 *jho' ntaḥ*. This replacement will be valid for both kinds of *LIṄ*, i.e., *vidhiliṅ* of 3.3.161 *vidhinimantraṇāmantraṇa...* and *āśīḥ* of 3.3.173 *āśiṣi liṅloṭau*.

3.4.109 सिजभ्यस्तविदिभ्यश्च

sijabhyastavidibhyaś ca
/sijabhyastavidibhyaḥ 5/3 *(itar. dv.) ca* Ø/
(lasya #77, *ṅitaḥ* #99, *jher jus* #108)
sicaḥ parasya abhyastasaṃjñakebhyo vetteś cottarasya jher jus ādeśo bhavati
A *jhi* which occurs after *sIC*, or after that which is termed *abhyasta*, or else, after verbal root *vid*, is replaced with *Jus*.

EXAMPLES:

akārṣuḥ
abibhayuḥ
aviduḥ

1. This rule begins provisions not related to *LIṄ* (*aliṅartha*). It offers *Jus* as a replacement for *jhi* when the same occurs either after *sIC*, or after an item termed *abhyasta*, or else after the verbal root *vid* 'to know'. Special mention of *vid*, and items termed *abhyasta*, separate from *sIC*, is made to exclude *sIC*. Note that this replacement is applicable only in the context of *LA* affixes marked with *Ṅ* as their *it*. Commentators state that *ṅitaḥ* is carried here from rule 3.4.99 via *maṇḍūkapluti* to facilitate this interpretation. Thus, this replacement is not available in the context of *LA* affixes marked with *Ṭ* as their *it*. Separate mention of *abhyasta* and *vid* enables this replacement to also apply in the context of *LUṄ*. Recall that *sIC* is applicable in *LUṄ* (cf. 3.1.43 *luṅi* and 3.1.44 *cleḥ sic*).

Note that verbal root *vid* is here specified without its *vikaraṇa*. It can then be interpreted differently. However, *vid*, meaning *sattā* 'existence',

is out since it would permit only *ātmanepada* endings. Of course, *jhi* is not *ātmanepada*. Verbal root *vid*, meaning *lābha* 'gain', is also out since its *vikaraṇa* comes in between the root and *jhi*. This rule will not permit the replacement if an intervention of this sort occurs. It is, therefore, recommended to interpret *vid* meaning *jñāna*, since its *vikaraṇa* gets deleted by *LUK*, and there is close proximity between the verbal root and *jhi*.

3.4.110 आतः

ātaḥ
/*ātaḥ* 5/1/
(*jherjus* #108, *sicaḥ* #109)
sica ākārāntāc ca parasya jher jusādeso bhavati
The *jhi* which occurs after *sIC*, and also after a verbal root ending in *ā*, is replaced by *Jus*.

EXAMPLES:

aduḥ
adhuḥ
asthuḥ

1. This rule offers a restriction (*niyama*). It states that if there is to be a *Jus* replacement for *jhi* occurring after *sIC*, it should be effective only after a verbal root which ends in *ā*. How could *jhi* be found after a verbal root ending in *ā*, and at the same time, after *sIC*. For, the root and *jhi* will be intervened by *sIC*.

Commentators state that *sicaḥ*, carried from the preceding rule, here means 'after *sIC* which has gone through deletion by *LUK*'. If the reference is to a deleted *sIC*, then how could one satisfy the condition of the replacement? That is, how can one meet the condition that *jhi* to be replaced by *Jus* is occurring after *sIC*? By the provisions of rule 1.1.62 *pratyayalope pratyayalakṣaṇam* 'operations relative to an affix obtain even when the affix gets deleted'. This rule thus applies only where the verbal root ends in *ā* and there occurs the deletion of *sIC* by *LUK*. See derivational details in the appendix.

Note that *t* of *ātaḥ* is for ease of articulation (*mukhasukhārtha*). The cited examples are forms of verbal roots *dā*, *dhā* and *sthā* for which see the appendix.

3.4.111 लङः शाकटायनस्यैव

laṅaḥ śākaṭāyanasyaiva
/*laṅaḥ* 6/1 *śākaṭāyanasya* 6/1 *eva* 0/
(*jherjus* #108, *ātaḥ* #110)

ākārāntād uttarasya laṅādeśasya jher jusādeśo bhavati, śākaṭāyanasyā-cāryasya matena

In the opinion of *Śākaṭāyana*, the *jhi* replacement of *LAṄ* which occurs after a verbal root which ends in *ā* is replaced by *Jus*.

EXAMPLES:

ayuḥ
ayān

1. This rule states that a *jhi* replacement of *LAṄ* which occurs after a verbal root ending in *ā*, can also be replaced with *Jus* only in the opinion of the grammarian Śākaṭāyana. Obviously, in the opinion of others the replacement will not take place. It is, thus, an optional provision. The examples are optional forms of verbal root *yā* 'to go'.

2. A question is raised here against explicitly using the word *lṅaḥ* in the rule. For, even without its explicit use *Jus* can obtain in place of the *jhi* replacement of *LAṄ*, at the strength of *ṅitaḥ* available from the *anuvṛtti*. Commentators state that an explicit mention of *LAṄ* becomes necessary so that the provision of this rule can be stopped from becoming available to extensional *LAṄ*. That is, the *LOṬ*, which gets treated as if it were *LAṄ* by rule 3.4.85 *loṭo laṅvat*, cannot qualify for the provisions of this rule.

3.4.112 द्विषश्च

dviṣaś ca
/dviṣaḥ 5/1 *ca* Ø/
(jher jus # 108 *laṅaḥ śākaṭāyanasyaiva* # 111)
dviṣaḥ parasya laṅādeśasya jher jusādeśo bhavati śākaṭāyanasyācāryasya matena

The *jhi*-replacement of *LAN* which occurs after verbal root *dviṣ* 'to harm' is also replaced with *Jus* in the opinion of Sākaṭāyana.

EXAMPLES:

adviṣuḥ 'they wished to harm'
adviṣan 'id.'

1. The *ŚaP* after verbal root *dviṣ* is deleted by rule 2.4.72 *adiprabhṛtibhyaḥ śapaḥ*.

3.4.113 तिङ्शित्सार्वधातुकम्

tiṅśitsārvadhātukam
/tiṅśit 1/1 *sārvadhātukam* 1/1/
(pratyayaḥ #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)

tiṅaḥ śitaś ca pratyayāḥ sārvadhātukasaṃjñā bhavanti
Affixes denoted by the abbreviatory term *tiṄ* (3.4.78 *tiptasjhi...*), and affixes marked with *Ś* as an *it*, are termed *sārvadhātuka*.

EXAMPLES:

bhavati
nayati
pavamānaḥ
yajamānaḥ

1. This rule assigns the term *sārvadhātuka* to those affixes which are introduced after a verbal root, and are either denoted by the abbreviatory term *tiṄ*, or are marked with a *Ś* as their *it*. The assignment of the term *sārvadhātuka* facilitates the introduction of affixes such as *ŚaP* (3.1.68 *kartari śap*), etc., which, in turn, enable the application of *guṇa* as per rule 7.3.84 *sārvadhātukārddha....* The same assignment of the term can also facilitate the introduction of augment *iṬ* in the case of verbal roots which belong to the class headed by *rudh* 'to obstruct'. Other operations relative to the assignment of the term *sārvadhātuka* are not hard to find. See the appendix for further details. Examples cited as above are *LAṬ* and *ŚānaC* forms of verbal roots *bhū*, *nī*, *pū* and *yaj*.

3.4.114 आर्धधातुकं शेषः

ārdhadhātukaṃ śeṣaḥ
/*ārdhadhātukam* 1/1 *śeṣaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *dhātoḥ* #3.1.91)
tiṅaḥ śitaś ca varjayitvā' nyaḥ pratyayaḥ śeṣo dhātusaṃśabdanena vihita ārdhadhātukasaṃjño bhavati
An affix which occurs after a *dhātu* but is not a *sārvadhātuka* is termed an *ārdhadhātuka*.

EXAMPLES:

lavitā
lavitum
lavitavyam

1. This rule assigns the term *ārddhadhātuka* to those affixes which are introduced after a verbal root, and are neither marked with *Ś* as their *it*, nor are denoted by the abbreviatory term *tiṄ*. That is, a non-*Śit*, or non-*tiṄ* affix introduced after a verbal root will be termed *ārddhadhātuka*. Our examples illustrate affixes *tṛC*, *tumUN* and *tavyaT* after verbal root *lūÑ* 'to cut'.

Commentators state that this term assignment must be made only in those contexts where the affix which conditions the term-assignment is

introduced after a verbal root with the explicit mention of *dhātoḥ*. It is for this reason that affixes introduced within the domain of 3.1.91 *dhātoḥ*, alone, qualify for the assignment of this term. For example, affix *saN* introduced by 3.1.5 *guptijkidbhyaḥ san* cannot qualify for the assignment of the term *ārddhadhātuka*, since its introduction has been made by stating the roots, and not *dhātoḥ* 'after the verbal root'. Obviously, lack of term-assignment blocks operations relative to the term.

The assignment of the term *ārddhadhātuka* also facilitates the operation of *guṇa*, as has already been noted in connection with the preceding rule (cf. 7.3.84 *sārvadhātukārdha*...). It also facilitates the introduction of augment *iṬ*, as is clear from the provisions of rule 7.2.35 *ārdhadhātukasyeḍ*...). The word *śeṣa* is used so that this term can apply to the exclusion of the affixes covered by the preceding rule.

3.4.115 लिट् च

liṭ ca
/liṭ 1/1 *ca* Ø/
(ārddhaddhatukam #114)
liḍādeśas tiṅ ārddhadhātukasaṃjño bhavati
A *tiṄ* replacement of *LIṬ* also is termed *ārddhadhātuka*.

EXAMPLES:

pecitha
śekitha
jagle
mamle

1. The examples illustrate the forms of verbal roots *pac* 'to cook', *śak* 'to be able to', *glai* 'to be weary' and *mlai* 'to be sad'. The rule offers an exception to the assignment of the term *sārvadhātuka* of rule 3.4.113 *tiṅśit*.... Thus, a *tiN* which replaces *LIṬ* is termed *ārddhadhātuka*. Commentators observe, here, that the use of *śeṣa* in the preceding rule excludes class inclusion (*saṃjñāsamāveśa*). That is, *śeṣaḥ* blocks the assignment of the two terms *sārvadhātuka* and *ārddhadhātuka* to a single entity such as one denoted by *tiN*. There is no such indication in case of our present rule. Why cannot both terms be made applicable to the *tiṄ* replacements of *LIṬ*? After all, outside of the domain of one term (*ekasaṃjñā*), two terms can be applied to a single entity. It is not difficult to see how assignment of both terms to a single entity could create difficulty. How can one indicate that class inclusion of terms is not intended here? By bringing *eva* 'alone' from rule 3.4.111 *laṅaḥ*..., whereby we understand that *ārddhadhātuka*, alone (*eva*) should be assigned to the *tiN* replacement of *LIṬ*. This is how bringing *eva* results into a restrictive (*niyama*) interpretation of this rule.

3.4.116 लिङाशिषि

liṅāśiṣi
/liṅ 1/1 *āśiṣi* 7/1/
(ārddhadhātukam #114*)*
āśiṣi viṣaye yo liṅ sa ārddhadhātukasamjño bhavati
A *tiN* replacement of *LIṄ* which denotes *āśiṣ* 'benediction' is termed *ārddhadhātuka*.

EXAMPLES:

laviṣīṣṭa 'may you cut'
paviṣīṣṭa 'may you purify'

1. This rule assigns the term *ārddhadhātuka* also to a *LIṄ* which denotes benediction (3.3.173 *āśiṣi* ..). This constitutes an exception to the assignment of the term *sārvadhātuka*, of rule 3.4.113 *tiṅśit*.... A class-inclusion (*saṃjñāsamāveśa*) of these terms can again be blocked by bringing *eva* from rule 3.4.111 *laṅaḥ*....

3.4.117 छन्दस्युभयथा

chandasy ubhayathā
/chandasi 7/1 *ubhayathā* Ø/
chandasi viṣaye ubhayathā bhavati sārvadhātukam ārddhadhātukaṃ ca
An affix in the Vedic may be termed either way.

EXAMPLES:

vardhantu
svastaye
viśṛṇvire
somam indrāya sunvire
upastheyāma

1. This rule constitutes an expatiation (*prapañca*) of 3.1.85 *vyatyayo bahulam*. That is, in the Vedic, one can find all kinds of instances contrary to the provisions stated for the assignment of the terms *sārvadhātuka* and *ārddhadhātuka*. Thus, the term *ārddhadhātuka* may not be applied in favor of *sārvadhātuka*, and vice versa. One can also find assignment of these two terms both in a single word, and regardless of any existing provision for individual assignments. Assignment of both terms of course is contrary to the provisions made. These exceptions are made so that operations relative to assignment of these terms can be availed. Refer to the appendix for further details concerning derivational implications of cited examples.

A question is raised as to why the exceptional application of the terms *sārvadhātuka* and *ārddhadhātuka* are not understood, here, to be restricted to the context of replacements for *LIṄ*? Why must one accept this application as relevant to the provisions of the entire section which deals with the assignment of these terms? Commentators state that the entire section dealing with assignment of these terms is to be understood based on usages which are not limited to replacements of *LIṄ*.

APPENDIX

Derivational History of Examples

INTRODUCTORY REMARKS

The second and third *adhyāya* of the *Aṣṭādhyāyī* deal with the following major operational provisions:

1. Derivation of compounds (2.1.3 *prāk kaḍārāt samāsaḥ*)
2. Derivation of *pada* ending in *sUP* (1.4.14 *suptiṅantam...*)
3. Derivation of *pada* ending in *tiṄ* (3.4.78 *tiptasjhi...*)
4. Derivation of verbal roots ending in affixes *saN*, etc. (3.1.32 *sanādyantā dhātavaḥ*)
5. Derivation of nominal stems ending in affixes termed *kṛt* (1.4.46 *kṛttaddhitasamāsāś ca*)

1. *Derivation of Compounds*

Pāṇini presents the derivation of compounds in the domain of 2.1.3 *prāk kaḍārāt samāsaḥ* subject to the condition of *sāmarthya* 'fitness, capability' as underlined by rule 2.1.1 *samarthaḥ padavidhiḥ*. This condition has been explained in detail in the *Mahābhāṣya*; also see my notes under this rule. Note that rule 2.1.3 *prāk kaḍārāt...* heads a domain which includes rules upto and including 2.2.38 *kaḍārāḥ karmadhāraye*. The formation of a compound takes place under specific provisions of rules read with 2.1.4 *saha supā*. That is, a *pada* ending in *sUP* is combined with another *pada* ending in *sUP* provided they both are syntactico-semantically related, and hence, qualified to be integrated into a compound. Integration has thus been described as a process whereby two or more syntactico-semantically related nominal *pada* are combined to yield a formal unit with a single integrated meaning (*ekārthībhāva*). My notes under individual rules furnish qualifying details.

The domain of compound-formation with its individual subdomains is as follows:

2.1.1 *samarthaḥ padavidhiḥ*
2.1.3 *prāk kaḍārāt samāsaḥ*
2.1.4 *saha supā*
2.1.5 *avyayībhāvaḥ* through
2.1.21 *anyapadārthe ca saṃjñāyām*;
2.1.22 *tatpuruṣaḥ* through
2.2.22 *ktvā ca*;
2.2.23 *bahuvrīhiḥ* through
2.2.28 *tena saheti tulyayoge*;
2.2.29 *cārthe dvandvaḥ*

The above recognizes *avyayībhāva*, *tatpuruṣa*, *bahuvrīhi*, and *dvandva* as four types of compounds. Rules 1.2.42 *tatpuruṣaḥ samānādhikaraṇaḥ karmadhārayaḥ* and 2.1.23 *saṃkhyāpūrvo dviguḥ* recognize two subtypes of *tatpuruṣa*. Rule 2.1.11 *vibhāṣā* adds another dimension to the description of compounds. That is, compounds specified after this rule are treated as optional unless stated otherwise. They are used parallel to their analyzed form (*vigrahavākya*). Thus, a compound such as *rājapuruṣaḥ* 'king's man' can be used optionally with its analyzed form *rājñaḥ puruṣaḥ* with no difference in meaning. These two units are considered as alternants because they derive from the same underlying string: *rājan* + *Ṅas puruṣa* + *sU*.

The following is a summary of operations performed relative to the formation of compounds:

(*a*) *sUP*-deletion

Deletion (*LOPA*) of nominal endings (*sUP*) contained within compound derivates termed *prātipadika* 'nominal stem' (1.2.46 *kṛttaddhitasamāsāś ca*) via express mention of *LUK* by rule 2.4.71 *supo dhātuprātipadikayoḥ*.

(*b*) Order of constituents

The constituents of a compound are arranged in a particular order as per specifications of rules such as 2.2.30 *upasarjanaṃ pūrvam*. This rule demands that a constituent termed *upasarjana* be placed first in a compound. Rule 1.2.43 *prathamānirdiṣṭa samāsa upasarjanam* assigns the term *upasarjana* to that constituent of a compound which has been specified with the nominative (*prathamā*) by the rule which allows the formation.

(*c*) Assignment of number and gender

It is only logical to assign number (*vacana*) and gender (*liṅga*) to a derived compound since its underlying constituents may vary in this respect. Rules which assign number and gender to compounds are also contained in the fourth quarter of *adhyāya* two. Here are a few major rules dealing with the assignment of number and gender:

2.4.1 *dvigur ekavacanam*
'a compound termed *dvigu* has the denotatum of one'

2.4.17 *sa napuṃsakam*
'a *dvigu* or *dvandva* compound with the denotatum of one (*ekavacana*) is assigned neuter (*napuṃsaka*)'

2.4.26 *paraval liṅgaṃ dvandvatatpuruṣayoḥ*
'the gender of a *dvandva* and *tatpuruṣa* compound is assigned similar to the constituent which follows'

It must also be noted in connection with the assignment of gender to compounds that, in case of *karmadhāraya* and *bahuvrīhi* compounds, a feminine form is replaced by its corresponding masculine as, for example, is provided by rule 6.3.33 *striyāḥ bhāṣitapuṃskād...*, etc. Obviously, these

rules must also have consequences for the derivation of compounds. I have used the word 'masculine transformation' parallel to the traditional *puṃvadbhāva* to show this replacement of a feminine by a corresponding masculine.

(*d*) Non-deletion of *sUP* via *LUK*

It has already been stated that affixes denoted by *sUP*, when forming part of a compound string, are deleted by *LUK* as per rule 2.4.71 *supo dhātuprātipadikayoḥ*. There are, however, certain compounds which do not permit the deletion of their *sUP*. A provision for non-deletion of *sUP* (*aluk*) is made by rules contained within the domain of 6.3.1 *alug uttarapade*. This rule, for reasons of not allowing *sUP*-deletion, constitutes an exception to rule 2.4.71 *supo dhātuprātipadikayoḥ*. A compound string must also check rules which may block *LUK*-deletion of *sUP*.

(*e*) Introduction of affixes

Note that certain compound strings are subjected to operations relative to the introduction of affixes in the domain of 5.4.68 *samāsāntāḥ*. This affixation may also subject the resultant strings to operations in the domain of rule 6.4.1 *aṅgasya*.

(*f*) Accentuation (*svara*)

Assignment of accent through the application of rules contained in the domain headed by 6.1.223 *samāsasya* can be accepted as the last operation relative to the derivation of compounds. But since rules of the entire second quarter (*pada*) of *adhyāya* six constitute an exception to rule 6.2.223 *samāsasya* they must also be consulted in the context of the assignment of accent.

Rules contained within the domain outlined by 2.1.1 *samarthaḥ padavidhiḥ* through 2.2.38 *kaḍārāḥ karmadhāraye* define the main domain of compound formation. All other rules brought close to the context of compound-derivation must be treated as part of an extended domain. Operations which I have just outlined proceed more or less in the order shown. One must however be prepared for some specific exceptions. They will of course be noted at appropriate places.

All compound strings are termed nominal stem (*prātipadika*) after which they qualify for operations relative to the domain of rule 4.1.1 *ṅyāp-prātipadikāt* and 4.1.2 *svaujasmauṭ*... etc.

2. *Derivation of pada ending in sUP*

A *pada* has generally been defined as a form ending in an affix denoted by the abbreviatory term *sUP*, or *tiṄ*. A *sUP* is introduced after a nominal stem, or an item ending in feminine affixes *Ṅī* and *āP*, to derive a nominal *pada*. The third quarter of *adhyāya* two of the *Aṣṭādhyāyī* discusses conditions under which one can introduce the *sUP* affixes. Rule 4.1.2 *svaujasmauṭ*... enumerates a set of twenty-one affixes abbreviated

as *sUP* and grouped in seven triplets (*trik*) of three elements each. Individual triplets have been termed *prathamā* 'first', *dvitīyā* 'second', etc. The three elements of each individual triplet is termed *ekavacana* 'singular', *dvivacana* 'dual', and *bahuvacana* 'plural' respectively. The introduction of these *sUP* affixes after a nominal stem is regulated by rule 2.3.1 *anabhihite* 'when not already expressed'. That is, a *sUP* affix cannot be introduced when its denotatum has already been expressed by some other means.

The *sUP* affixes denote diverse *kāraka* and non-*kāraka* relations. The *kāraka*, in turn, have been discussed in the domain of rule 1.4.23 *kārake*. It is imperative that a selection of *sUP* must necessarily involve rules of the *kāraka* section. I shall refer to it as the process of *sUP*-selection. Once the placement of these affixes has taken place the derivational process becomes largely automatic. I shall explain only a few important derivations of nominal *pada*. Refer to the explanatory details of nominals already derived in the appendix of volume II.

3. *Derivation of pada ending in tiṄ*

Rule 3.4.77-78 *lasya; tiptasjhisipthas...* introduce a set of eighteen elements denoted by the abbreviatory term *tiṄ* to replace what are generally referred to as the abstract *LA* affixes. A *LA* affix is introduced after a transitive verbal root to denote either *kartṛ* 'agent', or *karman* 'object'. It is introduced after an intransitive verbal root to denote *kartṛ* and *bhāva* 'root-sense' (3.4.69 *laḥ karmaṇi ca bhāve cākarmakebhyaḥ*). The *tiṄ* elements which replace a *LA* are classified into two sets of *ātmanepada* and *parasmaipada* where each set contains three triplets of three elements. Each triplet is termed *prathama* 'third', *madhyama* 'second', and *uttama* 'first' persons. Each element of individual triplets is termed singular (*ekavacana*), dual (*dvivacana*), and plural (*bahuvacana*) respectively. I have already explained in detail many derivations entailing these affixes in volume II. The process of selecting a *tiṄ* affix has also been discussed at the beginning of the appendix there.

4. *Derivation of verbal roots ending in affixes saN, etc.*

Parallel to the derivation of complex nominal stems such as *samāsa* 'compound', and derivates which end in affixes *kṛt* (3.1.93 *kṛd atiṅ*), or *taddhita* (4.1.76 *taddhitāḥ*), Pāṇini also provides for the derivation of complex verbal roots ending in affixes headed by *saN* (3.1.32 *sanādyantā dhātavaḥ*). That is, derivates ending in affixes enumerated beginning with *saN* are termed *dhātu* 'verbal root'. These affixes are : *saN* (3.1.5 *guptijkidbhyaḥ...* through 3.1.7 *dhātoḥ karmaṇaḥ...*); *KyaC* (3.1.8 *supa ātmanaḥ kyac*); *kāmyaC* (3.1.9 *kāmyac ca*); *KyaṄ* (3.1.11 *karttuḥ kyaṅ...*); *KyaṢ* (3.1.13 *lohitādi...*); *KyaC* (3.1.19 *namovarivasa...*); *ṆiṄ* (3.1.20 *pucchabhāṇḍa...*); *ṆiC* (3.1.21 *muṇḍamiśra...*); *yaṄ* (3.1.22 *dhātor...*), *yaK* (3.1.27 *kaṇvādibhyo...*); *āya* (3.1.28 *gupūdhū...*); *īyaṄ* (3.1.29 *ṛter...*); and

ṆiṄ (3.1.30 *kamer ṆiṄ*). Rule 3.1.32 *sanādyantā dhātavaḥ* assigns the term *dhātu* 'verbal root' to forms which end in these affixes. The derivates are then qualified for operations in the domain of 3.1.91 *dhātoḥ*.

5. *Derivation of nominal stems ending in kṛt*

The domain of these derivates is headed by 3.1.91 *dhātoḥ* in addition to the following:

3.1.92 *tatropapadaṃ saptamīstham*
'that which is specified in this domain of *dhātoḥ* with *saptamī* is termed an *upapada* 'cooccurring word'

3.1.93 *kṛd atiṅ*
'an affix which is not denoted by the abbreviatory term *tiṄ* is termed *kṛt*'

3.1.94 *vā' sarūpo' striyām*
'a formally dissimilar affix which constitutes an exception in this domain of *dhātoḥ* blocks its general counterpart only optionally except when both rules form part of the domain of *striyām* (3.3.94 *striyāṃ*)'

3.1.95 *kṛtyāḥ*
'affixes introduced hereafter (prior to 3.1.133 *ṇvultṛcau*) are termed *kṛtya*'

Rules 3.1.93 *kṛd atiṅ* and 3.1.95 *kṛtyāḥ* do not assign the terms *kṛt* and *kṛtya* to two sets of different affixes. Instead *kṛtya* affixes form a subset of *kṛt*. That is, affixes introduced in the subdomain of 3.1.95 *kṛtyāḥ* will be assigned both the terms. Elsewhere, in this domain of 3.1.91 *dhātoḥ*, affixes, other than those denoted by the abbreviatory term *tiṄ*, will be assigned the single term *kṛt*. The class-inclusion of the terms *kṛtya* within *kṛt* enables the *kṛtya* derivates to be assigned the term *prātipadika* 'nominal stem' by rule 1.2.46 *kṛttaddhitasamāsāś ca*.

Rule 3.1.92 *tatropapadaṃ saptamīstham* offers a cooccurrence condition by means of the term *upapada* 'cooccurring, or conjoined word'. The term is given a definition by means of the mark of *saptamī*. That is, an *upapada* is a word which is specified by the locative (*saptamī*) nominal ending of an operational rule within the domain of 3.1.91 *dhātoḥ*. The cooccurring word thus forms the left context for the introduction of an affix in this domain. Now consider the following rule:

3.2.1 *karmaṇy aṇ*
'affix *aṆ* occurs after a verbal root which cooccurs with a *pada* 'word' denoting *karman* 'object'

A nominal stem such as *kumbhakāra* is derived by introducing affix *aṆ* after verbal root *ḌUkṛÑ* 'to do, make' under the cooccurrence condition of the word *kumbhānām* terminating in genitive (*ṣaṣṭhī: kumbha* + *ām*), and denoting object (*karman*). Rule 3.1.92 *tatropapadam...* joined with

rule 3.2.1 *karmaṇy aṇ* explains that affix *aṆ* can be introduced after a verbal root only when a word denoting *karman* cooccurs. The locative (*saptamī*) of *karmaṇi* in rule 3.2.1 *karmaṇy aṇ* thus is a mark for bringing close to its context the specification of rule 3.1.92. Consequently, *kumbha* + *ām*, an *upapada* denoting object (*karman*) constitutes the condition for the introduction of affix *aṆ* after verbal root *kṛÑ*.

Rule 3.1.94 *vā' sarūpo' striyām* makes an interesting proposal, especially in view of rule-interaction. It is generally believed that an exception (*apavāda*) blocks its general counterpart (*utsarga*) obligatorily. But this obligatory blocking by an exception is made optional with the following specifications:

(i) the exception and general relationship must be shared by affixes of the domain of 3.1.91 *dhātoḥ*;
(ii) the affixes relative to this proposal must be dissimilar in form (*asarūpa*); and
(iii) the affixes (exception and the general both) must be enumerated outside the scope of rule 3.3.94 *striyāṃ ktin*.

If a set of two affixes such that one is an exception to the other, a general, meets all these three conditions, the exception will block its general counterpart only optionally. This practically negates the notion of obligatory blocking by an exception. There is a fairly large number of rule-interaction within this domain which comes under the scope of rule 3.1.94. The tradition uses the term *vā' sarūpavidhi* to characterize this blocking.

The preceding has been an introduction to the operational provisions made by rules of *adhyāya* two and three. This will serve as reference for quickly understanding the perspective of derivational details which follow.

Examples as usual have been numbered in the order of their occurrence in the text. Since the derivational history of a great number of examples relating to the operational scope of these two *adhyāya* has already been presented in the first two volumes of this study, our choice of derivations will be guided by necessity, and desire to avoid duplication. It is therefore not unreasonable to expect frequent references to similar derivations, derivational steps, or explanations, already presented. The format of our presentation is largely narrative. However, derivational steps or explanations are offered by way of complementing explanatory notes presented under individual rules.

DERIVATIONAL HISTORY OF EXAMPLES

2.1.1 *samarthaḥ padavidhiḥ*

Examples under this rule are furnished to explain the condition of *sāmarthya* 'fitness to combine in a compound', in the absence of which

formation of compounds will be blocked. Consider for illustration the following:

(*a*) *paśya devadatta kaṣṭam*
śrito viṣṇumitro gurukulam
'see the misery Devadatta! Viṣṇumitra has taken recourse to the teachers' house'

(*b*) *kiṁ tvaṃ kariṣyasi śaṅkulayā*
khaṇḍo devadatta upalena
'what will you do with the nutcracker Devadatta! it is already split by the cowdung-cake'

(*c*) *gaccha tvaṃ yūpāya dāru devadattasya gehe*
'you go for fetching the ritual post; the log is in Devadatta's house'

(*d*) *bhāryā rājñaḥ puruṣo devadattasya*
'the wife of the king; man of Devadatta'

These examples each entail a set of two *pada* such as *kaṣṭam* / *śritaḥ*; *śaṅkulayā* / *khaṇḍaḥ*; *yūpāya* / *dāruḥ*; and *rājñaḥ* / *puruṣaḥ*. They are identical with those which may share syntactico-semantic relationship, and subsequently, combine to yield compounds such as *kaṣṭaśritaḥ*; *śaṅkulā-khaṇḍaḥ*; *yūpadāruḥ*; and *rājapuruṣaḥ*. In strings (*a*) through (*d*) we find that the syntactico-semantic relationship between words such as *yūpāya dāruḥ* is impaired. For, *yūpāya* 'for the ritual post' is relatable to the injunction of 'you go for fetching the ritual post' than to 'the log' of 'the log is in Devadatta's house'. Similar impairment of *sāmarthya* relationship can also be witnessed in other examples. It is because of the lack of syntactico-semantic relation (*sāmarthya*) between elements of a given string.that formation of a given compound is blocked.

2.1.2 *sub āmantrite parāṅgavat svare*

This rule allows a word ending in a *sUP* to be treated as part of the following word provided this latter is termed an *āmantrita* (2.3.48 *sā'mantritam*). This purpose of 'treating the former as part of the subsequent' (*parāṅgavadbhāva*) is accent (*svara*). Consider the following two examples:

(1) *kuṇḍena aṭan*

(2) *paraśunā vṛścan*

where *aṭan* and *vṛścan* are two *pada* ending in the nominative (*prathamā*) denoting *sambodhana* 'address'. Rule 2.3.48 *sāmantritam* assigns the term *āmantrita* to the nominative singular denoting address. Now consider the following rules:

1.2.39 *svaritāt saṃhitāyām anudāttānām*
'every *anudātta* which occurs after a *svarita* is replaced by *ekaśruti* 'monotone' in *saṃhitāpāṭha* 'recitation of the Veda with phonetic changes as effected by *sandhi* rules'

6.1.158 *anudāttaṃ padam ekavarjam*
'a *pada*, except for its one syllable (for which an *udātta* 'high-pitch', or *svarita* 'circumflex' may be made available) is marked *anudātta* 'low-pitched'

6.1.192 *āmantritasya ca*
'the initial (*ā*) of an item termed *āmantrita* is also marked with *udātta*'

8.1.19 *āmantritasya ca*
'and that which is termed an *āmantrita*, and occurs subsequently to another *pada*, is also marked *anudātta* provided it does not occur at the beginning of a quarter (*pada*) verse'

8.4.66 *udāttād anudāttasya svaritaḥ*
'a *svarita* comes in place of an *anudātta* when it occurs after an *anudātta*'

Given the string *kuṇḍena aṭan* the preceding word *kuṇḍena* will be treated as part of the following word *aṭan* because of the assignment of the term *āmantrita*. The word *aṭan* of the string would be subject to the application of rule 8.1.19 *āmantritasya ca* which will mark it with the single accent *anudātta* in toto (*sarvānudātta*). But our present rule intervenes. That is, what rule 8.1.19 sees as a string of two words, i.e., an *āmantrita* following a non-*āmantrita*, is treated as one word for purposes of accentuation. Rule 8.1.19 cannot apply unless the string consisted of two words. This occasions the application of rule 6.1.92 *āmantritasya ca* of the sixth *adhyāya* (*ṣāṣṭhika*) whereby the initial syllable of the single word *kuṇḍenāṭan* is assigned the *udātta* accent. The *ku* of *kuṇḍena*, treated as part of the larger word *kuṇḍenāṭan*, for purposes of accent, is marked *udātta*. Rule 6.1.158 *anudāttaṃ padam ekavarjam* now assigns *anudātta* accent to all syllables except the *ku*. However, rule 8.4.65 *udāttānudāttasya...* requires that *ḍe* of *kuṇḍe* be marked with *svarita*. Rule 1.2.39 *svaritāt...* will now assign *ekaśruti* after the *svarita* of *ḍe*.

Similar explanations also apply in case of the term *āmantrita* when assigned to *vṛścan* of *paraśunā vṛścan*. The consequence of *parāṅgavadbhāva* 'treating a preceding word as part of the following *āmantrita*' is similar to *kuṇḍena aṭan*. Thus we get: *kuṇḍéna aṭan* and *paraśúnā vṛścan*.

2.1.3 *prāk kaḍārāt...*-2.1.5 *avyayaṃ vibhakti...*

Refer to subsequent rules for relevant examples.

2.1.6 *avyayaṃ vibhaktisamīpasamṛddhi...*

This rule allows for an indeclinable (forming a *pada* by ending in a *sUP* as per 2.1.4 *saha supā*) to combine with any other *pada*, again ending in a *sUP*, providing they both were syntactico-semantically related. Note that the word *avyaya* is specified in this rule with the nominative (*prathamā*). Consequently, the indeclinable *pada* will be termed an *upasarjana* (1.2.43 *prathamā...*), and will be placed first in the compound (2.2.30 *upasarjanaṃ pūrvam*).

This rule specifies *vibhakti*, etc., as denotational conditions which must be met prior to the formation of individual compounds. It is for this reason that the word *vacana* 'denotation' must be used with each one of the words such as *vibhakti* which specify individual semantic conditions. The derivational history of examples given under this rule is not very different from many already discussed elsewhere. Let us list some of the examples:

(3) *adhistri*
(4) *upakumbham*
(5) *sumagadham*
(6) *durgavadikam*
(7) *nirmakṣikam*
(8) *atitaisṛkam*
(9) *itipāṇini*
(10) *anuratham*
(11) *anurūpam*
(12) *pratyartham*
(13) *anujyeṣṭham*

Our example (3) *adhistri* is derived from *strī* + *Ṅi* + *adhi* + *sU* where *adhi* is an indeclinable denoting *vibhakti* which conditions the use of *saptamī* 'locative' after *strī*. Note that the order of elements in the string *strī* + *Ṅī* + *adhi* + *sU* must be changed to: *adhi* + *sU* + *strī* + *sU*. This preplacement of the secondary constituent of the compound is ordered at the strength of the assignment of the term *upasarjana* to the *pada* constituted by *adhi* + *sU*. Rule 1.2.43 *prathamā...* assigns the term *upasarjana* to that constituent of a compound which has been referenced with the nominative (*prathamā*; in the present case *avyayam*) in the rule which allows the formation of the compound on hand. Rule 2.2.30 *upasarjanaṃ pūrvam* orders the preplacement. Rule 1.2.46 *kṛttaddhitasamāsāś ca* assigns the term *prātipadika* 'nominal stem' after which 2.4.72 *supo dhātu...* orders the deletion of nominal endings by *LUK*. The resultant compound is assigned the term *napuṃsaka* 'neuter' by rule 2.4.18 *avyayībhāvaś ca* read with 2.4.17 *sa napuṃsakam*. The assignment of the term *napuṃsaka* is consequential. For example, in case of *adhistrī*, which yields the string *adhistrī* + *sU* after the application of 4.1.2 *svauj...*, the long final vowel of *strī* is replaced with short *-i* as per 1.2.47 *hrasvo napuṃsake prātipadikasya*. This will give us: *adhistri* + *sU* which will subsequently have its *sUP* deleted by *LUK* as per rule 2.4.82 *avyayādāp supaḥ*.

The preceding offers a string of operations guided mainly by the assignment of the terms *upasarjana*, *samāsa*, *avyayībhāva*, *avyaya*, *prātipadika*, and *napuṃsaka*. Thus, *upasarjana* orders preplacement. It may offer some other operation elsewhere. The assignment of the term *samāsa* leads to

the assignment of the term *prātipadika* which, in turn, causes the deletion of *sUP*. The assignment of the term *avyayībhāva* leads to the assignment of the term *avyaya* which then causes the assignment of the term *napuṃsaka*. We have further witnessed how a *napuṃsaka* causes the shortening of the long vowel. Similarly, we also see how the *sU* after *adhistri* is dropped at the strength of the assignment of the term *avyaya*. One can easily see a dependency relationship between the assignment of the terms and consequent operations. Additionally, one must also note the hierarchy of operations relative to the hierarchy of terms assigned. For example, *samāsa, avyayaībhāva, avyaya, napuṃsaka,* and *prātipadika* entail class-inclusion of terms (*saṃjñāsamāveśa*). Operations conditioned by these terms must also follow the relative order in which the terms are assigned. (See pp. 193–99 of volume one for a systematic discussion of this and other details relative to the derivation of compounds in general, and *avyayībhāva* in particular. Refer also to the derivation of (144) *pratyagni*, and (145) *upāgni* in the appendix of volume II, pp. 376–77). These derivations have a lot common with *adhistri* and *upakumbham* where this latter is derived from *upa* + *sU* + *kumbha* + *Ṅas*. Note that *upa* is used here in the sense of *sāmīpya* 'proximity' relative to the pot (*kumbha*). This explains why we must have the genitive *Ṅas* after *kumbha*. Recall that rule 2.4.82 *avyayādāp...* deletes the *sUP* introduced after an *avyayībhāva* compound termed *avyaya*. However, if the compound termed *avyaya* terminates in *a* then a *sUP*, except for a *pañcamī* 'fifth triplet of nominal ending', is replaced with *am*, in accordance with rule 2.4.83 *nāvyayībhāva....* Given the string *upakumbha* + *am* where *sU* is replaced with *am*, rule 6.1.107 *ami pūrvaḥ* will order a single *a*-replacement for the sequence of two. Thus, *upakumbh (a+a→a) m* = *upakumbham*. Derivates such as (4-6) and (10-13) entail this replacement of their *sUP* by *am*. Obviously, they also entail the application of rule 6.1.107 *ami pūrvaḥ*. Examples (7-8) entail shortening of their final long vowel *ā*. It is not difficult to derive the rest of the examples in view of derivational details already furnished. The remaining examples involve an indeclinable *pada* with *su, dur, nir, ati,* and *prati*, or *anu*, used with specified meanings. Incidentally, given the string *prati* + *artham* rule 6.1.77 *iko yaṇ aci* applies after the deletion of the nominal endings. This, in turn, produces *prat(i→y)artham* = (13) *pratyartham*.

2.1.9 *sup pratinā...*-2.1.10 *akṣa...pariṇā*

Note that the indeclinables of these two rules are not specified with nominative (*prathamā*). Consequently, their preplacement, due mainly to a lack of assignment of the term *upasarjana*, cannot be accomplished. Thus we get examples such as: (14) *sūpaprati* and (15) *akṣapari* where *prati* and *pari* are postposed in the compound. The nominal endings introduced after these compound bases will be deleted by *LUK* of rule 2.4.82 *avyayādāp supaḥ*.

2.1.12 *apaparibahirañcavaḥ pañcamyā*

Note that because of the *anuvṛtti* of *vibhāṣā* there will be two sets of examples: (16)/(17) *apatrigarttam/apa trigarttebhyaḥ*; (18)/(19) *paritrigarttam/ pari trigarttebhyaḥ*; and (20)/(21) *bahirgrāmam/bahir grāmāt*. The *pañcamī*, in case of *apa* and *pari*, is provided for by rule 2.3.10 *pañcamy apāṅparibhiḥ* at the strength of their designation as *karmapravacanīya* by rule 1.4.88 *apaparī varjane*. The *pañcamī* of *bahis* must be obtained at the strength of the Pāṇinian usage of this rule. The singular ablative ending *ṄasI*, given the string such as *bahisgrāma* + *ṄasI* is replaced by *āt* by rule 7.1.12 *ṭāṅasiṅasāminātsyāḥ*. The *s* of *bahis* will be replaced with *r* by 8.2.66 *sasjuṣo ruḥ*.

2.1.14 *lakṣaṇenābhipratī ābhimukhye*

This rule again will yield two sets of examples: (22)/(23) *abhyagnim/ agnim abhi* and *pratyagnim/agniṃ prati*. I have already shown the derivation of *pratyagnim* (see vol. I, pp. 376-77). Note that *abhi* and *prati* are termed *karmapravacanīya* by rules 1.4.91 *abhir abhāge* and 1.4.90 *lakṣaṇetthambhūtākhyāna...* respectively. The accusative nominal ending (*dvitīyā*) is ruled by 2.3.8 *karmapravacanīyayukte dvitīyā*.

2.1.17 *tiṣṭhadguprabhṛtīni ca*

Examples such as (24) *tiṣṭhadgu*, (25) *vahadgu*, (26) *khaleyavam*, (27) *āyatīgavam* 'the time when the cows return from grazing', and (28) *lūyamānayavam* 'the time when the barley is harvested', etc., are all taken straight from the *GP*. The assignment of the term *avyayībhāva* is ad hoc (*nipātana*). These examples must be handled via *nipātana*, since operationally their constituents will not qualify for yielding the *avyayībhāva* compounds. Thus, *tiṣṭhadgu* has its first constituent derived from *sthā* + *LAṬ* where *LAṬ* is replaced with *ŚatṚ*. The *o* of its *go* is replaced with *u* (a short counterpart of *o*) by rule 1.2.48 *gostriyor upasarjanasya*. Example (25) *vahadgu* is no different. While (26) *khaleyavam* illustrates how the locative (*saptamī*) in *khale* is retained via *nipātana* (27) involves the lack of *puṃvadbhāva*. Additionally, this latter example entails the introduction of *samāsānta* (5.4.68 *samāsāntāḥ*) affix *ṬaC*. Finally, (28) *lūyamānayavam* requires that *LAṬ* be replaced with *ŚānaC* again by *nipātana*.

2.1.18 *pāre madhye ṣaṣṭhyā vā*

This rule offers the combination of *pāra* and *madhya* with a *pada* ending in genitive (*ṣaṣṭhī*) to yield an *avyayībhāva* compound optionally to a genitive *tatpuruṣa*. It is in this sense that the provision of this rule is treated as an exception to the rule which allows the formation of the genitive *tatpuruṣa* compound. Thus we will get (29) *pāregaṅgam* and (30) *madhyegaṅgam* parallel to *pāre gaṅgāyāḥ* and *madhye gaṅgāyāḥ* where *pāre* and *madhye* are retained as ending in *e* via *nipātana* at the strength of the citation of the rule. The genitive *tatpuruṣa* compounds will be (31) *gaṅgāpāram* and (32) *gaṅgāmadhyam* parallel to the strings: *pāraṃ gaṅgāyāḥ*

and *madhyaṃ gaṅgāyāḥ*. Note that *vā* 'optionally' is employed in the rule to provide for the *avyayībhāva* compound optionally to the genitive *tatpuruṣa*. The larger domain of option (*mahāvibhāṣā*; 2.1.11 *vibhāṣā*) provided for the parallel analyzed forms (*vigrahavākya*) in relation to both the *avyayībhāva* and *tatpuruṣa* compounds. The *vā* of this rule provides for the genitive *tatpuruṣa* compound optionally to *avyayībhāva*.

2.1.23 *dviguś ca*

Note that (33) *pañcarājī* and (34) *daśarājī* are very similar in derivation to (35) *dvyahaḥ* and (36) *trayhaḥ* which I have already derived as part of (114) *dvyahapūrvāya* and (115) *tryahapūrvāya* (cf. vol. I, pp. 367-68). These compounds are allowed by 2.1.51 *taddhitārthottarapada....* They are assigned the term *dvigu* by rule 2.1.52 *saṃkhyāpūrvo dviguḥ*. Given the compound string *pannñcarājan*, rule 5.4.91 *rājāha...* will introduce affix *ṬaC*. The resultant string *pañcarājan* + *(Ṭ)a(C)* = *pañcarājana* will lose its *ṭi* (the form *na* constituted by the last vowel; 1.1.64 *aco' ntyādi ṭi*) as per 6.4.144 *nas taddhite* read with 6.4.143 *ṭeḥ*. This will produce: *pañcarāja* (*na*→∅) = *pañcarāja*. Since a *dvigu* compound with its following constituent ending in *a* is treated as feminine, rule 4.1.21 *dvigoḥ* (in view of the statement *akārāntottarapado dviguḥ striyāṃ bhāṣyate*) introduces affix *ṄīṢ*. Given the string *pañcarāja* + *ī* (after *it*-deletion) the *a* before the feminine affix *ī* will be deleted by 6.4.148 *yasyeti ca*. The next example (34) *daśarājī* is similarly derived. The *n* of *pañcan* and *daśan* in these examples is deleted by 8.2.7 *na lopaḥ prātipadikāntasya*.

Note that (37) *pañcagavam* and (38) *daśagavam* with their bases *pañcagava* (cf. (61) *pañcagavadhanaḥ* under rule 2.1.51 *taddhitārthottarapada...*)) and *daśagava* deriving from: *pañcago* + *ṬaC* and *daśago* + *ṬaC*, after the application of 6.1.78 *eco' yavāyāvaḥ* do not permit the feminine affix *ṄīṢ* even though the bases terminate in *a*. The *samāsānta* affix is introduced by 5.4.92 *gor ataddhitaluki*. The compounds are assigned neuter gender as per rule 2.4.17 *sa napuṃsakam*. Recall that this assignment of gender is mediated by *ekavadbhāva* 'treating something as denoting one' of 2.4.1 *dvigur ekavacanam*. Of course, the term *dvigu* is assigned by rule 2.1.10 *saṃkhyā....*

2.1.24 *dvitīyā śritātīta...*

This rule allows for compounds where a *pada* ending in accusative (*dvitīyā*) is combined with another *pada* constituted by *śrita*, etc. Thus, from *kaṣṭa* + *am* + *śrita* + *sU*, *kāntāra* + *am* + *atīta* + *sU*, *naraka* + *am* + *patita* + *sU*, *grāma* + *am* + *gata* + *sU*, *taraṅga* + *am* + *atyasta* + *sU*, *sukha* + *am* + *prāpta* + *sU*, and *sukha* + *am* + *āpanna* + *sU*, we derive (39) *kaṣṭaśritaḥ*, (40) *kāntārātītaḥ*, (41) *narakapatitaḥ*, (42) *grāmagataḥ*, (43) *taraṅgātyastaḥ*, (44) *sukhaprāptaḥ*, and (45) *sukhāpannaḥ*. Note that (40), (43), and (45) also involve the application of rule 6.1.101 *akaḥ savarṇe...* which, after the formation of the compound, and the subsequent deletion

of *sUP*, orders the sequence *a+a* at the junction of the two combined bases to be replaced with a single long *ā*.

Note that a *tatpuruṣa* compound is assigned gender in accordance with its subsequent constituent. Since all such constituents are here used as modifiers to a masculine noun these compounds will all be assigned masculine. They can also be interpreted as *bahuvrīhi* though there will then be a difference in accent. Commentators do not accept the *bahuvrīhi* interpretation. The accents for examples (39) and (42) is controlled by rule 6.2.47 *ahīne dvitīyā* which is an exception to 6.2.144 *thāthaghañkta...* which, in turn, regulates the accents of other examples. Rule 6.2.47 demands the retention of the original accent of the first constituent (*pūrvapadaprakṛtisvara*). Thus, *kaṣṭaśrita* will retain the *udātta* accent of the final syllable (*antodātta*) of *kaṣṭa*. Rule 6.2.144 assigns *udātta* accent to the final syllable of a constituent terminating in affixes *tha, atha, GHaÑ, Kta*, etc. provided what precedes them is either a *gati, kāraka*, or an *upapada*. This rule thus marks the compound as *antodātta*. Many compounds including *kaṣṭaśritaḥ, rājapuruṣaḥ*, and *yūpadāruḥ* have been derived (pp. 447-50) in volume II.

2.1.27 *sāmi*

This rule provides for examples such as (46) *sāmikṛtam* and (47) *sāmipītam* where *sāmi* is an indeclinable. One of the purposes of forming a compound with *sāmi* is to get a single *udātta* accent (*aikaśvarya*) on the final syllable. In the absence of the compound-formation *sāmi* and *pītam* will both have *udātta* accent on their final syllables. The compound, of course, will have a single *udātta* as: *sāmikṛtám*.

2.1.28 *atyantasaṃyoge ca*

Note that our example (48) *sarvarātrakalyāṇī* entails two step compounds. That is, one has to first derive *sarvarātra*, and then use it with *dvitīyā* 'accusative' to combine with *kalyāṇī* + *sU*. A compound between *sarvā* + *sU* + *rātri* + *sU* is permitted by rule 2.1.49 *pūrvakālaikasarva....* This will yield *sarvarātri* where rule 6.3.41 *puṃvat karmadhāraya...* will replace *sarvā* with *sarva*, its masculine counterpart. Given the *tatpuruṣa* compound *sarvarātri* rule 5.4.87 *ahaḥ sarvaikadeśa...* will introduce the *samāsānta* affix *aC* which subsequently will lead to the deletion of *i* by 6.4.148 *yasyeti ca*. This will give us: *sarvarātr(i→∅)* + *a* = *sarvarātr* + *a* = *sarvarātra* One can now form the string *sarvarātra* + *am* to combine it with *kalyāṇī* + *sU*. Of course, the resultant compound will be: *sarvarātrakalyāṇī*, a compound of the *dvitīyā-tatpuruṣa* type with an internal *tatpuruṣa* compound of the *samānādhikaraṇa* 'coreferential' type.

2.1.29 *tṛtīyā tatkṛtārthena...*

Note that (49) *śaṅkulākhaṇḍaḥ* and (50) *kirikāṇaḥ* are derived from *śaṅkulā* + *Ṭā* + *khaṇḍa* + *sU*, and *kiri* + *Ṭā* + *kāṇa* + *sU* under the condition that the quality denoted by *khaṇḍa* + *sU* and *kāṇa* + *sU* is produced

by the *pada* which ends in *tṛtīyā*. How do *khaṇḍa* and *kāṇa* denote quality? Actually, affix *MatUP* is introduced after *khaṇḍa* and *kāṇa* to denote the sense of 'that which has 'splitting' or 'one-eyedness' as its quality (*khaṇḍakāṇa guṇo' syāsti*)'. Affix *MatUP* is introduced, and is subsequently deleted, by two *vārttika* proposed under rule 5.2.94 *tad asyāsti*.... The words *khaṇḍa* and *kāṇa* cannot denote quality unless they denote substance (*dravya*). For, a quality resides in the substance. These words can denote quality residing in a substance once *MatUP* is introduced. For, then they start denoting a thing qualified with the quality of *khaṇḍana* and *kāṇatva*. The compound *kirikāṇaḥ* will thus mean: a person qualified with the state of being one-eyed, a quality produced by the charge of a boar.

2.1.38 *stokāntikadūrārthakṛcchrāṇi ktena*

This rule offers examples where *LUK*-deletion of *pañcamī* 'fifth triplet of *sUP*' is blocked by rule 6.3.2 *pañcamyā stokādibhyaḥ*. As a result we get (51) *stokānmuktaḥ* from *stoka* + *ṄasI* + *mukta* + *sU* → *stoka* + *ṄasI* + *mukta* + (*sU* → Ø) = *stoka* + *ṄasI* + *mukta* → *stoka* + *āt* + *mukta* = *stokātmukta*. Note that *ṄasI*, when blocked from deletion, is replaced with *āt* (cf. rule 7.1.12 *ṭāṅasi*...). Given the compound string *stokātmukta* one can introduce *sU* to derive *stokānmuktaḥ* via *sUP*-selection and *r-visarga* (see vol. II, pp. 319-20). The *t* of *stokāt* will be first replaced with *d*, and then by *n* to produce *stokānmuktaḥ* by the application of 8.2.39 *jhalāṃ*... and 8.4.44 *yaro' nunāsike*... respectively. The derivation of (52) *dūrādāgataḥ* follows the same pattern.

Notice that because of the non-deletion of the nominal ending *pañcamī* there is no obvious difference between the compound and its parallel analyzed form. What then is the purpose of forming a compound. First of all the compound is allowed in the context of special meanings. Secondly, the compound formation allows for the string of two words to be joined together. This is what is known as *aikapadya*. Finally, the compound allows for a single *udātta* accent at the final syllable. This is what is known as *aikasvarya* 'single-accentness'.

I have shown the derivation of *stokānmuktaḥ* from the underlying *stoka* + *ṄasI* + *mukta* + *sU* for clarity. The tradition here invokes the *paribhāṣā*: *gatikārakopapadānāṃ kṛdbhiḥ saha samāsavacanaṃ prāk subutpatteḥ* thereby demanding that the underlying string be: *stoka* + *ṄasI* + *mukta* since *mukta* is a derivate ending in affix *kṛt*. This way *sUP* introduced after *mukta* will not have to be deleted.

2.1.50 *diksaṃkhye saṃjñāyām*

Examples such as (53) *pūrveṣukāmaśamī*, (54) *pañcāmrāḥ*, and (55) *saptarṣayaḥ* are derived from *pūrvā* + *sU* + *iṣukāmaśamī* + *sU*, *pañcan* + *Jas* + *āmra* + *Jas*, and *saptan* + *Jas* + *ṛṣi* + *Jas* parallel to *pūrvā cāsau iṣukāmaśamī ca*, *pañca ca te āmrāḥ*, and *sapta ca te ṛṣayaḥ*. The compound is additionally termed *karmadhāraya* by rule 1.2.42 *tatpuruṣaḥ samānādhikaraṇaḥ*....

The endings as usual will be deleted after the formation of the compound. The *n* of *pañcan* and *saptan* will be deleted by 8.2.7 *nalopaḥ....* Given the string *pūrva* + *iṣukāmaśamī*, and *sapta* + *ṛṣi*, rule 6.1.84 *ād guṇaḥ* will order a single *guṇa* replacement in place of the two vowels at the junction of constituent bases of the compound. Thus, we get *pūrv (a + i → e)ṣukāmaśamī* = *pūrveṣukāmaśamī*, and *sapt (a + ṛ → ar)ṣi* = *saptarṣi.*

2.1.51 *taddhitārthottarapadasamāhāre ca*

(56) *paurvaśālaḥ*
(57) *āparaśālaḥ*
(58) *pūrvaśālāpriyaḥ*
(59) *āparaśālāpriyaḥ*
(60) *pāñcanāpitiḥ*
(61) *pañcagavadhanaḥ*
(62) *pañcagavam*
(63) *pañcapūlī*
(64) *pañcakumāri*

(56) *paurvaśālaḥ*

The first example is derived by combining the two syntactically related words *pūrvā* + *Ṅi* and *śālā* + *Ṅi* into a *tatpuruṣa* compound with the understanding that a *taddhita* affix will be subsequently introduced. Note that the introduction of the *taddhita* affix cannot take place unless we have a nominal stem (*prātipadika*). We cannot have a nominal stem unless we first form a compound and let 1.2.46 *kṛttaddhitasamāsāś ca* assign the term nominal stem. We are thus caught in the difficulty (*doṣa*) technically known as *itaretarāśraya*. It is to remove this difficulty that a *tatpuruṣa* compound is formed by 2.1.51 *taddhitārthottarapada*...in anticipation of the introduction of a *taddhita* affix. The locative of *taddhitārthe* is interpreted as *viṣayasaptamī* 'locative of domain' to facilitate this procedure. The compound base, after the *LUK*-deletion of *Ṅi*, will be: *pūrvāśālā.* The application of *puṃvadbhāva* 'masculine transformation' (6.3.33 *striyāṃ...* read with the statement of the *Mahābhāṣya: sarvanāmno vṛttimātre puṃvadbhāvaḥ* ad 2.2.26 *diṅnāmāny...*) will yield:

pūrv(ā → a) + *śālā* = *pūrvaśālā.*

Rule 4.2.107 *dikpūrvapadād...* will now introduce the residual (*śaiṣika*; 4.2.91 *śeṣe*) *taddhita* (4.1.76 *taddhitāḥ*) affix (3.1.1 *pratyayaḥ*) *Ña* after (*paraś ca*) the nominal stem (4.1.1 *ṅyāp-prātipadikāt...*) *pūrvaśālā*. The resultant string will be: *pūrvaśālā* + (*Ñ* → ∅) *a* = *pūrvaśālā* + *a*. The assignment of the terms *aṅga* (1.4.13 *yasmāt...*), *bha* (1.4.18 *yaci bham*), etc., will occasion the application of rules 7.2.117 *taddhiteṣvacām...* and 6.4.148 *yasyeti ca* to yield: *p(u → au)rvaśāl(ā → ∅)* + *a* = *paurvaśāl* + *a* = *paurvaśāla*, again a nominal stem by rule 1.2.46 *kṛttaddhita....* Deriving *paurvaśālaḥ* via *sUP*-selection, and *s-visarga* is not difficult. Similar application of rules will

derive (57) *āparaśālaḥ*. These two examples illustrate the *taddhitārthe* aspect of our present rule.

Deriving (58) *pūrvaśālāpriyaḥ* 'he to whom eastern hall is dear' entails a *bahuivrīhi* formation of three constituents (*tripadabahuvrīhi*): *pūrvā* + *sU* + *śālā* + *sU* + *priyā* +*sU* meaning *pūrvā śālā priyā yasya*. This *bahuvrīhi* of three constituents is interpreted as containing a subtype of the *tatpuruṣa* compound termed *karmadhāraya* (1.2.24 *tatpuruṣaḥ samānādhikaraṇaḥ...*) namely *pūrvaśālā*. The formation of the *bahuvrīhi* is allowed by 2.1.24 *anekam anyapadārthe* though the *karmadhāraya-tatpuruṣa* between *pūrvā* + *sU* and *śālā* + *sU* is allowed by rule 2.1.51 *taddhitārthottarapada...* under the condition of *uttarapade*, the following constituent, i.e., *priyā* + *sU*. A *tatpuruṣa* compound termed *karmadhāraya* is required also to block the retention of the original accent of the base of the initial constituent (*pūrvapadaprakṛtisvara*) in a *bahuvrīhi* (cf. 6.2.1 *bahuvrīhau prakṛtyā pūrvapadam*). The *karmadhāraya* will occasion the application of rule 6.1.217 *samāsasya* whereby the final *ā* of *pūrvaśālā* will be marked *udātta*. Thus, the purpose of forming a *tatpuruṣa* compound is mainly to ensure the final high pitch accent (*antodātta*) on the last constituent of the compound. Or, to let rule 6.2.1 *bahuvrīhau...* to be blocked by rule 6.1.217 *samāsasya*. The *bahuvrīhi* will have *priyā* as the final constituent, and hence, the desired accent cannot be gotten. Furthermore, the *antodātta* of *pūrvaśālā* will also occasion the application of other accent rules such as 6.1.151 *anudāttaṃ padam...*, 8.4.65 *udāttānudāttayoḥ* whereby the *bahuvrīhi* will have the accent as follows: *pūrvaśālāpríyaḥ*. Similar rules will apply in deriving (59) *āparaśālāpriyaḥ*. These two examples illustrate the condition of *uttarapade* of rule 2.1.51.

An example of *samāhāra* with a directional word (*dikśabda*) is not possible. Compounds such as (60) *pāñcanāpitiḥ* and (61) *pañcagavadhanaḥ* illustrate instances of *taddhitārthe* and *uttarapade* respectively with a constituent denoting number (*saṃkhyā*). These again are *bahuvrīhi* compounds with three constituents.

(60) *pāñcanāpitiḥ*
(61) *pañcagavadhanaḥ*
(62) *pañcagavam*

Our first example derives from *pañcan* + *ām* + *nāpita* + *ām* with the expectation that a compound will be formed in anticipation of the scope of a *taddhita* suffix *iÑ* introduced to denote an *apatya* 'offspring' by rule 4.1.95 *ata iñ*. This will yield the compound-base *pañcanāpita* with the deletion, first of its *sUP*, and subsequently of the *n* of *pañcan* (8.2.7 *nalopaḥ prātipadikāntasya*), after which we will get affix *iÑ* in view of the assignment of the term *prātipadika* by rule 1.2.46 *kṛttaddhitasamāsāś ca*. This will produce *pañca(n* → *∅)* + *nāpita* + *i(Ñ* → *∅)* = *pañcanāpita* + *i*

which, after the application of *vṛddhi*, as explained earlier in connection with the derivation of (56) *paurvaśālaḥ*, will yield: *pāñcanāpita* + *i*. Rule 6.4.148 *yasyeti ca*, as explained in (56) *paurvaśālaḥ*, will delete the final *a* of *nāpita* to yield: *pāñca* + *nāpit (a* → ∅*)* + *i* = *pāñcanāpiti*. To derive *pāñcanāpitiḥ* by subsequently introducing *sU* and applying *s- visarga* is not problematic at all.

Example (61) *pañcagavadhanaḥ* contains the string: *pañcan* + *Jas* + *go* + *Jas* + *dhana* + *sU* for deriving a *tripada-bahuvrīhi* 'a *bahuvrīhi* compound with three constituents' where *pañcan* + *Jas* + go + *Jas* forms an internal *tatpuruṣa* termed *dvigu* on account of having a number word as its initial constituent (2.1.52 *saṃkhyāpūrvo dviguḥ*). If one simply wants to derive a *samāhāra* 'grouping, collection' type of *dvigu*, the form will be: *pañcagavam* (cf. example (37) under rule 2.1.23), a neuter (*napuṃsaka*; 2.4.17 *sa napuṃsakam*). Note that the *samāhāra-dvigu* base *pañcango* goes through the deletion of its *n*. Rule 5.4.92 *gor ataddhitaluki* introduces the *samāsānta* affix *ṬaC* to yield: *pañcago* + *a*. Our form *pañcagava* derives by application of 6.1.78 *eco' yavāyāvaḥ*. Affix *sU* introduced after the neuter nominal stem *pañcagava* will be replaced with *am* by rule 7.1.23 *ato' m*. Given the string *pañcagava* + *(sU* → *am)* = *pañcagava* + *am*, rule 6.1.107 *ami pūrvaḥ* will apply to yield: *pañcagav (a+a* → *a) m* = *pañcagavam*. One can also refer to *dvigu* derivates such as (438) *pañcendraḥ*, (440) *pañcaśaṣkuliḥ*, (441) *pañcaśaṣkulam*, and *pañcagoṇiḥ* in the appendix of volume II for additional details.

Recall that *pañcagava* forms part of (61) *pañcagavadhanaḥ*, a *tripada-bahuvrīhi* where the introduction of a *samāsānta* affix becomes obligatory (*nitya*). For, *vibhāṣā* still carries, and in the context of the following word (*uttarapade*), an optional *tatpuruṣa*, such as *pañcago*, would otherwise yield a *bahuvrīhi* compound with three constituents: *pañcagodhanaḥ*.

Examples (62) *pañcapūlī* and (63) *pañcakumāri* are derived as *samāhāra-dvigu* similar to *pañcagavam*. Given the string *pañcan* + *ām* + *pūla* + *ām* parallel to the analyzed form (*vigraha-vākya*) *pañcānāṃ pūlānāṃ samāhāraḥ* 'a collection, or grouping of five bunches' the resultant compound will be: *pañcapūla*. This, in turn, will receive the feminine affix *ṄīP* by rule 4.1.21 *dvigoḥ* for reasons that a *dvigu* compound terminating in *a* is used in the feminine (cf. *vt: akārāntottarapado dviguḥ striyāṃ bhāṣyate* ad 2.4.17 *sa napuṃsakam*). The final *a* of *pañcapūla*, before *ṄīP*, will be deleted by 6.4.148 *yasyeti ca*. Thus: *pañcapūl(a* → ∅*)* + *ī* = *pañcapūlī*.

Example (63) *pañcakumāri* contains *pañcan* + *ām* + *kumārī* + *ām* whereby we get *pañcakumārī* after *sUP*-deletion, and the extension of singular number (*ekavadbhāva*; 2.1.41 *dvigur ekavacanam*), and neuter gender (*napuṃsaka*; 2.4.17 *sa napuṃsakam*). Rule 1.2.47 *hrasvo napuṃsake...* then orders the long *ī* of *kumārī* replaced with the short to yield: *pañcakumār (ī* → *i)* =*pañcakumāri*

A nominal ending such as the nominative singular *sU* introduced after *pañcakumāri* will be deleted by rule 7.1.23 *svamor napuṃsakāt.*

2.1.52 *saṃkhyāpūrvo dviguḥ*

We have already seen how a *dvigu* such as *pañcapūlī* is derived. Our example (64) *pañcakapālaḥ* derives from *pañcan* + *suP* + *kapāla* + *suP* under the *taddhitārthe* condition of the preceding rule. The compound base *pañcakapāla* is assigned the name *dvigu*, and receives the *taddhita* affix *aṆ* in the sense of *saṃskṛtam* by 4.2.15 *saṃskṛtaṃ bhakṣāḥ*. Affix *aṆ* is subsequently deleted by rule 4.1.88 *dvigor lug anapatye* for reasons of occurring after a *dvigu* and being a *taddhita* with no denotatum of *apatya* 'offspring'. One can also derive (65) *pañcanāvapriyaḥ* under the condition of *uttarapade*, i.e., *priya* + *sU*. Our *dvigu* compound *pañcanau* will receive the *samāsānta* affix *ṬaC* by rule 5.4.99 *nāvo dvigoḥ*. Rule 6.1.78 *eco'yavāyāvaḥ* will replace the *au* of *nau* with *āv* before the *a* (of *ṬaC*) to yield: *pañcan (au→āv)* + *a* = *pañcanāva*. The rest of the rule applications are similar to examples already discussed in the preceding rule.

2.1.60 *sanmahatparamottamotkṛṣṭāḥ*

Example (66) *mahāpuruṣaḥ* is derived from *mahat* + *sU* + *puruṣa* + *sU* where, given *mahatpuruṣa*, rule 6.3.46 *ānmahataḥ samānā...* introduces *āT* (*ātva*) as a replacement for the final sound segment of *mahat* (cf. 1.1.52 *alo' ntyasya*). Thus, *maha (t→ā)puruṣa* = *mah (a+ā→ā)puruṣa* = *mahāpuruṣa.*

2.1.67 *yuvākhalatipalitavalinajaratībhiḥ*

Note that the feminine in *jaratī* does not restrict the formation of such compounds to feminine only. Thus we not only get (67) *yuvajaratī* from *yuvati* +*sU* + *jaratī* + *sU* and (68) *yuvakhalatī* from *yuvati* + *sU* + *khalatī* + *sU*, but also *yuvajaran* and *yuvakhalatiḥ*, etc. The derivational process does not offer any difficulty. The *n* of *yuvan* will be deleted by 8.2.7 *nalopaḥ prātipadikāntasya*. The feminine examples will also have *yuva* through *puṃvadbhāva* of 6.3.42 *puṃvad karmadhāraya....*

2.1.68 *kṛtyatulyākhyā ajātyā*

Examples such as (69) *bhojyoṣṇam* and (70) *pāniyaśītam* have *bhojya* and *pāniya* derived from verbal roots *bhuj* 'to consume' and *pā* 'to drink' with the introduction of the *kṛtya* affixes *ṆyaT* (3.1.124 *ṛhalor...*) and *anīyaR* (3.1.96 *tavyattavyānīyaraḥ*).

2.1.70 *kumāraḥ śramaṇādibhiḥ*

Note that one of the purposes of formulating this rule is to facilitate the preplacement of *kumāra*. The listing of nominals headed by *śramaṇā* includes both masculine as well as feminine forms. For reasons of coreferentiality (*sāmānādhikaraṇya*) *kumāra* is interpreted as specifying both *kumāra* and *kumārī*. Thus, feminine bases of the list will be combined with *kumārī* and the masculine will have both the choices (*...ye tu puṃliṅgāḥ tair ubhayathā*). Example (71) *kumāraśramaṇā* entails *puṃvadbhāva* again by 6.3.42 *puṃvat karmadhāraya....*

2.2.4 *prāptāpanne ca dvitīyayā*
This rule offers two sets of optional examples:

(72) *prāptajīvikaḥ* / (73) *jīvikāprāptaḥ*
(74) *āpannajīvikaḥ* / (75) *jīvikāpannaḥ*

The second example in each set is a *dvitīyā- tatpuruṣa* formed optionally to the first by this rule. Note also that the second example has *jīvikā* as the first constituent in the compound. This is made possible by assigning to *jīvikā* the term *upasarjana* by rule 1.2.44 *ekavibhakti cāpūrvanipāte*. This also causes the shortening of the long *ā* of *jīvikā* by rule 1.2.48 *gostriyor upasarjanasya* as in *prāptajīvikaḥ*. The first example of each set will have *prāpta* and *āpanna* as initial constituent.

2.2.5 *kālāḥ parimāṇinā*
Examples such as (76) *dvyahajātaḥ*, (77) *tryahajātaḥ*, and (78) *saṃvatsarajātaḥ* are like genitive *tatpuruṣa* compounds parallel to *dvyahaḥ jātasya*, *tryahaḥ jātasya*, and *saṃvatsaraḥ jātasya* respectively. For, their constituency entails *parimāṇaparimāṇi-sambandha* 'measure-measured' relationship. Thus, a person born (*parimāṇī*) is measured by a word denoting time (*kāla*), the measure (*parimāṇa*). The genitive in these examples obviously obtains after the word which denotes *parimāṇin*.

Note that *dvyahaḥ* and *tryahaḥ* are *samāhāradvandva* compounds parallel to *dvayor ahnoḥ samāhāraḥ* 'a collection of two days' and *trayor ahnoḥ samāhāraḥ* 'a collection of three days'. Given the strings: *dviahan* and *triahan*, rule 5.4.91 *rājāhasakhibhya...* introduces the *samāsānta* affix *ṬaC*. The result becomes: *dviahan + (Ṭ→Ø) a (C→Ø) = dvi + ahan + a*, and *tri + ahan + a*. Rule 6.4.145 *ahnaṣ...* now applies to delete the *ṭi* (1.1.64 *aco' ntyādi ṭi*) part of *ahan* of both the examples (cf. examples (35-36) under 2.1.23 *dviguś ca*). This yields: *dvi + ah (an→Ø) a* and *tri + ah (an→Ø) +a* which after the application of 6.1.77 *iko yaṇ aci* will produce: *dv (i→y) ah + a = dvyaha* and *tr (i→y) ah + a = tryaha* respectively. Note in this connection that *ahan* is not replaced with *ahna* because of the negation of rule 5.4.89 *na saṃkhyā....*

2.2.6 *naÑ*
The derivation of the negative *tatpuruṣa* compounds is fairly straightforward. However, the following rule- applications must be noted:

(*a*) 6.3.73 *nalopo nañaḥ*
'the *n* of *naÑ* is deleted before a following word (*uttarapade*)'

(*b*) 6.3.74 *tasmān nuḍ aci*
'*n (UṬ)* is introduced to that which follows the deletion and begins with a vowel (*aC*)'

Examples (79) *abrāhmaṇaḥ* and (80) *anaśvaḥ* parallel to *na brāhmaṇaḥ* and *na aśvaḥ* are given here to illustrate the application of the two rules just cited. A compound string such as *na + brāhmaṇa* will go through

the deletion of the *n* reducing the string to: *a* + *brāhmaṇa* = *abrāhmaṇa* where the (*b*) above will not apply because *brāhmaṇa* does not begin with a vowel. It will however, apply in case of a string such as (*n*→∅)*a* + *aśva* = *n* + *aśva*. This will entail the introduction of augment *nUṬ* to *aśva* at the beginning because of the *Ṭ* as an *it* (1.1.46 *ādyantau ṭakitau*). Thus, *a* + *n* (*UṬ*→∅) + *aśva* = *anaśva*.

2.2.15 *tṛjakābhyāṃ kartari*

Rules 2.2.15 through 2.2.17 have been interpreted differently by the *Kāśikā* and the *SK*. Since I have accepted the position of the *SK* I have also switched the examples. Thus we get examples (81) *apāṃ sraṣṭā* (82) *purāṃ bhettā*, (83) *vajrasya bharttā*, and (84) *saktūnāṃ pāyakaḥ* under this rule.

Note that *sraṣṭā*, *bhettā*, and *bharttā* are all derivates of *tṛC* (3.1.133 *ṇvultṛcau*) containing the strings *sṛj* + *tṛC*, *bhid* + *tṛC* and *bhṛ* + *tṛC*. Refer to derivation (697) *bhettā* in volume II for specific details. Deriving *sraṣṭā* from *sṛj* + *tṛC* entails some additional rule application. Rule 6.1.58 *sṛjidṛśoḥ* will introduce augment *a(M)* to yield: *sṛ* + *a* + *j* + *tṛ*; a subsequent application of 6.1.77 *iko yaṇ aci* will produce *s(ṛ→r)* + *a* + *j* + *tṛ*. Rule 8.2.36 *vraśca...* will replace *j* by *ṣ* which, in turn, cause the replacement of *t* of *tṛ* by *ṭ* via the application of rule 8.4.41 *ṣṭunā ṣṭuḥ*. We will now have *s* + *ra* + *ṣ* + *ṭṛ*. I have not shown here the application of rules on affix *tṛC*. One can easily find that in derivations of *cetā*, *bhettā*, and *chettā* in volume II.

Note that the derivation of *bharttā* entails *guṇa* similarly to *bhettā*. The derivations of *apām* and *purām*, genitive plurals denoting an object, from *ap* + *ām* and *pur*+*ām*, is straightforward. The derivation of *pāyakaḥ* in *saktūnāṃ pāyakaḥ* entails the introduction of affix *ṆvuL*. It also requires the application of rule 7.3.33 *āto yuk...* which will introduce *yUK* to yield: *pā* + *y* + *vu*. For deriving *pāyaka* from this string apply 7.1.1 *yuvor....* Thus, *pā*+*y*+(*vu*→*aka*) = *payaka* + *sU* = *pāyakaḥ*. Incidentally, the word *saktūnām* is derived from *saktu* + *ām* where rule 7.1.54 *hrasvanadyāpo nuṭ* introduces *n* (*UṬ*→∅) to yield: *saktu* + *n* + *ām*. Rule 6.4.3 *nāmi* will now apply to replace the short *u* of *saktu* with its long counterpart to produce: *sakt* (*u*→*ū*)*n* + *ām* = *saktūnām*.

The *m* of *saktūnām*, as well as that of *purām*, etc., will be replaced with *anusvāra* by rule 8.3.23 *mo' nusvāraḥ* before a consonant such as the *p* of *pāyakaḥ*.

2.2.16 *kartari ca*

Examples such as (85) *bhavataḥ śayikā* and (86) *bhavata āsikā* also form an exception to the formation of genitive *tatpuruṣa* compound. Note that *śāyikā* and *āsikā* are both derived by introducing affixes *ṆvuC* and *ṬāP*. Thus, affix *ṆvuC* is introduced after *śī*(*Ṅ* → ∅) to yield *śī* + *vu* which, through the application of rule 7.1.1 *yuvor anākau* (with 1.4.13 *yasmāt...*;

6.4.1 *aṅgasya*) becomes: *śī* + (*vu*→*aka*) = *śī* + *aka*. The string becomes *ś*(*ī*→*ai*) + *aka* = *śai* + *aka* after *vṛddhi* by rule 7.2.115 *aco' ñṇiti*. Rule 6.1.75 *eco' yavāyāvaḥ* then applies to yield: *ś*(*ai*→*āy*) + *aka* = *śāy* + *aka* = *śāyaka*, a nominal stem (1.2.46 *kṛttaddhita...*) terminating in a *kṛt* affix. Feminine affix *ṬāP* is now introduced by rule 4.1.4 *ajādyataṣ ṭāp* under the domain of 4.1.3 *striyām* read with 4.1.1 *ṅyāpprātipadikāt*. The *a* before *k* of *śāyaka* + *ā* is replaced with *i* by rule 7.3.44 *pratyayasthāt....* This will produce *śāy*(*a*→*i*)*ka* + *ā* from whence we ultimately get: *śāyikā*. One can similarly derive *āsikā*. The genitive in *bhavataḥ* derives from *bhavat* + *Ṅas* which produces *bhavataḥ* through *s*→*r*→ *visarga*.

2.2.17 *nityaṃ krīḍājīvikayoḥ*

Examples such as (87) *uddālakapuṣpabhañjikā* and (88) *vāraṇapuṣpapracāyikā* illustrate the genitive *tatpuruṣa* with the meaning of sport (*krīḍā*). Examples such as (89) *dantalekhakaḥ* and (90) *nakhalekhakaḥ* are cited for *jīvikā* 'livelihood'. Both *uddālakapuṣpabhañjikā* and *vāraṇapuṣpapracāyikā* entail *kṛt* derivates (*bhañjikā*; *pracāyikā*) in feminine. Thus, *bhañjikā* derives from *bhañj* + *ṆvuL* = *bhañj* + *aka*. The rest of the application of rules to derive *bhañjikā* from this string is similar to *śāyikā*. Remember, however, that affix *ṆvuL* is introduced with the denotatum of name (*saṃjñā*) by rule 3.3.109 *saṃjñāyām*. Furthermore, *bhañjikā* + *sU* combines with *puṣpa* + *ām* to yield: *puṣpabhañjikā* which is then combined with *uddālaka* + *ām* to produce *uddālakapuṣpabhañjikā*. This last is allowed by rule 2.2.8 *ṣaṣṭhī*. Similar rules apply in deriving *vāraṇapuṣpapracāyikā* where *pracāyikā* derives from *ciÑ* used with the preverb *pra*. Given *pra* + *ci* + (*vu*→*aka*), rule 7.2.115 *aco' ñṇiti* orders *vṛddhi* to produce: *pra*+*c*(*i*→*ai*)+*aka*. The *ai* is then replaced with *āy* through the application of 6.1.75 *eco' yavāyāvaḥ* to yield: *pra*+*c*(*ai*→*āy*)+ *aka* = *pracāyaka*. Deriving *pracāyikā* from *pracāyaka* + *ṬāP* does not offer anything new. Our examples *dantalekhakaḥ* and *nakhalekhakaḥ* both entail *lekhakaḥ* derived from *likh* + *ṆvuL* where *ṆvuL* gets replaced with *aka*. Of course, *i* of *likh* goes through the *guṇa* replacement *e* (7.3.86 *pugantalaghūpadhasya ca*). Both *nakha* and *danta* of the examples will be constituting a *pada* in the genitive as: *danta* + *ām* and *nakha* + *ām*.

2.2.18 *kugatiprādayaḥ*

This rule covers examples of compound formation generally known as *prādisamāsa*. Examples such as (91) *kupuruṣaḥ* and (92) *duṣpuruṣaḥ* are easy to derive. The *s* of *dus* in *duṣpuruṣaḥ* is replaced with *ṣ* by 8.3.41 *idudupadhasya cāpratyayasya*. Refer to the appendix of volume II for derivation of compound forms such as *ūrīkṛtam* and *ūrīkṛtya*.

There are quite a few *vārttika* under this rule which also provide for compounds such as (93) *atimālaḥ*, (94) *alaṃkumāriḥ*, (95) *niṣkauśāmbiḥ* and (96) *nirvārāṇasiḥ*. These examples have been fully derived in the appendix of volume II. The derivation of *alaṃkumāriḥ* proceeds from *kumārī* + *sU* +

alam + *sU* where *kūmārī* is termed an *upasarjana* by 1.2.44 *ekavibhakti cāpūrvanipāte*. The final long *ī* of *kumārī* will be replaced with short by 1.2.48 *gostriyor upasarjanasya*. Given *alamkumāri* the *m* will be replaced with *anusvāra* by 8.3.23 *mo' nusvāraḥ* to yield: *alaṃkumāri*. Deriving *alaṃkumāriḥ* via introduction of *sU* and subsequent *rutvavisarga* should not pose any difficulty.

2.2.19 *upapadam atiṅ*

One of the most celebrated examples of *upapadasamāsa* is (97) *kumbhakāraḥ*. The derivation contains the string *kumbha* + *ām* + *kāra* +*sU* though with a reminder that such a compound should be formed prior to the introduction of the nominal endings (cf. *PŚ* (76): *gatikārakopapadānāṃ kṛdbhiḥ saha samāsavacanaṃ prāk subutpatteḥ*). The genitive of *kumbha* + *ām* is inferred as denoting an object (*karman*) through the variable reference of 3.2.1 *karmaṇy aṇ* read with rule 3.1.92 *tatropapadaṃ saptamīstham*.

Rule 3.2.1 *karmaṇy aṇ* introduces affix *aṆ* to derive *kāra* via *vṛddhi* by rule 7.2.115 *aco' ñṇiti*. Thus: *(kṛ + a (Ṇ→∅) = k (ṛ→ār) + a = kāra*.

Examples such as (98) *aśvakrītī* and (99) *dhanakrītī* contain the strings: *aśva* + *Ṭā* + *krīta* + *sU* and *dhana* + *Ṭā* + *krīta* + *sU*. *Kāśikā* uses example (98) to illustrate how, if the compounds are formed after introducing the *sUP*, the introduction of *ṄīṢ* will be blocked. The compound formation is allowed by 2.1.32 *kartṛkaraṇe kṛtā bahulam*. Given the compound form *aśvakrīta*, rule 4.1.50 *krītāt karaṇapūrvāt* will introduce affix *ṄīṢ*. Rule 6.4.148 *yasyeti ca* will apply on *aśvakrīta* + *(Ṅ→∅)ī(Ṣ→∅)* to delete the final *a* of *aśvakrīt(a→∅)*, a form termed *bha*, under the following *ī*. This will produce the compound base *aśvakrītī* after which a *sU* may be introduced only for deletion by 6.1.66 *halṅyābbhyo....*

2.2.24 *anekam anyapadārthe* ... 2.2.25 *saṃkhyayā...*

Refer to many examples of *bahuvrīhi* derivates in the appendix. For a typical *bahuvrīhi* such as *citraguḥ* parallel to *citrā gāvo yasya* 'he who owns brindled cows' refer to derivation (432) there.

Examples such as (100) *upadaśāḥ* parallel to *daśānāṃ samīpe ye* 'those which are in the vicinity of ten' contain a string such as: *up* + *sU* + *daśan* + *ām* where a *bahuvrīhi* compound is ordered by this rule. The resultant form *upadaśan* (after *sUP*-deletion) receives the *samāsānta* affix *ḌaC* by 5.4.73 *bahuvrīhau saṃkhyeye....* This yields *upadaśan* + *(Ḍ→∅)a(C→∅)* = *upadaśan* + *a* where the *aṅga*-final *an* is deleted by 6.4.143 *ṭeḥ*. The compound base *upadaś* + *a* = *upadaśa* can now take the nominative plural ending *Jas* where, after *it*-deletion of *J*, rule 6.1.102 *prathamayoḥ pūrvasavarṇaḥ* orders *pūrvasavarṇadīrgha*, a homogenious long vowel replacement similar to the first. That is: *upadaśa* + *(J→∅) as* = *upadaś (a+a→ā) s* = *upadaśās*. The preceding form produces *upadaśāḥ* through *rutva-visarga*.

Similar rule application is required for deriving (101) *upaviṃśāḥ* parallel to *viṃśateḥ samīpe ye*. Note, however, that rule 6.4.142 *ti viṃśater ḍiti* will delete the *ti* of *viṃśati*. Rule 6.1.97 *ato guṇe* will apply on *upaviṃśa* + *a* to produce *upaviṃśā* via *parasavarṇadīrgha*, a long vowel replacement similar to the following vowel of a sequence. One can similarly also derive (102) *āsannadaśāḥ* and (103) *adūradaśāḥ*, etc. Deriving (104) *dvitrāḥ* from *dvitr(i→∅)* + *ḌaC* + *Jas* through *ṭi*-deletion of *dvitri*, etc., is not problematic. An example such as (105) *tricaturāḥ* receives affix *aC* as opposed to *ḌaC* in view of the proposal of the *vārttika* (ad 5.4.73 *bahuvrīhau...*): *caturo' cprakaraṇe tryupābhyām upasaṃkhyānaṁ*. This introduction of affix *aC* also facilitates the non-deletion of the *ṭi* part by rule 6.4.143 *ṭeḥ*.

2.2.30 *upasarjanaṃ pūrvam*

It is very easy to understand the derivational consequences of this as well as the following rules from the details of compound derivations already discussed. Refer to particular examples such as *akṣaśauṇḍaḥ*, *śaṅkulākhaṇḍaḥ*, and *rājapuruṣaḥ*, etc., in the appendix of volume II.

2.3.1 *anabhihite*...2.3.73 *caturthī cāśiṣya...*

Note that these rules mostly relate to conditions under which a nominal ending denoted by the abbreviatory term *sUP* (4.1.2 *svaujasmauṭ...*) can be introduced after a nominal stem (1.2.45 *arthavad adhātur...*; 1.2.46 *kṛttaddhita...*) to derive nominal *pada* 'word'. I have already shown the derivation of numerous nominal words in the appendix of volume II. Quite a few such derivates will be derived in the next two volumes. I have therefore not shown any derivations here.

2.4.3 *anuvāde caraṇānām*

Examples such as (106) *udagāt* and (107) *pratyaṣṭhāt* as in *udagāt kaṭhakālāpam* and *pratyaṣṭhāt kaṭhakauthukam* are *LUṄ* derivates of verbal root *iṆ*, used with the preverb *ud*, and *sthā* used with the preverb *prati*, respectively. These derivations in many ways follow the patterns of numerous *LUṄ* derivates already derived in the appendix of volume II. Refer to *akariṣyat*, *acīkarat*, *acaiṣīt*, and *ajīharat*, etc., for general operations relative to *LUṄ*. Note that *sIC* of these examples will be deleted by rule 2.4.77 *gātisthā....* This will leave: *ud+a+i+t* where *i* will be replaced with *gā* by 2.4.45 *iṇo gā luṅi*.

2.4.5 *adhyayanato' viprakṛṣṭa...*

Examples such as (108) *padakakramakam* entails the introduction of affix *vuN* by rule 4.2.61 *kramādibhyo vun* after both *pada* and *krama* to derive *padaka* and *kramaka*. Affix *ṭhaK* is similarly introduced after *vṛtti* to derive (109) *vārttika* by rule 4.2.60 *kratūkthādi....* Follow the derivation of (197) *dādhikam* in the appendix of volume II to derive *vārttika* from *vṛtti* + *ṭhaK*.

2.4.11 *gavāśvaprabhṛtīni ca*

Note that examples such as (110) *gavāśvam* are listed in the *GP* with *ekavadbhāva* 'treatment as if singular'. One can understand though that the *dvandva* compound can be allowed by rule 2.2.29 *cārthe dvandvaḥ* in addition to the *avaṄ* replacement for *o* of *go* by 6.1.119 *avaṅ sphoṭāyanasya* to yield *gavāśvam*. Other examples should be similarly understood.

2.4.29 *rātrāhnāhāḥ puṃsi*

Note that examples (111) *dvirātraḥ*, (112) *trirātraḥ*, and (113) *catūrātraḥ* are derived by combining *dvi*, *tri* and *catur* with *rātri*, *ahna* and *aha* in view of 2.1.51 *taddhitārthotlarapada*.... Rule 5.4.87 *ahaḥ sarvaika*... introduces the *samāsānta* affix *aC*. Rule 6.4.148 *yasyeti ca* will as usual delete the *bha*-final *i*, or *a*. Our present rule assigns masculine to compound bases terminating in the *samāsānta* affix (cf. *Kāś: kṛtasamāsāntānāṃ nirdeśaḥ*). This assignment of masculine is necessary in view of *paravalliṅgatā* 'assignment of gender in consonance with the gender of the following constituent' which may obtain due to *rātri* (feminine) and *ahna* (neuter).

Note that *catūrātraḥ* entails the application of 8.3.14 *ro ri* whereby the *r* of *catur* is deleted. The *u* of *catu* is replaced with *ū* to yield *catūrātra* via the application of rule 6.3.111 *ḍhralope pūrvasya*....

An example such as (114) *pūrvāhṇaḥ* is derived by combining *pūrva* + *sU ahan* + *Ṅas* by rule 2.2.1 *pūrvaparādharottara*.... A combined base *purva* + *ahan* receives the *samāsānta* affix *ṬaC* by 5.4.91 *rātrāha*.... Rule 5.4.88 *ahno' hna etebhyaḥ* orders the *ahan* of *pūrva* + *ahan* + *(Ṭ)a(C)* to be replaced with *ahna*. Rule 6.4.148 *yasyeti ca* deletes the final *a* of *ahna* before the *a* of *ṬaC* to yield: *pūrva* + *ahn* + *a* = *pūrvāhna*. One can derive *pūrvāhṇaḥ* from *pūrvāhna* + *sU* via *rutva-visarga* where the *n* of *pūrvāhna* will be replaced with *ṇ* by rule 8.4.7 *ahno' adantāt*. Similar rules apply in deriving (115) *aparāhṇaḥ* and (116) *madhyāhnaḥ* where this last example does not get its *n* replaced with *ṇ* because of the lack of a preceding *r*.

2.4.36 *ado jagdhir lyapti kiti*

This rule allows a replacement in *jagdh* for verbal root *ad* 'to consume' to derive (117) *prajagdhya*, (118) *vijagdhya*, (119) *jagdhaḥ*, and (120) *jagdhavān*. Our first example has verbal root *ad* used with the preverb *pra*. The affix occurring after *ad* is *LyaP* for which see the derivation of (195) *prakṛtya* in the appendix of volume II. The application of this rule will produce: *pra* + *(ad* → *jagdh)* + *(L*→*0) ya (P*→*0)* = *prajagdhya*. Example (118) *vij˘gdhya* follows the same pattern.

Example (119) *jagdhaḥ* is derived by introducing the *niṣṭhā* suffix *Kta* (1.1.28 *ktaktavatū niṣṭhā*; 3.2.102 *niṣṭhā*) after verbal root *ad*. Given the replacement in *jagdh* for *ad* we get: *(ad* → *jagdh)* + *(K*→*0) ta* = *jagdh* + *ta*. The *t* of *ta* is replaced with *dh* by rule 8.2.40 *jhaṣastathor*.... The final *dh* of *jagdh* of *jagdh* + *dha* will then be replaced with *d* by rule 8.4.53 *jhalāṃ jaś jhaśi*. This will produce *jag(dh*→*d)* + *dha* = *jagd* + *dha* on which rule

8.4.65 *jharo jhari savarṇe* applies. The result is: *(d→∅) + dha = jagdha;* a nominal stem after which *sU* can be introduced to derive *jagdhaḥ* through *rutva-visarga.*

Refer to the derivation of (30) *citavān* in the appendix of volume II for deriving *jagdhavān.* Note that some operations relative to the change of *t→dh, dh→d,* and *d→∅* as explained in case of *jagdhaḥ* will also be applicable on *(ad→jagdh) + (K→∅) tavat (U→∅) = jagdh + tavat.*

2.4.37 *lṛṅsanor ghasḷ*

This rule introduces *ghasL* as a replacement for *ad* to derive forms such as (121) *aghasat,* (122) *aghasatām,* (123) *aghasan*; and (124) *jighatsati,* (125) *jighatsataḥ,* (126) *jighatsanti.* These derivations are not very different from the many *LUṄ* and *saN* derivations already discussed in the appendix of volume II. Verbal root *ad* will be replaced with *ghas(L→∅)* before affixes *LUṄ* and *sa(N→∅).* For arriving at the string *aṬ + ghas + CLI + t* refer to the derivation of (18) *acaiṣīt* in the appendix of volume II. The *CLI* will then be replaced with *a (Ṅ→∅)* by rule 3.1.55 *puṣādidyutādi...* on account of *L* as an *it.* This will produce: *a + ghas + a + t = aghasat.* Note that the augment *aṬ* has been introduced here by rule 6.4.71 *luṅlaṅlṛṅ....* This introduction of the augment must be done subsequent upon the replacement of *ad* by *ghasL.* For, *ad* begins with a vowel, and consequently, 6.4.72 *āḍ ajādīnām* may introduce the augment *āṬ.* This obviously will produce the wrong form *āghasat.* This introduction of *āṬ* can be blocked if *ghasL* replaced *ad* first. Refer to the derivation of (467) *apacatām* (appendix vol. II) for deriving (122) *aghasatām.* Of course, keeping in mind the replacement relative to this rule. Deriving (123) *aghasan* from *aṬ + ghas + a + (jh→ant)* should not be problematic. Rule 6.1.97 *ato guṇe* will order a single replacement in place of the vocalic sequence *a+a* to yield: *aghas + ant.* The *t* of the sequence *nt* will be deleted by 8.2.23 *saṃyogāntasya lopaḥ.*

The next set of three examples all entail affix *saN* and subsequent doubling (*dvitva*) for which refer to derivation (304) *rurudiṣati* in the appendix of volume II. Note that doubling will take place after the replacement in *ghasL.* This will produce: *ghas + ghas + sa* where *sa* will be termed an *ārddhadhātuka* by 3.4.114 *ārddhadhātukaṃ....* This will occasion the introduction of augment *iṬ* by rule 7.2.35 *ārddhadhātukasyeḍ...* which, in turn, will be blocked by rule 7.2.10 *ekāc upadeśe....* Note that doubling and the application of rule 7.4.60 *halādi śeṣaḥ* will produce *gha(s→∅) + ghas + sa.* Rule 7.4.62 *kuhoś cuḥ* now applies to yield: *(gh→jh)a + ghas + sa = jha + ghas + sa.* Rule 8.4.54 *abhyāse car ca* will further replace the *jh* with *j* to produce *ja + ghas + sa.* The *a* of *ja* will then be replaced with *i* under the provision of rule 7.4.79 *sany ataḥ.* Rule 7.4.49 *saḥ syārddha...* will now replace the *s* of *ghas* in *ji + ghas + sa* with *t* to produce: *ji + ghat + sa = jighatsa,* a verbal root by 3.1.32 *sanādyantā....* One can easily

derive *jighatsati* from *jighatsa* + *ŚaP* + *(LAṬ* →*tiP)* where the sequence *a*+*a* will again be replaced with *a* by 6.1.96 *ato guṇe*. Examples (125) *jighatstaḥ* and (126) *jighatsanti* can be derived similarly to *pacataḥ* and *pacanti* (cf. appendix of volume II) from *jighatsa* + *LAṬ*.

2.4.40 *liṭy anyatarasyām*

Refer to derivations (231) *jakṣatuḥ* and (232) *jakṣuḥ* in the appendix of volume II. Examples such as (127) *ādatuḥ* and (128) *āduḥ* are optional with no replacement of *ad* by *ghas*. Examples such as (129) *jaghāsa* and (130) *āda* are also optional where *jaghāsa* is derived with the replacement for *ad* in *ghas*. These derivations both start with *ad* + *a* where *a* is a replacement of *tiP* which in itself is a replacement of *LAṬ*. Doubling and deletion by 7.4.60 *halādi...* will produce the two strings as follows: *gha* + *ghas* + *a* and *a* + *ad* + *a*. The first will produce *jaghas* + *a* after changes similar to *jighatsati*. Note, however, that *ja* does not change into *ji* in this case. The penultimate *a* of *jaghas* of *jaghas* + *a* will be lengthened by rule 7.2.116 *ata upadhāyāḥ* to produce *jagh(a*→*ā)s* + *a* =*jaghāsa*. Our optional string *a* + *ad* + *a* will be subject to the application of rule 7.4.70 *ata ādeḥ*. This will replace the first *a* with *ā*. Rule 7.2.116 *ata upadhāyāhḥ* will now apply on *ā* + *ad* + *a* to produce *ā* + *ād* + *a*. Finally, rule 6.1.101 *akaḥ savarṇe dīrghaḥ* will replace the sequence *ā*+*ā* to produce *(ā*+*ā*→*ād)* + *a* = *āda*.

2.4.41 *veño' nyatarasyām*

This rule accounts for the optional *LIṬ* examples of *veÑ* such as (131) *uvāya*, (132) *ūvatuḥ*, (133) *ūvuḥ*, and (134) *ūyatuḥ* and (135) *ūyuḥ*. All these derivations begin with *ve(Ñ*→*0)* + *LIṬ* where *LIṬ* gets replaced with *tiP*, etc., only to be further replaced with *ṆaL*, *atus* and *us* of 3.4.82 *parasmaipadānāṃ....* Note, however, that our present rule orders the replacement *vay* for *veÑ* before the *ārdhdhātuka* affix *LIṬ*. The *parasmaipada* replacements such as *ṆaL*, etc., will follow. Our string *vay* + *(ti(P*→*0)* → *(Ṇ*→*0)a(L*→*0))* = *vay* + *a* will go through the application of doubling, *saṃprasāraṇa* (6.1.17 *liṭy abhyāsasyobhayeṣām*) and 7.4.60 *halādi...* to yield: *vay* + *vay* + *a* = *va* + *vay* + *a* = *(v*→*uay* + *vay* + *a)* = *uvay* + *a*. Rule 7.2.116 *ata upadhāyāḥ* now yields *uv(a*→*ā)y* + *a* = *uvāya*.

Our next form *ūvatuḥ* is derived from *vay* + *atus* where *atus* is the replacement for the third person dual *parasmaipada* ending *tas*. The *y* of *vay* + *atus* escapes the *samprasāraṇa* available from rule 6.1.16 *grahijyāvayi....* Instead, it is replaced with *v* to change the string to *vav* + *a* by rule 6.1.39 *vaś cānyatarasyām*. The processes of doubling, the *samprasāraṇa* of the initial *va* and *halādiśeṣa* will now produce *u* + *uv* + *atus*. The desired form *ūvatuḥ* can then be produced by the application of *savarṇadīrgha* (6.1.101 *akaḥ savarṇe...*) and *rutva-visarga*. Note here that *v* as a replacement for the *y* of *vay* by rule 6.1.39 *vaścānyatarasyāṃ kiti* is optional. In the absence of availing that option we will get *ūyatuḥ* parallel to *ūvatuḥ*. We

will also end up with two optional forms *ūvuḥ* and *ūyuḥ* deriving from *vay* + *us* in the plural where *us* is a *parasmaipada* replacement for *LIṬ* via *jhi*.

Note further that the provisions of rule 2.4.41 *veño vayi* are also optional. If this option is not availed we will get (136) *vavau*, (137) *vavatuḥ* and (138) *vavuḥ*. The root-final *e* in all these three examples is replaced with *ā* with reference to rule 6.1.45 *adeca upadeśe*.... The *a* of *NaL* in *vā* + *(LIṬ→NaL)* = *vā* + *a* is replaced with *au* by 7.1.34 *āta au ṇalaḥ*. The final *a* of *vā* is then deleted by 6.4.64 *āto lopa iṭi ca*. The *samprasāraṇa* is here blocked by rule 6.1.40 *veñaḥ*. This should facilitate the derivation of these forms with no difficulty.

2.4.42 *hano vadha liṅi*

Examples such as (139) *vadhyāt*, (140) *vadhyāstām*, and (141) *vadhyasuḥ* involve *vadha* as the replacement for verbal root *han* before affix *LIṄ* introduced as per rule 3.3.173 *āśiṣi liṅloṭau*. The resultant string *(han→vadha)* + *(LIṄ→ti(P→∅)* = *vadha* + *ti* receives *yāsUṬ* as the augment by rule 3.4.103 *yāsuṭ parasmaipade*.... This will produce *vadha* + *yās* + *t*. Rule 3.4.100 *itaś ca* will as usual delete the *i* of *ti*. The final *a* of *vadha* of the resultant string *vadha* + *yās* + *t* will be deleted by rule 6.4.48 *ato lopaḥ*. This will produce *vadh(a→∅)* + *yās* +*t* where an application of rule 8.2.29 *skoḥ saṃyogādyor*... deletes the *s* to yield: *vadh* + *yā(s→∅)* + *t* = *vadhyāt*.

The derivation of *vadhyāstām* from *(han→vadha)* + *(LIṄ→tas)* = *vadha* + *yās (UṬ→∅)* + *tas* =*vadhyās* + *tas* is easy. The *tas* is here replaced with *tām* to produce *vadhyāstām* by rule 3.4.101 *tasthasthamipāṃ*.... The plural form *vadhyāsuḥ* is similarly derived from *vadha* + *yās* + *jhi* where rule 3.4.108 *jher jus* orders *(J→∅)us* to replace *jhi* to produce: *vadha* + *yās* + *us*. An application of rules as shown will turn *vadha* + *yās* + *us* into *vadhyāsuḥ*.

2.4.43 *luṅi ca*

Refer to the derivation of (211) *avadhīt* in the appendix of volume II. Examples (142) *avadhiṣṭām* and (143) *avadhiṣuḥ* are third personal dual and plural forms containing: *avadh (a→∅)* + *i* + *s* + *tas* = *avadh* + *i* + *s* + *tas* and *avadh* + *i* + *s* + *jhi* where *tas* and *jhi* are dual and plural third personal replacements for *LUṄ*. Our *tas* gets replaced with *tām* to yield: *avadh* + *i* + *s* + *tām* where rule 8.3.59 *ādeśapratyayoḥ* orders the *s* to be replaced with *ṣ*. This, in turn, will cause the application of rule 8.4.41 *ṣṭunā ṣṭuḥ* whereby *t* of *tām* will be replaced with *ṭ*. Thus, *avadhi(s→ṣ)* + *(tās→ṭām))* = *avadhiṣṭām*. The plural form *avadhiṣuḥ* entails an additional application of rule 3.4.109 *sijabhyasta*... whereby the *jhi* of *avadhis* + *jhi* is replaced with *Jus* to derive *avadhiṣ* + *u(s→r→ḥ)* = *avadhiṣuḥ* via *rutva-visarga*.

2.4.45 *iṇo gā luṅi*

This rule replaces verbal root *i(N→∅)* with *gā* to derive the *LUṄ*-

derivates (144) *agāt* and (145) *agāyi*. The first is derived from *aṬ* + *gā* + *ti* where *tiP* replaces *LUṄ*. The *i* of *ti* is deleted by 3.4.100 *itaś ca* and the *aṬ* augment is introduced as usual by rule 6.4.71 *luṅlaṅlṛṅ*.... Note that this derivation will also involve the introduction *CLI* and its replacement with *sIC*. The *sIC* of the resultant string *a+gā+s+t* will be deleted by 2.4.77 *gātisthā*.... The next example *agāyi* derives from *a(Ṭ)* + *(iṆ→gā)* + *(C)i(Ṇ)* + *t* where 3.1.66 *ciṇ bhāvakarmaṇoḥ* introduces *CiṆ*. Our string *a+gā+i* receives the augment *yUK* by rule 7.3.33 *āto yuk ciṇ*.... It finally goes through the deletion of its *t* by rule 6.4.104 *ciṇo luk*.

2.4.47 *sani ca*

Our examples (146) *jigamiṣati* is *saN*-derivate of verbal root *iṆ*. This rule turns *i* + *sa* into *gam* + *sa* which through doubling produces *gam* + *gam* + *sa*. The application of rule 7.4.60 *halādi*... yields *ga* + *gam* + *sa*. The *iT* will be introduced by rule 7.2.35 *ārdhadhātukasyeḍ*.... Additionally, *ga* + *gam* + *i(Ṭ→0)* + *sa* will have the *a* of *ga* replaced with *i* by 7.4.79 *sany ataḥ*. This will give us *gigamisa* where 7.4.62 *kuhoś cuḥ* will turn the initial *g* into *j*. Rule 8.3.59 *ādeśa pratyayayoḥ* will replace the *s* with *ṣ*. Thus, *J(a→i)+gam+i+(s→ṣ)a* = *jigamiṣa*. I have here shown only the partial derivation of *jigamiṣati* which derives from *(i→gam)* + *saN))* + *LAṬ*. Refer to the derivations of similar *saN*-derivates such as (304) *rurudiṣati*, (305) *vividiṣati*, (307) *jighṛkṣati*, (309) *pipṛcchiṣati* and (312) *cikīrṣati*, etc., in the appendix of volume II for systematic derivational details in steps. Deriving (147) *jigamiṣataḥ* and (148) *jigamiṣanti* with *tas* and *jhi* as replacements for *LAṬ* should not pose any difficulty.

2.4.48 *iṅaś ca*

Our example (149) *adhijigāṃsate* entails the *saN*-derivate of verbal root *iṆ* used with the preverb *adhi*. Given *adhijigam* + *sa* + *LAṬ* where *adhijigam* is produced after replacing *iṆ* with *gam* and performing operations such as doubling, *cutva*, and *itva* (such as: *(g→j)(a→i)gam*) before *saN*. The second *a* of *adhijigam* goes through *ātva* 'replacement in *ā*' of rule 6.4.16 *ajjhanagamāṃ sani*. The *m* of *adhijig(a→ā)m* + *sa* is replaced with *anusvāra* by 8.3.24 *naścāpadāntasya*.... This will yield *adhijigāṃsa* which, when followed by *LAṬ*, will produce *adhijigāṃsate* similarly to many third person singular *ātmanepada* forms already derived. The same can be said about deriving the third personal dual and plural examples (150) *adhijigāṃsete* and (151) *adhijigāṃsante* with the *ātmanepada* endings replacing *LAṬ*.

2.4.49 *gāṅ liṭi*

The three examples under this rule again are third personal forms of *ātmanepada*: (152) *adhijage*, (153) *adhijagāte* and (154) *adhijagire*. The first form derives from *adhi(i→gā)* + *(LIṬ→ta)*. The *ta* is subsequently replaced with *eŚ* by rule 3.4.81 *liṭastajhayor*.... The *ā* of *gā* is deleted by rule 6.4.64 *āto lopa iṭi ca*. This produces *g(ā→0)* + *(ta→e(Ś→0)* = *g* + *e* which, read with the preverb *adhi*, will be: *adhi* + *g* + *e*. Note that doubling takes

place without the preverb. The doubling is allowed by rule 6.1.8 *liṭi dhātor anābhyāsasya* with *sthānivadbhāva* 'treating the substitute as if it was the substituendum' facilitated by 1.1.59 *dvirvacane' ci.* This will produce *adhigā* + *g* + *e*. The shortening (*hrasva*; 7.4.59 *hrasvaḥ*) of *ā* of *adhigā* followed by the *cutva* of *g*→*j* will produce *adhi(g*→*j)(ā*→*a)ge* = *adhijage.* Refer to earlier derivational details for specific rule application relative to doubling (*dvitva*). The next example *adhijagāte* derives from *adhijag* + *āte* where the dual *ātmanepada* ending *ātām* goes through the replacement of its *ṭi* (1.1.64 *aco' ntyādi ṭi*) by *e* by rule 3.4.79 *ṭit ātmanepadānāṃ...*:

Our last example *adhijagire* involves the replacement of third personal plural *ātmanepada* ending *jha* with *ireC* in view of rule 3.4.81 *liṭastajhayor...* to yield *adhijag* + *ire* (*C*→∅) = *adhijagire.*

2.4.50 *vibhāṣā luṅlṛṅoḥ*

Refer to derivations (266) *adhyagīṣṭa*, (267) *adhyagīṣātām*, and (268) *adhyagīṣata* in the appendix (pp. 425–27) of volume II. The derivation of (155) *adhyaiṣṭa*, (156) *adhyaiṣātām* and (157) *adhyaiṣata* is optional to the preceding. The root *i* in this case is not replaced with *gā*. Given *adhi*+*i*, the root gets the augment *āṬ* (6.4.72 *āḍ ajādīnām*). Rule 7.3.84 *sārvadhātukārdhadhātukayoḥ* will apply on *adhi* + *ā* (*Ṭ*→∅) + *i* + *ṣ* + *t* to require *guṇa* of *i* to produce: *adhi*+*ā*+*e*+*ṣṭa*. Rule 6.1.90 *āṭaś ca* will replace the sequence *ā*+e with a single *vṛddhi* vowel *ai*. Rule 6.1.77 *iko yaṇ āci* will now apply on *adhi*+*ai*+*ṣṭa* to produce *adhyaiṣṭa* via replacing the *i* of *adhi* with *y*. The derivation of *adhyaiṣātām* begins with *adhyaiṣ* + *ātām* where *LUṄ* is replaced with the third person dual *ātmanepada* ending *ātām*. The plural form *adhyaiṣata* is easy to derive with reference to *adhyagīṣata.*

The following is a select list of two sets of *LṚṄ* derivates:

(158) *adhyagīṣyata*, (159) *adhyagīṣyetām*, (160) *adhyagīṣyanta*; and (161) *adhyaiṣyata*, (162) *adhyaiṣyetām*, (163) *adhyaiṣyanta.*

The first example (158) *adhyagīṣyata* derives from the string *adhi*+*aṬ*+(*i*→*gā*)+(*LṚṄ*→*ta*) where *LṚṄ* has been introduced by rule 3.3.139 *liṅnimitte....* Rule 3.1.33 *syatāsī...* introduces affix *sya* after the *gāṄ* replacement of *i* to produce: *adhi* + *a* + *gā* + *sya* + *ta*. Rule 6.4.66 *ghumāsthā...* (read with 1.2.1 *gāṅkuṭādi...*) will then replace the *ā* of *gā* with *ī*. This will produce: *adhi* + *a* + *gī* + *sya* + *ta*. Rule 6.1.77 *iko yaṇ aci* will replace the *i* of *adhi* with *y*; and 8.3.59 *ādeśapratyayayoḥ* will change the *s* of *sya* with *ṣ*. Thus: *adh(i*→*y)* + *a* + *gī* + (*s*→*ṣ)ya* + *ta* = *adhyagīṣyata*. An optional form to this will be (161) *adhyaiṣyata* deriving from *adhi* + *āṬ* + *i* + *sya* + *ta* where *āṬ* will be the augment because the root, in the absence of a replacement in *gāṄ*, will still be *ajādi* 'vowel-initial'. Other details such as single *vṛddhi* replacement *ai* for *ā* + *i*; the *y* replacement for the *i* of *adhi*, and the *s*→*ṣ* change in *sya* are easy to understand. The dual form (159) *adhyagīṣyetām* derives from *adhyagīṣya* + *ātām* where the *ā* of *ātām* gets

replaced with *iy* of rule 7.2.81 *āto ṅitaḥ*. Rule 6.1.87 *ād guṇaḥ* then applies on *adhyagīṣya* + (*ā→iy*) *tām* = *adhyagīṣya* + *iy* + *tām* to produce: *adhyagīṣy* (*a+i→e*) *y* + *tām* where 6.1.66 *lopo vyor vali* will delete the second *y*. Thus: *adhyagīṣye*(*y*→∅) + *tām* = *adhyagīṣyetām*. Note that the form *adhyagiṣya*, which I cite here, before *ātām* is just for convenience. One has to arrive at the derivation of that form gradually through step by step procedures beginning with *iṆ* + *LṚṄ*, etc. Follow similar procedures to derive other examples.

2.4.51 *ṇau ca saṃścaṅoḥ*

This rule orders *gāṄ* as an optional replacement for *iṄ* relative to (164) *adhijigāpayiṣati*, (165) *adhyāpipayiṣati*, (166) *adhyajīgapat* and (167) *adhyāpipat*.

The first example derives from (*adhi* + (*i*(*Ṇ*→∅)→*gā*)) + (*Ṇ*→∅)*i*(*C*→∅))) + *sa* (*N*→∅)))) where 3.1.26 *hetumati ca* first introduces affix *ṆiC*. The result of this, i.e., *i+i* used with *adhi*, is termed a verbal root by 3.1.32 *sanādyantā*.... Affix *saN* is introduced by rule 3.1.7 *dhātoḥ karmaṇaḥ*...after *adhi*+ *gā* +*i* where our present rule replaces *i* with *gā*. Augment *pUK* is then introduced to the root by rule 7.3.36 *arttihrīvlīri*... to yield: *adhi* + *gā* + *p*(*UK*→∅) + *i* + *sa*. Rule 7.2.35 *ārddhadhātukasyeḍ*... to yield: *adhi* + introduce *i*(*Ṭ*=∅) before the *ārddhadhātuka* affix *sa*: *adhi*+*gā* + *p* + *i* + *i* + *sa*. The operation of doubling will now take place under the provision of rule 6.1.9 *sanyaṅoḥ* read with 6.1.1 *ekāco dve*.... Note that doubling will affect *gāp* to produce: *adhi* + *gāp* + *gāp* + *i* + *i* + *sa*. That is, augment *pUK* will be treated as part of the verbal root for purposes of doubling. This same, as usual, will not be true of the preverb *adhi*. The application of rules 6.1.4 *pūrvo' bhyāsaḥ* and 7.4.60 *halādi śeṣaḥ* will change the string to: *adhi* + *gā*(*p*→∅) + *gāp* + *i* + *i* + *sa*. Rule 7.4.62 *kuhoś cuḥ* will cause *cutva* of the *g* of *gā* to yield: *adhi* + (*g*→*j*)*ā* + *gāp* + *i* + *i* + *sa*. Rule 7.4.79 *sany ataḥ* apply *itva* whereby we get: *adhi* + *j*(*ā* →*i*) + *gāp* + *i* + *i* + *sa* = *adhijigāpi* + *i* + *sa*. Rule 7.3.84 *sārvadhātukārddhadhātukayoḥ* will order *guṇa* for the final *i* of *adhijigāpi* to produce *adhijigāpe* which, in turn, will yield *adhijigāp*(*e*→*ay*) + *i* + *sa*, through the application of 6.1.78 *eco' yavāyāvaḥ*. Our resultant string *adhijigāpayi*(*s*→*ṣ*)*a* = *adhijigāpayiṣa* (through the application of 8.3.59 *ādeśapratyayayoḥ*) will still be a termed a verbal root by 3.1.32 *sanādyantā dhātavaḥ*. Consequently, *LAṬ*→*tiP*, and *ŚaP* introduced after *adhijigāpayiṣa* will produce *adhijigāpayiṣati*.

We will have (165) *adhyāpipayiṣati* if the option of *gā* replacement of verbal root *i* is not availed. It will produce the verbal root *adhyāpipayiṣa* from the basic string: *adhi* + *i* + *i* + *sa*. Affix *ṆiC* will condition the *i* of the root to be replaced with its *vṛddhi* counterpart *ai* via 7.2.115 *aco' ñṇiti*. Rule 6.1.48 *krīṅjīnāṃ*...will then order *ā* as a replacement (*ātva*) to yield: *adhi* + *āpi* + *i* + *sa*. The application of *guṇa* and its replacement in *ay*, similar to the preceding example, will produce: *adhi* + *āpayiṣa*. The next

form *adhi* + *ā*+ *pi* + *payiṣa* will be produced through doubling under the provisions of rules 6.1.2 *ajāder dvitīyasya* read with 1.1.59 *dvirvacane' ci*. This doubling would involve *rūpātideśa* whereby its result will be: *pi* + *pay*. Finally, *adh(i→y)* + *āpipayiṣa* = *adhyāpipayiṣa* will produce: *adhyāpipayiṣati* similar to the preceding example.

Form (166) *adhyajīgapat* is a *LUṄ* derivate of verbal root *iṄ* used with the preverb *adhi*, and the causative suffix *ṆiC*. The *i* of *adhi* + *i* + *ṆiC* is replaced with *gā* to produce: *(adhi* + *(i→gā))* + *(Ṇ→∅)i(C∅)))* =*adhi* + *gā* + *i*. Rule 3.2.10 *luṅ* introduces affix *LUṄ* to realize: *adhi* + *gā* + *i* + *LUṄ* = *adhi* + *gā* + *i* + *LUṄ*. Two additional rule applications (3.1.43 *cli luṅi* and 3.1.48 *ṇiśridrusrubhyaḥ...*) will change the string to: *adhi* + *gā* + *i* + *(CLI→(C→∅) a (Ṅ→∅)* + *i LUṄ* = *adhi* +*gā* + *i* + *a* + *LUṄ*. Rule 3.4.78 *tiptasjhisipthasthа...*read with 3.4.77 *lasya* will, of course, replace *LUṄ* with *ti(P→∅)* to yield *adhi* + *gā* + *i* + *a* + *ti*. A subsequent application of rule 3.4.100 *itaś ca* will reduce the *ti* to *t*. The string will now be *adhi* + *gā* + *i* + *a* + *t*. Rule 7.3.36 *artihrīvlīrīknūyī...*will again introduce the augment *pUK* subsequent to which the *i*, i.e., *ṆiC*, will be deleted by rule 6.4.51 *ṇer aniṭi*. This will produce: *adhi* + *gāp* + *a* + *t* where the *ā* of *gāp*, the penultimate of sound of an *aṅga* before affix *CaṄ*, will be replaced with its short counterpart by rule 7.4.1 *ṇau caṅy upadhāyāḥ....* Our string will now become *adhi* + *gap* +*a* + *t*. Doubling and related applications will produce *adhi* + *(g→j) a (p→∅)* + *gap* + *a* + *t* = *adhi* + *ja* + *gap* + *a* + *t* where *sanvadbhāva* 'extending operations characteristic to affix *saN*' will further cause the application of rules 7.4.79 *sanyataḥ* and 7.4.93 *sanvallaghuni caṅpare....* This will cause *itva* 'replacement in *i*' whereby we get: *adhi* + *j (a→i)* + *gap* + *a* + *t* = *adhi* + *ji* + *gap* + *a* + *t*. Rule 7.4.94 *dīrghoḥ laghoḥ* will then replace the short *i* of *ji* with long to yield *adhi* + *jī* +*gap* + *a* + *t*. Our string *adhi* + *jī* + *gap* + *a* will still be termed an *aṅga* (1.4.13 *yasmāt pratyayavidhis...*) whereby rule 6.4.71 *luṅlaṅlṛṅ...*will introduce the augment *a(Ṭ→∅)*. The resultant string *adhi* + *a* + *jī* + *gap* + *a* + *t* will be subject to the application of rule 6.1.77 *iko yaṇ aci* whereby the *i* of *adhi* will be replaced with *y* to produce *adhyajīgapat*.

An optional form such as (167) *adhyāpipat* will be derived in the absence of not availing the option of replacing *iṄ* with *gā*. The initial string *adhi* + *iṄ* + *ṆiC* = *adhi* + *i* + *i* will as usual go through *vṛddhi*, *ātva* (6.1.48 *krīṅ nau...*), and introduction of *pUK* to produce *adhi* + *(i→ai→āt)* + *p* + *i*. Operations such as the introduction of *LUṄ*, *CLI*, *CaṄ*, the deletion of *ṆiC* (*ṇilopa*), and shortening of the *ā* of *adhi* + *āp* will produce: *adhi* + *ap* + *a* + *t*. Doubling is here performed via *rūpātideśa* of 1.1.59 *dvirvacane' ci* because the application of 6.1.11 *caṅi* read with 6.1.2 *ajāder dvitīyasya* will not be possible. For, the *p* is not a vowel. The *rūpatideśa-dvitva* will change the string to *adhi* + *api* + *p* + *a* + *t*. Rule 6.4.72 *āḍajādīnām...*will introduce the augment

āṬ which, after the application of 6.1.77 *iko yaṇ aci* and 6.1.90 *āṭaś ca*, will produce *adhi* + *āṬ* + *api* + *p* + *a* + *t* = *adh* (*i*→*y*) + *ā* (*Ṭ*→Ø) + *api* + *p* + *a* + *t* = *adhy* + (*ā*+*a*→*ā*) *pi* + *pa* + *t* = *adhyāpipat*.

2.4.53 ***bruvo vaciḥ***

The *ātmanepada* derivates (168) *ūce* and (169) *vakṣyate* derive from (*brū*→*vac*) + (*LIṬ*→*ta*)) and (*brū*→*vac*) + (*LṚṬ*→*ta*)). Our first string *vac* + *ta* goes through the replacement in *eŚ* for its *ta* (3.4.81 *liṭastajhayor*...) followed by the *samprasāraṇa* of rule 6.1.15 *vacisvapi*.... This produces the *uc* + *e* which through doubling (*dvitva*) and related operations becomes (*u*(*c*→Ø) *uc* + *e*). An application of *savarṇadīrgha* will finally produce (*u*+*u*→*ū*)*c* + *e* = *ūce*.

Deriving (169) *vakṣyate* from (*vac* + (*LṚṬ*→*ta*)) will require the introduction of *sya* of 3.1.33 *syatāsī*...followed by *ta*→*te* of 3.4.79 *ṭita ātmanepadānāṃ*.... The resultant string *vac* + *sya* + *te* will go through *kutva* of *c* by 8.2.30 *coḥ kuḥ*. The new output *vak* + *sya* + *t* + (*e*) will become *vak* + (*s*→*ṣ*)*ya* + *te* = *vakṣyate* after the application of rule 8.3.59 *ādeśapratyayayoḥ*.

2.4.55 ***vā liṭi***

Examples (170) *ācakhyau*, (171) *ācakhyatuḥ*, (172) *ācakhyuḥ*; and (173) *ācacakṣe*, (174) *ācacakṣāte*, (175) *ācacakṣire* illustrate the optional replacement of *cakṣIṄ* by *khyāÑ* (2.4.54 *cakṣiṅaḥ khyāñ*). The first set of three examples are derived by taking the option of replacement. The next set obviously does not accept the optional replacement. Example (170) *ācakhyau* is derived from *ā*+ (*cakṣ*→*khyā*) + (*LIṬ*→ *tiP*)) where *tiP* gets further replaced with *ṆaL* of 3.4.82 *parasmaipadānāṃ*.... Rule 6.1.8 *liṭi dhātor anābhyāsasya* will apply to produce *ā* + *ca* + *khyā*. Rule 7.1.34 *āta au ṇalaḥ* will then apply to replace *a* of (*Ṇ*)*a*(*L*) with *au*: *ā* + *ca* + *khyā* + (*a*→*au*) = *ā* + *ca* + *khyā* + *au*. An application of rule 6.1.88 *vṛddhireci* will introduce a single *vṛddhi* replacement to finally produce: *ācakhy*(*ā* + *au*→*au*) = *ācakhyau*.

Follow additional rule application similar to *papatuḥ* and *papuḥ* (appendix of volume II) to derive *ācakhyatuḥ* and *ācakhyuḥ*. The remaining three examples do not involve the replacement in *khyāÑ*. Their derivation is very similar to (153) *adhijagāte* and (154) *adhijagire* given under rule 2.4.49 *gāṅ liṭi*.

2.4.56 ***ajer vy aghañapoḥ***

Examples such as (176) *pravetā*, (177) *prājitā*, etc., will follow the pattern of (168) *bhavitā* and (170) *bhavitum* derived under rule 1.1.49 *ṣaṣṭhī sthāneyogā* (cf. appendix of volume II). Remember, however, that derivates with a replacement in *vī* will not be allowed the introduction of augment *iṬ* (cf. 7.2.10 *ekāc upadeśe*...). Thus, we will get *pravetā* through *guṇa* by rule 7.3.84 *sārvadhātukārdhadhātukayoḥ*. We will, of course, get: *prājitā* if the root is not replaced with *vī*. The derivation will also involve introduction of *iṬ* but no *guṇa*.

2.4.58 ***ṇyakṣatriyārṣañito***...

A derivate such as (178) *kauravyaḥ* could mean both 'a father who is the offspring of Kuru' as well as 'a son, or younger offspring such as a grandson, of Kuru' depending on what *taddhita* affix (relative to what base) has been manipulated for the derivation. Thus, *kauravyaḥ* can be derived from *kuru* + *Ṅas* by introducing affix *Ṇya* of 4.1.151 *kurvādibhyo...* read within the domain of 4.1.91 *tasyāpatyam*. An 'offspring' (*apatya*) such as 'a grandson, and so on' is assigned the term *gotra* (4.1.162 *apatyaṃ pautraprabhṛti gotram*). Affix *Ṇya* thus denotes a *gotra* descendant. Rule 1.4.18 *yaci bham* will assign the term *bha* to *kuru* of *kuru* + *Ṅas* + (*Ṇ*→Ø)*ya*. Rule 2.4.71 *supo dhātuprātipadikayoḥ* will, as usual, delete the *Ṅas*. Our string *kuru* + *ya* will change to *kur(u→o)* + *ya* first through *guṇa* of 6.4.146 *or guṇaḥ:* and next to *k(u→au)ro* + *ya* through *vṛddhi* of 7.2.117 *taddhiteṣv acām ādeḥ*. Rule 6.1.79 *vānto yi pratyaye* will then apply to bring about *kaur(o→av)* + *ya* = *kauravya* + *sU*→ *kauravyaḥ*. This derivate will denote a descendant such as a grandson', etc. A derivate of the same form though with the denotation of a *gotra*-descendant (son of a grandson, etc.; 4.1.163 *jīvati tu vaṃśye yuvā*) can be derived with affix *iÑ* (4.1.95 *ata iñ*) introduced after *kauravya*. This *iÑ*-derivate will still be *kauravya* because 2.4.58 *ṇyakṣatriyārṣa...* will subsequently delete the affix. That is, (*kauravya* + (*iÑ*→Ø)) + *sU*))) = *kauravyaḥ*.

One can similarly derive (179) *śvāphalkaḥ* from *śvaphalka* + *aṆ* of 4.1.114 *ṛṣyandhaka....* A similar form derived with *iÑ* will denote *yuvāpatya* 'young grandson etc.' as opposed to the *gotrāptya* 'grandson, etc.'. Other such examples can be easily derived by following the derivational pattern of many *taddhita* derivates of volume II.

2.4.62 *tadrājasya bahuṣu tenaivāstriyām*

Example such (180) *aṅgāḥ* derives from *aṅga* + *Ṅas* + *aṆ* where *aṆ* is introduced by rule 4.1.170 *dvyañmagadha...* to denote 'many male descendants'. The affix is termed *tadrāja* by 4.1.174 *te tadrājāḥ*. Our present rule (2.4.62 *tadrājasya...*) deletes *aṆ*. The resultant derivate, after *LUK*-deletion of *Ṅas* by 2.4.71 *supo dhātu...*, will still be *aṅga*. One can now introduce the nominative plural ending *Jas* to derive *aṅgāḥ* via *pūrvasavarṇadīrgha* (6.1.102 *prathamayoḥ pūrvasavarṇaḥ*) and *rutva-visarga*. Note that this derivational option with the deletion of affix *aṆ* is made available masculine plural. The singular and dual masculine forms will still be *āṅgaḥ* and *āṅgau* with *vṛddhi* and no-deletion of *aṆ*.

2.4.70 *āgastyakauṇḍinyayor agastikuṇḍinac*

This rule provides for *LUK*-deletion of affixes *aṆ* and *yaÑ* when their denotata is 'many'. It also allows for *agasti* and *kuṇḍinaC* to replace *agasta* and *kuṇḍinī*. Obviously, derivates with one or two (non-plural) denotata will not involve affixal deletion, or stated replacements. Thus, we will get. (181) *agastayaḥ* derived from *agastya* + *Ṅas* + *aṆ* (4.1.114 *ṛṣyandhaka...*). The deletion of affix *aṆ* as with the concurrent replacement will produce

agasti, a new derivate. One can easily derive *agastayaḥ* from *agasti* + (*J*→∅) *as* via *guṇa* by 7.3.109 *jasi ca*, and the *ay* replacement of the resultant *e* by 6.1.78 *eco' yavāyāvaḥ*. Thus, *agast(i→e→ay)* + *as* = *agastay* + *a(s→r(U→∅))* = *agastayaḥ*. Here again, the singular and dual derivates will still be *āgastyaḥ* and *āgastyau* with no affixal deletion, or replacement permitted.

Similar rules apply in deriving (182) *kuṇḍināḥ* from *kuṇḍina* + (*J*→∅)*as*. This derivation begins with *kuṇḍinī* + *Ṅas* + *yaÑ* where rule 4.1.105 *gargādibhyo...* introduces affix *yaÑ*. Our present rule deletes the affix and introduces *kuṇḍina* (*C*→∅) as a replacement for *kuṇḍinī*. The final derivate *kuṇḍināḥ* can then be derived from *kuṇḍina* + *Jas*. Once again *kauṇḍinyaḥ* and *kauṇḍinyau* will be the derivates in nominative singular and dual with no deletion of affix *yaÑ* and no replacement in *kuṇḍinaC*.

2.4.71 *supo dhātuprātipadikayoḥ*

Our example (183) *putrīyati* derives from *putrīya* + *LAṬ* where *putrīya*, a verbal root ending in affix (*K*→∅)*ya*(*C*→∅)) introduced after *putra* + *am* by rule 3.1.8 *supa ātmanaḥ....* The *am* of *putra* + *am* + *ya* is deleted by our present rule consequent upon the assignment of the term *dhātu* by 3.1.32 *sanādyantā....* The *a* of *putra* is replaced with *ī* by rule 7.4.33 *kyaci ca* to produce *putrīya*, a verbal root after which (*LAṬ*→*ti(P)*) and (*Ś*)*a(P)* can be introduced. Thus, *putrīya* + *a* + *ti* = *putrīyati* where 6.1.97 *ato guṇe* replaces the vocalic sequence *a*+*a* with *a*.

Since numerous derivations involving the *LUK*-deletion of *sUP* by this rule have already been explained in the appendix of this and volume II, no further efforts will be made to explain the operational aspects of this rule.

2.4.72 *adiprabhṛtibhyaḥ śapaḥ*

Example (184) *dveṣṭi* derives from *dviṣ* + *ŚaP* + *tiP* where our present rule deletes *ŚaP*. An application of *guṇa* yields *dv(i→e)ṣ* + *ti* = *dveṣ* + *ti* which after the application of rule 8.4.41 *ṣṭunā ṣṭuḥ* produces *dveṣ* + (*t*→*ṭ*) = *dveṣṭi*.

2.4.74 *yaṅo' ci ca*

Note that the derivational details of *loluvaḥ* and *popuvaḥ* have already been presented in the appendix of volume II. Example (185) *pāpaṭhīti* derives from *paṭh* + (*yaṄ*→∅) where this rule orders the *LUK*-deletion of affix *yaṄ*. Operations relative to doubling will apply on *paṭh* to produce *paṭh* + *paṭh*→ *pa* + *paṭh* = *pa* + *paṭh* where 7.4.83 *dīrgho' kitaḥ* will order the legthening of the duplicated syllable: *p(a→ā)* + *paṭh* = *pāpaṭh*, a verbal root by 3.1.32 *sanādyantā dhātavaḥ*. The resultant string *pāpaṭh* + *ŚaP* + *ti(P)* will be subject to *LUK*-deletion of *ŚaP* whereby we will get: *pāpaṭh* + *ti*. Rule 7.3.94 *yaṅo vā* will then introduce *ī(Ṭ*→∅) to produce *pāpaṭh* + *ī* + *ti* = *pāpaṭhīti*. Similar application of rules will derive (186) *lālapīti* 'chirps again and again' and (187) *vāvadīti* from verbal roots *lap* and *vad*.

2.4.75 *juhotyādibhyaḥ śluḥ*

Note that *juhoti* has already been derived as example (250) in the appendix of volume II. Deriving (188) *bibharti* from *(bhṛ + (ŚaP→ŚLU-deletion)) + ti(P→∅)))*is not very difficult given numerous other derivations involving doubling. Doubling will produce *bhṛ + bhṛ + ti* which, in turn, produces *bhar + bhṛ + ti* via the application of rule 7.4.66 *ur at* read with 1.1.51 *ur aṇ raparaḥ*. The resultant string *(bh(ṛ→ar) + bhṛ + ti* will produce *bha(r→∅) + bhṛ + ti* after the application of 7.4.60 *halādi śeṣaḥ*. Rule 7.4.76 *bhṛñām it* orders *itva* whereby we get: *bh(a→i) + bhṛ + ti*. This string goes through the application of rule 8.4.54 *abhyāse car ca* whereby its initial *bh* is changed to *b* to produce *(bh→b)i + bhṛ + ti*. The *guṇa* replacement *ar* for the *ṛ* of *bhṛ* by rule 7.3.84 *sārvadhātukārddhadhātukayoḥ* can easily produce *bi + bh(ṛ→ar) + ti = bi + bhar + ti = bibharti*.

Our next example (189) *nenekti* is similarly derived from (*ṇij(IR→∅) + ŚaP + ti(P)* where this rule again applies the deletion. The root-initial *ṇ* is changed to *n* by 6.1.65 *ṇo naḥ*. Doubling and *halādi-śeṣa* applies after this to produce *ni(j→∅) + nij + ti* which, through the application of 7.4.75 *nijāṃ trayā...*, becomes *n(i→e) + nij + ti = ne + nij + ti*. The *laghūpadhaguṇa* application of rule 7.3.86 *pugantalaghūpadhasya ca* changes this preceding string into: *ne + n(i→e)j + ti*. Deriving *nenekti* from *ne + nej + ti* will need the application of *kutva* 'a replacement in sounds denoted by *ku*' (8.2.30 *coḥ kuḥ*) and *cartva* 'a replacement in sounds denoted by the abbreviatory term *cR*' (8.4.55 *khari ca*). Thus: *ne + ne(j→g) + ti = ne + ne(g→k) + ti = nenekti*.

2.4.76 *bahulaṃ chandasi*

Examples (190) *dāti* and (191) *dhāti* derive from *dā + (LAṬ→ tiP)* and *dhā + (LAṬ→tiP)* where no *ŚLU* applies to the *ŚaP* of these roots. Instead, the deletion takes place by *LUK*. A lack of *ŚLU* also results into no doubling by 6.1.10 *ślau*. The derivation thus becomes very straightforward. Note that these roots belong to the *juhotyādi* class; and as such, doubling, etc., should have applied. But they do not at the strength of *bahulam*.

The same effect of *bahulam* enables the application of doubling, etc., where there is no scope. Consider now the example (192) *vivaṣṭi* which derives from *vaś + ti(P)*. We get the example (193) *vaṣṭi* in the classical language where *ŚaP* goes through deletion by *LUK*. Our example in the Vedic at the strength of *bahulam* enables the verbal root *vaś* to go through *dvitva* 'doubling' even though it does not belong to the *juhotyādi* class. It is a root of the *adādi* class which has its *ŚaP* go through *ŚLU* at the strength of *bahulam*. This of course will occasion the application of operations relative to doubling. The result will be: *vaś + vaś + ti = va + vaś + ti*. The *bahulam* provision of this rule will also provide for the *itva* of *va* to produce *v(a→i) + vaś + ti = vi + vaś + ti*. The *ś* of the string will be changed

to *ṣ* to produce *vi* + *vaṣ* + *ti* by the application of rule 8.2.36 *vraścabhrasja....* The *t* of *ti* will then be changed to *ṭ* by rule 8.4.41 *ṣṭunā ṣṭuḥ* to produce *vivaṣ* + *(t→ṭ)i* = *vivaṣṭi.*

Similar rule applications will produce (194) *vivakti* through subsequent *kutva* of *viva(c→k)ti.*

2.4.79 *tanādibhyastathāsoḥ*

This rule provides for sets of optional derivates such as (195) *atata* and (196) *atanişṭa*; and (197) *atathāḥ* and (198) *atanişṭhāḥ* from *tan* + *sIC* + *ta* and *tan* + *sIC* + *thās*, each resulting into two forms depending on whether or not the option of deleting *sIC* is availed. Thus, with the augment *a(Ṭ→∅)* and deletion of *sIC* we will get the *ta* form *a* + *tan* + *ta*. It will produce *ata(n→∅)* + *ta* through the deletion of *n* by 6.4.37 *anudāttopadeśa....* Of course, the *ātmanepada* will be introduced by 1.3.72 *svaritañitaḥ....* A non-deletion option of *sIC* would give a parallel form *atanişṭa* from *a* + *tan* + *i(Ṭ→∅)* + *s(IC→∅)* + *ta* where the *s* of *sIC* will be replaced with *ṣ* (*ṣatva*) of 8.3.59 *ādeśa pratyayayoḥ*. Further application of *ṣṭutva* by 8.4.41 *ṣṭunā ṣṭuḥ* will produce *a* + *tan* + *i* + *ṣ* + *(t→ṭ)a* = *atanişṭa*. Deriving *atathāḥ* and *atanişṭhāḥ* offer nothing new except for the *rutva-visarga*.

2.4.80 *mantre ghasahvaraṇaśavṛdahād...*

Refer to derivation (233) *akṣan* in the appendix of volume II. Example (199) *mā hvaḥ* derives from *hvṛ* + *LUṄ* where affix *LUṄ* is introduced after verbal root *hvṛ* cooccurring with *mā(Ṅ→∅)* by rule 3.3.175 *māṅi luṅ*. Note that *CLI* of *mā hvṛ* + *(LUṄ→ti(P→∅)* will be deleted by our present rule. Rule 3.4.100 *itaś ca* will as usual delete the *i* of *ti*. The introduction of augment *aṬ* will be blocked by rule by 6.4.74 *na māṅyoge*. The string with these applications will become: *mā hvṛ* + *t(i→∅)* = *mā hvṛ* + *t*. The *guṇa* application of 7.3.84 *sārvadhātukārddha...*, read with 1.1.5 *uraṇ raparaḥ*, will produce *mā hv(ṛ→ar)* + *t* = *mā hvar* + *t*. The *t* will now be deleted by 6.1.68 *halṅyābbhyo...* to yield *mā* + *hvar* = *mā hvar* which through *rutva-visarga* will produce *mā hva(r→ḥ)* = *mā hvaḥ.*

Our next derivate (200) *praṇaṅ* as in *praṇaṅ martyasya* is again a *LUṄ* derivate of verbal root *ṇaś* used with *pra* where the *ṇ* of the root has been replaced with *n* by rule 6.1.65 *ṇo naḥ*. Note, however, that after the deletion of *CLI*; blocking of *aṬ* because of the cooccurrence condition of *māṄ* in the full *mantra* of which *praṇaṅ* is a part; and the deletion of *i* as well as of *t* of *ti*; rule 8.4.14 *upasargād asamāse' pi* will again order the *ṇ* to replace the *n* of *pra* + *naś* to produce *pra* + *ṇaś*. The final *ś* of the string will go through *kutva* of rule 8.2.39 *jhalāṃ jaśo' nte* whereby we will get *pra* + *ṇa(ś→g)*. This resultant *g* will be finally changed into *ṅ* to yield *pra* + *ṇa(g→ṅ)* = *praṇaṅ* of *praṇaṅ martyasya* by rule 8.4.45 *yaro' nunāsike....*

The next derivate (201) *āvaḥ* derives from *ā(Ṅ→∅)* + *vṛ(Ñ→∅)* = *āvṛ* + *tiP* similarly to *hvaḥ* of *mā hvaḥ*. Note that because of an absence of the cooccurrence of *māṄ*, the augment *aṬ* cannot be blocked here. Thus, we

will get *ā* + *a*(*Ṭ*→∅)) + *vṛ* via *savarṇadīrgha*. Other derivational details are same as in *hvaḥ*.

The next example (202) *dhak* is a derivative of *dah* where *LUṄ* has been replaced with the second person singular *parasmaipada* ending *si*(*P*→∅). Of course, this example will be derived with the blocking of the augment *aṬ* because of the cooccurrence of *māṄ*. If the root is treated as occurring with *āṄ* then the form will be *ādhak* where the initial long *ā* will be gotten through *savarṇadīrgha* of *ā* + *a*(*Ṭ*→∅)) similarly to *āvaḥ*. I shall now return to the derivation of *dhak* from *dah* + *si* similarly to the other examples. The *si* as well as *CLI* will also be deleted here. The *h* of the remaining *dah* will be replaced with *gh* to produce: *da(h→gh)* via the application of 8.2.32 *dāder dhātor ghaḥ*. The *d* of the resultant *dagh* will further be replaced with *dh* via the application of rule 8.2.37 *ekāco baśo jhasantasya*. The form will now be (*d*→*dh*)*a* + *gh* = *dha* + *gh*. The final *gh* will be first replaced with *g* (8.2.39 *jhalāṃ jaśo nte*); and then with *k* by rule 8.4.56 *vāvasāne*. This will give us *dha(gh→g→k)* = *dhak*. Since this last rule application is optional one can still retain *dhag* as the derivative.

One can similarly derive (203 *āprāḥ* as a derivative of verbal root *prā* used with the preverb *āṄ* where *LUṄ* gets replaced with *siP* additionally to the introduction of the augment *aṬ*. Our string *āṄ* + *aṬ* + *prā* + *siP* will as usual produce *āprās* where contrary to the preceding example the deletion of *s* is not undertaken. The desired form *āprāḥ* is then gotten via *rutvavisarga*.

Deriving (204) *parāvark* from *parā* + *v(ṛ→ar)j* + *t(i→∅)*) = *parā* + *a*(*Ṭ*→∅) + *varj a* (*t*→∅) = *par(ā+a)* = *parā* + *var(j→g→k))* = *parāvark* should not be difficult to comprehend. The *guṇa* application in *v(ṛ→ar)j* + *ti* is that of the *laghūpadha* type.

The next two examples (205) *akran*, and (206) *agman* are both third person plural *LUṄ*-derivates where *jhi* comes as its replacement after verbal roots *kṛ*, and *gam*. Our third example (207) *ajñata*, a derivate of verbal root *jan*, entails the replacement of its *LUṄ* by the third person plural *ātmanepada* ending *jha*. All these examples also entail the deletion of *CLI* (by this rule) and the introduction of augment *aṬ*. The *jh* gets replaced with *ant* of 7.1.3 *jho' ntaḥ* and the *i* of *anti* as usual gets deleted. The *t* of *akṛ* + *ant* will go through its deletion by 8.2.23 *saṃyogāntasya lopah*. Rule 6.1.77 *iko yaṇ aci* will apply on *akṛ* + *an* to produce *ak(ṛ→r)* + *an* = *akran*. Example (206) *agman* is relatively easier to derive. Rule 6.4.98 *gamahanajana...* applies on *ajan* + *jha* to delete the penultimate *a* of *jan* whereby we get: *aj* + *n* + *jh*. The *jh* at the end of the string gets replaced with *ata* to yield *aj* + *n* + (*jh*→*at*)*a* = *aj* + *n* + *ata* via the application of rule 7.1.5 *ātmanepadeṣv*.... This string *aj* + *n* + *ata* will now go through the *ścutva* of 8.4.40 *stoś cunā ścuḥ* to yield: *aj* + (*n*→*ñ*) + *ata* = *ajñata*.

3.1.3 *ādyudāttaś ca*

This rule is formulated by way of providing accent for items introduced as affixes. An example such as (207) *kartavyam* is derived by introducing affix (3.1.1 *pratyayaḥ*) *tavyaT* (3.1.96 *tavyattavyānīyaraḥ*) after (3.1.2 *paraś ca*) verbal root *(ḌU)kṛ(Ñ)* via the application of *guṇa* of *ṛ* by rule 7.3.84 *sārvadhātukārddhadhātukayoḥ* read with 1.1.51 *ur aṇ raparaḥ*. Thus, *k(ṛ→ar)* + *tavya(T→∅)* = *kar* + *tavya*, which will be termed a nominal stem (1.2.46 *kṛttaddhitasamāsāś ca*), and consequently, will receive affix *sU* (4.1.2 *svaujasmauṭ...*). This *sU*, however, will be replaced with *am* by rule 7.1.24 *ato' m* to produce *kartavya* + *(sU→am)* = *kartavya* + *am*. An application of rule 6.1.107 *ami pūrvaḥ* will change the string *kartavya* + *am* into *kartavy(a+a→a)m* = *kartavyam*. One can also optionally apply rule 8.4.46 *aco rahābhyāḥ dve* for doubling up the *t* in *kartavyam* to produce *karttavyam*. But this still is not the complete story.

Our present rule is an accent rule. It assigns the *udātta* accent on the initial syllable of the affix. Thus, *távyaT* will be marked *udātta* initially as shown. The final accentuation of *kartavyam* will have to wait for provisions of rules 6.1.158 *anudāttaṃ padaṃ ekavarjam* (read with the *Mbh.* statement *sati śiṣṭasvaro balīyān*) and 8.4.66 *udāttād anudāttasya svaritaḥ* to furnish the final accent as *kartavyám*.

Example (208) *taittirīyam* derives from *tittiri* + *Ṭā* + *cha(Ṇ→∅)* where the *taddhita* (4.1.76 *taddhitāḥ*) affix *chaṆ* has been introduced after *tittiri* + *Ṭā* through the variable reference of the affixal denotatum of *tena proktam* 'stated/promulgated by X' (4.1.101 *tena proktam*). The affix is introduced by rule 4.3.102 *tittirivaratantu....* The *ch* of *tittiri* + *cha* is replaced with *īy* to produce *tittiri* + *īy* + *a* under the provisions of rule 7.1.2 *āyaneyinīyiyaḥ....* Our final form *taittirīya* will be produced by the applications of rule 7.2.117 *taddhiteṣv acām ādeḥ* and 6.4.148 *yasyeti ca*. The first rule will order the *vṛddhi* substitute *ai* for the first *i* of *tittiri* where as the second will delete its last *i*. Thus, *t(i→ai)ttir(i→∅)* + *īya* = *taittir* + *īya* = *taittirīya*. The nominative singular ending *sU* introduced after the nominal stem *taittirīya* will produce *taittirīyam* similarly to *karttavyam* though again with a little detail on the accentuation.

The replacement *īy* will be marked *udātta* via the *sthānivadbhāva* provision of rule 1.1.56 *sthānivad ādeśo' nalvidhau*. This will set aside the accent of the base as per the *satiśiṣṭasvara* provision made by the statement of the *Mbh.* under rule 6.1.158 *anudāttam....* The final accent is again determined as shown in case of the earlier example as: *taittīrīyám*. Note that the base *tittiri* is itself marked *udātta* at its final *i* (*antodātta*) by *Phiṭsūtra* 1 : *phiṣo' nta udāttaḥ*.

3.1.4 *anudāttau suppitau*

This again is an accent rule whereby affixes denoted by the abbreviatory term *sUP*, or those marked with *P* as their *it*, are marked *anudātta*.

Our first example (209) *dṛṣadau* derives from *dṛṣad* + *au* where *dṛṣad* is a nominal stem (1.2.46 *kṛttaddhitasamāsāś ca*) terminating in the *uṇādi* affix *ad(I→∅)*. This affix is introduced after verbal root *dṝ* where *ṣ(UK→∅)* is also introduced as an augment. Thus, *dṛṣ* + *ad* = *dṛṣad*. I do not show here the detailed derivation since *bāhulaka* is also involved with the *uṇādi* derivates. Affix *au* is of course the nominative dual introduced after *dṛṣad*. This ending in view of our present rule will be marked *anudātta* with the understanding that the final accent of *dṛṣadau* will be decided in view of 8.4.66 *udāttād anudāttasya svaritaḥ* as follows: *dṛṣadaú*.

The nominative plural form (210) *dṛṣadáḥ* can be similarly derived from *dṛṣad* + *(J→∅)as* = *dṛṣad* + *a (s→r→ḥ))* via placement of *Jas* and *rutva-visarga*.

I have already shown the derivation of *pacati* (as derivation (488) in the appendix of volume II). I shall here explain only its accentuation. Rule 6.1.162 *dhātoḥ* will assign the *udātta* accent to the *a* of verbal root *pac*. The two affixal elements, *tiP* and *ŚaP*, of the underlying string *pac* + *tiP* = *pac* + *ŚaP* + *tiP*, will both, in view of our present rule, be marked with *anudātta*. For, they are both marked with *P* as their *it*. The result is: *pac* + *a* + *ti*. The *a* will then be changed to *svarita* by 8.4.66 *udāttād anudāttasya svaritaḥ*. Rule 1.2.39 *svaritāt saṃhitāyām* will then intervene to assign *ekaśruti* 'monotone' to the *ti* to produce the final accent as: *pacáti*. The same goes for examples such as *paṭháti*.

3.1.5 *guptijkidbhyaḥ san*

I have already discussed the derivational history of numerous *saN*-derivates. Deriving (211) *jugupsate* and (212) *titikṣate* from *gup* + *sa* and *tij* + *sa* should not pose any difficulty. For example, doubling and *halādiśeṣa* will produce: *gu* + *gup* + *sa* and *ti* + *tij* + *sa*. The initial *g* of *gup* + *gup* + *sa* will be replaced with *j* via *cutva* of 7.4.62 *kuhoś cuḥ*. Thus, *(g→j)u* + *gup* + *sa* = *jugupsa*. The *j* of our string *ti* + *tij* + *sa* will go through *kutva* under the application of rule 8.2.30 *coḥ kuḥ*. The result of this rule application, i.e, *ti* + *ti(j→g)* + *sa*, is processed by rule 8.4.55 *khari ca* to produce: *ti* + *ti(g→k)* + *sa*. Finally, the *s* of *titik* + *sa* will be replaced with *ṣ* to produce the verbal root *ti* + *tik* + *(s→ṣ)a* = *titikṣa* by rule 8.3.59 *ādeśapratyayayoḥ*. Deriving *jugupsate* and *titikṣate* from *jugupsa* + *LAṬ* and *titikṣa* + *LAṬ* where *LAṬ* gets replaced with the third person singular *ātmanepada* ending *ta* is fairly straightforward.

Note that the *saN* introduced by this rule does not qualify for the assignment of the term *ārddhadhātuka* by rule 3.4.114 *ārddhadhātukaṃ śeṣaḥ* mostly because it has not been introduced with the direct specification of *dhātoḥ* as is the case with the *saN* introduced, for example, by rule 3.1.7 *dhātoḥ karmaṇaḥ*.... Consequently, there is no introduction of augment *iṬ* in case of (211) *jugupsate*.

3.1.6 *mānbadhadānśānbhyo*...

Our examples (213) *mīmāṃsate*, (214) *bībhatsate*, (215) *dīdāṃsate*, and (216) *śīśāṃsate* all entail a corresponding long vowel replacement for the vowel of their reduplicated syllable (*abhyāsa*). This constitutes an additional provision made by rule 2.1.6 *mānbadhadān....* The first example contains the verbal root *mīmānsa* which, in turn, derives from *mān* + *sa*. We will get the string *mā* + *mān* + *sa* after doubling (*dvitva*) and *halādi-śeṣa*. Rule 7.4.59 *hrasvaḥ* will require the shortening of *mā* to produce: *m(ā→a)* + *mān* +*sa* which with the application of *itva* by 7.4.79 *sany ataḥ*: *m(a→i)* + *mān* + *sa*. Our present rule will now order the long vowel replacement for the short *i* of *mi* to produce: *m(i→ī)* + *mān* + *sa* = *mīmānsa*. An introduction of *LAṬ* and related operations will derive *mīmānsate*. Similar application of rules are also involved in deriving *dīdāṃsate*. Note, however, 8.3.24 *naś cāpadāntasya jhali* orders the *n* to be replaced with the *anusvāra* in all cases except for (214) *bībhatsate*. This example derives from *badh* +*sa* which, through doubling and related operations including the lengthening of this rule, will produce *bī* + *badh* + *sa*. Rule 8.2.37 *ekāco baśo jhaṣ...*will now apply to replace the *b* of *badh* with *bh*. That is, *bī* + *(b→bh)adh* + *sa* = *bībhadh* + *sa*. Rule 8.4.55 *khari ca* will now apply to yield: *bībha(dh→t)* + *sa* = *bībhatsa*. Affix *LAṬ* replaced with the third singular *ātmanepada* ending *ta* after *bībhatsa* can easily produce *bībhatsate*.

3.1.15 *karmaṇo romanthatapobhyāṃ...*

Deriving (217) *romanthāyate* and (218) *tapasyati* from *romantha* + *am* + *KyaṄ* and *tapas* + *am* + *KyaṄ* follows the pattern of many similar derivations already shown in the appendix of the earlier volume. Rule 7.4.25 *akṛtsārvadhātukayor dīrghaḥ* will order the lengthening of the final *a* of *romanmth(a→ā)* + *am* + *ya*. The *am* as usual will be deleted by 2.4.71 *supodhātu...*after the assignment of the term *dhātu*. The *Ṅ* as an *it* will require the selection of an *ātmanepada* (1.3.12 *anudāttaṅita ātmanepadam*) ending *ta* after *romanthāya* to derive *romanthāyate*. Note that *tapasya* will be used with the *parasmaipada* ending *ti* in view of the *vārttika: tapasaḥ parasmaipadaṃ ca*.

The derivational history of the following derivates in *KyaC* is also similar. The *KyaC* will require the selection of *parasmaipada* endings as opposed to the *ātmanepada* of *KyaṄ*.

3.1.22 ***dhātor ekāco halādeḥ kriyāsamabhihāre...***

Examples (219) *pāpacyate*, (220) *yāyajyate*, (221) *jvājalyate* and (222) *dedīpyate* derive from verbal roots *pac*, *yaj*, *jval* and *dīpI* with the introduction of affix *yaṄ* where its *Ṅit* status will as usual require the *LAṬ* to be replaced with *ātmanepada*. Apply, on *pac* + *ya(Ṅ→0)*, rules similar to (185) *pāpaṭhīti* for deriving *pāpacya* after which *LAṬ→ta→te*, *ŚaP*, and a single *guṇa*-replacement like the following (*pararūpa*) by 6.1.97 *ato guṇe* will derive *pāpacyate*. Similar rules will apply in deriving *yāyajyate*. Note that the application of 6.1.15 *vacisvapiyajādīnāṃ...* whereby *samprasāraṇa* may become applicable in case of *yāyajyate* is blocked because of the lack

of the *Kit* status of affix *yaṄ*. Example (222) *dedīpyate* entails the application of *guṇa (d(ī→e)* + *dīp* + *ya* by 7.4.82 *guṇo yaṅlukoḥ*.

3.1.23 *nityaṃ kauṭilye gatau*

Example (223) *caṅkramyate* derives from *kram* + *yaṄ* which after doubling and related operations produces *ka* + *kram* + *ya*. An application of 7.4.62 *kuhoś cuḥ* applies *cutva* to yield *(k→c)a* + *kram* + *ya* = *ca* + *kram* + *ya*. Augment *nUK* is now introduced to change the string to *ca* + *n* *(UK→Ø)* + *kramya*. This *n* as usual will be replaced with *anusvāra* by 8.3.24 *naś cāpadāntasya*.... A further application of rule 8.4.58 *anusvārasya yayi parasavarṇaḥ* on the resultant string *caṃ* + *kram* + *ya* will replace the *anusvāra* with *ṅ* to produce: *caṅkramya*. The final derivate *caṅkramyate* can now be derived very easily. Similar rules will apply in deriving (224) *dandramyate* from *dram* + *yaṄ*.

3.1.24 *lupasadacarajapajabhadaha...*

Our example (225) *lolūyate* can be easily derived from *lup* + *yaṄ* through doubling, *halādiśeṣa*, and subsequent *guṇa* of the *abhyāsa* by 6.1.9 *sanyaṅoḥ*. The result will be a verbal root: *lup* + *ya (N→Ø)* = *(lup→lu)* + *lup* + *ya* = *l(u→o)* + *lup* + *ya* = *lolupya*. An introduction of *LAṬ→ta* with subsequent application of relavant rules will produce: *lolupyạte*.

The derivation of (226) *sāsadyate* from *sad* + *yaṄ* entails legthening of the *a* of the *abhyāsa* by 7.4.83 *dīrgho' kitiḥ*. The resultant root *sāsadya* will receive *LAṬ* to derive *sāsadyate*. Our example (227) *cañcūryate* requires the augment *nUK* to derive: *ca* + *n(UK→Ø)* + *car* + *ya* = *ca* + *n* + *car* + *ya* after doubling and subsequent *halādiśeṣa*. The *a* of *car* occurring subsequent to the *abhyāsa* will be replaced with *u* by rule 7.4.88 *utparasyātaḥ*. This will produce *ca* + *n* + *c (a→u)r* + *ya* = *cancurya*. This *u* will now be lengthened by 8.2.77 *hali ca* to derive *canc(u→ū)ūrya*, again a verbal root. Introduction of *LAṬ→t(a→e)* with the subsequent addition of *(S→Ø)a (P→Ø)* will yield *cancūryate*. The *n→ṃ→ñ* change to arrive at *ca (n→ṃ→ñ)cūryate* = *cañcūryate* involves the application of rules similar to the last step of (223) *caṅkramyate*.

The derivation of (228) *jañjapyate* involves similar rule application except that *nUK* is here introduced by 7.4.86 *japajabhadahadaśabhañja*.... Similar rules will apply in deriving examples such as (229) *jañjabhyate*, (230) *dandahyate*, and (231) *dandaśyate*. This last example will have the deletion of its first *ṃ* by rule 6.4.24 *aniditāṃ hal...* at the derivational stage of doubling prior to *halādiśeṣa* as follows: *da(ṃ→Ø)ś* + *daṃś* + *ya* = *daś* + *daṃś* + *ya*. One can now apply *halādiśeṣa*, *nUK*, and other rules as indicated to derive *dandaśyate*.

The derivational history of (232) *nijegilyate* entails the application of *itva* of rule 7.1.100 *ṛt id dhātoḥ* in the *aṅga* section (6.4.1 *aṅgasya*; 1.4.13 *yasmāt pratyayavidhis...*). This replacement of *ṛ* of *gṛ* + *ya(N→Ø)* = *gṛ* + *ya* will produce *g (ṛ→ir)* + *ya* as per 1.1.51 *ur aṇ raparaḥ*. Our string *gir* + *ya*

will produce *gi* + *gir* + *ya* through doubling and related operations. The *cutva* of 7.4.62 *kuhoś cuḥ* followed by the *guṇa* of the *abhyāsa* by 7.4.82 *guṇo yaṅlukoḥ* will produce: *(g→j)i* + *gir* + *ya* = *j(i→e)* + *gir* + *ya* = *je* + *gir* + *ya*. The *r* of *gir* will go through a replacement in *l* (*latva*) by 8.2.20 *gro yaṅi*. Thus, *jegi(r→l)ya* = *jegilya*, a verbal root. Our example derives from *(nijegilya* + *(LAṬ→t(a→e))* where verbal root *jegilya* is used with the preverb *ni*.

3.1.25 *satyāpapāśavīṇātūla...*

Note that the final *a* in *satyāp(a)* is to facilitate pronunciation (*uccāraṇārtha*). The derivate *satyāp* entails the introduction of augment *āpUK* by *nipātana*. An introduction of affix (*Ṇ*→∅)*i*(*C*→∅) will produce *satyāpi* which will be assigned the term *dhātu* by 3.1.32 *sanādyantā dhātavaḥ*. Our next example (233) *satyāpayati* can be derived from *satyāpi* + *(LAṬ→ti* (*P*→∅) = *satyāpi* + *ti* where rule 7.3.84 *sārvadhātukārdha...* will cause the *guṇa* of *i* before (*Ś*→∅)*a*(*P*→∅), a *sārvadhātuka* (3.1.113 *tiṅśit...*), to produce *satyāp (i→e)* + *a* + *ti*. Rule 6.1.78 *eco' yavāyāvaḥ* will now replace the resultant *e* with *ay* to derive *satyāp(e→ay)* + *a* + *ti* = *satyāpayati*. All the other nominal stems will similarly derive (234) *vipāśayati* (with the root used with *vi*), (235) *rūpayati*, (236) *upavīṇayati* (with the root used with *upa*), (237) *anutūlayati* (with the root used with *anu*), (238) *upaślokayati* (with the root used with *upa*), (239) *abhiṣeṇayati* (with the root used with *abhi*), (240) *anulomayati* (with the root used with *anu*), (241) *tvacayati*, (242) *saṃvarmayati* (with the root used with *sam*), (243) *varṇayati*, and (244) *avacūrṇayati* (with the root used with *ava*). Note that stems such as *tvaca* which are given with the final *a* will go through the deletion of this *a* before affix *ṆiC* by rule 6.4.155 *ṭeḥ*. A feminine stem such as *senā* will go through *puṃvadbhāva*.

The verbal derivates of the class headed by *cur*, etc., pose no difficulty. For example, (245) *corayati* derives from *cur* + (*Ṇ*→∅)*i*(*C*→∅) = *cur* + *i* = *c(u→o)r* + *i* = *cori* where the *laghūpadhaguṇa* '*guṇa*-replacement for the short penultimate vowel' of the root is ordered by 7.3.86 *pugantalaghūpadhasya ca*. The resultant derivates of *ṆiC* will all be reassigned the term *dhātu* by 3.1.32 *sanādyantā dhātavaḥ* so that *LAṬ* can be introduced. Our string *cori* + *LAṬ* should subsequently produce *corayati* similarly to the *guṇa* and *e→ay* replacement of (233) *satyāpayati*.

3.1.28 *gupūdhūpavicchipaṇipanibhya āyaḥ*

Examples such as (246) *gopāyati*, (247) *dhūpāyati*, (248) *vicchāyati*, (249) *paṇāyati* and (250) *panāyati* do not pose any derivational problems. The first *gopāyati* will entail *laghūpadhaguṇa* similarly to *corayati* of the earlier rule. I omit here the details of deriving *gopāyati* from *gopāya*, the resultant *dhātu* via placement of *LAṬ→tiP* and related operations.

3.1.30 *kamer ṇiṅ*

Deriving (251) *kāmayate* from *kāmi* + *(LAṬ→t(a→e)* = *kāmi* + *te* is not

problematic. The *vṛddhi* in *k(a→ām)* + (*Ṇ*→∅)*i*(*Ṅ*→∅) = *kām* + *i* = *kāmi* is accomplished by 7.2.116 *ata upadhāyāḥ* because of the *Ṇ* as an *it* in the affix. This, of course, brings an *ātmanepada* affix as a replacement for *LAṬ* by rule 1.3.12 *anudāttaṅita....*

3.1.31 *āyādaya ārddhadhātuke vā*

Our example (252) *goptā* is a *LUṬ*-derivate (3.3.15 *anadyatane luṭ*) of verbal root *gup* where, given *gup* + *LUṬ*, affix *āya* became available from rule 3.1.28 *gupūdhūpavicchi....* This rule optionally blocks this introduction of *āya*. Follow the derivational hostory of (43) *kaṇitā* (in the appendix of volume II) to derive *goptā* from *gup* + *LUṬ*. Remember, however, that verbal root *gup* is marked with *U* as an *it*. This, under the provisions of rule 7.2.44 *svaratisūtisūyati...*, will cause the optional introduction of augment *iṬ*. Our example *goptā* does not avail the option of introducing *iṬ*. But if one avails this option, the example parallel to *goptā* will be (253) *gopitā*.

A third form (254) *gopāyitā* will be derived from *gup* + *āya* = *gopāya*; and *gopāya* + *LUṬ* where *gopāya* will be the newly derived verbal root. Deriving *gopāya* from *gup* + *āya* through *guṇa* of *u* under the condition of the *ārddhadhātuka* affix *āya* is not problematic. Deriving *gopāyitā* from *gopāya* + *tās* (refer to the derivation of *kaṇitā* in the appendix of volume II) entails the introduction of *iṬ* by rule 7.2.35 *ārddhadhātukasyeḍ....* The *a* of *āya* is deleted by 6.4.48 *ato lopaḥ*. Thus, *gopāy(a→∅)* + *i*(*Ṭ*→∅) + *tās* = *gopāyitā*.

Similar rules will apply in deriving (255) *arttitā* from *ṛt* + *LUṬ* where the *īyaṄ* option of rule 3.1.29 *ṛter īyaṅ* is not availed. An option to introduce *īyaṄ* will derive (256) *ṛtīyitā* from *ṛt* + *īya* + *iṬ* + *tās* where the *a* of *īya* will be deleted similarly to that of *āya*. Parallel derivations such as (257) *kamitā* and (258) *kāmayitā* can be made from *kam* + *tās* and *kam* + *iṬ* + *īya* + *tās* depending on whether the option of *ṆiṄ* is accepted. The *vṛddhi* of *kam* in *kāmayitā* with the option of *ṆiṄ* will be accomplished by rule 7.2.116 *ata 'upadhāyāḥ*.

3.1.33 *syatāsī lṛluṭoḥ*

Refer again to (43) *kaṇitā* in the appendix of volume II for deriving (259) *mantā* and (260) *saṃgantā* from *man* + *tās* + (*Ḍ*)*ā* and *samgam* + *tās* + (*Ḍ*)*ā*. The *m* of *gam* will go through *parasavarṇa* application of rule 8.4.58 *anusvārasya yayi parasavarṇaḥ*.

3.1.34 *sib bahulaṃ leṭi*

The derivation of (261) *joṣiṣat* begins with *juṣ* + *LEṬ* where affix *LEṬ* is introduced by rule 3.4.7 *liṅarthe leṭ*. Augment *aṬ* is introduced by 7.2.35 *ārdhadhātukasyeḍ...*to produce: *juṣ* + *i*(*Ṭ*→∅) + *LEṬ* which after the *tiP* replacement of *LEṬ* becomes: *juṣ* + *i* + *ti*. Our present rule then introduces *s*(*IP*→∅) to realize: *juṣ* + *i* + *s* + *ti*. A subsequent application of rule 3.4.94 *leṭo' ḍāṭau* introduces *a*(*Ṭ*→∅) to *LEṬ* to yield *juṣ* + *i* + *s* + *a* + *ti*.

Rule 3.4.94 *itaś ca lopaḥ parasmaipadeṣu* will then delete the *i* of *ti* to produce *juṣ + i + s + a + t (i→∅) = juṣ + i + s + a + t*. The application of *guṇa* (7.2.35 *sārvadhātukārddha...*) followed by the *s→ṣ* replacement of 8.3.59 *ādeśa pratyayayoḥ* will finally produce *j(u→o)ṣ + i + (s→ṣ) + a + t = joṣiṣat*. Note further that the *parasmaipada* of this example is ad hoc justifiable via 3.1.85 *vyatyayo bahulam*.

Similar rules derive (262) *tāriṣat* from *tṝ* where the *a* of *tar + i + s + a + t* after the *guṇa* of the root-vowel will be replaced with *ā* to produce: *t(a→ā)r + i + s + a + t = tāriṣat*. This replacement by *ā* is also ad hoc justifiable via 3.1.85 *vyatyayo bahulam*. Affix *sIP*, with reference to a *vārttika* proposal (ad this rule; *sib bahulaṃ chandasi ṇit*), can be variously treated as if marked with *Ṇ* as an *it*. This can facilitate *vṛddhi* by 7.2.115 *aco' ñ ṇiti*. Thus, *t(ṝ→ār) + s... = tāriṣat*.

Deriving (263) *mandiṣat* from *madI + LEṬ* entails the introduction of augment *nUM* by rule 7.1.58 *idito num dhātoḥ*. This will turn the string initially into *ma (n (UM→∅) d +s + ti*. Subsequent operational steps will realize *mand + i + (s→ṣ) + a + t = mandiṣat*. Here again the *parasmaipada* justifiable via *vyatyaya*.

3.1.38 *uṣavidajāgṛbhyo' nyatarasyām*

This rule allows for the optional introduction of affix *ām* after verbal roots *uṣA, vida,* and *jāgṛ*. I have already shown many such derivations though with *cakre* for which see the appendix of volume II under rule 1.3.63 *āmpratyayavat....* This rule requires the use of (264) *cakāra*, a *parasmaipada* of *kṛ* used here as an iterant (*anuprayoga*) as opposed to its *ātmanepada* form *cakre*. For, these roots are *parasmaipada*. Thus, *kṛ + LIṬ→ ti(P→∅) = kṛ + ti* where *ti* is replaced with *(N→∅)a(L→∅)* of 3.4.82 *parasmaipadānām ṇalatusus....* Rule 6.1.8 *liṭi dhātor anabhyāsasya* now applies doubling (*dvitva*) to produce: *kṛ + kṛ*. Rule 7.4.66 *ur at* then orders *a* as a replacement for *ṛ* which becomes *ar* in view of rule 1.1.51 *uraṇ raparaḥ*. The string now becomes *k(ṛ→ar) + kṛ + a = kar + kṛ + a*. This string becomes *ca + kṛ + a* through the *r*-deletion of *kar* via *halādiśeṣa*, and the *cutva* of 7.4.62 *kuhoś cuḥ*. Thus: *ka (r→∅) + kṛ + a = (k→c)a + kṛ + a = ca + kṛ + a*. Rule 7.2.115 *aco' ñṇiti* subsequently applies *vṛddhi* to bring about *ca + k(ṛ→ār) + a = cakāra*. Deriving (265) *oṣāñcakāra*, (266) *vidāñcakāra*, and (257) *jāgarāñcakāra* through the introduction of *ām* after *uṣ, vida* and *jāgṛ* is not very difficult. The first and the third derivate would entail *(laghūpadha)guṇa*. Thus, *(u→o)ṣ + ām + cakāra = oṣāñcakāra*, etc. Verbal root *vida* has been specified, through ad hoc (*nipātana*) as ending in *a* (*adanta*). This *a* is deleted by 6.4.48 *ato lopaḥ*. The question of *laghūpadhaguṇa* in case of *vid + ām* does not arise because the deleted *a* becomes present through *sthānivadbhāva*. This rules out the presence of an *iK* in the penultimate position, a requirement for the application of *laghūpadhaguṇa*. The other rule applications are not hard to comprehend.

3.1.39 *bhīhrībhrūhuvāṃ...*

This rule transfers operations similar to *ŚLU*, i.e., doubling by 6.1.10 *ślau*, and *itva* by 7.4.76 *bhṛñām it*. Examples (267) *bibhayāñcakāra*/(268) *bibhāya*; (269) *jihrayāñcakāra*/(270) *jihrāya*; and (271) *juhavāñcakāra*/(272) *juhāva* illustrate this.

Our first example *bibhayāñcakāra* is derived from *bhī* + *LIT* where *LIT* gets deleted; and an option of *ām* is accepted. Given *bhī* + *ām* + *kṛ* + *ṆaL* the string goes through doubling to produce *bhī* + *bhī* + *ām*.... I omit here the details of deriving *cakāra* to avoid duplication. After the *itva* of 7.4.76 *bhṛñām* it followed by the application of 8.4.54 *abhyāse carca* we get: *bh(ī→i)* + *bhī* + *ām* = *(bh→b)i* + *bhī* + *ām* = *bi* + *bhī* + *ām*. Deriving *bibhayāñcakāra* from *bi* +*bhi* + *ā* + *cakāra* is easy. Rule 7.3.84 *sārvadhātukārddhaḍhātukyoḥ* offers *guṇa* producing *bi* + *bh (ī→e)* + *ām...* which, in turn, produces *bi* + *bh (e→ay)* + *ām...* through the application of 6.1.78 *eco' yavāyāvaḥ*. Thus, *bi* + *bhay* + *ām* + *cakāra* = *bibhayāñcakāra* where 8.3.23 *mo' nusvāraḥ* changes the *m* of *ām* to *ṃ*. The *anusvāra*, similar to the last step of (223) *caṅkramyate* becomes *ñ*. A string such as *bhī* + *LIṬ* where the option of *ām* is not accepted will produce *bhī* + *a* from *bhī* + *(Ṇ)a(L)* = *bhī* + *bhī* + *a* = *bh(ī→i)* + *bhi* + *a* = *(bh→b)* + *bibhāya* = *bi* + *bhī* +*a*.

An application of *vṛddhi* (7.2.115 *aco' ñṇiti*) followed by *āy* as its replacement by 6.1.78 *eco' yavāyāvaḥ* will produce: *bi* + *bh(ī→ai)* + *a* = *bi* + *bh(ai->āy)* + *a* = *bibhāya*.

Similar rules apply in deriving *jihrayāñcakāra* and *jihrāya* from *hrī* + *hrī* + *ām* + *LIṬ* and *hrī* + *(LIṬ->tiP->ṆaL* where the *h* of the duplicated syllable changes first into *jh* and then into *j* via the application of rules 7.4.62 *kuhoś cuḥ* and 8.4.54 *abhyāse carca* respectively. Incidentally, the non-initial *r* of *hrī*, the duplicated syllable, cannot be retained due to special interpretation of the compound *halādi* of rule 7.4.60 *halādi śeṣaḥ*. Other examples follow similar derivational history.

3.1.40 *kṛñcānuprayujyate liṭi*

This rule, by interpretation, provides for the iterant, or tagged phrase, also to be constituted by verbal roots *bhū* and *as* in addition to *kṛ*. An example for these new iterants is furnished as (273) *pācayāmbabhūva* and (274) *pācayāmāsa*. Deriving *āsa* of *pācayāmāsa* from *ās* + *ṆaL* is not very difficult. Doubling and related operations will produce *a(s→Ø)* + *as* + *(N→Ø) a (L->Ø)* = *a* + *as* + *a* where the first *a* will be lengthened by 7.4.70 *ata ādeḥ*. Rule 6.1.101 *akaḥ savarṇe dīrghāḥ* will then apply to produce *(a->ā)* + *as* + *a* = *(ā+a* = *ā)s* + *a* = *āsa*.

The derivation of *babhūva* begins with *bhū* + *(LIṬ->tiP->ṆaL)* = *bhū* + *a* where 6.4.88 *bhuvo vug luṅliṭoḥ* orders the introduction of *vUK*. This changes the string to *bhū* + *vUK* + *a* = *bhūv* + *a*. Doubling and *halādiśeṣa* will produce *bhū(v->Ø)* + *bhū* + *a* = *bhū* + *bhūv* + *a*. Rule 7.4.59 *hrasvaḥ* orders the short counterpart for the long vowel of *bhū* only to be subsequently replaced with *a* by rule 7.4.73 *bhavateraḥ*. Thus, *bh(ū→u)* + *bhūv*

+ *a* = *bh(u→a)* + *bhūv* + *a* = *bha* + *bhūv* + *a*. Rule 8.4.54 *abhyāse carca* finally produces *(bh→b)a* + *bhūv* + *a* = *ba* + *bhūv* + *a* = *babhūva* by replacing the *bh* of *bha* with *b*. It should be easier now to understand the derivation of *pācayāmbabhūva* our complete example.

3.1.41 *vidāṃkurvantv ity anyatarasyām*

Let us derive first *kurvantu* of (275) *vidāṅkurvantu*. The derivation begins with verbal root *kṛ* + *(LOṬ→jhi)* where *jh* further gets replaced with *ant* to produce *kṛ* + *(jh→ant)i* = *kṛ* + *anti* by rule 7.1.3 *jho' ntaḥ*. Rule 3.1.79 *tanādikṛñbhya uḥ* then introduces the *vikaraṇa u* after which the *i* of *anti* is replaced with *u* of 3.4.86 *eruḥ*. Thus, *kṛ* + *u* + *anti* = *kṛ* + *u* + *ant(i→u)* = *kṛ* + *u* + *antu*. A further application of *guṇa* by 7.3.84 *sārvadhātukārddhadhātukayoḥ* read with 1.1.51 *ur aṇ raparaḥ* will produce *k(ṛ→ar)* + *u* + *antu* = *kar* + *u* + *antu*. This string will then go through *utva* of rule 6.4.110 *ata ut sārvadhātuke* to yield *k(a→u)r* + *u* + *antu* = *kuru* + *antu*. Rule 6.1.77 *iko yaṇ aci* will finally produce *kur(u→v)* + *antu* = *kurvantu*.

Let us now return to *vidāṅkurvantu* where, given *vid* + *LOṬ*, affix *ām* is introduced via *nipātana* to produce *vid* + *ām* + *LOṬ*. Blocking the application of *laghūpadhaguṇa* of rule 7.3.86 *pugantalaghūpadha...*, in *vid* before *ām*, is again accomplished via *nipātana*. The deletion of *LOṬ* and, the tagged *LOṬ* in *kurvantu*, further emphasizes the ad hoc nature of this derivation. These remarks relative to application of rules in deriving forms such as *vidāṅkurvantu* are made only for explanatory purposes. The derivates under *nipātana* need not be furnished any derivational details.

Our string *vid* + *LOṬ*, in the absence of this optional ad hoc introduction of *ām*, will derive the regular form *vidantu*.

3.1.42 *abhyutsādayāṃprajanayāṃcikayāṃ...chandasi*

This rule again makes optional ad hoc provisions relative to the Vedic usages. The examples in the classical language will still be (276) *abhyudasīṣadat*, etc., derived from *ṣad* + *ṆiC* + *LUṄ* where *abhi* and *ud* are preverbs used with verbal root *ṣadḶ*. Follow derivational steps similarly to (240) *āṭiṭat* in the appendix of volume II till you derive: *abhi* + *ut* + *sād* + *i* + *(C)a(Ṅ)* + *(LUṄ →ti(P)*. Rule 6.4.51 *ṇer aniṭi* then applies to delete the *i* of *ṆiC*. A subsequent application of rule 7.4.1 *ṇau caṅy upadhāyāḥ* on *abhi* + *ut* + *sād* + *(i→∅)* +*a* + *ti* will change the string to *abhi* + *ut* + *s(ā→a)d* + *a* + *ti* = *abhi* + *ut* + *sad* + *a* + *ti*. The *i* of *ti* will be finally deleted by 3.4.100 *itaś ca*. Doubling and *halādiśeṣa* will produce: *abhi* + *ut* + *sa(d→∅)* + *sad* + *a* + *t(i→∅)*. The *itva* of *sa* by 7.4.79 *sanyataḥ* via *sanvadbhāva* followed by the lengthening of the resultant *i* of *sa→i* = *s(i→ī)* by 7.4.94 *dīrgho laghoḥ* will produce: *abhi* + *ut* + *sī* + *sad* + *a* + *t*. Note here that doubling does not apply to the preverbs as is clear from numerous derivations already explained. I have carried the preverbs just for explanatory purposes; also for keeping track of the full derivational string. Incidentally, I should

also have brought rule 6.4.71 *luṅlaṅlṛṅ*...whereby augment *a(Ṭ)* will be introduced to the root. This will change the string to: *abhi* + *ut* + *sī* + *sad* + *a* + *ti* = *abhi* + *ut* + *a(Ṭ)* + *sī* + *sad* + *a* + *t* = *abhi* + *ut* + *sī* + *sad* + *a* + *t*. Refer to the derivational history of (240) *āṭiṭat* (volume II) and (166) *adhyajīgapat*, under rule 2.4.51 *ṇau ca*...for systematic application of rules.

Note, however, that the *i* of *abhi* will be replaced with *y* through the application of 6.1.77 *iko yaṇ aci*. The *s* of *sad* will be similarly replaced with *ṣ* via the application of rule 8.3.59 *ādeśapratyayayoḥ*. Thus, *abh (i→y)* + *ud* + *a* + *sī* + *(s→ṣ)ad* + *a* + *t* = *abhy* + *ud* + *a* + *sī* + *ṣad* +*a* + *t* = *abhyud* + *asīṣadat* = *abhyudasīṣadat*.

3.1.45 *śala igupadhād aniṭaḥ ksaḥ*

Our examples (277) *adhukṣat* and (278) *alikṣat* are *LUṄ*-derivates of *duh* and *lih*. The underlying strings as usual are: *a(Ṭ→Ø)* + *duh* + *(LUṄ→ tiP→t)* = *a* + *duh* + *CLI* + *t* where this rule introduces *Ksa* as a replacement for *CLI*. The resultant string, i.e., *a* + *duh* + *(CLI→(K→Ø)sa* + *t* =*a* + *duh* + *sa* + *t* goes through the application of rule 8.2.32 *dāder dhātor ghaḥ* whereby the *h* of *duh* is replaced with *gh*. The *d* of *du(h→gh)* is also replaced with *dh* by rule 8.2.37 *ekāco baśo bhaṣ*.... This changes the string to *a* + *du(h→gh)* + *sa* + *t* = *a* + *(d→dh)ugh* + *sa* + *t*. The *gh* is then replaced with *k* by rule 8.4.55 *khari ca* to produce *a* + *dhu(gh→k)* + *sa* + *t* = *adhuk* + *sat*. The *s* of the string will then be replaced with *ṣ* to realize *adhuk* + (*s* → *ṣ*) *at* = *adhukṣat* by 8.3.59 *ādeśapratyayayoḥ*. Note that the root was subject to the application of *laghūpadhaguṇa* (7.3.86 *pugantalaghūpadhasya ca*) which was blocked by 1.1.5 *kṅiti ca*. Similar application of rules will derive (278) *alikṣat*. Note, however, that the *h* of *lih* is replaced with *ḍh* by 8.2.31 *ho ḍhaḥ*. The *ḍh* is then replaced with *k* by rule 8.2.41 *ṣaḍhoḥ kaḥ si*.

3.1.47 *na dṛśaḥ*

This rule does not allow the *Ksa*-replacement for the *CLI* occurring after *dṛśIR* 'to see'. Rule 3.1.57 *irito vā* applies instead to optionally introduce *a(Ṅ)*. The string at this stage will be *a* + *dṛś* + *(CLI→a(Ṅ)* + *t* = *a* + *dṛś* + *a* + *t*. Note that *aṄ* replaces *CLI* at the strength of *IR* as an *it* in the root. The *ṛ* of the root does not go through *laghūpadhaguṇa* before *aṄ* because 1.1.5 *kṅiti ca* blocks it. The *guṇa* instead is brought about by 7.4.16 *ṛdṛśo' ṅi guṇah*. Thus, *a* + *d(ṛ→ar)ś* + *a* + *t* = (279) *adarśat*.

It should be remembered that 3.4.100 *irito vā* provides *aṄ* as a replacement for *CLI* only optionally. Affix *s(IC→Ø)* will replace *CLI* in the situation where the option of *aṄ* is not availed. The string at this stage will be *a* + *dṛś* + *s* + *t*. Rule 6.1.58 *sṛjidṛśor*... then will insert *aM* after *dṛ* to produce *a* + *dṛ* + *a(M→Ø)* + *ś* + *s* + *t*. Rule 7.1.77 *iko yaṇ aci* applies at this stage to change the string to *a* + *d(ṛ→r)* + *a* + *ś* + *s* + *t* = *adra* + *ś* + *s* + *t*. Rule 7.2.3 *vadavrajahalantasyācaḥ* will subsequently cause *vṛddhi*

whereby we will get *adr(a→ā)* + *ś* + *s* + *t*. Rule 7.3.96 *astisico' pṛkte* will then introduce *ī(Ṭ→∅)* to produce *adrā* + *ś* + *s* + *ī* + *t*. Rule 8.2.36 *vraścabhrasjasṛjmṛj*...will further replace the *ś* with *ṣ*. The resultant string, i.e., *adrāṣ* + *s* + *ī* + *t* will go through the application of rule 8.2.41 *ṣaḍhoḥ kaḥ si* whereby its *ṣ* will be changed to *k*. This will produce *adrā (ṣ→k)* + *s* + *ī* + *t* = *adrāk* + *sīt*. The application of rule 8.3.59 *ādeśapratyayayoḥ* is needed to change *s* into *ṣ* to finally produce *adrāk* + *(s→ṣ)* + *īt* = (280) *adrākṣīt*.

3.1.47 *ṇiśridrusrubhyaḥ karttari caṅ*

Refer to the appendix under rule 1.4.10 *hrasvaṃ laghu* for deriving *acīkarat* and *ajīharat*. Example (281) *aśiśriyat* also derives with *CaṄ* as a replacement for *CLI*. Doubling (by 6.1.11 *caṅi*), *halādiśeṣa*, introduction of *aṬ* (*aḍāgama*), and *tiP* will produce *a (Ṭ→∅)* + *śi* + *śri* + *a* + *t*. Rule 6.4.77 *aciśnudhātu*...will then introduce *iyAṄ* to realize: *aśiśr(i→iy(AṄ→∅)* + *a* + *t* = *aśiśriyat*. Similar derivational steps have to be followed to derive (282) *asusruvat* and (283) *adudruvat* where rule 6.4.77 *aciśnudhātu*..., in these cases, introduces the replacement *uvAṄ*.

3.1.49 *vibhāṣā dheṭśvyoḥ*

This rule introduces *caṄ* as a replacement for *CLI* only optionally. Thus, we will get two forms (284) *adadhat* and (285) *adhāt* where (285) illustrates the optional deletion of *sIC*. We will get (286) *adhāsīt* parallel to *adhāt* if the optional deletion of *sIC* is not undertaken. Note that *adadhat* is derived from *aṬ* + *dhā* + *dhā* + *(CLI→ca(Ṅ)* + *t* where the *e* of verbal root *dhe(Ṭ)* goes through a replacement in *ā* (*ātva*) by rule 6.1.45 *ādeca upadeśe*.... Doubling, and other operations are similar to the many examples already given. The *ā* of the root *dhā* will be deleted by rule 6.4.64 *āto lopa iṭi ca* under the condition of the *ārddhadhātuka* affix *caṄ* marked with *Ṅ*. The resultant string, i.e., *a* + *dhā* + *dh (ā→∅)* + *a* + *t*, will have its *dhā* go through shortening of *ā* by rule 7.4.59 *hrasvaḥ*. This will give us *a* + *dh(ā→a)* + *dh* + *a* + *t* = *a* + *dha* + *dh* + *a* + *t* where *dh* will go through a replacement in *d* (*jaśtva;* 8.4.54 *abhyāse car ca*). The result will be *a* + *(dh→d)a* + *dh* + *a* + *t* = *adadhat*. A parallel form *adhāt* can be derived by taking the optional *sIC* as a replacement for *caṄ*. This *sIC*, however, will be deleted, though optionally, by rule 2.4.78 *vibhāṣā ghrādheṭ*.... We will thus get *a* + *dhā* + *(CLI→ sIC)* + *t*. If the *LUK*-deletion of *sIC* is not opted then we will get *adhāsīt* from *a* + *dhā* + *sIC* + *īṬ* + *t* similarly to *alāvīt* for which see the appendix under rule 1.1.2 *adeṅ guṇaḥ*. Rule 7.2.73 *yamaramanama*... will introduce *sAK* prior to the *i(Ṭ)* of 7.2.35 *ārddhadhātukasyeḍ valādeḥ*. Thus, *a* + *dhā* + *s(AK)* + *s(IC)* + *ī(Ṭ)* + *i (Ṭ)* + *t* = *adhā* + *s* + *s* + *ī* + *i* + *t*. The *s* of the *sIC* will be eventually deleted by 8.2.28 *iṭ īṭi*. Rule 6.1.101 *akaḥ savarṇe*...will then apply to realize *a* + *dhā* + *s* + *(ī* + *i* = *ī)* + *t* = *adhāsīt*.

Deriving (287) *aśiśviyat* from *aṬ* + *śvi* + *śvi* + *caṄ* + *t* entails *iyAṄ* after doubling and related rule applications. A replacement in *aṄ* for *CLI* as

opposed to the present *CaṄ* will produce (288) *aśvat* from *aṬ* + *śvi* + *aṄ* + *t*. Note that the *aṄ* is introduced by 3.1.58 *jṝstambhumrucumlucu*.... The final *i* of the root will be replaced with *a* by rule 7.4.18 *śvayater aḥ*. The result will be: *a* + *śv (i→a)* + *a* + *t* = *aśv* + *a* + *a* + *t*. Finally, rule 6.1.96 *ato guṇe* will finally bring the single vowel substitute to derive *aśv(a+a→a) t* = *aśvat*.

Yet another optional form (289) *aśvayīt* can be derived if the optional replacement *aṄ* is not accepted. This will bring in *sIC*. Refer to the derivational history of *alāvīt* under 1.1.2 *adeṅ guṇaḥ*; also that of (286) *adhāsīt*. Note that the *vṛddhi* application of 7.2.1 *sici vṛddhiḥ parasmaipadeṣu* is blocked by 7.2.5 *hmyantakṣaṇaśvasa*.... An application of *guṇa* by rule 7.3.84 *sārvadhātukārddhadhātukayoḥ*...followed by the *ay* replacement of 6.1.78 *eco' yavāyāvaḥ* will produce: *a* + *śv (i→e→ay)* + *i* + *s* + *ī* + *t*. The deletion of *s* and *savarṇadīrgha* will produce *aśvayīt* similarly to (286) *adhāsīt*.

3.1.50 *gupeś chandasi*

Examples (290) *ajūgupatam* and (291) *agauptam*, (292) *agopiṣṭam*, and (293) *agopāyiṣṭam* illustrate the provisions of this rule. The first, *ajūguputam*, derives from *gup* + *(CLI→CaṄ)* + *LUṄ →thas* where this rule provides *CaṄ* as a replacement for *CLI* and *LUṄ* is replaced with the second person dual *parasmaipada* ending *thas* in related operations, as well as the augment *aṬ*. Doubling, *halādiśeṣa*, *cutva* of *g* and the introduction of *aṬ* produces *a* + *(g→j)u* + *gup* + *a* + *thas* = *a* + *ju* + *gup* + *a* + *thas*. The second personal *thas* has to be replaced with *tam* as is required by rule 3.4.101 *tasthasthamipām*.... The short *u* of the *abhyāsa*, i.e., *ju*, will subsequently be replaced with its long counterpart due to rule 6.1.7 *tujādīnāṃ dīrgho' bhyāsasya*. The result will thus be *a* + *jū* + *gup* + *a* + *(thas→tam)* = *ajūgupatam*.

Example (291) *agauptam* derives by replacing *CLI* with *sIC* obviously in the absence of replacing the same with *CaṄ*. This will produce the initial string as *a* + *gup* + *s (IC→0)* + *(LUṄ→ thas→tam))* = *a* + *gup* + *tam*. Note that the introduction of *iṬ* (*iḍāgama*) as per rule 7.2.35 *ārddhadhātukasyeḍ*... is optionally not accepted here as per rule 7.2.44 *svaratisūti*.... Rule 7.2.3 *vadavrajahalantasyācaḥ* then orders *vṛddhi* for the *u* of *gup* to produce *a* + *g (u→au)p* + *tam* = *agauptam*.

Example (292) *agopiṣṭam* derives from *a* + *gup* + *i* + *s* + *tam* where the optional *iṬ* of rule 7.2.44 *svaratisūti*...is availed. The *vṛddhi* which was available from 7.2.3 *vadavrajahalantasyācaḥ* is blocked by 7.2.4 *neṭi*. Instead, we see the application of *laghūpadhaguṇa* whereby we get *a* + *g(u→o)p* + *i* + *s* + *tam*. Our final form *agopiṣṭam* will be produced via the applications of rules 8.3.59 *ādeśa pratyayayoḥ* and 8.4.41 *ṣṭunā ṣṭuḥ* as follows: *agopi(s→ṣ)* + *(t→ṭ)am* = *agopiṣṭam*.

The next example (293) *agopāyiṣṭam* contains verbal root *gopāya* derived from *gup* + *āya* where affix *āya* is optionally introduced by 3.1.31 *āyādaya ārddhadhātuke vā* and *laghūpadhaguṇa* applies to produce *g(u→o)p* + *āya* =

gopāya. An introduction of *LUṄ*, followed by the *sIC*-replacement for *CLI* as well as the introduction of *aṬ* will produce *a + gup + s + tam* where *tam* is again a replacement of *LUṄ* via *thas*. The *vṛddhi* similarly to the preceding example became available but in this case was blocked by 7.2.4 *neṭi*. Rule 7.2.35 *ārddhadhātukasyeḍ*...will introduce *iṬ* where, given *a + gopāya + i(Ṭ) + s + tam*, the *a* of *gopāya* will be deleted by 6.4.48 *ato lopaḥ*. We will thus have *a + gopāy + i + s + tam* which through the application of 8.3.59 *ādeśapratyayayoḥ* and 8.4.41 *ṣṭunā ṣṭuḥ* becomes *a + gopāy + i + (s→ṣ) + tam = a + gopāy + i + ṣ + (t→ṭ)am = agopāyiṣṭam*.

3.1.52 *asyativaktikhyātibhyo' ṅ*

Example (294) *paryāsthata* derives from *as + (CLI→aṄ) + (LUṄ→ ta)* where our present rule orders *CaṄ* as a replacement for *CLI* and *LUṄ* gets replaced with the third person singular *ātmanepada* ending *ta* as per the *vt: upasargād asyatyuhyor*... ad rule 1.3.30 *nisamupavibhyoḥ*.... Of course, verbal root *as* 'to throw' is here used with the preverb *pari*. The augment in this case is *āṬ* of 6.4.72 *āḍ ajādīnām*.... This produces *pari. + ā (Ṭ→∅) + as + a(N→∅) + ta* where 7.4.17 *asyates thuk* introduces *th(UK)*. The resultant string, i.e., *pari + ā + as + th + a + ta*, will go through *yaṇādeśa* and *savarṇadīrgha* to produce: *par(i→y) + (ā+a→ā)s + th + a +ta = paryāsthata*.

Example (295) *paryāsthetām* is third person dual where *LUṄ* is replaced with *ātām*. Rule 7.2.81 *āto ṅitaḥ* applies on the string such as *paryāsth + a + ātām* to replace the *ā* of *ātām* with *iy*. The result becomes *paryāsth + iy + tām*. Rule 6.1.66 *lopo vyor vali* deletes the *y* subsequent to which 6.1.87 *ād guṇaḥ* applies to yield *paryāsth + a + i(y→∅) + tām = paryāsth + (a+i= e) + tām = paryāsthetām*.

Examples (296) *avocat*, (297) *avocatām*, and (298) *avocan*; or (299) *ākhyat*, can be similarly derived. The first, *avocat* derives from *aṬ + vac + CLI→ aṄ + (LUṄ→tiP→t))* = *a + vac + a + t*. Rule 7.4.20 *vaca um*, read with 1.1.47 *mid aco' ntyāt paraḥ*, introduces *uM* to yield *a + va + u(M→ ∅)c + a + t = a + va + u + c + a + t*. Rule 6.1.87 *ād guṇaḥ* will finally produce *a + v(a+u→o)c + a + t = avocat*. The derivational history of *avocatām* does not offer anything new except for *tām* coming as a substitute for *tas* by 3.4.101 *tasthasthamipām*.... Deriving *avocan* from *aṬ + vac + aṄ + (LUṄ→(jh→ant)i = a + vac + a + anti* is not very difficult. The final *i* is deleted by 3.4.100 *itaś ca*, and the *t* is dropped by 8.2.23 *saṃyogāntasya lopaḥ*. Thus, *a + (vac→va + u)c + a + (jh→ant(i→∅) = a + v(a+u→o)c + a + an(t→∅) = avoca + an*. Rule 6.1.97 *ato guṇe* will replace the sequence *a+a* with *a* as *avoc (a+a→a)n = avocan*. Our last form *ākhyat* contains the verbal root *khyā* used with the preverb *āṄ*. Thus, it derives from *āṄ + aṬ + khyā + LUṄ→tiP→t = ā + a + khyā + t* where the *ā* of *khyā* is deleted by 6.4.64 *āto lopa iṭi ca* to yield *ā + a+ khy(ā→∅)+ a + t*. An application of 6.1.101 *akaḥ savarṇe dīrghaḥ* finally produces *(ā+a = ā)khy + a + t = ākhyat*.

3.1.53 *lipisicihvaś ca*

Deriving (300) *alipat* from *aṬ + lip + aṄ + (LUṄ→tiP)* and (301) *asicat* from *aṬ + ṣic + aṄ + (LUṄ→tiP)* is easy. Remember, however, that the *laghūpadhaguṇa* available from 7.3.86 *puganta laghūpadhasya ca* is blocked by 1.1.5 *kṅiti ca.* The initial *ṣ* of the root in *asicat* is replaced with *s* by 6.1.64 *dhātvādeḥ....* Example (301) *āhvat* derives like *ākhyat* from *āṄ + aṬ + hve (Ṅ→0) + aṄ + tiP* where the *e* of *hve* goes through a replacement in *ā* (*ātva*) by rule 6.1.45 *ādeca upadeśe....* The deletion of this resultant *ā* as well as the *savarṇadīrgha* replacement for *(ā+a=ā)+ hv(ā→0) + a + t = āhvat* is same as in *ākhyat.*

3.1.54 *ātmanepadeṣv anyatarasyām*

Deriving *ātmanepada* forms such as (302) *alipata,* (303) *alipta;* (304) *asicata,* (305) *asikta;* and (306) *ahvata,* (307) *ahvāsta* entails the introduction of *ātmanepada* affixes by rule 1.3.72 *svaritañitaḥ kartrabhiprāye....* It also entails optionally replacing *CLI* with either *aṄ* of this rule, or *sIC* of 3.1.44 *cleḥ sic.* Thus, *alipata* derives from *aṬ + lip + (CLI→aṄ) + (LUṄ→ta).* This preceding can also produce an optional form *alipta* when *CLI* is instead replaced with *sIC.* Rule 8.2.26 *jhalo jhali* will then delete the *sIC.* Similar rules apply in deriving *asicata* and *asikta* with an additional rule application of *c* by *k* (*kutva*) of rule 8.2.30 *coḥ kuḥ.* Note here that rule 8.2.26 *jhalo jhali* which deletes *sIC* is contained in the *tripādī;* and hence, is treated as suspended (*asiddha*) in view of rule 7.3.86 *pugantalaghūpadhasya ca.* That is, rule 7.3.86 will demand *laghūpadhaguṇa.* This, however, will be blocked by 1.2.11 *liṅsicāv ātmanepadeṣu* based on the extension (*atideśa*) of *kitva,* status with *K* as an *it.* The *hveÑ* forms are not difficult to derive especially in view of the preceding derivates.

3.1.56 *sarttiśāstyarttibhyaś ca*

The derivational history of (308) *asarat* begins similarly to *asicat* though entails *guṇa* by 7.4.16 *ṛdṛśo' ṅi guṇaḥ* read with 1.1.51 *ur aṇ raparaḥ.* The *guṇa* of rule 7.3.84 *sārvadhātukārddhadhātukayoḥ* will be blocked by 1.1.5 *kṅiti ca.* Similar rules apply in deriving *ārat* where *āṬ* is introduced as the augment by rule 6.4.72 *āḍ ajādīnām.* Deriving (309) *aśiṣat* entails the application of two rules: 6.4.34 *śāsa id aṅhaloḥ* and 8.3.60 *śāsivasighasīnāṃ....* The first rule causes a replacement in *i* (*itva*) for the *ā* in the *upadhā* of the root. The second replaces the *s* of the root with *ṣ.*

3.1.57 *irito vā*

One can also derive (310) *abhidat,* and (311) *acchidat* similar to examples of the preceding rule. Note, however, in case of *acchidat,* that given *aṬ + chid + aṄ + t,* augment *tUK* will be introduced by rule 6.1.73 *che ca.* The resultant string *a + t + chid + a + t* will go through *ścutva* of rule 8.4.40 *stoḥ ścunā ścuḥ* to produce *a + (t→c) + chid + a + t = acchidat.*

Our optional forms such as (312) *abhaitsīt,* and (313) *acchaitsīt* derive with the option of *sIC.* Thus, given *aṬ +* tUK *+ chid + (CLI→sIC) + t*

similarly to the preceding examples, rule 7.3.96 *astisico' apṛkte* will introduce *īṬ* whereby we will get: *a* + *t* + *chid* + *s* + *ī*(*Ṭ*→*∅*) + *t*. This rule-application will be followed by that of 7.2.3 *vadavrajahalantasyācaḥ* whereby we will get *vṛddhi* of the *i* of *chid* marked by the terminal consonant *(halantalakṣaṇā)*. The resultant string, i.e., *a+t* + *ch(i* → *ai)d* + *s*+ *ī* + *t*, will go through the application of 8.4.55 *khari ca* which requires a replacement in *caR (cartva)*. Thus, we get *a* + *t* + *chai (d→t)* + *sīt* + *acchaitsīt* where I have not shown steps common with the preceding derivatives.

3.1.60 *ciṇ te padaḥ*

An example such as (314) *udapādi* derives from *ud* + *aṬ* + *pad* + *CiṆ* + *ta* where *CiṆ* is a replacement of *CLI* and *ta* is third singular *ātmanepada* denoting an agent. The *ta* is deleted by 6.4.104 *ciṇo luk*. The *vṛddhi* is, of course, ordered by 7.2.116 *ata upadhāyāḥ*.

3.1.63 *duhaś ca*

Our example (315) *adohi* derives from *aṬ* + *duh* + *(CLI→CiṆ)* + *LUṄ* → *ta*) through the deletion of the obligatory *ta* denoting object, and, of course, *guṇa*. We get (316) *adugdha* from *aṬ* + *duh* + *(CLI→Ksa)* + *(LUṄ→ta))* where *Ksa* replaces *CLI* by rule 3.1.45 *śala igupa*.... This *Ksa*, however, is deleted by 7.2.73 *lug vā*.... The resultant string *aduh* + *ta* will produce *adugdha* via the application of rules 8.2.32 *dāder dhātor ghaḥ*, 8.2.40 *jhaṣas tathor*..., and 8.4.53 *jhalāṃ jaś jhaśi* whereby we get the series of replacements. Thus, while the first rule changes the *h* of *duh* into *gh*, the second replaces the *t* of *ta* with *dh*. Finally, the third rule applies on *adugh* + *dha* to realize *adu(gh→g)* + *dha* = *adugdha*.

3.1.64 *na rudhaḥ*

Example (317) *anvavāruddha* derives from *anu* + *ava* + *aṬ* + *rudh* + *(CLI→sIC→∅)* + *(LUṄ→ta)* where *sIC* is deleted by 8.2.26 *jhalo jhali*. The *t* of *ta* will be replaced with *dh* by rule 8.2.40 *jhaṣastathor*...; the *dh* of *rudh* will similarly be replaced with *d* by rule 8.4.52 *jhalāṃ*.... Thus we get *anu* + *ava* + *a* + *ru(dh→d)* + *(t→dh)a* = *an(u→v)* + *av(a+a→ā)* +*ruddha* = *anvavāruddha* additionally through *yaṆ* and *savarṇadīrgha*. Note that the consequence of blocking *CiṆ* as a replacement for *CLI* is to introduce *sIC* which gets deleted by 8.2.26 *jhalo jhali*. Examples such as (318) *atapta* and (319) *anvavātapta* given under the following rule can be similarly derived.

3.1.66 *ciṇbhāvakarmaṇoḥ*/3.1.67 *sārvadhātuke yak*

The derivation of (320) *akāri* from *aṬ* + *kṛ* + *(CLI→CIṆ)* + *ta* via *vṛddhi* by 7.2.115 *aco' ñṇiti* is not difficult. Examples such as (321) *āsyate*, (322) *śayyate* and (323) *gamyate* with the introduction of *yaK* under the condition of a following affix termed *sārvadhātuka* (3.4.113 *tiṅśit*...) does not pose much of a problem. Thus, given *ās* + *LAṬ→ta* where *LAṬ* is introduced to denote *bhāva* 'root-sense' and subsequently gets replaced with the third person singular *ātmanepada* ending *ta*, our present rule introduces *ya(K→∅)* to produce *ās* + *ya* + *ta*. Our final form *āsyate* is derived by replacing the

a of *ta* by *e* under the provisions of rule 3.4.79 *ṭit ātmanepadānām....* The other forms can be similarly derived. Remember, however, that, in case of *śayyate*, the final vowel of verbal root *śī* gets replaced with *ayAṄ* of rule 7.4.22 *ayaṅ yi kṅiti*. Thus, *ś (i→ay) + ya + te = śayyate*. An example such as *kriyate* manipulates the *LA* affix to denote the object. See the appendix under rule 1.3.13 *bhāvakarmaṇoḥ* for deriving *kriyate* and similar other forms.

3.1.68 *karttari śap*

Refer to the appendix under rule 1.1.2 *adeṅ guṇah* for deriving *bhavati* and *pacati*.

3.1.69 *divādibhyaḥ śyan*

Examples such as (324) *dīvyati* or (325) *sīvyati* can be derived by introducing (*Ś*→*Ø*)*ya*(*N*→*Ø*) as opposed to *ŚaP* before *tiP*. Remember that the *ṣ* of *ṣivU* 'to sew' is as usual replaced with *s* by rule 6.1.64 *dhātvādeḥ ṣaḥ saḥ*. The *laghūpadhaguṇa* of *i* is blocked because of the status of this affix as *pit* (1.2.4 *sārvadhātukam apit*). This penultimate (*upadhā*) *i* is replaced with its long counterpart under the provision of rule 8.2.77 *hali ca*.

3.1.70 *vā bhrāśabhlāśabhramuklamutrasitruṭilaṣaḥ*

Deriving the optional (*ŚyaN* / *ŚaP*) sets of examples for roots specified by this rule is not very difficult. Let us just consider the two examples: (326) *bhrāśate*, and (327) *bhrāśyate*. An application of rules 7.3.74-75 *śamāṃ aṣṭānām...*, *ṣṭhīvuklamucamāṃ...*, and 7.3.76 *kramaḥ parasmaipadeṣu* order *vṛddhi* in case of *bhram*, *klam*, and *kram*, etc. In case of the derivates of *truṭ* we will have to introduce *Śa* optionally with *ŚyaN* since the root belongs to the *tudādi* class.

3.1.73 *svādibhyaḥ...*/3.1.74 *śruvaḥ śṛ ca*

Deriving (328) *sunoti* and (329) *sinoti* from *ṣuÑ* + (*LAṬ*→*tiP*) and *ṣiÑ*+ (*LAṬ*→*tiP*) with subsequent introduction of *Śnu* entails *guṇa* by 7.3.84 *sārvadhātukārddhadhātukayoḥ* before *tiP*. The root-initial *ṣ* will be replaced with *ṣ* of 6.1.64 *dhātvādeḥ....* The initial *guṇa* is blocked for reasons similar to the derivation of (324) *dīvyati*.

Examples such as (330) *śṛṇoti*, (331) *śṛṇutaḥ*, and (332) *śṛṇvanti* derive from *śru* + *LAṬ* where the root is replaced with *śṛ*. The *LAṬ* is replaced with *tiP*, *tas*, or *jhi* as desired. The first example entails *guṇa* where as the second and third do not. The third, however, entails *yaṆ*, i.e., *śriṇ(u→v)* + *anti*. The *n* of *Śnu* is replaced with *ṇ* by rule 8.4.2 *aṭkupvāṃ....* Incidentally, be advised that by providing for a replacement in *śṛ* simultaneously with the introduction of affix *Śnu*, Pāṇini wants to emphasize that elsewhere in the context of some other affix this replacement will not be allowed.

3.1.77 *tudādibhyaḥ śaḥ*

Note in connection with the derivation of (333) *tudati* and (334) *nudati* from *tud* +*LAṬ* and *nud* + *LAṬ* that the *Ś* as an it in the affix is intended for the assignment of the term *sārvadhātuka* by 3.1.113 *tiṅśit sārvadhātukam*. This will enable affix *Śa* also to be treated as if marked with *Ṅ* as an *it*. For, rule 1.2.4 *sārvadhātukam apit* will view it as a *sārvadhātuka* affix not marked with *P* (*apit*).

3.1.78 *rudhādibhyaḥ śnam*

Examples (335) *ruṇaddhi* and (336) *bhinatti* derive from (*rudh(IR→Ø)* + *LAṬ*)and *bhid(IR→Ø)* + *LAṬ* where this rule introduces *ŚnaM* under the condition of the following *tiP* replacement of *LAṬ*. The string at this stage is: *ru*+ *na* + *dh* + *ti* and *bhi* + *na* + *d* + *ti*. Notice that the *M* as an *it* in *ŚnaM* is used for specifying the locus of operation (*deśavidhyartha*). Consequently, the affix is introduced after the last among the vowels of the roots in consonance with rule 1.1.47 *mid aco' ntyāt paraḥ*. Refer to the derivation of (146) *viruṇaddhi* under the appendix of this rule (1.1.47) for additional details. Note also that rules 8.2.40 *jhaṣastathor...* and 8.4.53 *jhalāṃ jaś...* are not valid in the context of *bhi* + *na* + *d* + *ti*. Instead, the *d* of *bhid* is replaced with *t* by rule 8.4.55 *khari ca*.

3.1.80 *dhinvikṛṇvyor a ca*

Examples (337) *dhinoti* and (338) *kṛṇoti* derive from *dhin (v→a)* + *u* + *(LAṬ→tiP)* and *kṛn(v→a)* + *u* + *(LAṬ→tiP)* where this rule introduces *u* under the condition of the following *ti*. It also requires the root-final *v* to be replaced with *a*. Note that these roots belong to the *bhvādi* class, and hence qualify for *ŚaP*. This rule makes a provision for *u* instead. Rule 6.4.48 *ato lopaḥ* then deletes the root-final substitute *a*. The resultant strings *dhin* + *u* + *ti* and *kṛn* + *u* + *ti* go through *guṇa* as per 7.3.84 *sārvadhātukārddhadhātukayoḥ*. It is stated that the *n* of *nUM* in *kṛnvI* is replaced with *ṇ* at the strength of a *vārttika* (ad 8.4.1 *ṛvarṇāc ceti vaktavyam*).

Note that the roots are actually *dhivI* and *kṛvI*. But since Pāṇini specifies them as *dhinvI* and *kṛṇvI*, we understand that they come with the augment *nUM* attached to them at the outset.

3.1.81 *kryādibhyaḥ śnā*

Examples such as (339) *krīṇāti* and (340) *prīṇāti* derive from (*ḌU→Ø)krī(Ñ→Ø)* + *(LAṬ→tiP)* and *prīÑ* + *(LAṬ→tiP)* where this rule introduces *Śnā* to yield *krī* + *nā* + *ti* and *prī* + *nā* + *ti*. Rule 8.4.2 *aṭkupvām...* will finally replace the *n* of *nā* with *ṇ* to derive *krīṇāti* and *prīṇāti*. Note that the corresponding dual forms (341) *krīṇītaḥ* and (342) *prīṇītaḥ* will have to go through the application of *ītva* of rule 6.4.113 *ī haly aghoḥ* whereby the *ā* of *nā* will be replaced with *ī*. Of course, the *s* of the dual ending *tas* will also go through *rutva-visarga*.

3.1.82 *stambhustumbhuskambhuskumbhuskuñbhyaḥ śnuś ca*

Note that the nasal (*anunāsika*) *m* of the root will be deleted by 6.4.24 *aniditāṃ hala upadhāyāḥ....* Examples such as (343) *stabhnāti*, with *(Ś→Ø)nā)*, and (344) *stubhnoti* with *(Ś→Ø) nu* and *guṇa*, are not difficult to derive. The *U* of the roots is of course an *it*.

3.1.83 *halaḥ śnaḥ śānaj hau*

This rule requires that *Śnā* occurring after a verbal root terminating in a consonant be replaced with *ŚānaC* when *hi* follows. Thus, given *muṣ* + *LOṬ→si(P→Ø)* where *LOṬ* is introduced by 3.3.162 *loṭ ca*, the second person singular replacement of *LOṬ* is subsequently replaced with *hi* by

3.4.87 *ser hy apic ca.* It is with the string at the stage of *muṣ* + *nā* + *hi* that our present rule introduces (*Ś*→∅)*āna*(*C*→∅) as a replacement for *nā*. This yields *muṣ* + *āna* + *hi* where *hi* is subsequently deleted by rule 6.4.105 *ato heḥ*. Rule 8.4.2 *aṭkupvāṃ...* finally replaces the *n* of *āna* with *ṇ* to produce (345) *muṣāṇa*. Similar rules will derive (346) *puṣāṇa* from *puṣ* + *LOṬ*.

3.1.86 *liṅy āśiṣy aṅ*

Examples such as (347) *upastheyam* derive from *upa* + *sthā* + *LIṄ* where affix *LIṄ* is introduced after verbal root *sthā* used with the preverb *upa* by rule 3.3.173 *āśiṣi liṅloṭau*. The affix is further replaced with the first personal ending *miP* of 3.4.78 *tiptasjhi....* This yields *upa* + *sthā* + *mi(P)*. This string goes through the application of rules 3.4.101 *tasthasthamipām...*and 3.4.103 *yāsuṭ parasmaipadeṣu...*whereby *mi(P)* is replaced with *am*, and augment *yāsUṬ* is attached. Thus we get *upa* + *sthā* + (*mi(P)*→*am*) = *upa* + *sthā* + *yās* (*UṬ*→∅) + *am*. Our present rule introduces *aṄ* at this stage to realize *upa* + *sthā* + *a*(*Ṅ*→∅) +*yās* + *am*. It is interesting to note that a replacement of affix *LIṄ* is assigned the term *ārddhadhātuka* by rule 3.4.116 *liṅ āśiṣi*. The same replacement can also be assigned the term *sārvadhātuka* by the 'either-or' (*ubhayathā*) provision of rule 3.4.117 *chandasy ubhayathā* in case of the Vedic language. The *am* replacement of *LIṄ* via *miP* is here accepted as *sārvadhātuka* to facilitate the application of rules 7.2.79 *liṅaḥ salopo' nantyasya* and 7.2.80 *ato yeyaḥ* whereby first the *s* of *yās* is deleted. The *yā* is then replaced with *iy*. Thus we get *upa* + *sthā* + *a* +*yā*(*s*→∅) + *am* = *upa* + *sthā* + *a* + (*yā*→*iy*) + *am* = *upa* + *sthā* + *a* + *iy* + *am*. The *ā* of *sthā* will then be deleted by rule 6.4.64 *āto lopa iṭi ca* under the condition of the following *aṄ*. The resultant string *upa* + *sth*(*a*→∅) + *a* + *iy* + *am* will go through the application of a single *guṇa* replacement for its sequence *a*+*i* as per rule 6.1.87 *ād guṇaḥ*. Thus, *upa* + *sth* + (*a*+*i*→*e*)*y* + *am* = *upastheyam*.

An example such as (348) *upageyam* can be similarly derived from *upa* + *gai* + *LIṄ* where rule 6.1.45 *ādeca upadeśe...*will order *ā* as a replacement (*ātva*) for the *ai* of verbal root *gai* 'to sing'.

A third example, (349) *gamema*, can be derived from *gam* + *LIṄ* where *LIṄ* gets replaced with the first person plural *parasmaipada* ending *mas*. The string will be expanded to *gam* + (*yā*→*iy*)(*s*→∅)) +*a* + *mas*, similarly to (347) *upastheyam*. The *s* of *mas* will be deleted by rule 3.4.99 *nityaṃ ṅitaḥ*. The *y* will also be deleted by 6.1.66 *lopo vyor vali*. The rest should pose no problem.

An example for verbal root *vac* is given as (350) *vocema* which, in turn, can be derived similarly to *gamema*. Note, however, that given *vac* +*a* + *yās* + *mas*, rule 7.4.20 *vaca um* will introduce *uM* to *vac*. Rule 1.1.47 *mid aco' ntyāt paraḥ* would demand that *u*(*M*→∅) be introduced to *vac* after its *a*. This will yield *va* + *u* + *c* + *a* + *yās* + *mas*. Rule applications relative to *yāsuṬ* will produce *va* + *u* + *c* + *a* + *iy* + *mas*. A two-fold application of rule 6.1.87 *ād guṇaḥ* will be required to realize *v* (*a*+*u*→*o*) + *c* + (*a*+*i*→*e*)*y*

+ *mas* = *vocey* + *mas*. The deletions relative to the *s* of *mas* and *y* of *vocey* will follow the pattern of *gamema* to finally produce *vocema*.

Additional examples such as (351) *videyam*, (352) *śakeyam* and (353) *āruheyam* are similarly derived by introducing affix *LIṄ* after specified verbal roots used with or without any preverbs as desired.

3.1.87 *karmavat karmaṇā tulyakriyaḥ*

Note that (354) *abhedi* derives similarly to (315) *adohi*. The derivation of *adugdha* has already been discussed under rule 3.1.63 *duhaś ca*. The derivation of (355) *kāriṣyate* follows in many ways the derivation of *kariṣyati* for which see example (742) under the appendix of rule 1.4.13 *yasmāt pratyayavidhis....* Treating an agent as if an object (*karmavadbhāva*) entails performing operations similarly to *CiṆ* (*ciṇvatkārya*). That is, introducing *sya* and *iṬ* by rule 6.4.62 *syasicsīyuṭ...*; and applying *vṛddhi* by 7.2.115 *aco' ñṇiti*. Thus, *kṛ* + *(LṚṬ→t(a→e)* = *kṛ* + *te* = *kṛ* + *i* + *sya* + *te* = *k(ṛ→ār)* + *i* + *sya* + *te* = *kār* + *i* + *(s→ṣ)ya* + *te* = *kāriṣyate*. The *ātmanepada* in this example has been introduced by rule 1.3.13 *bhāvakarmaṇoḥ*.

3.1.89 *na duhsnunamāṃ yakciṇau*

Example (356) *dugdhe* derives from *duh* + *(LAṬ→t(a→e))* where *ta*, the third person singular *ātmanepada* replacement of *LAṬ*, is additionally required to go through the *e* replacement (*etva*; 3.4.79 *ṭit ātmanepadānā...*) of its *ṭi* (1.1.64 *aco' ntyādi ṭi*). Refer to the derivational details of (316) *adugdha* for the application of rules relative to the *h* of *duh* and *t* of *te* to finally derive *dugdhe*. Note, however, that affix *ŚaP* will be introduced by 3.1.68 *karttari śap* in the event of *yaK* being negated for *duh* by the present rule. The *śap* will subsequently be deleted by rule 2.4.72 *adiprabhṛtibhyah....* Of course, *ātmanepada* will be introduced by 1.3.13 *bhāvakarmaṇoḥ*.

Example (357) *prasnute* similarly derives from *pra* + *snu* + *(LAṬ→t(a→e))* = *prasnu* + *te*. Our next example (358) *prāsnoṣṭa* is a *LUṄ*-derivate of verbal root *snu*, used with the preverb *pra*, where this present rule blocks *CiṆ* as a replacement for *CLI*. Thus, given *pra* + *aṬ* + *snu* + *(CLI→sIC)* + *(LUṄ→ta)))* = *pra* + *a* +*snu* + *s* + *ta*, *guṇa*, *ṣatva* (8.3.59 *ādeśa pratyayayoḥ*), *ṣṭutva* (8.4.44 *ṣṭunā ṣṭuḥ*) and *savarṇadīrgha* (6.1.101 *akaḥ savarṇe dīrghaḥ*) will produce *prāsnoṣṭa* as follows:

pra + *a* + *sn(u→o)* + *s* + *ta (guṇa)* = *pra* +*a* + *sno* + *(s→ṣ)* + *ta (ṣatva)* = *pra* + *a* + *sno* + *ṣ* + *(t→ṭ)a (ṣṭutva)* = *pr(a+a→ā)* + *sno* + *ṣ* + *ṭa (savarṇadīrgha)* = *prāsnoṣṭa*.

Yet another example (359) *prāsnāviṣṭa* derives from *pra* + *a* + *snu* + *iṬ* + *sIC* + *(LUṄ→ta)* where the option of *ciṇvatkārya* as provided for by rule 6.4.62 *syasicsīyuṭ...*is availed. The *vṛddhi* by 7.2.115 *aco' ñṇiti* will apply to produce *pra* + *a* + *sn(u→au)* + *i* + *s* + *ta*. A replacement in *āv* for *au* by 6.1.78 *eco' yavāyāvaḥ* will realize *pra* + *a* + *sn(au→āv)* + *i* + *s* + *ta* = *pra* + *a* + *snāv* + *i* + *s* + *ta*. An application of *ṣatva*, *ṣṭutva*, and *savarṇadīrgha* will produce *prāsnāviṣṭa*.

The derivates of *nam* such as (360) *namate* and (361) *anaṃsta* are

derived similarly from *nam* + *ta* and *aṬ* + *nam* +*sIC* + *ta* where the first derivate is denied *yaK* and hence is thus left with *ŚaP*. The second derivate is denied *CIṆ*, and hence is left with *sIC*. The *m* of *a* + *nam* + *s* + *ta* is replaced with *anusvāra* by rule 8.3.23 *mo' nusvāraḥ*.

3.1.97 *aco yat*

This rule introduces affix *yaT* after roots ending in vowels. We thus get examples (362) *geyam* from *gai* + *yaT*, (363) *peyam* from *pā* + *yaT*, (364) *ceyam* from *ciÑ* + *yaT*, and (365) *jeyam* from *ji* + *yaT*. Note that the *ai* of *gai* goes through *ātva* of rule 6.1.45 *ādeca upadeśa*.... Rule 6.4.65 *īd yati* then applies on *g(ai→ā)* + *ya(T→∅)* = *gā* + *ya* to replace the final *ā* of the *aṅga* (1.4.13 *yasmāt pratyayavidhis*...) with *ī* (*ītva*) under the condition of affix *yat*, an *ārddhadhātuka* (3.4.114 *ārddhadhātukaṃ śeṣaḥ*). The nominal stem *g(ā→ī)* + *ya* = *g* + *(ī→e)* + *ya* = *g* + *e* + *ya* =*geya* can now be derived via the application of *guṇa* by 7.3.84 *sārvadhātukārddhadhātukayoḥ*. A nominal ending *sU* (4.1.2 *svaujasmauṭ*...) introduced after the nominal stem (1.2.46 *krttaddhitasamāsāś ca*) *geya* will be subsequently replaced with *am* of 7.1.24 *ato' m* to produce *geya* + (*sU→am*) = *geya* + *am*. An application of 6.1.107 *ami pūrvaḥ* will then order a single substitute (*ekādeśa*), similar to preceding (*pūrvarūpa*) in form, to replace the vocalic sequence of *a* + *a*. We thus get *gey(a+ a→a)m* = *geyam*. Other examples can be similarly derived through the application of *guṇa* before *yaT*. Note though that affix *yaT* will be termed *kṛtya* (3.1.95 *kṛtyāḥ*) consequent upon which it can only denote *bhāva* and *karman* as per 3.4.70 *tayor eva kṛtya*.... The denotation of *kartṛ* 'agent' as per 3.4.67 *kartari kṛt* will thus not be available to it.

3.1.106 *vadaḥ supi kyap ca*

Example (366) *brahmodyam* contains the nominal stem *brahmodya* which, in turn, derives from *brahman* + *Ṅas* + *vad* + *KyaP* where *Ṅas* denotes object (*karman*). Incidentally, *brahman* + *Ṅas* gets its *n* deleted by rule 8.2.7 *nalopaḥ prātipadikāntasya*. Rule 6.1.15 *vacisvapiyajādi*...requires the *samprasāraṇa* of the *v* of *vad*. We thus get *brahma* (*n→∅*) + *Ṅas* + (*v→u)ad* + (*K→∅)ya(P→∅)* = *brahma* + *Ṅas* + *uad* + *ya*. Rule 6.1.108 *samprasāraṇāc ca* will then apply to replace the sequence *u+a* with *u* thereby to produce *brahma* + *Ṅas* + *ud* + *ya* = *brahma* + *Ṅas* + *udya*. Rule 2.2.19 *upapadam atiṅ* will then order the formation of an *upapada* compound subsequent to which *Ṅas* will be deleted by 2.4.71 *supo dhātuprātipadikayoḥ*. The resultant string *brahmaudya* will go through a single *guṇa*-replacement in *o* by rule 6.1.87 *ād guṇaḥ* for its sequence *a+u* to produce *brahm(a+u→o)dya* = *brahmodya*. The final example *brahmodyam* will be derived from *brahmodya* + *sU* similarly to (362) *geyam* from *geya* + *sU*. Note that the *upapada* compound is allowed with reference to the *paribh: gatikārakopapadānāṃ kṛdbhiḥ saha samāsavacanaṃ prāk subūtpatteḥ*. Refer to my discussion of this under the text and appendix of rule 2.2.19

upapadam atiṅ.

A derivate such as (367) *brahmavadyam* which contains the nominal stem *brahmavadya* will be derived parallel to *brahmodyam* if the option of introducing affix *yaT*, as opposed to *KyaP*, is accepted. Similar rules will apply in deriving optional examples such as (368) *satyodyam* and (369) *satyavadyam.*

3.1.109 *etistuśāsvṛdṛjuṣaḥ*

Deriving forms such as (370) *ityaḥ* from *(i + KyaP) + sU))*, (371) *stutyaḥ* from *(stu + KyaP) + sU))*, etc., entails the introduction of augment *tUK* by rule 6.1.71 *hrasvasya piti....* An example such as (372) *śiṣyaḥ* will be derived from *(śās + KyaP) + sU))* where the penultimate *ā* will go through a replacement in *i* (*itva*) by rule 6.4.34 *śās idaṅhaloḥ*. The *s* of the resultant string *ś(a→i)s + ya)* will go through *ṣatva* of rule 8.3.60 *śāsivasighasīnām...* to produce: *śi(s→ṣ)ya)) = śiṣya*, the nominal stem after which *sU* will be introduced.

3.1.113 *mṛjer vibhāṣā*

A set of optional examples such as (373) *parimṛjyaḥ* and (374) *parimārgyaḥ* will derive from *(pari + mṛj + KyaP) + sU))* and *(pari + mṛj + ṆyaT) + sU))* since affix *KyaP* is here introduced optionally to *ṆyaT* of 3.1.124 *ṛhalor ṇyat.* This optional provision of *KyaP* was obligatorily available to verbal root *mṛj* because of being *ṛdupadha*. Now the *KyaP* becomes optional. The derivational history of *parimṛjyaḥ* with *KyaP* is straightforward. Deriving *parimārgyaḥ* entails *vṛddhi* (*parim(ṛ→ār)j...*) by 7.2.11 *mṛjer vṛddhiḥ* followed by *kutva* (*parimār(j→g)...*) of rule 7.3.53 *cajoḥ ku....*

3.1.120 *vibhāṣā kṛvṛṣoḥ*

Each verbal root will have a set of optional derivates where the option will be relative to affixes *KyaP* and *ṆyaT*. Refer to the derivational details of *ityaḥ* for deriving the nominal stem *kṛtya* of (375) *kṛtyam*. Follow the final steps of (362) *geyam* for deriving *kṛtyam* from *kṛtya + sU*. Example (376) *kāryam* contains the nominal stem *kārya* which, in turn, derives from *(kṛ + ṆyaT) + sU))* through *vṛddhi* of 7.2.115 *aco' ñṇiti.*

3.1.124 *ṛhalor ṇyat*

Note that derivates ending in affix *ṆyaT* such as *kāryam* where the root ends in *ṛ* will be subject to the application of *vṛddhi* by rule 7.2.115 *aco' ñṇiti*. Derivates with *ṆyaT* introduced after verbal roots ending in a consonant will go through *vṛddhi* of rule 7.2.116 *ata upadhāyāḥ*. Examples such as (377) *vākyam* and (378) *pākyam* will go through *kutva* as per rule 7.3.52 *cajoḥ ku....*

3.1.126 *āsuyuvapirapilapicamaś ca*

The *ṆyaT* derivates such as (379) *āsāvyam*, and (380) *yāvyam* contain *āsāvya + sU* and *yāvya + sU*. Deriving *āsāvya* from *ā(Ṅ→Ø) + (ṣ→s)u + (Ṇ)ya(T) = āsu + ya* where *āṄ* is a preverb and the root-initial *ṣ* is replaced with *s* of 6.1.64 *dhātvādeḥ...* of course requires *vṛddhi*. However, note that

given *āsā* + *ya*, rule 6.1.80 *dhātos tannimittasyaiva* will apply to produce *āsā* + *v* + *ya* = *āsāvya*. Other examples such as (381) *vāpyam*, etc., will just involve *vṛddhi* as per rules mentioned in connection with the derivates of preceding rule.

3.1.134 *nandigrahipacādibhyo lyuṇinyacaḥ*

Our example (382) *nandanaḥ* contains *nandana* + *sU* where *nandana* derives from *(ṬU→∅)nad(Ī→∅)* + *(L→∅)yu))* = *nad* + *yu*. Rule 7.1.58 *idito num dhātoḥ* introduces augment *n(UM→∅)* to produce *na* + *n* + *d* + *yu*. The *yu* of the affix will be replaced with *ana* of 7.1.1 *yuvor anākau*. The *n* before *d* is also replaced with *anusvāra* of rule 8.3.24 *naś cāpadāntasya* whereby we get *na* + *(n→ṃ)* + *d* + *ana*. The *anusvāra* is then changed back to *n* as per *parasavarṇa* of 8.4.58 *anusvārasya yayi parasavarṇaḥ*. It is advised by a *vārttika* under this rule that *nad* should receive affix *Lyu* only after having received *ṆiC* from 3.1.26 *hetumati ca*. This *ṆiC* will also be deleted by 6.4.51 *ṇer aniṭi*.

Example (383) *grāhī* contains the nominal stem *grahin* derived by introducing affix *ṆinI* after *grah*. Rule 7.2.116 *ata upadhāyāḥ* will then cause *vṛddhi* to produce the nominal stem *gr(a→ā)h* + *in* = *grāhin*. Deriving *grāhī* from *grāhin* + *sU* entails the deletions of *n* (by 8.2.7 *na lopaḥ...*) and *sU* (by 6.1.68 *halṅyābbhyo...*). The short *i* of *grāhi* is replaced with its long counterpart by rule 6.4.13 *sau ca*.

An example such as (384) *pacaḥ* derives from *(pac* + *aC)* = *paca* + *sU))* via further application of *rutva-visarga*.

3.1.135 *igupadhajñāprīkiraḥ*

Example (385) *vikṣipaḥ* derived from *(vi* + *kṣip* + *(K→∅)a)* + *sU* = *(vikṣip* + *a)* + *sU))* where *vi* is a preverb and the *guṇa* of *i* is blocked at the strength of the *Kit* status of the affix (*kitvād guṇābhāvaḥ*). A derivate of *jñā* such as (386) *jñaḥ* entails the deletion of *ā* (*āllopa*) by 6.4.64 *āto lopa iṭi ca*. A similar derivation of (387) *priyaḥ* from *prī(Ñ→∅)* + *a)* + *sU))* entails *iyAṄ* as a replacement for the *ī* of *prī* as per rule 6.4.77 *aciśnudhātu....* Rule 7.1.100 *ṝta id dhātoḥ* similarly orders *i* as a replacement for the *ṝ* of *kṝ* in deriving (388) *kiraḥ*. Note that the replacement becomes *ir* (*rapara*) in view of rule 1.151 *ur aṇ raparaḥ*.

3.1.136 *ātaś copasarge*

Examples such as (389) *prasthaḥ*, (390) *suglaḥ*, and (391) *sumlaḥ* contain stems which derive by introducing affix *Ka* after verbal roots *sthā*, *glai*, and *mlai* used in conjunction with *pra* and *su*. Note that the *ai* of *glai* and *mlai* will go through a replacement in *ā* (*ātva*) by rule 6.1.45 *ādeca upadeśe....* For deletion of *ā* to arrive at the desired form refer to *āllopa* of (386) *jñaḥ*.

3.1.137 *pāghrādhmādheṭdṛśaḥ*

Examples such as (391) *utpibaḥ*, (392) *ujjighraḥ*, (393) *uddhamaḥ*, (394) *uddhayaḥ*, and (395) *utpaśyaḥ* contain stems which derive by introducing affix *Śa* after verbal roots *pā*, *ghrā*, *dhmā* and *dheṬ* whether used in

conjunction with a preverb. These examples all have the cooccurrence condition of *ud*. Thus, given *ud* + *pā* + (*Ś*→*0*)*a* = *ud* + *pā* + *a*, rule 3.4.67 *kartari śap* will introduce (*Ś*)*a*(*P*) to produce *ud* + *pā* + *a* + *a*. The root will then be replaced with *pib* by rule 7.3.78 *pāghrādhmāsthā....* We will thus get *ud* + *pib* + *a* + *a* which through the application of rule 6.1.97 *ato guṇe* will produce *ud* + *pib* + (*a*+*a*→*a*) = *ud* + *pib* + *a* = *utpiba*. Note that the *d* of *ud* will be changed to *t* by *cartva* of rule 8.4.55 *khari ca*. Deriving *utpibaḥ* from *utpiba* + *sU* is easy. The other roots, except for *dheṬ*, will also get their replacements such as *jighṛ*, *dham*, and *paś* by the same rule under similar condition of a following *SaP*. Deriving *ujjighraḥ* will also entail *cartva*. All other rules are similar to *utpibaḥ*. Deriving *uddhayaḥ* from *ud* + *dhe*(*Ṭ*→*0*) + *a* + *a* =*ud* + *dhe* + *a* + *a* also involves *pararūpa* whereby we get *ud* + *dhe* + (*a*+*a*→*a*). A replacement in *ay* (*ayādeśa*) for the *e* of *dhe* by 6.1.78 *eco' yavāyāvaḥ* will finally produce *ud* + *dh*(*e*→*ay*)*a* = *uddhaya*, a nominal stem after which *sU* can be introduced to derive *uddhayaḥ*. Note that examples can also be derived without accepting the cooccurrence condition of the preverbs.

3.1.138 *anupasargāl limpavindadhāripārivedyudejicetisātisāhibhyaś ca*

Examples such as (396) *limpaḥ* derive from *lip* + (*Ś*)*a* + (*Ś*)*a* where the first *Śa* is the *vikaraṇa* of the *tudādi* group of roots introduced as per 3.1.77 *tudādibhyaḥ....* A further introduction of *nUM* by 7.1.59 *śe mucādīnām* produces *li* + *n*(*UM*→*0*)*p* + *a* + *a* = *linp* + *a* + *a* which through *anusvāra* and *parasavarṇa* (cf. 8.3.24 *naś cāpadāntasya*; 8.4.58 *anusvārasya yayi parasavarṇaḥ*) ultimately derives *limpa*. An introduction of *sU* and subsequent *rutva-visarga* yields *limpaḥ*. Similar rules apply in deriving (397) *vindaḥ*.

An example such as (398) *dhārayaḥ* derives from *dhāraya* + *sU* where *dhāraya* is a nominal stem derived by introducing affix *Śa* after verbal root *dhāri*, a *ṆiC* derivate of *dhṛÑ*. The resultant string *dhāri* + *ŚaP* + *Śa* = *dhāri* + *a* + *a* will go through *guṇa* (7.3.84 *sārvadhātukārddha...*) and *ayādeśa* (6.1.78 *eco' yavāyāvaḥ*) to produce *dhār*(*i*→*e*→*ay*)*a* + *a* = *dhāraya* +*a*. Deriving *dhāraya* from *dhāray*(*a*+*a*→*a*) via *pararūpa* is easy. Similar rule applications are needed to derive (399) *pārayaḥ* from *pṛ* + *ṆiC* = *pāri* + *Śa* and (400) *udejayaḥ* from *ud*+*ejṚ*+*ṆiC* = *udeji* + *Śa*. The remaining roots, except for *sāti*, will receive their *ṆiC* from 3.1.25 *satyāpa...curādibhyo ṇic* for deriving (401) *vedayaḥ*, (402) *cetayaḥ*, and (403) *sāhayaḥ*. This last example will be derived from *sāti* + *ŚaP* + *Śa* where verbal root *sāti* is treated as *sautra* 'attested only by the *sūtra*'.

3.1.139 *dadātidadhātyor vibhāṣā*

This rule produces an optional set of two examples (405) *dadaḥ*, (406) *dāyaḥ*; and (407) *dadhaḥ*, (408) *dhāyaḥ* for verbal roots *ḌUdāÑ* and *ḌUdhāÑ*. Note that a *ŚaP* introduced before affix *Śa* will be deleted by 2.4.75 *juhotyādibhyaḥ....* This will lead to doubling whereby we will get *dā* + *dā* + *a*. A short *a* will replace the long *ā* of the reduplicated syllable

(*abhyāsa*) *dā* by rule 7.4.59 *hrasvaḥ*. This will be followed by the deletion of *ā* (*āllopa*) thereby to yield *d(ā→a)* + *dā* + *a* = *da* + *d(ā→∅)* + *a* = *dada*. Now one can derive *dadaḥ* from *dada* + *sU*. Our optional example *dāyaḥ* derives from *dā* + *Ṇa* = *dā* + *yUK* + *Ṇa* where *Ṇa* is introduced optionally to *Śa* by rule 3.1.141 *śyādvyadhāsru*.... The *yUK* is subsequntly introduced by 7.3.33 *āto yukciṇkṛtoḥ*.

One can similarly derive *dhāyaḥ*. Deriving *dadhaḥ* would entail the application of 8.4.54 *abhyāse car ca* whereby the *dh* of the reduplicated syllable (*abhyāsa*; at the stage when the string is: *dha* + *dh* + *a*) will be replaced with *d* to produce (*dh* → *d*)*a* + *dh* + *a* = *dadha*.

3.1.141 *śyādvyadhāsrusaṃsrvatīṇa*...

Deriving (409) *avaśyāyaḥ* from *avaśyāya* + *sU* entails the introduction of affix *Ṇa* after verbal root *śyaiṄ* used in conjunction with *ava*. An application of *ātva* of 6.1.45 *ādeca upadeśe*... followed by the introduction of *yUK* will produce *ava* + *śy(ai→ā)(Ṅ)* + *(Ṇ)a* = *ava* + *śyā* + *y(UK)* + *a* = *avaśyāya*. Deriving *avaśyāyaḥ* with the introduction of *sU* and *rutva-visarga* is easy.

Deriving (410) *āsrāvaḥ* from *ā(Ṅ→∅)* + *sru* + *(Ṇ)a* = *a* + *sru* + *a* entails *vṛddhi* by 7.2.115 *aco' ñṇiti*. An application of 6.1.78 *eco' yavāyāvaḥ* will then replace the *au* by *āv*: *a* + *sr(u→au→āv)* + *a* = *āsrāva))* + *sU* = *āsrāvaḥ)))*.

3.1.146 *gas thakan*

Example (411) *gāthikā* derives from *gai* + *thaka(N→∅)* through *ātva*: *g(ai→ā)* + *thaka* = *gā* + *thaka* = *gāthaka*. Rule 4.1.4 *ajādyataṣ ṭāp* then introduces the feminine affix *ṬāP*. The *itva* application of rule 7.3.44 *pratyayasthātkāt*... and the *savarṇadīrgha* of 6.1.101 finally produces *gāth* (*a→i*)*ka* + *(T→∅)ā(P→∅)* = *gāthik(a* + *ā→ā)* = *gāthikā*. Affix *sU* introduced after *gāthikā* will be subsequently deleted by 6.1.68 *halṅyābbhyo*....

3.1.147 *ṇyuṭ ca*

Example (412) *gāyanī* derives from *gai* + *(Ṇ)yu(Ṭ)* + *ṄīP))* where *ātva* again applies. This gives us (*g(ai→ā)* + *yu* = *gā* + *yu*. Rule 7.3.33 *āto yukcinkṛtoḥ* then introduces *yUK* whereby the string becomes *gā* + *y(UK→∅)* + *yu*. The *yu* will finally be replaced with *ana* of rule 7.1.1 *yuvor anākau*. Thus, *gā* + *y* + *yu→ ana* = *gāyana*. This nominal stem will then receive the feminine affix *(Ṅ)ī(P)* of rule 4.1.15 *ṭiḍḍhāṇañ*.... Rule 6.4.148 *yasyeti ca* will order the deletion of the final *a* of *gāyana* to produce: *gāyan(a→∅)* + *ī* = *gāyanī*. The nominal ending *sU* introduced after *gāyanī* will again be deleted.

3.2.1 *karmaṇy aṇ*

Refer to derivational details of (97) *kumbhakāraḥ* and (136) *svāduṃkāram* under the appendices of rules 2.2.19 *upapadam atiṅ* and 1.1.39 *kṛnmejantaḥ* respectively for a general idea on deriving the examples of this rule. Example (413) *vedādhyāyaḥ* contains the string *veda* + *Śas* + *(adhi+iṄ)* + *aṆ*

where *adhi*+ *i* + *a* derives *adhyāya* through *vṛddhi* (7.2.115 *aco' ñṇiti*) and *āyādeśa* (6.1.78 *eco' yavāyāvaḥ*). Thus, *adhi* + (*e*→*ai*) + *a* = *adhi* + (*ai*→ *āya*) + *a*. An application of 6.1.77 *iko yaṇ aci* would as usual turn *adhi* + *āy* + *a* into *adhyāya* via *adh*(*i*→ *y*) + *āy* + *a*. The accusative plural after *veda* will as usual be deleted after the formation of the compound *vedādhyāya* where 6.1.101 *akaḥ savarṇe dīrghaḥ* has also applied on *ved*(*a* + *a*→*ā*) *dhyāya*)).

3.2.2 *hvāvāmāś ca*

Note that (414) *putrahvāyaḥ* and (415) *tantuvāyaḥ* are derivates of verbal roots *hveÑ* and *veÑ* which will go through *ātva* before *a*(*Ṇ*). Our present rule specifies them with *ātva*. Rule 7.3.33 *āto yukciṇkṛtoḥ* will introduce *yUK* to realize *hv*(*e*→*ā*) + *a* = *hvā* + *y*(*UK*→0) + *a* = *hvāya*. Deriving *putrahvāyaḥ* from (*putra* + *am* + *hvāya*) + *sU* is not any difficult. Similar rules apply in deriving *tantuvāyaḥ*.

3.2.3 *āto' nupasarge kaḥ*

Examples (416) *godaḥ* and (417) *kambaladaḥ* also derive with the cooccurring condition of an object though with the introduction of affix *Ka* after verbal root *dā*. The *ā* of *dā*, as in many other derivates to follow, will be subsequently deleted by 6.4.64 *āto lopa iṭi ca*. All other operations are similar to other derivates. Same sets of rules can derive (418) *pārṣṇitram* by introducing affix *Ka* after verbal root *trā* under the cooccurrence condition of the object constituted by *pārṣṇi*. Note that *pārṣṇitra* + *sU* will yield *pārṣṇitram* via the application of rules 7.1.24 *ato' m* and 6.1.107 *ami pūrvaḥ*. Thus, *pārṣṇitra* + (*sU*→ *am*) = *pārṣṇitr*(*a* + *a*→*a*)*m* = *pārṣṇitram*.

3.2.8 *gāpoṣ ṭak*

Note that verbal roots *gā* and *pā* as usual will be subjected to the deletion of their *ā* (*āllopa*). Examples such as (419) *śakragaḥ* and (420) *sāmagaḥ* will have their feminine forms derived by affix *ṄīP* (4.1.15 *ṭiḍḍhāṇañ*...) at the strength of the *Ṭit* status of affix *ṬaK*. Examples such as (421) *surāpaḥ* and (420) *surāpī*, a feminine, can be similarly derived.

3.2.13 *stambakarṇayoḥ ramijapoḥ*

Note that examples (422) *stamberamaḥ* and (423) *karṇejapaḥ* entail the non-deletion (*aluk*) of their *saptamī* by rule 6.3.9 *halantāt saptamyāḥ*.

3.2.14 *śami dhātoḥ saṃjñāyām*

Deriving (424) *śaṅkaraḥ* from *śaṅkara* + *sU* where affix *aC* is introduced after verbal root *kṛ*, under the cooccurrence condition of the indeclinable (*avyaya*) *śam* entails *guṇa* of *ṛ*. Of course, additionally to the change of *m* to *anusvāra* (8.3.23 *mo' nusvāraḥ*) and that of *anusvāra* to *parasavarṇa* form of *ṅ* (8.4.54 *anusvārasya yayi parasavarṇaḥ*). The derivation of (425) *śaṃbhavaḥ* would not only entail *guṇa* but also *avādeśa*. Thus, *śam* + *bh* (*u*→*o*→*av*) + *aC* = *śa* (*m*→*ṃ*)*bhava* = *śaṃbhava* where *m* will be replaced with the *anusvāra*. Deriving (426) *śaṃvadaḥ* is easy.

3.2.21 *divāvibhāniśāprabhābhāskārāntād*...

Note that (427) *divākaraḥ* and (428) *vibhākaraḥ*, etc., offer nothing new

in their derivation. Deriving (429) *ahaskaraḥ* requires a replacement in *r* for the *n* of *ahan* by 8.2.69 *ro' supi*. This *r* will then go through a replacement in *visarga* by 8.3.15 *kharavasānayor....* Finally, the *visarga* itself will be replaced with *s* by 8.3.46 *ataḥ kṛkamikaṃsa....* The derivation of (431) *aruṣkaraḥ* will entail replacing the *s* of *arus* with *ṣ* (*ṣatva*) by rule 8.3.45 *nityaṃ samāse....* The derivation of (432) *dhanuṣkaraḥ* offers nothing new.

3.2.28 *ejeḥ khaś*

The derivation of(433) *aṅgamejayaḥ* begins with the introduction of affix *KHaŚ* after the *ṆiC* form *eji* of verbal root *ejṚ* 'to tremble' where *eji* will still be a root in view of rule 3.1.32 *sanādyantā dhātavaḥ*. Note that *eji* + *(KH→∅)a(Ś→∅)* will also receive *(Ś→∅)a(P→∅)* to produce *eji* + *a* + *a* which, through the application of *guṇa* (7.3.84 *sārvadhātukārdha...*) will become *ej(i→e)* + *a* + *a* = *eje* + *a* + *a*. Remember that *aṅga* will also be part of the string after the formation of the compound, and the *sUP*-deletion of *am*. Rule 6.3.67 *arurviṣad...*will now introduce *m* *(UM→∅)* to *aṅga* under the condition of the following *eje* + *a* + *a* which ends in an affix marked with *KH* as an *it*. This will produce *aṅgam* + *eje* + *a* + *a* = *aṅgameje* + *a* + *a*. The *ayādeśa* of 6.1.78 *eco' yavāyāvaḥ* will then produce *aṅgamej (e→ay)* + *a* + *a*. Finally, the *pararūpa* application of rule 6.1.97 *ato guṇe* will realize *aṅgamejay* +*(a+a→a)* = *aṅgamejaya*. Similar rules apply in deriving the nominal stem *janamejaya* of (434) *janamejayaḥ*.

3.2.29 *nāsikāstanayoṇ...*

Examples such as (435) *nāsikandhamaḥ* entails the application of rule 7.3.78 *pāghrādhmāsthā...* whereby *dhmā* is replaced with *dham*. The resultant string thus becomes *nāsikā* + *dham* + *a*. The long *ā* of *nāsikā* is replaced with short by 6.3.66 *khity anavyayasya*. The augment *mUM*, and subsequent *anusvāra* and *parasavarṇa* applications will eventually derive the nominal stem *nāsik(ā→a)* + *m* + *dham* + *a* = *nāsikam* + *dhama* =*nāsika(m→ṃ→n)* + *dhama* = *nāsikandhama*. Note that example (436) *nāsikandhayaḥ* involves the *ayādeśa* of the *e* of *dheṬ*. The derivation of (437) *stanandhayaḥ* is not different either. Note, however, that, to derive a parallel feminine form (438) *stanandhayī*, one has to introduce *ṄīP* by 4.1.15 *ṭiḍḍhāṇañ....*

3.2.35 *vidhvaruṣos tudaḥ*

Note that the *parasavarṇa* replacement of *ṃ* of the string *vidhu* + *m* *(UM→∅)* + *tud* + *a* = *vidhu (m→ṃ)* + *tuda* = *vidhu (ṃ→n)* + *tuda* = (439) *vidhuntudaḥ* by rule 8.4.59 *vā padāntasya* is optional. The same applies to (440) *aruntudaḥ*.

3.2.39 *dviṣatparayos tāpeḥ*

Note that (441) *dviṣantapaḥ* and (442) *parantapaḥ* also entail rule applications similar to the preceding examples. The root *tap* is here used as ending in *ṆiC*. Thus, the introduction of *KHaC* after *tāp* + *i*, where *vṛddhi* is caused by 7.2.115 *aco' ñṇiti*, produces *tāp* + *i* + *a*. The introduction of *m (UM)* to *dviṣat* will realize the string *dviṣa* + *m* + *t* + *tāp* + *i* + *a*. Affix *ṆiC* will

subsequently be deleted by 6.4.51 *ṇer aniṭi*. The penultimate long vowel of *tāp* will be shortened under the condition of the following *KHaC* by 6.4.94 *khaci hrasvaḥ*. The string will now become *dviṣamt* + *tāp* + (*i*→∅) + *a* = *dviṣamt* + *t(ā→a)p* + *a* = *dviṣamt* + *tapa*. The final *t* of *dviṣamt* will be deleted by 8.2.23 *saṃyogāntasya lopaḥ*. One can now apply the *anusvāra* and *parasavarṇa* to derive the nominal stem *dviṣantapaḥ*. Similar rules apply in deriving *parantapaḥ*.

3.2.44 *kṣemaPriyamadre' ṇ ca*

Deriving examples (443) *kṣemakāraḥ* optionally to (444) *kṣemaṃkaraḥ* is not very complex. Remember that affix *aN* will condition *vṛddhi* (as in *kāraḥ*) in contrast to *KHaC* which will introduce *mUM*. Similar rules apply in deriving (445) *priyakāraḥ* and (446) *priyaṃkaraḥ*.

3.2.48 *antātyantādhvadūrapāra...*

Examples such as (447) *antagaḥ*, (448) *atyantagaḥ*, and (449) *adhvagaḥ*, etc., entail the deletion of the *ṭi* of *gam*, i.e., *am*, under the condition of the *Ḍit* status of affix *Ḍa* (cf. *Kāś.* ad 6.4.143 *ṭeḥ: ḍityabhasyāpy anubandha-karaṇasāmarthyāt ṭilopo bhavati*). An example such as (450) *śatruhaḥ* of the following rule will also entail similar deletion.

3.2.50 *ape kleśatamasoḥ*

The derivates of affix *Ḍa* such as (451) *kleśāpahaḥ* and (452) *tamopahaḥ* will again involve the deletion of the *ṭi* (*an*) of *apahan*. Deriving *kleśāpaha* from *kleśa* + *apah* + *a* involves *savarṇadīrgha*. Deriving *tamopaha* from *tamas* + *apah* + *a* involves *rutva* of *s* by 8.2.66 *sasajuṣo ruḥ*. Rule 6.1.113 *ato ror aplutād apluteḥ* then applies on *tamar* + *apaha* to replace the *r* with *u*. This occasions the application of rule 6.1.87 *ād guṇaḥ* whereby the sequence *a*+*u* of *tam(a+u)+ apaha* is replaced with a single *guṇa* vowel *o*. The resultant *tamo* + *apaḥ* requires the *pūrvarūpa-ekādeśa* 'single substitute similar to the first' of 6.1.109 *eṅaḥ padāntād ati* in place of the sequence *o*+*a*. Thus we get *tam(o+a→o)paha* = *tamopaha*.

3.2.51 *kumāraśīrṣayor ṇiniḥ*

Example (453) *kumāraghātī* derives from *kumāraghātin* + *sU* where *ghātin* derives by introducing affix *ṆinI* after verbal root *han* under the cooccurrence condition of *kumāra* + *am*, a *pada* denoting an object. The *h* of *han* will be replaced with *gh* before *in* (7.3.54 *ho hanter...*) thereby producing *kumāra* + *ghan* + *in*. The *n* of *ghan* will then be replaced with *t* by rule 7.3.32 *hanasto' ciṇ....* The resultant string, *kumāra* + *gha(n→t)* + *in* = *kumāra* + *ghat* + *in* will now go through the *vṛddhi* of the penultimate *a* by 7.2.116 *ata upadhāyāḥ* to realize *kumāra* + *gh(a→ā)t* + *in* = *kumāraghātin*. **Deriving *kumāraghātī* from *kumāraghātin* + *s(U→∅)* entails *(i→ī)*** by 6.4.13 *sau ca*. That is, *kumāraghāt (i→ī)n* + *s* = *kumāraghātīn* + *s*. Rule 6.1.68 *halṅyābbhyo...* will delete the *s* followed by the deletion of *n* by 8.2.7 *nalopaḥ prātipadikāntasya*. We will thus get *kumāraghātīn* + (*s*→∅) = *kumāra-ghātī(n→∅)* = *kumāraghātī*.

An example such as (454) *śīrṣaghātī* can be similarly derived with the understanding that *śiras* gets replaced with *śīrṣa* by this very rule.

3.2.52 *lakṣaṇe jāyāpatyoṣ ṭak*

The examples of this rule entail the deletion of the penultimate part of *han* (6.4.98 *gamahana...*) thereby producing *jāyā* + *h(a→∅)n* + *a* = *jāyāhna*. The *h* of the string will be replaced with *gh* by rule 7.3.54 *ho hanter*...to produce *jāyā(h→gh)na*. The nominative (*prathamā*) singular *sU* can now be introduced to derive (455) *jāyāghnaḥ*. Similar rules will apply in deriving (456) *patighnī* though via the introduction of the feminine affix *ṄīP* after *patighna*. The *ṭit* status of *Ṭak* will facilitate the introduction of *ṄīP* by 4.1.15 *ṭiḍḍhāṇañ*....

3.2.56 *āḍhyasubhagasthūlapalita...*

The derivation of examples such as (457) *āḍhyaṃkaraṇam*, (458) *subhagaṃkaraṇam*, (459) *sthūlaṃkaraṇam*, etc., are similar to the derivation of other affixes marked with *KH* as *it*. One can refer to the derivation of (433) *aṅgamejayaḥ*, etc., where the introduction of *mUM* is a must. The *kṛ* + *KHyuN* sequence will produce *karana* through the *ana* replacement for the *yu* of the affix. The *n* will then be replaced with *ṇ* by rule 8.4.1 *raṣābhyāṃ no ṇaḥ*.... The derivation of *āḍhyaṃkaraṇam* from *āḍhyaṃkaraṇa* + *sU* will follow rule-application similar to *pārṣṇitra* + *sU* of (418) *pārṣṇitram*.

3.2.58 *spṛśo' nudake kvin*

An example such as (460) *mantraspṛk* is derived by introducing affix *KvIN* after verbal root *spṛś* used in conjunction with a *pada* ending in *sUP* though not constituted by the nominal stem *udaka*. Rule 6.1.67 *ver apṛktasya* will delete the affixal *v* to produce *mantra* + *Ṭā* + *spṛś* + (*v*→∅). The *Ṭā* will also be deleted after the formation of the compound *mantraspṛś*. The string *mantraspṛś* + *s*(*U*→∅) will have its affixal *s* deleted by 6.1.68 *halṅyābbhyo*.... The *ś* of *mantraspṛś* will go through *kutva* of 8.2.62 *kvin pratyayasya* read with 1.1.50 *sthāne' ntaratamaḥ*. The resultant string, i.e., *mantraspṛ(ś→kh)* = *mantraspṛkh* will go through the applications of two rules. Rule 8.2.39 *jhalāṃ jaśo' nte* will require replacing the *kh* with *g*. Rule 8.4.56 *vāvasāne* will provide *k* as an optional replacement for the resultant *g*. Thus, *mantraspṛ(ś→kh→g→k)* = *mantraspṛk*.

Similar set of rules apply in deriving (461) *jalaspṛk*. Refer to (II: 446-47) for the full derivational history of *ghṛtaspṛk*.

3.2.59 *ṛtvigdadhṛksragdig...*

Note that (462) *ṛtvik*, (463) *dadhṛk*, (464) *srak*, (465) *dik*, and (466) *uṣṇik* are derived with affix *KvIN* via *nipātana*. The first example *ṛtvik* derives from *yaj* + *KvIN* = *yaj* + (*v*→∅) = *yaj* where *yaj* will go through *samprasāraṇa* of 6.1.15 *vacisvapiyaj*...to yield (*y*→*i*)*aj*→*i*(*a*→∅)*j* = *ij*. Note here that *ij* will be the final part of the compound *ṛtuij* since *KvIN* was introduced after verbal root *yaj* under the cooccurrence condition of a

nominal word constituted by *ṛtu*. Deriving *ṛtvik* from *ṛt(u→v)ij* = *ṛtvi* (*j→g→k* = *ṛtvik*) entails the application of 6.1.77 *iko yaṇ aci* followed by relevant rules at the end of (456) *mantraspṛk*. Deriving *dadhṛk* entails doubling (*dvitva*) of *dhṛṣ* before *KvIN* via *nipātana*. That is, *dhṛṣ* + *dhṛṣ* + *KvIN→dhṛ(ṣ→0)* + *dhṛṣ* + (*v→0*) = *dh(ṛ→a)* + *dhṛṣ* = *(dh→d)a* + *dhṛṣ* = *dadhṛ(ṣ→k)*. Refer to many examples where rule application relative to doubling has already been explained. The *r* of *dhṛ* is replaced with *a* by 7.4.66 *ur at*. Other examples can also be similarly derived via *nipātana*.

The derivation of (467) *prāṅ* from *pra* + *añc* + *KvIN* will produce *prāñc* + *KvIN* through 6.1.101 *akaḥ savarṇe*.... The *ñ* will be deleted by 6.4.24 *aniditāṃ hala*.... The (*v* of) *KvIN* will be deleted as explained. Given a string such as *prāc* + *sU*, rule 7.1.70 *ugidacāṃ sarvanāmasthāne*... will inrtroduce *nUM* to change the string to *prā* + *n(UM→0)* + *c* + *s*. The affixal *s* will again be deleted. The *c* will be deleted by 8.2.23 *saṃyogāntasya lopaḥ*. The result of this rule application *prān* + (*c→0*) + (*s→0*) = *prān* will now go through *kutva* of 8.2.62 *kvinpratyayasya kuḥ* whereby we get the final derivate *prā(n→ṅ)* = *prāṅ*. Similar rules will derive (468) *pratyaṅ* from *prati* + (*añc* + *v*) = *prati* + *aṅ* = *prat(i→y)aṅ*. Using *ud* + *añc* + *v* will derive (469) *udaṅ*. Note that in deriving (470) *kruṅ* from *kruñc* + *v* = *kru(ñ→0)* = *kru(nUM)c* = *krunc* + *s*, parallel to *prā*+ *nUM* + *c* + *s* of (468) *prāṅ*, *krunc* does not lose its penultimate *n* because of *nipātana*.

3.2.60 *tyadādiṣu dṛśo' nālocane kañ ca*

Deriving optional forms such as (470) *tyādṛk* by introducing affix *KvIN* after verbal root *dṛś* used in conjunction with a nominal *pada* constituted by *tyad* where *tyad* would lose its final sound segment *d* before the nominal ending under the provision of rule 7.2.102 *tyadādīnāmaḥ*. The resultant string after the formation of compound will be: *tyad* + *dṛś* + *KvIN*. A derivate with the cooccurrence condition of *tad*, i.e., (471) *tādṛk*, will similarly yield the string *ta* + *dṛś* + *KvIN*. A replacement in *ā* (*ātva*) of rule 6.3.91 *ā sarvanāmnaḥ* will then apply to change the strings to: *ty(a→ā)* + *dṛś* + *v*, and *t(a→ā)* + *dṛś* +*v*. The application of *kutva* of 8.2.62 *kvinpratyayasya* along with the deletion of the *s* of *sUP* as shown in earlier examples will produce *tyādṛk* and *tādṛk*.

Examples (472) *tyādṛśaḥ* and (473) *tādṛśaḥ* involve the introduction of affix *KaÑ*, optionally to *KvIN*, after verbal root *dṛś*. They, however, will lack *kutva* as is the case with *KvIN*. Consequently, the derivates will be *tyādṛś* + (*K→0*)*a*(*N→0*) = *tyādṛśa*; and *tādṛśa*. Operations relative to *sUP*-selection, and *rutva-visarga* will ultimately realize *tyādṛśaḥ* and *tādṛśaḥ*. Similar rules will apply in deriving (474) *yādṛk* and (475) *yādṛśaḥ* with the conjoined word *yad*.

3.2.61 *satsūdviṣadruhaduhayuj...kvip*

Note that affix *KvIP* will be deleted in toto. The resultant compounds

under the cooccurrence conditions of *vedi*, *śuci*, and *antarikṣa* will subsequently go through *sUP*- selection, and deletion, to derive (476) *vediṣat*, (477) *śuciṣat*, and (478) *antarikṣasat*. The initial *ṣ* of the verbal root *ṣadḶ* will be replaced with *s* by rule 6.1.64 *dhātvādeḥ ṣaḥ saḥ*. The *ṣ* comes back as a replacement for the *s* of *vedisat* and *śucisat* through the application of 8.3.106 *pūrvapadāt*. The final *t* of the examples is an optional replacement for *d* under the provision of rule 8.4.56 *vāvasāne*.

Deriving (479) *aṇḍasūḥ* and (480) *śatasūh* with *KvIN* introduced after verbal root *sū* used in conjunction with a *pada* constituted by *aṇḍa* and *śata* is easy. Verbal roots *dviṣ*, *druh* and *duh*, through the introduction of affix *KvIP* under the cooccurrence condition of a nominal *pada* constituted by *mitra*, and *go* will yield derivates such as (481) *mitradviṭ*, (482) *mitradhruk*, (483) *godhruk*, and (484) *godhuk*. Note that the *ṣ* of *mitradviṣ* will get a replacement in *ḍ* by rule 8.2.39 *jhalāṃ jaśo' nte*. The *ḍ* will then get replaced by *ṭ* with the application of 8.4.56 *vāvasāne*. The *h* of *mitradruh* will be first replaced with *gh* of rule 8.2.33 *vā druhamuh....* An application of rule 8.2.37 *ekāco baśo bhaṣ...* will replace the *d* of *druh* with *dh*. The string will now be *mitra(d→dh)ru(h→gh))* = *mitradhrugh*. The final *gh* will then go through the application of rules 8.2.39 *jhalāṃ jaśo' nte* and 8.4.56 *vāvasāne* to produce *mitradhru(gh→g)* = *mitradhru(g→k)* = *mitradhruk*. Examples (483) *godhruk* and (484) *godhuk* will require similar rule applications. The *h* of *duh* will be replaced with *gh* by rule 8.2.32 *dāder dhātor ghaḥ*. Examples of *yuj*, such as (485) *aśvayuk* and (486) *prayuk*, will receive their final *k* as a replacement for *g* (8.4.56 *vāvasāne*), which earlier replaced the *j* of *yuj* through the *kutva* of rule 8.2.30 *coḥ kuḥ*. The rest of the examples can be similarly derived. Remember though that the *ṇ* replacement for the *n* of (487) *grāmaṇīḥ* and (488) *praṇīḥ* comes via *nipātana*.

3.2.62 *bhajo ṇviḥ*

Refer to the derivation of *ardhabhāk* (II: 447) for the application of this rule.

3.2.63 *chandasi sahaḥ*

An example such as (489) *turāṣāṭ* is derived by introducing affix *ṆvI* after verbal root *sah* under the cooccurrence condition of a *pada* constituted by *tura*. Note that *tura* will receive a replacement in *ā* for its final *a* by 6.3.137 *anyeṣām api dṛśyate*. The *a* of *sah* will also go through *vṛddhi* before *ṆvI* as per 7.2.115 *aco' ñṇiti*. The *h* of the resultant *turāsāh* will go through *ḍhatva* of 8.2.31 *ho ḍhaḥ*. This will produce *turāsāḍh*. An application of 8.2.39 *jhalāṃ jaśo' nte* followed by that of 8.4.56 *vāvasāne* will produce: *turāsā(ḍ→ṭ)* = *turāsāṭ*. The *s* of *turāsāṭ* will be replaced with *ṣ* by rule 8.3.56 *saheḥ sāḍaḥ saḥ*.

3.2.67 *janasanakhanakramagamo viṭ*

The derivation of (490) *abjāḥ* requires the introduction of affix *vIṬ*

under the cooccurrence condition of a *pada* constituted by *ap*. Deriving *abjāḥ* from *(ap+jan)sU))*, where affix *vIṬ* is deleted by 6.1.67 *ver apṛktasya*, entails replacing the root-final *n* or *m* by *ā* (*ātva*; cf. 6.4.41 *viḍvanor...)*. The resultant *(ap + ja + ā) + sU))* will go through the application of 6.1.101 *akaḥ svarṇe....* The *p* of *ap + j(a+ā→ā) = sU)) = ap + jā + sU* will be replaced with *b* by 8.2.39 *jhalāṃ jaśo' nte*. Deriving *abjāḥ* from *abjā + sU* requires *rutva-visarga*. Similar rules apply in deriving (491) *goṣāḥ* with verbal root *san* where its *s* is replaced with *ṣ* by rule 8.3.108 *sanoter anaḥ*. An example such as (492) *agregāḥ* entails non-deletion of the locative ending (*saptamī*) as per the *bāhulaka* of 6.3.14 *tatpuruṣe kṛti bahulam*.

3.2.68 *ado' nanne*/3.2.69 *kravye ca*

Examples (493) *āmāt*, (494) *sasyāt*, and (495) *kravyāt* derive from *āma + am + ad + vIṬ*, *sasya + am + ad + vIṬ*, and *krvya +am + ad + vIṬ* where *vIṬ* is as usual deleted by rule 6.1.67 *ver apṛktasya*. The *ātva* of *āma*, etc., followed by *savarṇadīrgha* will derive *āmāt*, *sasyāt* and *kravyāt*. Rule 6.1.67 *halṅyābbhyo...* will delete the *sU* introduced after these derivates.

3.2.70 *duhaḥ kab ghaś ca*

Deriving (496) *kāmadughā* and (497) *dharmadughā* from *kāma + am + duh + Ka* and *dharma + am + duh + Ka* entails replacing the *h* of *duh* with *gh* (*ghatva*) as per rule 8.2.32 *dāder dhātor ghaḥ*. Affix *ṬāP* (4.1.4 *ajādyataṣ ṭāP*) will be subsequently introduced after *kāmadugha* and *dharmadugha* to denote feminine. The *sU* introduced after the feminine derivates will be deleted by 6.1.67 *halṅyābbhyo....*

3.2.71 *mantre śvetavahokthaśapuroḍāśo ṇvin*

Example such as (498) *śvetavāḥ*, and (499) *ukthaśāḥ* derive from *(śveta + Ṭā + vah + ṆvIN) + sU))* and *(uktha + Ṭā + śaṃs + ṆvIN) + sU))* where the instrumental ending *Ṭā* denotes agent (*kartṛ*) in the first example, and instrument (*karaṇa*) in the second. Note that the second example can also have the cooccurring *pada* with the denotatum of *karman* 'object'. Affix *ṆvIN*, in these examples, is replaced with *ḌaŚ* as per the *vārttika: śvetavahādīnāṃ ḍas padasya ca* under this rule. The application of yet another *vārttika: ḍity abhasyāpi ṭer lopaḥ* (ad 6.4.14 *atvasantasya cādhātoḥ*) will change the string to *śvetavah + (Ḍ→0)as)) = śvetav(ah→0) + as = śvetav + as = śvetavas*. The introduction of *sU* followed by the long vowel replacement of 6.4.14 *atvasantasya...* will produce *śvetavas + s(U) = śvetav(a→ ā)s + s(U) = śvetavās + s(U)*. Rule 6.1.67 *halṅyābbhyo...* will as usual delete the *sU*, and *rutva-visarga* will produce *śvetavā(s → r → ḥ) = śvetavāḥ*. The next example can also be similarly derived. Note, however, that the nasal of the root is deleted by *nipātana*. One can also derive (500) *puroḍāḥ* where affix *ṆvIN* is introduced after verbal root *dāś(Ṛ)* under the cooccurrence condition of a nominal *pada* constituted by *puras*. Note that *puras* will be changed to *puro* as per the applications of rules 8.2.66 *sasajuṣo ruḥ*, 6.1.113 *ato ror aplutād...*, and 6.1.87 *ād guṇaḥ*.

Thus: *pura(s→r→u* = *pur(a+u→o))*. The string *pur(as→o)* + *dāś* + *NvIN→(D)as* will subsequently produce *puroḍāś* + *as* + *sU* where the *d* of the root will be replaced with *ḍ* through *nipātana*. The resultant string, i.e. *puroḍāś* + *as* will, as in the preceding example, go through the *ṭilopa* as well as of the *sU* to finally derive *puroḍāḥ*.

3.2.72 *ave yajaḥ*

A long vowel replacement for the *a* of *yaj* followed by the *Ḍas*-replacement for *ṆvIN* of *(avayaj* + *ṆvIN)* + *sU))* will ultimately produce (501) *āvayāḥ*.

3.2.73 *vijupe chandasi*

Deriving (502) *upayaṭ* from *upayaj* + *vIC* will entail the total deletion of the affix followed by the *ṣ*-replacement for the *j* of *yaj* by rule 8.2.36 *vraścabhrasja....* This *ṣ* will further be replaced with *ḍ* (8.2.39 *jhalāṃ jaśo' nte*). One can optionally derive *upayaṭ* from *upayaḍ* + *(sU→∅)* = *upayaḍ* by applying 8.4.56 *vāvasāne*.

3.2.74 *āto maninkvanibvanipaś ca*

This rule allows, in the Vedic, the introduction of affixes *manIN*, *KvanIP*, and *vanIP* additionally to *vIC* after verbal roots ending in *ā*. This explains why we have examples of *dā*, *sthā*, *dhā* and *pā* as in (503) *sudāmā*, (504) *aśvatthāmā*, (505) *sudhīvā*, (506) *supīvā*, and (507) *bhūridāvā*, etc.

Our first example *sudāmā* contains *(su* + *dā* + *manIN)* + *sU* = *sudāman* + *s* where rule 6.4.8 *sarvanāmasthāne cāsambuddhau* orders the lengthening of the penultimate vowel of the *aṅga*. Thus: *sudām (a→ā)n* + *sU* = *sudāmān* + *sU*. The deletion of *n* will be accomplished by 8.2.7 *nalopaḥ....* The *s(U)* as usual will be deleted by 6.1.67 *halṅyābbhyo....*

The derivation of *aśvatthāmā* parallel to *aśva iva tiṣṭhati* contains *(aśva* + *sU* + *sthā* + *manIN)* + *sU))* where, because of its listing in the group of nominals known as *pṛṣodara*, etc., *aśvasthāman* must go through the *t*-replacement for its *s* to produce *aśvatthāman* (cf. 6.3.109 *pṛṣodarādīni yathopadiṣṭam*). The rest of the derivation remains similar to the preceding examples.

The derivation of *sudhīvan* and *supīvan* requires a replacement in *ī* (*ītva*) for the *ā* of the roots as per rule 6.4.66 *ghumāsthāgāpā....* Our last example, *bhūridāvā*, derives similarly from *bhūridāvan* + *sU* where the affix introduced after *dā* happens to be *vanIP*.

3.2.76 *kvip ca*

Example (508) *ukhāsrat* derives with the introduction of affix *KvIP* after verbal root *srams* under the cooccurrence condition of *ukhā*. The affix is as usual deleted. The nasal of *ukhāsrams* + *sU* is also deleted by 6.4.24 *aniditāṃ hala upadhā....* The final *s* of *ukhāsras*, will after the deletion of *sU*, be replaced with *d* in view of 8.2.72 *vasusransudhvaṃsu....* The resultant form *ukhāsrad* can now be changed into *ukhāsrat* via the *t*-replacement for its final *d* as per rule 8.4.56 *vāvasāne*.

Similar rules will apply in deriving (509) *parṇadhvat*.

Example (510) *vāhābhraṭ* derives by introducing affix *KvIP* after verbal root *bhraṃś* 'to fall down' under the cooccurrence condition of *vāha*. The *ś* of *vāhabhraś*, subsequently to the deletion of the nasal of the root, will be replaced with *ṣ* by rule 8.2.36 *vraścabhrasjsṛjmṛj*.... The resultant *vāhabhraṣ*, of course after the deletion of *sU*, will receive the *ḍ→ṭ* replacement for its final *ṣ* to produce *vāhabhraṭ* similarly to (502) *upayaṭ*. The lengthening of the *a* of *vāha* in *vāhabhra* to realize *vāhābhraṭ* is accounted for by 3.2.75 *anyeṣām api dṛśyante*.

3.2.77 *sthaḥ ka ca*

An example such as (511) *śaṃsthaḥ* derives by introducing affix *Ka* after verbal root *sthā* used in conjunction with the indeclinable *pada śam* where, given, *śaṃsthā* + *a*, rule 6.4.64 *āto lopa iṭi ca* deletes the long *ā*. Finally, *śaṃstha* + *s* will produce *śaṃsthaḥ* through *rutva-visarga*. A parallel derivate with affix *KvIP* will be (512) *śaṃsthāḥ*.

3.2.78 *supy ajātau ṇinis tācchīlye*

Deriving examples such as (513) *uṣṇabhojī*, and (514) *śītabhojī* from underlying strings such as *(uṣṇa* + *bhuj* + *ṆinI)* + *sU*, and *(śīta* + *bhuj* + *ṆinI)* + *sU))* entail *guṇa* whereby we get *uṣṇa* + *bh(u→o)j* + *in*. The rest of the rules are similar to (455) *kumāraghātī*.

3.2.81 *bahulam ābhīkṣṇye*

Deriving (514) *kaṣāyapāyiṇaḥ* and (515) *kṣīrapāyiṇaḥ* from *kaṣāyapāyin* + *Jas* and *kṣīrapāyin* + *Jas* where the nominal stems *kaṣāyapāyin* and *kṣīrapāyin* entail the introduction of affix *ṆinI* after verbal root *pā* under the cooccurrence condition of the nominal *pada* constituted by *kaṣāya* and *kṣīra* respectively. The introduction of *yUK* (7.3.33 *āto yuk ciṇkṛtoḥ*) followed by *rutvavisarga* and the *ṇ*-replacement (*ṇatva*) are subsequently required operations to realize the derivates. Thus: *kaṣāyapāyin* + *(J→∅)as))* = *kaṣāyapāyina(s→ḥ)* = *kasāyapāyi(n→ṇ)aḥ* = *kaṣāyapāyiṇaḥ*. The next example also follows similar rule application.

3.2.83 *ātmamāne khaś ca*

This rule introduces affixes *KHaŚ* and *ṆinI* to optionally derive (516) *darśanīyammanyaḥ* and (517) *darśanīyamānī*. The *ṆinI* form as usual entails the penultimate *vṛddhi* in *man* + *in* => *mānin*. Deriving *darśanīyamānī* from *darśanīyamānin* + *sU* does not offer anything new. Deriving *darśanīyammanyaḥ* from *darśanīyammanya* + *sU* involves the introduction of affix *KHaŚ* after verbal root *man* under the cooccurrence condition of a nominal *pada* constituted by *darśanīya*. A string such as *darśanīya* + *man* + *(KH→∅)a(Ś→∅)* = *darśanīya* + *man* + *a* will receive *ŚyaN* because the root belongs to the *divādi* class (3.1.69 *divādibhyaḥ śyan*). The introduction of augment *mUM* by 6.3.67 *arurdviṣat*... will be next. Thus: *darśanīya* + *man* + *ya* + *a* = *darśanīya* +*m(UM→∅)* + *man* + *ya* + *a* = *darśanīyammanya* + *a*. Rule 6.1.97 *ato guṇe* will finally produce the nominal stem

darśanīammanya which after the introduction of *sU* and subsequent *rutva-visarga* will produce *darśanīyammanyaḥ*. Additional examples such as (518) *paṇḍitammanyaḥ* and (519) *paṇḍitamānī* can be similarly derived.

3.2.85 *karaṇe yajaḥ*/3.2.86 *karmaṇi hanaḥ*

Examples under these rules require the cooccurrence condition of *karaṇa* 'instrument' and *karman* 'object' respectively for the introduction of affix *ṆinI* after verbal roots *yaj* and *han*. Thus, we get (520) *agniṣṭomayājī* and (521) *mātulaghātī*. Refer to (455) *kumāraghātī* for derivational details of the second example.

3.2.87 *brahmabhrūṇavṛtreṣu kvip*

Examples such as (522) *brahmahā*, (523) *bhrūṇahā* and (523) *vṛtrahā* involve the deletion of *n*, and lengthening (6.4.13 *sau ca*) similar to (455) *kumāraghātī*.

3.2.89 *sukarmapāpamantrapuṇyeṣu kṛñaḥ*

Deriving examples such as (524) *sukṛt*, (525) *karmakṛt*, (526) *mantrakṛt* and (527) *puṇyakṛt* by introducing affix *KvIP* after verbal root *kṛ* under the cooccurrence condition of a *pada* constituted by *su*, etc., requires augment *tUK* by 6.1.71 *hrasvasya piti kṛti....* Thus: *sukṛ* + (*KvIP*→$\emptyset$) + *t*(*UK*) = *sukṛt*, etc.

3.2.90 *some suñaḥ*/3.2.91 *agnau ceḥ*

See derivations (252) *agnicit* and (253) *somasut* (II: 421-23) under the appendix of rule 1.1.62 *pratyayalope pratyaya....*

3.2.93 *karmaṇīnirvikriyaḥ*

3.2.94 *dṛśeḥ kvanip*

3.2.95 *rājani yudhikṛñaḥ*

3.2.96 *sahe ca*

The derivation of (528) *somavikrayī*, (529) *rasavikrayī* and (530) *madya-vikrayī* requires the introduction of affix *inI* after verbal root *krīÑ* used with the preverb *vi* under the cooccurrence condition of a *pada* which ends in *sUP* and denotes an object. Thus, *soma* + *am* + *vi* + *krī* + *in* will go through *sUP*-deletion, *guṇa* (7.3.84 *sārvadhātukārdha...*) and *ayādeśa* (6.1.78 *eco' yavāyāvaḥ*) to produce *somavikr(ī→e→ay)* + *in* = *soma-vikrayin*. The derivation of *somavikrayī* from *somavikrayin* + *sU* is not very different from derivates such as (455) *kumāraghātī* which require *n*-deletion (*nalopa*), and lengthening (*dīrghatva*), etc. The same applies to other such derivates.

Deriving (531) *vārāṇasīdṛśvā* by introducing affix *KvaniP* after verbal root *dṛśIR*, used with *vārāṇasī* serving as its *karman*, will also require the deletion of *n* of *vārāṇasīdṛśvan* + *sU*. The lengthening of *a* at the end to produce *vārāṇasīdṛśvā* before *sU* will be accomplished by 6.4.8 *sarvanā-masthāne....* The *sU*, of course, will be deleted. Similar set of rules will apply in deriving (532) *paralokadṛśvā* and (533) *pāṭaliputradṛśvā*. Examples (534) *rājayudhvā*, (535) *rājakṛtvā*; and (536) *sahayudhvā*, and

(537) *sahakṛtvā* are different only in terms of specific conditions of cooccurrence.

3.2.97 *saptamyāṃ janer ḍaḥ*

The derivation of (538) *upasarajaḥ* and (539) *mandurajaḥ* requires the introduction of affix *Ḍa* after verbal root *jan* under the cooccurrence condition of a nominal *pada* ending in the locative (*saptamī*). Thus: *upasara + Ṅi + jan + (Ḍ→∅)a = upasara + jan + a* after the deletion of *Ṅi*. Note that *upasarajana* of *upasarajana + sU* goes through the deletion of its *ṭi* (1.1.64 *aco' ntyādi ṭi*) eventhough it is not a *bha* in view of 6.4.143 *ṭeḥ* (cf. *Mbh.* ad this rule: *ḍity abhasyāpy anubandhakaraṇasāmarthyāt*). Deriving *upasaraj(an→∅)a + s(U→∅) = upasarajaḥ* parallel to *upasare jātaḥ* 'born out of the first pregnancy' through *rutva-visarga* offers nothing new. Same rules will apply in deriving *mandurajaḥ* from *(mandurā + Ṅi) + jan + Ḍa) + sU))* parallel to *mandurāyāṃ jātaḥ* 'born in a stable'. Note that the *ā* of *mandurā* is shortened by 6.3.63 *ṅyāpoḥ saṃjñā....*

3.2.102 *niṣṭhā*

Refer to the appendix of rule 1.1.5 *kṅiti ca* for derivational details of examples cited under this rule.

3.2.103 *suyajor ṅvanip*

Deriving (540) *sutvā* by introducing affix *(Ṅ)van(IP)* after verbal root *ṣuÑ* first requires the replacement by *s* of the root-initial *ṣ* by rule 6.1.64 *dhātvādeḥ ṣaḥ saḥ*. Secondly, given *su + van*, rule 6.1.71 *hrasvasya piti kṛti tuk* introduces the augment *tUK*. Deriving *sutvā* from *sutvan +sU* offers nothing new. Similar rules with the exception of *tUK* apply in deriving *yajvā*.

3.2.104 *jīryater atṛn*

Example (541) *jaran* is derived by introducing affix *at(ṚN)* after verbal root *jṝ* where the final *ṝ* of the root goes through *guṇa* to produce *j(ṝ→ar) + at(ṚN→∅) = jar + at*. Rule 7.1.70 *ugidacāṃ sarvanāmasthāne' dhātoḥ* introduces augment *nUM* to *jarat + sU* to produce *jara(n(UM →∅)t + sU*. The deletion of *sU*, and also that of the final *t* of the conjunct (*saṃyogāntalopa*) yields *jaran*. The nominative dual and plural forms of *jarat*, i.e., (542) *jarantau* and (543) *jarantaḥ*, can be similarly accomplished from *jarat + au* and *jarat + (J→∅) as* via the application of *nUM* and (in case of the plural) *rutva- visarga*.

3.2.105 *chandasi liṭ*

Our example (544) *ātatāna* is derived by introducing affix *LIṬ* (and subsequently replacing it with *ṆaL* as per 3.4.82 *parasmaipadānāṃ ṇal...*) after verbal root *tan(U→∅)* used with the preverb *ā(Ṅ→∅)* Doubling and related operations such as *halādiśeṣa* will produce *ā + ta + tan + a* where 7.2.116 *ata upadhāyāḥ* will order *vṛddhi* to realize *āta + t(a→ā)n + a = ātatāna*. The derivation of (545) *dadarśa* from *dṛ + dṛś + a* is not difficult. Refer to examples with doubling and other similar operations for further rule application.

3.2.106 *liṭaḥ kānaj vā*

Examples such as (545) *cikyānaḥ* and (546) *suṣuvāṇaḥ* derive from *ci* + *ci* + *āna* and *su* + *su* + *āna* where verbal roots *ci(Ñ)* and *su* (with its initial *ṣ* replaced with *s*) go through doubling of 6.1.8 *liṭi dhātor...* and *LIṬ* gets replaced with *KānaC*. The string *ci* + *ci* + *āna* will go through the application 7.3.58 *vibhāṣā ceḥ* whereby we will get *ci* + *(c→k)i* + *āna* = *ci* + *ki* + *āna*. Rule 6.1.71 *aciśnudhātu...* will then have its *iyaṄ* blocked in favor of the *yaṆ* of 6.4.82 *eranekāco' saṃyoga....* Thus: *ci* + *k(i→y)* + *āna* = *cikyāna*. Deriving *cikyānaḥ* from *cikyāna* + *sU* is easy. Similar rules apply in deriving *suṣuvāṇaḥ* where the second *ṣ* is a replacement of *s* by 8.3.59 *ādeśapratyayayoḥ* and the *ṇ* is a replacement for the *n* of *āna* as per rule 8.4.2 *aṭkupvāṅnum....*

3.2.107 *kvasuś ca*

Examples such as (547) *jakṣivān* and (548) *papivān* derive from *(ad* + *LIṬ)* +*sU* and *(pā* + *LIṬ)* + *sU* where *LIṬ* is replaced with *(K)vas(U)*. Rule 2.4.40 *liṭy anyatarasyām* then orders *ghas* as a replacement for *ad* to change the string to *(ad→ghas)* + *(LIṬ→vas)* = *ghas* + *vas*. Doubling and related operations will produce *gha* + *ghas* + *vas* where 7.2.76 *vasvekāj...* will then introduce *i(Ṭ)*: *gha* + *ghas* +*i* + *vas*. The penultimate *a* of the *aṅga* will then be deleted by 6.4.100 *ghasibhasor hali* to yield *gha* + *gh* *(a→Ø)s* + *i* + *vas*. Rule 8.4.55 *khari ca* will replace the remaining *gh* with *k*. The *s* of *gha* + *ks* + *i* + *vas* will go through a replacement in *ṣ* (*ṣatva*) whereby we get *gha* + *k(s→ṣ)* + *i* + *vas* = *jakṣi* + *vas*. The initial *gh* of the string will change into *j* (*cartva*) via *jh* (*cutva*) through the application of rules 7.4.62 *kuhoś cuḥ* and 8.4.54 *abhyāse car ca*. See the derivational history of (30) *citavān* under the appendix of 1.1.5 *kṅiti ca* for details of how *(gh→jh→j)a(gh→k(s→ṣivas)* + *sU))* will finally produce *jakṣivān*.

Deriving *papivān* from *(pā* + *pā* + *vas)* + *sU* is comparatively easier. The *ā* before *vas* will be deleted by 6.4.64 *āto lopa iṭi ca*. Augment *iṬ* will also be introduced here to produce *pā* + *p* + *i* + *vas* through the facility of *rūpātideśa* 'extension of form' of rule 1.1.59 *dvirvacane' ci*. Finally, the *ā* of *pā in pā* + *p* + *i* + *vas* will go through shortening (*hrasva*) by 7.4.59 *hrasvaḥ*. Deriving *papivān* from *papivas* + *sU* again requires reference to the derivation of *citavān* as mentioned.

3.2.108 *bhāṣāyāṃ sadavasaśruvaḥ*

This rule makes the replacement of *KvasU* optional in case of these three verbs relative to the classical usage. An example such as (549) *upasedivān* will thus derive from *(upa* + *sad* + *sad* + *i* + *vas)* + *sU))* similarly with reference to rules of the preceding examples. Note, however, that the root is used with the preverb *upa* which, as usual, will not be part of doubling. Rule 6.4.120 *ata ekahalmadhye...* will then delete the first *sad* and order *e* as a replacement (*etva*) thereby changing the string to *upa* + *(sad→Ø)* + *s(a→e)d* + *i* + *vas* = *upa* + *sed* + *i* + *vas* = *upasedivas*.

The long vowel replacement (*dīrgha*) for the short (*hrasva*) of *vas* in *upasedivas* will be ordered by rule 6.4.10 *sānmahataḥ saṃyogasya*. Following the derivational patterns of the preceding examples will produce *upasedivān* from *upasedivas* + *sU*. Forms such as (550) *upāsadat* derive similarly to (300) *alipat* where *aṄ* replaces *CLĪ* by 3.1.55 *puṣādi*.... The derivation of (551) *upāsīdat* requires that *sad* be replaced with *sīd* before *ŚaP* by 7.3.78 *pāghrādhmāsthā*... to produce *upa* + *a(Ṭ)* + *(sad→sīd)* + *(Ś)a(P)* + *t*= *upa* + *a* + *sīd* + *a* + *t*. An application of *savarṇadīrgha* (6.1.101 *akaḥ savarṇe*...) will finally produce *up(a+a→ā)* + *sīd* + *a* + *t* = *upāsīdat*. Yet another example (552) *upasasāda* can be derived by introducing affix *LIṬ* after verbal root *sad* used with the preverb *upa* where the *LIṬ* will be introduced by 3.2.115 *parokṣe liṭ*. The *tiP* which will replace *LIṬ* of *upa* + *sad* + *LIṬ* will be further replaced with *ṆaL* of 3.4.82 *parasmaipadānāṃ*.... Doubling and related operations will then follow to produce *upa* + *sa* + *sad* + *a*. Rule 7.2.116 *ata upadhāyāḥ* will produce the final derivate by ordering the *vṛddhi*-replacement for the penultimate *a*. Thus, *upasas(a→ā)d* + *a* = *upasasāda*.

The derivation of (553) *anūṣivān* proceeds with the introduction of *KvasU* after verbal root *vas* used with the preverb *anu*. Rule 6.1.15 *vacisvapi*... then orders *samprasāraṇa* which also causes the deletion of *a* of *vas*. This will produce *anu* + *us* + *vas*. Doubling, *halādiśeṣa*, and *iṬ* will then apply to realize *anu* + *u* + *us* + *i* + *vas* where rule 8.3.60 *śāsivasighas*... further orders *ṣ* as a replacement for *s* of *us*. This will give us *anu* + *u* + *uṣ* + *i* +*vas* = *anūṣivas* via *savarṇadīrgha*. Affix *su* can now be introduced to derive *anūṣivān* from *anūṣivas* + *sU*.

The derivation of (554) *anvavātsīt* is in many ways similar to the derivation of (20) *alāvīt* in the appendix of volume II. The *vṛddhi* is accomplished in this example by 7.2.3 *vadavrajahala*.... The *t* of *anvavāt* in *anvavātsīt* is replaced for *s* in view of rule 7.4.49 *saḥ syārdhadhātuke*. Rule 7.3.96 *astisico' pṛkte* introduces the augment *ī(Ṭ)* for which see the derivation of (16) *akārṣīt* again in the appendix of volume II. Note that the introduction of *iṬ* is blocked by rule 7.2.10 *ekāc upadeśe*....

The derivation of (555) *anvavasat* form *anu* + *aṬ* + *vas* + *LUṄ* is not very different from the many *LUṄ*-derivates already explained. Deriving (556) *anūvāsa* from *anu* + *u* + *v(a→ā)s* + *a* entails replacing *LIṬ* with *ṆaL* via *tiP* as in (552) *upasasāda*. The application of *samprasāraṇa* and related operations will finally produce the derivate.

The derivation of (557) *upaśuśruvān* requires the introduction of *KvasU* after verbal root *śru* used with the preverb *upa*. Doubling and other operations similar to the derivates of the preceding rule will also apply. The derivation of (558) *upāśrauṣīt*, a derivate in *LUṄ*, is similar to that of (16) *akārṣīt* (cf. appendix of volume II). Example (559) *upaśuśrāva*, a derivate in *LIṬ*, offers nothing new.

The derivation of (560) *aśṛṇot* proceeds with *śru* + *LAṄ* which, after the *śṛ* replacement for *śru* by 3.1.74 *śruvaḥ...*, and the introduction of the *vikaraṇa Śnu*, receives *aṬ*. This yields *a(Ṭ)* + *śṛ* + *Śnu* + *(LAṄ→tiP→t)* = *a* + *śṛ* + *nu* + *t*. Note that the *guṇa* of *ṛ* of *śṛ* before *Śnu* is blocked at the strength of 1.2.4 *sārvadhātukam apit*. However, the *guṇa* for the *u* of *Śnu* before *tiP* cannot be blocked. Thus, we get *aśṛ* + *n(u→o)* + *t* which after the *ṇ* as a replacement for its *n* (*ṇatva*; vide the *vārttika: ṛvarṇāntasya ṇatvaṃ vācyam*) produces *aśṛṇot*.

3.2.109 *upeyivānanāśvānanūcānaś ca*

Deriving (561) *upeyivān* from *upa* + *i* + *(LIṬ→KvasU)* with subsequent doubling will produce *upa* + *i* + *i* + *vas*. The reduplicate *i* will go through lengthening (*dīrgha*) as per rule 7.4.69 *dīrgha iṇaḥ kiti*. This rule allows a replacement in *yaṆ* for the *i* of *upa* + *(i→ī)* + *i* + *vas* = *upa* + *ī* + *(i→y)* + *vas* via *nipātana* since *i* occurs before a consonant. The resultant string *upa* + *ī* + *y* + *vas* will receive *iṬ* as per rule 7.2.67 *vasvekāj....* This will give us *upa* + *ī* + *y* + *i(Ṭ)* + *vas* = *upa* + *ī* + *yi* + *vas*. Rule 6.1.87 *ād guṇaḥ* will finally produce *up(a+ī→e)* + *yi* + *vas* = *upeyivas* from which one can easily derive *upeyivān* following the derivational pattern of other derivates in *KvasU*.

Now consider the optional derivates such as (562) *upāgāt* from *upa* + *i* + *(CLI→sIC→∅)* + *(LUṄ→tiP→t)* = *upa* + *i* + *t*; (563) *upait* from *upa* + *i* + *(LUṄ→tiP→t)* = *upa* + *i* + *t;* and (564) *upeyāya* from *upa* + *(LIṬ→tiP→(Ṇ)a(L)* = *upa* + *i* + *a*. Our first example *upāgāt* will require verbal root *i* to be replaced with *gā* as per rule 2.4.45 *iṇo gā luṅi*. The *sIC* is deleted by 2.4.77 *gātisthāghupā....* The string will receive *ā(Ṭ)* (6.4.72 *āḍ ajādīnām*) whereby we will get *upa* + *ā* + *gā* + *t* = *upāgāt* through *savarṇadīrgha*. Note that the *i* of *tiP* is deleted by 3.4.100 *itaś ca*.

The second example will also receive *āṬ* though its *ŚaP* will be deleted by 7.4.72 *adiprabhṛtibhyaḥ....* A single *vṛddhi* replacement ordered for the sequence *ā+i* by rule 6.1.90 *āṭaś ca* will give us *upa(ā* + *i* = *ai)* + *t* = *upa* + *ai* + *t*. A second single *vṛddhi* replacement will then be ordered by 6.1.88 *vṛddhir eci* whereby the sequence *a* + *ai* of *upa* + *ai* + *t* will be replaced with *ai* to finally derive *up(a* + *ai*= *ai)* = *upait*.

The derivation of *upeyāya* entails *(LIṬ→tiP→ṆaL)* after *i* 'to go', used with the preverb *upa*, whereby we get *upa* + *i* + *a*. Rule 7.2.115 *aco' ñṇiti* then orders *vṛddhi* for *i* which gives us *upa* + *(i→ai)* + *a* =*upa* + *ai* + *a*. Rule 6.1.78 *eco' yavāyāvaḥ* then orders *āy* as a replacement for *ai* to produce: *upa* + *āy* + *a*. Rule 6.4.78 *abhyāsasyāsavarṇe* read with 1.1.53 *ṅic ca* will introduce *iyAṄ* to change the string to *upa* + *iy(AṄ→∅)* + *āy* + *a* = *upa* + *iy* + *āy* + *a*. The final form will be realized by the application of rule 6.1.87 *ād guṇaḥ*. Thus: *up(a+i* = *e)y* + *āy* + *a* = *upeyāya*.

Yet another derivate of *KvasU* is cited here as (565) *anāśvān* parallel to *na āśvān*. The derivate contains *aś* + *KvasU* which ultimately produces

āśvān from *āśvas* + *sU*. Note that doubling and related operations will produce *a(ś→∅)* + *aś* + *vas* = *a* + *aś* + *vas*. The initial sequence *a+a* will go through the single *guṇa* replacement in *a* of 6.1.87 *ād guṇaḥ*. The result will be *(a+a→a)ś* + *vas* = *aś* + *vas*. Rule 7.4.70 *ata ādeḥ* will then order the lengthening of *a* to give us *(a→ā)ś* + *vas* = *āśvas*. The introduction of augment *iṬ* by rule 7.2.67 *vasvekāj...* is blocked here by our present rule via its provision of *nipātana*. Follow the derivation of *KvasU* examples to derive *anāśvān* from *anāśvas* + *sU* where the base in itself is a negative (*naÑ*) *tatpuruṣa* compound. Note that the *n* of *na(Ñ→∅)* + *āśvas* is deleted by 6.3.73 *nalopo nañaḥ*. The resultant string will then receive the augment *nu(Ṭ→∅)* by rule 6.3.74 *tasmān nuḍ aci*. This will give us *(n→∅)a* + *āśvas* = *a* + *n(UṬ→∅)* + *āśvas* = *anāśvas*, the nominal base after which *sU* will be introduced to derive *anāśvān*.

Our next example (566) *nāśīt* is again a negative *tatpuruṣa* compound where given *na* + *āśīt* rule 6.1.101 *akaḥ savarṇe dīrghaḥ* applies to yield *n(ā+a→ā)śīt*. Our example *āśīt* contains the string *ā(Ṭ)* + *aś* + *ī(Ṭ)* + *(CLI→sIC→∅))* + *(LUN→t(i→∅(P→∅)))* = *aś* +*t* where augment *ī(Ṭ→∅)* is introduced by 7.3.96 *astisico' pṛkte*. This will be followed by the deletion of *sIC* by rule 8.2.28 *iṭ īṭi*. The details of elements of the string are similar to other derivates already derived. The application of a single *vṛddhi* replacement in *ā* by rule 6.1.90 *āṭaś ca* will then produce: *(ā* + *a→ā)ś* + *ī* + *t*= *āśīt*.

One can also derive (567) *nāśnāt* parallel to *na āśnāt* which also entails the augment *āṬ* and the *vikaraṇa Śnā* as per 3.1.81 *kryādibhyaḥ śnā*. A derivate of *LIṬ* such as (568) *nāśa* can also be derived from *a* + *aś* + *(LIṬ→(tiP→Ṇ)a(L))* = *a* + *aś* + *a*. This string will first go through *vṛddhi* of the *upadhā* of the verbal root: *a* + *(a→ā)ś* + *a* (7.2.116 *ata upadhāyāḥ*); the next *vṛddhi* will apply to the reduplicate (*abhyāsa*): *(a→ā)* + *āś* + *a* = *ā* + *āśa* (7.4.70 *ata ādeḥ*). An application of *savarṇadīrgha* will produce *(ā+ā* = *ā)ś* + *a* = *āśa*. The application of *savarṇadīrgha* is also required on the string *na* + *āśa* after the negative *tatpuruṣa* compound.

The derivation of (569) *anvavocat* entails the replacement of *brū* by *vac* (2.4.53 *bruvo vaciḥ*) given *anu* + *brū* + *LUṄ*. Refer to the derivation of (296) *avocat* for further details. Note that *anu* + *avocat* yields *anvavocat* via the application of 6.1.77 *iko yaṇ aci*. A *LAṄ* derivate such as (570) *anvabravīt* is derived from *anu* + *a(Ṭ)* + *brū* + *(Ś)a(P)* + *tiP* where rule 7.3.93 *bruva īṭ* introduces *ī(Ṭ)*. This *ŚaP* is deleted by 2.4.72 *adi prabhṛtibhyaḥ...* to give us *anu* + *a* + *brū* + *ī* + *t(i→∅)* = *anu* + *a* + *brū* + *ī* + *t*. An application of *guṇa* (7.3.84 *sārvadhātukārdhadhātukayoḥ*) followed by a replacement in *av* by rule 6.1.78 *eco' yavāyāvaḥ* will produce: *anu* + *a* + *br(u→o→av)* + *ī* + *t* = *anu* + *a* + *brav* + *ī* + *t*. Rule 6.1.77 *iko yaṇ aci* will then apply on *anu* to produce: *an(u→v)* + *a* + *brav* + *ī* + *t* = *anv* + *a* + *brav* + *ī* + *t* = *anvabravīt*.

Refer to the derivational history of (131) *uvāya* for deriving (571) *anūvāca* from *anu* +*vac* + *LIṬ*.

3.2.110 *luṅ*/3.2.111 *anadyatane laṅ*

Refer to the derivation of *akārṣīt* and *ahārṣīt* under the appendix of 1.1.1 *vṛddhir ādaic*. One can also refer to the *LAṄ*-derivate (201) *akurutām* (vol. II: 396–97) for specific details of deriving (572) *akarot* and (573) *aharat* which contain *a(Ṭ)* + *kṛ* +*u* + *tip* and *aṬ* + *hṛ* + (*Śa(P)* + *ti(P)*) respectively. The derivation of *akarot* requires the *guṇa* of both *ṛ*→*ar* and *u*→*o* to produce *a* + *k(ṛ*→*ar)* + *(u*→*o)* + *t* = *akarot*. Our next example requires the *guṇa* of *ṛ*. Thus: *a* + *h(ṛ*→*ar)* + *a* + *t* = *aharat*.

3.2.112 *abhijñāvacane lṛṭ*

The derivation of (574) *vatsyāmaḥ* proceeds from *vas* + *sya* + *mas* similarly to the underlying string of (742) *kariṣyati* (vol. II: 509–10) which differs only in the selection of *tiP* as opposed to the first personal dual *vas* of the example on hand. Rule 7.4.49 *saḥ syārdhadhātuke* will replace the *s* of *vas* with *t* to produce *va(s*→*t)* + *sya* + *mas*. The final *a* of *vatsya* will go through lengthening (*dīrgha*) via the application of rule 7.3.101 *ato dīrgho yañi*. Thus: *vatsy(a*→*ā)* + *mas* = *vatsyāmas*. A subsequent application of *rutva-visarga* will finally derive *vatsyāma(s*→*r*→*ḥ)* = *vatsyāmaḥ*.

3.2.113 *na yadi*

A derivate such as (575) *avasāma* will derive from *a(Ṭ)* + *vas* + *ŚaP* + *mas* where *vas* will be a replacement for *LAṄ* of 3.2.111 *anadyatane laṅ*. The final derivate will be realized via lengthening as in the preceding example followed by the deletion of the *s* of *mas* by 3.4.99 *nityaṃ ṅitaḥ*.

3.2.114 *vibhāṣā sākāṅkṣe*

An example such as (576) *bhokṣyāmahe* derives from *bhuj* + *sya* + *mahi* where *mahi(Ṅ)* is a first personal plural *ātmanepada* replacement for *LṚṬ*. The root vowel *u* will go through the *guṇa* of its penultimate vowel (*laghūpadhaguṇa*). Rule 3.4.79 *ṭit ātmanepadānāṃ ṭer e* will as usual produce *bhoj* + *sya* + *mah (i*→*e)* = *bhoj* + *sya* + *mahe*. The *j* will then change to *k* through *g* as per the *kutva* and *cartva* of rules 8.2.30 *coḥ kuḥ* and 8.4.55 *khari ca* respectively. The *s* of *bho(j*→*g*→*k)* + *sya* + *mahe* will then go through *ṣatva* of 8.3.59 *ādeśapratyayayoḥ*. This in addition to the lengthening of the *a* of *sya* will produce *bhok* + *(s*→*ṣ)y(a*→*ā)* + *mahe* = *bhokṣyāmahe*.

An optional example in *LUṄ*, i.e. (577) *abhuñjmahi*, derives from *a(Ṭ)* + *bhuj* + (*LUṄ*→*mahi*) where 3.1.78 *rudhādibhyaḥ śnam* introduces (*Ś*)*na*(*M*) after the *u* of *bhuj* on account of *M* as an *it* (1.1.47 *midaco' ntyāt paraḥ*). The *a* of *na* in *a* + *bhu* + *na* + *j* + *mahi* will be deleted by 6.4.111 *śnasor al lopaḥ* to produce *a* + *bhun(a*→*0)j* + *mahi* = *abhunj* + *mahi*. Rules 8.3.24 *naś cāpadāntasya jhali* and 8.4.58 *anusvārasya yayi parasavarṇaḥ* will now derive *abhu(n*→*ṃ*→*ñ)j* + *mahi* = *abhuñjmahi*.

3.2.115 *parokṣe liṭ*

Refer to the appendix of rule 1.1.58 *na padāntadvirvacana...* where I have explained the derivation of (231) *jakṣatuḥ* and (232) *jakṣuḥ*. Similar rules apply in deriving (578) *cakāra* and (579) *jahāra* from *kṛ* + *LIṬ* and *hṛ* + *LIṬ* where *LIṬ* will have to be replaced with *ṆaL* and *ṛ* of the root will go through *vṛddhi*. One can similarly derive (580) *vilalāpa* from *vi* + *lap* + *(LIṬ→ṆaL))* = *vi* + *la* + *lap* + *a* = *vilal(a→ā)p* + *a* = *vilalāpa* through doubling, *halādiśeṣa*, and *dīrgha*. The same is true of (581) *jagāma* from *ga* + *gam* + *a* where the *g* of reduplicate *ga* additionally gets replaced with *j*.

3.2.117 *praśne cāsannakāle*

The derivation (582) *iyāja* from *ya* + *yaj* + *(LIṬ→ṆaL)* requires doubling. Additionally, the reduplicated syllable *ya* goes through *samprasāraṇa*, and the deletion of *a*, to produce: *(y→i)(a→0)* + *yaj* + *a* = *i* + *yaj* + *a* which through *dīrgha* of the *a* of *iyaj* produces *iy(a→ā)j* + *a* = *iyāja*. Note that (583) *jaghāna* can also be similarly derived from *han* + *(LIṬ→tiP→ṆaL))* which after doubling and *halādiśeṣa* will produce *ha* + *han* + *a*. The *cutva* in *jh* of rule 7.4.62 *kuhoś cuḥ* followed by the *j* replacement of *jh* by 8.4.54 *abyāse car ca* will change the string to *(h→jh→j)a* + *han* + *a*. Rule 7.3.54 *ho hanter...* will then order the *h* of *han* to be replaced with *gh* for reason that *ṆaL* is marked with *Ṇ* as an *it*. Deriving *jaghāna* from *ja* + *(h→gh)an* + *a* = *ja* + *ghan* + *a* will just require the *vṛddhi* of the penultimate (*upadhā*) vowel *a* by 7.2.116 *ata upadhāyāḥ*.

3.2.119 *aparokṣe ca*

The derivation of (584) *adhyāpayati* as in *adhyāpayati sma* begins with *adhyāpi* for deriving which refer to (167) *adhyāpipat*. The introduction of *LAṬ→tiP* and *ŚaP* followed by *guṇa* of *i* and subsequent replacement in *ay* will produce *adhyāp(i→e→ay)* + *a* + *ti* = *adhyāpayati*. The derivation of (585) *bravīti* from *brū* + *ŚaP* + *LAṬ→tiP* entails the introduction of *ī(Ṭ* (7.3.93 *bruva īṭi*) whereby we get *brū* + *ī* + *ti*. Note that *ŚaP* is deleted by 2.4.72 *adi prabhṛtibhyaḥ*. For the remaining application of *guṇa* of the *ū* of *brū* and its subsequent replacement in *av* refer to the derivation of (570) *anvabravīt*.

3.2.121 *nanvor vibhāṣā*

Refer to the derivation of (16) *akārṣīt* (vol. II, 332–33) for deriving (586) *akārṣam* which differs from the former in respect of *miP* as a replacement for *LUṄ*. Note that rule 3.4.101 *tasthasthamipāṃ...*will subsequently replace *miP* with *am*.

3.2.122 *puri luṅ cāsme*

Our example (586) *avātsuḥ* derives from *a(Ṭ)* + *vas* + *s(ĪC)* + *(LUṄ→jhi)* where *jhi* subsequently gets replaced with *(J)us* of 3.4.109 *sijabhyastavidibhyaś ca*. The *s* of *vas* will be replaced with *t* by 7.4.49 *saḥ*

syārdhadhātuke and its *a* will go through *vṛddhi* by 7.2.3 *vadavrajahalantasyācaḥ*. Thus, *a* + *v(a→ā)(s→t)* + *s* + *us* = *avātsu(s→r→ḥ)* = *avātsuḥ*. Refer to the derivational history of *ījuḥ* (vol. II: 428–29) for deriving (587) *ūṣuḥ* from *vas* + *(LIṬ→jhi→Jus)* through doubling, *samprasāraṇa* and other related operations. Note that rule 8.3.60 *śāsivasighasīnām...* will replace the *s* of *ūs* in *ūs* + *us* with *ṣ*. The application of *rutva-visarga* will finally produce *uṣū(s→ḥ)* = *ūṣuḥ*.

3.2.124 *laṭaḥ śatṛśānavāv aprathamāsamānādhikaraṇe*

An example such as (589) *pacantam* contains *pacat* + *am* where *pacat* is derived from *pac* + *(Ś)a(P)* + *LAṬ*. The *LAṬ* in this example is replaced with *ŚatṚ*. Rule 6.1.97 *ato guṇe* will finally produce the nominal stem *pac* + *(a+a→a)t* = *pacat*. The final form *pacantam* will be derived by the introduction of *nUM* by rule 7.1.70 *ugidacāṃ sarvanāmasthāne*. Thus: *paca(n(UM→Ø)* + *t* + *am* = *pacantam*. The nominative/vocative singular form of *pacat* will be derived form *pacat* + *sU* where *nUM* will be introduced to derive *pacant* + *sU*. Rule 6.1.68 *halṅyābbhyo...* will as usual delete *sU*. The final *t* of *pacant* will then be deleted to produce *pacan(t→Ø)* = (590) *pacan* by 8.2.23 *saṃyogāntasya lopaḥ*. A replacement in *(Ś)āna(C)* for *LAṬ* followed by the introduction of *m(UK)* by rule 7.2.82 *āne muk* will similarly produce the nominal stem *pac* + *a* + *m* + *āna* = *pacamāna*. The subsequent introduction of *am* after *pacamāna* together with the application of 6.1.107 *ami pūrvaḥ* will then realize *pacamān (a+a→a)m*=(591) *pacamānam*. Deriving (592) *pacatā*, the instrumental singular of *pacat*, from *pacat* + *(Ṭ)ā* is easy. The instrumental singular of *pacamāna* from *pacamāna* + *(Ṭ)ā* requires that *Ṭā* be replaced with *ina* by rule 7.1.12 *ṭāṅasiṅasāminātsyāḥ*. Rule 6.1.87 *ād guṇaḥ* then applies on *pacamāna* + *ina* to produce *pacamān(a+i→e)na* = *pacamānena*. Another derivate with *āna* is (593) *vidyamānaḥ* derived from *(vid* + *(Ś)ya(N)* + *m(UK→Ø)* + *(LAṬ→āna* = *vidyamāna))* + *sU)))* = *vidyamānaḥ*. One can similarly derive (594) *adhīyānaḥ* from *adhīyāna* + *sU* where the nominal stem *adhīyāna* entails a replacement in *āna* for *LAṬ* after verbal root *i* used with the preverb *adhi*. Thus, *adhi* + *i* + *(LAṬ→ āna)* = *adhī* + *āna* through *savarṇadīrgha*. Rule 6.4.77 *aci śnudhātubhruvām...* will then introduce *iyAṄ* to produce *adhī* + *iy(AṄ)* + *āna*. An application again of *savarṇadīrgha* will realize *adhīyāna* which after the introduction of *sU* will derive *adhīyānaḥ*.

The derivation of (595) *juhvat* entails the deletion of *ŚaP* of *hu* + *hu* + *ŚaP* + *(LAṬ→ŚatṚ)* where *ŚaP* gets subsequently deleted by 2.4.75 *juhotyādibhyaḥ śluḥ*. Refer to the derivation of (250) *juhoti* (vol. II: 420) for how the *h* of the reduplicate syllable is replaced with *j* in *(h→j)u* + *hu* + *at* = *ju* + *hu* + *at*. The *u* of *hu* will go through *yaṆ* of 6.4.87 *huśnuvoḥ sārvadhātuke* to finally realize *ju* + *h(u→v)* + *at* = *juhvat*.

The derivation of (596) *śayānāḥ* contains the string *śī (Ṅ→Ø)* +

(ŚaP→∅) + (LAṬ→ŚānaC) = śī + āna where *ŚaP* gets deleted by 2.4.72 *adiprabhṛtibhyaḥ....* The *ī* of the verbal root goes through *guṇa* and the corresponding replacement in *ay* by rules 7.4.21 *śīṅaḥ sārvadhātuke...* and 6.1.78 *eco' yavāyāvaḥ*. Thus we get *ś(ī→e→ay) + āna = śayāna*, a nominal stem after which the nominative plural ending *Jas* can be introduced to derive *śayānāḥ*. Rule 6.1.102 *prathamayoḥ pūrvasavarṇaḥ* will order a single long vowel replacement for both the final *a* of *śayāna* and the initial *a* of *as* to produce *śayān(a+a→ā)s = śayānās*. This last will produce *śayānāḥ* through *rutva-visarga* of the final *s*.

Note that (597) *tiṣṭhantaḥ* derives from *tiṣṭhat + (J)as* where *tiṣṭh* is a replacement of *sthā* by rule 7.3.78 *pāghrā....* The introduction of *n(UM)* followed by *rutva-visarga* should produce *tiṣṭh + at + as = tiṣṭhant + as = tiṣṭhanta(s→r→ḥ) = tiṣṭhantaḥ*.

3.2.127 *tau sat*

The derivation of (598) *kariṣyan* proceeds with *kṛ + LṚṬ* similarly to (742) *kariṣyati* for which see the appendix under rule 1.4.13 *yasmāt...* (vol. II: p. 510). Deriving *kariṣyan* from *kariṣya + at* on the pattern of *kariṣyati* should not be problematic since *kariṣya* is common to them. Given *kariṣya + at* where *at* is the *ŚatṚ* replacement for *LṚṬ*, rule 6.1.97 *ato guṇe* will then apply to produce *kariṣy(a+a→a)t = kariṣyat*. The introduction of *nUM*, and deletion of *t* at the end of the conjunct *(saṃyoga)*, will yield *kariṣyan*. Of course, the *sU* will again go through deletion.

Deriving (599) *kurvan* from *kṛ + (LAṬ→(Ś)at(Ṛ)) = kṛ + u + at* entails *guṇa* by 7.3.84 *sārvadhātukārdhadhātukayoḥ* before *u* of 3.1.79 *tanādi-kṛñbhyabhya....* The *a* of *k(ṛ→ar) + u + at = kar + a + at* will go through a replacement in *u* (*utva*) by rule 6.4.110 *ata ut sārvadhātuke*. The resultant string, i.e., *k(a→u)r + u + at = kur + u + at*, will produce *kur + (u→v)at = kurvat* through the application of rule 6.1.77 *iko yaṇ aci*. Our final derivate *kurvan* should then derive from *kurvat + sU*.

Derive (600) *kurvāṇaḥ* from *kṛ + u + (Ś) + āna (C)* where the operations similar to the preceding example will produce *kurvāna*. The *n* of the base will go through a replacement in *ṇ* and the *s* of *sU* will go through *rutva-visarga*. Deriving (601) *kariṣyamāṇaḥ* from *kariṣya + āna* will entail the introduction of *mUK*, *ṇatva*, and *rutva-visarga* of the *s* of *sU*.

3.2.129 *tācchīlyavayovacanaśaktiṣu cānaś*

The root after which affix *(C)āna(Ś)* is introduced as a replacement for *LAṬ* to derive (602) *muṇḍayamānāḥ* is *muṇḍi*. The *ṆiC* will of course be introduced by 3.1.21 *muṇḍamiśra....* We will get *muṇḍ(i→e→ay) + (Ś)a(P) + (LAṬ→āna) = muṇḍay + a + āna* via the familiar process of *guṇa* and its replacement in *ay*. Rule 7.2.82 *āne muk* will then introduce *m(UK)* to realize *muṇḍaya + m + āna = muṇḍayamāna*. An introduction of the nominative plural *Jas* followed by the single long replacement (*pūrvasavarṇadīrgha*) of rule 6.1.102 *prathamayoḥ pūrvasavarṇaḥ* will produce

muṇḍayamāna + (*J*→Ø)*as* = *muṇḍayamān(a+a→ā)s* = *muṇḍayamānās*. The final derivate will just require an application of *rutva-visarga*.

One can similarly derive (603) *bhūṣayamāṇāḥ* from *bhūṣ* + *ṆiC* = *bhūṣi* + *LAṬ* = *bhūṣi* + *a* + *āna*. Note, however, that given *bhūṣayamānāḥ* rule 8.4.2 *aṭkupvāṅnum*...will change the *n* to *ṇ*. Yet another example such as (604) *paryasyamānāḥ* where *ŚyaN* is introduced after verbal root *as* used with *pari* is not difficult to derive. The *i* of *pari* goes through its replacement in *y* and *mUK* is again introduced before *āna*. Similar rules apply in deriving (605) *vahamānāḥ* and (606) *pacamānāḥ*. The derivation of (607) *nighnānāḥ* from *ni* + *han* + *ŚaP* + (*LAṬ* → *CānaŚ*) entails two deletions: the deletion of *ŚaP* by 2.4.72 *adiprabhṛtibhyo*...; followed by the deletion of the penultimate (*upadhā*) *a* of *nihan* by rule 6.4.98 *gamahanajana*...at the strength of *CānaŚ*, a *sārvadhātuka* affix not marked with *P* as *it*, being treated as if marked with *Ṅ* (1.2.4 *sārvadhātukam apit*). The *h* of *nihn* + *āna* will be replaced with *gh* to realize: *ni(h→gh)n* + *āna* via rule 7.3.54 *ho hanter*...read with 1.1.50 *sthāne' ntaratamaḥ*. Our final derivate *nighnānāḥ* will be derived from *nighnāna* + (*J*)*as* similar to the forms already discussed.

3.2.130 *iṅdhāryoḥ śatrakṛcchriṇi*

The derivation of (608) *adhīyan* proceeds from *adhi* + *i* + *ŚaP* + (*LAT*→ *ŚatṚ*) where, subsequent to the deletion of *ŚaP* by 2.4.72 *adiprabhṛtibhyaḥ*..., *savarṇadīrgha* of *i* + *i* followed by the introduction of *nUM* will produce *adh(i* + *i* → *ī)* + *a* + *n* + *t* = *adhīyant*. The introduction and deletion of *sU* followed by the deletion of the final *t* of the conjunct will realize *adhīyan*. The derivation of (609) *dhārayan* requires the use of *dhāri* a derivate of *dhṛ* terminating in affix *ṆiC*. Operations such as *guṇa* and subsequent replacement in *ay* will produce *dhār(i→e→ay)* + *a* + *at* where *a* is technically the *vikaraṇa Śa* of rule 3.1.77 *tudādibhyaḥ*...

3.2.131 *suño yajñasaṃyoge*

The derivation of (610) *sunvantaḥ* proceeds with *ṣuÑ* + *Śnu* + (*LAṬ*→*at*) where, given *ṣu* + *nu* + *at*, the root-initial *ṣ* gets replaced with *s* (6.1.64 *dhātvādeḥ*...). Rule 6.4.87 *huśnuvoḥ sārvadhātuke* will then apply to bring: *su* + *n(u→v)* + *at*. The introduction of *nUM* and *Jas* to subsequently derive *sunvantaḥ* through *rutva-visarga* does not offer anything new.

3.2.132 *tṛn*

Note that *karttā* has already been derived as derivation (177) under the appendix of volume II(p. 388). The next example (611) *vaditā* derives from *vad* + *i(Ṭ)* + *tṛ* for which see (7) *taritā* in the appendix of volume II under rule 1.1.2 *adeṅ guṇaḥ*. The derivation of (612) *muṇḍayitāraḥ* begins with *muṇḍi* + *i* + *tṛ* + (*J*)*as* where the first *i* is technically affix *ṆiC* introduced by 3.1.21 *muṇḍa*.... Note that the *a* of *muṇḍa* before the causal *ṆiC* will be deleted by a *vārttika* proposal under 6.5.155 *ṭeḥ*. The *guṇa* of *i* (7.3.84

sārvadhātukārdha...; 3.4.114 *ārdhadhātukam...*) and subsequent replacement of *e* in *ay* will produce *muṇḍ(i →e→ay)i + tṛ = muṇḍayitṛ*. The final form will be derived from *muṇḍayitṛ + (J)as* through the *vṛddhi* of *ṛ* and *rutva-visarga* as: *muṇḍayit(ṛ→ ār)a(s→ḥ)) = muṇḍayitāraḥ)))*.

3.2.136 *alaṃkṛñnirākṛñprajanotpacotpatonmada...iṣṇuc*

The derivation of (613) *alaṃkariṣṇuḥ* contains *(alaṃkṛ + iṣṇuC) + sU* where *ṛ* of *alaṃkṛ* goes through *guṇa*. The *s* of *sU* of course goes through *rutva-visarga*. Examples such as (614) *nirākariṣṇuḥ* similarly derive from *nir + āṄ + kṛ + iṣṇuC) + sU*)). Other examples such as (615) *sahiṣṇuḥ* and (616) *cariṣṇuḥ*, etc., may not meet the necessary condition for *guṇa*.

3.2.137 *ṇeś chandasi*

The derivation of (617) *dhārayiṣṇavaḥ* and (618) *pārayiṣṇavaḥ* contains *(dhāri + iṣṇuC) + (J)as* and *(pāri + iṣṇuC) + (J)as* where the roots before *iṣṇuC* terminate in *ṆiC*. It is also for this reason that the *i* of *ṆiC* gets replaced with *ay* by rule 6.4.55 *ayāmantāl....* Thus we get *dhār(i→ay) + iṣṇu + as = dhārayiṣṇu + as*. One can similarly get *pārayiṣṇu + as*. An application of *guṇa* by 7.3.109 *jasi ca* followed by the *av* replacement for the resultant *e* will produce *dhārayiṣṇ(u→o→av) + as = dhārayiṣṇavas*. The application of *rutva-visarga* will provide *dhārayiṣṇavaḥ*. The same applies in case of *pārayiṣṇavaḥ*.

3.2.141 *śamityaṣṭābhyo ghinuṇ*

Our example (619) *śamī* contains *śam + in(UṆ→0)* where the *vṛddhi* of 7.2.116 *ata upadhāyāḥ* is blocked by rule 7.3.34 *nodāttopadeśasya....* Rule 6.4.13 *sau ca* then orders the long replacement for the short penultimate *i* to produce *śamīn*. The *sU* after the base will be deleted by 6.1.68 *halṅyābbhyo....* The *n* also goes through deletion though by 8.2.7 *nalopaḥ prātipadikāntasya*. Similar derivational history is shared by (620) *tamī*, (621) *damī* and (622) *bhramī*, etc. The derivation of *unmādī* additionally requires the change of the *d* of *ud* into *n* by 8.4.45 *yaro' nunāsike....*

3.2.142 *sampṛcānurudhāṅyamāṅyasaparisṛsaṃsṛj...*

The derivation of examples (623) *samparkī*, (624) *rāgī* and (625) *tyāgī*, etc., entails *kutva* of 7.3.52 *cajoḥ ku ghiṇyatoḥ*. The nasal of *rañj* is treated as deleted via *nipātana* at the strength of its citation in this rule. Other examples can be similarly derived via the application of operations such as *vṛddhi*, etc. Note that some examples will have the *vṛddhi* of the penultimate vowel by rule 7.2.116 *ata upadhāyāḥ*. Others such as (626) *parisārī* will have *vṛddhi* by 7.2.115 *aco' ñṇiti*. Example (623) *samparkī* will similarly have the *guṇa* of the penultimate vowel (*laghūpadhaguṇa*).

3.2.146 *nindahiṃsakliśakhāda...vuñ*

Note that rule 7.1.1 *yuvor anākau* replaces the *vu* with *aka*. Thus we get *nindaka + sU* = (627) *nindakaḥ*, (628) *hiṃsakaḥ*. and (629) *khādakaḥ*, etc. Verbal roots *ṇidI* and *hisI* get the forms *nind* and *hiṃs* through the *nUM* of 7.1.58 *idito num dhātoḥ*. Roots such as *vad* and *(ṇ→n)aś* will receive *vuÑ*

while ending in *ṆiC*. This *ṆiC* would subsequently be deleted by 6.4.51 *ṇer aniṭi*. The deletion of the final *a* of *asūya* in (630) *asūyakaḥ* is accomplished by 6.4.48 *ato lopaḥ*.

3.2.148 *calanaśabdārthād akarmakād yuc*

Note that rule 7.1.1 *yuvor anākau* will replace affix *yu(C)* with *ana*. Thus, given *ru* + *yu*, rule 7.3.84 *sārvadhātukārdhadha...* would require *guṇa*: *r(u→o)* + *(yu→ana)*. The *o* will subsequently be replaced with *av* by 6.1.78 *eco'yavāyāvaḥ*. The final derivate (631) *ravaṇaḥ* will derive from *ravana* + *sU* where *n* will be replaced with *ṇ* and *s* will go through *rutva-visarga*. The *n→ṇ* change will take place in view of 8.4.1 *raṣābhyāṃ no ṇaḥ...*. Additional examples such as (632) *calanaḥ*, (633) *copanaḥ* and (634) *śabdanaḥ* can be similarly derived through *guṇa* (in (633), and *rutva-visarga*.

3.2.150 *jucaṅkramyadandramyasṛgṛdhijvalaśucalaṣapatapadaḥ*

The derivation of (635) *javanaḥ* from *ju* + *yu(C)* follows the pattern of (631) *ravaṇaḥ*. Refer to the derivation of verbal roots (223) *caṅkramya* and (224) *dandramya* after which *yu(C)* will be introduced to derive (636) *caṅkramaṇaḥ* and (637) *dandramaṇaḥ*. The root-final *ya* is deleted by 6.4.49 *yasya halaḥ*. Changes such as (*yu→ana*), *n→ṇ* (*ṇatva*), and *rutva-visarga* are not hard to accomplish.

3.2.152 *na yaḥ*/3.2.153 *sūdadīpadīkṣaś ca*

The derivational history of examples (638) *knūyitā*, (639) *kṣmāyitā*, (640) *sūditā*, and (641) *dīpitā* follows the pattern of *tṛN* derivates already explained under rule 3.2.135 *tṛn*. Affix *tṛN* (3.2.135 *tṛn*) is introduced after cited roots when this rule blocks the introduction of *yuC*.

3.2.154 *laṣapatapadasthābhūvṛṣahana...ukañ*

Examples such as (642) *apalāṣukam*, (643) *prapātukāḥ*, (644) *kāmukāḥ*, and (645) *āgāmukāḥ*, and (646) *upasthāyukāḥ*, etc., all entail *vṛddhi* before *ukaÑ* conditioned by *Ñ*. Our last example requires the introduction of *yUK* by rule 7.3.33 *āto yuk ciṇkṛtoḥ*.

3.2.155 *jalpabhikṣakuṭṭaluṇṭavṛṅaḥ ṣākan*

The derivation of (647) *jalpākaḥ*, etc., from *(jalp* + *(Ṣ)āka(N))* + *sU)))*, etc., is straightforward. However, deriving (648) *varākaḥ* requires *guṇa* of the penultimate *ṛ*. Note that the *Ṣ* as an *it* in the affix conditions the introduction of feminine affix *ṄīṢ* (4.1.41 *ṣid gaurādibhyaś ca*) in deriving examples such as (649) *varākī*.

3.2.156 *prajor iniḥ*

The derivation of (650) *prajavī* with *inI* proceeds with *pra* + *ju* + *in* which produces *prajavin* through *guṇa* and subsequent replacement in *av*. Our string *prajavin* + *sU* entails the lengthening of *i* by 6.4.13 *sau ca* to realize *prajav(i→ī)n*. Refer to (619) *śamī* for details relative to the deletion of *n* and *sU*.

3.2.157 *jidṛkṣiviśrīṇvamāvyathābhya....*

The derivation of examples (651) *jayī* form *ji* + *inI*, (652) *darī* from *dṛ* + *inI*, (653) *atyayī* from *ati* + *i* + *inI*, (654) *paribhavī* from *pari* + *bhū* + *inI* and (655) *prasavī* from *pra* + *ṣū* + *inI* entails *guṇa* and corresponding replacement in *ay* or *av*. The last example also requires *s* as a replacement for the root-initial *ṣ* as per 6.1.64 *dhātvādeḥ ṣaḥ saḥ*.

3.2.158 *spṛhigṛhipatidayinidrātandrāśraddhābhya āluc*

The first three roots—*spṛha, gṛha* and *pata* are enumerated as *curādi* group of roots terminating in *a*. Consequently, their forms with affix *ṆiC* will be: *spṛha* + *i*, *gṛha* + *i* and *pata* + *i*. This root-final *a* is deleted by 6.4.48 *ato lopaḥ* thereby yielding *spṛhi, gṛhi* and *pati* after which affix *āluC* is to be introduced. The first two strings may have rule 7.3.86 *pugantalaghūpadhasya ca* apply to cause *guṇa* of their penultimate *ṛ*. The last example similarly may be a candidate for *vṛddhi* of its penultimate vowel by rule 7.2.116.*ata upadhāyāḥ*. This *guṇa* and *vṛddhi*, however, is blocked at the strength of *sthānivadbhāva* which makes the deleted *a* as if part of the string. Thus, there will be no penultimate vowel to which *guṇa* and *vṛddhi* could apply. Rule 6.4.55 *ayāmanta...*will then order *ay* as a replacement for the root-final *i* thereby yielding *spṛh(i→ay)* + *ālu* = *spṛhayālu*. The introduction of *sU* followed by *rutva-visarga* will derive the final form (656) *spṛhayāluḥ*. Similar rules apply in deriving (657) *gṛhayāluḥ* and (658) *patayāluḥ*.

3.2.159 *dādheṭsiśadasado ruḥ*/2.3.160 *sṛghasyadaḥ...*

Deriving (659) *dāruḥ* from *(dā* + *ru)* + *sU*; (660) *dhāruḥ* from *(dhe(Ṭ)* + *ru)* + *sU*; (661) *seruḥ* from *(si* + *ru)* + *sU*; (662) *śadruḥ* from *(śad* + *ru)* + *sU*; and (663) *sadruḥ* from *sad* + *ru* + *sU* through *guṇa* (in (661)) and *rutva-visarga* in general is not difficult. Note, however, that the *dhā* of *dhe(Ṭ)* is obtained as a replacement for the root-final *e* from rule 6.1.45 *ādeca upadeśe....*

Examples of *KmaraC* such as (664) *sṛmaraḥ*, (665) *ghasmaraḥ* and (666) *admaraḥ* are derived without *guṇa* because of the *K* as the affixal *it* (cf. 1.1.5 *kṅiti ca*).

3.2.161 *bhañjabhāsamido ghurac*

Refer to the derivation of (493) *bhaṅguram* in the appendix (pp. 465–66) of volume II. Other examples are easy to derive.

3.2.163 *iṇnaśjisartibhyaḥ kvarap*/3.2.164 *gatvaraś ca*

Note that *guṇa* will be as usual blocked because of 1.2.5 *kṅiti ca*. Rule 6.1.71 *hrasvasya piti kṛti...*will introduce *tUK* to *i* + *(K)vara(P)* to derive *(i* + *t(UK)* + *vara)* + *sU* = (667) *itvaraḥ*. Deriving (668) *itvarī* would require the introduction of the feminine affix *ṄīṢ* of rule 4.1.15 *ṭiḍḍhāṇañ....* Similar rules will apply in deriving (669) *jitvaraḥ*/ (670) *jitvarī*; (671) *sṛtvaraḥ*/ (672) *sṛtvarī*. Note that (673) *naśvaraḥ*/ (674) *naśvarī* do not qualify for *tUK*. The *iṬ* in these examples is blocked by rule 7.2.8 *neḍ vaśikṛti*.

Note that rule 3.2.164 itself provides for the deletion of the *am* of *gam* via (*nipātana*) to facilitate the derivation of (674) *gatvaraḥ* and (675) *gatvarī*.

3.2.166 *yajajapadaśām yaṅah*

Follow the derivation pattern of (218) *sāsadyate* under rule 3.1.24 *lupasadacarajapa...* to derive *yāyajya*. Similar derivations under that rule are to be followed to derive *jañjapya* and *dandaśya*. Rule 6.4.49 *yasya halaḥ* will subsequently delete the *ya* of *ya(Ṅ)* to produce *yāyaj(ya→∅)* + *ūka* = *yayajūka*. Similar deletion of *ya* also occurs in other examples. Deriving (676) *yāyajūkaḥ*, (677) *jañjapūkaḥ*, and (678) *dandaśūkaḥ* with the introduction of *sU* and *rutva-visarga* is easy.

3.2.168 *sanāśaṃsabhikṣa uḥ*/3.2.169 *binduricchuḥ*

Refer to the derivation of (222) *cikīrṣakaḥ* and (223) *jihīrṣakaḥ* to derive verbal roots *cikīrṣa* and *jihīrṣa*. These roots are required so that affix *u* can be introduced by this rule to derive *(cikīrṣ(a→∅) + u) + sU* = (679) *cikīrṣuḥ*. The root-final *a* will be deleted by rule 6.4.48 *ato lopaḥ*. Similar rules apply in deriving (680) *jihīrṣuḥ*. Example (681) *āśaṃsuḥ* derives from *(aśas(I) + u)) + sU)))* where *nUM* is introduced after the last vowel of the root at the strength of its *I* as an *it* (7.1.58 *idito num dhātoḥ*). Deriving (682) *bhikṣuḥ* from *(bhikṣ + u) + sU))* is straightforward.

Our next examples, i.e. (683) *binduḥ* and (684) *icchuḥ*, entail the introduction of *nUM* to *vid*; and the *ch* as a replacement for the *ṣ* of *iṣ* both via *nipātana*. Rule 6.1.73 *che ca* introduces *t(UK→∅)* which through the application of 8.4.40 *stoś cunā ścuḥ* produces *i(ṣ→ch) +u* = *i(t)ch + u* = *i(t→c)ch + u* = *icchu*.

3.2.171 *ādṛgamahanajanaḥ kikinau liṭ ca*

The derivation of (685) *papiḥ* proceeds with *pā + Ki(N→∅)* where rule 6.4.64 *āto lopa iṭi ca* deletes the final *ā* of the root. Doubling by 6.1.8 *liṭi dhātor...*in view of rule 1.1.58 *dvirvacane' ci* via treating affixes *Ki* or *KiN* as if they were *LIṬ* produces *pā + p + i*. Rule 7.4.59 *hrasvaḥ* read with 6.1.4 *pūrvo' bhyāsaḥ* will replace the long vowel of *pā* with its corresponding short to realize *p(ā→a) + p + i* = *papi*. The placement of *sU* followed by *rūtva-visarga* will produce *papiḥ*. Similar rules will apply in deriving (686) *dadiḥ* from *dā*.

The derivation of (687) *taturiḥ* proceeds with *tṝ + Ki* where the root-final *ṝ* is replaced with *u* in view of 7.1.103 *bahulaṃ chandasi* read with 1.1.51 *ur an raparaḥ*. This will give *tṝ→tur + i*. Doubling, and the application of 7.4.66 *ur at* read again with 1.1.51 will yield *t(ṝ→ar) + tur + i* = *tar + tur + i*. An application of 7.4.60 *halādi śeṣaḥ* will reduce the string to *ta(r→∅) + tur + i* = *taturi* which, through *sU* and *rutva-visarga* will produce *taturiḥ*. Similar rules will apply in deriving (688) *jaguriḥ* from *jāgṛ*.

The derivation of (688) *jagmiḥ* from *gam + Ki* also entails doubling and related operation whereby we get *ga + gam + i*. The *g* of the reduplicate *ga* will be replaced with *j* of rule 7.4.62 *kuhoś cuḥ*. The penultimate *a* of *ja + gam* will then be deleted by 6.4.98 *gamahanajana...* to

produce *ja* + *g(a*→∅*)m* + *i* = *jagmi*. Similar rules apply in deriving (689) *jaghniḥ* and (690) *jajñiḥ* from *han* + *Ki* and *jñā* + *Ki*.

3.2.172 *svapitṛṣor najiṅ*

The derivation of (691) *svapnak* proceeds with *svap* + *naj(IṄ*→∅) where the application of *kutva* (8.2.30 *coḥ kuḥ*) and *cartva* (8.4.56 *vāvasāne*) derives the nominal stem as *svapna(j*→*g*→*k)* = *svapnak*. The *sU* of *svapnak* + *s(U)* will then be deleted by 6.1.68 *halyāṅbhyo*.... Deriving (692) *tṛṣṇak* from *(tṛṣ* + *naj)* + *sU* entails replacing the *n* of the affix with *ṇ* by 8.4.1 *raṣābhyāṃ ṇo naḥ*....

3.2.177 *bhrājabhāsadhurvidyutorji...kvip*

The derivation of (702) *pūḥ* from *(pṝ* + *KvIP)* + *sU* entails a re-derived by introducing affix *KvIP* after verbal root *bhrāj(Ṛ*→∅) used with the preverb *vi*. Rule 6.1.68 *halṅyābbhyo*...read with 6.1.67 *ver apṛktasya* subsequently deletes the affix. The *sU* of *vibhrāj* + *sU* will also be deleted leaving *vibhrāj*. The terminal *j* of the string will be replaced with *ṣ* through the application of rule 8.2.36 *vraścabhrasjasṛj*...read with 1.1.52 *alo' ntyasya*. The *ṣ* is further replaced with *ḍ* to derive *vibhrāḍ* through the application of rule 8.2.39 *jhalāṃ jaśo' nte*. An optional application of 8.4.56 *vāvasāne* can then be availed to replace the final *ḍ* with *ṭ* to derive *vibhrāṭ*.

The nominative dual and plural forms (694) *vibhrājau* and (695) *vibhrājaḥ* derive by introducing *au* and *(J)as*. Example (696) *bhāḥ* derives via *rutva-visarga* of the final *s* of *bhās* after the deletion of *KvIP* and *sU*. The dual and plural forms (696) *bhāsau* and (697) *bhāsaḥ* are easy to derive. Deriving (698) *vidyut* from *(vidyut* + *KviP)* +*sU))* is easy. The derivation of (699) *ūrk* entails the *kutva* and *jaśtva* of the final *j* of *ūr(j*→*g*→*k)* as per rules 8.2.30 *coḥ kuḥ* and 8.4.56 *vāvasāne*. The corresponding dual and plural forms (700) *ūrjau* and (701) *ūrjaḥ* are easy to derive.

The derivation of (702) *pūḥ* from *(pṝ* + *KvIP)* + *sU* entails a re-placement in *u* (*utva*) followed by its lengthening as per rules 7.1.102 *ud oṣṭhyapūrvasya* and 8.2.76 *rvor upadhāyā dīrgha*.... Note that *utva* will be followed by *r* (*rapara*; 1.1.51 *ur aṇ raparaḥ*). Thus, *p(ṛ*→*ur* + *KvIP* = *p(u*→*ū)r* + *(KvIP*→∅) = *pūr* + *(sU*→∅) = *pū(r* →*ḥ)* = *pūḥ*.

3.2.178 *anyebhyo' pi dṛśyate*

Deriving (703) *yuk* from *(yuj* + *KvIP)* + *sU* additionally requires the *j*→*g*→*k* replacement as explained in connection with (699) *ūrk*. Deriving (704) *chit* and (705) *bhit* from *(chid* + *KvIP)* + *sU* just requires the change of the root-final *d* to *t* by 8.4.56 *vāvasāne*.

3.2.180 *viprasaṃbhyo ḍv asaṃjñāyām*

Deriving (706) *vibhuḥ* from *(vibhū* + *(Ḍ*→∅*)u)* + *sU* via *rutva-visarga* first requires the deletion of the root- final *ū* by *ḍity abhasyāpi*..., a proposal under rule 6.4.143 *ṭeḥ* in the *Mahābhāṣya*. Similar rules apply in deriving (707) *prabhuḥ* and (708) *saṃbhuḥ*.

3.2.181 *dhaḥ karmaṇi ṣṭran*

Note that the *Ṣ* of affix *ṢṭraN* is given as an *it* to facilitate the introduction of the feminine affix *ṄīṢ* by rule 4.1.41 *ṣid gaurādibhyaś ca.* One can derive (709) *dhātrī* from *(dhā + ṭra) + (Ṅ)ī(Ṣ)) + sU* where the *ṭ* of the affix will change to *t* because of the deletion of its *Ṣ* as an *it*. Note that the *Ṣ* serves as a condition for the change of *t* to *ṭ* in *ṢṭraN*. The affixal form will always be realized as *tra* after the deletion of *Ṣ*. The final *a* of *dhātra* before *ī* of *ṄīṢ* will be deleted to derive *dhātrī* by rule 6.4.148 *yasyeti ca.* A similar form will also result if one used verbal root *dheṬ* where 6.1.45 *ādeca upadeśe...* will replace the final *e* of the root with *ā*.

3.2.182 *dāmnīśasayuyujastutudasi...*

The derivation of (710) *meḍhraḥ* proceeds with *mih + tra* where *laghūpadhaguṇa* (7.3.86 *pugantalaghūpadhasya ca*) and the *ḍh* replacement for *h* (8.2.31 *ho ḍhaḥ*) follows to realize *m(ī→e)(h→ḍh) + tra = meḍh + tra.* Rule 8.2.40 *jhaṣastathordho' dhaḥ* then replaces the t of *tra* with dh. We thus get *meḍh + (t→dh)ra =meḍh + dhra.* The *dh* is then replaced with *ḍh* in view of 8.4.41 *ṣṭunā ṣṭuḥ*. The *ḍh* of *meḍh* in *meḍh + (dh→ḍh)ra = meḍh + ḍhra* is then deleted by 8.3.13 *ḍho ḍhe lopaḥ*. This gives us *me (ḍh→∅) + ḍhra = meḍhra.* One can similarly derive (711) *yoktram* through *guṇa* and *kutva.* Note that rule 7.1.24 *ato' m* will replace the *sU* with *am* after *yoktra.* Rule 6.1.107 *ami pūrvaḥ* will then apply on *yoktra + am* to realize *yoktr(a+a→a)m = yoktram.* Deriving (712) *dātram,* (713) *stotram,* (714) *totram,* (715) *netram* and (716) *śastram* requires similar rule applications. Note that (717) *daṃṣṭrā* derives with *ṬāP* instead of *ṄīS*.

Deriving (718) *naddhram* from *nah + tra* requires the application of rules 8.2.34 *na ho dhaḥ* to produce *na(h→dh) + tra = nadh + tra.* Rule 8.2.40 *jhaṣastathordho' dhaḥ* will then apply to realize *nadh + (t→dh)ra = nadh + dhra.* The final form of the nominal stem *naddhra* will be derived after the application of rule 8.4.53 *jhalāṃ jaś jhaśi.* Thus, *na(dh→d) + dhram = naddhram.* Note that the introduction of *iṬ* in case of roots such as *śas,* etc., is blocked by 7.2.9 *titutratathasi....*

3.2.188 *matibuddhipūjārthebhyaś ca*

Note that (719) *mataḥ* of *rājñāṃ mataḥ* is derived from *mata + sU* where *mata* contains *man + (K)ta.* Rule 7.2.10 *ekāca upadeśe...*will block the introduction of *iṬ* subsequent to which the *n* will be deleted by 6.4.37 *anudāttopadeśa....* Incidentally, the formation of a compound between *rājan + Ṅas* and *mata + sU* is disallowed by 2.2.12 *ktena ca pūjāyām.* The genitive of *rājan + Ṅas* will be introduced by 2.3.67 *ktasya ca vartamāne.* Follow applications similar to *nadh + tra* of (718) *naddhram* to derive (720) *buddhaḥ* from *(budh + (K)ta) + sU)).* The derivation of (721) *pūjitaḥ* would require the introduction of *i(Ṭ)* by 7.2.35 *ārdhadhātukasyeḍ....* Similar rules apply in deriving (722) *arcitaḥ.* Note, however, that these

roots will have the forms *pūji* and *arci* if they are accepted as *curādi*. Their final *i* will then have to be deleted by rule 6.4.52 *niṣṭhāyāṃ seṭi*.

3.3.5 *vibhāṣā kadākarhyoḥ*

This rule allows for the derivation of *LAṬ* forms optional to *LṚṬ* and *LUṬ*. The derivation of (723) *bhuṅkte* begins with *bhuj* + (*LAṬ*→*ta*) where *LAṬ* gets replaced with *ta*. Rule 3.4.79 *ṭit ātmanepadānāṃ ṭer e* then replaces the *a* of *ta* with *e*. Rule 3.1.78 *rudhādibhyaḥ śnam* then introduces *śnam* to produce *bhu* + (*Ś*)*na*(*M*) + *j* + *t*(*a*→*e*) = *bhu* + *n* + *j* + *te*. The *j* of *bhuj* becomes *k* via *g* through the application of rules 8.2.30 *coḥ kuḥ* and 8.4.54 *khari ca*. This will give *bhu* + *n* + (*j*→*g*→*k*) + *te* = *bhu* + *n* + *k* + *te*. The *n* will then be replaced with *ṅ* via *anusvāra* as per rules 8.3.24 *naś cāpadāntasya jhali* and 8.4.54 *anusvārasya yayi parasavarṇaḥ*. Thus, *bhu*(*n*→*ṃ*→*ṅ*) + *k* + *te* = *bhuṅkte* (cf. *prayuṅkte* of 1.3.64 for missing details).

The derivation of (724) *bhokṣyate* begins with *bhuj* + *LṚṬ* where *LṚṬ* gets replaced with *ta*. The *ta* itself yields to *te* as is the case with *bhuṅkte*. Our string *bhuj* + *te* will go through *guṇa* of 7.3.84 *sārvadhātukārddhadhātukayoḥ*. The resultant string, i.e., *bh*(*u*→*o*)*j* + *te*, will receive *sya* of 3.1.33 *stayāsī*.... The result will be *bhoj* + *sya* + *te*. The *j*→*g*→*k* will also be applicable here. The *s* of *sya* will go through a replacement in *ṣ* (*ṣatva*) by rule 8.3.59 *ādeśapratyayayoḥ*. Thus, *bho*(*j*→*g*→*k*) + *sya* + *te* = *bhok* + (*s*→*ṣ*)*ya* + *te* = *bhokṣyate*.

The derivation of (725) *bhoktā* begins with *bhuj* + (*LUṬ*→ *ti*(*P*)) = *bhuj* + *ti* where 3.1.33 *syatāsī*... introduces *tās* to change the string to *bhuj* + *tās* + *ti*. The *ti* will subsequently be replaced with *Ḍā* of rule 2.4.85 *luṭaḥ prathamasya*.... This will yield *bhuj* + *tās* + (*Ḍ*→∅)*ā* = *bhuj* + *tās* + *ā*. A *vārttika* ad rule 6.4.143 *ṭeḥ* (cf. *ḍity abhsyāpy anubandhakaraṇa*...) will then delete the *ās* (cf. 1.1.64 *aco' ntyādi ṭi*) of *tās* whereby we get *bhuj* + *t*(*ās*→∅) + *ā* = *bhuj* + *tā*. An application of *guṇa* on *u* followed by the *j*→*g*→*k* similarly to the preceding examples will produce *bh*(*u*→*o*)(*j*→*g*→*k*) + *tā* = *bhoktā*.

3.3.6 *kiṃvṛtte lipsāyām*

Examples (726) *bhojayanti* derives from *bhuj* + *ṆiC* + *ŚaP* + *jhi* where *jh* of *jhi* gets replaced with *ant* of 7.1.3 *jho' ntaḥ*. The application of *guṇa* on the *u* of *bhuj* under the condition of the *ārdhadhātuka* affix *ṆiC* will produce *bh*(*u*→*o*)*ji* + *a* +*anti* = *bhoji* + *a* + *anti*. The *i* will then be replaced with its *guṇa* counterpart *e* under the condition of the *sārvadhātuka* affix *ŚaP*. The resultant *e* of *bhoj*(*i*→*e*) + *a* + *anti* = *bhoje* + *a* + *anti* will go through its replacement in *ay* thereby to produce *bhoj*(*e*→ *ay*) + *a* + *anti*. Rule 6.1.97 *ato guṇe* will then replace the sequence of *a* + *a* with a single *a* to produce *bhojay* + (*a*+*a*→*a*) *nti* = *bhojayanti*.

The derivation of (727) *bhojayitāraḥ* proceeds with *bhuj* + *ṆiC* = *bhoji* + *LUṬ*→*jhi* = *bhoji* + *tās* + *jhi* = *bhoji* + *tās* + *a* + *jhi*. The *jhi* of our string will be replaced with *ras* of 2.4.85 *luṭaḥ prathamasya*.... The

introduction of *i(Ṭ)* by 7.2.35 *ārdhadhātukasyeḍ...* followed by *guṇa* of *i* with subsequent *ay* will produce *bhoj(i→e→ay)* + *i* + *tās* + *ras* = *bhojayitās* + *ras*. The *s* of *tās* will then be deleted by rule 7.4.51 *ri ca*. The application of *rutva-visarga* on the resultant string *bhojayitā* (*s*→∅) + *ras* will produce *bhojayitāra(s→r→ḥ)* = *bhojayitāraḥ*.

The derivation of (728) *dadāti* begins with *dā* + *(LAṬ→ti(P)* which after the introduction, and deletion via *ŚLU* (2.4.75 *juhotyādibhyaḥ...*), of *ŚaP*, requires doubling as well as the shortening of the reduplicate. Thus, *dā* + *ti* = *dā* + *(ŚaP→∅)* + *ti* = *dā* + *dā* + *ti* = *d(ā→a)* + *dā* + *ti* = *dadāti*. Note that the shortening of the reduplicate (*dā*) is accomplished by rule 7.4.59 *hrasvaḥ*. The derivation of (729) *dātā* from *dā* + *LUṬ* follows relevant rules similar to (725) *bhoktā*. Deriving (730) *dāsyati* from *dā* + *sya* + *ti* offers nothing new.

3.3.8 *loḍarthalakṣaṇe ca*

The derivation of (731) *āgacchati* contains *āgam* + *(Ś)a(P)* + *(LAṬ→ti(P)* = *āgam* + *a* + *ti* where 7.3.77 *iṣugamiyamāṃ chaḥ* introduces *ch* as a replacement for the final *m* of *āgam*. Rule 6.1.73 *che ca* then introduces the augment *tUK* to produce *āga (m→ch)* + *a* + *ti* = *āga(t(UK→∅)ch)* + *a* + *ti* = *āgatch* + *a* + *ti*. Rule 8.4.40 *stoḥ ścunā ścuḥ* then orders *c* as a replacement for *t* to produce *āga(t→c)ch* + *a* + *ti* = *āgacchati*. The derivation of (732) *āgamiṣyati* contains *āgam* + *iṬ* + *sya* + *ti* where *ti* is a replacement for *LṚṬ* and *iṬ* has been introduced by 7.2.58 *gamer iṭ parasmaipadeṣu*. The *s* of *sya* in *āgam* + *i* + *sya* + *ti* will subsequently be replaced with *ṣ* to realize *āgamiṣyati* by 8.3.59 *ādeśapratyayayoḥ*. Our last example (733) *gantā* derives similarly to (725) *bhoktā* obviously with no *j→g→k* change. The *m* of *gam* changes to *n* (8.4.54 *anusvārasya...*) via *anusvāra* (8.3.23 *mo' nusvāraḥ*) to realize ***ga(m → ṃ → n)tā = gantā***.

Example (734) *adhīṣva* derives form *adhi* + *i* + *(ŚaP→∅)* + *(LOṬ→sva)* where *ŚaP* gets deleted by 2.4.72 *adiprabhṛti...* and *LOṬ* gets replaced with the second person singular *ātmanepada* ending *thās*. This *thās* of *adhi* + *i* + *thās* subsequently gets replaced with *se* of rule 3.4.80 *thāsaḥ se*. But then the *e* of *se* is also replaced with *va* by rule 3.4.90 *savābhyāṃ vāmau*. Thus, *adhi* + *i* + *(thās→s(e→va))* = *adhi* + *i* + *sva*. The vocalic sequence *i* + *i* will have a long replacement to yield *adh(i+i→ī)* + *sva* = *adhīsva*. The *s* will then be replaced with *ṣ* in view of 8.3.59 *ādeśapratyayayoḥ*.

3.3.9 *liṅ cordhvamauhūrttike*

The derivation of (735) *āgacchet* entails the introduction of affix *LIṄ* after verbal root *gam* used with the preverb *ā*. The *LIṄ* will be replaced with the third personal *parasmaipada* ending *tiP* to give us: *āgam* + *ti*. The root *āgam* will yield the form *āgacch* similar to (731) *āgacchati*. The *parasmaipada* replacement *ti* of *āgacch* + *(Ś)a(P)* + *ti* = *āgacch* + *a* + *ti* will then receive the augments *yās(UṬ)* and *s(UṬ)* of rules 3.4.103 *yāsuṭ*

parasmaipadeṣu.. and 3.4.107 *suṭ tithoḥ* to produce: *āgacch* + *a* + *yās* (*UṬ*→∅) + *s*(*UṬ*→∅) + *ti* = *āgacch* + *a* + *yās* + *s* + *ti*. The *i* of *ti* will then be deleted by 3.4.100 *itaś ca*. The resultant string, *āgacch* + *a* + *yās* + *s* + *t* gets the *yā* replaced with *iy* by rule 7.2.80 *ato yeyaḥ*. This gives us *āgacch* + *a* + (*yā*→*iy*)*s* + *s* + *t* = *āgacch* + *a* + *iy* + *s* + *s* + *t* which then suffers the loss of *y* and the two *s* segments on account of rules 6.1.66 *lopo vyor vali* and 7.2.79 *liṅaḥ salopo' nantyasya*. The result will be: *āgacch* + *a* + *i* (*y*→∅) (*s*→∅) + (*s*→∅) + *t* = *āgacch* + *a* + *i* + *t*. Rule 6.1.87 *ād guṇaḥ* will derive the final derivate as *āgacch* + (*a*+*i*→*e*) + *t* = *āgacch* + *e* + *t* = *āgacchet*.

3.3.16 *padarujaviśaspṛśo ghañ*

The derivation of (736) *pādaḥ* and (737) *rogaḥ* from *pad* + (*GH*)*a*(*Ñ*) = (*pad* + *a*) + *sU* entails *vṛddhi* of *a* of *pad* (7.2.115 *aco' ñṇiti*) followed by the *rutva-visarga* of *s*(*U*). The derivation of *rogaḥ* entails *guṇa* of the short penultimate (*laghūpada*) *u* of *ruj* before the *ārdhadhātuka* affix *GHaÑ*. The *j* of *roj* also gets replaced with *g* via *kutva* of 7.3.52 *cajoḥ ku ghiṇyatoḥ*. Similar rules apply in deriving (738) *veśaḥ*.

3.3.20 *parimāṇākhyāyāṃ sarvebhyaḥ*

3.3.21 *iṅaś ca*

The derivation of (739) *niṣpāvaḥ* entails introducing *GHaÑ* after *pū* used with *nir* where *nir* + *pū* + *a* goes through the *ṣ* replacement for the *r* of *nir* via *visarga* in view of rules 8.3.15 *kharavasānayor*...and 8.3.41 *idudupadhasya*.... Thus, *ni*(*r*→*ḥ*→ *ṣ*)*pū* + *a* = *niṣpū* + *a*. The *ū* will then go through *vṛddhi* (7.2.115 *aco' ñṇiti*...) in *au* with the corresponding replacement in *āv* (6.1.78 *eco' yavāyāvaḥ*). This will give us the nominal stem *niṣp*(*ū*→*āv*) + *a* = *niṣpāva* after which *sU* can be introduced to derive *niṣpāvaḥ*. A derivate of *kṛ* such as (740) *kāraḥ* just requires *vṛddhi*, one of the two characteristic operations applicable to the derivates of *GHaÑ*. Note that the other operation is *kutva* by 7.3.52 *cajoḥ ku ghiṇyatoḥ*. I shall, from here on, not derive any derivate in *GHaÑ* unless it entails some additional operations. The nominative dual forms of these two derivates, i.e., (741) *niṣpāvau* and (742) *kārau*, would require the placement of the dual ending *au*.

Examples (743) *adhyāyaḥ* and (744) *upādhyāyaḥ* are similarly derived from *adhi* + *i* + *a* and *upa* + *adhi* + *i* + *a* where *upa* and *adhi* yield *upādhi* through *savarṇadīrgha*. The application of *vṛddhi* and subsequent replacement in *āy* will produce *adhi* + (*i*→*ai*→*āy*) + *a* and *upādhi* + (*i*→*ai*→*āy*) + *a*. Rule 6.1.77 *iko yaṇ aci* will then apply to derive *adh*(*i*→*y*)*āy* + *a* = *adhyāya* and *upādh*(*i*→*y*)*āy* + *a* = *upādhyāya*.

3.3.26 *avodor niyaḥ*

Deriving (745) *unnāyaḥ* requires the introduction of affix *GHaÑ* after verbal root *nī* used in conjunction with a *pada* constituted by *ud*. The usual *vṛddhi* and *āy* replacement will produce *nāya*. A compound formation of *ut* + *sU* + *nāya* will yield *utnāya* where the *t* will be replaced with *n* by

8.4.45 *yaro' nunāsike....* Thus, *u(t→n) + nāya = unnāya + sU => unnāyaḥ.* Similar rules apply in deriving (746) *avanāyaḥ.*

3.3.38 *parinyornīṇordyūtābhreṣayoḥ*

Note that the *n* of *parin(i→ai→āy) + a = parināya + (Ṭā)* is replaced with *ṇ* through the application of rule 8.4.14 *upasargād asamāse',pi....* Thus, *pari(n→ṇ)āya + (ā→ina) = pariṇay(a+i=e)na* = (747) *pariṇāyena.*

3.3.43 *karmavyatihāre ṇac striyām*

The first example (748) *vyāvakrośī* is derived by introducing affix *ṆaC* after verbal root *kruś* combined with *vi* and *ava* via rule 2.2.18 *kugatiprādayaḥ* where 6.1.77 *iko yaṇ aci* replaces the *i* of *vi* with *y* and the root goes through the *guṇa* of its penultimate vowel. This produces *v(i→y) + ava + kr(u→o)ś + (Ṇ)a(C) = vy + ava + krośa + a = vyavakrośa,* a nominal stem after which affix *aÑ* (5.4.14 *ṇacaḥ striyām*) is to be introduced. This gives us *vyavakrośa + a(Ñ→0).* Note that rule 7.3.3 *na yvābhyāṃ padāntā...* offers *ai* as an augment to the initial vowel of the string which is blocked by *vṛddhi* of rule 7.2.117 *taddhiteṣv acām ādeḥ.* The result is: *vy(a→ā) vakrośa + a =vyāvakrośa + a.* Rule 6.1.97 *ato guṇe* then applies to derive *vyāvakroś(a+a→a) = vyāvakrośa,* still a nominal stem (1.2.46 *kṛttaddhitasamāsāś ca*) after which rule 4.1.15 *ṭiḍḍhāṇañ...*introduces *ṄīP.* The final *a* of *vyāvakrośa + ī* is deleted by 6.4.148 *yasyeti ca* whereby we get *vyāvakroś(a→0) + ī = vyāvakrośī.* A subsequent placement and deletion of *sUP* by 6.1.68 *halṅyābbhyo...*will finally derive *vyāvakrośī.*

Similar rules apply in deriving (749) *vyāvalekhī* and (750) *vyāvahāsī* from *vi + ava + likh + ṆaC* and *vi + ava + has + ṆaC* where *likh* also goes through the application of *laghūpadhaguṇa.*

3.3.44 *abhividhau bhāva inuṇ*

Example (751) *sāṃkūṭinam* is derived by introducing affix *inUṆ* after verbal root *kū* combined with *sam* again by 2.2.18 *kugatiprādayaḥ.* Affix *aṆ* is then introduced after *saṃkūṭ + in = samkūṭin* where *samkūṭin + a(Ṇ→0) = saṃkūṭin + a* is saved by 6.4.164 *inaṇy anapatye* from going through the deletion of *in* by rule 6.4.144 *nas taddhite.* The *a* of *sam* instead goes through *vṛddhi* followed by the *anusvāra* of *m* by rules 7.2.117 *taddhiteṣv acām...*and 8.3.23 *mo' nusvāraḥ* respectively. This will give us *s(a→ā(m→ṃ))kūṭin + a = sāṃkūṭina.* The nominative singular ending *sU* introduced after *sāṃkūṭina* will be replaced with *am* to realize *sāṃkūṭina + am* which after the application of 6.1.97 *ato guṇe* will yield *sāṃkūṭinam.*

A derivate of *inUṆ* with verbal root *ru* combined with *sam* will be (752) *sāṃrāviṇam* where the *u* of *ru* goes through *vṛddhi* (7.2.115 *aco' ñṇiti*) and subsequent replacement in *āv* corresponding to *au.* The *am* also replaces the *sU* additionally to the replacement of *n* by *ṇ* in view of 8.4.2 *aṭkupvāṅ....* We thus get the final derivate *sāṃr(u→au-āv)i(n→ṇ)a + (sU→am) = sāṃrāviṇ(a+a = a)m = sāṃrāviṇam.*

3.3.52 *raśmau ca*

3.3.53 *vṛṇoter ācchādane*

The first rule offers (753) *pragrāhaḥ*, a derivate in *GHaÑ*, optionally to (754) *pragrahaḥ*, a derivate in *aP*.

The second rule offers yet another *GHaÑ* derivate optionally to *aP*. We thus get (755) *prāvāraḥ* where the lengthening of the *a* of *pra* is ordered by 6.3.122 *upasargasya ghañy amanuṣye bahulam*. We will have a derivate such as (756) *pravaraḥ* if the option of *GHaÑ* is not accepted.

3.3.72 *hvaḥ samprasāraṇaṃ ca...*

This rule introduces affix *aP* after verbal root *hveÑ* used in conjunction with *ni*, *abhi*, *upa*, and *vi* to derive (757) *nihava* + *sU*=> *nihavaḥ*, (758) *abhihavaḥ*, (759) *upahavaḥ*, and (760) *vihavaḥ*. Note that verbal root *hve(Ñ)* yields the form *hvā* through the application of rule 6.1.45 *ādeca upadeśe....* This rule also requires *samprasāraṇa* of the *v* of *hvā* in *nih(v→u)ā* + *a(P)* = *nihu* + *ā* + *a*. Rule 6.1.108 *samprasāraṇāc ca* then applies to replace the sequence *u* + *ā* by *u* to realize *nihu* + *a*. An application of *guṇa* followed by the *av* replacement for the resultant *o* will provide us with *nih(u→o→av)* + *a* = *nihava*. An introduction of *sU* and subsequent *rutva-visarga* will produce *nihavaḥ*. Similar rules apply in deriving other examples.

3.3.88 *ḍvitaḥ ktri*

Refer to the appendix of 1.3.5 *ādir ñiṭuḍavaḥ* for the derivational details of examples listed under this rule.

3.3.90 *yajayācayatavicchapracchrakṣo naṅ*

Examples such as (761) *yajñaḥ*, (762) *yācñā*, (763) *yatnaḥ*, (764) *viśnaḥ*, (765) *praśnaḥ*, and (766) *rakṣṇaḥ* derive from *(yaj + na) + sU*, *(yāc + na) + (Ṭ)ā) + sU))*, *(yat + na) + sU))*, *(vicch + na) + sU))*, *(pracch + na) + sU))*, and *(rakṣ + na) + sU))*. The first two examples require replacing the *n* of *na* with *ñ* (*ścutva*) by rule 8.4.40 *stoḥ ścunā ścuḥ*. The second also requires the introduction of the feminine affix *ṬāP* (4.1.4 *ajādyataṣ ṭāp*). Our third example is easy to derive. The fourth and fifth require *ś* as a replacement for the *cch* of the roots as per rule 6.4.19 *cchvoḥ śūḍ anunāsike* to thereby yield *vi(cch→śna* and *pra(cch→ś))na*. Deriving *rakṣṇa* from *(rakṣ + na) + sU* will subsequently require the replacement of *n* by *ṇ* as per rule 8.4.1 *raṣābhyāṃ no ṇaḥ....*

3.3.92 *upasarge ghoḥ kiḥ*

3.3.93 *karmaṇy adhikaraṇe ca*

Note that the *K* of affix *Ki* is intended as an *it* to facilitate the deletion of the long *ā* of verbal roots *dā* and *dhā* by rule 6.4.64 *āto lopa iṭi ca*. Thus, we get *dā* + *(K→∅)i* = *d(ā→∅)* =*di*; *dhā* + *(K)i* = > *dhi*. Examples such as (767) *pradiḥ*, (768) *pradhiḥ*, and (769) *antarddhiḥ* should now be easier to derive under the cooccurrence condition of *pra*, and *antar*; of course, with subsequent formation of compounds by 2.2.19 *upapadam atiṅ* and

introduction of *sU* as well as *rutva-visarga*. Note, however, that *antar* is treated as an *upasarga* at the strength of a *vārttika* ad 1.1.65 *alo'n tyāt pūrva upadhā* (*antaḥ śabdasya...*). Similar rules apply in deriving (770) *jaladhiḥ* and (771) *śaradhiḥ*.

3.3.94 *striyāṃ ktin*

3.3.95 *sthāgāpāpaco bhāve*

The derivation of (772) *kṛtiḥ*, (773) *citiḥ*, and (774) *matiḥ* from *(kṛ + (K→Ø)ti(N→Ø)) + sU)), ci(Ñ) + (K)ti(N)) + sU*, and *man + (K)ti(N)) + sU* is straightforward. Note, however, that the *n* of *man* is deleted by 6.4.37 *anudāttopadeśa....* Additionally, rule 6.1.97 *ñnityādir nityam* assigns the initial *udātta* accent to the item ending in affix *KtiN*. Rule 3.3.96 *mantre vṛṣeṣapacamana...* assigns, for usages in the *mantra* literature, the *udātta* accent to affix *KtiN*. The *guṇa* of *ṛ* and *i* in *kṛti* and *citi* is blocked at the strength of affix *KtiN* marked with *K* as an *it* (1.1.5 *kṅiti ca*).

The derivation of (775) *paktiḥ* requires the application of rule 8.2.30 *coḥ kuḥ* whereby the *c* of *pac* is replaced with *k*. The derivation of (776) *prasthitiḥ* requires the *i* as a replacement (*itva*) for *ā* of *prasthā* as per rule 7.4.40 *dyatisyatimāsthā....* This *itva*, in case of (777) *saṃgītiḥ*, is accomplished by 6.4.66 *ghumāsthāgāpā....* The same applies in case of (778) *prapītiḥ* and (779) *sampītiḥ*.

3.3.98 *vrajayajor bhāve kyap*

3.3.99 *saṃjñāyām samajaniṣadanipatamanavida...*

Deriving (780) *vrajyā* from *(vraj + (K)ya(P)) + ṬāP)) + sU)))* is not very difficult. The affix is *udātta*; hence, the accentuation will be: *vrajyá*.

The derivation of (781) *samajyā*, (782) *niṣadyā*, (783) *nipatyā*, (784) *manyā*, (785) *vidyā*, (786) *sutyā*, (787) *śayyā*, (788) *bhṛtyā*, and (789) *ityā* also entails affixes *KyaP*, *ṬāP* and *sU*. Note that *sutyā*, *bhṛtyā* and *ityā* entail the introduction of *tUK* (6.1.71 *hrasvasya piti kiti tuk*). Furthermore, the *ī* of *śī(Ṅ)* is replaced with *ayAṄ* in deriving *ś(i→ay) + ya = śayya* on way to *śayyā*.

3.3.100 *kṛñaḥ śa ca*

This rule would permit three derivates (790) *kriyā*, (791) *kṛtyā*, and (792) *kṛtiḥ* from *(kṛ + ya(K) + Śa) + ṬāP)) + sU))), (kṛ + (t(UK) +(K)ya(P) + ṬāP)) + sU)))* and *(kṛ + Kti(N)) + sU)))* respectively. Note that the first derivate will have *yaK* introduced before affix *Śa* with its denotatum as *bhāva*. Of course, the *yaK* will be introduced by 3.1.67 *sārvadhātuke yak*. The *ṛ + ya + a* of the first example will have its *ṛ* replaced with *riṄ* of rule 7.4.28 *riṅ śayag liṅkṣu*. Thus, *k(ṛ→ri) + ya + a* where 6.1.97 *ato guṇe* will apply to produce *kriy(a+a→a) = kriya*. Deriving *kriyā* with *ṬāP* through *savarṇadīrgha* and deletion of *sU* should not be difficult. Note that *yaK* can also be introduced before *Śa* denoting *karman*. The

derivate will still be *kriyā* but the derivational path will differ. Thus, after the introduction of *riN̄*, rule 6.4.77 *aciśnudhātu...* read with 1.1.53 *ṅic ca* will introduce *iyAṄ* to produce *k(r̥→r(i→iyAṄ)) + a = kriya*. This subsequently with *ṬāP*and *sU* will derive *kriyā*. The derivate in *KyaP* will receive *tUK* from rule 6.1.71 *hrasvasya piti kiti tuk* to derive *kr̥tyā*. The derivate in *KtiN* can be justified at the strength of the statement of the *Mahābhāṣya* ad this rule.

3.3.101 *icchā*

The derivation of (793) *icchā* from *iṣ + Śa* is blocked from receiving *yaK* (3.1.67 *sārvadhātuke yak*) via *nipātana*. The *ṣ* of the root will receive *ch* followed by the introduction of augment *tUK* as per rules 7.3.77 *iṣugamiyamāṃ...* and 6.1.73 *che ca*. Rule 8.4.40 *stoḥ ścunā ścuḥ* will then apply on *i(ṣ→ch) + a = i(t(UK→∅)ch+ a = iich + a* to replace the *t* with *c* to produce *i (t→c)ch + a = iccha*. The introduction of *ṬāP* and *sU* will then derive *icchā*.

3.3.102 *a pratyayāt*

Refer to the derivation of verbal roots *cikīrṣa*, etc., under rules dealing with affixes *saN* (3.1.7 *dhātoḥ karmaṇaḥ...*), *KyaC*, and *KāmyaC*. The derivates of this rule require the introduction of affix *a* after *cikīrṣa*, etc., where the root-final *a* will be deleted before affix *a* by rule 6.4.48 *ato lopaḥ*. Rule 1.2.46 *kr̥ttaddhitasamāsāś ca* will assign the term nominal stem (*prātipadika*) to *cikīrṣa*, etc., to enable the introduction of feminine affix *ṬāP* by 4.1.4 *ajādyataṣ ṭāp*. Thus, we will get (794) *cikīrṣā*, (795) *jihīrṣā*, (746) *putrīyā*, (797) *putrakāmyā*, (798) *lolūyā*, and (799) *kaṇḍūyā*.

3.3.104 *ṣidbhidādibhyo' ṅ*

3.3.105 *cintipūjikathikumbicarcaś ca*

The derivation of (800) *jarā* would require *guṇa* by rule 7.4.16 *r̥̄dr̥śo'ṅi guṇaḥ* read with 1.1.51 *ur aṇ raparaḥ* to yield *j(r̥̄→ar) + a(Ṅ)*.

The roots of examples under rule 3.3.104 would all end in *ṆiC* which subsequently will be deleted by 6.4.51 *ṇer aniṭi*. This will give us derivates such as (801) *cintā*, (802) *pūjā*, (803) *kathā*, (804) *kumbā*, and (805) *carcā* via *ṬāP*, *savarṇadīrgha* (as in *cinta + (Ṭ)ā(P) = cint(a+a→ā) = cintā*), and the deletion of *sU* as in other examples. Note that *cintā* would also require the introduction of augment *n(UM)* by rule 7.1.58 *idito num dhātoḥ* to yield *cit(ṆiC→∅) + a = ci(n(UM)t + a = cinta*.

An optional example (806) *cintanā* is also derived with the introduction of affix *yu(C)* optionally to *aṄ*. Rule 7.1.1 *yuvor anākau* will replace the *yu* with *ana* to yield *cint + (yu→ana) = cintana*. The introduction of *ṬāP* followed by the placement and deletion of *sU* as well as *savarṇadīrgha* will produce *cintanā*.

3.3.107 *ṇyāsaśrantho yuc*

Examples (807) *kāraṇā* and (808) *hāraṇā* require verbal roots *kāri* and *hāri* where affix *NiC* is introduced after *kr̥* and *hr̥* by rule 3.1.26 *hetumati ca*.

The *ṛ* of the roots has gone through *vṛddhi* of 7.2.115 *aco' ñṇiti* and the term *dhātu* is subsequently assigned by 3.1.32 *sanādyantā....* The *ṆiC* before *yuC* will again be deleted by rule 6.4.51 *ṇer aniṭi*. The *n* of *kār(ṆiC→ 0) + (yu→ana) = kār + ana* will be replaced with *ṇ* by rule 8.4.2 *aṭkupvāṅ....* Examples such as (809) *āsanā* and (810) *śranthanā* will of course be derived without roots ending in *ṆiC*.

3.3.108 *rogākhyāyāṃ ṇvul bahulam*

The derivation of (811) *pracchardikā* contains *pra + chad + ṆiC + (Ṇ)vu(L)) + ṬāP)) + sU* where *ṆiC* is introduced by rule 3.1.25 *satyāpapāśarūpavīṇā....* Follow rules similar to (85) *śāyikā* with the understanding that this example will require the introduction of *tUK* by 6.1.73 *che ca* followed by the *c*-replacement (*ścutva*) of 8.4.40 *stoḥ ścunā ścuḥ*. Our next example (812) *pravāhikā* will be similarly derived by introducing *ṆiC* after *pra-vah* by rule 3.1.26 *hetumati ca*. The *NiC* in both these examples will be deleted by 6.4.51 *ṇer aniṭi*. Similar rules apply in deriving (813) *vicarcikā*. The *vu* of *ṆvuL* would of course be replaced with *aka* of 7.1.1 *yuvor anākau*.

The derivation of (814) *śiro' rttiḥ* proceeds with the derivation of *arttiḥ* from *ard + (K)ti(N)* where 8.4.55 *khari ca* applies to produce *ar(d→t) + ti = artti*, and 7.2.9 *titutratha...* blocks the introduction of augment *iṬ*. Our derivate *artti* is then combined in a genitive *tatpuruṣa* compound with *śiras* where its *s* is replaced with *r* via 8.2.66 *sasajuṣo ruḥ*. Rule 6.1.113 *ato ror aplutād...* then applies on *śirar + artti* to replace the *r* with *u* thereby producing *śirau + artti*. The application of 6.1.87 *ād guṇaḥ* will then replace the sequence *u + a* with *o* to produce *śir(a+u→o) + artti = śiro artti*. Rule 6.1.109 *eṅaḥ padāntād ati* will finally order *o* as a replacement for both *o* and *a* to produce *śiro' rtti*. The introduction of *sU* followed by *rutva-visarga* will derive *śiro' rttiḥ*.

3.3.110 *vibhāṣākhyānaparipraśnayor iñ ca*

This rule allows for *iÑ* optionally with *ṆvuL* with the understanding that, due to the inclusion of *vibhāṣā*, other relevant affixes can also be introduced. Thus, consider these derivates where I also indicate their derivational strings:

(815) *kārim* from *kṛ + iÑ = kāri* where *vṛddhi* is accomplished by 7.2.115 *aco' ñṇiti*;

(816) *kārikām* from *k(ṛ→ār) + (ṆvuL→aka) = kār + i(Ṭ) + aka + ṬāP* where rules similar to (85) *śāyikā* apply to produce *kārikā*. The examples in sentences are given in the accusative for which the introduction of *am* and relevant operations have to be performed.

Refer to the derivation of additional examples under rules 3.3.94 *striyāṃ ktin* and 3.3.100 *kṛñaḥ śa ca*.

The derivation of examples with verbal root *gaṇa* proceeds with its causal form *gaṇi* since the root belongs to the *curādi* class. Note that the

final *a* of *gaṇa* gets deleted by rule 6.4.48 *ato lopaḥ*. The *vṛddhi* of the penultimate *a* of *gaṇ* cannot be accomplished by 7.2.116 *ata upadhāyāḥ* for reasons that the deleted *a* will become alive by *sthānivadbhāva* 'treating a replacement as if it was the item replaced'. Thus, *vṛddhi* cannot apply since the penultimate (*upadhā*) position will now be occupied by *ṇ*, and not the *a*. The *ṆiC* itself gets deleted by 6.4.51 *ṇer aniṭi*.

3.3.112 *ākrośe nañy aniḥ*

Note that (817) *akaraṇiḥ* derives from *naÑ* + *kṛ* + *ani* where *ṛ* of the root goes through *guṇa* before *ani* to produce *na* + *k(ṛ→ar)* + *ani* = *na* + *karani*. The *n* of *na* is deleted by 6.3.73 *nalopo nañaḥ*. The introduction of *sU* followed by *rutva-visarga* will produce *akara(n→ṇi)(s(U)→ḥ))* = *akaraṇiḥ* where 8.4.2 *aṭkupvāṅnum...* will replace the *n* with *ṇ*.

3.3.113 *kṛtyalyuṭo bahulam*

Note that deriving (818) *snānīyam* from *(snā* + *anīya(R))* + *sU))* and (819) *dānīyaḥ* from *(dā* + *anīya(R))* + *sU))* entails *savarṇa- dīrgha* before the nominative singular ending *sU*.

The derivation of (820) *apasecanam* from *(apa* + *sic* + *LyuṬ)* + *sU))*, (821) *avasrāvaṇam* from *ava* + *srāvi* + *LyuṬ)* + sU, (822) *rājabhojanāḥ* from *rājan* + *Ṅas* + *bhojana* + *sU* with *bhojana* deriving from *bhuj* + *LyuṬ* entails diverse significations. The first example requires *guṇa*. The second loses the *i*, i.e., (*ṆiC*), to 6.4.51 *ṇer aniṭi* and has the *n* replaced with *ṇ*. The derivation of *bhojana* entails *guṇa* of *u* of *bhuj* followed by the formation of the genitive *tatpuruṣa* compound. Of course, the *yu* of *LyuṬ* is replaced with *ana* by 7.1.1 *yuvor anākau*. The *sU* of the first two examples goes through *am* for which see (751) *sāṅkūṭinam*. The nominative plural ending *(J)as* after *rājabhojana* causes the long vowel replacement homogeneous with the preceding *a* of the sequence *a+a* at the end (*pūrvasavarṇadīrgha*; 6.1.102 *prathamayoḥ...*). Finally, an application of *rutva-visarga* will derive *rājabhojan(a+a→ ā)(s→r→ḥ)* = *rājabhojanāḥ*.

3.3.116 *karmaṇi ca yena saṃsparśāt...*

3.3.117 *karaṇādhikaraṇayoś ca*

The derivation of (823) *odanabhojanam* and (824) *payaḥpānam* requires the derivation of *odanabhojana* and *payaḥpāna* via the introduction of affix *LyuṬ* after verbal roots *bhuj* and *pā* used in conjunction with words constituted by *odana* and *payas* with the denotata of object (*karman*). The *rutva-visarga* of *s* of *payas* followed by the *am* replacement of the *sU* introduced after these obligatory compounds is not difficult to comprehend.

The derivation of (825) *idhmapravraścanaḥ* from *idhma* + *Ṅas* + *pravraśca* + *sU*, and of (826) *palāśaśātanaḥ* from *palāśa* + *Ṅas* + *śātana* + *sU* involves genitive *tatpuruṣa* compound. Note that the derivation of *śātana* proceeds with the causal form of the verbal root *śad(Ḷ)*. Affix *LyuṬ* is then introduced after *ś(a→ā)d(Ḷ→Ø)* + *(Ṇ)i(C)* = *śādi*. This *ṆiC* is, however, deleted by 6.4.51 *ṇer aniṭi*. The *d* of the root is replaced with *t*

by rule 7.3.42 *śader agatau taḥ*. Thus, *śā(d→t)(ṆiC→∅) + (LyuṬ→ana) = śātana*.

The derivation of (827) *godohanī* and (828) *saktudhānī* again involves the genitive type of *tatpuruṣa* compound though the derivates will be denoting *adhikaraṇa* 'locus'. The resultant compound base *godohana* from *go* + *Ṅas* + *dohana* + *sU* where *dohana* derives from *duh* + *(LyuṬ→ana)* through *guṇa* then receives the feminine affix *ṄīP* of 4.1.15 *ṭiḍḍhāṇañ....* Thus, *god(u→o)h + ana = godohana + (Ṅ)ī(P) = godohanī* where the final *a* of *godohana* gets deleted by 6.4.148 *yasyeti ca*. The *sU* of *godohanī + sU* will be subsequently deleted by 6.1.68 *halṅyābbhyo....* Similar rules are applied in deriving *saktudhānī*.

3.3.118 *puṃsi saṃjñāyāṃ prāyeṇa...*

The derivation of (829) *dantacchadaḥ* and (830) *uraśchadaḥ* requires the introduction of affix *GHa* after verbal root *chad* used with *ṆiC* of 3.1.25 *satyāpapāśarūpa....* Note further that *chādi*, the causal form of *chad*, must also cooccur with the nominal *pada* constituted by *danta* and *uras* with the denotatum of *karman*. Thus, we get *danta + Śas + chādi + (GH)a* and *uras + Śas + chādi + (GH)a* where the penultimate *ā* of *chādi* goes through shortening (*hrasva*) as per rule 6.4.96 *chāder ghe' d...* to produce *ch(ā→a)di =chadi*. The *ṆiC* again gets deleted in view of 6.4.51 *ṇer aniṭi*. Rule 6.1.73 *che ca* then introduces the augment *t(UK)* to *danta* to realize *dantat + chada*. Rule 8.4.40 *stoḥ ścunā ścuḥ* then subjects this *t* to be replaced with *c* whereby we get *danta(t→c)chad + a = dantacchada*. Note that *uraśchadaḥ* does not qualify for the introduction of *tUK*.

Deriving (831) *ālayaḥ* by introducing affix *GHa* after verbal root *lī* used with the preverb *ā(Ṅ→∅)* requires *guṇa* of *ī* followed by the replacement of *e* in *ay*. Thus, we get *āl(ī→e→ay) + a = ālaya + s(U) = ālayaḥ*.

3.3.120 *ave stṛstor ghañ*

3.3.121 *halaś ca*

The derivation of (832) *avatāraḥ* from *(avatṛ + (GH)a(Ñ) + sU))* and of (833) *avastāraḥ* from *avastṛ + (GH)a(Ñ) + sU))* requires the *vṛddhi* (7.2.115 *aco' ñṇiti*) of *ṛ* followed by *rutva-visarga* of *sU*.

The *vṛddhi* in deriving (834) *vīmārgaḥ* from *(vi + mṛj(ŪṢ) + (GH)a(Ñ) + sU))* and (835) *apāmārgaḥ* from *(apa + mṛj(ŪṢ) + (GH)a(Ñ) + sU))* entails *vṛddhi* of *ṛ* as per rule 7.2.114 *mṛjer vṛddhiḥ*. The resultant string *vim(ṛ→ār)j + a) = vimārj + a* would require that the short *i* of *vi* be replaced with long in view of rule 6.3.122 *upasargasya ghañy....* The *j* of the resultant string *v(i→ī)mārj + a* will then be replaced with *g* of 7.4.62 *kuhoś cuḥ* to produce *vīmār(j→g) + a = vīmārga*. Similar rules will apply in deriving *apāmārga*. The final derivates will now require *sU* and *rutva-visarga*.

3.3.123 *udako' nudake*

The derivation of (836) *tailodaṅkaḥ* contains *taila* + *Ṅas* + *udaṅka* where *udaṅka* derives by introducing affix *GHaÑ* after verbal root *añc* used with the preverb *ud* under the cooccurrence condition of a *pada* constituted by *taila* denoting object. The derivation requires *kutva* of 7.3.52 *cajoḥ ku ghiṇyatoḥ*. Thus, *taila(Ṅas→∅)* + *udañca→tailodañca* (6.1.87 *ād guṇaḥ*); *tailodañ(c→k)a* = *tailoda(ñ→ṃ)ka* (8.3.24 *naś cāpadāntasya...*); *tailoda(ṃ→ṅ)ka* (8.4.58 *anusvārasya yayi parasavarṇaḥ*).

3.3.127 *kartṛkarmaṇoś ca bhūkṛñoḥ*

This rule derives examples with two conjoined *pada* simultaneously. Thus, (837) *īṣadāḍhyaṃkaraḥ* is derived by introducing affix *KHaL* after verbal root *kṛ* used in conjunction with two nominal *pada* constituted by *īṣad* and *āḍhya* with the denotatum of object. The same explanation can be forwarded for reconstructing the underlying string of (838) *svāḍhyaṅkaraḥ*. The derivation of (839) *īṣadāḍhyaṃbhavaḥ*, and (840) *svāḍhyaṃbhavaḥ* not only requires affix *KHaL* to be introduced after verbal root *bhū* but also requires the conjoined *pada* to denote *kartṛ*. The root vowels *ṛ* and *ū* undergo *guṇa*. The *o* of *bhū→bho* is replaced with *av*. The *m* in all these examples comes via the introduction of augment *m(UM)* of rule 6.3.67 *arur dviṣat....* Rule 8.3.24 *naś cāpadāntasya jhali* then replaces the *m* with *anusvāra*.

3.3.131 *vartamānasāmīpye vartamānavad vā*

3.3.132 *āśaṃsāyāṃ bhūtavac ca*

I have already explained many derivates with *LAṬ*, *ŚatṚ*, *Kta*, *LUṄ*, *LUṬ*, and *LṚṬ*. The derivates of these rules do not involve anything substantially different. The derivation of (841) *āgamat* contains *ā(Ṅ)* + *a(Ṭ)* + *gam* + *CLI* + *t* where the *i* of *ti(P)* gets deleted (3.4.100 *itaś ca*) and *CLI* is replaced with *a(Ṅ*; 3.1.55 *puṣādi...)* to derive *ā* + *a* + *gam* + *a(Ṅ→∅)* + *(LUṄ→t(i→∅))*. The *savarṇadīrgha* of *ā+a* will produce: *ā+a→ā* + *gam* + *a* + *t* = *āgamat*.

Derive (842) *adhyagīṣmahi* similarly to *adhyagīṣṭa* of rule 1.2.1 *gāṅkuṭādi...* (vol. II, 425-26). Of course, parallel to step (*a*) of *adhyagīṣṭa*, one will have to select the first person plural *ātmanepada* ending *mahi(Ṅ)* to replace *LUṄ* of this example. The derivation of (843) *āgataḥ* from *(āgam* + *(K)ta)* + *s(U))* requires the deletion of the root-final *m* by rule 6.4.37 *anudāttopadeśa...* before *rutva-visarga*. Derive (844) *adhīmahe* from *adhi* + *i* + *(ŚaP→∅)* + *mah(i→e)* = *adh(i+i→ī)* + *mahe* = *adhīmahe*. The deletion of *ŚaP* is accomplished by 2.4.72 *adiprabhṛtibhyaḥ....* The *e* as a replacement (*etva*) for the *i* of *mahi*, of course, comes through the application of 3.4.79 *ṭit ātmanepadānāṃ ṭer e*.

The derivation of (845) *adhyeṣyāmahe* contains the string *adhi* + *i* + *sya* + *(LṚṬ→mah(i→e)* where *sya* is introduced in place of *ŚaP* before *mahi*. The root, i.e., *i*, goes through *guṇa* before affix *sya*, an *ārdhadhātuka* (7.3.84 *sārvadhātukārdhadhātukayoḥ*). The resultant string, i.e., *adhi* +

(i→e) + *sya* + *mahe*, then goes through the application of rules 6.1.77 *iko yaṇ aci* and 7.3.101 *ato dīrgho yañi* to produce: *adh(i→y)* + *e* + *sy(a→ā)* + *mahe* = *adhyeṣyāmahe*. The *s* is finally replaced with *ṣ* by rule 8.3.59 *ādeśapratyayayoḥ*.

3.3.134 *āśaṃsāvacane liṅ*

The derivation of (846) *adhīyīya* contains *adhi* + *i* + *(LIṄ→sīy(UṬ→∅)* + *i(Ṭ→∅)* = *adhi* + *i* + *sīy* + *i* where rule 3.4.102 *liṅaḥ sīyuṬ* introduces *sīy(UṬ)* before the first person singular replacement *iṬ* of *LIṄ*. The *i* of *iṬ* is then replaced with *a* by rule 3.4.106 *iṭo' t*. We thus get: *adhi* + *i* + *sīy* + *a*. Rule 7.2.79 *liṅaḥ salopo*...then deletes the *s* of *sīy(UṬ)* to produce: *adhi* + *i* + *(s→∅)īy* + *a* = *adhi* + *i* + *īya*. Verbal root *i* is then replaced with *iy(AṄ→∅)* to produce *adhi* + *(i→iy)* + *īya* = *adhi* + *iy* + *īya*. The application of *savarṇadīrgha* (6.1.101 *akaḥ savarṇe*...) will finally produce: *adh(i+ī→ī)y* + *īya* = *adhīy* + *īya* = *adhīyīya*.

3.3.135 *nānadyatanavat kriyāprabandhasāmīpyayoḥ*

Note that (847) *adāt* contains *aṬ* + *dā* + *sIC* + *t*, as in (144) *agāt* under rule 2.4.45 *iṇo gā luṅi*; and many similar examples already derived, where *sIC* gets deleted by 2.4.77 *gātisthāghupābhūbhyaḥ*....

The derivation of (848) *adhyāpipat* proceeds with *adhi* + *i* + *i* where affix *ṆiC* is introduced (3.1.26 *hetumati ca*) after verbal root *iṄ* used with the preverb *adhi*. The root is replaced with *ā* by rule 6.1.48 *krīṅjīnāṃ*.... Augment *pUK* is then introduced by rule 7.3.36 *artihrīvlīrī*... to produce *adhi* + *(a→ā)p(UK→∅)* + *i* = *adhi* + *āp* + *i*. Affixes *LUṄ* and *CLĪ* are then introduced with reference to the derived root *adhi* + *āpi*. Note that affix *LUṄ* is replaced with *ti(P)* where the *i* of *ti* is deleted by 3.4.100 *itaś ca*. Affix *CLĪ* is also replaced with *(C)a(Ṅ)* of 3.1.48 *ṇiśridrusrubhyaḥ*.... This gives us: *adhi* + *āpi* + *(CLĪ→(C)a(Ṅ)* + *(LUṄ→t(i→∅)* = *adhi* + *āpi* + *a* + *t*. Doubling of *pi* as per 6.1.2 *ajāder dvitīyasya* will produce *adhi* + *āpi* + *pi* + *a* + *t*. Rule 6.4.72 *āḍ ajādīnām* then introduces *ā(Ṭ)*. The result is: *adhi* + *ā(Ṭ→∅)* + *āpi* +*pi* + *a* + *t* = *adhi* + *ā* + *āpi* + *pi* + *a* + *t*. An application of rule 6.1.90 *āṭaś ca* will order a single *vṛddhi* replacement for the sequence of *ā*+*ā* thereby producing *adhi* + *(ā* + *ā→ā)pi* + *pi* +*a* + *t* = *adhi* + *ā* + *pi* + *pi* + *a* + *t*. The deletion of *(Ṇ)i(C)* by 6.4.51 *ṇer aniṭi* yields *adhi* + *ā* + *pi* + *p(i→∅)* + *a* + *t* = *adhi* + *āpipat* which through the application of 6.1.77 *iko yaṇ aci* becomes *adh(i→y) apipat* = *adhyāpipat*. Note that I held the application of this last rule to facilitate proper understanding of the fact that doubling and the introduction of augments is undertaken without recognizing the existence of the preverbs.

The derivation of (849) *ādhita* requires the introduction of affix *LUṄ* after verbal root *dhā* used with the preverb *āṄ*. Rule 1.2.17 *sthāghvor ic ca* also applies to replace the root-final *ā* with *i* to produce *ā(Ṅ→∅)* + *dh(ā→i)* + *LUṄ* = *ādhi* + *LUṄ*. The introduction of *a(Ṭ)* and *sIC*

(6.4.71 *luṅlanlṛṅ*...; 3.1.44 *cleḥ sic*) precede the *ātmanepada* replacement in *ta* for *LUṄ*. The resultant string, i.e., *ā* + *a(Ṭ)* + *dhi* + *sIC* + *ta*, loses its *sIC* to 8.2.27 *hrasvād aṅgāt*. The initial vocalic sequence of *ā+a* will be replaced with *ā* through *savarṇadīrgha*. One can similarly derive (850) *adita* from *aṬ* + *dā* + *LUṄ*. The derivation of (851) *ayaṣṭa* contains *a(Ṭ)* + *yaj* + *sIC* + *ta* where *sIC* gets deleted by rule 8.2.26 *jhalo jhali*; and *yaj* receives *ṣ* as a replacement for its final *j* from rule 8.2.36 *vraścabhrasjasṛjamṛja*.... This produces *aya(j→ṣ)* + *ta* = *ayaṣ* + *ta*. Rule 8.4.41 *ṣṭunā ṣṭuḥ* will finally replace the *t* with *ṭ* to produce *ayaṣ* + *(t→ṭ)a* = *ayaṣṭa*. The derivation of (852) *ādhāsyate*, (853) *yakṣyate* and (854) *dāsyate* can be accomplished following relevant rules of (724) *bhokṣyate* and other derivational patterns already explained.

3.3.136 *bhaviṣyati maryādavacane' varasmin*

The derivation of (855) *bhokṣyāmahe* contains *bhuj* + *sya* + *(LṚṬ→mahi)*, and also shares the *j→g→k* as well as *s→ṣ* change with (724) *bhokṣyate*. The lengthening of the *a* of *bhokṣya* is accomplished by 7.3.101 *ato dīrgho yañi*. Example (856) *pāsyāmaḥ* is similarly derived from *pā* + *sya* + *(LṚṬ→mas)* where *LṚṬ* gets replaced with first person plural *parasmaipada* ending *mas*.

3.3.138 *parasmin vibhāṣā*

The derivation of (857) *adhyetāsmahe* and *pātāsmaḥ* contains *adhi* + *i* + *tās* + *mahiṄ* and *pā* + *tās* + *mas* where *mahiṄ* and *mas* are replacements for *LṚṬ*. Note that affix *tās* has been introduced by 3.1.33 *syatāsī lṛluṭoḥ*. The *i* of *mahiṄ* has gone through *etva* of 3.4.79 *ṭit ātmanepadānāṃ ṭer e*. Of course, *adhi* + *i* yields *adhi* + *(i→e)* = *adh(i→y)* + *e* = *adhye* through *guṇa* and *y* replacing *i*.

3.3.139 *liṅnimitte lṛṅ kriyātipattau*

Example (858) *paryābhaviṣyat* contains the string *pari* + *ā(Ṅ→0)* + *a(Ṭ)* + *bhū* + *i(Ṭ→0)* + *sya* + *(LṚṄ→t(i→0)* = *par(i→y)ā* + *(bhū→bho→bhav)* + *i* + *sya* + *t* = *paryābhavi(s→ṣ)yat* = *paryābhaviṣyat* where *i* of *ti* is deleted by 3.4.100 *itaś ca*. The *guṇa* of *ū* in *bhū* with subsequent replacement *av* is accomplished by rules 7.3.87 *sārvadhātukārdha*... and 6.1.78 *eco' yavāyāvaḥ*. Example (858) *āgamiṣyat* similarly derives from *ā(Ṅ)* + *a(Ṭ)* + *gam* + *i(Ṭ)* + *sya* + *t*. The derivation of (860) *abhokṣyata* requires the underlying string *aṬ* + *bhuj* + *sya* + *ta* where *LṚṄ* is replaced with the third person singular *ātmanepada* suffix *ta*.

3.3.143 *vibhāṣā kathami liṅ ca*

Example (861) *yājayati* contains *yāji* + *ŚaP* + *(LAṬ→ti(P)* = *yāji* + *a* + *ti* which, with *guṇa* and subsequent replacement in *ay* produces *yājayati*. A derivate with *LṚṬ* will similarly be (862) *yājayiṣyati* derivable from *yāji* + *i(Ṭ)* + *sya* + *ti* . Example (863) *yājayet* contains *yāji* +*ŚaP* + *yās(UṬ)* + *s(UṬ)* + *(LIṄ→ti)* similarly to (735) *āgacchet*. The derivation of (864) *bhavitā* is not very different from (43) *kaṇitā* for which see

vol. II, pp. 343-44. Remember, however, that the root here ends in affix *ṆiC*.

The derivation of (865) *ayījayat* contains the string *(aṭ + yāj + (Ṇ)i(C) + (CLI→CaṄ)) + (LUṄ→t(i→Ø))* = *a + yāj + i + a + t* similarly to (738) *acīkarat* for which see (vol. II, pp. 506–08). Our present example will require the shortening of the long *ā* of *yāj* followed by the deletion of *ṆiC* by rules 7.4.1 *ṇau caṅi upadhā...* and 6.4.51 *ṇer aniṭi* respectively. Doubling, etc., will then follow to derive the final derivate similar to *acīkarat*. Refer to derivations such as (257) *jāgarāñcakāra* for deriving (866) *yājayāñcakāra* from *yāji + LIṬ*.

3.3.151 *śeṣe lṛḍ yadau*

Example (867) *ārokṣyati* contains *āruh + sya + (LṚṬ→ti)* = *āruh + sya + ti* where 7.3.84 *sārvadhātukārdhadhātukayoḥ* orders *guṇa* of *u* in *ruh* to realize: *ār(u→o)h + sya + ti*. Rules 8.2.31 *ho ḍhaḥ* and 8.2.41 *ṣaḍoḥ kaḥ si* then apply to replace *h* with *k* via *ḍh*. We thus get: *āro (h→ḍh→k) + sya + ti* = *ārok + syati*. The *s* of *sya* is finally replaced with *ṣ* by rule 8.3.59 *ādeśapratyayayoḥ* to derive *ārok(s→ṣ)yati* = *ārokṣyati*. Our next example (868) *adhyeṣyate* similarly derives from *adhi + i + sya + t(a→e)*.

3.3.153 *kāmapravedane...*

The derivation of (869) *bhuñjīta* contains *bhuj + (LIṄ→ta)* where *Śnam* is introduced by 3.1.78 *rudhādibhyaḥ....* The resultant string, i.e., *bhu + na + j + ta*, receives *(s)īy(UṬ)* and *s(UṬ)* with subsequent deletion of both the *s* segments similarly to (846) *adhīyīya*. This will yield: *bhu+ n + j + īy + ta* = *bhunj + ī + ta* where *y* gets subsequently deleted by 6.1.66 *lopo vyor vali*. The *n* is replaced with its palatal counterpart via *ṃ* per application of rules 8.3.24 *naś cāpadāntasya...* and 8.4.58 *anusvārasya yayi parasavarṇaḥ*. Thus, *bhu(n→ṃ→ñ) + j + ī(y→Ø) + ta* = *bhuñjīta*.

3.3.157 *icchārtheṣu liṅloṭau*

Example (870) *bhuṅktām* also contains *bhu + n(a→Ø) + j + ta* = *bhunj + ta* where *ta*, for reasons of being a replacement of *LOṬ*, goes through the application of 3.4.79 *ṭit ātmanepadānāṃ ṭer e* to produce *bhunj + t(a→e)* = *bhunj + te*. This *e* is further replaced with *ām* by rule 3.4.90 *ām etaḥ* to yield *bhunj + t(e→ām)* = *bhunj + tām*. Refer to the derivation of (723) *bhuṅkte* for rules responsible for changing *bhunj + tām* into *bhun(j→g→k) + tām* = *bhu(n→ṃ→ṅ)k + tām* = *bhuṅktām*.

3.3.158 *samānakartṛkeṣu tumun*

3.3.159 *liṅ ca*

Example (871) *bhoktum* contains *bhuj + tum(UN→Ø)* where *j* is also replaced with *k* via *g* as in the previous example. The derivation of (872) *bhuñjīya* can be accomplished by following the derivation of (869) *bhuñjīta* where first person singular *iṬ* (as opposed to *ta*) replaces *LIṄ*. The *i* of *iṬ* is subsequently replaced with *a* (3.4.106 *iṭo' t*) to yield *bhunj + ī y +*

(i→a) = bhunjīya. Refer to the derivation of *adhīyīya* under rule 3.3.134 *āśaṃsāvacane....*

3.3.160 *icchārthebhyo vibhāṣā vartamāne*

Example (873) *vaṣṭi* derives from *vaś* + *(ŚaP→Ø)* + *(LAṬ→ ti(P)* = *vaś* + *ti* where *ŚaP* gets deleted because the root belongs to the *adādi* group (2.4.72 *adiprabhṛtibhyaḥ...*). The palatal *ś* is then replaced with *ṣ* on account of 8.2.36 *vraścabhrasja....* The *t* then changes to *ṭ* through the application of 8.4.41 *ṣṭunā ṣṭuḥ*. The derivation of (874) *uśyāt* requires *samprasāraṇa* of rule 6.1.16 *grahijyāvayi....* Thus, *(vạ→ua→uś)* + *(ŚaP→Ø)* + *(LIṄ→t(i→Ø)* = *uś* + *t*. Refer to the derivation of (736) *āgacchet* for deriving *uś* + *yā(s* + *s→Ø)* + *t* = *uśyāt* where this example does not have its *yā* replaced with *īy*.

Example (875) *kāmayate* contains *kāmi* + *ŚaP* + *(LAṬ→t(a→e)* = *kāmi* + *a* + *te* where *kāmi* ends in *ṆiC* which causes the *vṛddhi* of its *a*. The *ātmanepada* affix *ta* replaces *LAṬ* and as usual yields *te*. The *guṇa* of *i* followed by the replacement of resultant *e* in *ay* is not difficult to comprehend. We thus get *kām(i→e→ay)* + *a* + *te* = *kāmayate*. Example (876) *kāmayeta* similarly contains *kāmi* + *a* + *(LIṄ→ta)* where the *a* of the *ātmanepada* ending does not go through *e* (*etva*) but the *yā* of *yāsUṬ* gets replaced with *iy*. This gives us: *kāmi* + *a* + *yās* + *s* + *ta* = *kāmi* + *a* + *(yā→iy)s* + *s* + *ta* = *kāmi* + *a* + *iy* + *(s* + *s→Ø)* + *ta* = *kām (i→e→ay)* + *a* + *iy* + *ta* = *kāmay* + *a* + *i(y→Ø)* + *ta* = *kāmay* + *(a+i→e))* + *ta* = *kāmayeta*. Refer to (736) *āgacchet* for relevant details.

3.3.161 *vidhinimantraṇāmantraṇādhīṣṭa...*

3.3.162 *loṭ ca*

Example (877) *kuryāt* contains *kṛ* + *u* + *(LIṄ→ti(P))* = *kṛ* + *u* + *yās* + *s* + *t(i→Ø)* where *ṛ* goes through its *guṇa* replacement in *ar* before the *vikaraṇa u* (3.1.79 *tanādikṛñ...*). The *a* of *ar* is replaced with *u* as per 6.4.110 *ata ut sārvadhātuke*. This produces *k(ṛ→ar* + *u...)* = *k(a→u)r* + *u...* = *kur* + *u* + *yās...* similarly to (736) *āgacchet*. Note that the *u* of *kur* + *u* + *yās...* is deleted by 6.4.109 *ye ca*. The rest of the rules are similar to (736) *āgacchet*.

Example (878) *adhyayai* contains *i* + *(Śap→Ø)* + *(LOṬ→i(Ṭ)→e)* where *e* comes as a replacement (*etva*) of the first person singular *ātmanepada* replacement of *LOṬ* as per rule 3.4.79 *ṭit ātmanepadānām....* This *e*, however, is further replaced with *ai* of rule 3.4.93 *et ai*. Augment *āṬ* is then introduced by rule 3.4.92 *āḍ uttamasya pic ca* to produce *i* + *ā(Ṭ)* + *(e→ai)* = *i* + *ā* + *ai*. Rule 6.1.90 *āṭaś ca* then orders a single *vṛddhi* replacement for *ā* + *ai* to produce *i* + *ai*. The application of 7.3.84 *sārvadhātuka...* and 6.1.78 *eco' yavāyāvaḥ* finally produce: *(i→e→ay)* + *ai* = *ayai*. Note that *adhi* + *ayai* produces *adhyayai* through the application of 6.1.77 *iko yaṇ aci*.

3.3.163 *praiṣātisargaprāptakāleṣu kṛtyāś ca*

Note that the *kṛtya* examples are given optionally to those of *LOṬ*. Example (879) *karaṇīyaḥ* derives by introducing affix *anīya* (3.1.96 *tavyattavyānīyaraḥ*) after verbal root *kṛ*, i.e., ((*kṛ* + *anīya*) + *sU*, through *guṇa*, *n*→*ṇ* (*ṇatva*; 8.4.2 *aṭkupvāṅ*...) and *rutva-visarga*. Example (880) *kartavyaḥ* is similarly derived from (*kṛ* + *tavyaT*) +*sU*. Examples (881) *kṛtyaḥ* and (882) *kāryaḥ* derive from (*kṛ* + *KyaP*) + *sU* and (*kṛ* + *ṆyaT*) + *sU* respectively. Affixes *KyaP* and *ṆyaT* are introduced here by rules 3.1.120 *vibhāṣā kṛvṛṣoḥ* and 3.1.124 *ṛhalor ṇyat*. Our derivate in *KyaP* lacks *guṇa* because of *K*; the *ṆyaT* derivate will require *vṛddhi* because of *Ṇ* (7.2.115 *aco' ñṇiti*). Rule 6.1.71 *hrasvasya piti kṛti tuk* introduc augment *t*(*UK*) in *kṛtyaḥ*. Deriving (883) *karotu* from *kṛ* + *u* + (*LOṬ*→*ti*) = *kṛ* + *u* + *ti* requires replacing the *i* of *ti* by *u* of 3.4.86 *eruḥ* followed by the *guṇa* of both *ṛ* and *u* by 7.3.84 *sārvadhātukārdhadhātukayoḥ*. This produces: *k*(*ṛ*→*ar*) + (*u*→*o*) + *t*(*i*→*u*) = *karotu*.

3.3.166 *adhīṣṭe ca*

Example (884) *adhyāpaya* contains *adhyāpi* + (*Ś*)*a*(*P*) + (*LOṬ*→ *si*(*P*)) where *adhyāpi* is derived similarly to the derived root in (167) *adhyāpipat*. The *si* is subsequently replaced with *hi* of 3.4.87 *ser hy apic ca*. Rule 6.4.105 *ato heḥ*, however, will delete the *hi* to produce *adhyāp*(*i*→*e*→*ay*) + *a* + (*si*→*hi*→∅) = *adhyāpaya* through *guṇa* and subsequent replacement in *ay*.

Follow the derivational patterns of (250) *juhoti* (vol. II, p. 420) to arrive at *ju* + *hu* + *si*, of (885) *juhudhi*, from *hu* + (*LOṬ*→*si*). The *si* will again be replaced with *hi* similarly to the preceding example. Rule 6.4.101 *hujhalyor he dhiḥ* will then replace *hi* with *dhi* to produce *ju* + *hu* + (*si*→*hi*→*dhi*) = *juhudhi*.

3.3.169 *arhe kṛtyaś ca*

Example (886) *voḍhavyā* is a feminine derivate in *ṬāP* (4.1.4 *ajādyataṣ ṭāp*) introduced after *voḍhavya* which, in turn, contains *vah* + *tavya*. The *h* of *vah* and the *t* of *tavya* are replaced with *ḍh* and *dh* by rules 8.2.31 *ho ḍhaḥ* and 8.2.40 *jhaṣastathor ddho' dhaḥ* respectively. This gives us: *va*(*h*→*ḍh*) + (*t*→*dh*)*avya* = *vaḍh* + *dhavya*. The *ḍh* is then deleted by 8.3.13 *ḍho ḍhe lopaḥ* which, in turn, conditions the *a* of *va*(*ḍh*→∅) = *va* to change to *o* by rule 6.3.112 *sahivahor od avarṇasya*. We thus get *v*(*a*→*o*) + *dhavya* = *vo* + *dhavya*. Rule 8.4.41 *ṣṭunā ṣṭuḥ* finally replaces *dh* with *ḍh* to produce *vo* + (*dh*→*ḍh*)*avya* = *voḍhavya* which with (*Ṭ*)*ā*(*P*) and susbequent addition of *sU* produces *voḍhavyā*. Refer to the derivation of (8) *cetā* under the appendix of rule 1.1.2 *adeṅ guṇaḥ* to derive the *tṛC* derivate (887) *voḍhā* where the *h* of *vah* and the *t* of *tṛC* will also go through changes just noted for *voḍhavya*.

3.3.174 *ktickticau ca saṃjñāyām*

Examples such as (888) *mantiḥ* and (889) *tantiḥ* contain *man* + (*K*)*ti*(*C*) + *sU*

and *tan* + *(K)ti(C)* + *sU* where the *a* of *tan* and *man* are saved from being replaced with the *ā* of rule 6.4.15 *anunāsikasya kvijhaloḥ...* at the strength of 6.4.39 *na ktici....* The same holds in case of the deletion of their *n* by rule 6.4.37 *anudāttopadeśa....* This, however, is blocked by 6.4.39 *na ktici....* The application of *rutva-visarga* on the *s* of *manti* + *s(U)* and *tanti* + *s(U)* finally produces the desired derivates.

Note that (890) *sātiḥ* similarly derives from *ṣan* + *ti* + *s(U)* where the root-initial *ṣ* is replaced with *s* under the application of rule 6.1.64 *dhātvādeḥ ....* The *n* of *san* + *ti* is replaced with *ā* by 6.4.45 *sanaḥ ktici...* to produce *sa(n→ā)* + *ti* = *s(a* + *ā* => *ā)* + *ti* = *sāti.*

Similar rules apply in deriving (891) *bhūtiḥ*. Example (892) *dattaḥ* derives from *dā* + *(K)ta* = *dāta* + *s(U)* where rule 7.4.46 *do dad ghoḥ* replaces *dā* with *dad*. Rule 8.4.55 *khari ca* then applies to produce *(dā→dad)* + *ta* = *da(d→t))* + *ta* = *datta.* The introduction of *sU* followed by *rutva-visarga* will produce *dattaḥ*. The instrumental *tatpuruṣa* compound *devadattaḥ* thus has *datta* as one of its constituents.

3.4.2 *kriyāsamabhihāre loṭ loṭo hisvau vā ca taddhvamoḥ*

Example (892) *lunīhi* derives from *lū* + *(Ś)nā* + *(LOṬ→hi))* where *LOṬ* gets replaced with *hi*, and the *ā* of *nā* gets replaced with *ī* by rule 6.4.113 *ī haly aghoḥ*. This produces *lū* + *n(ā→ī)* + *(LOṬ→hi))* = *lū* + *nīhi*. The *ū* of *lū* gets a short replacement per rule 7.3.80 *pvādīnāṃ hrasvaḥ* to produce *l(ū→u)* + *nīhi* = *lunīhi*. The doubling in *lunīhi lunīhi* expresses repetition of the action (*kriyāsamabhihāra*).

Note that *alāvīt* has already been derived as example (20, pp. 334-34) of volume II. Example (893) *alāviṣṭām* entails the replacement of the third person dual *tas* by *tām* of rule 3.4.101 *tasthasthamipām....* Thus, *alāvis* + *tām* = *alāviṣṭām* through *s→ṣ* and *t→ṭ* changes per rules 8.3.59 *ādeśapratyayayoḥ* and 8.4.41 *ṣṭunā ṣṭuḥ*. The derivation of (842) *alāviṣuḥ* entails replacing the third personal plural *jhi* by *Jus* of 3.4.108 *jher jus*. Thus, *alāvi(s→ṣ)* + *(jhi→(J)us)* = *alāviṣ)* + *u(s→r→ḥ)* = *alāviṣuḥ*. The derivation of (894) *adhīṣva* involves *adhi* + *i* + *(LOṬ→sva)* = *adhīṣva* through *s→ṣ* (*ṣatva*) and similar long vowel replacement (*savarṇadīrgha*).

3.4.6 *chandasi luṅlaṅliṭaḥ*

Example (895) *akarat* derives from *a(Ṭ)* + *kṛ* + *(CLĪ→a(Ṅ)* *(LUṄ→t(i→∅))* = *a* + *kṛ* + *a* + *t* through *guṇa* of *ṛ* (7.4.16 *ṛdṛśo' ṅi guṇaḥ)*; deletion of *i* of *tiP* (3.4.100 *itaś ca*); and *aṄ* as a replacement for *CLĪ* (3.1.59 *kṛmidruruhi...*). The derivation of (896) *akaram* contains *a* + *kṛ* + *a* + *am* where *am* is a replacement of *miP*, the first person singular replacement of *LUṄ* (3.4.101 *tasthasthamipāṃ...*). Rule 6.1.107 *ami pūrvaḥ* orders a single replacement for the sequence *a+a* of *a* + *kar* + *a* + *(mi→am)* = *akar* + *(a+a→a)m* = *akaram.*

The derivation of (897) *avṛṇīta* proceeds with *a (Ṭ)* + *vṝ(N)* + *(Ś)nā* + *ta* where *ṝ* goes through shortening, and the *ā* of *nā* goes through the

replacement in *ī* to produce *avṛṇīta* via the *n*→*ṇ* change brought about by 8.4.1 *raṣābhyām no ṇaḥ....*

Example (898) *mamāra* derives from *mṛ(Ṅ)* + *(LIṬ→ti→ (Ṇ)a(L))* where *LIṬ* is replaced with the active (*parasmaipada*) ending *ti*, subsequently *ṆaL* (3.4.82 *parasmaipadānām ṇalatusus...*) at the strength of 1.3.61 *mriyater...*, even when the root is marked with *Ṅ* to receive middle (*ātmanepada*) endings as per 1.3.12 *anudāttaṅita ātmanepadam*. The *vṛddhi* of *ṛ* by 7.2.115 *aco' ñṇiti* read with 1.1.51 *ur aṇ raparaḥ* produces *m(ṛ→ār)* + *a*. Rule 6.1.8 *liṭi dhātor...* then causes doubling which, in turn, introduces *mṛ* to the string to realize *mṛ* + *mār* + *a* via treating *mār* still as *mṛ* in view of the *sthānivadbhāva* of 1.1.58 *dvirvacane' ci*. Rule 7.4.66 *ur at* then replaces *ṛ* with *a* to produce *m(ṛ→a)* + *mār* + *a* = *mamāra*.

3.4.7 *liṅarthe leṭ*

3.4.8 *upasaṃvādayoś ca*

Refer to the appendix of 3.1.34 *sib bahulaṃ leṭi* for derivational details of cited examples. Example (899) *īśai* derives from *īś* + *(LEṬ→i(Ṭ)→e→ai)* = *īś* + *ai* = *īśai* where the replacement of *LEṬ* in *i→e→ai* is similarly to (878) *adhyayai*. Note, however, that *ai* here is ordered by 3.4.96 *vaito' nyatra*. Our next example, i.e., (900) *gṛhyāntai*, similarly derives from *grah* + *LEṬ* where *(jh→ant)a* (3.4.77 *tiptasjhi*; 7.1.3 *jho' ntaḥ*) replaces *LEṬ* to realize *grah* + *anta*. Rule 3.1.67 *sārvadhātuke yak* then introduces *ya(K)* whereby the string becomes *grah* + *ya* + *anta*. The *a* of the *ātmanepada* ending *ta* will go through its replacement in *e* (*etva*). The root will then go through *samprasāraṇa* of rule 6.1.16 *grahijyāvayi...* to realize *g(r→ṛ)ah* + *ya* + *ant(a→e)* = *gṛah* + *ante*. The vocalic sequence *ṛ+a*, as usual, will be replaced with the *ṛ* in view of rule 6.1.108 *samprasāraṇāc ca*. Rule 3.4.92 *āḍ uttamasya pic ca* then introduces *ā(Ṭ)* whereby we get *gṛh* + *ya* + *ā* + *ante*. The vocalic sequence *ā+a* is then replaced with *ā* by 6.1.90 *āṭaś ca* to produce *gṛh* + *ya* + *(ā+a→ ā)nte* = *gṛh* + *ya* + *ānte*. The *e* of *ānte* is also replaced with *ai* of rule 3.4.93 *et ai* to realize *gṛhya* + *āntai* where *savarṇadīrgha* finally realizes *gṛhy(a+ā→ā)ntai* = *gṛhyāntai*. Similar rules apply in deriving (901) *ucyāntaiḥ* from *vac* + *LEṬ*. Example (902) *patāma* derives from *pat* + *(LEṬ→mas)* where *mas* gets replaced with *ma* of 3.4.82 *parasmaipadānām....* The *āṭ* is here introduced by rule 3.4.94 *leṭo' aḍāṭau*.

3.4.9 *tumarthe sesenase...taveṅ tavenaḥ*

Many of the examples of this rule have been derived in this and the preceding volume. Example (903) *preṣe* contains *pra* + *i* + *(K)se* where *pra* is a preverb. The application of rule 8.3.59 *ādeśapratyayayoḥ* and 6.1.87 *ād guṇaḥ* produces *pra* + *i* + *(s→ṣ)a* = *pr(a+i→e)ṣe* = *preṣe*. Example (904) *śriyase* contains *śri(Ñ)* + *(K)ase(N)* where rule 6.4.77 *aci śnudhātubhruvāṃ...* orders *iy(AṄ)* as a replacement for the root-final *i* to yield: *śr(ī→iy)ase* = *śriyase*. The derivation of (905) *āhuvadhyai* contains *ā* + *hu* + *(K)adhyai*,

or *(K)adhyai(N)* where 6.1.77 *iko yaṇ aci* replaces *u* with *v*. Note that (906) *pibadhyai* contains *pā* + *(Ś)adhyai* where rule 7.3.78 *pāghrādhmāsthāmnādāṇ...* orders *pā* replaced with *pib*. Example (907) *mādayadhyai* contains *mādi* + *(Ś)adhyain* where *mādi* is the causal form of *mad* 'to be happy' derived via *ṆiC* (3.1.26 *hetumati ca*) and subsequent *vṛddhi*. The final derivate is produced from *mādi* + *adhyaiN* through *guṇa* and *ay* replacing *e*.

3.4.10 *prayai rohiṣyai avyathiṣyai*

Example (908) *prayai* is derived via *nipātana* with the introduction of affix *Kai* after verbal root *yā* used with the preverb *pra*. The *ā* of *pra* + *yā* + *(K)ai* is then deleted by 6.4.64 *āto lopa iṭi ca*. The next two examples, (909) *rohiṣyai* and (910) *avyathiṣyai*, are derived form *ruh* + *iṣyai*, through *guṇa*, and *naÑ* + *vyath* + *iṣyai*. The *sU* introduced after these derivates is deleted by 2.4.82 *avyayād āpsupaḥ*. The assignment of the term *avyaya* is made at the strength of 1.1.39 *kṛn mejantaḥ*.

3.4.12 *śaki ṇamulkamulau*

Examples (911) *dṛśe* and (912) *vikhye* are derivates of *(K)se* introduced after verbal roots *dṛśIR* and *khyā*, used with the preverb *vi* with the deletion of its *ā* similarly to (908) *prayai*. Examples (913) *vibhājam* and (914) *apalupam* are derived from *vibhaj* + *(Ṇ)am(UL)* and *apalup* + *(K)am(UL)* where the verbal roots are used with the preverbs *vi* and *apa*. The first example entails *vṛddhi* conditioned by the *Ṇ* as per rule 7.2.115 *aco' ñṇiti*. The second example cannot undergo either *vṛddhi* or *guṇa* because of the *K* as an it in affix *KamUL*. The deletion of *sU* in all these examples is conditioned by the assignment of the term *avyaya* to them: the first two based on their ending in *e*; the subsequent two based on their termination in *m*.

3.4.14 *kṛtyārthe tavaikenkenyatvanaḥ*

The derivation of (916) *didṛkṣeṇyaḥ* begins with the derivation of its underlying root *didṛkṣa* from *dṛś* + *dṛś* + *sa(N)* through the introduction of affix *saN*, doubling (*dvitva*), replacement in *a* followed by *r* (7.4.66 *ur at*; 1.1.51 *ur aṇ raparaḥ*) and *halādiśeṣa* (7.4.60 *halādi...*). This produces *dṛś* + *dṛś* + *sa* => *da* + *dṛś* + *sa*. Rule 7.4.79 *sany ataḥ* then orders *i* as a replacement for the *a* of *da* to produce *d(a→i)* + *dṛś* + *sa* = *di* + *dṛś*. The *ś* is then replaced with *k* of rule 8.2.41 *ṣaḍoḥ kaḥ si* to produce *di* + *dṛ(ś→k)* + *sa* = *didṛk* + *sa*. Rule 8.3.59 *ādeśapratyayayoḥ* then orders the *s* to be replaced with *ṣ*. The resultant form, i.e., *didṛkṣa*, is assigned the term *dhātu* by rule 3.1.32 *sanādyantā dhātavaḥ*.

3.4.11 *dṛśe vikhye ca*

3.4.21 *samānakartṛkayoḥ pūrvakāle*

3.4.22 *ābhīkṣṇye ṇamul ca*

The derivation of (917) *bhuktvā* and (918) *pītvā* derive from *bhuj* + *(K)tvā* and *pā* + *(K)tvā* where *kutva* entails *j→g→k* similar to (725) *bhoktā*, and *pītvā* entails the replacement of *ā* with *ī* by rule 6.4.66 *ghumāsthāpā....*

The derivates of the next rule entail doubling of *bhojam* and *pāyam* as

in (919) *bhojaṃbhojam* and (920) *pāyaṃpāyam*. The individual forms are derived by introducing affix *(Ṇ)am(UL)* after verbal roots *bhuj* and *pā* where *u* of *bhuj* goes through *guṇa*, and *pā* receives the augment *y(UK)* of rule 7.3.33 *āto yuk ciṇ....*

3.4.25 *karmaṇy ākrośe kṛñaḥ khamuñ*

3.4.26 *svādumi ṇamul*

The derivation of (921) *coraṃkāram* and (922) *dasyuṃkāram* requires the introduction of affix *(KH)am(UÑ)* after verbal root *kṛ* under the co-occurrence condition of a word constituted by *cora* and *dasyu* with the denotata of *karman* 'object'. The derivation of *kāra* obviously requires *vṛddhi* of *ṛ* by 7.2.115 *aco' ñṇiti*. The *am* will be deleted via the formation of the compound. Note, however, that augment *m(UM)* will be introduced by rule 6.3.67 *arurdviṣadajantasya...* on account of the affixal *KH* as an *it*. Thus, *cora + am + k(ṛ→ār) + (KH)am(UÑ) = cora + (am→∅) + kāram = cora + m(UM) + kāram = coramkāram*. Similar application of rules will yield *dasyumkāram*. The *m→ṃ* change will result due to rule 8.3.24 *naś cāpadāntasya jhali*.

The examples of the second rule have already been derived as (136) *svāduṃkāram*, (137) *sampannaṃkāram*, and (138) *lavaṇaṃkāram* under the appendix of volume II (pp. 372-74).

3.4.36 *samūlākṛtajīveṣu...*

3.4.37 *karaṇe hanaḥ*

3.4.39 *haste varttigrahoḥ*

The derivation of (923) *samūlaghātam* contains *(samūla + am + han + (Ṇ)am(UL)) + sU)))* similarly to (450) *śīrṣaghātī*.

Examples (924) *akṛtakāram* and (925) *jīvagrāham* are similarly derived from *(naÑ + kṛ + Kta = akṛta + am + kṛ + (Ṇ)am(UL) + sU))*, and *jīva + am + grah + (Ṇ)am(UL)) + sU))*.

Deriving (926) *pāṇighātam* from *pāṇi + bhyām + han + (Ṇ)am(UL)) + sU))* follows similar derivational patterns. The derivation of (927) *hastavarttam* contains *hasta + Ṭā + vartti + (Ṇam(UL)) + sU))* where *vartti* is the causative form of *vṛt* 'to turn' ending in affix *ṆiC*. The *ṆiC*, however, is deleted subsequently by 6.4.51 *ṇer aniṭi*.

3.3.47 *upadaṃśas tṛtīyāyām*

3.4.48 *hiṃsārthānāṃ ca samānakarmakāṇām*

Deriving (928) *mūlakopadaṃśam* from *mūlaka + Ṭā + upadaṃś + (Ṇ)am(UL) +'sU))* is not very difficult especially in view of the preceding details. Example (929) *ārdrakopadaṃśam* is not different either. Note, however, that the derivates of *ṆamUL* are in many ways parallel to the derivates of *Ktvā*. We will then also get forms such as (930) *mūlakenopadaśya* where the *m* of the root is deleted by rule 6.4.24 *aniditāṃ hala upadhāyāḥ*. The nasal will also be deleted in (931) *daṇḍenopahatya* (6.4.37 *anudāttopadeśavana...*) parallel to *daṇḍopaghātam*. Incidentally, *upahatya* of

daṇḍenopahatya also requires augment *tUK* of rule 6.1.71 *hrasvasya piti kṛti tuk*. The formation of compounds is allowed in all these instances by 2.2.21 *tṛtīyā....*

3.4.52 *apādāne parīpsāyām*

Examples such as (932) *śayyotthāyam* and (933) *randhrāpakarṣam* derive from *śayyā + ṄasI + ut + sthā + (Ṇ)am(UL)) + sU))* and *randhra + ṄasI + apakṛṣ + (Ṇ)am(UL) + sU))* where the *s* of the preverb *sthā* will be replaced with *t* by rule 8.4.60 *udaḥ sthāstambhoḥ....* This *th* will be subsequently deleted by 8.4.65 *jharo jhari savarṇe*. Note also that *utthāyam* also requires the introduction of *yUK* of rule 7.3.33 *āto yuk ciṇ....* The *ā* of *śayyā* and the *u* of *utthāya* are replaced with *o* by 6.1.87 *ād guṇaḥ*.

3.4.61 *svāṅge taspratyaye kṛbhvoḥ*

Note that *mukhataḥ* of examples such as (934) *mukhataḥkāram*, (935) *mukhatobhūya*, and (936) *mukhatobhāvam* entails the introduction of affix *tasIL* of rule 5.4.45 *apādāne cāhīyaruhoḥ*. The *s* of *mukhatas* goes through *rutva-visarga* in *mukhataḥkāram*. The *rU*, however, is changed to *u* via rule 6.1.114 *haśi ca* in cases of *mukhatobhūya* and *mukhatobhāvam*. The resultant sequence of, for example, *mukhata(ḥ→rU→u) = mukhat(a + u)* is replaced with *o* to produce *mukhatobhūya* or *mukhatobhāvam* through the application of 6.1.87 *ād guṇaḥ*.

3.4.68 *bhavyageyapravacanīyopasthānīyajanyāplāvyāpātyā vā*

Our first example (937) *bhavyaḥ* derives from *(bhū + yaT) + sU))* through *guṇa* and subsequent *av* replacement of *o*. Note that affix *yaT* is introduced by rule 3.1.97 *aco yat*. The *av* replacement for *o* comes from 6.1.80 *dhātos tannimittasyaiva*. A similar replacement in *āv* for the resultant *vṛddhi* in *au* of *ā(Ṅ→0) + plu + (Ṇ)ya(T)* is also ordered by this same rule to derive an example such as (938) *āplāvyaḥ*. The *ṆyaT* is introduced by rule 3.1.125 *or āvaśyake*. Examples (939) *pravacanīyaḥ* and (940) *upasthānīyaḥ* entail the introduction of affix *anīyaR* (3.1.96 *tavyattavyānīyaraḥ*) after verbal roots *vac* and *sthā* used with the preverbs *pra* and *upa*.

3.4.72 *gatyarthākarmakaśliṣaśīṅsthāsavasa...*

Note that (941) *gataḥ* derives from *(gam + Kta) + sU))* where *m* is deleted by 6.4.37 *anudāttopadeśa....* Examples (942) *glāna* and (943) *āsita* derive from *glai + (K)ta* and *ās + (K)ta* where the first receives a replacement in *ā* for the *ai* by rule 6.1.45 *ādeca upadeśe...*; the second receives the augment *iṬ*. Furthermore, *gl(ai→ā) + ta = glā + ta* will have the *t* replaced with *n* by 8.2.43 *saṃyogāder....* Deriving (944) *upaśliṣṭa* from *upaśliṣ + (K)ta* requires the *t* to be replaced with *ṭ* by rule 8.4.41 *ṣṭunā ṣṭuḥ*. The derivation of (945) *anūṣita* from *anu + vas + (K)ta* not only requires the introduction of *iṬ* by rule 7.2.52 *vasati kṣudhor iṭ* but also *samprasāraṇa* and related operations on the *va* of *vas* by rule 6.1.15 *vacisvapiyajādīnam....* We thus get *anu + (v→u)as + i(Ṭ) + (K)ta = anu + usita = anūṣita* through

savarṇadīrgha. The *s* of *anūsita* is replaced with *ṣ* in accordance with rule 8.3.60 *śāsivasighasi....*

The derivation of (946) *ārūḍhaḥ* from *(āruh +(K)ta) + sU))* requires the *h* to be replaced with *ḍh* and the *t* with *dh* through the applications of rules 8.2.31 *ho ḍhaḥ* and 8.2.40 *jhaṣasta....* The resultant *āru(h→ḍh) + (t→dh)a = āruḍh + dha* will then have its *dh* replaced with *ḍh* by 8.4.40 *ṣṭunā ṣṭuḥ*. The first *ḍh* of *āruḍh + ḍha* will then be deleted by 8.3.13 *ḍho ḍhe lopaḥ* subsequent to which rule 6.3.111 *ḍhra lope...* will demand the *u* of *āru(ḍh→Ø) + ḍha* to be replaced with *ū* to produce *ārūḍha*.

Example (947) *anujīrṇaḥ* contains *(anu + jṝ + (K)ta) + sU))* where *ṝ* is replaced with *i* followed by *r* by rule 7.1.101 *ṝt id dhātoḥ* read with 1.1.51 *ur aṇ raparaḥ*. The *t* of *anuj(ṝ→ir) + ta = anujir + ta* is replaced first with *n* then by *ṇ* through the application of rules 8.2.42 *radābhyām...*and 8.4.1 *raṣābhyām....* The *i* of *anujir + (t→n→ṇ)a = anujir + ṇa* is then replaced with *ī* by 8.2.77 *hali ca* to produce *anujīrṇaḥ*.

3.4.80 *thāsaḥ se*

Example (948) *pacase* derives from *pac + (Ś)a(P) + (LAṬ→ thās→se)* where our present rule replaces *thās* with *se*. Example (949) *pecise* from *pac + (LIṬ→se)* entails doubling where, given *pa + pac + i(Ṭ) + se, pa* gets deleted by 6.4.120 *ata ekahalmadhye' nādeśer liṭi*, and *s* is replaced with *ṣ* by rule 8.3.59 *ādeśapratyayayoḥ*. The derivation of (950) *paktāse* contains *pac + LUṬ→thās→se* (3.3.15 *anadyatane luṭ*) where *LUṬ* is replaced with *se* via *thās*, and rule 3.1.33 *syatāsī lṛluṭoḥ* introduces *tās* to realize *pac + tās + se*. Note that the *s* of *tās* is subsequently deleted by 7.4.50 *tasastyor lopaḥ* to produce: *pac + tā(s→Ø) + se = pac + tāse*. The *c* of *pac* will then go through its replacement in *k* (*kutva*; 8.2.30 *coḥ kuḥ*) to realize the final derivate as *pa(c→k) + tāse = paktāse*. The same *kutva* will also apply in case of (951) *pakṣyase* which contains the string *pac + sya + (LṚṬ→se)*. The *s* of *pa(c→k) + sya + se* will be replaced with *ṣ* to realize *pak + (s→ṣ)ya + se = pakṣyase*.

3.4.82 *parasmaipadānāṃ ṇalatususthalathusaṇalvamāḥ*

Example (952) *papāca* derives from *pa + pac + (Ṇ)a(L)* via doubling where *a* of *pac* goes through *vṛddhi* of 7.2.116 *aco' ñṇiti...* to produce: *pa + p(a→ā)c + a = papāca*. Examples such as (953) *pecatuḥ*, (954) *pecuḥ*, (955) *pecitha*, etc., in addition to doubling, also require the application of 6.4.120 *ata ekahalmadhye...* whereby the reduplicated element (*abhyāsa*) is deleted, and *a* of the root is replaced with *e* similarly to (949) *pecise*. The derivation of (956) *papaktha* contains *pa + pac + tha* where *c→k*(*kutva*) is the only significant operation beyond doubling. Note here that 7.2.62 *upadeśe' tvataḥ* cannot permit the introduction of *iṬ*.

3.4.84 *bruvaḥ pañcānām ādita...*

The derivation of examples such as *āha*, etc., has already been explained in the appendix of volume II. Example (957) *āttha* derives from *brū* +

(Ś)a(P) + si(P) = brū + a + si where our present rule replaces *si* with *thaL*, *brū* gets replaced with *āha* and the *h* of *āha* is further replaced with *th* by rule 8.2.35 *āhas thaḥ*. This gives us: *(brū→ā(h→th) + (Ś)a(P)→∅)) + (si→tha(L)) = āth + tha*. The *th* of *āth* will be replaced with *t* to realize *ā(th→t) + tha = āttha*.

3.4.87 *ser hy apic ca*

Refer to the derivation of *lunīhi* under rule 3.4.2 *kriyāsamabhihāre....* Example (958) *punīhi* will follow the same pattern. The derivation of (959) *rādhnuhi* will entail the introduction of the *vikaraṇa Śnu* since the root belongs to the *svādi* group (3.1.73 *svādibhyaḥ śnuḥ*). Similar rules apply in deriving (960) *takṣṇuhi* with the understanding that the *n* of *nu* is here changed to *ṇ* by 8.4.1 *raṣābhyāṃ no ṇaḥ....*

3.4.92 *āḍ uttamasya pic ca*

The derivation of (961) *karavāṇi* contains the string *kṛ + u + ni* where *ni* is a further replacement (3.4.89 *mer niḥ*) of the first person singular replacement of *mi* in itself a replacement of *LAṬ*, and the *u* is the *vikaraṇa* of the *tanādi* class (3.1.79 *tanādi...*). Rule 3.4.92 then introduces *ā(Ṭ)* to realize *kṛ + u + ā + ni* which then goes through the *guṇa* of *ṛ* under the condition of *u*. This produces *k(ṛ→ar) + u + a + ni*. The *u* will now be subject to the application of *guṇa* under the condition of *āni* thereby producing *k(ṛ→ar) + (u→o) + āni = kar + o + āni*. The replacement in *av* for *o* followed by the change of *n* to *ṇ* by 8.4.1 *raṣābhyāṃ no ṇah...* will finally realize *kar + (o→av) + ā(n→ṇ)i = karavāṇi*.

3.4.95 *eta ai*

Example (962) *mantrayaite* derives from *mantri + (Ś)a(P) + (LEṬ→āt(ām→e))* where *mantri* ends in affix *ṆiC*, *LEṬ* is replaced with the third person dual *ātmanepada* ending *ātām*, and *ām* of *ātām* is further replaced with *e* (3.4.79 *ṭit ātmanepadānām...*) thereby yielding *mantri + a + āte*. The *ā* of *āte* is subjected to the application of our present rule whereby *ā* is replaced with *ai*. This gives us: *mantri + a + (ā→ai)te) = mantri + a + aite*. The *guṇa* of *i* followed by the *ay* replacement of the resultant *e* will then produce: *mantr(i→e→ay) + a + aite = mantraya + aite*. An application of 6.1.88 *vṛddhir eci* will finally bring about *mantray (a+ai→ai)te = mantrayaite*.

Similar rules apply in deriving the second person dual (967) *mantrayaithe* from *mantri + a + āthām*. The derivation of (868) *karavaite* and (960) *karavaithe* proceed with *kṛ +u + ātām* and *kṛ + u +āthām* where *u*, the *vikaraṇa* introduced by rule 3.1.79 *tanādikṛñ...*, goes through *guṇa* and subsequent replacement of *o* by *av*.

3.4.97 *sa uttamasya*

3.4.98 *nityaṃ ṅitaḥ*

The derivation of (970) *karavāva* and (971) *karavāma* optionally to (972) *karavāvaḥ* and (973) *karavāmaḥ* contains the strings *kṛ + u + ā(Ṭ) +*

(LAṬ→vas) and *kṛ + u + ā(Ṭ) + (LAṬ→maḥ)* where *āṬ* is introduced by 3.4.94 *leṭo' aḍāṭ*. Here again both *ṛ* and *u* go through *guṇa*, with *av* in case of *u*, to produce *k(ṛ→ar) + (u→o→av) + ā + vas = kar + av + ā + vas = karavāvas*. Similar rules will apply to bring about: *karavāmas*. Our present rule will then offer the optional deletion of the final *s* to derive *karavāva* and *karavāma*. If, however, this option is not availed, the result will be *karavāva(s→r→ḥ) = karavāvaḥ* and *karavāma(s→r→ḥ) = karavāmaḥ*.

The derivation of (974) *apacāva* and (975) *apacāma* from *a(Ṭ) + pac + (Ś)a(P) + (LAṄ→vas)= apaca + vas* and *a(Ṭ) + pac + (Ś)a(P) + (LAṄ→mas) = apaca + mas* requires the deletion of the final *s* as obligatory (*nitya*). Thus, rule 3.4.99 *nityaṃ ṅitaḥ* will allow only one set of forms in the first person dual and plural. Rule 7.3.101 *ato dīrgho yañi* finally applies to realize *apac(a→ā) + va(s→0) = apacāva*. The plural is similarly derived as: *apac(a→ā) + ma(s→0) = apacāma*.

3.4.100 *itaś ca*

Example (976) *apākṣīt* contains *a(Ṭ) + pac + s(ĪC) + ī(Ṭ) + (LUṄ→ti(P))* where our present rule deletes the *i* of *tiP*; and *īṬ* is introduced by rule 7.3.96 *astisico' pṛkte*. The introduction of *aṬ* and *sĪC* should be easier to comprehend by now. The next stage in the derivation relates to the *vṛddhi* of the *a* of *pac* (7.2.3 *vadavrajahalantasyācaḥ*) followed by the *kutva* of *c* (8.2.30 *coḥ kuḥ*). Thus, *ap(a→ā)c + s + ī + t = apā(c→k) + s + ī = apākṣīt*. The *s* of *apāksīt* will then be replaced with *ṣ* to produce *apāk(s→ṣ)īt = apākṣīt* by rule 8.3.59 *ādeśa pratyayayoḥ*.

3.4.101 *tasthasthamipāṃ tāṃtaṃtāmaḥ*

The derivates of *LAṄ* are not very difficult to derive. The examples of *LUṄ* need some explanation. For example, (977) *apāktām* contains *a(Ṭ) + pac + (sIC→0) + (LUṄ→tas→tām) = apac + tām* where *vṛddhi* and *kutva* change *pac* to *pāk* similarly to the earlier example, and *sĪC* gets deleted by 8.2.26 *jhalo jhali*. We thus get: *ap(a→ā) (c→k) + tām = apāktām*. Other examples of *LUṄ*, i.e., (978) *apāktam* from *a(Ṭ) + (pac→pāk) + (LUṄ→thas→tam))* and (979) *apākta* from *a(Ṭ) + (pac→pāk) + (LUṄ→tha→ta))*, follow similar application of rules. The derivation of (980) *apākṣam* from *a(Ṭ) + (pac→pāk) + (s(ĪC)→ṣ)) + (LUṄ→mi(P) →am))* does not meet the conditions under which its *s(ĪC)* can be deleted. Consequently, the *s* of the string is retained with its subsequent replacement with *ṣ*.

3.4.102 *liṅaḥ sīyuṭ*

Examples (981) *paceta*, (982) *paceyātām* and (983) *paceran* derive from *pac + (Ś)a(P) + LIṄ* where *LIṄ* gets replaced with the third personal singular, dual, and plural *ātmanepada* endings *ta*, *ātām* and *jha* respectively. Our present rule introduces *sīy(UṬ→0)* to the replacements of *LIṄ* although the *s* and *y* of *sīy* are deleted by rules 7.2.79 *liṅaḥ salopo...* and

6.1.66 *lopo vyor...* respectively in the first example. An application of *guṇa* finally produces *pac* + (*s*→∅) (*ī*→*e*) (*y*→∅) + *ta* = *pac* + *e* + *ta* = *paceta*. Note that yet another augment *sUṬ* is also introduced to the first example by rule 3.4.107 *suṭ tithoḥ*. This again is deleted by the same rule which deletes the *s* of *sīy*.

The deletion of *y* is not applicable in deriving *paceyātām*. The last example has its *jha* replaced with *ran* in addition to the deletions of *s* and *y*.

3.4.103 *yāsuṭ parasmaipadeṣūdātto ṅic ca*

3.4.104 *kid āśiṣi*

Example (984) *kuryāt* contains *kṛ* + *u* + (*LIṄ*→*ti*) where *ti* loses its *i* to 3.4.100 *itaś ca*, and our present rule introduces *yās(UṬ)* to realize: *kṛ* + *u* + *yā* + *t*(*i*→∅) = *kur* + *u* + *yās* + *t*. The *u* then causes the *guṇa* of *ṛ* whereby we get *k*(*ṛ*→*ar*) + *u* + *yā* + *t* = *kar* + *u* + *yāt*. Rule 6.4.101 *at ut sārvadhātuke* now replaces the *a* of *kar* with *u* (*utva*) to produce *k*(*a*→*u*)*r* + *u* + *yāt* = *kur* + *u* + *yāt*. The *u* before *yāt* will then be deleted by 6.4.109 *ye ca*. We thus get: *kur* + (*u*→∅) + *yāt* = *kuryāt*. The derivation of (985) *kuryātām* requires that *LIṄ* be replaced with *tas* which, in turn, be replaced with *tām* of 3.4.101 *tasthasthamipām*..... This will give us *kṛ* + *u* + (*LIṄ*→*tas* →*tām*), from whence *kuryātām* can be derived similarly to the preceding example. Our next example, (986) *kuryuḥ*, contains *kṛ* + *u* + *yās* + *us* where *us* is a replacement of *jha* (3.4.108 *jher jus*) which itself is a replacement of *LIṄ*. The application of *guṇa* and *utva* followed by the deletion of *u* similar to the preceding two examples will yield *kur* + (*u*→∅) + *yās* + *us* = *kur* + *yās* + *us*. The *s* is then deleted by 7.2.79 *liṅaḥ salopo' nantyasya* to yield *kur* + *yā* + *us*. The vocalic sequence of *ā* + *u* will then have to be replaced with a single vowel similar to the following (*parasavarṇa*) as per 6.1.96 *usy apadāntāt*. Thus, *kur* + *y*(*ā*+*u*→*u*)*s* = *kuryus*. The application of *rutva-visarga* will now derive *kuryuḥ*.

Similar rules apply in deriving examples (987) *iṣyāt*, (988) *iṣyāstām* and (989) *iṣyāsuḥ* which are all derivates of *iṣ* in *LIṄ* denoting 'benediction (*āśiṣi*). It must, however, be understood that the replacements of *LIṄ* in these examples are treated as marked with *K* as their *it*. This is for blocking any *guṇa* or *vṛddhi*. The deletion of *s* of *yās* in the first two examples is accomplished by 8.2.29 *skoḥ saṃyogādyor*.... The assignment of the term *ārdhadhātuka* to *LIṄ* with the denotatum of 'benediction' blocks the introduction of *Śa* of 3.1.77 *tudādibhyaḥ śaḥ*.

3.4.104 *jhasya ran*

3.4.105 *iṭo' t*

The derivation of (990) *paceran* contains *pac* + (*Ś*)*a*(*P*) + *sīy* + *jha* where *LIṄ* gets replaced with *ran* via *jha*. The *y* and *s* will as usual be deleted by 6.1.66 *lopo vyor vali* and 7.2.79 *liṅaḥ salopo*.... This will give us:

pac + a + (s→∅)ī(y→∅) + (LIṄ→jha→ran))) = *pac + a + ī + ran* where 6.1.87 *ād guṇaḥ* must apply to produce *pac(a+ī→e) + ran = pac + e + ran = paceran.*

Example (991) *paceya* contains *pac + a + īy + i(Ṭ)* where *i(Ṭ)* is the first person singular *parasmaipada* replacement of *LIṄ*, and *sīy(UṬ)* again loses its *s* similarly to the preceding examples. Our present rule replaces *i(Ṭ)* with *a* whereby we get *pac + a + īy + (i(Ṭ)→a)) = pac + a + īy + a.* An application of 6.1.87 *ād guṇaḥ* will finally produce *pac + (a +i→e)y + a = paceya.*

Deriving (992) *kṛṣīya* from *kṛ + sīy + i(Ṭ)→a* where *i(Ṭ)* is a replacement of *LIṄ*. The *s* of *kṛ + sīy + a* has its *s* replaced with *ṣ*.

3.4.107 *suṭ tithoḥ*

3.4.108 *jher jus*

Refer to the derivation of (339) *kṛsīṣṭa* under the appendix of rule 1.2.12 *uś ca*. The remaining examples should be similarly derived. Note that these examples entail benedictive *LIṄ* where 1.2.12 *uś ca* conditions lack of *guṇa*.

Example (993) *paceyuḥ* contains *pac + (Ś)a(P) + yās(UṬ) + (jha→(J)us)) = pac + a + yās + us* where rule 7.2.80 *ato yeyaḥ* will introduce *iy* in place of *yā* of *yās* to produce *pac + a + (yā→iy)s + us)) = pac + a + iy + s + us.* The *s* as usual will be deleted by 7.2.79 *liṅaḥ salopo' nantyasya*. The final form will be realized by the application of single *guṇa* replacement (6.1.87 *ād guṇaḥ*), on the vocalic sequence of *a+i*, and *rutva-visarga* on the final *s*. Thus, *pac + (a+i→e)y + u(s→r→ḥ)) = paceyuḥ*. Similar rules apply in deriving (994) *yajeyuḥ*.

3.4.109 *sij abhyastavidibhyaś ca*

Examples (994) *akārṣuḥ* and (995) *ahārṣuḥ* are derived similarly to (10) *akārṣīt* and (17) *ahārṣīt* explained under the appendix of rule 1.13 *iko guṇavṛddhī*. Note, however, that these derivates require *jhi* to replace *LUṄ* which, in turn, will be replaced with *us*. Furthermore, rule 7.3.96 *atisico' pṛkte...* will not apply in these examples. Thus, *a + (kṛ→ār) + s + (jhi→us)) = akār(s→ṣ) + us = akārṣu(s→r→ḥ) = akārṣuḥ.*

The preceding examples illustrate the replacement in *Jus* for *jhi* occurring after *sIC*. Examples (996) *abibhayuḥ* and (937) *ajihrayuḥ* entail this replacement after items termed *abhyasta* (6.1.5 *ubhe abyastam*). The derivation of *abibhayuḥ* begins with *bhī + (ŚaP→ŚLU) + (LUṄ→jhi)* where *ŚaP* is deleted by means of *ŚLU*, which, in turn, conditions doubling (*dvitva*) to produce (*bhī + bhī + jhi*). The long *ī* of the first *bhī* will be replaced with short by 7.4.59 *hrasvaḥ*. The resultant string *bh(ī→i) + bhī + us* then requires the application of 8.4.53 *abhyāse car ca* whereby the *bh* of *bhi* is replaced with *b* to produce: *(bh→b)i + bhī + jhi = bi + bhi + jhi.* The introduction of *aṬ* and replacement of *jhi* by *us* follow to realize: *aṬ + bhī + bhī + (jhi→us).* Note that the output of doubling, i.e., *bhī + bhī*,

is assigned the term *abhyasta* to facilitate the replacement of *jhi* by *us*. The *guṇa* (7.3.84 *sārvadhātukārdhadhātukayoḥ*) of *ī* followed by the *av* replacement (6.1.78 *eco' yavāyāvaḥ*) for the resultant *e* will produce: *a* + *bi* + *bh(ī→e→ay)* + *us* = *abibhayus*. The application of *rutva-visarga* will finally realize *abibhayu(s→r→ḥ)* = *abibhayuḥ*.

The derivation of (998) *ajihrayuḥ* similarly realizes the string *hrī* + *hrī* + *jhi* = *h(r→∅)ī* + *hrī* +*jhi* = *h(ī→i)* + *hrī* + *(jhi→us)* = *a* + *hi* + *hrī* + *us* after doubling, *halādiśeṣa*, shortening of *ī*, introduction of *aṬ* and *us* replacement for *jhi*. This string will finally require the application of rules 7.4.62 *kuhoś cuḥ* and 8.4.54 *abhyāse car ca* to replace the *h* of *hi* with *j* via *jh* respectively. This will give us *a* + *(h→jh→j)i* + *hrī* + *us* which then goes through *guṇa*, *e→ay*, and *rutva-visarga* similar to the preceding example to derive *ajihrayuḥ*.

Example (999) *ajāgaruḥ* follows similar derivational pattern though with fewer rule application. For, the deletion of *ŚaP* in this example is accomplished by *LUK* of 2.4.72 *adiprabhṛtibhyaḥ...* which would not permit doubling. Thus, *aṬ* + *jāg(ṛ→ar)* + *u(s→r→ḥ))* = *ajāgaruḥ* through *guṇa* and *rutva-visarga*. Note that *us* cannot replace *jhi* unless *jhi* is occurring after a form which has been termed *abhyasta*. The term *abhyasta* cannot be assigned unless the root goes through doubling (*dvitva*). It is to allow the replacement in *us* for *jhi* after verbal roots *jāgṛ*, and the like, that rule 6.1.6 *jakṣityādayaḥ ṣaṭ* is formulated. This rule assigns the term *abhyasta* to six roots even without doubling. Similar rules apply in deriving (1000) *aviduḥ*.

3.4.110 *ātaḥ*

The derivation of (1001) *aduḥ* contains *a(Ṭ)* + *dā* + *(sIC→∅)* + *(LUṄ→jhi→us))* = *a* + *dā* + *us*. Rule 6.1.93 *usyapadāntāt* then applies to replace the root-final *ā* with *u* to produce *ad(ā→u)s* = *adus* whereby we get *adu(s→r→ḥ)* = *aduḥ* through *rutva-visarga*. Similar rules apply in deriving (1002) *adhuḥ* from *a* + *dhā* + *us*, and (1003) *asthuḥ* from *a* + *sthā* + *us*.

3.4.111 *laṅaḥ śākaṭāyanasyaiva*

Note that (1004) *ayuḥ* and (1005) *avuḥ* derive as optional forms of (1006) *ayān* and (1007) *avān* from *a(Ṭ)* + *yā* + *(ŚaP→∅)* + *(LUṄ→ jhi))* = *a* + *yā* + *jhi* and *a* + *vā* + *(jhi→us)* respectively where 2.4.72 *adiprabhṛtibhyaḥ...* deletes the *ŚaP*. If, however, one does not accept the option favored by Śākaṭāyana, the derivate would be *ayān* where *jhi* will be replaced with *ant* of 7.1.3 *jho' ntaḥ*. The resultant string, i.e., *ayā* + *(jh→ant)i* = *ayā* + *anti*, will have the *i* deleted by 3.4.100 *itaś ca* thereby producing *ayā* + *ant(i→∅)* = *ayā* + *ant*. The application of 8.2.23 *saṃyogāntasya lopaḥ* will then delete the final *t* to derive *ayā* + *an(t→∅)* = *ayā* + *an*. The vocalic sequence *ā* + *a* will then be replaced with the single

long *ā* to produce *ay(ā+a→ā)n* = *ayān* through *savarṇadīrgha*. Same steps have to be followed to derive *avān*.

3.4.115 *liṭ ca*

Examples (1008) *pecitha* and (1009) *śekitha* contain *pac* + *(LIṬ→siP→thaL))* = *pac* + *tha* and *śak* + *tha* where 3.4.82 *parasmaipadānāṃ*... replaces the *LIṬ* with *thaL* via the second personal *parasmaipada* singular affix *siP*. Rule 3.4.115 *liṭ ca* assigns the term *ārdhadhātuka* to *tha* to facilitate the introduction of *i(Ṭ)* via 7.2.63 *ṛto bhāradvājasya*. But rule 6.1.8 *liṭi dhātor...* with operations relative to doubling must apply to derive *pa* + *pac* + *tha* which, with the introduction of *i(Ṭ)*, will yield *pa* + *pac* + *i* + *tha*. Rule 6.4.121 *thali ca seṭi* now applies to delete the *pa* of doubling, and replace the *a* of *pac* under the condition of the following *tha*. The result is: *(pa→Ø)* + *p(a→e)c* + *i* + *tha* = *pacitha*. Similar rules apply in deriving *śekitha*.

The derivation of (1010) *jagle* and (1011) *mamle* contain *glai* + *(LIṬ→ta)* = *glai* + *ta* and *mlai* + *ta* where 3.4.81 *liṭas tajhayor eśirec* orders *ta* replaced with *e(Ś→Ø)* to yield *glai* + *e*. The root then receives *ā* as a replacement (6.1.45 *ādeca upadeśe*...) for its *ai* whereby we get *gl(ai→ā)* + *e* = *glā* + *e*. Doubling and related operations such as *halādiśeṣa*, and short-replacement (*hrasva*) for the long *ā* then produces *glā* + *glā* + *e* = *gā* + *glā* + *e* = *g(ā→a)* + *glā* + *e* = *ga* + *glā* + *e*. The *ā* of *glā* is then deleted by 6.4.64 *āto plopa iṭi ca* to realize: *ga* + *gl(ā→Ø)* + *e* = *ga* + *gle*. The *g* of *ga* is then replaced with *j* by rule 7.4.62 *kuhoś cuḥ* to derive *(g→j)a* + *gle* = *jagle*. Similar rules will apply in deriving *mamle*.

3.4.116 *liṅāśiṣi*

Example (1012) *laviṣīṣṭa* and (1013) *paviṣīṣṭa* contain *lū* + *i(Ṭ)* + *sīy(UṬ)* + *s(UṬ)* + *(LIṄ→ta)* and *pū* + *i(Ṭ)* + *sīy(UṬ)* + *s(UṬ)* + *ta* similarly to (315) *bhitsīṣṭa* (vol. II, pp. 436-37) under the appendix of rule 1.2.11 *liṅsicāv ātmanepadeṣu*. Note here that the assignment of the term *ārddhadhātuka* under the conditions of benedictive *LIṄ* enables the introduction of *iṬ* by 7.2.35 *ārddhadhātukasyeḍ valādeḥ*. There are basically three operations, i.e., *guṇa* of the *u* of roots, subsequent replacement by *av* of the resultant *o*, and *ṣ* coming as a replacement for the two *s* elements of the string (8.3.59 *ādeśapratyayayoḥ*).

3.4.117 *chandasy ubhayathā*

Example (1014) *vardhantu* contains *vardhi* + *(LOṬ→jhi→antu)* where *vardhi* is derived by introducing affix *ṆiC* after *vṛdh* through *guṇa*, and *LOṬ* is replaced with *jhi* which is subsequently replaced with *ant* by 7.1.3 *jho' ntaḥ*. The *i* of *jhi* will be replaced with *u* by 3.4.86 *er uḥ*. The result will be: *vardhi* + *ant(i→u)* = *vardhi* + *antu*. The *i* of *ṆiC* is then deleted by 6.4.51 *ṇer aniṭi* to yield *vardh(i→Ø)* + *antu* = *vardhantu*. The assignment of the term *ārdhadhātuka* causes the deletion of affix *ṆiC*.

Example (1015) *svastaye* contains *(su +as + KtiN)* + *Ṅe))* where affix

KtiN is introduced after verbal root *as* occurring with *su* to derive the nominal base *s(u→v)* + *as* + *ti* = *svasti*. The derivation of the dative form *svastaye* from *svasti* + (*Ṅ→Ø*)*e* requires the application of rule 1.4.7 *śeṣo ghy asakhi* whereby *svasti* is optionally assigned the term *ghi* as opposed to *nadī*. Rule 7.3.111 *gher ṅiti* applies as a result to allow for the *guṇa* of *i* to produce: *svast(i→e)* + *e* = *svaste* + *e*. Rule 6.1.78 *eco' yavāyāvaḥ* will then replace the first *e* with *ay* to realize: *svast(e→ay)* + *e* = *svastaye*. Note that affix *KtiN* in *svasti* is to be termed *ārddhadhātuka* by 3.4.114 *ārddhadhātukaṃ śeṣaḥ* but our present rule instead assigns the term *sārvadhātuka* thereby blocking *bhū* (2.4.52 *aster bhūḥ*) from replacing *as*. Additionally, the *a* of *as* is also not deleted by rule 6.4.111 *śnasor al lopaḥ* on account of the lack of the assignment of the term *ārddhadhātuka* to affix *KtiN*.

Example (1016) *viśṛṇvire* derives from *vi* + *(śru→śṛ)* + *(Ś)nu* + *LIṬ→jha→ire(C))*) where *LIṬ* is replace with *ireC* via the third person plural *ātmanepada* suffix *jha*, and rule 3.1.74 *śruvaḥ śṛ ca* introduces the *śṛ* as a replacement for *śru* together with *(Ś)nu*. This explains why we get *viśṛ* + *nu* + *ire*. Both *u* and *n* of *nu* then go through replacements in *v* (6.4.87 *huśnuvoḥ sārva...*) and *ṇ* (8.3.59 *ādeśapratyayayoḥ*) respectively. This gives us: *viśṛ* + *(nu→ṇv)* + *ire* = *viśṛṇvire*. Note that blocking the assignment of the term *ārddhadhātuka* in favor of *sārvadhātuka* facilitates the *vikaraṇa* as well as the replacement of the root. The next example (1017) *sunvire* similarly derives from verbal root *ṣu→su* (6.1.64 *dhātvādeḥ...*) where doubling by 6.1.8 *liṭi dhātor...* cannot be accomplished because *LIṬ* does not occur directly after the root. It is, instead, intervened by *Śnu* which, in turn, is introduced at the strength of the assignment of the term *sārvadhātuka*. Lack of doubling thus can also be treated as the consequence of the provision of this rule. This provision of the *sārvadhātuka*, of course, goes against the *ārddhadhātuka* proposal of 3.4.116 *kidāśiṣi*.

Our next example (1018) *upastheyāma* contains the string *upa* + *sthā* + *yās(UṬ)* + *(LIṄ→mas))* = *upasthā* + *yās* + *mas* where the assignment of the term *ārddhadhātuka* or *sārvadhātuka* is both made as a choice. Thus, the deletion of *s* of *mas*, by rule 7.2.79 *liṅaḥ salopo...*, takes place at the strength of assigning the term *sārvadhātuka* (3.4.113 *tiṅśit...*). The assignment of the term *ārddhadhātuka* by our present rule makes it possible for the *ā* of *sthā* to be replaced with *e* in view of rule 6.4.67 *er liṅi*. This is how we get: *upasth(ā→e)* + *yā* + *ma(s→Ø)* = *upastheyāma*.

The Aṣṭādhyāyī of Pāṇini

Volume IV

English Translation of Adhyāyas Four and Five with Sanskrit Text, Transliteration, Word-Boundary, Anuvṛtti, Vṛtti, Explanatory Notes, Derivational History of Examples, and Indices.

Rama Nath Sharma

This volume of the *Aṣṭādhyāyī* of Pāṇini contains English translation of *adhyāyas* four and five. It includes Sanskrit text of individual *sūtras* with their transliteration, word-boundaries, indication of inflectional endings and formation of compounds. Each *sūtra* is also furnished with *anuvṛtti, vṛtti,* examples, detailed explanatory notes, and complete derivational history of examples cited by the *Kāśikāvṛtti.*

Explanatory notes are presented to facilitate proper understanding of individual *sūtras,* especially in view of their formulation, interpretation, application and relative placement. An attempt has been made to sort out and explain pertinent issues, as raised and discussed by major commentaries. The appendix contains nearly three hundred examples with complete derivational history. Over five hundred derivations have been discussed in notes under individual *sūtras,* especially from the point of view of their relevance to the Pāṇinian grammatical system.

This volume is the fourth of a now planned six-volume study. The fifth volume of this series will cover the *sūtras* of *adhyāya* six. The sixth and the last volume will include the remaining *adhyāyas,* seven and eight.

Preface

This present is the fourth of a planned previously five but now six-volume study on the *Aṣṭādhyāyī* of Pāṇini. It also constitutes the third of the four translation volumes of the *sūtrapāṭha* of Pāṇini, with Sanskrit text, transliteration, word-boundary, *anuvṛtti, vṛtti,* English translation, examples, explanatory notes, derivations and appendices. This volume contains the English translation of *adhyāyas* four and five of the *Aṣṭādhyāyī.* The fifth and sixth volumes of this series will soon be published with the English translation of *adhyāyas* six, seven and eight.

I have, as usual, relied very heavily on commentarial sources for sorting out issues relative to rule-formulation, interpretation, application and order. Three *prakriyā* texts, the *Rūpāvatāraḥ* of Dharmakīrti, the *Prakriyākaumudī* of Rāmacandra and the *Siddhāntakaumudī* of Bhaṭṭoji Dīkṣita have served as primary sources for derivational details. I have benefited most from the *Vyākaraṇamahābhāṣya* of Patañjali, the *Vyākaraṇacandrodaya* of Charudeva Shastri, the *Kāśikāvṛtti,* with the *Nyāsa* of Jinendrabuddhi and *Padamañjarī* of Haradatta (with Hindi translation of Jayashankar Lal Tripathi), the *Aṣṭādhyāyībhāṣya* of Prajñā Devī, the Hindi translation of the *Laghukaumudī* of Varadarāja made by Bhimsen Shastri and the *Siddhāntakaumudī* of Bhaṭṭoji Dīkṣita with the *Tattvabodhinī* of Jñānendra Sarasvatī and the *Bālamanoramā* of Vāsudeva Dīkṣita. I have mostly followed the *Kāśikāvṛtti* with the *Nyāsa* and *Padamañjarī* for explanatory notes. Here again, under individual rules, I have taken detours to accommodate remarks of cultural importance.

I have presented some general derivational processes at the beginning of the appendix so that repetition can be minimized. I have still offered major derivational details to illustrate issues, both in the text as well as in the appendix. Frequent references to derivational details of earlier volumes have proved very helpful.

I fully realize the extremely complex nature of the form and content of the *Aṣṭādhyāyī.* I am also aware of my own limitations due to which I may have made many mistakes. I realize that there are many typographical errors in the earlier volumes. I have tried not to repeat them in this volume. As I get to the end of my work on the last *adhyāya* I feel that I should have better completed the last volume first. This would have offered some better insights into arrangements of discussions. I do intend to edit the earlier volumes of the *sūtrapāṭha* and additionally, present a more detailed version of volume one. I shall greatly appreciate my reader's comments in this regard.

I must express my deep sense of indebtedness to authors of works I have regularly consulted. My brother Narendra and Pandit Ramaprasad Tripathi,

both of the Sampurnanand Sanskrit University at Varanasi, have always been generous to me in giving of their time. I have, as usual benefited greatly from the writings of Professor George Cardona.

The University of Hawaii, especially through its Research Council and Research Relations, has been very generous in supporting my research endeavors with grants. The American Institute of Indian Studies still remains the major funding agency to support this entire project. I am grateful to the University of Hawaii and the American Institute of Indian Studies for their continued support. I must express my special thanks to Chris Bopp without whose programing skills I would have been lost in the software jungle. These volumes owe a great deal to him. Finally, these volumes owe the most to my wife Kamala who has always protected me from many of my duties as a householder. I could not do this project without her support.

Adhyāya Four

Pāda One

4.1.1 ङ्याप्प्रातिपदिकात्

ṅyāpprātipadikāt
/ *ṅyāp-prātipadikāt* 5/1 = *ṅī ca āp ca prātipadikaṃ ca* = *ṅyāpprātipadikam* (*sam. dv.*), *tasmāt*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2)
adhikāro'yam; yad ita ūrdhvam anukramiṣyāma āpañcamādhyāyaparisamāpteḥ ṅyāpprātipadikād ity evaṃ tad veditavyam
An affix (henceforth, through the end of *adhyāya* five) occurs after that which either ends in affixes marked with *Ṅī* and *āP*, or is a nominal stem (*prātipadika*).

Examples:

Look under subsequent rule(s).

1. This governing rule (*adhikāra*) specifies bases after which affixes enumerated in its domain can be introduced. The expression *ṅyāp* refers to a form which ends in feminine affixes marked with *Ṅī* and *āP*. These individual terms can each refer to three feminine affixes: *ṄīṢ*, *ṄīP* and *ṄīN*, on the one hand, and *CāP*, *ṬāP* and *ḌāP*, on the other. That *Ṅī* and *āP* each refer to a class of three affixes each is made possible by their specification by means of *Ṅī* and *āP*, used with no additional *it*-elements: *N*/ (*ṄīN*), *Ṣ*/ (*ṄīṢ*), *P*/ (*ṄīP*); and *C*/ (*CāP*), *Ṭ*/ (*ṬāP*), *Ḍ*/ (*ḌāP*).

Rule 4.1.2 *svaujasmauṭ*. . . constitutes a subdomain, whereby a set of twenty-one nominal endings termed *vibhakti* (1.4.104 *vibhaktiś ca*) are introduced. These nominal endings are generally referred to by the abbreviatory term *sUP* (1.4.103 *supaḥ*). Rule 4.1.3 *striyām* heads another subdomain under which feminine affixes specified by *ṅyāp* are introduced. These two subdomains, headed by 4.1.2 *svaujasmauṭ*. . . and 4.1.3 *striyām*, both require a nominal stem as their input. Additionally, an output of the subdomain headed by 4.1.3 *striyām*, i.e., a form which ends in feminine affixes characterized as *ṅyāp*, can also form an input to the subdomain of 4.1.2 *svaujasmauṭ*. . . . That is, a nominal stem which takes the option of 4.1.3 *striyām*, to derive a feminine form ending in *ṅyāp*, re-enters the domain of 4.1.1 to avail the option of 4.1.2 *svaujas*. . . . This re-entry of a feminine form to the subdomain of 4.1.2 is obligatory. A nominal stem which, upon entering the domain of 4.1.1, opts for the option of 4.1.2 may also get re-entry to the domain of 4.1.1, especially for derivational options of its subdomain headed by 4.1.76 *taddhitāḥ*.

2. Note that rule 4.1.1 does not have any predication (*vidheya*). Consequently, the purpose of its formulation should be accepted as facilitating the application of other rules (*parārtha*). It is also a governing rule, and hence, has a valid scope of application prior to the domain of 6.4.1 *aṅgasya*.

Kāśikā explains that *ṅyāpprātipadikam* specifies two types of forms: (*i*) nominals ending in feminine affixes marked with *Ṅī* and *āP*; and nominal stems covered by rules 1.2.45 *arthavad*... and 1.2.46 *kṛttaddhita*.... This specification is made possible by the *samāhāra* type of *dvandva* compound in *ṅyāpprātipadikam*. That this specification is made via *samāhāradvandva* is clear from the singular (*ekavacana*) in *ṅyāpprātipadikam*. An *itaretarayoga* type formation of a *dvandva* compound would have required its specification via plural, as . . . *prātipadikebhyaḥ*. This *samāhāra* specification also rules out the possibility of any other compound-formation. If such a possibility is not ruled out then *ṅyāpprātipadikam* may also be interpreted as a genitive *tatpuruṣa* compound, parallel to *ṅyāpoḥ prātipadikam*, meaning: a nominal stem termed compound with constituents terminating in *Ṅī* and *āP*. Consequently, *sU*, etc., could be introduced only after compound bases such as *rājakumārī*, etc., which end in *Ṅī*, and not after *kumārī*, etc., which could not qualify as compounds. One can argue here that *ṅyāpoḥ prātipadikam* refers to a nominal stem which ends in *Ṅī* and *āP*, and thus could refer to both a compound as well as a non-compound base. One can thus facilitate the introduction of *sUP* also after forms such as *kumārī*. This, however, will create difficulty of interpretation. For, *ṅyāpoḥ prātipadikam* will have *prātipadikam* as part of predication. The *prātipadika* of 4.1.1 is part of the subject (*uddeśya*). Consequently, the sense of one cannot be equated with the sense of the other, especially relative to the introduction of *sUP* (4.1.2 *svaujas*...), the predicate (*vidheya*).

3. It is argued that to state that affixes denoted by the abbreviatory term *sUP* occur after 'that which ends in *Ṅī* and *āP*, or else, is a nominal stem' is not necessary. For, an affix, in view of 3.1.2 *paraś ca*, will have to occur after something, anyway. Rule 4.1.1 makes a specification with regard to that after which *sUP* can be introduced. One can even say that affixes denoted by the abbreviatory term *sUP* can be introduced only after bases covered by specifications made by *ṅyāpprātipadikāt*. If one does not accept this then there could be problems. *Padamañjarī*, ad *Kāś*., outlines four types of bases: (*i*) verbal roots (*dhātu*), (*ii*) items ending in affixes denoted by the abbreviatory term *tiṄ* (*tiṅanta*), (*iii*) a sentence (*vākya*) and (*iv*) items which end in affixes denoted by the abbreviatory term *sUP*. If a particular specification in terms of *ṅyāpprātipadikāt* is not made then *sUP*, *ṬāP*, etc., feminine affixes, *aṆ*, and the *taddhita* affixes commonly known as the *svārthikas* (5.3.96 *ive pratikṛtau*, etc.), will occur after these four types of bases in accord with the order of their enumeration (*yathāsaṃkhya*).

Kāśikā claims that, based upon deduction, one can still find those same bases forming left context of an affixal operation, as one would otherwise

have by means of a specification such as *ṅyāpprātipadikam*. However, it is in view of specifications such as *vṛddha* 'that among whose vowels the first is a *vṛddhi* (1.1.73 *vṛddhir yasyācām ādis tad*. . .)', *avṛddha* 'that which is not *vṛddha*', *a-varṇa* 'the vowel *a*', *svara* 'accent' and *dvyac* 'that which contains two vowels', that a specification such as *ṅyāpprātipadikam* becomes necessary:

> *vṛddhāvṛddhāvarṇasvaradvyajlakṣaṇapratyayavidhau*
> *tatsampratyayārtham ṅyāpprātipadikagrahaṇam kartavyam*
> 'to employ *ṅyāpprātipadikam* is necessary for facilitating the understanding of an affixal operation characterized by specifics such as *vṛddha, avṛddha, avarṇa, svara,* and *dvyac*'

For, *vṛddha*, etc., are given as qualifiers (*viśeṣaṇa*) to *ṅyāpprātipadikam*. It will indeed be a confusing situation to find modifiers used without their corresponding modifieds. Thus, if *ṅyāpprātipadikam* is not specified then operational scopes, for example of rules such as 4.1.157 *vṛddhād agotrāt*, 4.1.160 *prācām avṛddhāt phin*, 4.1.95 *ata iñ*, 4.2.44 *anudāttāder añ* and 4.4.7 *nau dvyacaṣ ṭhan*, would run into interpretational confusion. For, these rules must be supplied with *ṅyāpprātipadikam* as a qualified (*viśeṣya*) for modifiers such as *vṛddha, avṛddha, adanta*, etc.

A question is raised against including *ṅyāp* in the specification of this rule, especially when *prātipadikāt* itself can account for it. For, a *prātipadika* also carries reference to its counterparts in other genders (*Paribhāṣā* (72): *prātipadikagrahaṇe liṅgaviśiṣṭasyāpi grahaṇam*). The inclusion of *ṅyāp* is made to ensure that a *taddhita* affix can also be introduced after a syntactically related nominal stem ending in affixes denoting feminine (*SK*: . . . *ṅyābgrahaṇam ṅyābantāt taddhitotpattir yathā syān ṅyābhyām prāṅ mā bhūd ity evam artham*). Consider the derivation of *āryakā* from *ārya* + *ṬāP* + *kaN*, where *kaN*, a *taddhita* affix, denotes *svārtha*, the meaning of its nominal base. If affix *kaN* is introduced after *ārya*, prior to *ṬāP*, then the result will be *āryakā*, Rule 7.3.44 *pratyayasthāt*. . . will then apply on *āryakā* to replace its *a*, which precedes *k*, with *i*. The result will be: *āryikā*. This derivate will be unique since the *i*-replacement for *a* is obligatory (*nitya*). That is, *āryakā*, a parallel form to *āryikā*, can never be derived. If *ṬāP* is introduced prior to the introduction of *kaN*, then, given *āryā* + *ka*, the final *ā* of *āryā* will be replaced with its short counterpart by rule 7.4.13 *ke 'ṇaḥ*. This will give us *āryaka*. One can now derive *āryikā*, from *āryaka* + *ṬāP* where the short *a* before *k* will be treated as the *ā* it replaced. This will then facilitate the optional application of rule 7.3.46 *udīcām ātaḥ*. . ., whereby the *a* before *k* will be optionally replaced with *i*. We will thus get *āryikā*, parallel to *āryakā*.

Kāśikā recognizes that 'a specification by means of *ṅyāp* also facilitates introducing *taddhita* affixes after bases which end in *ṅyāp* (*tadantāt taddhitavidhānārtham ṅyābgrahaṇam*). Consider the derivation of *kālitarā* 'a female relatively more black . . .', where the comparative suffix *taraP* is in-

troduced after *kālī* (5.3.57 *dvivacanavibhajyopapade* . . .), a derivate ending in *ṄīṢ* of 4.1.42 *jānapadakuṇḍa* . . ., to denote relative prominence (*prakarṣa*). Commentators state that *kālitarā* cannot be derived unless the specification of its base is made by *ṅyāp*. For, denotation of feminine by *ṄīṢ*, and that of relative prominence by *taraP*, will create a conflicting situation. That is, the scope elsewhere (*sāvakāśatva*) of a feminine affix must be one where 'feminine' alone is denoted. The scope elsewhere of *prakarṣa* 'relative prominence' must be one where *prakarṣa* alone is denoted. Thus, *kālī* and *kālatarah* illustrate instances where both meanings have their independent scope (*sāvakāśatva*). An example such as *kālitarā*, presents a situation of conflict where both meanings find their scope. This conflict can be resolved in accord with 1.4.2 *vipratiṣedhe paraṃ kāryam*. Consequently, only *prakarṣa*, and no feminine can be expressed, mostly because *taraP* is subsequent. If, however, the bases are specified with *ṅyāp* then *kālitarā* can be derived with no problem.

4.1.2 **स्वौजसमौट्छष्टाभ्यांभिस्ङेभ्यांभ्यस्ङसिभ्यांभ्यस्ङसोसांङ्योस्सुप्**

svaujasmauṭchaṣṭābhyāmbhisṅebhyāmbhyasṅasibhyāmbhyasṅasosāṃṅyossup / *svaujas . . . sup* 1/1 = *su ca au ca jaś ca . . . oś ca sup ca* = *svaujas . . . sup* (*sam. dv.*) /
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *ṅyāpprātipadikāt* #1)
'*su, au, jas, am, auṭ, śas, ṭā, bhyām, bhis, ṅe, bhyām, bhyas, ṅasi, bhyām, bhyas, ṅas, os, ām, ṅi, os, sup*' *ity ete pratyayā ṅyāpprātipadikād bhavanti*
Affixes *sU, au, Jas; am, auṬ, Śas; ṭā, bhyām, bhis; Ṅe, bhyām, bhyas; ṄasI, bhyām, bhyas; Ṅas, os, ām* and *Ṅi, os, suP* occur after that which either ends in affixes marked by *Ṅī* and *āP*, or is termed a nominal stem.

EXAMPLES:

kumārī 'girl'
gaurī 'a female of fair complexion; Shiva's consort'
śārṅgaravī 'a female name'
khaṭvā 'cot'
bhaurājā 'a city with many kings'
kārīṣagandhyā 'a granddaughter of Karīṣagandhi'
dṛṣad 'nominative singular of *dṛṣad* 'pebble, rock''

1. Refer to the appendix for derivational details of these examples. The first, *kumārī*, constitutes an example for both *ṅyāpprātipadikāt* and *ṄīP* (4.1.20 *vayasi prathame*). The next two, *gaurī* and *śārṅgaravī*, represent affixes *ṄīṢ* (4.1.41 *ṣidgaurādibhyaś ca*) and *ṄīN* (4.1.73 *śārṅgaravādyaño* . . .). The next three examples, *khaṭvā, bahurājā* and *kārīṣagandhyā*, represent derivates of *ṬāP* (4.1.4 *ajādyataṣ ṭāp*), *ḌāP* (4.1.13 *ḍāb ubhābhyām* . . .) and *CāP* (4.1.74 *yaṅaś cāp*), respectively.

2. The twenty-one suffixes enumerated by this rule have been classified into seven triads of *prathamā* 'first', *dvitīyā* 'second', *tṛtīyā* 'third', *caturthī* 'fourth', *pañcamī* 'fifth', *ṣaṣṭhī* 'sixth', and *saptamī* 'seventh' (1.4.101 *tiṅas-trīṇi*. . .). Individual members of each triad are further assigned the terms *ekavacana* 'singular', *dvivacana* 'dual' and *bahuvacana* 'plural', respectively (1.4.102 *tāny ekavacana* . . .). The following is a tabular listing for reference:

	singular	*dual*	*plural*
prathamā	*sŪ*	*au*	*Jas*
dvitīyā	*am*	*auṬ*	*Śas*
tṛtīyā	*Ṭā*	*bhyām*	*bhis*
caturthī	*Ṅe*	*bhyām*	*bhyas*
pañcamī	*ṄasI*	*bhyām*	*bhyas*
ṣaṣṭhī	*Ṅas*	*os*	*ām*
saptamī	*Ṅi*	*os*	*suP*

The vowels which have been used as *it* in these elements either facilitate articulation, or distinguish endings from each others (*viśeṣaṇārtha*). The *Ṭ*, as an *it* in *Ṭā*, is used to facilitate formation of the abbreviatory term *sŪṬ*. The final *P* of *suP* is brought as an *it* so that these nominal endings all can be referred to by the single abbreviatory term *sŪP*.

The denotata of these nominal endings have been outlined as number (*saṃkhyā*), nominal stem notion (*prātipadikārtha*) and *karman* 'object' etc., by rules enumerated elsewhere (2.3.1 *anabhihite*, etc.; *Kāś.*: *saṃkhyākarmādayaś ca svādīnām arthāḥ śāstrāntareṇa vihitās tena sahāsyaikavākyatā*). This rule, for its proper interpretation, must share the 'single-sentenceness' relationship (*ekavākyatā*) with them. Thus, rule 2.3.2 *karmaṇi dvitīyā*, read with 2.3.1 *anabhihite* and rule 4.1.2 *svaujas*. . ., can be interpreted as a single sentence as follows:

> 'affixes termed *dvitīyā*, particularly its members termed *ekavacana* 'singular', *dvivacana* 'dual' and *bahuvacana* 'plural', occur after an item which either ends in a feminine affix denoted by *Ṅī* and *āP*, or is termed a *prātipadika*, provided an object (*karman*) not expressed otherwise, is to be expressed'

Recovering the context of a rule, via 'single-sentenceness' (*ekavākyatā*), often entails an elaborate network of related rules. My interpretation of 2.3.2 *karmaṇi dvitīyā* shows the involvement of only a few important rules.

Note that accepting the signification of affixes denoted by *sUP* as *saṃkhyākarmādi* 'number and object, etc.' is also problematic. For example, if *saṃkhyākarmādi* is the denotatum of a *sUP* then these affixes cannot be introduced after indeclinable bases (*avyaya*). Consequently, Pāṇini's provision of deleting a *sUP* by means of *LUK* after an indeclinable (2.4.82 *avyayād*

āp supaḥ) becomes meaningless (*vyartha*). But since Pāṇini provides for deleting a *sUP* after an indeclinable, introduction of the same after an indeclinable cannot be challenged. That is, a *sUP* will be introduced after an indeclinable even when *saṃkhyākarmādi* are not denoted. It is a different story that nominative (*prathamā*) singular (*ekavacana*) alone could then be introduced.

4.1.3 स्त्रियाम्

striyām
/*striyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *ṅyāpprātipadikāt* #4.1.1)
yad ita ūrdhvam anukramiṣyāmas striyām ity evaṃ veditavyam
The following affixes occur after a nominal stem when feminine is to be denoted.

EXAMPLES:

Refer to subsequent rules.

1. That this rule is formulated to facilitate application of other rules (*parārtha*) is clear from the specification of *striyām* in locative (*saptamī*), especially with absence of any predicate (*vidheya*). It offers *jāti* 'class', particularly *strītva* 'femininity', as scope for application of rules it governs. A question is raised as to what *strītva* is. It is explained that, like the general class of *gotva* 'cowness', *strītva* also finds varying loci (*āśryaya*), both general (*sāmānya*) and particular (*viśeṣa*). In the absence of a well defined particular locus, it may, on occasions, be comprehended in a manner similar to *brāmaṇatva* 'Brāhmaṇaness' based on *upadeśa*. *Kāśikā*, therefore, explains this *jāti* of *strītva* as *sāmānyaviśeṣ ā bahuprakārāḥ* 'general and particular of varying types' (*Kāś.: sāmānyaviśeṣāḥ strītvādayo gotvādaya iva bahuprakārā kvacid āśrayaviśeṣābhāvād upadeśavyaṅyā eva bhavanti yathā brāhmaṇatvādayaḥ*).

Sanskrit grammarians do not clearly define what gender is. Patañjali recognizes prominence of 'breasts' and 'hair' as distinguishing marks for 'females' and 'males', respectively. A thing which is different from two is characterized as 'neuter':

stanakeśavatī strī syāl lomaśaḥ puruṣaḥ smṛtaḥ/
ubhayor antaraṃ yac ca tadabhāve napuṃsakam//

But this could only characterize biological gender. It cannot apply to a host of things such as *khaṭvā* 'cot', *mālā* 'garland', *ghaṭa* 'pot', *paṭa* 'cloth', etc.

Grammarians rely solely upon usages for determining gender (*lokāśrayatvāl liṅgasya*). What about the belief that gender is already included within the denotatum of a nominal stem (*prātipadikagrahaṇe liṅgaviśiṣṭasyāpi grahaṇam*)? If the notion of femininity (*strītva*) is included within the sense of a *prātipadika*

then what is the purpose of introducing a feminine affix. It is argued that feminine affixes are employed to manifest this notion of gender inhered by nominal stems. They thus reinforce its comprehension by way of definitizing it. As far as comprehension of gender, per se, is concerned, one may, in many instances, comprehend it even without the use of a feminine suffix.

2. Note that this rule forms a subdomain of 4.1.1 *ṅyāpprātipadikāt.* The *anuvṛtti* (from rule 4.1.1) of *prātipadikāt* alone is valid here since a form which ends in a feminine affix (*ṅyābanta*) cannot form an input to the subdomain which introduces that affix.

4.1.4 अजाद्यतष्टाप्

ajādyataṣ ṭāp

/ *ajādyataḥ* 5/1 = *ajādiś ca at ca* = *ajādyat; tasmāt* = *ajādyataḥ* (*sam. dv.*); *ṭāp* 1/1/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #41, *striyām* #3)

ajādibhyaḥ prātipadikebhyo' akārāntāc ca prātipadikāt striyāṃ ṭāp pratyayo bhavati

Affix *Ṭāp* occurs after a nominal stem which is abstracted from the group headed by *ajā* 'she-goat', or after a stem which ends in *-aT* (1.1.70 *taparas tatkālasya*), when feminine is denoted.

EXAMPLES:

ajā 'she-goat'
eḍakā 'ewe'
caṭakā 'sparrow'
aśvā 'mare'

1. The *P* of *ṬāP* is given as an *it* for the general low pitch (*anudātta*) accent of rule 3.1.4 *anudāttau suppitau.* The *Ṭ* is used as an *it* to distinguish *ṬāP* from affixes such as *CāP* and *ḌāP.* The *T* of *aT* is, of course, part of *taparakaraṇa* (1.1.70 *taparas tatkālasya*), whereby stems ending in *a* (of short duration) alone can qualify.

This provision of *ṬāP,* especially in view of its specification with *ajādi* 'that which begins with *ajā*', is made against affixes *ṄīṢ* and *ṄīP,* which may otherwise find their scope of application. Note that the listing of the *ajādi* group is not made with the enumeration of nominal stems *aja,* etc. It is, instead, made with *ajā,* etc., which are items derived with affix *ṬāP* already introduced (*kṛtaṭāppratyaya*). Thus, *ṬāP* will be introduced after stems specific to those of *ajā,* etc.

Affixes *ṄīṢ* and *ṄīP,* as against *ṬāP,* could be conditioned by factors such as: (*i*) signification of *jāti* 'class', (*ii*) marked association of a female with a corresponding male (*puṃyoga-lakṣaṇa*), (*iii*) a following word with the denotatum of flower of fruits (*puṣpaphalottarpada*), or (*iv*) age (*vaya*), etc.

Consider, for example, the derivation of *śūdrā* 'a female of the class characterized as *śūdra*'. This provision of *ṬāP* is made against denotation of a 'wife', in relation to the 'husband'. Thus, the wife of a *śūdra* is not called *śūdrā*. Instead, *śūdra* denotes a class of females (*jāti*). For denoting a 'female (wife)' corresponding to a 'male (husband)', one has to introduce affix *ṄīṢ* to derive *śūdrī*, parallel to *śūdrasya bhāryā* 'wife of a *śūdra*'. This 'association with a male (*puṃyoga*)' does not work with forms which have *mahat* as their first constituent. Thus, the wife of an *ābhīra*, a class synonymous with *mahāśūdra*, will not be called *mahāśūdrī*. Instead, *ṬāP* will be used to derive *mahāśūdrā*. This exception is made possible because of *tadantavidhi*, interpreting a form as ending in that by means of which a specification is made (1.1.73 *yena vidhis tadantasya*). Incidentally, an *ābhīra* is characterized as the offspring of a *brāhmaṇa* father and an *ugrā* mother. An *ugrā*, in turn, is a female born of a *śūdrā* mother and a *kṣatriya* father.

Kāśikā states that the following *paribhāṣā* is not valid in this connection:

> *grahaṇavatā prātipadikena tadantavidhir nāsti*
> 'a specification made by means of a particular nominal stem is not interpreted as referring also to a form which may end in that nominal stem'

Consequently, we get forms such as *atidhīvarī* 'an excellent fisherwoman', *atipīvarī* 'a very fat woman', *atibhavatī* 'a very respected woman' and *atimahatī* 'a very great woman'. Examples such as *ajā* 'she-goat', *aśvā* 'mare' and *caṭakā* 'sparrow' denote *jāti* 'class'; *bālā* 'maiden', *pākā* 'girl', *vatsā* 'female calf', and *mandā* 'feeble woman', etc., denote age (*vaya*). One can similarly get other examples in other categories where *ṬāP* is introduced to block *ṄīṢ* or *ṄīP*.

2. Why should *ajādi* be explicitly mentioned in this rule especially when, since all bases of *ajādi* end in *a*, specification made with *ataḥ* can account for *ṬāP*? For, all the *ajādi* bases end in *a*. A special mention of *ajādi* is made here to block provisions of *ṄīṢ* (4.1.63 *jāter astrīviṣayād . . .*) and *ṄīP* (4.1.20 *vayasi prathame*).

3. Bhaṭṭoji Dīkṣita interprets *ajādyataḥ* as ending in genitive (*ṣaṣṭhyanta*). A *pañcamyanta* 'ending in a fifth triplet of *sUP*' interpretation is problematic. For example, given *pañcaja* 'a group of five goats', *ṬāP* will yield a wrong form: **pañcājā*. A genitive interpretation will yield the correct form *pañcājī*, with *ṄīP* of 4.1.21 *dvigoḥ*. Actually, these two interpretations relate to questions of whether denotation of feminine should be accepted as meaning of a base, or of an affix. If affix, then a *pañcamī* interpretation of *ajādyataḥ*, read in view of *ṬāP*, will yield the following meaning:

> 'affix *ṬāP* occurs after a nominal stem which ends in *a*, or after a nominal which is inferred from the group headed by *ajā*, when feminine is denoted'

This interpretation will accept 'feminine' as the meaning of the affix (*pratyayārtha*). A genitive interpretation will accept 'feminine' as included within the meaning of the base. What would be the function of a feminine affix under this interpretation? It will simply manifest the notion of gender inhered by the base (*dyotayati*). Thus, a genitive interpretation of *ajādyataṣ ṭāp* will yield the following meaning:

> 'affix *ṬāP* occurs after a nominal stem which ends in *a*, or is inferred from the group headed by *ajā*, when the sense of feminine inhered by the base is made manifest'

Bhaṭṭoji Dīkṣita accepts the genitive interpretation, along with 'revelation or manifestation' as the meaning of feminine affixes. The tradition has discussed both views relative to the denotation of gender. Those who accept gender as part of the meaning of a nominal stem believe that an affix is introduced to 'manifest or reveal' this meaning (*striyāṃ yat prātipadikaṃ vartate tasmāt ṭābādayaḥ*). This view accepts the base after which a feminine affix is to be introduced as qualified with 'feminineness' (*strītvaviśiṣṭa*). Adherents of the other view believe that an affix is introduced after a base when gender is to be denoted (*striyām abhidheyāyāṃ ṭābādayo bhavanti*). This view will give prominence to affixal meaning: *prakṛtipratyayau sahārthabrūtas tayoḥ pratyayārthasyaiva prādhānyam* 'affixal meaning is principal when a specification is made concurrently by means of a base as well as an affix'. But this will create problems. Since 'feminine' is to be expressed as affixal meaning (*pratyayārtha*) qualified by meaning of the base (*prakṛtyartha*), singular (*ekavacana*) alone can be used. What is the use of dual and plural forms? If feminine is to be accepted as a notion inhered by the base then this problem would not arise. Commentators have discussed and resolved this, and host of other problems concerning the two views, in relation to the fivefold (*pañcaka*) meaning of bases (*prātipadika*), and the notions of *jāti* 'class', *vyakti* 'individual', *padārtha* 'substance' and *sattā* 'existence'. I omit any further discussion of them for lack of interest. My translations and discussions reflect acceptance of both the views.

4.1.5 **ऋन्नेभ्यो ङीप्**

> *ṛnnebhyo ṅīp*
> /*ṛnnebhyaḥ* 5/3 = *ṛt ca n ca* = *ṛnn* (*sam. dv.*); *tasmāt; ṅīp* 1/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1 *striyām* #3)
> *ṛkārāntebhyo nakārāntebhyaś ca prātipadikebhyaḥ striyām ṅīp pratyayo bhavati*
> Affix *ṄīP* occurs to denote feminine after nominal stems which end in *ṛ* (*ṛT*, cf. 1.1.70 *taparas tatkālasya*) and *n*.

EXAMPLES:

> *kartrī* 'she who does . . .'

hartrī 'she who carries . . .'
daṇḍinī 'she (a female ascetic) who carries a shaft'
chatriṇī 'she who carries an umbrella'

1. Note that *Ṅ*, as an *it* in *ṄīP*, is intended for reference to affixes *ṄīP*, *ṄīṢ* and *ṄīN* in general (*sāmānyagrahaṇa*). That is, in its absence, a reference with *Ṅ* of *Ṅyāp* in rule 4.1.1 *ṅyāpprātipadikāt*, will have to be limited to just two affixes. What is the purpose of *P* as an *it*? It is used so that *ṄīP* can be distinguished (*viśeṣaṇārthaḥ*) from *ṄīN* and *ṄīṢ*. This *P*, as has already been stated, also accounts for *anudātta*.

2. Note that *ṛnnebhyaḥ* is interpreted as: 'after that which ends in *ṛ* and *n*'. Such an interpretation is possible only when one treats *ṛnnebhyaḥ* as a qualifier (*viśeṣaṇa*) to *prātipadikāt* (here read as *prātipadikebhyaḥ*), in accord with *tadantavidhi* 'treating a qualified (*viśeṣya*) as ending in that which qualifies (*viśeṣaṇa*)'.

4.1.6 उगितश्च

ugitaś ca
/*ugitaḥ* 5/1 = *ug it yasya* (*bv.*), *tasmāt; ca* ϕ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3)
ug id yatra sambhavati yathākathañcit tad ugic chabdarūpam, tadantāt striyām ṅīp pratyayo bhavati
Affix *ṄīP* occurs to denote feminine also after a form which ends in an *it* denoted by the abbreviatory term *uK* (*u, ṛ, ḷ*; cf. *Śs.* 1-2).

EXAMPLES:

bhavatī 'you (feminine polite of *bhavat*)'
atibhavatī 'you (feminine extremely polite)'
pacantī 'she who is cooking'
yajantī 'she who is performing a ritual sacrifice'

1. Note that *uK* denotes *u, ṛ, ḷ*. The form *ugit* is interpreted as a *bahuvrīhi* compound parallel to *ug it yasya* 'that which has sounds denoted by *uK* as an *it*'. We know that the meaning of a *bahuvrīhi* falls outside of its constituent meanings (*anyapadārtha*). Can *prātipadika* of *prātipadikāt* be accepted as the denotatum of the *bahuvrīhi* compound *ugit*? That is, can *ugit* be accepted as a modifier (*viśeṣaṇa*) to *prātipadika*? To accept *prātipadikāt* as a qualified (*viśeṣya*) for *ugit* will facilitate the introduction of *ṄīP* in *bhavatī* and *mahatī*, where nominal stems *bhavatŨ* and *mahatŨ* have *Ũ* as an *it*. But this interpretation will block *ṄīP* in examples such as *gomatī* 'a river; she who is rich in cows' where it is affix *matUP*, and not the nominal stem *go*, which has *uK* as an *it*. Examples such as *arvatī* 'mare' will also be excluded since what is an *ugit* there is *tṚ*, a replacement of *n* of *arvan*, itself an *ugit*. It is therefore suggested that *ugit* be interpreted not as a nominal stem but as a qualifier.

This qualifier status of *ugit*, when read with *prātipadikāt*, will facilitate *tadantavidhi* and yield the following interpretation:

> 'affix *ṄīP* occurs after a nominal stem which ends in a form containing a sound denoted by the abbreviatory term *uK* as an *it*'

2. A *vārttika* proposes that roots with *uK* as an *it* should be excluded from the scope of this rule. This will exclude roots *saṃsŪ* and *dhvaṃsŪ* of *ukhāsrat* 'fallen from a pot' and *parṇadhvat* 'fallen from a leaf'. An additional *vārttika* suggests that forms ending in affix *añcŪ* should be included to enable the derivation of *prācī* 'east' and *pratīcī* 'west' with *ṄīP*. The *Mahābhāṣya* rejects this *vārttika*, and accepts *yogavibhāga*, whereby *anyatarasyām* of rule 4.1.8 *pādo' nyatarasyām* will be treated as a rule by itself. It will be accepted as a residual (*śeṣa*) rule to 4.1.6, 4.1.7 and 4.1.8. This rule will then be treated as *vyavasthitavibhāṣā*, whereby a *dhātu* which qualifies as *ugit* will receive *ṄīP* only when it ends in *añcŪ*

4.1.7 **वनो र च**

> *vano ra ca*
> /*vanaḥ* 6/1 *ra* (deleted 1/1) *ca* ϕ/
> (*pratyayaḥ* #3.1.1, *paraś ca* ϕ #3.1.2, *prātipadikāt* #1, *striyām* #3)
> *vannantād prātipadikāt striyām ṅīp pratyayo bhavati rephaś cāntādeśaḥ*
> Affix *Ṅīp* occurs to denote feminine after a nominal stem which terminates in *van*, with an additional provision that *r* comes in place of the final sound of that which ends in *van*.

EXAMPLES:

> *dhīvarī* 'fisherman's wife'
> *pīvarī* 'a fat woman'
> *śarvarī* 'night; Rati, Kāma's wife'
> *paralokadṛśvarī* 'a female; capable of seeing through the world beyond'

1. Commentators state that 4.1.5 *ṛnnebhyo* ... could easily account for derivates of this rule. For, stems which end in *van* also qualify as those which end in *n*. A separate formulation of this rule is needed so that *r* can be concurrently be introduced as a replacement.

Note that *van* is a cover term for affixes *KvanIP*, *vanIP* and *ṄvanIP*. These affixes enable their bases to qualify as those ending in *n*. That is, *van* of the rule means: that (a nominal stem) which ends in *van* (*vann-antāt prātipadikāt*). Commentators state that *van* also refers to a nominal stem which ends in a form ending in affix *van*. That is, *van* means: a nominal stem which ends in a nominal stem ending in *van* (*vann-antāt prātipadikāntāt prātipadikāt*). This second interpretation is gotten via *Paribhāṣā* (24): *pratyayagrahaṇe yasmāt sa vihitas tadādes tadantasya grahaṇam* 'that after which an affix is introduced

refers not only to a form which ends in that affix, but also to that which ends in the form ending in that affix'.

The word-form *van* cannot be here interpreted as denoting verbal root *vanU* 'to beg', because 'a specification relatable to both an affix (*pratyaya*) as well as a non-affix (*apratyaya*), is interpreted as referring to an affix alone' (*Paribhāṣā* (111): *pratyayāpratyayayoḥ pratyayasyaiva grahaṇam*). Besides, interpreting *van* to refer to verbal root *vanU* would not make any sense.

A *vārttika* states that this rule cannot introduce *ṄīP* after a form which, prior to introduction of an affix denoted by *van*, ended in a sound segment denoted by the abbreviatory term *hŚ* (*Śs.* 5-10; *vano na haśaḥ*). Consider *śarvarī* where a *van* affix has been introduced after *śṛ* which does not end in *hŚ*. A form, such as *śar* which ends in *r* is produced through application of *guṇa* before *van*. Now consider *sahayudhvā brāhmaṇī* where *sahayudh*, which ends in *dh* (a *hŚ*), receives *kvanIP* (3.2.94 *dṛśeḥ kvanip*). Affix *ṄīP*, and *r* as a replacement for *n* as well, are thus blocked.

4.1.8 पादोऽन्यतरस्याम्

pādo' nyatarasyām
/*pādaḥ* 5/1 *anyatarasyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3)
pādantāt prātipadikād anyatarasyāṃ striyāṃ ṅīp pratyayo bhavati
Affix *ṄīP* optionally occurs to denote feminine after a nominal stem which ends in *pād* 'foot'.

EXAMPLES:

dvipāt 'that which has two feet'
dvipadī 'id'.
catuṣpāt 'that which has four feet'
catuṣpadī 'id'.
sahayudhvā brāhmaṇī 'a Brāhmaṇa woman who was a fighting companion'

1. This rule specifies *pādaḥ*, an ablative of *pād*, where the *samasānta* affix *ṬaC*, of *pāda*, has already been deleted. That is, *pād*, with deleted *ṬaC*, occurs at the end of a compound. Thus, *dvipād* is a *bahuvrīhi* compound originally with the form *dvipāda*. Rule 5.4.140 *saṃkhyā*... deletes its final *a*, subsequent to which *pād* is replaced with *pad* by rule 6.4.130 *pādaḥ pat*. We will get *dvipād* if the option of *ṄīP* is not accepted. Recall that 6.4.130 *pādaḥ pat* is contained within the subdomain of 6.4.129 *bhasya*. Our string *dvipād* cannot be termed *bha* unless affix *ṄīP* is introduced. Lack of assignment of the term *bha* blocks the replacement of *pād* by *pad*. The *d* of *dvipād* is optionally replaced with *t* (*cartva*) of 8.4.55 *vā' vasāne*.

4.1.9 टाबृचि

ṭāb ṛci
/*ṭāp* 1/1 *ṛci* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *pādaḥ* #8)
ṛci vācyāyāṃ pādantāt prātipadikāt striyāṃ ṭāp pratyayo bhavati
Affix *ṬāP* occurs after a nominal stem which ends in *pād*, to denote feminine, when a hymn (*ṛcā*) is signified.

EXAMPLES:

dvipadā ṛk 'a hymn with two quarters'
tripadā ṛk 'a hymn with three quarters'
catuṣpadā ṛk 'a hymn with four quarters'

1. Note that our preceding rule makes a provision for *ṄīP*. This rule overrides that provision by introducing *ṬāP* under the special meaning condition of *ṛcā*. The sense of locative in *ṛci* is that of denotation (*abhidheya*). That is, this locative does not denote scope (*viṣaya*). For, a scope interpretation will restrict this rule to the *Ṛgveda*. Accepting the denotational meaning of locative will let this rule apply everywhere (*Nyāsa: yadi hi viṣaya-nirdeśaḥ syāt . . . ṛggrantha eva syāt, nānyatra; abhidheya-nirdeśe ti sarvatra bhavatīti bhāvaḥ*).

4.1.10 न षट्स्वस्रादिभ्यः

na ṣaṭsvasrādibhyaḥ
/*na* ϕ *ṣaṭsvasrādibhyaḥ* 5/3 = *svasā ādir yeṣām te svasrādayaḥ; ṣaṭ ca svasrādayaś ca* = *ṣaṭsvasrādayas, tebhyaḥ* (*bv.* with int. *itar. dv.*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ajādyataṣ ṭāp* #4, *ṛnnebhyo ṅīp* #5)
ṣaṭsaṃjñakebhyaḥ svasrādibhyaś ca prātipadikebhyaḥ strīpratyayo na bhavati
An affix which denotes feminine does not occur after a nominal stem which is termed *ṣaṭ* (1.1.24 *ṣṇāntā ṣaṭ*), or is listed in the group headed by *svasṛ* 'sister'.

EXAMPLES:

pañca brāhmaṇyaḥ 'five Brāhmaṇa women'
sapta brāhmaṇyaḥ 'seven Brāhmaṇa women'
svasā 'sister'
duhitā 'daughter'
nanāndā 'husband's sister'
yātā 'husband's brother's wife'
catasraḥ 'four . . .'

1. Note that this rule negates all feminine affixes which have been made available thus far (*Kāś.: yo yataḥ prāpnoti sa sarvaḥ pratiṣidhyate*). It should not

be interpreted simply as a negation of *ṄīP*, since *ṄīP* constitutes the most immediate context (*anantaratvāt*). Our rule also negates *ṬāP*. Incidentally, *ṄīP* still forms the most immediate context since a provision for *ṬāP* of 4.1.10 *ṭāb ṛci* is made against it. Besides, this *ṬāP* is not intended to be carried via *anuvṛtti* (*asvaritavāt*).

It is argued that items termed *ṣaṭ* are number words (*saṃkhyā*), and as such, they simply facilitate comprehending quantitative differences of things. They do not facilitate any understanding of gender per se. Comprehension of gender takes place via syntactic coordination (*sāmānādhikaraṇya*) of number words with things which they distinguish (*Nyāsa*: *saṃkhyāś ca bhedamātraṃ dravyasya pratyāyayanti, na strītvam; yā tu tasya strītvapratītiḥ sā śabdāntareṇa sāmānādhikaraṇyād bhavati*). A negation of feminine in relation to *ṣaṭ*, when the same is not made available, is vacuous (*vyartha*). Negation (*pratiṣedha*) makes sense only when a positive provision is available. It was made clear in connection with 4.1.3 *striyām* that a qualifier, such as *śukla* 'white', qualifies for a feminine affix in accord with its qualified. This same is also true of items termed *ṣaṭ*.

2. Note that *pañca* (of *pañca brāhmaṇyaḥ*) and *catasṛ* represent two sets of derivates where feminine affixes are negated. The first word is blocked from receiving *ṄīP* (of 4.1.5 *ṛnnebhyo ṅīp*) which was available in view of the final *n* of *pañcan* 'five'. Recall that 1.1.24 *ṣṇāntā ṣaṭ* assigns the term *ṣaṭ* to *pañcan* on account of its final *n*. Thus, given *pañcan* + *Jas* we get *pañcan* + (*Jas*→ϕ) = *pañca* (*n*→ϕ), where 7.1.22 *ṣaḍbhyo luk* and 8.2.7 *nalopaḥ prātipadikāntasya* are responsible for deleting *Jas* and *n*, respectively. The second example *catasṛ* becomes an exception to 4.1.5 because *catasṛ* is a replacement for *catur* (7.2.99 *tricaturos striyām* . . .). This negation of *ṄīP* and *ṬāP*, conditioned by *ṣaṭ*, is applicable also items which end in a *ṣaṭ*. For example, consider *priyapañcā* of *priyapañcā draupadī* 'Draupadī for whom five are dear'.

A question is asked as to why an item termed *ṣaṭ* cannot qualify for *ṬāP* after deletion of its *n* has taken effect. Why *pañca*, at the strength of now ending in *a*, cannot get *ṬāP* (*ṣaṭsaṃjñānām ante lupte ṭāb utpattiḥ kasmān na syāt*)?. One cannot argue here that this negation then would become vacuous (*vyartha*). This negation would have served its purpose by blocking the next immediate (*anantara*) *ṄīP* anyway (*Paribhāṣā* (62): *anantarasya vidhir bhavati pratiṣedho vā*). It is stated that *ṬāP* can be blocked by accepting the deleted *n* of *pañcan* as suspended (*asiddha*; 8.2.2 *nalopaḥ supsvarasaṃjñātugvidhiṣu*). But how could *n*-deletion be treated as *asiddha* when operations relative to *ṬāP* are not included within the scope of 8.2.2. This scope of *ṬāP* comes well within the scope of *sub-vidhi* of 8.2.2 when one accepts the formation of the abbreviatory term *sUP*, formed with *sU* of 4.1.2 *svaujas* . . . and the *P* of 4.1.74 *yaṅaś cāp*. That is, *ṬāP* cannot be introduced because deletion of *n* will become *asiddha*. But accepting the formation of the abbreviatory term (*pratyāhārā*) *sUP* with the *P* of 4.1.74 *yaṅaś cāp*, to include operations

relative to *ṬāP*, will create problems elsewhere. The *Mahābhāṣya* discusses this, and other aspects of this problem, in detail. Patañjali rejects this notion of *asiddhatva*, especially in the derivational context of *bahucarmikā nagarī* 'a city with hide in abundance', where *n*-deletion of *bahucarman*, if treated as *asiddha*, will block the *i* (*itva*) of 7.3.44 *pratyayasthāt kāt*. . . . That is, given *bahucarmaka* + *ṬāP*, the *a* of *aka* cannot be found immediately before the *k*. For, the deleted *n* of *bahucarman* will then be there through *asiddhatva*. This will then block *itva*.

Consequently, '*striyām*' *ity arthamātram apekṣya tatra yad uktaṃ bhavati tan na bhavati* 'that (*ṄīP* and *ṬāP*) which is provided there in view of denotation of meaning specified by *striyām* does not apply here'.

4.1.11 मनः

manaḥ
/*manaḥ* 5/1/
(*pratyayaḥ*#3.1.1, *paraś ca*#3.1.2, *prātipadikāt*#1, *striyām*#3, *ṅīp*#5 *na* #10)
mannantād prātipadikān ṅīp pratyayo na bhavati
Affix *ṄīP* does not occur to denote feminine after a nominal stem which ends in *man*.

Examples:

dāmā 'nominative singular of *dāman* 'rope''
dāmānau 'nominative dual of *dāmān*'
dāmānaḥ 'nominative plural . . .'
sīmā 'nominative singular of *sīman* 'limit, parting of hair''
sīmānau 'nominative dual . . .'
sīmānaḥ 'nominative plural . . .'
atimahimā 'nominative singular of *atimahiman*; he who has excelled in glory'
atimahimānau 'nominative dual . . .'
atimahimānaḥ 'nominative plural . . .'

1. This rule negates the provision of 4.1.5 *ṛnnebhyo ṅīp*.

2. Note that *man* refers here to forms which end in affixes, for example, the *Uṇādi* (IV.144) *manIN*, etc. Commentators explain that *man* must also refer to any stem which may end in *man*. That is *man* does not have to be affix *man*. How do we know this? From *paribhāṣā* (17): *aninasmangrahaṇān arthavatā cān arthakena ca tadantavidhiṃ prayojayanti* 'specifications made by means of *an*, *in*, *as* and *man*, entail *tadantavidhi*, a process whereby that by means of which a specification is made refers also to that which ends in it, whether or not *an*, etc., are meaningful'. This *paribhāṣā* has been read in the *Mahābhāṣya* under rule 1.1.72 *yena vidhis tadantasya*. Note that *sīman* and *atimahiman* end in *man*, though *man* is not an affix. That is, *man* is not mean-

ingful. Examples such as *pāman* 'skin disease' and *dāman* 'rope, string', with nominative forms such as *pāmā, pāmānau, pāmānaḥ*; and *dāmā, dāmānu, dāmānaḥ*, do terminate in affix *man*. This *man* is meaningful because of being an affix.

4.1.12 अनो बहुव्रीहेः

ano bahuvrīheḥ
/*anaḥ* 5/1 *bahuvrīheḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīp* #5, *na* #10)
annantād bahuvrīheḥ striyām ṅīp pratyayo na bhavati
Affix *ṄīP* does not occur to denote feminine after a *bahuvrīhi* nominal stem which ends in *an*.

EXAMPLES:

suparvā 'nominative singular of *suparvan*; . . . whose joints are beautiful'
suparvāṇau 'nominative dual . . .'
suparvāṇaḥ 'nominative plural . . .'
sucarmā 'nominative singular of *sucarman*; . . . whose skin is beautiful'
sucarmāṇau 'nominative dual . . .'
sucarmāṇaḥ 'nominative plural . . .'

1. Note that *bahuvrīheḥ* simply means 'after a *bahuvrīhi* compound'. Our examples, though, illustrate only one kind of *bahuvrīhi*, namely, that which ends in *an* but does not go through deletion of its penultimate (*upadhālopa*) sound. Rule 4.1.28 *ana upadhālopino' nyatarasyām* will make an optional provision for *ḌāP*, against *ṄīP*, in case of *bahuvrīhi* compounds which end in *an*, and go through deletion of their *upadhā*. The fact that this rule covers instances of *bahuvrīhi* compounds which end in *an*, with no deletion of their *upadhā*, becomes known by process of elimination (*pāriśeṣyāt*). Also, this rule negates *ṄīP* against optional *ḌāP* of the next rule, and optional *ṄīP* of 4.1.28 *anupadhālopino*. . . . That is, this rule blocks *ṄīP* in toto. The *ḌāP* of the next rule is made optional to absence of a feminine affix.

Why do we have to include the condition of *bahuvrīheḥ*? So that *atirājī*, a *tatpuruṣa* compound parallel to *atikrāntā rājānam* 'she who has excelled the king', may not qualify for *ṄīP*.

4.1.13 डाबुभ्यामन्यतरस्याम्

ḍāb ubhābhyām anyatarasyām
/*ḍāp* 1/1 *ubhābhyām* 5/2 *anyatarasyām* 7/1/
(*pratyayaḥ* #3.3.3, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3)
ḍāp pratyayo bhavati ubhābhyām; mannantād prātipadikād annantāc ca

bahuvrīher anyatarasyām
Affix *ḌāP* optionally occurs after both, i.e., a nominal stem which ends in *man* and a *bahuvrīhi* compound which ends in *an*.

EXAMPLES:

pāmā
pāme
pāmāḥ
sīmā
sīme
sīmāḥ
bahurājā 'nominal singular of *bahurājā*, an assembly of many kings'
bahurāje 'nominative dual . . .'
bahurājāḥ 'nominative plural . . .'
bahudhīvā 'a very clever female'
bahudhīvarī 'id.'
bahupīvā 'a very fat female'
bahupīvarī 'id.'

1. Note that *ubhābhyām* 'after both . . .' refers to nominal stems which (*i*) end in *man* (4.1.11 *manaḥ*); or (*ii*) constitute a *bahuvrīhi* compound ending in *an* (4.1.12 *ano bahuvrīheḥ*). These two categories of stems are not allowed *ṄīP* in view of the two preceding rules. The *ṄīP* which is negated here may become available to these stems by rule 4.1.5 *ṛnnebhyo ṅīp*. Our present rule makes an optional provision for *ḌāP* against the negation of *ṄīP*. The word *ubhābhyām* restricts optional *ḌāP* to two categories of specified stems. Examples, such as *sīmā/ sīme/ sīmāḥ*, illustrate the option of *ḌāP*. Affix *ṄīP* must remain negated in cases where this optional *ḌāP* is not accepted. This will yield forms, such as *sīmā/ sīmānau/ sīmānaḥ*, where no feminine affix is introduced. An optional *ḌāP*, in the context of a *bahuvrīhi* compound ending in *an*, produces examples such as *bahurājā/ bahurāje/ bahurājāḥ*. Not accepting this option will again lead to negation of *ṄīP* (4.1.12 *ano bahuvrīheḥ*). This will produce examples such as *bahurājā/ bahurājānau/ bahurājānaḥ*, with no choice of a feminine affix. Note that this optional provision for *ḌāP* would cause *ṭi*-deletion in a presuffixal base termed *bha* (6.4.143 *teḥ*). Not accepting *ḌāP* would result in retention of the base-final *n*.

2. What is the purpose of *anyatarasyām* in this rule (*Kāś.*: *anyatarasyāṃ grahaṇaṃ kimartham*)? Is *anyatarasyām* used here to allow negation of *ṄīP* in cases where option of *ḌāP* is not accepted? Or is it used for allowing option of *ṄīP* against its own negation, or else, against the option of *ḌāP* just proposed. The first interpretation is not appropriate (*ādyaṃ tāvad ayuktam*) since *ḌāP*, and a negation of *ṄīP* as well, is already made available by the explicit statement of *ḍāb ubhābhyām* (4.1.13) '*ḌāP* after both . . . (*vacanasāmarthyāt*)'. Obviously, this provision of *ḌāP* cannot be made optional to

the obligatory negation of ṄīP. A non-application of negation, or of optional ḌāP, will make both provisions meaningless. Thus, they both will have to be applied: ṄīP obligatorily, and ḌāP optionally. This interpretation is possible even without the explicit use of *anyatarasyām*.

The second interpretation is also inappropriate (*dvitīyam apy ayuktam*). For, if *anyatarasyām* is intended to provide the option of ṄīP to a *bahuvrīhi*, with no deletion of its *upadhā* (4.1.28 *ana upadhālopino'nyatarasyām*), then negation of 4.1.12 *ano bahuvrīheḥ* will become useless. If *anyatarasyām* is, instead, understood as providing the option of ḌāP to *bahuvrīhi* stems which go through deletion of their *upadhā* but which do not take the option of ṄīP of 4.1.28 *ana upadhālopino'nyatarasyām*, then it does not make any sense. For, *anyatarasyām* of 4.1.28 itself will account for option of ḌāP. The *anyatarasyām* of this rule is thus not required.

Kāśikā states that *anyatarasyām* should be used here for offering ḌāP as an option to ṄīP of 4.1.7 *vano ra ca*, which, without this *anyatarasyām*, will remain negated because of 4.1.12 *ano bahuvrīheḥ* (*Nyāsa*: *ṅībrephāv aprāptau, 'ano bahuvrīheḥ' iti pratiṣedhāt; tasmāt tadvidhānārtham anyatarasyāṃ grahaṇaṃ kartavyam*). Consider *bahudhīvā* and *bahudhīvarī* as examples. The *Mahābhāṣya* proposes split-interpretation (*yogavibhāga*) of this rule as follows:

(*i*) *ḍāb ubhābhyāṃ bhavati*, where both *manaḥ* (4.1.11) and *ano bahuvrīheḥ* are carried;

(*ii*) *anyatarasyām*, where *ano bahuvrīheḥ* alone is carried.

This second split-rule is intended for making affix ṄīP (of 4.1.5 *ṛnnebhyo ṅīp*), and replacement in *r* for *n* (of 4.1.7 *vano ra ca*), both optionally available.

4.1.14 अनुपसर्जनात्

anupasarjanāt

/*anupasarjanāt* 5/1 = *na upasarjanam* = *anupasarjanam* (*nañ. tat.*); *tasmāt*/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3)

yad ita ūrdhvam anukramiṣyāmo'nupasarjanād ity evaṃ tad veditavyam

Affixes enumerated hereafter occur after a nominal stem which is not termed an *upasarjana* (1.2.43 *prathamā nirdiṣṭaṃ samāsa upasarjanam*).

EXAMPLES:

kurucarī 'she who wanders in the country of the Kurus'
madracarī 'she who wanders in the country of Madras'

1. This is an *adhikāra*, valid through 4.1.77 *yūnas tiḥ*. Note that *anupasarjana*, of *anupasarjanāt*, is explained by rule 1.2.43 *prathamānirdiṣṭaṃ samāsa upasarjanam* as a compound constituent which is specified with nominative (*prathamā*) in a rule allowing formation of compounds.

The word *anupasarjana* 'non-secondary', of *anupasarjanāt*, is a negation (*pratiṣedha*) of the *prasajya* type yielding the interpretation: *upasarjanān ṅībādayo na bhavanti* 'affixes *ṄīP*, etc., do not occur after an *upasarjana*'. A *paryudāsa* interpretation will yield the interpretation: *upasarjanād anyasmān ṅībādayo bhavanti* 'affixes *ṄīP*, etc., occur after a form other than an *upasarjana*'. The first interpretation is a straight negation (*niṣedha*). It will not permit affix *ṄīṢ*, in *kukkuṭīpādaḥ*, because *kukkuṭī* will be termed an *upasarjana* by rule 2.2.8 *ṣaṣṭhī* where *ṣaṣṭhī*, a *pada* ending in genitive, is specified with nominative (*prathamā*). This argument is not valid since introduction of *ṄīṢ* will take place prior to compound-formation at the strength of being internally conditioned (*antaraṅga*). The formation of compound, an externally conditioned operation, will take place with *kukkuṭī* as a constituent ending in *ṄīṢ*. But the *ṄīṢ* of *kukkuṭī* will also be blocked. How? The word *anupasarjana* means *pradhāna* 'principal'; and *kukkuṭī* denotes *jāti* 'class'. A *pradhāna* is comprehended relative to an *apradhāna* 'secondary'. We do not have anything non-principal, or secondary, relative to which *kukkuṭa* can be accepted as 'principal'. Consequently, the *paryudāsa*, or operational interpretation of negation, is faulty (*tasmād vidhi pakṣo'yaṃ duṣṭaḥ*). The negation in *anupasarjanāt* is therefore accepted as *prasajya*, whereby we understand that '*ṄīP*, etc., do not occur after that which is *upasarjana* 'secondary; non-principal'.'

Now consider *kurucarī*, a *tatpuruṣa* compound (2.2.19 *upapadam atiṅ*) formed with *kuru* + *sUP* and *cara*, where *cara* is a derivate of *Ṭa* (3.2.16 *careṣ ṭaḥ*), a *kṛt* affix introduced after verbal root *car* under the co-occurrence condition of *kuru* + *suP*. The word *cara* cannot be accepted as an *upasarjana* since it is part of a *tatpuruṣa* compound where meaning of the following constituent is principal (*uttarapadapradhāna*). It can also not be accepted as an *upasarjana* because it is not specified with a nominative in the wording of the rule which allows formation of this compound. Consequently, we get affix *ṄīP*. The same could not be true of *bahukurucarā* 'an area full of those who wander in the country of the Kurus', a *bahuvrīhi* compound where individual constituents are all considered as *upasarjana*. A *ṄīP* will thus be blocked. Incidentally, the final *a* of *kurucara* and *madracara* will be deleted by 6.4.147 *yasyeti ca*, before the *ṄīP* of 4.1.15 *ṭiḍḍhāṇañ*. . ., of course, introduced at the strength of *Ṭ* as an *it* in affix *Ṭa*.

2. Note that *anupasarjanāt* qualifies *prātipadikāt* which, when read with *ataḥ* of 4.1.4 *ajādyataṣ ṭāp*, will yield this following interpretation:

> 'an affix occurs to denote feminine after a nominal stem which ends in *a*, and is not an *upasarjana* . . .'

This negation of *anupasarjanāt* is not required if *tadantavidhi* 'a specification made by an item also refers to that which ends in that item' is not accepted. For, *Paribhāṣā* (32): *grahaṇavatā prātipadikena tadantavidhir nāsti*

'*tadantavidhi* becomes inoperative when a specification happens to be made by enumerating individual nominal stems'. But *anupasarjanāt* is required for offering negation (*pratiṣedha*) in the following rules. The negation itself cannot be accomplished without accepting the notion of *tadantavidhi*. What is the way out of this difficulty? *Kāśikā* states that *tadantavidhi* is operative in this section (*asmin prakaraṇe tadantavidhir iti*). But it becomes operative only in the context of that which is 'non-secondary' or 'principal'. A *vārttika* (*śūdrā cāmahatpūrvā jātiḥ*) under 4.1.4 *ajādyataṣ ṭāp* makes this known. If *tadantavidhi* is not accepted then, given *pratyayagrahaṇe yasmāt sa vihitas tadādes tadantasya ca grahaṇaṃ bhavati* 'a specification made with an affix refers to a form which begins with the base after which that affix is introduced, and also to the form which ends in that affix', the *aṆ* of the next rule will refer to a form which ends in *aṆ*. We can thus derive *aupagavī* 'female descendant of Upagu' with the introduction of *ṄīP* after *aupagava*, a *taddhita* derivates ending in *aṆ*. But this *paribhāṣā* will create problems in deriving *kumbhakārī* 'a female potter' where *kāra* is a derivate ending in *aṆ*. The compound base *kumbhakāra* cannot be accepted as ending in a form (*kāra*) which, in turn, ends in *aṆ*. That is, *kāra* alone can qualify to receive the affix. A *tadantavidhi* interpretation will facilitate affixal introduction after *kumbhakāra*, a form ending in *kāra* (*Nyāsa*: *tadantavidhau tu jñāpite kāraśabdāntād apīkāraḥ sidhyati*). Incidentally, *aṆ* of next rule is interpreted as a *taddhita* (4.1.83 *prāg dīvyato'ṇ*) as well as a *kṛt* (3.2.1 *karmaṇy aṇ*).

4.1.15 टिड्ढाणञ्द्वयसज्दघ्नञ्मात्रच्तयप्ठक्ठञ्कञ्क्वरपः

ṭiḍḍhāṇañdvayasajdaghnañmātractayapṭhakṭhañkañkvarapaḥ
/ *ṭiḍḍhāṇañ . . . kvarapaḥ* 5/1 = *ṭa it yasya sa ṭit* (*bv.*); *ṭic ca ḍhaś ca . . . kvarap ca* = *ṭiḍḍhāṇañ . . . kvarap* (*sam. dv.*); *tasmāt*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3)
ṭidādibhyaḥ prātipadikebhyaḥ striyāṃ ṅīp pratyayo bhavati
Affix *ṄīP* occurs to denote feminine after nominal stems which end in *a* (*adanta*) and have, as their final (*antya*), a non-secondary (*anupasarjana*) form either marked with *Ṭ*, or ending in affixes *ḍha*, *aṆ*, *aÑ*, *dvayasaC*, *daghnaC*, *mātraC*, *tayaP*, *ṭhaK*, *ṭhaÑ*, *kaÑ* and *KvaraP*.

EXAMPLES:

kurucarī 'she who wanders in the country of the Kurus'
madracarī 'she who wanders in the country of the Madras'
sauparṇeyī 'a female descendent of Suparṇī'
vainateyī 'a female descendent of Vinatā'
kumbhakārī 'she who makes pots'
nagarakārī 'she who builds cities; a female architect'
autsī 'a female descendent of Utsa'
audapānī 'a female descendent of Udapāna'

urudvayasī 'a river with chest-deep water'
ūrudaghnī 'id.'
ūrumātrī 'id.'
jānudvayasī 'a river with knee-deep water'
jānudaghnī 'id.'
jānumātrī 'id.'
pañcatayī 'that which has five parts'
daśatayī 'that which has ten parts'
ākṣikī 'a female who gambles with dice'
śālākikī 'id.'
lāvaṇikī 'a female who sells salt'
yādṛśī 'the (feminine) kind which . . .'
tādṛśī 'that (feminine) kind . . .'
itvarī 'she who is in haste'
naśvarī 'she who will perish; fragile'
āḍhyaṃkaraṇī 'she who makes one rich'
subhagaṅkaraṇī 'she who brings prosperity'

1. Note that *ataḥ* 'that which ends in *a*' is carried everywhere as a qualifier to nominal stems (*Kāś.*: *ataḥ iti sarvatrānuvartate*). It is used as such where possible (*tat sati sambhave viśeṣaṇam bhavati*). It is treated as carried for subsequent rules where context of a given rule requires otherwise (*Nyāsa*: *yatra sambhavati tatra viśeṣaṇaṃ bhavati, yatra tu na sambhavati tatrottarārtham eva* . . .). Note that this entire rule, along with *ataḥ*, serves as a qualifier to *prātipadikam*, especially in accord with *tadantavidhi*. Thus, *ataḥ*, read with *prātipadikāt*, will be interpreted as: after a nominal stem which ends in *a*. The word *Ṭit* can similarly refer to a nominal stem which is either marked with *Ṭ* as an *it*, or else, ends in that which is marked as such. Affixes *ḍha*, etc., will yield the interpretation: 'after a nominal stem which ends in affix *ḍha*, etc., or ends in a form which ends in affix *ḍha*, etc.'. Remember, however, that referents of *ṭit* and *ḍha*, etc., must also qualify as an *anupasarjana* 'non-secondary' or 'principal'. Refer to notes under the preceding rule.

2. The word *ṭit* 'that which has *Ṭ* as an *it*' refers to two sets of forms: (*i*) an affix which has *Ṭ* as an *it*; and (*ii*) a nominal stem, or a verbal root, which may have *Ṭ* as an *it*. This rule accepts both of these interpretations. Thus we get *kurucarī* where *kurucara* is a nominal stem ending in *cara* which, in turn, ends in affix *Ṭa* marked with *Ṭ* as an *it*. There are also nominal stems, such as *nadaṬ*, *devaṬ* and *coraṬ*, etc., which are marked with *Ṭ* and are listed in the *pacādi* group. They yield forms such as *nadī* 'river', *devī* 'divine' and *corī* 'a female thief', etc. Similarly, we get *stanandhayī* 'a girl sucking on her mothers' breasts' where *dheṬ*, a verbal root ending in *Ṭ*, receives affix *KHaŚ* (3.2.29 *nāsikāstanayor*. . .) to derive *dhaya*. Note that *pacamāna* 'he who is cooking' and *yajamāna* 'he who is performing a ritual sacrifice' do not qualify for

their status as *ṭit* even though they involve affix *ŚānaC*, a replacement of *LAṬ* marked with *Ṭ*. Commentators state that *ṭit* status of *LAṬ*, for purposes of this rule, is not accepted. Why? Because it has two *it* elements. That is, *ekānubandhakagrahaṇe na dvyanaubandhakasya* 'a specification made with one *it* does not refer to a form with two *it* elements'. *LAṬ* also has *Ǎ* as an additional *it*. But this exclusion of *LǍṬ* will create problems: (*a*) not accepting *Ṭ* as an *it* renders the *ṭit* status of *LAṬ* as vacuous (*vyartha*); and (*b*) accepting the two *anubandha* as reason for exclusion must also exclude *LyuṬ*, etc., where *karaṇī* and *sāmagī* are derived with *ṄīP*, based upon *Ṭ* as an *it*. The *Ṭ* of *LAṬ* will not be useless because its purpose is basically to facilitate application of 3.4.79 *ṭit ātmanepadānāṃ ṭet e*. The *Ṭ* of *LyuṬ* must be included within the scope of this rule, otherwise, in its absence, making *LyuṬ* as *ṭit* will become useless (*ṭitkaraṇam anarthakaṃ syāt prayojanāntarāsambhavāt*). Besides, an operation conditioned by an *it* does not apply on a replacement of *LA* if the *it* happens to be contained within the *LA*. This is how *vakṣyamāṇā*, a derivate of *LṚṬ*, does not get *ṄīP* of 4.1.5 *ugitaś ca*, based upon *Ṛ* and *Ṭ* of *LṚṬ*. If the replacements of *LA* were also treated as marked with what they replaced then Pāṇini would not need to state *ṅic ca* in 3.4.103 *yāsuṭ parasmaipadeṣūdātto ṅic ca*. For, a replacement of *LIṄ* would then attain the status of *Ṅīt* anyway. Why then try to provide this status to a replacement via extension.

The tradition also restricts the *ṭit* status of an *āgama* 'augment' from conditioning the introduction of *ṄīP*. If the *ṭit* status of an *āgama* could condition the introduction of *ṄīP* then, in examples such as *sāyaṃtanī* 'relative to evening', *ṄīP* will already be available at the strength of *tUṬ* (5.3.23 *sāyaṃciram . . .*), the augment. Why then mark affixes *Ṭyu* and *ṬyuL* (5.3.23 *sāyaṃciram . . .*) with *Ṭ* as an *it*? Note that *sāyaṃtana*, of *sayaṃtanī*, derives from *sāyam* + *Ṭyu* with augment *tUṬ*. Thus, *sāyam* + *t* + (*yu*→*ana*) = *sāyaṃtana*. The *ṭit* status of *Ṭyu* and *ṬyuL* then becomes an indicator (*jñāpaka*). Consequently, *paṭhitā* of *paṭhitā vidyā* 'knowledge was attained' does not get *ṄīP* on account of the *ṭit* status of augment *iṬ*.

3. Note that affix *ḍha* is specified here without any indicatory symbol (*anubandha*). This, in view of *Paribhāṣā* (82): *niranubandhakagrahaṇe na sānubandhakasya*, would not allow an affix marked with *K*, for example *ḍhaK*, to also refer to *ḍha*, an affix with no *anubandha*. Consequently, this reference with *ḍha* will be limited to 4.4.106 *ḍhaś chandasi* and 5.3.102 *śilāyā ḍhaḥ*, where examples of the second rule will be characteristically limited to neuter (*Nyāsa*: *svabhāvata eva napuṃsake vartate*). Derivates of the first rule will also exclude feminine since a form such as **sabheyī* is not attested. We must therefore accept a reference by this *ḍha* to a *ḍha* which is used with an *anubandha*. This is the only way we can save this *ḍha* from becoming vacuous (*vyartha*). Refer to the appendix for derivational details.

4. A *vārttika*, under this rule, also recommends *ṄīP* after stems which (*i*)

either end in *naÑ* (*strīpuṃsābhyām nañsnañau bhavanāt*), *snaÑ*, *īkaK* and *KHyuN*, or (*ii*) are constituted by *taruṇa* and *taluna*. Thus, we get: *straiṇī* 'that which is found among women', *pauṃsnī* 'a female deserving of men', *śāktīkī* 'she whose weapon is a spear', *yāṣṭīkī* 'she whose weapon is her shaft', *āḍhyaṃkaraṇī* 'she who makes one rich', *taruṇī* 'young female' and *takunī* 'id.'.

4.1.16 **यञश्च**

yañaś ca
/*yañaḥ* 5/1 *ca* ϕ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *ṅīp* #5, *anupasarjanāt* #14)
anupasarjanād yañantāc ca prātipadikāt striyām ṅīp prartyayo bhavati
Affix *ṄīP* also occurs to denote feminine after a non-secondary nominal stem which ends in *yaÑ*.

EXAMPLES:

gārgī 'a female descendent of Garga'
vātsī 'a female descendent of Vatsa'

1. Why did Pāṇini not include affix *yaÑ* in the earlier rule. This would have saved him one rule. A split formulation is made so that affixes of the earlier rule could be stopped from being carried to the next rule (*yogavibhāga uttarārthaḥ*). That is, a joint formulation with *yaÑ*, because of its association (*sāhacarya*) with them, would also qualify them for application in the next rule. This next rule requires the *anuvṛtti* of *yaÑ* alone. This way, affix *Ṣpha* is restricted to occur only after stems which end in *yaÑ*, and not after stems which may end in an affix of the preceding rule.

A *vārttika* requires that, for purposes of this rule, a reference to *yaÑ* be limited to the domain of *apatya* (4.1.93 *tasyāpatyam*). That is, affix *yaÑ*, for example of 4.3.10 *dvīpād anusamudraṃ yañ*, which falls within the domain of 4.3.53 *tatra bhavaḥ* should be excluded. Such a restriction will facilitate the derivation of *dvaipyā* '. . . found in an island' with *ṬāP*.

4.1.17 **प्राचां ष्फ तद्धितः**

prācāṃ ṣphas taddhitaḥ
/*prācām* 6/3 *ṣphaḥ* 1/1 *taddhitaḥ* 1/1
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *anupasarjanāt* #14, *yañaḥ* #16)
prācām ācāryāṇāṃ matena yañantāt striyāṃ ṣphaḥ pratyayo bhavati sa ca taddhitasaṃjñaḥ
Affix *Ṣpha*, termed a *taddhita*, occurs, in the opinion of Eastern grammarians, to denote feminine after a non-secondary nominal stem which ends in *yaÑ*.

EXAMPLES:

gārgyāyaṇī 'a granddaughter of Garga'
vātsyāyanī 'a granddaughter of Vatsa'
gārgī 'id.'
vātsī 'id.'

1. This rule introduces affix *Ṣpha*, in the opinion of Eastern grammarians, as an option to *ṄīP* of the preceding rule.

2. Affix *Ṣpha* is assigned the term *taddhita* so that its derivates can be termed nominal stems (*prātipadīka*) as per 1.2.46 *kṛttaddhitasamāsāś ca*. A *Ṣ* as an *it* facilitates the application of 4.1.41 *ṣidgaurādibhyaś ca*.

Note that derivates of this rule denote feminine by means of two affixes: *Ṣpha* and *ṄīṢ*. Why should feminine be expressed by *ṄīṢ* of rule 4.1.41 *ṣid gaurādibhyaś ca* when the same is already expressed by affix *Ṣpha* of this rule? Commentators note that *Ṣpha* itself does not denote feminine. It is marked with *Ṣ* to facilitate the application of *ṄīṢ*. This makes denotation of feminine as a joint function of both *Ṣpha* and *ṄīṢ* (*Nyāsa*: *na hi kevalaḥ ṣphaḥ strītvam abhivyaṅktuṃ samartha iti ṅīṣam apekṣate*).

3. Commentators note that *sarvatra* 'everywhere' is brought here from the following rule so that no other provision can block the provision of this rule. For example, rule 4.1.75 *āvatyāc cāp* allows affix *CāP* to denote feminine after a nominal stem which terminates in *yaÑ*. A reading of *sarvatra*, from the following rule, will block rule 4.1.75 *āvaṭyāc cāp* from introducing *CāP*. Thus, *sarvatra* is to be brought to block a provision which may otherwise block the provision of this rule (*bādhakabābhanārtha*).

4.1.18 सर्वत्र लोहितादिकतन्तेभ्यः

sarvatra lohitādikatantebhyaḥ
/*sarvatra* ϕ *lohitādikatantebhyaḥ* 5/3 = *lohita ādir yeṣāṃ te* = *lohitādayaḥ*; *kata ante yeṣāṃ te* = *katantāḥ* (*bv.*) = *lohitādayaś ca te katantāś ca* (*karm. tat.* with int. *bv.*); *tebhyaḥ*/
(*pratyayah* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *anupasarjanāt* #14, *yañaḥ* #16, *ṣphas taddhitaḥ* #17)
sarvatra lohitādibhyaḥ kataparyantebhyo yañantebhyaḥ striyāṃ ṣphaḥ pratyayo bhavati
Affix *Ṣpha*, termed a *taddhita*, occurs to denote feminine, in the opinion of all grammarians, after a non-secondary nominal stem which ends in affix *yaÑ* and is enumerated in the list beginning with *lohita* 'read' through *kata*.

EXAMPLES:

lauhityāyanī 'granddaughter of Lohita'
śāṃsityāyanī 'granddaughter of Śaṃsita'

bābhravyāyanī 'granddaughter of Babhru'
śākalyāyanī 'granddaughter of Śakala'
śākalāḥ 'students of Śākalya'

1. Note that *sarvatra* means *sarveṣāṃ mate* 'in the opinion of all grammarians'. The nominal listing, specified here as *lohitādi*, is a subgroup within *gargādi*. The word *śakala* comes at the end of *lohitādi* which is the first *gaṇa* here. The second group of nominals, i.e., *kaṇvādi*, begins with *śakala* and extends through *kata*. Such a specification is made so that *śakala* could form the 'end' and 'beginning', respectively, of these two groups. What is this *tadantādi* 'forming the end and beginning of that' purpose of *śakala* in defining these two groups? A *lohitādi* ending in *śakala* defines the scope of *Ṣpha*. A *kaṇvādi*, with *śakala* at the beginning, defines the scope of *aṆ*. The following verse summarizes the specification:

kaṇvāt tu śakalaḥ pūrvaḥ katād uttara iṣyate/
pūrvottarau tadantādi ṣphāṇau tatra prayojanam//

This specification is needed to modify the order of listing in the *gaṇa*. That is, given the order: '*kapi, kata, kurukata, anaḍuh, kaṇva, śakala*', an effort is made to remove *kapi* and *anaḍuh* away, and place *śakala* in between *kata* and *kaṇva*. This will put *śakala* at the boundary of the two *gaṇas*. Why *śakala*? Because it can be used with *Ṣpha* and *aṆ* both. Thus, we get *śākalyāyanī* 'a granddaughter of Śakala' and *śākalāḥ* 'students of Śākalya'.

4.1.19 कौरव्यमाण्डूकाभ्यां च

kauravyamāṇḍūkābhyāṃ ca
/*kauravyamāṇḍūkābhyām* 5/2 = *kauravyaś ca māṇḍūkaś ca* = *kauravyamāṇḍūkau* (*itar. dv.*) *tābhyām; ca* ϕ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *anupasarjanāt* #14, *ṣphas taddhitaḥ* #17)
'*kauravya, māṇḍūka*' *ity etābhyām striyām ṣpha pratyayo bhavati*
Affix *Ṣpha*, termed a *taddhita*, also occurs to denote feminine after nominal stems *kauravya* and *māṇḍūka*.

EXAMPLES:

kauravyāyaṇī 'granddaughter of Kuru'
māṇḍūkāyanī 'granddaughter of Maṇḍūka'

1. Note that *Ṣpha* of *kauravyāyaṇī* and *māṇḍūkyāyanī* forms an exception to affixes *ṬāP* (4.1.4 *ajādyataṣ ṭāp*) and *ṄīP* (4.1.15 *ṭiḍḍhāṇañ* . . .), respectively. That is, *kauravya* qualifies for *ṬāP* because it ends in *a*. Affix *ṄīP* becomes available to *maṇḍūka* on the basis of its *aṆ*. Our present rule offers *Ṣpha* as an exception which, subsequently, leads to the introduction of *ṄīṢ* after *kauravyāyana* and *māṇḍūkāyana*. Our first stem *kauravya* derives from

kuru + *Ṅas* + *Ṇya* of 4.1.151 *kurvādibhyo ṇyaḥ,* through the application of 6.4.146 *or guṇaḥ* and 6.1.76 *vānto yi pratyaye.* Thus, *kuru* + *Ṅas* + *Ṇya* → *kuru* + *ya* → *kuru* + *ya* → *kur* (*o*→*av*) + *ya* → *kurav* + *ya.* Rule 7.2.117 *taddhiteṣv acām* . . . will replace the initial *u* with its *vṛddhi* counterpart *au,* based upon *Ṇya* being *Ṇit.* Affix *aṆ* is introduced after *maṇḍūka* + *Ṅas* (4.1.119 *ḍhak ca maṇḍukāt*) to derive *māṇḍūka* through initial *vṛddhi* and deletion of the final *a* of *maṇḍuka.* Deriving *kauravyāyaṇī* from *kauravya* + (*Ṣph*→*āyan*) *a* + *ṄīP*→ *kauravyāyanī* + *sU* = *kauravyāyaṇī,* involves operations such as *a*-deletion of *bha, āyan* as a replacement for *ph,* deletion of *sU* and *ṇatva.* Similar derivational steps are followed in deriving *māṇḍūkāyanī.*

2. A *vārttika* recommends that *āsuri,* derived with the introduction of *iÑ* after *asura* + *Ṅas,* also be enumerated as part of this rule. Obviously, this is intended to account for examples such as *āsurāyaṇī.*

4.1.20 **वयसि प्रथमे**

vayasi prathame
/ *vayasi* 7/1 *prathame* 7/1 /
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *ṅīp* #5, *anupasarjanāt* #14)
prathame vayasi yat prātipadikaṃ śrutyā vartate tataḥ striyāṃ ṅīp pratyayo bhavati
Affix *ṄīP* occurs to denote feminine after a non-secondary nominal stem which ends in -*a* and denotes the first stage of life.

EXAMPLES:

kumārī 'an adolescent female'
kiśorī 'id.'
varkarī 'a young she-goat'

1. Commentators explain *vayas* as a physical state brought about by *kāla* 'time'. They further illustrate it as *yauvanādiḥ* 'yough, etc.' *Kāśikā* states that affixal provisions of this rule apply to nominal stems which, no sooner they have been articulated, can make the listener comprehend the age (*śrutyā; śravaṇamātreṇa*). This is why *uttānaśayā* 'an adolescent female, she who sleeps on her back' and *lohitapādikā* 'she whose feet are red' cannot be covered by this rule. These stems literally do not denote age.

2. It is hard to exactly define the first stage of life. A two-way classification of age as 'young' and 'old' can be characterized with notions of *upacaya* 'growth of vital body elements' and *apacaya* 'decline of vital body elements'. Some accept four stages of life: *bālya* 'adolescence', *yauvana* 'youth', *madhya* 'middle' and *sthavira* 'old'. Commentators describe the age of *bālya* as covering the period through which one normally subsists on 'milk' and 'staples' (*kṣīrānna-vartakaḥ*). But some state that this also includes youth. In this view,

then, there will only be three stages of life where *bālya* and *yauvana* will be treated as one. For this reason, some just consider three relevant stages in life: the first when one pursues studies (*vidyā*), the second when one pursues pleasures of life or wealth (*dhana*), and the third when one practices austerity (*tapas*). But others subscribe to yet another notion of thee stages:

> *āṣoḍaśād bhaved bāto yāvat kṣīrānnavartakaḥ/*
> *madhyamaḥ saptatir yāvat parato vṛddha ucyate//*
> 'one is called an 'adolescent' till the age of sixteen when one subsists on milk and staples; the middle age extends up to seventy beyond which one is called old'

Our example *kumārī* 'a female adolescent' is, at times, also explained as not denoting the first part of life. It can also refer to a female with no sexual contact with a male (*puṃyogābhāva*). That is, a girl prior to her wedding. What if one does not get married for a long time? She cannot be called a *kumārī*? For, a female in her youth is called *strī* 'woman' (*prāptayauvanā stry abhidhīyate*), and a *kumārī* is no *strī*.

3. Some are inclined to interpret *prathame* of this rule as *acarame* '. . . non-final (old)'. If *prathame* refers to the '. . . non-old' stage of life then derivates denoting youth can also be covered by this rule. That is, we will not need any *vārttika* (*vayasy acarama iti vaktavyam*) for deriving *vadhūṭi* 'a female in her youth' and *ciraṇṭī* 'an unmarried woman (still residing with her parents)'.

4. Refer to the appendix of 4.1.2 for derivational details.

4.1.21 द्विगोः

> *dvigoḥ*
> */dvigoḥ 5/1/*
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *ṅīp* #5, *anupasarjanāt* #14)
> *dvigusaṃjñakād prātipadikāt striyām ṅīp pratyayo bhavati*
> Affix *ṄīP* occurs to denote feminine after a non-secondary nominal stem which ends in *a* and is termed *dvigu* (2.1.52 *saṃkhyā* . . .).

EXAMPLES:

> *pañcapūlī* 'a bundle of five bunches'
> *daśapūlī* 'a bundle of ten bunches'

1. The word *dvigu* here refers to a *samāhāradvigu* formed by 2.1.51 *taddhitārthottarapadasamāhāre ca*. A *vārttika* claims that this rule applies to only those *dvigu* compounds which contain a final constituent terminating in *a* (*akārāntottarapado dviguḥ striyām iṣṭaḥ*). Why then *triphalā* 'collection of three fruits' is derived with *ṬāP* (4.1.4 *ajādyataṣ ṭāp*)? Its stem is listed in the *ajādi* group. Refer to (62) *pañcapūli*, in the appendix of vol. III, for derivational details.

4.1.22 अपरिमाणबिस्ताचितकम्बल्येभ्यो न तद्धितलुकि

aparimāṇabistācitakambalyebhyo na taddhitaluki
/*aparimāṇa* . . . *kambalyebhyaḥ* 5/3 = *na parimāṇam* = *aparimāṇam* (*nañ. tat.*); *aparimāṇaṃ ca bistā ca ācitaś ca kambalyaṃ ca* = *aparimāṇa* . . . *kambalyāni* (*itar. dv.*), *tebhyaḥ*; *na* ϕ *taddhitaluki* 7/1 = *taddhitasya luk* = *taddhitaluk* (*ṣaṣ. tat.*), *tasmin*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *ṅīp* #5, *anupasarjanāt* #14, *dvigoḥ* #21)
aparimāṇāntād dvigor bistācitakambalyāntāc ca taddhitaluki sati ṅīp pratyayo na bhavati
Affix *ṄīP* does not occur to denote feminine after a non-secondary nominal stem termed *dvigu*, which ends in a constituent denoting 'non-measure' (*aparimāṇa*), or ends in *bista*, *ācita* and *kambalya*, provided deletion of a *taddhita* affix, by means of *LUK*, has taken effect.

EXAMPLES:

pañcāśvā '. . . purchased for five horses'
daśāśvā '. . . purchased for ten horses'
dvivarṣā '. . . she whose two years have passed'
trivarṣā '. . . she whose three years have passed'
dvibistā '. . . she who cooks grains cqual to two Bistas in weight'
dvyācitā '. . . she who cooks grains equal to two Ācitas in weight'
dvikambalyā '. . . purchased for two blankets'

1. This rule negates the provision of our preceding rule. *Kāśikā* offers *dvyāḍhakī* 'she who cooks something equal to two *āḍharkas* in weight' and *pañcāśvī* 'a herd of five horses' as counter-examples where the stem of the first ends in *āḍhaka* denoting 'measure'. The second stem does not meet the condition of deletion of its *taddhita* affix by *LUK*.

4.1.23 काण्डान्तात् क्षेत्रे

kāṇḍāntāt kṣetre
/*kāṇḍāntāt* 5/1 = *kāṇḍam ante yasya sa kāṇḍāntaḥ* (*bv.*), *tasmāt*; *kṣetre* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *ṅīp* #5, *anupasarjanāt* #14, *dvigoḥ* #21, *na taddhitaluki* #22)
kāṇḍaśabdāntād dvigos taddhitaluki sati kṣetre vācye ṅīp pratyayo na bhavati
Affix *ṄīP* does not occur to denote feminine after a non-secondary nominal stem termed *dvigu* which ends in *kāṇḍa*, if deletion of a *taddhita* affix by means of *LUK* has taken effect, and the derivate signifies (*kṣetra*).

EXAMPLES:

dvikāṇḍā kṣetrabhaktiḥ 'part of a field equal in measure to two Kāṇḍas; sixteen lower arm-lengths, or approximately twenty-four feet'

trikāṇḍā kṣetrabhaktiḥ 'part of a field equal in measure to three Kāṇḍas; twenty-four lower arm-lengths or approximately thirty-six feet'

1. Note that negation of *ṄīP* is already available with reference to *kāṇḍa* when something 'other than measure' (*aparimāṇa*) is denoted. This rule is formulated to restrict that negation of the earlier rule to the context of *kṣetra* (*Kāś.*: *kāṇḍa-śabdasyāparimāṇavācitvāt pūrveṇaiva pratiṣedhe siddhe kṣetre niyamārtham vacanam*). Thus, *dvikāṇḍī rajjuḥ* 'a rope equal in measure to two Kāṇḍas' cannot avail this negation, obviously because it does not denote *kṣetra.*

2. Why is the word *anta* used in this rule when its sense can be gotten via *tadantavidhi.* A formulation which excludes *anta,* for example *kāṇḍāt kṣetre,* will present *kṣetra* as a qualifier to *kāṇḍa.* This will give us the meaning *kṣetre yaḥ kāṇḍaśabdas tadantād dvigoḥ* '. . . after a *dvigu* which ends in *kāṇḍa* with the signification of *kṣetra.* . . .' Such an interpretation will not be able to block *ṄīP* in *dvikāṇḍā kṣetrabhaktiḥ* because *kāṇḍa* will then be denoting *pramāṇa* 'measure'. The sense of *kṣetra* will then be denoted by *dvikāṇḍa.* This interpretation will unnecessarily block *ṄīP* in *dvikāṇḍī vaḍavā* 'a mare purchased with land equal in measure to two Kāṇḍas'. An explicit use of *anta* cannot allow *kṣetra* to become a qualifier to *kāṇḍa* since, in that case, only that which ends in *kāṇḍa* can be qualified with *kṣetra.*

3. A derivate such as *dvikāṇḍā,* as in *dvikāṇḍā kṣetrabhaktiḥ,* parallel to *dve kāṇḍe pramāṇam asyāḥ,* will receive affix *mātraC* (5.2.37 *dvyasajdaghnacmātrac*). But this, or for that matter *dvyasaC* and *daghnaC* as well, will be deleted (cf. *vt.* ad 5.2.37 *pramāṇe*. . .: *dvigor nityam*). Affix *ṄīP* is now blocked in favor of *ṬāP.*

4.1.24 पुरुषात्प्रमाणेऽन्यतरस्याम्

puruṣāt pramāṇe' nyatarasyām
/*puruṣāt* 5/1 *pramāṇe* 7/1 *anyatarasyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *ṅīp* #5, *anupasarjanāt* #14, *dvigoḥ* #21, *na taddhitaluki* #22)
pramāṇe yaḥ puruṣaśabdas tadantād dvigos taddhitaluki sati anyatarasyām na ṅīp pratyayo bhavati
Affix *ṄīP,* optionally does not occur to denote feminine after a non-secondary nominal stem termed *dvigu,* when the same ends in *puruṣa* 'person, man' used as a measure and deletion of a *taddhita* affix by means of *LUK* has taken effect.

EXAMPLES:

dvipuruṣā parikhā 'a moat with its width (or depth) equal in measure to the height of two men'
dvipuruṣī parikhā 'id.'

1. This optional negation of *ṄīP* is made against the obligatory negation characterized earlier with *aparimāṇa* (4.1.22 *aparimāṇa* . . .). The twin conditions of *pramāṇa* and *taddhitaluki* are also important. A non-denotation of *pramāṇa* will clear the way for *ṬāP* in *dvābhyāṃ puruṣābhyāṃ krītā* = *dvipuruṣā vaḍavā* 'a mare purchased by two men'. A non-deletion of the *taddhita* affix will similarly yield *dvipuruṣī*, denoting *samāhāra* 'grouping'.

2. How can *puruṣa*, a word which denotes *jāti* 'class', denote *pramāṇa*? Because of its association with *pramāṇa* (*pramāṇaśabdenasambandhāj jātivacano' pi puruṣaśabdaḥ pramāṇe vartate*). The measure of a person is regarded as equal to five Aratni: *pañcāratniḥ puruṣaḥ*. What is an Aratni? Length of an elbow measured to the tip of the little finger is called Aratni.

4.1.25 बहुव्रीहेरूधसो ङीष्

bahuvrīher ūdhaso ṅīṣ
/ *bahuvrīheḥ* 5/1 *ūdhasaḥ* 5/1 *ṅīṣ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1 *striyām* #3)
ūdhasśabdāntād bahuvrīheḥ striyām nīṣ pratyayo bhavati
Affix *ṄīṢ* occurs to denote feminine after a *bhauvrīhi* compound which ends in *ūdhas* 'udder'.

EXAMPLES:

ghaṭodhnī 'a cow with udder like a pitcher'
kuṇḍodhnī 'a cow with udder like a bowl'

1. Note that the condition of *aT* 'ending in *a*' is still valid. Since a *bahuvrīhi* compound ending in *ūdhas* will obviously not meet this condition, affix *ṄīṢ* will be introduced only after *anaṄ* has replaced the final *s* of *ūdhas* (5.4.131 *ūdhaso' naṅ*).

This provision of *ṄīṢ* is made against optional negations of *ṄīP* and *ḌāP* of 4.1.12 *ano bahuvrīheḥ* and 4.1.13 *ḍāb ubhābhyām anyatarasyām.* The condition of *bahuvrīhi* is important to block *ṄīṢ* in a *tatpuruṣa* compound (2.2.4 *prāptāpanne ca* . . .), for example, *prāptā ūdhaḥ* = *prāptodhā* 'female young of a cow who can reach her mother's udder'.

4.1.26 संख्याव्ययादेर्ङीप्

saṃkhyāvyayāder ṅīp
/ *saṃkhyāvyayādeḥ* 5/1 = *saṃkhyā ca avyayaṃ ca* (*dv.*); *saṃkhyāvyaye ādinī yasya* (*bv.* with int. *dv.*), *tasmāt*; *ṅīp* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *bahuvrīher ūdhasaḥ* #25)
saṃkhyāder avyayādeś ca bahuvrīher ūdhasśabdāntād śabdād ṅīp pratyayo bhavati
Affix *ṄīP* occurs to denote feminine after a *bahuvrīhi* compound which

ends in *ūdhas,* and begins either with a number (*saṃkhyā*) or an indeclinable (*anyaya*).

EXAMPLES:

dvyūdhnī 'a cow with two udders'
nirūdhnī 'a cow with no udder'

1. Why do we have to state *ādi* 'that which begins with . . .' in this rule? For, in its absence, the rule will be interpreted as meanig: 'after a *bahuvrīhi* which ends in *ūdhas,* used in combination after either a number word or an indeclinable. . . .' That is, a *bahuvrīhi* where an indeclinable, or a word denoting number, is not immediately followed by *ūdhas,* will be blocked from receiving *ṄīP.* Thus, *dvividhodhnī* 'a cow with two udders' cannot be derived with *ṄīP.* The *pañcamī* of *saṃkhyāvyayābhyām* will, otherwise, require *ūdhas* to immediately follow the number word or indeclinable (*PM:* . . . *pañcamīnirdeśāt tābhyām anantaro ya ūdhaḥ śabdas tadantād eva syāt, padāntaravyavāye tu na syād.* . . .)

4.1.27 दामहायनान्ताच्च

dāmahāyanāntāc ca
/ *dāmahāyanāntāt* 5/1 = *dāma ca hāyanaś ca* = *dāmahāyanau; dāmahāyanau ante yasya sa* = *dāmahāyanāntaḥ* (*bv.* with int. *dv.*), *tasmāt; ca* ϕ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *bahuvrīheḥ* #25, *saṃkhyāvyayāder ṅīp* #26)
saṃkhyāder bahuvrīher dāmaśabdāntād hāyanaśabdantāc ca striyām ṅīp pratyayao bhavati
Affix *ṄīP* occurs, to denote feminine, also after a *bahuvrīhi* nominal stem which begins with a word denoting number (*saṃkhyā*) and ends in *dāman* 'rope', or *hāyana* 'year'.

EXAMPLES:

dvidāmnī '. . . tied with two ropes'
tridāmnī '. . . tied with three ropes'
dvihāyanī '. . . two years old'

1. Note that *ūdhas* and *avyaya* are no longer carried. But why should *saṃkhyā* be carried when *avyaya* is dropped. It is stated that *saṃkhyā* alone is marked with *svarita* (1.3.11 *svaritenādhikāraḥ*). This rules out *ṄīP* in *uddāmā vaḍavā* 'wild mare'.

This provision of *ṄīP* must be obligatory (*nitya*) since it is here made against (*i*) negative (4.1.12 *ano bahuvrīheḥ*) and optional (4.1.13 *ḍāb ubhābhyām* . . .) provisions of *ṄīP* and *ḌāP* on the one hand, and (*ii*) the optional provision of *ṄīP* over *ḌāP* (4.1.28 *ana upadhālopino* . . .), on the other.

Examples of *hāyana* are available only in the context of *vaya* 'age' (*vt. hāyano vayasi smṛtaḥ*). Thus, we get *caturhāyaṇī kanyā* 'a girl who is four years old', parallel to *catvāri hāyanāni yasyāḥ sā*. Affix *ṬāP* is blocked in favor of *ṄīP* to derive *caturhāyaṇī*. A counter-example to this is: *caturhāyanā śālā* 'a hall which was built four years ago', where *ṬāP* could not be blocked because *vayas* is not denoted. Note that *ṇ* cannot replace *n* of *hāyana* if age is not denoted (*ṇatvam api tricaturbhyāṃ hāyanasya*).

4.1.28 अन उपधालोपिनोऽन्यतरस्याम्

ana upadhālopino' nyatarasyām
/*anaḥ* 5/1 *upadhālopinaḥ* 5/1 = *upadhāyā lopaḥ* = *upadhālopaḥ* (*ṣaṣ. tat.*); *upadhālopo' syāstīti* = *upadhālopī* (*bv.* with int. *ṣaṣ. tat.*); *anyatarasyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *bahuvrīheḥ* #25, *ṅīp* #26)
annanto yo bahuvrīhir upadhālopī tasmād anyatarasyāṃ ṅīp pratyayo bhavati
Affix *ṄīP*, optionally, occurs to denote feminine after a *bahuvrīhi* nominal stem which ends in *an* and anticipates the deletion of its penultimate sound (*upadhā*).

EXAMPLES:

bahurājā sabhā 'an assembly with many kings'
bahurājñī 'id.'
bahurāje sabhe 'two assemblies with many kings'

1. The condition of *upadhālopinaḥ* is restrictive in nature. That is, *ṄīP* is allowed only after that *bahuvrīhi* compound which ends in *an* and goes through deletion of its penultimate *a* (*Nyāsa*: *tasmād upadhālopina eva ṇīb yathā syāt anupadhālopino mā bhūd ity evam artham idam ucyate* '. . . this rule is stated so that *ṄīP* is allowed only after that which has gone through deletion of its penultimate sound, and not after that which has not gone through deletion of its penultimate sound'). This deletion of the penultimate *a* is accomplished by 6.4.134 *allopo' naḥ*.

Note that this optional provision of *ṄīP* is restrictive. For, it is made against the negative provision of 4.1.12 *ano bahuvrīheḥ*. It is also relatable to optional provision of *ḌāP* of 4.1.13 *ḍāb ubhābhyām anyatarasyām*. Thus, a *bahuvrīhi* compound which ends in *an*, but which goes through deletion of *a*, will have an optional derivate in *ḌāP* (4.1.13 *ḍāb ubhābhyām* . . .): *bahurājā/ bahurāje/ bahurājāḥ*, nominative singular, dual and plural. If this option is not accepted then *ṄīP* (which is negated by 4.1.12 *ano bahuvrīheḥ*) can be introduced by this rule, provided deletion of *a* (*upadhālopa*) has taken effect. This will give us another set of nominative forms: *bahurājñī, bahurājñau, bahurājñaḥ*. If *a* is not deleted, then we will get a third set of forms where, obviously, *a* will be

retained but *ḌāP* and *ṄīP* will both be negated. This set of forms will follow the pattern of *rājan* 'king'. Thus, *bahurājā*, *bahurājānau* and *bahurājānaḥ*. Refer to the appendix for derivational details.

4.1.29 **नित्यं संज्ञाछन्दसोः**

nityam saṃjñāchandasoḥ
/ nityam ϕ *saṃjñāchandasoḥ* 5/2 = *saṃjñā ca chandaś ca* (*itar. dv.*), *tayoḥ/*
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *bahuvrīheḥ* #25, *ṅīp* #26, *ana upadhālopinaḥ* #28)
annantād bahuvrīher upadhālopinaḥ saṃjñāyāṃ viṣaye chandasi ca nityaṃ ṅīp pratyayo bhavati
Affix *ṄīP* occurs, obligatorily, to denote feminine after a *bahuvrīhi* nominal stem which ends in *-an* and anticipates the deletion of its penultimate sound segment (*upadhā*), provided the derivate denotes a name (*saṃjñā*), or else, is restricted to the Vedic language.

EXAMPLES:

surājñī 'name of a village; a village with a good king'
atirājñī 'name of a village; a village whose king has excelled others in ruling'
gauḥ pañcadāmnī 'a cow tied with five ropes'
dvidāmnī 'a cow tied with two ropes'

1. This constitutes an exception to the option offered by the preceding rule (*vikalpasyāpavādaḥ*). Commentators state that *nityam* is used for clarity (*vispaṣṭārtham*). For, this rule will be interpreted as obligatory even when *nityam* is not used. That is, a provision made against one which already exists is accepted as obligatory (*ārambhasāmarthyān nityaṃ bhavati*). An optional *ṄīP* is already available from the preceding rule. Why make a provision again if it is not going to be obligatory (*PM* ad *Kāś.*: *pūrveṇaiva hi vikalpena ṅīp siddhaḥ, tadārambhasamarthyād eva ṅīp nityaṃ bhaviṣyati anyathā hīdaṃ vacanam anarthakaṃ syāt*).

Refer to the derivational history of *dvyurūdhnī* for deriving *pañcadāmnī*, etc. Rules similar to *bahurājñī* apply in deriving *surājñī* and *atirājñī*, parallel to *śobhanā rājāno yasyāṃ sā* and *atikrāntā rājāno yasyāṃ sā*, respectively.

4.1.30 **केवलमामकभागधेयपापापरसमानार्यकृतसुमङ्गलभेषजाच्च**

kevalamāmakabhāgadheyapāpāparasamānāryakṛtasumaṅgalabheṣajāc ca
/ kevalam . . . bheṣajāt 5/1 = *kevalaś ca māmakaś ca bhāgadheyaś ca pāpaś ca aparaś ca samānaś ca āryakṛtaś ca sumaṅgalaś ca bheṣajaṃ ca kevala . . . bheṣajam* (*sam. dv.*), *tasmāt*; *ca* = ϕ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīp* #26 *saṃjñāchandasoḥ* #29)

kevalādibhyaḥ prātipadikebhyaḥ saṃjñāyāṃ chandasi viṣaye striyāṃ ṅīp pratyayo bhavati
Affix *ṄīP* occurs to denote feminine after nominal stems *kevala* 'only', *māmaka* 'my own', *bhāgadheya* 'share', *pāpa* 'evil', wicked', *apara* 'other', *samāna* 'similar, equal', *āryakṛta* 'made, or done, by a noble', *sumaṅgala* 'auspicious' and *bheṣaja* 'medicine', provided derivates denote a *saṃjñā*, or they are restricted to the Vedic language.

EXAMPLES:

kevalī 'a female name'
māmakī 'this is mine'
bhāgadheyī 'property, inheritance'
pāpī tv iyam 'this woman indeed is a sinner'
utāpa̱rībhyó ma̱gha̱vā vijígye 'Indra won over deceitful designs'
samānī pravāṇī '. . . weaver's shuttle'
āryakṛtī '. . . made by nobles'
sumaṅgalī '. . . auspicious'
bheṣajī 'medicine, cure'

1. Note that *saṃjñāchandasoḥ* is carried from the last rule. Consequently, derivates in *ṬāP*, i.e., *kevalā, māmakā*, etc., which cannot meet the twin conditions of *saṃjñāchandasoḥ* will serve as counter-examples to *ṄīP*. Rule 4.1.4 *ajādyataṣ ṭāp* will introduce *ṬāP* in the Classical language where derivates do not denote a *saṃjñā*. *Kāśikā* enumerates such examples of *ṬāP* with the qualification of *bhāṣāyām* 'in the Classical language'. Obviously, their denotata fall outside the domain of *saṃjñā*.

The derivation of these forms offers nothing new. Refer to many derivates of *ṬāP* and *ṄīP* already derived.

4.1.31 रात्रेश्चाजसौ

rātreś cājasau
/*rātreḥ* 5/1 *ca* ϕ *ajasau* = *na jasau* (*nañ. tat.*)/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīp* #26, *saṃjñāchandasoḥ* #29)
jasviṣayād anyatra saṃjñāyāṃ chandasi ca rātriśabdād ṅīp pratyayo bhavati
Affix *ṄīP* occurs after *rātri* 'night' to denote feminine when the derivate denotes a name, or constitutes an usage of Vedic, provided the context involves an ending other than *Jas*.

EXAMPLES:

yā ratrī sṛṣṭā 'the night which was created . . .'
rātrībhiḥ 'by nights . . .'

1. Note that *saptamī* in *ajasau* is interpreted as denoting domain (*viṣaya*).

This way, the internal (*antaraṅga*) provision of *ṄīP* does not come into conflict with the external (*bahiraṅga*) provision of an ending other than *Jas* 'nominative plural'.

A *vārttika*, under this rule, recommends that *ajasau* should be interpreted as *ajasādiṣu* to yield the interpretation: 'outside the domain of endings enumerated beginning with *Jas*'. Acceptance of this *vārttika* will restrict application of this rule to two derivates of *rātri*, nominative singular and dual. It is argued that Pāṇini, by formulating the negation as *ajasau*, locative singular of *ajasi* (where *i* is added for pronunciation), as against the more economical *ajasi*, intended to express some additional meaning. That additional meaning can be accepted as the desired interpretation of *ajasau* as 'within the domain of an ending other than *Jas*' (*Nyāsa: iha lāghavārtham 'ajasi' iti vaktavye' jasāv ity uktam mātrādhikyād arthādhikyasūcanārtham tenājasādiṣu ṅīb bhavatīti*). This extended application will block *ṄīP* in *rātriṃ sahoṣitvā* 'after having stayed through the night together' where *rātrim* is an accusative form.

2. Our example *rātrī*, a nominative singular, is derived with *ṄīP* where 6.4.148 *yasyeti ca* deletes the final short *i* of the base. The nominative plural form of *rātri* (with *Jas*) is *rātrayaḥ*, as opposed to *rātryaḥ*. Given *rātri* + (*J*) *as*, rule 7.3.109 *jasi ca* applies to yield *rātre* + *as* which, after a replacement in *ay* for *e* by 6.1.78 *eco'yavāyāvaḥ*, produces *rātrayaḥ*. A form such as *rātryaḥ* will be blocked because of negation of *ajasau*.

How would one explain a form such as *rātryaḥ* in *timirapaṭalair avaguṇṭhitāś ca rātryaḥ* 'nights veiled by layers of darkness?' The word *rātryaḥ* is the nominative plural of *rātrī* which, in turn, ends in *ṄīṢ* characterized by *bahvādi* of 4.1.45 *bahvādibhyaś ca*. The *rātrī* of *rātryaḥ* is formed with the *kṛt* affix *triP* (*Uṇādi* IV.67).

4.1.32 **अन्तर्वत्पतिवतोर्नुक्**

antarvatpativator nuk

/ *antarvatpativatoḥ* 6/2 = *antarvat ca pativat ca* = *antarvatpativatau* (*itar. dv.*), *tayoḥ*; *nuk* 1/1

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīp* #26)

antarvatpativator nug bhavati ṅīp ca pratyayaḥ

Affix *ṄīP* occurs to denote feminine after *antarvat* and *pativat*, with a concurrent provision that they also receive augment *nUK*.

EXAMPLES:

antarvatnī 'a pregnant woman'

pativatnī 'she whose husband is alive'

1. This rule offers two bases *antarvat* and *pativat* in relation to which augment *nUK* is introduced. Affix *matUP* is introduced, via *nipātana*, for deriving *antarvat* parallel to *antaḥ asyāṃ asti garbhaḥ* 'she inside whom is a fetus'.

Rule 5.2.94 *tad asyāsty asminn* . . . introduces affix *matUP* after a nominal stem which ends in nominative and is in syntactic coordination with *asti* 'exists'. The word *antaḥ* signifies locus (*adhikaraṇa*), and thus, is not in syntactic coordination with *asti*. This rule, by citing *antarvat* as the base (*prakṛti*), is allowing *matUP* by *nipātana*. The *m* of *mat* will, of course, be replaced with the *v* of 8.2.9 *mād upadhāyāś ca*. . . . The base *pativat* can qualify for *matUP*, parallel to *patiḥ asty asyāḥ*, where syntactic coordination is not impaired. This base, however, cannot qualify for a replacement in *v*. This rule then allows *m* of *matUP* to be replaced with *v* via *nipātana*. *Kāśikā* cites the following verse:

> *antarvat-pativatos tu matub-vatve nipātanāt/*
> *garbhiṇyāṃ jīvapatyāṃ ca vāc chandasi tu nugvidhiḥ//*
> '*antarvat* and *pativat* derive with *matUP*, and a replacement in *v* via *nipātana*, in the sense of 'a pregnant woman' and 'one whose husband is alive', respectively; augment *nUK*, in the Vedic, is, however, optional'

2. Commentators explain that *ṄīP* could also be introduced by rule 4.1.5 *ṛnnebhyo ṅīp*. That is, let this and the next rule just introduce augment *nUK*. The forms which end in *n* could then qualify for *ṄīP* of rule 4.1.5 *ṛnnebhyo ṅīp*. Why did Pāṇini not follow this suggestion. He followed this method of *nipātana*, instead, to limit *ṄīP* to specialized contexts. That is, *ṄīP* is introduced after *antarvat* when the derivate denotes a pregnant woman. Similarly to this, *pativat* must also denote a woman whose husband is alive. Thus, these derivates must be limited to contexts of *garbha* 'pregnancy' and *pati* 'husband'. *Kāśikā* cites *antarasyāṃ śālāyāṃ vidyate* '. . . is inside the house' and *patimatī pṛthivī* 'the land has a king' as counter-examples where absence of required meanings would not permit *ṄīP*. Note that a provision of *ṄīP* is primary, as opposed to that of *nUK* which is secondary. For, this section deals with feminine affixes. The introduction of *nUK* cannot be made independently. It must be restricted to specified bases.

Deriving *antarvatnī* from (*antarvat* + *n*(*UK*) + *ṄīP*) + *sU*) is straightforward. The word *pativatnī* follows the same pattern. Affix *matUP* is introduced after *antar* via *nipātana*. The *m* of *matUP* is replaced by *v* in view of 8.2.9 *mād upadhāyāś ca*. The *v* in *pativat* is also accomplished via *nipātana*. Our present rule offers *nUK* and *ṄīP*.

4.1.33 **पत्युर्नो यज्ञसंयोगे**

> *patyur no yajñasaṃyoge*
> /*patyuḥ* 6/1 *naḥ* 1/1 *yajñasaṃyoge* 7/1 = *yajñena saṃyogaḥ* (*tṛt. tat.*), *tasmin*/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīp* #26)
> *patiśabdāt striyām ṅīp pratyayo bhavati nakāraś cādeśaḥ yajñasaṃyoge gamyamāne*

Affix *ṄīP* occurs to denote feminine after nominal stem *pati*, with the additional provision of *n* to come in place of its final sound, when sacrificial connection (*yajñasaṃyoga*) is signified.

EXAMPLES:

yajamānasya patnī '. . . wife of one for whom a ritual sacrifice is performed'

patni! vācaṃ yacha 'O wife! offer your concurrence . . .'

1. Note that if *yajñasaṃyoga* 'ritual connection' is to be interpreted as 'connection with *yajña*' as such, then *yajñasya patir iyaṃ brāhmaṇī* 'this Brāhmaṇa woman is the master of this ritual sacrifice' would also qualify for operational provisions of this rule. The form of the word *pati*, used in conjunction with the word-form *yajña*, cannot satisfy the necessary requirement of *yajñasaṃyoga*. Commentators state that *yajñasaṃyoga* must be mediated by a semantic connection between meanings of *yajña* and *pati*, qualified with *strī*. Obviously, the word-form *pati* is not capable of participating in the sacrifice. It is the denotation of the word *pati*, and not its form (*śabda*), which is required to be associated with the meaning of the sacrifice, either as a means, or as one to whom the fruit of the ritual accrues. Our example, *yajñasya patir iyaṃ brāhmaṇī*, does not qualify *brāhmaṇī* as a means, or as the person to whom merits accrue. Our other example i.e., *yajamānasya patnī*, involves sacrificial connection since *patnī* participates in rituals with her husband, and she also shares merits which accrue (*tatsādhanatvāt phalagrahītṛtvād vā*). She can be accepted as connected with the sacrifice even when she does not actively participate in it. For, the money which her husband uses for making gifts at the sacrifice is not only partly hers but also her husband is obligated to seek her consent before gifting it away (*PM*: *madhyakaṃ ca dampatyor dhanam . . . tataś ca tyāge bhāryāyā apy anumatir apekṣyata iti*). Incidentally, *yajña* is explained as 'abandoning one's ownership of all things in favor of ownership of gods' (*devatoddeśena svadravyatyāgaḥ*).

How would one justify *patnī* in *vṛṣalasya patnī* 'wife of a lowly untouchable'? How could there be *yajñasaṃyoga* when a *vṛṣala* is not allowed to participate in a sacrifice (*PM*: *śūdrasyaiva yajñe'nadhikṛtatvād yajñenāsaṃyogāt kathaṃ tadbhāryāyā yajñasaṃyogaḥ*). By way of *upamāna* 'analogy'. After all, she becomes a *patnī* because she has taken vows before Agni (*PM*: *agnisākṣikaṃ yat pāṇigrahaṇam tad vṛṣalādīnām apy asti*).

2. Many accept that this *sūtra* is formulated only for introducing *n* as a replacement for the final sound segment (1.1.52 *alo'ntyasya*) of a base. For, given *pat* + (*i*→*n*) = *patn*, rule 4.1.5 *ṛnnebhyo ṅīp* can then introduce *ṄīP*, anyway. This view, however, may create derivational difficulties. Incidentally, *pat*(*i*→*n*) + (*Ṅ*)*ī*(*P*) + *sU* will yield *patnī*, without any problem. The genitive of *patyuḥ* thus facilitates the replacement. Note that *patnī* + *sU* will also yield

patni, a vocative, where the long final *ī* is replaced with short (*hrasva*) through application of rule 7.3.107 *ambārthanadyor*. . . . The genitive of *patyuḥ* will have to be interpreted as *pañcamī* 'ablative' for purpose of introducing *ṄīP*.

4.1.34 **विभाषा सपूर्वस्य**

vibhāṣā sapūrvasya

/*vibhāṣā* ϕ *sapūrvasya* 6/1 = *saha* (*vidyamānaḥ*) *pūrvaḥ avayavo yasya tat* = *sapūrvam* (*bv.*), *tasmāt*/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #4.1.1, *striyām* #4.1.3, *anupasarjanāt* #14, *ṅīp* #26)

patiśabdāntasya prātipadikasya sapūrvasya anupasarjanasya striyām vibhāṣā nakārādeśo bhavati

Affix *ṄīP*, with an additional provision of *n* coming to replace the final sound segment of the base, occurs optionally to denote feminine after a non-*upasarjana* nominal stem which contains *pati* as its final constituent, used in combination after an initial constituent.

EXAMPLES:

vṛddhapatiḥ 'she whose husband is old'
vṛddhapatnī 'id.'
sthūlapatiḥ 'she whose husband is fat'
sthūlapatnī 'id.'

1. This optional *ṄīP*, offered here against the condition of *yajñasaṃyoga* (4.1.33 *patyur*. . .), occurs after a nominal stem which ends in *pati*. Additionally, since such an option was previously not made available (*aprāpta*), it is called *aprāptavibhāṣā*.

2. This rule carries the *anuvṛtti* of *anupasarjanāt* and *patyuḥ*. These two, along with *sapūrvasya*, are brought as qualifiers (*viśeṣaṇa*) close to *prātipadikāt* so that this rule can be properly understood. That is, *anupasarjanāt* is not a qualifier to *pati* but is a qualifier to that which ends in *pati*.

The word *saha*, as replaced with *sa* of *sapūrvasya*, can mean *tulyayoga* 'similar connection with an action', for example, in: *saśiṣyo gurur āgataḥ* 'the teacher came with his student'. The teacher and the taught are both connected here with the action of *āgamana* 'coming'. The word *saha* could also mean: *sattā* 'existence', as in: *sahaiva daśabhiḥ putrair bhāraṃ vahati gardabhī* 'the female donkey carries the load herself even when she has ten sons'. The context of this rule requires *saha* to be interpreted as *sattā*. That is, *sapūrvasya* is to be interpreted as *vidyamānapūrvasya* 'that which has something to precede it'. If *sapūrvasya* were to be interpreted with *saha* as meaning *tulyayoga*, the rule, especially its concurrent provision of replacement in *n*, will read as follows:

sahapūrveṇa patiśabdāntasya nakāto bhavati

'-*n* comes in place of that which ends in *pati* and is preceded by something equally connected with the action'

Commentators note that such an interpretation will create difficulties. For example, -*n* could then be available also to *vṛddha* of *vṛddhapatiḥ*.

Two meanings are generally assigned to *pūrva*: (*a*) *vyavasthā* 'a definite arrangement of ruling', as in *pūrvaṃ mathurāyaḥ pāṭaliputram* 'Pāṭaliputra is in the east of Mathurā'; and (*b*) *avayava* 'part of a whole', as in *pūrvaṃ kāyasya* 'front of the body'.

The first meaning will interpret the rule as: *vidyamānaḥ pūrvo yasmāt tasya patiśabdāntasya nakāro bhavati* '-*n* is introduced to a nominal stem which ends in *pati*, used after an initial constituent'. This interpretation will run into problem. That is, augment *n* will be blocked in *dṛḍhapatnī* 'she whose husband is strong', because of lack of something to precede it. Commentators, therefore, suggest that *saha* of this rule is to be interpreted as denoting *sattā* 'existence'. The word *pūrva* must then be interpreted as denoting *avayava* 'part'. This will yield the correct interpretation of *sapūrvasya*: *saha vidyamānaḥ pūrvo' vayavo yasya tat* 'that which (ends in *pati* and) has a constituent to precede (*pati*)'.

4.1.35 नित्यं सपत्न्यादिषु

nityaṃ sapatnyādiṣu
/*nityaṃ* ϕ *sapatnyādiṣu* 7/3 = *sapatnī* = *samānaḥ patir yasyāḥ sā*; *sapatnī ādir yeṣāṃ te sapatnyādayaḥ* (*bv.*), *teṣu*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīp* #26, *patyur naḥ* #33)
sapatnyādiṣu yaḥ patiśabdaḥ tasmāt striyāṃ nityaṃ ṅīp pratyayo bhavati nakāraś cāntādeśaḥ
Affix *ṄīP* occurs obligatorily to denote feminine after *pati*, with an additional provision of *n* replacing its final sound segment, provided *pati* is included within a nominal stem listed in the group headed by *sapatnī* 'co-wife'.

EXAMPLES:

sapatnī 'she who has a common husband'
ekapatnī 'she who has one husband'

1. *Kāśikā* accepts *n* as the principal provision of this rule: *nityaṃ nakārādeśaḥ* . . . *ṅīp tu labhyata eva* '*n* is offered here as an obligatory provision; *ṄīP*, indeed, is already available'.

2. The word *nityam* is used here for clarity (*nityagrahaṇam vispaṣṭārtham*). For a provision made for something which already exists is treated as obligatory. This provision of *ṄīP* with *n* is made against an optional provision which is already available from the preceding rule. Since our present rule does not

use *vā* 'optionally', its provision will be treated as obligatory. Hence, *nityam* need not be stated explicitly.

3. The *saptamī* 'seventh triplet of *sUP*', in *sapatnyādiṣu*, denotes *viṣaya* 'scope'. Consequently, *n* will be restricted to replace the *i* of *pati*, only when *sapatnī*, etc., form the scope of derivation.

4. Note that there is no listing of *gaṇa* headed by *sapatni*. Consequently, this Pāṇinian reference of *sapatnyādiṣu* becomes a suspect. Commentators explain that *sapatnyādi* here refers to a listing known as *samānādi*. What makes one understand this? The analyzed form of the word *sapatnī*: *samānaḥ patiḥ yasyāḥ sā*, a *bahuvrīhi* formed with *sa* replacing *samāna*, via *nipātana*. Since *samāna* itself, and not any of its synonyms, can be replaced with *sa* when a *bahuvrīhi* compound with *pati* is formed, *samāna* becomes a means of reference. Words such as *samāna* 'equal, same' *eka* 'one', *vīra* 'brave', *piṇḍa* 'lump (of food)', *bhrātṛ* 'brother', *putra* 'son' and *dāsa* 'slave' will all be included in this reference. That is, *sapatnī* is interpreted as heading a listing of compounds formed with *pati* as the final constituent. Words listed in the group headed by *samāna* will be used before *pati* as initial constituents. Why did Pāṇini not state *samānādiṣu*? He instead used *sapatnyādiṣu* to account for the *sa*-replacement of *samāna* by this rule.

4.1.36 पूतक्रतोरै च

pūtakrator ai ca
/putakratoḥ 6/1 *ai* (deleted 1/1); *ca* φ
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīp* #26)
anupasarjanāt pūtakratoḥ prātipadikāt striyām ṅīp pratyayo bhavati
Affix *ṄīP* occurs to denote feminine after the non-*upasarjana* nominal stem *pūtakratu*, with an additional provision that its final *u* be replaced with *ai*.

EXAMPLES:

pūtakratāyī 'wife of Pūtakratu'

1. This rule introduces *ṄīP* after *pūtakratu* with an additional provision that *ai* replace the final *u* of the base. Recall that a base after which an affix is introduced is marked with *pañcamī* 'fifth triplet of *sUP*'. Recall also that an augment is introduced to a form marked with genitive (*ṣaṣṭhī*). Since these operations both are applicable in case of *pūtakratu*, its form *pūtakratoḥ*, a *pañcamī*, will also have to be interpreted as *ṣaṣṭhī*. *Kāśikā* reminds that operational provisions of this, and the next two rules as well, are made in the context of *puṃyoga* 'connection of a male with a corresponding female' (*traya ete yogāḥ puṃprakaraṇe draṣṭavyāḥ*).

Affix *ṄīP* is introduced after *pūtakratu* in the sense of *pūtaḥ kratuḥ yena*

saḥ 'the wife of one by whom the sacrifice was made sanctified'. Deriving *pūtakratāyī* form (*pūtakratu* + *ṄīP*) + *sU*, where this rule also provides for the final *u* of *pūtakratu* to be replaced with *ai*, is easy. Given *pūtakrat* (*u*→*ai*) + *ī*, rule 6.1.78 *eco'yavāyāvaḥ* will apply to yield *pūtakrat* (*ai*→*āy*) + *ī* = *pūtakratāyī* + (*sU*→ϕ) = *pūtakratāyī*.

4.1.37 वृषाकप्यग्निकुसितकुसीदानामुदात्तः

vṛṣākapyagnikusitakusīdānām udāttaḥ
/ *vṛṣākapyagnikusitakusīdānām* 6/3 = *vṛṣākapiś ca agniś ca kusitaś ca kusīdaś ca* = *vṛṣākapyagnikusitakusiddāḥ* (*itar. dv.*) *teṣā*; *udāttaḥ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #4, *ṅīp* #26, *ai* #36)
vṛṣākapyādīnām anupasarjanānām udātta aikārādeśo bhavati striyām ṅīp ca pratyayaḥ
Affix *ṄīP* occurs to denote feminine after non-*upasarjana* nominal stems *vṛṣākapi*, *agni*, *kusita* and *kusīda*, with an additional provision that *ai* marked *udātta* come in place of their final vowel.

EXAMPLES:

vṛṣākapāyī 'wife of Vṛṣākapi'
agnāyī 'wife of Agni'
kusitāyī 'wife of Kusita'
kusīdāyī 'wife of Kusīda'

1. Note that *vṛṣākapi* is marked with *udātta* in the middle (*madhyodātta*; *Phiṭsūtra* 42: *laghāv ante dvayoś ca* . . .). This rule offers *ai*, concurrently marked *udātta*, as a replacement for the final *i* of specified bases. When this *ai* is replaced with *āy* before *ī* of *ṄīP*, the *udātta* accent of *ai* also gets transferred to *āy*. A final *udātta* accent to *agni*, etc., is already available through *sthānivadbhāva*, relative to the replacement of the final vowel. That is, *ai* can be treated as *udātta* because it replaces the final *i* of *agni*, etc., which is *udātta* to start with (*Phiṭsūtra* 1: *phiṣo'nta udāttaḥ*). Thus, *agnāyī*, *kusitāyī*, *kusīdāyī*, etc.

4.1.38 मनोरौ वा

manor au vā
/ *manoḥ* 6/1 *au* (deleted 1/1) *vā* ϕ
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīp* #26, *ai* #36, *udāttaḥ* #37)
manuśabdāt striyāṃ ṅīp pratyayo bhavati aukāraś cāntādeśaḥ aikāraś codāttaḥ
Affix *ṄīP* optionally occurs to denote feminine after nominal stem *manu*, with the additional provision that *au*, or *ai* marked *udātta*, come in place of its final.

EXAMPLES:

> *manoḥ strī* = *manā́yī* 'wife of Manu'
> *manā́vī* 'id.'
> *mánuḥ* 'id.'

1. This optional introduction of *ṄīP* yields three forms: one with no *ṄīP* and no replacement in *au/ai*: *manuḥ*; two forms with *ṄīP*, where one ends in a replacement in *au*, i.e., *manā́vī*, and the other in *ai*, i.e., *manā́yī*. Of course, *au* and *ai* are replaced with *āv* and *āy* before *ṅīP*.

Incidentally, *mánu* is marked *udātta* at the beginning, in consonance with the *Uṇādisūtra* (1.10).

4.1.39 **वर्णादनुदात्तात्तोपधात्तो नः**

> *varṇād anudāttāt topadhāt taḥ naḥ*
> /*varṇāt* 5/1 *anudāttāt* 5/1 *topadhāt* 5/1 = *takāra upadhā yasya sa* = *topadhaḥ* (*bv.*), *tasmāt*; *taḥ* 6/1 *naḥ* 1/1/
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīp* #26, *vā* #38)
> *varṇavācino' dantād anupasarjanāt prātipadikād anudāttāntāt topadhād vikalpena striyāṃ ṅīp pratyayo bhavati*
> Affix *ṄīP* occurs optionally to denote feminine after a nominal stem which terminates in *a*, is marked *anudātta* at the end, contains a *t* in its *upadhā* and signifies *varṇa* 'color', with an additional provision that the penultimate *t* be simultaneously replaced with *n*.

EXAMPLES:

> *enī́* 'brindled, variegated'
> *etā́* 'id.'
> *śyenī́* 'white'
> *śyetā́* 'id.'
> *háriṇī* 'green'
> *háritā* 'id.'

1. Note that words with the signification of color are marked *udātta* at the beginning in consonance with *Phiṭsūtra* 33: *varṇānāṃ taṇatinitāntānām*. Consequently, rule 6.1.152 *anudāttaṃ padam*... will mark the remainder of these words as *anudātta*. The condition of *topadha* '*t* in next to the last position' is important because, elsewhere, we will get *ṄīṢ* in consonance with the next rule.

2. The condition of a final *a* (*ataḥ*) marked *anudātta*, is still valid here. Thus *śitiḥ* 'white' qualifies, neither for *ṄīP*, nor for a replacement in *n*. Words such as *śvetā* derive from *ṬāP*, since *śveta* 'white' is not marked *anudātta* at the end. *Phiṭsūtra* 21: *ghṛtādīnāṃ ca* marks it *udātta* at the end. Derivational

details of these forms do not offer anything new. Accentuation and *t*→*n*, for example in *et*(*a*→*n*) + *ī* = *enī*, are the only two important things. The word *harita* will also involve *n*→*ṇ* (*ṇatva*).

4.1.40 अन्यतो ङीष्

anyato ṅīṣ
/ *anyataḥ* → *ṅīṣ* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *anupasarjanāt* #14, *varṇānudāttāt* #39)
topadhād anyataḥ varṇavācino' anudāttāntāt prātipadikāt striyām ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs to denote feminine after a non-*upasarjana* nominal stem which denotes *varṇa* 'color' and ends in *a* marked *anudātta*, even when it does not have any *t* in its *upadhā*.

EXAMPLES:

s̱āraṅgī́ 'brindled; variegated'
ḵalmāṣī́ 'brindled with black'

1. Note that *kalmāṣa* and *sāraṅga* have their final *a* marked *audātta* in view of *Phiṭsūtra* 42: *laghāv ante dvayoś*. . . . That is, their initial and final vowels are marked *anudātta* because their middle vowel is marked *udātta* in view of this *Phiṭsūtra*.

4.1.41 षिद्गौरादिभ्यश्च

ṣidgaurādibhyaś ca
/ *ṣidgaurādibhyaḥ* 5/3 = *ṣ it yasya sa ṣit* (*bv.*); *gaur ādir yeṣāṃ te gaurādayaḥ* (*bv.*); *ṣit ca gaurādayaś ca* = *ṣidgaurādayaḥ* (*itar. dv.* with *int. bv.*) *tebhyaḥ*; *ca* φ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40)
ṣidbhyaḥ prātipadikebhyo gaurādibhyaś ca striyām ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs to denote feminine after non-*upasarjana* nominal stems which are either marked with *Ṣ* as an *it*, or are enumerated in the list headed by *gaura* 'fair complexioned; white'.

EXAMPLES:

nartakī 'a female dancer'
rajakī 'washerwoman'
gārgyāyaṇī 'a female descendant of Garga'
vātsyāyanī 'a female descendant of Vatsa'
gaurī 'fair complexioned; Pārvatī'
matsī 'fish'

1. Note that *gaurādi* is an open-ended group (*ākṛtigaṇa*). A *vārttika* introduces augment *āM*, optionally in case of *anaḍuh*, to derive *anaḍ(u→v) āh + ī* ≐ *anaḍvāhī* and *anaḍuh + ī = anaḍuhī* 'cow'. Refer to examples (477) *narttakī* and (478) *rajakī* in the appendix of vol. II. Refer to the appendix of rule 4.1.17 *prācāṃ ṣpha* . . . for deriving *gārgyāyaṇī* and *vātsyāyanī*. Deriving *gaurī* from *gaura + ī* will entail deletion of *a* by 6.4.148 *yasyeti ca*. Deriving *matsī*, from *matsya + ī*, will additionally require the deletion of *y* by 6.4.149 *sūryatiṣyāgastyamatsyānāṃ*. . . . Thus, *mats(y→ϕ) a + ī = mats(a→ϕ) + ī = matsī + sU = matsī*.

4.1.42 **जानपदकुण्डगोणस्थलभाजनागकालनीलकुशकामुककबराद् वृत्त्यमत्रावपनाकृत्रिमा-श्राणास्थौल्यवर्णानाच्छादनायोविकारमैथुनेच्छाकेशवेशेषु**

jānapadakuṇḍagoṇasthalabhājanāgakālanīlakuśakāmukakabarād vṛttyamatrāvapanākṛtrimāśrāṇāsthaulyavarṇānācchādanā'yovikāramaithunecchākeśaveśeṣu

/*jānapadakuṇḍagoṇa* . . . *kabarāt* (*sam. dv.*) 5/1 *vṛttyamatrāvapanā* . . . *keśaveśeṣu* (*itar. dv.*) 7/3/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40)

jānapadādibhya ekādaśebhyaḥ prātipadikebhya ekādaśasu vṛtyādiṣv artheṣu yathāsaṃkhyaṃ ṅīṣ pratyayo bhavati

Affix *ṄīṢ* occurs to denote feminine after non-*upasarjana* nominal stems *jānapada, kuṇḍa, goṇa, sthala, bhāja, nāga, kāla, nīla, kuśa, kāmuka,* and *kabara,* when derivates denote *vṛtti* 'livelihood', *amatra* 'pot', *āvapana* 'sack', *akṛtrimā* 'natural high place', *śrāṇā* 'cooked', *sthūlya* 'imposing, huge', *varṇa* 'color', *anācchādana* 'non-covering', *ayovikāra* 'something made of iron', *maithunecchā* 'desire to have sex' and *kabara* 'hairdo', respectively.

EXAMPLES:

jānapadī 'livelihood'
kuṇḍī 'pot'
goṇī 'sack'
sthalī 'high grounds'
bhājī '(rice)-gruel'
nāgī 'fat (rope, elephant)'
kālī 'colored (black)'
nīlī 'medicinal herb'
kuśī 'something made of iron'
kāmukī 'a sexually aroused female'
kabarī 'a female with colorful hairdo'

1. Note that *jānapadī* can be interpreted as a derivate of *ṄīṢ*, so long as it

1. Note that *jānapadī* can be interpreted as a derivate of *ṄīS*, so long as it denotes *vṛtti* 'livelihood'. It should be interpreted as a derivate of *ṄīP* (4.1.15 *ṭiḍḍhāṇañ* . . .), when denoting something other than *vṛtti*. Thus, *jānapadī*, parallel to *janapade bhavā*, where *jānapada* is a derivate of *aÑ*. Similar meaning distinctions are also maintained in connection with other derivates. Thus, we get *nāgī* with *ṄīṢ* when *jāti* 'class' (4.1.63 *jāter*. . .) is denoted. Elsewhere, we get *nāgā* where the denotation is *guṇa* 'quality'. Similarly, we get *kālī*/ *kālā* 'a cruel female' and *nīlī* (female and medicinal herb) / *nīlā* (optionally a name). The same is true of *kāmukī* (sexually aroused) / *kāmukā* (desirous); *kabarī* (colorful hairdo) / *kabarā* (brindled).

Recall that derivates of *ṄīṢ* and *ṄīP* differ only in accent. Examples with signification of *amatra*, etc., derive with *ṄīṢ* because of particular meaning conditions. Elsewhere, they must be derived with *ṬāP* (4.1.4 *ajādyataṣ ṭāp*).

4.1.43 शोणात्प्राचाम्

śoṇāt prācām

/*śoṇāt* 5/1 *prācām* 6/3/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40)

śoṇaśabdāt prācām ācāryāṇān matena striyāṃ ṅīṣ pratyayo bhavati

Affix *ṄīṢ*, in the opinion of Eastern grammarians, occurs to denote feminine after a nominal stem which is constituted by *śoṇa* and is not an *upasarjana*.

EXAMPLES:

śoṇī vaḍavā 'a red mare'

śoṇā vaḍavā 'id.'

1. Note that since *śoṇa* denotes color, rule 4.1.39 *varṇād* . . . would have introduced *ṄīP*. This provision is then restrictive (*niyamārtha*). That is, *ṄīṢ* will be introduced only in the opinion of the Easterners.

4.1.44 वोतो गुणवचनात्

voto guṇavacanāt

/*vā* ϕ *utaḥ* 5/1 *guṇavacanāt* 5/1 = *guṇaṃ uktavān guṇavacanaḥ, tasmāt*/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40)

guṇavacanāt prātipadikād ukārāntāt striyāṃ vā ṅīṣ pratyayo bhavati

Affix *ṄīṢ* occurs optionally to denote feminine after a non-*upasarjana* nominal stem which ends in *u* and has the signification of quality (*guṇa*).

EXAMPLES:

paṭvī 'a clever woman'

paṭuḥ 'id.'
mṛdvī 'a tender woman'
mṛduḥ 'id.'

1. *Kāśikā* glosses the word *guṇavacanaḥ* as *guṇam uktavān* 'that which denoted quality in the past'. That is, *guṇavacana* refers to a form which now denotes a 'thing' (*dravya*) it qualified in the past, and having done that, has currently become one and the same with that thing (*Nyāsa: sa punar yaḥ prāg guṇaṃ vidhāya paścād . . . abhedopacārād vā tadvad dravyam abhidhatte sa veditavyaḥ*).

Kāśikā offers *śucir iyaṃ brāhmaṇī* 'this Brāhmaṇa woman is pure'; and *ākhuḥ* 'mouse' as counter-examples, where *śuci* 'pure' is a qualifier but does not end in *u*, and *ākhu* ends in *u* but is not a qualifier.

2. A *vārttika* recommends, for *vasu* 'pure', to receive *ṄīP* so that its derivate *vāsvī* can be marked *udātta* at the beginning (*vasuśabdād guṇavacanād ṅīb ādyudāttārtham*). Yet another *vārttika* negates introduction of *ṄīṢ* after nominal stem *kharu*, or after a stem which may have a conjunct in its next to the last position (*upadhā*). Thus, we get *kharur iyaṃ brāhmaṇī* 'this Brāhmaṇa girl is desirous of getting married' and *pāṇḍur iyam brāhmaṇī* 'this Brāhmaṇa woman is pale'. Deriving *paṭvī* from (*paṭu* + *ṄīṢ* + *sU*), through application of 6.1.77 *iko yaṇ aci* and *it/sUP*-deletions, offers nothing new. A form such as *paṭuḥ* will be derived as an option to *paṭvī* with no feminine affix involved.

3. The following verse, in the *Mahābhāṣya*, explains what *guṇa* is:

satve niviśate'paiti pṛthag jātiṣu dṛśyate/
ādheyaś cākriyājaś ca so' sattvaprakṛtir guṇaḥ//
'that which resides in a substance but may go away from it; that which is seen in different classes of things; . . . which can be brought about (*ādheya*), yet could still not be brought about by action (*akriyāja*); that is what quality is, something distinct from the nature of *sattva*.

4.1.45 बह्वादिभ्यश्च

bahvādibhyaś ca
/ bahvādibhyaḥ 5/3 = *bahur ādir yeṣāṃ te bahvādayaḥ* (*bv.*), *tebhyaḥ; ca* ϕ/ (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, . . .*prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40, *vā* #44)
'*bahu*' *ity evam ādibhyaḥ prātipadikebhyaḥ striyāṃ ṅīṣ pratyayo bhavati*
Affix *ṄīṢ* optionally occurs to denote feminine also after nominal stems which are listed in the group headed by *bahu* 'many', etc.

EXAMPLES:

bahvī 'many'
bahuḥ 'id.'

1. Note that *bahu* should not be included here since it denotes *guṇa* 'quality', and thus, could have been covered by the earlier rule. It is included here for use in the next rule (*bahuśabdo guṇavacana eva, tasyeha pāṭha uttarārthaḥ*).

2. Proposals, by means of *vārttikas,* have been made for introducing *ṄīṢ* (*i*) after a stem which ends in *i* and denotes a human limb; or (*ii*) after a stem which ends in affix *KtiN* (3.3.94 *ktin*). Thus we get: *dhamaniḥ/ dhamanī* 'vein, nerve': *rātri/ rātrī* 'night'. Some even claim that *ṄīṢ* could be introduced after any stem ending in *i,* provided it did not have the signification of a *KtiN.*

4.1.46 नित्यं छन्दसि

nityaṃ chandasi
/ *nityam* ф *chandasi* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40, *bahvādibhyaḥ* #45)
bahvādibhyaś chandasi viṣaye nityaṃ striyāṃ ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs obligatorily, in Vedic, to denote feminine after nominal stems which are listed in the group headed by *bahu* and are not termed an *upasarjana.*

EXAMPLES:

bahvī 'name of a medicine'

1. It is argued that *nityam* 'obligatorily' should not be stated in this rule. Why? Because its purpose can be served even without using it explicitly. How? If the rule is formulated simply as *chandasi,* with the *anuvṛtti* of the preceding rule except for *vā,* then, its provision will become obligatory for Vedic. For, this will be a provision made against an already available provision. But where is this provision for Vedic made? The provision made by the earlier rule, especially with no mention of Vedic, applies optionally also to Vedic. This is what an already made provision is. When a new provision is made with *chandasi,* and without the use of *vā,* it can only be obligatory (cf. *ārambhasāmarthyān nityaṃ bhavati*). Thus, Pāṇini should not have stated *nityam. Kāśikā* states that *nityam* is included here for use in the following rule (*nityagrahaṇam uttarārtham*).

4.1.47 भुवश्च

bhuvaś ca
/ *bhuvaḥ* 5/ *ca* ф/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40, *nityaṃ chandasi* #46)
chandasi viṣaye striyāṃ bhuvo nityaṃ ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs, in Vedic, to denote feminine, also after a non-

upasarjana nominal stem which ends in *bhu*.

EXAMPLES:

parbhvī 'she who is a ruler'
vibhvī 'she who is omnipresent'
śambhvī 'she who is benevolent'

1. How come *svayambhū* 'he who comes into existence by himself' cannot have a corresponding feminine derivate such as *svayambhvī*? Because *bhuvaḥ* of this rule specifies *bhu* in *pañcamī* 'ablative'. This ablative is introduced after a base terminating in short *u*. But, in that case, the ablative form should have been *bhoḥ*? That is, after the application of *guṇa* by 7.3.111 *gher ṅiti*. This specification by *bhuvaḥ* can then be accepted as limited to the realm of grammar (*sautra*). *Kāśikā* states that the word *utaḥ* is carried from 4.1.44 *voto* . . . to further specify the short *u* of *bhu*, via *taparakaraṇa* (1.1.70 *taparas tatkālasya*).

2. Note that words such as *vibhu*, etc., which are referenced here as ending in short *u*,derive with affix *Ḍu* of rule 3.2.180 *viprasambhyo ḍv asaṃjñāyām*.

4.1.48 पुंयोगादाख्यायाम्

puṃyogād ākhyāyām
/puṃyogāt 5/1 = *puṃsā yogaḥ* (*sambandhaḥ*) = *puṃyogaḥ* (*tṛ. tat.*), *tasmāt; ākhyāyām* 7/1/
puṃyogād hetor yat prātipadikaṃ striyāṃ vartate puṃsa ākhyābhūtaṃ tasmād ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs after a nominal stem which ends in *a* and signifies a male in relation to whom a female is to be expressed.

EXAMPLES:

gaṇakī 'astrologer's wife'
prasṭhī 'wife of a chief'

1. The nominal stem after which *ṄīṢ* occurs is explained by *Kāśikā* as: 'that which denoted a male but is currently used to denote a female based upon her relationship with that male' (*puṃyogādd hetor yat prātipadikaṃ striyāṃ vartate puṃsa ākhyābhūtaṃ* . . .). The *pañcamī* 'ablative' of *puṃyogāt* thus denotes *hetu* 'cause'. The word *puṃyogāt* is necessary to block *ṄīṢ* in examples such as *devadattā*, where a female is called as such irrespective of her association with a male. Commentators explain that *puṃyoga* becomes a *hetu* in relation to a female when *prasava* 'giving birth' is involved. Although, in *Bhaṭṭikāvya*, one can also find *ṄīṢ* even when a daughter (*duhitṛ*) is signified. The examples are: *kekayī* 'a daughter of Kekaya'. Similarly, one can cite *devakī*, parallel to *devakasya duhitā* 'daughter of Devaka'. Such examples prompt *Tattvabodhinī* (ad *SK*) to note that *puṃyoga* may also include *janya-janakabhāva*, offspring-father relationship (*sa ceha dampatibhāva eveti nāgrahaḥ; kiṃ tu*

janyajanakabhāvo'pi gṛhyate).

The word *ākhya* '. . . denotation of . . .' is used to exclude a nominal which signifies a female. Or else, a nominal stem which does not signify a male. Thus, we get *prastha* which does not denote a female. It is a derivate of *Ka* (3.1.3 *āto'nupasarge kaḥ*) where rule 8.3.92 *praṣṭho'gragāmini* causes retroflexion in deriving the feminine form *praṣṭhī*.

2. A *vārttika* negates *NīS* in connection with *gopālaka* 'one who tends cows', etc. Thus, the wife of a *gopālaka* will be called *gopālikā*. Yet another *vārttika* recommends *CāP*, after *sūrya*, to derive *sūryā* when *devatā* 'divinity' is denoted.

4.1.49 **इन्द्रवरुणभवशर्वरुद्रमृडहिमारण्ययवयवनमातुलाचार्याणामानुक्**

> *indravaruṇabhavaśarvarudramṛḍahimāraṇyayavayavanamātulācāryāṇām ānuk*
>
> /*indravaruṇa . . . ācāryāṇām* 6/3 = *indraś ca . . . ācāryaś ca* = *indra . . . ācāryāḥ* (*itar. dv.*), *teṣām*; *ānuk* 1/1/
>
> (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40, *puṃyogāt* #48)
>
> *indrādibhyaḥ prātipadikebhyaḥ striyāṃ ṅīṣ pratyayo bhavati, ānuk cāgamaḥ*
>
> Affix *NīṢ* occurs to denote a female, in association with a corresponding male, after non-*upasarjana* nominal stems *indra* 'Indra', *varuṇa* 'Varuṇa', *bhava* 'Śiva', *śarva* 'id.', *rudra* 'id.', *mṛḍa* 'id.', *hima* 'ice, snow', *araṇya* 'forest', *yava* 'barley', *yavana* 'Ionian', *mātula* 'mother's brother', and *ācārya* 'teacher, preceptor' where, additionally, they also receive augment *ānUK*.

EXAMPLES:

> *indrāṇī* 'wife of Indra'
> *varuṇānī* 'wife of Varuṇa'
> *bhavānī* 'wife of Bhava'
> *śarvāṇī* 'wife of Śarva'
> *rudrāṇī* 'wife of Rudra'
> *mṛḍānī* 'wife of Mṛḍa'
> *himānī* 'glacier'
> *araṇyānī* 'big dense forest'
> *yavānī* 'bad barley'
> *yavanānī* 'Ionian script'
> *mātulānī* 'maternal uncle's wife'
> *ācāryānī* 'wife of a teacher'

1. This introduction of *NīṢ*, to denote a female in association with a corresponding male (*puṃyoga*), has already been made available by the preceding rule. At least eight stems listed under this rule, i.e., *indra, varuṇa, bhava,*

śarva, rudra, mṛḍa, mātula and *ācārya,* could avail *ṄīṢ* of the preceding rule. Why do we have to read them here? So that *ānUK* can be introduced to them. The three remaining stems, i.e., *hima, araṇya* and *yava,* cannot receive *ṄīṢ* to denote a female 'in association with a male' for obvious reason of impossibility (*asambhāvanā*). The denotation of such a 'female' corresponding to a *yavana* is not available in usage.

The following *vārttikas* relate to special derivational provisions:

(*a*) Affix *ṄīṢ* should be introduced after *hima* and *araṇya* only when *mahatva* 'greatness, importance' is to be denoted (*himāraṇyayor mahatve, mahadd himaṃ himānī; mahad araṇyam araṇyānī*).

(*b*) Affix *ṄīṢ* should be introduced after *yava* when quality of its denotatum is expressed as bad (*yavād doṣe, duṣṭo yavo yavānī*).

(*c*) Affix *ṄīṢ* is to be introduced after *yavana* when the derivate denotes a script (*yavanāl lipyām; yavanānī lipiḥ*).

(*d*) Affix *ṄīṢ* is to be introduced obligatorily, though *ānUK* only optionally, after nominal stems *mātula* and *upādhyāya.* Of course, when *puṃyoga* is denoted (*upādhyāyamātulābhyāṃ vā*).

(*e*) The *n* of *ānUK,* in deriving *ācāryānī,* a feminine corresponding to *ācārya,* does not get replaced with *ṇ.*

(*f*) Affix *ṄīṢ* is also introduced optionally to denote feminine after *arya,* a trader (*vaiśya*), and *kṣatriya,* a warrior (*kṣatriya; aryakṣatriyābhyaṃ vā*).

(*g*) Affix *ṄīṢ* is also introduced after *mudgala,* in Vedic, to denote feminine. A provision of *ānUK,* marked with *L* as an *it,* is also made concurrently with *ṄīṢ* (*mudgalāc chandasi lic ca*).

2. Note that *himānī,* according to some (*Jijñāsu* II: 26), denotes depth, and not the expanse, of ice. Yāska explains *araṇyānī* as *patnī* 'wife' of *araṇya.* It is further explained that *patnī* means *pālayitṛ* 'protector, preserver', which is what a big forest is to its resident animals. The word *yavānī* entails *doṣa* 'badness', often explained as qualified with 'insignificance'. Incidentally, *yavānī* also means Arigano.

4.1.50 क्रीतात्करणपूर्वात्

krītāt karaṇapūrvāt
/*krītāt* 5/1 *karaṇapūrvāt* 5/1 = *karaṇaṃ pūrvam asmin iti karaṇapūrvaḥ* (*bv.*), *tasmāt*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ,* #4 *anupasarjanāt* #14, *ṅīṣ* #40)
krītaśabdāntāt prātipadikāt karaṇapūrvāt striyāṃ ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs to denote feminine after a nominal stem which ends in *krīta* 'purchased', and is used in combination after an initial compound constituent with the signification of *karaṇa* 'means'.

EXAMPLES:

> *vastrakrītī* '. . . purchased by means of clothes'
> *vasanakrītī* 'id.'

1. The word *pūrva* is used in this rule to ensure that the constituent which denotes *karaṇa* modifies the nominal stem as its *avayava* 'part' (*PM*: . . . *avayavavāci pūrvaśabdaḥ prātipadikaṃ tu viśeṣyam* . . .). The word *krīta* will facilitate a *tadantavidhi* interpretation: 'that which ends in *krīta*', again by way of being a qualifier (*viśeṣaṇa*) to the nominal stem. With *pūrvāt* as another modifier, the rule will mean: 'that which ends in *krīta*, and has an initial constituent denoting *karaṇa* to precede *krīta*'. Such an interpretation will not only block the introduction of *ṄīṢ* after a compound which may have an intervening constituent between *krīta* and the constituent which denotes *karaṇa*, but will also block *ṄīṢ* in expressions such as **aśvena krītī*.

2. Our example compounds are allowed by 2.1.32 *kartṛkaraṇe kṛtā bahulam*, prior to the introduction of nominal ending. Thus, *vastra* + *Ṭā* + *krīta* combines to yield *vastrakrīta* after deleting *Ṭā* by 2.4.71 *supo dhātuprātipadikayoḥ*. This is how we find the nominal stem *krīta* combined after *vastra* with the significance of *karaṇa*. How come we do not get *ṄīṢ* in *dhanakrītā* of *sā hi tasya dhanakrītā prāṇebhyo'pi garīyasī* 'she, his wife purchased with money, is precious than his life'. It is stated that *bahulam*, of 2.1.32 *kartṛkaraṇe kṛtā bahulam*, will take care of non-compliance with *paribhāṣā* (76): *gatikārakopapadānāṃ kṛdbhiḥ saha samāsavacanaṃ prāk subutpatteḥ* 'a compound of *gati*, etc., with constituents terminating in a *kṛt*, is formed prior to the introduction of a *sUP*'. That is, *bahulam* may clear the way for formation of such compounds even after introduction of *sUP*. Thus, *krīta* will first receive *ṬāP* and then *dhana* + *Ṭā krītā* + *sU* will combine to yield *dhanakrītā*.

4.1.51 क्तादल्पाख्यायाम्

> *ktād alpākhyāyām*
> /*ktāt* 5/1 *alpākhyāyām* 7/1 = *alpasya ākhyā* = *alpākhyā* (*ṣaṣ. tat.*), *tasyām*/ (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40, *karaṇapūrvāt* #50)
> *karaṇapūrvāt prātipadikāt ktāntād alpākhyāyāṃ ṅīṣ pratyayo bhavati*
> Affix *ṄīṢ* occurs to denote feminine after a non-*upasarjana* nominal stem which ends in *Kta* (1.1.26 *ktavatū niṣṭhā*) and is used in combination after an initial constituent denoting *karaṇa*, providing the derivate denotes *alpa* 'little'.

EXAMPLES:

> *abhraviliptī dyauḥ* 'sky with a few scattered clouds'
> *sūpaviliptī pātrī* 'a pot with very little soup'

1. *Kāśikā* states that *alpākhyāyām* is used as a qualifier to derivate meanings (*samudāyopādhiḥ*). It cannot be accepted as denoting a constituent meaning. Thus, if an example such as *abhraviliptī* is interpreted as *alpair abhrair viliptaḥ* 'overspread with fewer clouds' *alpa* becomes a modifier to *abhra* 'cloud', a constituent. If, instead, it is treated as a modifier to the derivate then *alpa* will be a modifier to *abhraviliptī* 'overspreading'. It is argued that there is no way *alpa* can be stopped from qualifying *abhra* in this example. After all, scantness of cloud-spread is easily relatable to scantness of clouds. But, contrarily, one can say that scantness of cloud-spread is the derivate meaning via which one infers scantness of clouds. The word *alpa* is not used in the compound because its meaning is understood (*PM*: *abhrāṇām alpatve sati tadvilepanasyālpatvam avaśyambhāvīti . . . vṛttau gatārthatvād alpaśabdasyāprayogaḥ*).

2. The condition of *alpa* is also significant otherwise. For, in its absence, *candanānuliptā* 'anointed with sandal-paste' of *candanānuliptā brāhmaṇī* 'a *brāhmaṇa* woman profusely anointed with sandalpaste' will also qualify for *ṄīṢ*, thereby yielding a wrong form **candanānuliptī*. The sense of *anulepana* 'anointement', in this example, is *bāhulya* 'abundance', exactly the opposite of *alpa*.

4.1.52 **बहुव्रीहेश्चान्तोदात्तात्**

bahuvrīheś cāntodāttāt

/*bahuvrīheḥ* 5/1 *ca* ϕ *antodāttāt* 5/1/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *anupasarjanāt* #14, *ṅīṣ* #40, *ktāt* #51)

bahuvrīhir yo' ntodāttas tasmāt striyāṃ ṅīṣ pratyayo bhavati

Affix *ṄīṢ* occurs to denote feminine after a *bahuvrīhi* nominal stem which has a constituent ending in *Kta* as its final and is also marked *udātta* at the end.

EXAMPLES:

śaṅkhabhinnī 'she who has a rent on her forehead'
urubhinni 'she who has a rent on her thigh'
galakotkṛttī 'she who has a protruding neck'
keśalūnī 'she who has her hair cut'

1. This rule offers examples where the first compound constituent denotes *svāṅga* 'one's limb'. An optional provision of *ṄīṢ* is made by the following rule in contexts where the first constituent denotes something other than *svāṅga* (*Kāś.*: *svāṅgapūrvapado bahuvrīhir ihodāharaṇam; asvāṅgapūrvapadād vikalpaṃ vakṣyati*).

2. The *anuvṛtti* of *ktāt*, unlike the preceding rule, cannot facilitate a *tadantavidhi* interpretation of this rule as: '. . . after a *bahuvrīhi* compound ending in *Kta*'. This is due to non-application of two *paribhāṣās* (24/29):

pratyayagrahaṇa and *kṛdgrahaṇa.* Consequently, 'after that which ends in *Kta*' becomes a qualifier to the final constituent of the *bahuvrīhi* compound.

3. Rule 2.2.36 *niṣṭhā* would not permit postposing (*paranipāta*) a compound constituent which ends in *Kta* (1.1.26 *ktaktavatū niṣṭhā*). A *vārttika* proposal is, therefore, made to accomplish this (*jātikālasukhādibhyaḥ paravacanam*). Rule 6.2.170 *jātikālasukhādibhyo* . . . marks all examples *udātta* at the end.

4. Following *vārttika* proposals are also relevant:

(*a*) A *bahuvrīhi* compound which is marked *udātta* at the end, and has *jāta* as its final constituent, should be excluded (*antodāttāj jātapratiṣedhaḥ*). This will exclude examples such as: *dantajātā* 'she whose teeth have appeared'; *stanajātā* 'she whose breasts have developed'.

(*b*) A derivate such as *pāṇigṛhītī* should be restricted to special meaning of *bhāryā* 'wife' (*pāṇigṛhītyādīnām arthaviśeṣe*). One whose hand was held for some other reason (*yathākathaṃcit*) should be called: *pāṇigṛhītā.*

(*c*) A *bahuvrīhi* compound with initial constituents in *bahu, naÑ, su, kāla* and *sukha,* etc., should be excluded from the scope of this rule (*abahunañsukālasukhādipūrvād iti vaktavyam*). This will offer examples of *ṬāP* such as: *bahukṛtā* 'she who has done much'; *akṛtā* 'she who has done nothing'; *sukṛtā* 'she who has done good things'; *māsajātā* 'she, since whose birth, one month has elapsed'; and *sukhajātā* 'she whose time of happiness has arrived'.

4.1.53 **अस्वाङ्गपूर्वपदाद्वा**

asvāṅgapūrvapadād vā

/ *asvāṅgapūrvapadāt* 5/1 = *na svāṅgam* = *asvāṅgam* (*nañ-tat.*); *asvāṅgam pūrvapadaṃ yasya saḥ* (*bv.* with int. *nañ-tat.*)

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40, *ktāt* #51, *bahuvrīheś cāntodāttāt* #52)

asvāṅgapūrvapadād antodāttāt ktāntād bahuvrīheḥ striyāṃ vā ṅīṣ pratyayo bhavati

Affix *ṄīṢ* occurs optionally to denote feminine after a nominal stem termed *bahuvrīhi* which ends in *Kta,* has its final vowel marked *udātta* and does not contain an initial constituent denoting *svāṅga* 'limb' (*asvāṅga-pūrvapadāt*).

EXAMPLES:

sārṅgajagdhī 'she who ate wet-gingers'
sārṅgajagdhā 'id.'
palāṇḍubhakṣitī 'she who ate onions'
palāṇḍubhakṣitā 'id.'

surāpītī 'she who drank liquor'
surāpītā 'id.'

1. The obligatory provision of *ṄīṢ* made by the earlier rule, is here rendered optional. Thus, we get *sārṅgajagdhī* or *śārṅgajagdhā*. Rule 6.2.120 *jātikālasukhādibhyo* . . . assigns a final *udātta* accent to the compound under the condition of *jāti*, denoted by its first constituent (*PM*: *sarvatra jātikālasukhādibhyaḥ' ity antodāttatvam*). Items such as *śārṅga* and *palāṇḍu* represent a class of edibles (*bhakṣyajātiḥ*).

The exclusion of a compound with its initial constituent denoting *svāṅga* is made in view of *śaṅkhabhinnī* and *urubhinnī* where the initial constituents denote *svāṅga*. *Kāśikā* also offers *vastracchannā* and *vasanacchannā* as counter-examples where the fnal constituents are not marked *udātta* at the end, especially in view of negation of *anācchādanāt* 'not after that which denotes *ācchādana* 'covering' (6.2.170 *jātikālasukhādibhyo' nācchādanāt* . . .). That is, initial constituents retain their original accent (*pūrvapadaprakṛtisvara*). Incidentally, these compounds are formed parallel to *vastraṃ channaṃ yayā* 'she by whom cloth is spread over'. A *vārttika* proposal, for names and Vedic usages, is made to account for *karmadhārayá* compounds such as *pravṛddhavilūnī/pravṛddhavilūnā* 'she who is excessively old and has her hairs cut' on the basis of *bāhulaka*. Some also interpret the compound as a *bahuvrīhi*. *Kāśikā* clearly states that it is not a *bahuvrīhi* (*nāyaṃ bahuvrīhiḥ*).

4.1.54 स्वाङ्गाच्चोपसर्जनादसंयोगोपधात्

svāṅgāc copasarjanād asaṃyogopadhāt
/*svāṅgāt* 5/1 *ca* ɸ *upasarjanāt* 5/1 *asaṃyogopadhāt* 5/1 = *saṃyogaḥ upadhāyāṃ yasya tat saṃyogopadham* (*bv.*); *na saṃyogopadham* (*nañ. tat.*), *tasmāt*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* 4.1.4, *ṅīṣ* #40, *vā* #53)
svāṅgaṃ yad upasarjanaṃ asaṃyogopadhaṃ tadantāt prātipadikāt striyām vā ṅīṣ pratyayo bhavati
Affix *ṄīṢ*, occurs to optionally denote feminine also after a nominal stem which contains an *upasarjana* used as its final constituent with the denotatum of *svāṅga* '(one's own) limb', and which does not contain a conjunct in its *upadhā* (penultimate position; 1.1.65 *alo' ntyāt pūrva* . . .).

EXAMPLES:

candramukhī 'she who has a moon-like face'
candramukhā 'id.'
atikeśī mālā 'a garland extending beyond the length of hair'

1. Note that *upasarjanāt* is interpreted as a qualifier (*viśeṣaṇa*) to the nomi-

nal stem, via *tadantavidhi*, to yield the interpretation: *upasarjanāntāt prātipadikāt* 'after a nominal stem which ends in an *upasarjana*'. The expressions *svāṅgāt* and *asaṃyogopadhāt* are used as qualifiers to *upasarjanāt* to yield the following meaning:

> '. . . an *upasarjana* which denotes a limb (*svāṅga*) and does not contain a conjunct in its *upadhā* (*asaṃyogopadhāt*)'

The word *svāṅga* is not interpreted here as 'one's own limb'. Grammarians use it more like a technical term with the following definition:

> *adravaṃ mūrtimat svāṅgaṃ prāṇistham avikārajam/*
> *atasthaṃ tatra dṛṣṭaṃ cet tasya cet tat tathāyutam//*
> *svāṅga* is 'that which is not liquid', 'that which has a form', 'that which is located within living beings', 'that which is not born as a modification of something'; *svāṅga* is also 'that which may not be located within living beings at the current time but which may have been witnessed as part of them sometimes in the past', and *svāṅga* is also 'that which is not located in a living being, but which is associated with a non-living in a manner similar to its association with a living'

The qualification of *adravam* is relevant in relation to examples such as *susvedā* 'she who perspires profusely', where *ṄīṢ* cannot be introduced since *sveda* is *drava* 'liquid'. An example such as *sujñānā* cannot avail *ṄīṢ* because knowledge does not have any form (*mūrti*). The *sumukhā* of *sumukhā śālā* 'a hall with beautiful entrance' is similarly out because *mukha* here belongs to a non-living thing, i.e., *śālā*. An example such as *bahuśophā* 'she whose limbs are greatly swollen' involves *śopha* 'swelling', characterizing modification of limbs (*vikāraja*). An example such as *atikeśī* with *ṄīṢ*, illustrates 'hair' (*keśa*) as part of a living being (*prāṇistha*). Contrast this with *sukeśā rathyā* 'a road full of beautiful hair' where their status as 'part of humans' is shown as a thing of the past. Finally, consider *dīrghamukhī pratimā* 'statue with a large face' where 'large face' is associated with 'the statue' in a manner similar to 'some real large face' associated with 'a living being'.

4.1.55 नासिकोदरौष्ठजङ्घादन्तकर्णशृङ्गाच्च

nāsikodarauṣṭhajaṅghādantakarṇaśṛṅgāc ca
| nāsikodarauṣṭhaja . . . śṛṅgāt 5/1 = *nāsikā ca udaraṃ ca oṣṭhaś ca . . . śṛṅgaṃ ca* = *nāsikodarauṣṭha . . . śṛṅgāc* (*sam. dv.*), *tasmāt; ca* ϕ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40, *vā* #53, *svāṅgāc copasarjanāt* #54)
svāṅgaṃ nāsikādyantāt prātipadikāt striyām vā ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs optionally to denote feminine after a nominal stem which ends in an *upasarjana* with the signification of *svāṅga*, namely

nāsikā 'nose', *udara* 'belly', *oṣṭha* 'lip', *jaṅghā* 'thigh', *danta* 'tooth', *karṇa* 'ear' and *śṛṅga* 'horn'.

EXAMPLES:

tuṅganāsikī 'she who has a high nose'
tuṅganāsikā 'id.'
tilodarī 'she who has a birthmark similar to a sesame on her abdomen'
tilodarā 'id.'
bimboṣṭhī 'she whose lips are (bright-red) like the Bimba fruits'
bimboṣṭhā 'id.'
dīrghajaṅghī 'she whose thighs are large'
dīrghajaṅghā 'id.'
samadantī 'she whose teeth are even'
samadantā 'id.'
cārukarṇī 'she whose ears are beautiful'
cārukarṇā 'id.'
tīkṣṇaśṛṅgī 'an animal with sharply pointed horns'
tīkṣṇaśṛṅgā 'id.'

1. The provisions of this rule are stated in view of negations characterized by *saṃyogopadhāt* (4.1.54), *bahvacaḥ* (4.1.56) and *sahanañvidyamānapūrvāt.* The first two, *nāsikā* and *udara,* of the seven stems enumerated here for optional introduction of *ṄīṢ,* contain many vowels (*bahvac*). These two thus form prior exceptions (*purastāpavāda*) to the negation of 4.1.56 *na kroḍādi bahvacaḥ.* It is also logical in view of (*Paribhāṣā* 60): *purastāpavādā anantarān vidhīn bādhante nottarān* 'prior exceptions block operational provisions which immediately follow, and not any subsequent'. The remaining five stems (*oṣṭha,* etc.), all contain conjuncts in penultimate positions (*saṃyogopadha*). They, thus, constitute an exception to *asaṃyogopadhāt* of 4.1.54 *svāṅgāc copasarjanāt.* But these stems can also constitute an exception to 4.1.57 *sahanañvidyamānapūrvāc ca.* However, note that rule 4.1.55 *nāsikodarauṣṭha*... is an exception (*apavāda*), read in between 4.1.54 *svāṅgāc*... and 4.1.57 *sahanañ*.... Consequently, it must operate in accord with *Paribhāṣā* 61: *madhye'pavādāḥ pūrvān vidhīn bādhante nottarān* 'exceptions placed in between two operational provisions block an operational provision which precedes, and not a provision which follows'. The five stems of our present rule thus illustrate an exception to the *asaṃyogopadhāt* provision of the preceding rule. The optional provision of *ṄīṢ* of this rule is blocked by negation of 4.1.57 *sahanañ*..., mostly because of being subsequent (*para*), though not most immediate (*anantara*).

2. The following three *vārttikas* cover additional derivates:

(*i*) An optional provision of *ṄīṢ* should also be made after a nominal stem which ends in *puccha* 'tail' to account for derivates such as *kalyāṇapucchī/ kalyāṇapucchā* '... one whose tail is beautiful' (*pucchāc*

ceti vaktavyam).

(*ii*) An obligatory (*nityam*) provision of *ṄīṢ* should be made after a nominal stem which ends in *puccha*, used in combination after *kabarā* 'body of hair', *maṇi* 'pearl, jewel', *viṣa* 'poison' and *śara* 'arrow' to account for derivates such as *kabarapucchī* 'that (feminine) which has a beautiful body of hair on its tail (a peahen)'; *maṇipucchī* 'that (feminine) which has a jeweled tail'; *viṣapucchī* 'that (feminine) which has a poisonous tail (a scorpion)'; and *śarapucchī* 'that (feminine) which has an arrowlike tail (a particular bird)'.

4.1.56 न क्रोडादिबह्वचः

na kroḍādibahvacaḥ

/*na* ϕ *kroḍādibahvacaḥ* = *kroḍa ādir yeṣāṃ te kroḍādayaḥ* (*bv.*); *bahvo aco yasmin sa* = *bahvacaḥ* (*bv.*); *kroḍādayaś ca bahvac ca* = *kroḍādibahvac, tasmāt* (*sam. dv.* with int. *bv.*)/

(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ataḥ* #4, *ṅīṣ* #40, *svāṅgāc copasarjanāt* #54)

kroḍādyantād bahvajantāc ca prātipadikāt striyāṃ ṅīṣ pratyayo na bhavati

Affix *ṄīṢ* does not occur after a nominal stem which ends in an *upasarjana* 'secondary' constituent with the signification *svāṅga* and is either listed in the group headed by *kroḍa* 'lap, flank of a horse', etc., or else, consists of many vowels (*bahvac*).

EXAMPLES:

kalyāṇakroḍā 'she whose lap is auspicious; a mare with auspicious flanks'
kalyāṇakhurā '(a goat) with auspicious hooves'
kalyāṇamukhā 'she who has an auspicious face'
pṛthujaghanā 'she whose thighs are fat'
mahālalāṭā 'she whose forehead is large'

1. Note that *kroḍādi* is an *ākṛtigaṇa*, an open-ended group whose membership is determined by usage. Haradatta explains *kroḍā* as *aśvānām uraḥ* 'flanks of horses', a feminine (*strīliṅgo'yam*). *Bālamanoramā* and *Tattvabodhinī*, ad *SK*, approve the use of *kroḍā* in all three genders (*Bālamanoramā: amaras tu 'na nākroḍaṃ bhujāntaram' iti strītvaṃ napuṃsakatvaṃ cāha. kvacit kośe puṃstvam api dṛśyate . . . evaṃ ca liṅgatraye'py udāharaṇam nirbādham*).

Our expression *kroḍādibahvacaḥ* is a modifier to *prātipadikāt*, where *svāṅgāt* and *upasarjanāt* are also paraphrased with it. That is, items denoted by *kroḍādibahvacaḥ*, a qualifier, must form the final of a nominal stem after which affix *ṄīṢ* is negated. They must also denote *svāṅga* and, at the same time, be termed an *upasarjana*. This all is gotten via *tadantavidhi*, relative to a qualifier treated as final of its qualified. A negation of *ṄīṢ* makes the introduction of *ṬāP* possible.

4.1.57 सहनञ्विद्यमानपूर्वाच्च

sahanañvidyamānapūrvāc ca
/ *sahanañvidyamānapūrvāt* 5/1 = *saha ca nañ ca vidyamānam ca sahanañ-vidyamānam; sahanañvidyamānaṃ pūrvaṃ yasya sa = sahanañvidyamāna-pūrvaḥ* (*bv.* with int. *dv.*), *tasmāt; ca* ϕ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40, *svāṅgāc copasarjanāt* #54, *na* #56)
'*saha, nañ, vidyamāna*' *ity evaṃ pūrvāt prātipadikāt striyāṃ ṅīṣ pratyayo na bhavati*
Affix *ṄīṢ* also does not occur to denote feminine after an *upasarjana* nominal stem which denotes *svāṅga* and is used in combination preceded by *saha* 'with', *naÑ* 'not' and *vidyamāna* 'existent'.

EXAMPLES:

sakeśā 'she who has hair'
akeśā 'she who does not have any hair'
vidyamānakeśā 'she who has hair'
sanāsikā 'she who has a nose'
anāsikā 'she who does not have a nose'
vidyamānanāsikā 'she who has a nose'

1. Note that this rule negates *ṄīṢ*, made available by rules 4.1.54 *svāṅgāc copasarjanāt* and 4.1.55 *nāsikodaroṣṭha....* Affix *ṬāP* is thus introduced in the absence of *ṄīṢ*. The *sa*, in *sakeśā*, results from the formation of compound with *saha*, as per rule 2.2.28 *tena saheti tulyayoge*. This *saha* is reduced to *sa* in view of rule 6.3.70 *vopasarjanasya*. In examples such as *akeśā*, *naÑ* is combined in a *bahuvrīhi* compound with the sense of *asti* 'is', in accord with a *vārttika* (under 2.2.24 *anekam...*): *nañó'styarthānāṃ bahuvrīher vā cottara-padalopaś ca vaktavyaḥ*. Compounds of other examples are allowed by 2.2.24 *anekam anyapadārthe*.

2. Why do we have to have *pūrvāt* in the rule? It is stated that *pūrva* here means *avayava* 'part of a whole' which, when used with *saha*, etc., becomes a qualifier (*viśeṣaṇa*). What does it qualify? It qualifies the nominal stem which is termed an *upasarjana* and which denotes *svāṅga*. Thus, affix *ṄīṢ* will be negated after a nominal stem whose final constituent is an *upasarjana* with the denotation of *svāṅga*, and which has *saha*, *naÑ* and *vidyamāna* as its initial constituent. This specification, by means of *avayava*, is also necessary to block this negation from applying to examples such as *kalyāṇavidyamāna-mukhā* 'she whose face is benevolent', where a constituent denoting *svāṅga* simply follows *saha*, etc.

If this was the intended interpretation then the rule should have been formulated as *sahanañvidyamānebhyaḥ*, thereby meaning: '*ṄīṢ* does not occur after a nominal stem which ends in an *upasarjana* signifying *svāṅga*, used

of *vidyamānamukhā*, parallel to *vidyamānaṃ mukham asyāḥ*, but will also block *ṄīṢ* in *kalyāṇavodyamānamukhī*. But it will not be able to block the *ṄīṢ* in *vidyamānakalyāṇamukhī*. It is, therefore, necessary to have *pūrva*, with its signification of a 'part' (*avayava*), as a condition. A formulation with *pañcamī* alone (as *sahanañvidyamānebhyaḥ*) is not sufficient (see *PM* ad *Kāś.* for further details).

4.1.58 नखमुखात्संज्ञायाम्

nakhamukhāt saṃjñāyām
/*nakhamukhāt* 5/1 = *nakhaṃ ca mukhaṃ ca* = *nakhamukham* (*sam. dv.*), *tasmāt*; *saṃjñāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40, *svāṅgāc copasarjanāt* #54, *na* #56)
nakhamukhāntāt prātipadikāt saṃjñāyāṃ striyāṃ viṣaye ṅīṣ pratyayo na bhavati
Affix *ṄīṢ* does not occur to denote feminine after a nominal stem which ends in *nakha* 'nail' and *mukha* 'face', and the derivate is to name a female (*saṃjñā*).

EXAMPLES:

śūrpaṇakhā 'Rāvaṇa's sister'
gauramukhā 'name of a woman'

1. This rule again negates the provision of *ṄīṢ* made by rule 4.1.54 *svāṅgāccopasarjanāt*. Elsewhere, when the derivate does not denote a name, we will get examples such as *tāmranakhī kanyā* 'a girl whose nails are red as copper' and *candramukhī* 'she whose face is as beautiful as moon'. These examples both entail *ṄīṢ*. A derivate such as *śūrpaṇakhā* can be derived with *ṬāP*, as against *ṄīṢ*, if the derivate is a name. A demoness, for reasons of possessing finger-nails similar in shape to a winnowing basket, can be called *śūrpanakhī*. This derivate will lack the replacement of its *n* by *ṇ* (*ṇatva*), which would otherwise obtain in a derivate of *ṬāP* signifying a name (*saṃjñā*; 8.4.3 *pūrvapadāt saṃjñāyām agaḥ*). A combination of *ṇatva* and *ṄīṢ* is not attested (*PM* ad *Kāś.*: *na punaḥ śūrpaṇakhīti ṇatvaṅīṣoḥ samāveśaḥ sādhuḥ*).

4.1.59 दीर्घजिह्वी च च्छन्दसि

dīrghajihvī ca cchandasi
/*dīrghajihvī* 1/1 *ca* ϕ *chandasi* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40)
dīrghajihvī iti chandasi viṣaye nipātyate
Affix *ṄīṢ* occurs, via *nipātana*, to derive *dīrghajihvī* in Vedic, when the derivate denotes a female name.

EXAMPLES:

dīrghajihvī 'a female name; she who has a long tongue'

1. This derivation, via *nipātana*, is necessitated because *dīrghajihva*, a masculine meaning 'one who has a long tongue', contains a conjunct in its penultimate (*upadhā*) position. Obviously, it does not qualify for affix *ṄīṢ* of rule 4.1.54 *svāṅgāc copasarjanāt*. Our present rule makes it available (*prāpta*), via *nipātana*, what was not available (*aprāpta*).

How come the rule is not formulated as *dīrghajihvāc chandasi*? That is, why do we have to accept this provision of *nipātana* with a final *ī*? A specification with *dīrghajihvī*, via *nipātana*, was made so that this form could be treated as obligatory. Note that the preceding rules involve negations (*pratiṣedha*; 4.1.56 *na kroḍādi*...), and optional provisions as well, of *ṄīṢ* (4.1.54 *svāṅgāc copasarjanād*...). Our present rule cannot be treated as a negative, since a negative provision makes sense only in the context of a positive provision already made (*prāptipūrvakatvāc ca pratiṣedhānām*). Such a positive provision for *ṄīṢ*, relative to a form ending in *jihvā*, or for that matter *jihvī*, is ruled out because of their penultimate conjunct (*saṃyogopadha*). This operational provision of *ṄīṢ* may be wrongly treated as optional. A reference with *dīrghajihvī*, via *nipātana*, makes the derivate obligatory.

2. This rule uses *ca* to bring *saṃjñāyām* close to its context.

4.1.60 दिक्पूर्वपदान् ङीप्

dikpūrvapadān ṅīp
/*dikpūrvapadāt* 5/1 = *dik pūrvapadaṃ yasya* (*bv.*), *tasmāt*; *ṅīp* 1/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3)
dikpūrvapadāt prātipadikād ṅīp pratyayo bhavati
Affix *ṄīP* occurs to denote feminine after a nominal stem which begins with a constituent denoting *diś* 'direction'.

EXAMPLES:

prāṅmukhaṃ yasyāḥ = *prāṅmukhī* 'she whose face is toward east; she who is facing east'
prāṅmukhā 'id.'
prāṅnāsikī 'she whose nose is toward east; she who is facing east'
prāṅnāsikā 'id.'

1. Note that derivates of *ṄīṢ* differ from those of *ṄīP* only in accent (*svare viśeṣaḥ*). Affix *ṄīP*, because of its *P* as an *it*, is *anudātta* (3.1.4 *anudāttau suppitau*). Affix *ṄīṢ* is marked *udātta* as the beginning, as per 3.1.2 *ādyudāttaś ca*. In this sense, derivates of *ṄīP* constitute an exception (*apavāda*) to operational (*vidhi*) or negational (*pratiṣedha*) provisions of *ṄīṢ* made by rules such as 4.1.54 *svāṅgāc copasarjanāt*, etc. But there is a greater correlation

between this provision of *ṄīP* and operational-negational provisions of earlier rules (*Kāś.*: '*svāṅgāc copasarjanāt*' *ity evamādividhipratiṣedhaviṣayaḥ sarvo'-py apekṣyate*). That is, *ṄīP* of this rule should be allowed after a nominal stem which begins with a directional word in the manner (and specification) similar to those under which *ṄīṢ* is allowed by rule 4.1.54 *svāṅgāc copasarjanāt*, etc. Affix *ṄīP* of this rule should also be negated with reference to specifications under which *ṄīṢ* is negated by earlier rules (*Nyāsa* ad *Kāś.* (III: 363): *tena yatra viṣaye ṅīṣ vihitas tatraiva ṅīb vidheyaḥ/ yatra tu viṣaye ṅīṣ pratiṣiddhas tatra ṅīb api pratiṣiddhyata iti*).

Consider, for illustration, rules 4.1.54 *svāṅgāc copasarjanāt* and 4.1.55 *nāsikodarauṣṭha*. . . which provide for optional (*vā*) introduction of *ṄīṢ*. Our first rule requires *ṄīṢ* to be introduced after an *upasarjana* 'secondary' constituent signifying 'one's own limb' (*svāṅga*). Additionally, this stem must end in *a* (*ad-anta*), and must not have a conjunct in its penultimate position (*asaṃyogopadha*). The *mukha*, of *prāṅmukhī* of rule 4.1.60 *dikpūrvapadād ṅīp*, is an *upasarjana*. It denotes *svāṅga*, ends in *a* and does not have a conjunct in its next to the last position. It also meets the requirement of 4.1.60 *dikpūrvapadāt*, since *pūrva* precedes it. The way is now clear for optional derivation of *prāṅmukhī* and *prāṅmukhā*. This *ṄīP*, however, cannot be introduced to derive **prāggulphī*, parallel to *prāggulphā* 'she whose ankles are turned toward east; she who has her back to the east'. For, *gulpha* is denied *ṄīṢ*, and consequently the *ṄīP*, of our present rule because it contains a conjunct (*saṃyoga*) in its next to the last position (*upadhā*). A negation of *ṄīṢ* is also required by rule 4.1.56 *na kroḍādibahvacaḥ*, thereby blocking the derivation of **prākkroḍī* with *ṄīP* of our present rule.

Incidentally, refer to (467) *prāṅ*, in the appendix of vol. III, for additional derivational details. Recall further that derivates of *ṄīP* and *ṄīṢ* differ only in accent.

2. A question is raised as to why, in an example such as *prāṅmukhā*, one must introduce affix *ṬāP*. Why can we not introduce *ṄīṢ* of 4.1.55 *svāṅgāccopasarjanād*. . ., once rule 4.1.60 *dikpūrvapadāt*. . . has denied *ṄīP*? It is stated that, in cases where both a general (*utsarga*) as well as an exceptional provision (*apavāda*) is made by means of an option (*vibhāṣā*), the general does not apply when its corresponding exception ceases to apply. Thus, *ṄīP* is an exception to *ṄīṢ*. These affixes both have been introduced in this context as part of an optional provision. Consequently, *ṄīṢ* must also be blocked (*PM* ad *Kāś.* (III: 363): *ṅipā mukte* '*svāṅgāc copasarjanāt*' *iti ṅīṣ api na bhavati. katham? uktam etat: yatrotsargāpavādau dvāv api vikalpitau tatrāpavādena mukto utsargo na pravartate*). Pāṇini's own practice is cited in support of such a conclusion. That is, rule 4.1.118 *pīlāyā vā* did not need *vā*. For, once *pīlā* is optionally released from the scope of *aṆ* at the strength of *mahāvibhāṣā* (and no *vā* of rule 4.1.118), *ḍhaK* of 4.1.120 *strībhyo ḍhak* would apply anyway. This will happen, again optionally, at the strength of *mahāvibhāṣā*. But once *pīlā* is

released optionally from *ḍhaK* of 4.1.120, can *aṆ* now apply? Yes, if there was no *vā* in 4.1.118. Since we have *vā* in 4.1.118, both 4.1.118 and 4.1.120 become optional, where *aṆ* is general as opposed to *ḍhaK* which is an exception. But we still get optional *aṆ* under the provision of 4.1.118? That *aṆ* is different from the *aṆ* we are talking about. That *aṆ* is ruled by 4.1.112 *viśvādibhyo'ṇ*. It is not the general affix *aṆ* of 4.1.83 *prāg dīvyato'ṇ*. What then is the purpose of *vā* in 4.1.118? To let the general *aṆ* of 4.1.83 apply optionally to *ḍhaK*.

3. The word *pada* is used in the rule so that any directional word, and not just *diś*, can brought within the scope of this rule.

4.6.61 **वाहः**

vāhaḥ
/*vāhaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40, *chandasi* #59)
vāhantāt prātipadikāt striyāṃ pratyayo bhavati
Affix *ṄīṢ* occurs, in Vedic, to denote feminine after a nominal stem which ends in a non-secondary constituent, namely *vāha*.

EXAMPLES:

dityauhī 'a two-year old cow'
praṣṭhauhī 'a cow with her first born'

1. Note that *vāh* is derived with affix *ṆvI* of 3.2.64 *vahaś ca*, read with 3.2.63 *chandasi sahaḥ*, under the cooccurrence condition of an object. That *vāhaḥ* is interpreted as a qualifier to *prātipadikāt*, via *tadantavidhi*, to get the sense of 'the stem which ends in *vāh*', is clear since *vāh* cannot be used by itself (*PM*: *kevalasya vāhaḥ sambhavo nāsti* . . .). It must be used as the final constituent of an obligatory compound formed with a conjoined *pada* denoting *karman*, and consequently, termed nominal stem (*prātipadika*).

4.1.62 **सख्यशिश्वीति भाषायाम्**

sakhyaśiśvīti bhāṣāyām
/*sakhī* 1/1 *aśiśvī* 1/1 *iti* ϕ *bhāṣāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40)
'*sakhī, aśiśvī*' *ity etau śabdau ṅīṣanto bhāṣāyām nipātyete*
The words *sakhī* and *aśiśvī* are derived, via *nipātana* with *ṄīṢ*, in the Classical language.

EXAMPLES:

sakhīyaṃ me brāhmaṇī 'this Brāhmaṇa woman is my friend'
aśiśvī = *nāsyāḥ śiśur astīti* 'a childless woman'

1. The qualification of *bhāṣāyām* is necessary because, in Vedic, we find usages such as: *sakhā saptapadī bhava* '(you) be my friend of seven steps!'; *aśiśum iva māṃ ayaṃ śiśur abhimanyate* 'this child treats me as if I (feminine) was childless'.

Note that *Kāś.* explains *aśiśvī* as *nāsyāḥ śiśuḥ* 'she of whose there is no child'. That is, *aśiśvī* is derived, via *nipātana,* as a feminine corresponding with *aśiśuḥ,* a *bahuvrīhi.* That is, *aśiśuḥ* is not a *tatpuruṣa* compound parallel to *na śiśuḥ* 'absence of a child'. The derivation of *aśiśvī,* parallel to a *tatpuruṣa* interpretation of *aśiśuḥ,* will create difference in meaning.

4.1.63 जातेरस्त्रीविषयादयोपधात्

jāter astrīviṣayād ayopadhāt
/yāteḥ 5/1 *astrīviṣayāt* 5/1 = *strī viṣayo yasya* (*bv.*); *na strīviṣayaḥ* (*nañ. tat.* with int. *bv.*), *tasmāt; ayopadhāt* = *ya upadhā yasya; na yopadhaḥ* (*nañ. tat.* with int. *bv.*), *tasmāt/*
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40)
jātivāci yat prātipadikaṃ na ca striyām eva niyatam astrīviṣayaṃ yakāropadhaṃ ca tasmāt striyāṃ ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs to denote feminine after a nominal stem which (*i*) ends in *a* with the significance of *jāti* 'class', (*ii*) is not obligatorily limited to the scope of feminine (*astrīviṣayāt*) and (*iii*) does not have *y* in its penultimate position (*ayopadhāt*).

EXAMPLES:

kukkuṭī 'hen'
mayūrī 'pea-hen'
brāhmaṇī 'a Brāhmaṇa woman'
nāḍāyanī 'granddaughter of Naḍa'

1. The three conditions, of *jāteḥ* 'after a stem which denotes a class', *astrīviṣayāt* 'after a stem which is not obligatorily limited to the scope of feminine' and *ayakāropadhāt* 'after a stem which does not have *y* in its penultimate position', are required so that derivates such as *muṇḍā* 'a female with shaven head', *makṣikā* 'fly' and *kṣatriyā* 'a woman of the warrior caste' can be kept out of the scope of this rule. Note that *muṇḍā,* a quality word (*guṇavacana*), does not denote *jāti.* The second *makṣikā* is uniquely feminine. The third stem, *kṣatriya,* of course, has *y* in its *upadhā.*

Grammarians state that *jāti* should be distinguishable by *ākṛti* 'form, appearance'. A class of cows (*gotva*) should thus be comprehensible by means of a form containing particulars such as dewlap, hooves, tail, and horns, etc. Note that such forms are not necessarily restricted to the denotatum of animate beings. Thus bank of a river (*taṭa*) can also denote *jāti.* A word which is not used in all genders but, when used once, cognizes many others, also

denotes *jāti.* The word *vṛṣala* can be accepted as denoting *jāti* since it can cognize the totality of *śūdras.* Grammarians also accept words with the significance of *gotra,* i.e., descendants, and *caraṇa* 'Vedic lineage', as denoting *jāti.* The following verse sums it up:

ākṛtigrahaṇā jātir liṅgānāṃ ca na sarvabhāk/
sakṛdākhyātanirgrāhyā gotraṃ ca caraṇaiḥ saha//

2. Note that the *anuvṛtti* of *ataḥ* '. . . which ends in *a*', used as a qualifier to *prātipadikāt,* will block *ṄīṢ* from being introduced after a stem, namely *go* 'cow', which denotes *jāti.*

3. A *vārttika* recommends that negation of *yopadha* 'that which has *y* in its *upadhā*' should not apply to *haya* 'horse', *gavaya* 'wild cow', *mukaya* 'mule', *matsya* 'fish' and *manuṣya* 'human male', which all denote *jāti* via appearance (*ākṛti*).

4. Our example *nāḍāyanī* is derived from (*nāḍāyana* + *ṄīṢ*) + *sU,* where *nāḍāyana* itself derives from *naḍa* + *Ṅas* + *phaK* with the signification of a *gotra*-descendant (grandson, etc.) of Naḍa. A *vṛddhi*-replacement for the initial *a* of *naḍa* is ordered by 7.2.118 *kiti ca,* at the strength of *phaK* being marked with *K* as an *it.* Rule 7.1.2 *āyaneyī* . . . orders *āyana* as a replacement for the *pha* of affix *phaK.* All other examples are easy to derive.

4.1.64 **पाककर्णपर्णपुष्पफलमूलबालोत्तरपदाच्च**

pākakarṇaparṇapuṣpaphalamūlabālottarapadāc ca
/pāka-karṇa-parṇa-puṣpa-phala-mūla-bālottarapadāt 5/1 = '*pāka* . . . *bālāḥ*' *ity ete śabdāḥ uttarapadaṃ yasya* (*bv.* with int. *dv.*), *tasmāt; ca* ϕ/ (*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40, *jāteḥ* #63)
pākādyuttarapadāj jātivācinaḥ prātipadikāt striyāṃ ṅīṣ pratyayo bhavati
Affix *ṄīṢ* also occurs to denote feminine after a nominal stem which denotes *jāti,* and has *pāka* 'cooking', *karṇa* 'ear', *parṇa* 'leaf', *puṣpa* 'flower', *phala* 'fruit', *mūla* 'root' and *bāla* 'young, tail' as its final.

EXAMPLES:

odanapākī 'a medicinal plant'
śaṅkukarṇī 'id.'
śālaparṇī 'id.'
śaṅkhapuṣpī 'id.'
dāsīphalī 'id.'
darbhamūlī 'id.'
gobālī 'id.'

1. Note that it is impossible to determine constituent meanings in these examples. Consequently, their paraphrases should be accepted simply as a

means of understanding derivational processes (*Nyāsa* ad *Kāś.*: *vyutpattimātrārtham tv asau kriyate, na tv atrāvayavārtho vidyate*). Haradatta (*PM* ad *Kāś.*) also recognizes difficulties in furnishing derivational details: *odanapākādayaḥ saṃjñāśabdā yathākathañcid vyutpādyāḥ* 'words such as *odanapākī* are names, and should, somehow or the other, be derived with effort'. This 'somehow . . . with effort' must also serve as an answer to the question: 'how could these word denote *jāti*?'. I have not tried here to derive any examples since that would require determining bases, affixes and operational steps.

The condition of *astrīviṣayāt* would not permit these stems to be included within the scope of the preceding rule. A *vārttika* requires that *y* of *matsya* be deleted only when a feminine affix with *Ṅ* as an *it* follows (*Mbh.* ad 6.4.149 *sūryatiṣyāgastyamatsyānām* . . .). Stems which end in *puṣpa, phala* and *mūla*, but which are not desired to be included here, are enumerated within the *ajādi* group of 4.1.14 *ajādyataṣ ṭāp.*

4.1.65 इतो मनुष्यजातेः

ito manuṣyajāteḥ
/*itaḥ* 5/1 *manuṣyajāteḥ* 5/1 = (*ṣaṣ. tat.*), *tasmāt*/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ṅīṣ* #40, *anupasarjanāt* #54)
ikārāntāt prātipadikān manuṣyajātivācinaḥ striyāṃ ṅīṣ pratyayo bhavati
Affix *ṄīṢ* occurs to denote feminine after a non-secondary nominal stem which ends in *i* and denotes a class of humans (*manuṣyajāti*).

EXAMPLES:

avantī 'a female (*gotra*) descendant of Avanti'
dākṣī 'a female (*gotra*) descendant of Dakṣa'

1. Note that *avantī* derives with affix *ÑyaṄ* (4.1.171 *vṛddhetkosalāj* . . .), introduced after the syntactically related nominal stem *avanti*. This affix, however, is deleted by *LUK* of 4.1.176 *striyām avantikunti*. . ., at the strength of assignment of the term *tadrāja* (4.1.172 *te tadrājāḥ*). This rule then introduces affix *ṄīṢ* to produce *avantī*, after 6.4.148 *yasyeti ca* deletes the short *i* of *avanti*. Our second example *dākṣī* is derived with *ṄīṢ* introduced after *dākṣi* '(gotra) descendant of Dakṣa', a derivate of *iÑ* (4.1.95 *ata iñ*) introduced after syntactically related nominal stem *dakṣa*. Note that *gotra* itself accounts for status as *jāti* of these examples (*Nyāsa* ad *Kāś.*: *sarvatra gotraṃ hi jātiḥ*).

2. A question is raised against explicit use of *jāteḥ* in the wording of this rule. That is, why can it not be gotten from the preceding rule via *anuvṛtti*. It is stated that *jāteḥ* of 4.1.63 is further qualified with *ayopadhāt*. Our present rule explicitly uses *jāteḥ* to cancel this association (*sāhacarya*). That is, *ṄīṢ* of this rule can be introduced also to derive examples such as *audameyī* 'a fe-

male *gotra*-descendant of Udameya', where *udameya* contains *y* in its penultimate position (*yopadha*; . . . *punar jātigrahaṇaṃ yopadhād api yathā syāt*).

3. A *vārttika* requires that *sautaṅgamī* 'a city built by Sutaṅgama' and *maunacittī* 'a city built by Municitta' should also be derived with *ṄīṢ*, even though the condition of *jāteḥ* is not met (*iñ upasaṃkhyānam ajātyartham*).

4.1.66 ऊङुतः

ūṅ utaḥ
/*ūṅ* 1/1 *utaḥ* 5/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ayopadhāt* #63, *manuṣyajāteḥ* #65)
ukārāntān manuṣyajātivācinaḥ prātipadikāt striyām ūṅ pratyayo bhavati
Affix *ūṄ* occurs to denote feminine after a nominal stem which ends in *uT* (*u*), does not have a *y* in its penultimate position and signifies a class of humans.

EXAMPLES:

brahmabandhūḥ = *brahmā* (*vipraḥ*) *bandhur asyāḥ* 'a (brāhmaṇa)woman whose brother if a brāhmaṇa (but who herself does not behave like one)'
vīrabandhūḥ 'a (kṣatriya) woman whose brother is brave but who herself is not'

1. The *Ṅ*, in *ūṄ*, used as a qualifier for facilitating references by rules such as 6.1.175 *noṅ dhātvoḥ*, etc. It is argued that a short *u* of this affix can itself yield its long counterpart, through the application of 6.1.101 *akaḥ savarṇe dīrghaḥ*. Thus, *brahmabandhu* + *uṄ* = *bahmabandhū*. Why is this affix then specified with a long *ū*? A long *ū* is used to block the *samāsānta* affix *kaP* of 5.4.154 *śeṣād vibhāṣā* (*Nyāsa* ad *Kāś.* (III: 373): *yadi dīrgho noccāryeta tadā 'śeṣād vibhāṣā' iti paratvāt pakṣe kap syāt, atas tadbādhanārthaṃ dīrghoccāraṇam*). Note that this *kaP* could become applicable at the strength of being subsequent (*para*). Haradatta explains that *ū* of *ūṄ* is a combination of *u* + *u*, where *u* is meant for blocking *kaP* of 5.4.154 (*PM* ad *Kāś.*: *ukāradvayaṃ dīrgheṇa nirdiṣṭam, tatra dvitīya ukāraḥ kapo bādhanārthaḥ*). Incidentally, *brahmabandhūḥ* is derived as example (711) in the appendix of vol. II.

2. Stems of this rule are qualified with *ayopadhāt* so that examples such as *adhvaryuḥ*, of *adhvaryur brāhmaṇī* 'a brāhmaṇa woman who is also a good *adhvaryu* (priest at a sacrifice)', can be kept out of the scope of this rule.

3. A *vārttika* recommends *ūṄ* also after forms signifying *aprāṇin* 'inanimate things', though with the exception of *rajju* 'rope', etc. Examples in point are *alābūḥ* 'round squash' and *karkandhūḥ* 'Jujube (a berry) tree, or its fruit'.

4.1.67 बाह्वन्तात्संज्ञायाम्

bāhvantāt saṃjñāyām
/ bāhvantāt 5/1 = *bāhu ante yasya* (*bv.*), *tasmāt*; *saṃjñāyām* 7/1/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.26, *prātipadikāt* #1, *striyām* #3, *ūṅ* #66)
bāhvantāt prātipadikāt saṃjñāyāṃ viṣaye striyām ūṅ pratyayo bhavati
Affix *ūṄ* occurs to denote feminine after a nominal stem which ends in *bāhu* 'arm', provided the derivate denotes a name (*saṃjñā*).

EXAMPLES:

bhadrabāhūḥ 'a female named Bhadrabāhū'
jālabāhūḥ 'a female named Jālabāhū'

1. The condition of *saṃjñāyām* is needed to exclude examples parallel to *vṛttau bāhū yasyāḥ* = **vṛttabāhūḥ* 'a female whose arms are round'.

4.1.68 पङ्गोश्च

paṅgoś ca
/ paṅgoḥ 5/1 *ca* ϕ/
(*pratyayaḥ* #3.1.1, *paraś ca* #3.1.2, *prātipadikāt* #1, *striyām* #3, *ūṅ* #66)
paṅguśabdāt striyām ūṅ pratyayo bhavati
Affix *ūṄ* occurs to denote feminine also after *paṅgu* 'crippled'.

EXAMPLES:

paṅgūḥ 'a crippled female'
